Before presenting his subject the speaker referred to the inspiration and enthusiasm felt by the pharmacists as this magnificent Headquarters building was being dedicated He thought of what this would have meant to the fathers of American Pharmacy, of the AMERICAN PHARMACEUTICAL ASSOCIATION if they could have been present It had been his privelege to know intimately many of them and he referred particularly to his association with Professor Remington and conversations with him on the future of American pharmacy

"The time has come," he said when with this magnificent background, with this perfect setting, with this strong organization to give us the opportunity to plan and organize the perpetuation, and the permanency of pharmacy "

He had given a great deal of thought to the problem of how to do this how to practically establish professional pharmacy so that the laymen, the physician, the scientists the educational world, shall accept without question the status of this great profession He had taken up the subject with medical groups, both the American Medical Association and the officials of the American Hospital Association of the College of Surgeons, so that the medical side might be thoroughly discussed

As a result he had asked the privilege of preparing a plan, a suggestion, it simply is a suggestion which was discussed before the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION As a result the Council appointed a Committee of men thoroughly imbued with the ideals of pharmacy to further study the question and report back to the Council whether or not this plan or some modified plan can be put into effect not to day but in the immediate future

The author stated that there are two associated statements which had been handed out which are attempts to outline more specifically the services which professional pharmacy is rendering to day, and for which there is a tremendous demand almost beyond the conception of many who are in pharmacy

These papers are deferred, but the services referred to are, in part brought out in the discussion The *bulletins* are entitled The Routine Service Offered by a Well Organized Pro fessional Pharmacy" and Special Services Offered by Some Professional Pharmacies ' *Bulletin 2* is made part of this report, as read

A SUGGESTION FOR THE ESTABLISHMENT OF A NATIONAL COUNCIL ON PHARMACEUTICAL PRACTICE UNDER THE AUSPICES OF THE A PH A

BY E FULLERTON COOK

It has been suggested that there be established, what has been spoken of as a 'National Council on Pharmaceutical Practice," under the auspices of the AMERICAN PHARMACEUTICAL ASSOCIATION and with the headquarters and secretary in the new A PH A building in Washington

The basic membership of this National Council would be from A PH A members, by appointment by the A PH A Council and specifically represent the following organizations

REPRESENTATIONS

The A PH A —possibly five members, including the Chairman of the N F Committee of Revision, the U S P —Committee of Revision, the American Association of Colleges of Pharmacy and the National Association of Boards of Pharmacy

It is also suggested that the following be invited to participate in an advisory capacity as auxiliary members

The N A R D Committee on U S P and N F Propaganda, the American Drug Manufacturers' Association, the American Medical Association (through either its Council on Pharmacy and Chemistry or Council on Medical Education and Hospitals) the American College of Surgeons—(this body establishes many of the standards for hospitals in the United States), the American Hospital Association the Food and Drug Administration (enforcing Drug Standards) the Surgeon General of the Public Health Service the Surgeon General of the Army (Medical Administrative Corps) and the Surgeon General of the Navy (Hospital Corps)

The larger group would be divided into three sub divisions

1 The professional pharmacist in retail practice coöperating with physicians in general practice

2 The hospital pharmacist

3 Such action as might be found practicable in promoting professional pharmaceutical service in the United States public health, military and naval organizations

All appointments to this Council would be made after consultation with and the approval of the group represented The sole purpose of this Council would be the promotion of more efficient pharmaceutical service in each of the fields represented

FIRST OBJECTIVE

The primary objective would be to specifically study the needs of each field of activity and then prepare and announce to the Country the minimum specifications as to personnel the physical equipment which should be provided to insure efficient service The Council would also make a restatement of codes of ethics and practice for each group as the basis for a high pro fessional standard

SECOND OBJECTIVE

After developing and announcing the statement covering professional standards each group would endeavor to promote the adoption of what was believed to be a minimum standard in each field They might proceed somewhat as follows

GROUP 1—RETAIL PHARMACEUTICAL PRACTICE

Suitable machinery would have to be set up with a secretary, so that established professional pharmacies throughout the Country might be given the opportunity to voluntarily 'register" with this ' National Council "

Such "registration" would require the setting forth, on a suitable form, of all essential facts about the professional side of the business, covering such points as

1 The training and experience of the pharmacists in charge and doing professional work

2 The character of the physical equipment, including stocks of drugs, chemicals volatile oils and galenicals with their quality and preservation Also how biologicals are kept, the kind of balances used, the sterilization equipment, etc

3 A catalog or list of the books available in the professional library

4 The character of the professional work done in the pharmacy during the preceding year and its percentage relationship to other departments in the same establishment

5 The relative floor space devoted to the various phases of "professional pharmacy,' as compared with other departments in the same establishment

The word "pharmacy" should be insisted upon and the word 'drug store" not permitted

NOTE The use of the designation pharmacist" or 'apothecary" would be recommended as appropriate terms

When reported facts on the questionnaire seemed to conform to the rigid specifications established, as an evidence of the spirit and ability of the pharmacist responsible for the establishment, an inspection would be arranged and if this is reported as satisfactory, the pharmacy would be registered for a limited period say two years, subject to reregistration upon evidence being submitted which indicated the maintenance of the standards

All established pharmacies in the Country would be invited and urged to "register" Compliance with the minimum standards believed to be necessary for the maintenance of high professional ideals is all that would be required The financial cost to the pharmacist to equipping for such pharmaceutical service would be relatively small This has recently been outlined by Mr Delgado in the JOURNAL OF THE A PH A (July 1933, page 680)

Professional assistance, through the periodic publishing of information on prescription practice, on the latest ' Materia Medica," suggestions for professional helps to physicians etc, would be a feature

In this way it is believed that a group of our existing professional pharmacists would be encouraged and helped to render better service to the medical profession and the public also that these pharmacies would be justified in appealing to physicians for support as a group and that physicians could ethically recommend their patients to have their prescriptions filled in these pharmacies, registered by the "National Council "

There is nothing in this plan to prevent any pharmacist participating in this program It will not require more than every registered pharmacist is now expected to offer Large organizations of department store type could readily meet all requirements by establishing a properly organized professional department George B Evans demonstrated the practicability of this many years ago

GROUP 2—THE HOSPITAL PHARMACIST

In the 1933 Hospital Standardization Report of the "American College of Surgeons" will be found the "Manual of Hospital Standardization" which sets forth the standards which must be maintained by a hospital which is to receive recognition by the medical authorities in this Country These specifications are accepted by the American Medical Association and by the American Hospital Association

Under "Pharmacy" the following statement is made

' Many hospitals have a pharmacy with one or more registered pharmacists employed either

part or full time The managements of several institutions believe their pharmacy afforded a financial saving To increase the economy relative to expense of medicine, the professional staff was requested in many cases to limit the amount of proprietary medicine prescribed in hospital practice and make use of their personal prescriptions for compounding drugs The use of a carefully worked out hospital pharmacopœia tends to increase economy and efficiency "

The truth of this statement has been throughly proven and the object of the sub group, dealing with the pharmacy of the hospital would be to first determine the minimum specifications for a hospital pharmacy covering the personnel the stocks and their handling the library and apparatus and other features such as manufacturing and buying

The ultimate saving to the hospital is another phase of outstanding importance since the adoption of this program must justify itself economically by more than paying a salary sufficient to insure the employment of a well trained pharmacist who would be a member of the official staff of the hospital

The pharmacist should have an educational background which will enable him to meet the medical staff with justified confidence, bringing to the group a knowledge of drugs and their action, combinations and dosage forms

When properly developed the installation of such a properly manned pharmacy should become one of the requirements for the registration of the hospital

GROUP 3—THE U S PUBLIC HEALTH, MILITARY AND NAVAL PHARMACISTS

This Council would endeavor to work, in coöperation with the Governmental organizations in the development and extension of this phase of pharmaceutical service

The author said that Pharmacists R R Gaw of Pittsburgh, H A K Whitney of Ann Arbor, and Mr Sechrist of New York, would discuss phases of professional pharmacy

Mr Whitney stated that pharmacists need the educational background which fits them to meet the medical staff on an equal footing He referred to the economy resulting from the employment of a pharmacist by a hospital He discussed the paper[1] and referred to them in his remarks, which follow in part

"The services that are available by pharmacists are mentioned in one of these papers together with other features of a pharmacist's activities outlined through conference with the medical staff the economical administration of purchases of medical supplies, and the records and control of narcotics and alcoholics which features a properly trained pharmacist in the smaller hospital might include, is outlined on another page They are listed as 'Special Services' offered by some professional pharmacists in laboratories for clinical testing for bacteriological examinations and other public health work assistance rendered to physicians and dentists in their office practice, and so on

These subjects are included in the curricula of recognized colleges of pharmacy and it is a type of service that can be given by a properly trained pharmacist

' Perhaps a recital of some of the things that have been accomplished in our institution may indicate the growing importance of the pharmacists' services " Mr Whitney stated that it was not difficult to have the medical staff concur in the purchase of an ointment mill sterilizing equipment, etc This resulted in doing more and better work this had been largely done by nurses heretofore and their work is now directed to that which is properly in their line The pharmacy at the University Hospital is now as well equipped as a small manufacturing establishment One service has led to another and there has been little resistance especially when it could be shown there was a saving in costs

Prof Louis Saalbach spoke for Mr Gaw of Pittsburgh He is well acquainted with McKennan Pharmacy and the success it has made in interesting physicians and supplying their special needs and prescription work He stated that this institution was developed from what was formerly a commercial store It was taken over by a colleague Mr O F Wolf who converted it into a professional store He was not even a graduate in pharmacy but he had the profession so much at heart that he devoted his entire life to the development of the professional side in that particular store and he has succeeded to such an extent that this store is known from

[1] Copies of these may be obtained from Prof E Fullerton Cook, 43rd St and Kingsessing Ave , Philadelphia, Pa

one end of the country to the other for the character of its practice and its association with physicians The speaker continued

"The Pittsburgh College of Pharmacy has charge of the pharmacy at the Fall Clinic under its direction and supervision One of his associates has direct charge of the laboratory and dispensing room He is continuously called in for consultation by the members of the staff of the Fall Clinic for information regarding the manufacturing of the different types of solutions He has opened their eyes to the things which can be done in a pharmacy and shown them that it is possible to save considerable money in the running of that clinic, which is a charitable institution

' At this clinic there is the opportunity of coming in contact with the medical student of the University of Pittsburgh because it is used largely as a teaching institution The senior class sees the patients and diagnoses the case by the side of the physician who has charge of it They learn how to prescribe and come into the pharmacy to see what the preparation looks like

We feel that we have been doing a wonderful work in a professional line by definitely educating the younger physicians, and the younger dentists with whom we come in contact It might be well to bring to your attention the fact of how far this education can interest the dental profession

Last week, in Pittsburgh, at a State association meeting we were requested to make some kind of of an exhibit The exhibit was made under the auspices of the AMERICAN PHARMACEUTICAL ASSOCIATION, arranged by the members of the staff of the School of Pharmacy At that particular demonstration we interested more than six hundred dentists, and at the same time that we had the demonstration, the manufacturers were endeavoring to acquaint them with some of their preparations

The dentists were greatly interested in the display made by us particularly in tooth powders and other preparations of that kind which the pharmacist can make, even including such substances as temporary fillings, for which the dentists have always supposed that a considerable amount of technique was required They were given a formula and samples of material prepared by the School of Pharmacy and advised that they could take that formula to a pharmacy and have it compounded by the pharmacist in charge

'The dentists assured us that they would ask us again at some future time to make displays of an educational character at their meeting, because they are very much interested in that type of work I feel that the pharmacists of the country can in their own communities, come in contact with their medical and dental organizations and stimulate professional pharmacy along the lines outlined by Professor Cook In my opinion the future of pharmacy and the relations with other professions rests largely in the hands of the younger men who are starting out and who we are trying to put on the right track at the school of pharmacy '

President Swain said the hour was getting late and he asked the speakers to condense their remarks so that all who desired would have an opportunity to speak

Mr Sechrist, of New York felt that every hospital pharmacist can endorse the outline of the report He was of the opinion that if a provision was made for a contact man from a committee to work with the physicians that he could do much in promoting the well being of the hospital pharmacist It is difficult for example to go into the operating room and advise the surgeon what to use, and how much to use He said that at the New York Hospital they have a formulary committee Its inception is due largely to the efforts of Dr R A Hatcher and he has designated various members of the staff to particular positions on that committee who are used as contact men for the surgeon It is largely in that way, by making that contact man feel the need for the things that we are trying to impress Very often it is difficult to contact them, we may try for weeks and miss "

We have the proprietary situation which is to be found in every hospital Some preparations are very expensive and the interne prescribes them frequently and in quantity because the detail man has probably, spent the day before with him, the pharmacist must abide his time "

He was of the opinion that if a certain friendship can be built up among some of the doctors through a committee appointed by the Medical Director that a great deal can be done to promote rational therapeutics Economy has been stressed but after all, especially in research institutions we owe much to the training of the younger men who are going to write prescriptions, they are the ones that really should be guided in the channels of rational therapeutics

Dean Edward Spease did not know he would be called upon to speak and would confine himself entirely to principles, and not to details He said in part

"In Cleveland, for a period of years, we have been working on this problem We felt that true pharmacy, if it is to succeed, must come through the door of the hospital, and a student must be trained there just as the medical man, the nurse and the dentist To that end we have worked with our university hospitals, the pharmacists in the hospitals are on the teaching staff of the School of Pharmacy and they are members of the faculty with university appointment

Once each month the Pharmacy Committee in the hospital meets, it is made up of a representative from each service in the hospital—medicine surgery obstetrics We have no member from the pathology division and we haven't asked for one The pharmacists and the directing pharmacists and those six men consider the medicine that is to be used in the hospitals We do not tell the doctor what he shall use it is a very different procedure We have tried to work out a series of principles, which we know will be an enormous saving to the hospitals we do not say to our medical men that a proprietary is wrong because it is a proprietary or a specialty and should not be made by a manufacturing house It must be demonstrated We are working out and have already recommended our medical council of our hospital group, and the medical council is made up of all these services including pathology and the administration We have recommended to them a policy on medication and that policy I am sure, will be adopted This whole program you will be able to read as it has been accepted for publication It will soon be out and you can then get it, with a photograph of what we are doing I could give you the detail, but I think all you want to day are the principles In addition to that we felt we had to do something with the retail pharmacist, something that we could build upon for the future

So we have formed an Academy of Pharmacy made up of those retailers who want to do the work as is outlined We have had the heartiest cooperation and support from the medical profession of the city three members of our Academy of Pharmacy and three members of our Academy of Medicine have constituted a joint committee to work it out and it has been passed by the Academy of Medicine

' We feel that those are the principal things that we have accomplished during the recent months I have been studying this problem for nearly eighteen years, and have had this relationship with the hospital now for nearly three years and this Academy of Pharmacy for nearly four years, and they recognize us within the hospital group on a basis of equality with the members of the medical profession We have a great many plans for the future which it is unnecessary to go into

As far as savings go of course, it can be put upon that basis, because our savings last year for our organization were somewhere in the neighborhood of thirty thousand dollars That doesn't include entirely the manufacturing of pharmaceutical preparations In our School of Pharmacy we have a control laboratory Those that need to go through laboratory procedure are sent from the hospitals and the man in charge of that is a very practical man a man who has had commercial manufacturing experience

"We are going into the textiles and perhaps, food some of that we do now, we look after the milk creams, etc We have definitely demonstrated to the organization the worth of pharmacy and we have had it in turn expressed to us not only in rank and recognition, but financially "

George Secord said he was very happy to be here this afternoon, and to listen to this very interesting discourse on professional pharmacy He knew of the work that Dean Spease has been doing and that is being done by Mr Gray, and various other hospital pharmacists in Chicago

The work he has been doing is strictly professional, but there have been no special features of development in testing and the preparation of ampuls and similar preparations which are handled for hospitals and the hospital physicians

He said that in the business section of a city there is another factor to be considered While we may devote most of our time to the professional pharmacy, still we do not have the time and the conveniences which are available to those in the hospitals The first element in the city pharmacy attempting to serve the physician and the patient, is to make the business go In my store about twenty nine feet of laboratory space is devoted to the manufacturing of pharmaceuticals and the compounding of physicians prescriptions About sixty or sixty five per cent of the receipts in the store are from pharmaceutical services and the sale of drugs, crude drugs and pharmaceutical preparations

'I highly commend the work which is being done and have hopes some day, after we get out from under this terrific strain of organizing work which has been piling on us for many years to make certain changes in my own business, which will permit of the doing of work along this line I had hopes of that several years ago, but certain conditions determined otherwise, and I have felt since that we have had a great loss "

William Gray said, ' A symposium was given on this subject at the last meeting of the Chicago Branch, A PH A , which I hope will be published in the JOURNAL We gave three different phases I might say, speaking for the Pharmacy Committee in our hospital, they have about one hundred members on the staff, and they supply anything that the medical man wants no matter whether it is for research or other purpose We supply him and give service "

Henry Brown, of Scranton Pa , said that last fall a meeting of doctors, dentists and pharmacists was held in Scranton There was an attendance of about four hundred A number of able speakers took up the various angles of pharmacy He made a display of a number of U S P and N F preparations, a number of dental preparations, a number of treatments that were original Dentists wanted preparations different from the regular standard formulary preparations 'I made one, that was tried out successfully, containing thymol iodine with menthol, and sterilized, excellent reports on that have been received Various antiseptic solutions were prepared The reception was very pleasing, that is, the comments of physicians and of dentists, they have appreciated the various formulas, which were printed on the tubes with the approximate price attached Comparison with the other preparations that they have used was very favorable, they appreciated the display and the returns I checked up on in the county, about two months afterwards, showed that the physicians and the dentists were very much interested in the work that was done and was displayed on that evening

'Before the end of the meeting they had us promise that in a short time, or in a few months about twice a year, we would have another meeting of the same type "

Dean George C Schicks was called on by President Swain He had jotted down a few things as Professor Cook was reading the plan which may, possibly, result in a nucleus for something to be used as a standardization for drug stores throughout the United States It mentions hospitals, and the possibility of pharmacists' employment in such institutions He continued

"I visited at a medical meeting a few weeks ago, where a survey was read which spoke of the drug department in the hospital in many hospitals, and the survey made of hospitals in the large city It brought out the fact that from the sale of drugs in the hospital department there was made a considerable profit, and that profit was used, which amounted to thousands of dollars in some instances to help pay the expenses of that hospital That was something new to me and I listened It may be that that would be an incentive for some hospitals to employ pharmacists, that do not at the present time, so that they may, perhaps, change their medications to those in the U S P and National Formulary

'I am well aware of the fact by personal contact with hospital pharmacists, and that this is a splendid opportunity for retail pharmacists to realize the contribution that the hospital pharmacists can make If we want physicians and dentists to write prescriptions it is very necessary that they be told something about the United States Pharmacopœia and National Formulary prescriptions It is quite necessary that this be presented to them in a form that they can use

"In our own State we are having splendid coöperation from the medical and dental professions, and the medical men have asked us to show them prescriptions They want us to translate prescriptions into a National Formulary product There is real possibility for contributions that the hospital pharmacist can make to the retail pharmacists in teaching these hospital internes the medical men and dental men, the art of writing prescriptions and what to write for

' In New Jersey, a medical man is putting out a phamplet with three hundred prescriptions in it, which will be adopted I understand, by the medical department of New Jersey, and supplied to medical men showing them what to write for, for U S P and N F products in prescriptions

"Most of the speakers have said something about dental men and most of them in a favorable way, showing that there is a real opportunity for prescription writing on their part I know they will write them if they know how to write them The pharmacist who can get them to write them is not the pharmacist who ridicules, but the pharmacist who assists and shows them how to write them in a very constructive manner If the pharmacist goes about it in this way, I

am sure that the dental men will respond Since you have many representatives on this program, if it is possible, I would ask that a representative from the American Dental Association be named in the plan "

President Swain felt that this is one of the most important phases of our deliberations He would like to see the time come when it will be possible to set aside an hour or possibly two hours in each one of these annual conventions of the AMERICAN PHARMACEUTICAL ASSOCIATION for such discussions That a stated period might be set aside just for a clearing of the ideas which have accumulated during the year and the experiences which the various ones have had He concluded by saying that these rather impromptu and sketchy discussions illustrate in a very pointed way just what value there is in having these experts and these men of broad experience in these fields give us the benefit of their own knowledge of the subject

Mr Whitney said he hoped that this might be brought up In an article he had presented in another section, as Dr Schicks has said, dentists are asked or have been asking for assistance He read a statement by Dr Charles B Edmunds, of the University of Michigan in his chairman s address of the Section of Pharmacology and Therapeutics at the Detroit meeting of the American Medical Association ' The pharmacologist cannot be held responsible for instruction in the practice of therapeutics In only rare instances does he have access to the clinic The internes, whether they will or not must be given such training If the practical therapeutic knowledge of recent graduates is limited to proprietary preparations teachers are responsible Their methods of practice are reflected in their students "

After concluding hopeful remarks by President Swain the Second General Session was adjourned

THIRD AND FINAL GENERAL SESSION

The Third and Final General Session of the AMERICAN PHARMACEUTICAL ASSOCIATION was convened at 8 30 P M by President R L Swain The minutes of the Second General Session were read and approved

Moving pictures of convention features were shown by Chairman R W Rodman of the Press Relations Committee and much enjoyed by those in attendance

President Swain stated in behalf of Mr Rodman through whose courtesy the moving pictures were shown of the dedicatory exercises of the American Institute of Pharmacy, that the film will be edited proper headings given to it and it will then be exhibited before the various State Pharmaceutical Associations this summer The film will then be given to the American Institute of Pharmacy for preservation

The final report of the House of Delegates was read by Secretary Kelly

Secretary Kelly said it is customary as a part of this report to request that the chairman of the Committee on Resolutions summarize these resolutions or call them to the attention of the General Session by title

Chairman Leonard O'Connell presented the resolutions by title (See Resolutions in May JOURNAL pages 474–476)

The Chairman moved the adoption of the resolutions, seconded by Henry F Heim The report was adopted by vote.

Secretary E F Kelly said that in accordance with one resolution submitted by the chairman of the Committee, he was requested to submit the following proposed amendment to the By Laws of the ASSOCIATION to carry out the purpose of that resolution That Section 1 of Article III of the By Laws be amended by the insertion of the words 'The Immediate Past-President " the purpose being to make the immediate past president an *ex officio* member of the Council in accordance with the recommendation of President Swain The Secretary stated that under the By Laws it would be necessary for this proposed amendment to lay over to the next session of the ASSOCIATION and be acted upon at that time That will serve to put this plan into effect after this year

President Swain stated that no action is required at this time

The Chairman of the Scientific Section was presented to report on the Ebert Prize

Chairman L W Rowe reported that no Ebert prize is to be awarded this year

L S Williams requested to speak under unfinished business

He hoped the members would not consider it presumption on his part to take the time of

the ASSOCIATION, but he had something on his chest He referred in a happy vein to the fact that he and President Swain were classmates and recounted some of these school events He was proud of the fact that he and President Swain were classmates and spoke in part as follows

'Dr Swain graduated from the College of Pharmacy twenty five years ago this month The class of 1909 watched him when he received honorable mention for merit He was the first one on that list, and that is authentic, because this is a program of 1909 He also won the Simon Medal for superior work in Analytical Chemistry and from then on he has been going up the line

We had a rather small class of twenty three members Six of those members died, six of them are not in Baltimore living in some other state, there are only seven in the City, but we feel very proud of that class One of our classmates is a teacher in the School of Pharmacy in the University of Maryland two of them are former presidents of the Maryland Pharmaceutical Association, one of them has just been appointed by Governor Ritchie to the Board of Pharmacy Our *Honor Man* Doctor Swain, has attained the high office of President of the AMERICAN PHARMACEUTICAL ASSOCIATION

I have been a member of the AMERICAN PHARMACEUTICAL ASSOCIATION for twenty four years, but have only attended two conventions, the one in Baltimore and the one here I didn't have a chance to get into any of the meetings in Baltimore because I was trying to help entertain the visitors, but this year I have attended as many sessions as I could

Mr Williamson said yesterday that he had watched the American Institute of Pharmacy from the time the spade had been put into the ground until it was finished I was unable to get over here when the ground was broken until Tuesday, a week ago I hadn't seen the building and when I drove over and went down Constitution Avenue I sat in the machine and looked with awe at the building

I feel that it is my building as it is your building, I feel that I have vital interests in that building because it represents the highest ideals of pharmacy

I know of the great amount of work that Dr Dunning has done I was sitting rather far back on the steps of the approach listening to the dedicatory exercises, and when I listened to President Swain a lump came up in my throat, and I couldn't help saying to those that were near me, That is my classmate up there '

I feel very proud of you, Dr Swain The class of 1909 is very proud of you, and at this time, the members wish you to accept a little token of its esteem and affection for our classmate Bob Swain "

In responding, President Swain said he wanted the members to share this honor with him so he asked Secretary Kelly to open the package

He referred to Mr Williams as one of the most unique pharmacists he had ever known

"In his drug store in Baltimore City, there is to be found probably the World's finest collection of old pharmacy show globes, so much so that his place has become the center of interest on the part of those who have shown a love for those old pharmaceutical symbols

Not only has he done that but he is starting his second collection of old drug store scales He has some very unique specimens and is fortunate in collecting the history of each and every one of them In addition to that he has a unique collection of old drug store mortars and pestles He seems to have an uncanny ability to collect these things There has not been a drug store closed for years that Lawrence has not made it his business to find out whether there were articles of this kind for his collection Those of you who were fortunate enough to be at the dedicatory exercises noticed in those rooms at the American Institute of Pharmacy some fine specimens of show globes Every one of them was donated by Lawrence Williams to the American Institute of Pharmacy and if you were to go into his store you wouldn t think any of them had been re moved '

President Swain said he greatly appreciated this evidence of esteem of the Class of 1909 and the mere fact that that esteem has survived the stress and the toil of twenty five years makes him appreciate it all the more He referred feelingly to his associates and the class history, he assured them that this occasion would be celebrated in a fitting manner later on

President Swain said that the time had come for the most important and impressive portions of the programs—the installation of officers Before taking up this part of the program, he deemed it fitting to indulge in a two or three minute resumé of the year during which he had been per mitted to serve this organization in the capacity of its president He said in part I feel in the

year of all years I have been honored beyond my merit because it certainly must remain for a good many years to come, one of the most outstanding, if indeed not the outstanding year in the history of this time honored organization

I would like to go back a year or two when the American Institute of Pharmacy had passed from the legendary, visionary days, so frequently referred to and so truthfully referred to by others until the later days of that project when the project was beginning to be launched as an actuality

I remarked last year at the Madison meeting just how fortunately my predecessor, Dr Philip was in having served as a president of this organization during that year in which stone was piled upon stone in such a superbly beautiful manner, that in due course we were permitted to see in actual marble this classic institution which we dedicated yesterday

I have made calls at the American Institute of Pharmacy during the year and on most every occasion I have gone out to the front of it, and I have looked over that tremendously impressive vista and I have turned my back upon the Lincoln Memorial and gazed in silent admiration at that exquisite piece of architecture which we now call Home '

At times in spite of the fact that I actually saw it in spite of the times when I have been face to face with it I could actually reach up and touch the coldness of its marble, and I have sometimes almost questioned whether or not the thing is actually there So it is not often given to people to see the realization, the actual consummation of their wishes so devoutly to be desired but this year and the year preceding saw slowly but persistently this achievement of this Asso CIATION

It shall ever be my most cherished memory to have presided over this organization during its dedicatory exercices '

President Swain continued Some writer has said that the most permanent thing the only permanent thing in this journey we call life, is change That is a rather trite statement but if you will for a moment grasp the suggestion, change is pretty nearly the only permanent thing that we have And so now I come to a changing of the ways, to the crossroads as it were

' As I stand here on this particular occasion and at this particular moment I represent the eighty second person who has relinquished the honor of the presidency to another

I don t know just what I should say as to what my emotions are but I am conscious of a rather commingling of emotions I can say frankly, when looked at from one point of view, that I rather regret—I might say quite truthfully that as I pass the gavel over to my successor worthy as he is I do it just a bit reluctantly, and that reluctance is not because there is any doubt in my mind as to his great ability to carry on the work, certainly as well as I have done and perhaps a little better but because it will necessarily prevent me from associating as closely and as intimately with a man with whom I have been permitted to associate with rather intimately over the last twenty five years And while, as he knows this will not in any sense mark any break in the friendship between Dr Kelly and myself the part that I regret is that I will not be able to see him quite as frequently as I have in the past '

He referred feelingly to the sterling qualities and efficient services of Secretary Kelly his unusually genial and kindly demeanor and his high place in pharmacy

President Swain continued As I have looked back over the history of this organization I sometimes have felt that possibly presidents might be more or less of a nuisance They come for a moment they bask in the sunlight and then pass on And yet when I think that they might be considered a nuisance I am impressed with a tremendously important accumulation of this material which is to be found in the YEAR BOOKS and the PROCEEDINGS of this ASSOCIATION, and then I am conscious of a deep feeling of admiration for the men who have served as the presidents of this organization during the last eighty-two years

I wish it were possible for some person with the proper touch and the proper management and the proper use of words to go back over that vast accumulation of material and edit it, bring to life probably in a volume or two, the gems with which this entire list of books is interspersed

Now I am about to pass out of this chair, so far as the presidency is concerned, and I want to give you just very briefly some little definite interpretation and it will only be very briefly I said that I would relinquish this gavel with a certain amount of reluctance but looking at it an another way I am looking at it in that way with a certain amount of pleasure I *find*

that and I rather suspect, that every person who has served as the president of this organization has had exactly the same reaction

' There have been times during the last eight months when I have been tempted on more than one occasion, to give expression to feelings which I knew I could substantiate with facts, give expression to conclusions and impressions which I knew were absolutely the truth, but yet I always felt on my shoulders a restraining hand I always felt a sense of responsibility, that perhaps through some peculiar interpretation or misinterpretation of what I was going to say might work to the disadvantage, it might work to the detriment of something far larger

"If there is anything a person learns from going through the office of the president of the AMERICAN PHARMACEUTICAL ASSOCIATION, it is a sense of responsibility, and one of the finest things about it all is that the traditions, the history, the accomplishments, the ideals, seem to stand by you as restraining hands So, if by any chance I have broken through and done anything at all in an official way that might possibly be considered as not to the interest of the ASSOCIATION, ascribe it if you please to a complete lack of knowledge on my part that it would have that implication or that effect "

I am going to repeat what I have said about an hour ago to a former president of this ASSOCIATION, and as I said in my presidential address, that to be asked to serve as a president of this organization, even within the brief period, is certainly the greatest distinction within the power of pharmacy to give, and to have been thus honored at your hands for a brief period shall always remain my most cherished memory "

President Swain requested L L Walton, a former president, to again serve as Master of Ceremonies He asked that the elected members of Council be presented for installation H A B Dunning S L Hilton and W Bruce Phillip

The Master of Ceremonies said "Mr President, I have the honor to present to you this triumvirate, three gentlemen whose services to this ASSOCIATION have been so highly valuable that I haven't words sufficient to express them I can assure you that the work of the ASSOCIATION will continue to progress as it has in the past "

They were duly installed

The first vice president, George D Beal, was presented for installation, as the distinguished son of a distinguished pharmacist

The second vice president, Oscar Rennebohm was presented by proxy, A C Taylor representing him

C W Holton was declared installed as treasurer

The Master of Ceremonies presented E F Kelly for installation as secretary

President Swain considered it more than an honor, he considered it a deep personal privilege to install Secretary E F Kelly

President Swain regretted, due to absence, that it was not possible to install the honorary president, J K Lilly

The Master of Ceremonies then presented the president elect Robert P Fischelis, he said "For a number of years, I have looked forward to the day when we might have as president of this ASSOCIATION, Dr Robert P Fischelis He has rendered many distinguished services for this body and in other respects and notwithstanding the very high standard of your administration which you are now about to complete I believe in handing the work over to him, that it will be maintained with credit to himself and with honor to pharmacy "

President Swain said it had been his privilege to know Dr Fischelis for a number of years As colleagues and in the National Association of the Boards of Pharmacy he had learned to appreciate his ability, his sometimes uncanny understanding of problems, and a seeming ease with which he worked out difficult problems He stated

' Just a short while ago, I was working my way through some of the early (about twenty five or thirty years ago) proceedings of the AMERICAN PHARMACEUTICAL ASSOCIATION, and I was a bit surprised, and equally as much delighted to find out that even in that early day, the papers were finding their way into the JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION and the YEAR BOOK, and the PROCEEDINGS of the AMERICAN PHARMACEUTICAL ASSOCIATION from the pen of our president elect

'During that time or since those years, he has held a number of important pharmaceutical positions, any number of which might be considered a sufficient reward for pharmaceutical effort

and taken altogether, present a very impressive record of accomplishment for a person who has not yet reached middle age

And so in passing this emblem of office over to Dr Fischelis as a president of the AMERICAN PHARMACEUTICAL ASSOCIATION, let me state to him quite frankly and quite proudly that I know that honor is not unknown to him

'Let me state also quite proudly and quite frankly again, that I entertain not the slightest misgivings as to the high standard of services he will render to this organization A careful study of the work the man has done, and a careful study of the principles for which he has consistently stood and an equally careful study of the courage which he has on several occasions manifested in his activities in the State of New Jersey, where he has established himself as a great leader of pharmaceutical opinion will show you that underlying it all has been a deep sense of responsibility and an unusually intelligent grasp then of the direction in which he wanted things to move I consider it not only as a pleasure but a privilege to be able to greet a friend of many years' standing and to place upon the lapel of his coat this insignia of honor"

The presentation was made and the members arose and applauded and then President Fischelis turned the gavel back to President Swain to conclude this meeting

President Swain said A distinguished statesman of the State of New Jersey knowing of this event, has expressed the desire to me to be present, and to participate Whether he wants to reflect his glory upon Dr Fischelis or whether he wants to bask in Dr Fischelis' glory I do not know, but at any rate I am going to present to you for whatever remarks the gentleman may desire to make, the Honorable Delain Powers, Congressman of the Fourth Congressional District of the State of New Jersey

Dr Powers replied that President Swain asked him about a half an hour ago to make a few remarks on this occasion He said

"I have the profound honor this evening and the distinctive privilege, Dr Fischelis, to present you, my friend my neighbor, my fellow townsman, a life membership in the New Jersey Pharmaceutical Association This, Doctor Fischelis is given you by the Association, because of the hours, days and the years of toil in their behalf I know that I am expressing the wish of every member when I say to you, Dr Fischelis that we are proud of you, New Jersey is proud of you, and we wish you the utmost success in this your latest honor"

President Fischelis replied 'I greatly appreciate this presentation, and particularly appreciated the fact that this Association has asked you to come here and present it to me'

Secretary Kelly spoke as follows 'I would like to express to the retiring president my sincere appreciation of the kind references he made to me, and to assure him that it has been just as great a pleasure for me to serve during this year with him, and I am sure we shall find it an equal honor to serve under our incoming president"

"This has been a very unique experience for all of us this week, and we have had the pleasure of taking part in exercises that are very uncommon to even an organization of this distinction, and of this age

'I couldn't help but be impressed the other day during the dedicatory exercises, with the thought that we were not only dedicating a building, but we were continuing the work of a great many distinguished pharmacists both men and women who preceded us I couldn't help but think of the great satisfaction I know many of them would have had in that great occasion

'It seems to me that in a certain sense we were copying their careers and I hope that those who had the privilege of seeing this can realize what a great happiness it was to do that

'In addition to other unique experiences this week for me at least I have been asked to perform a very unusual duty, or to convey a very unusual message In a peculiar sense it is a distinction to be requested by your Father, President Fischelis, to present for him to you, a message of congratulations and good wishes

"I don't know when I have had a greater honor than to represent the father of the new president I would like to read this telegram

My dear Robert Hearty congratulations to you on this occasion and best wishes for a successful term of office Your happy father'"

I take great pleasure in shaking hands with you as the representative of your father"

President Robert P Fischelis responded

Dr Swain Fellow Members and Friends No one who has been present at our meetings this

week and at our dedicatory exercises on Wednesday can help being impressed with the responsi bilities that will go with the presidency of this ASSOCIATION in the coming year Of course, I realize in taking over the office that the active routine work of the ASSOCIATION is well taken care of by our good Secretary our conscientious Editor and by the members of the Council and others who will function as they have in the past

Nevertheless there is a certain responsibility for leadership which naturally comes to the presiding officer It is my hope that in the coming year I may be able to meet these responsi bilities as they come, with some degree of satisfaction to you

I am happy to night to see here in this group some of the people who perhaps remember when I first became active in pharmaceutical association work in my native state Pennsylvania It was my privilege to work there with some of the leaders who have since passed away but who were then doing the big things which we are still talking about to day and which we are pointing to as part of our splendid heritage

It is particularly gratifying to me to have had Dr Walton present me to the President for installation He has been my mentor on many occasions and I owe much to his encouragement and advice I see also Louis Emanuel and Samuel C Henry who were then very active in the Pennsylvania Pharmaceutical Association and my good friends Mr and Mrs Peacock, who not only at the State conventions but at other times in the City of Philadelphia gave me their kind and helpful advice There are of course many others who have helped me in the years gone by and upon whom I expect to call in the coming year in behalf of the ASSOCIATION

Now, I know you do not expect a speech at this time and I do not intend making a formal or even an informal address However I do feel there are thoughts about the future in all of our minds and perhaps you should know a little bit about the way I am thinking about some of our problems

The Headquarters Building has been dedicated It is now occupied by our officers The glamour of the dedication ceremony and the publicity connected therewith will soon be matters of memory The building of course will stand always as a monument to all that is fine in phar macy, all that we expect in the way of professional progress I look upon it however from this time on more as a living pulsating thing the source of a stream that will energize and accelerate the life blood of the body pharmaceutic

I visualize it as a coördinating agency not displacing any worth while activity that is go ing on elsewhere, but doing that which we have so long lacked in American Pharmacy namely bringing to a focus these various activities so their full force may be felt wherever and whenever it is necessary to impress upon our people the importance of the tasks in which we are engaged

I was impressed this week with the discussions in the various Sections and in the House of Delegates I did not take very much part in them because I was listening intently

I think it is absolutely necessary for us to keep our finger on the pulse of American Phar macy We know we are not only in a transition stage in our own profession but also in the gen eral affairs of life and I feel that something must be worked out of all of the things that we have planned which will give encouragement to the men and women who are laboring in the field of pharmacy, far removed from the things which we have seen and done this week but nevertheless affected very much by them

Something has been said about increasing our membership and I am of course very anxious to see that the membership is increased It was of interest to me to note the many suggestions made that membership in the AMERICAN PHARMACEUTICAL ASSOCIATION should mean something more than just belonging to the ASSOCIATION that it should be more or less of a badge of distinc tion in American Pharmacy, and for that reason I feel we should give consideration to creating something distinctive about the membership

It may be worth considering the plans used by the American Association for the Advance ment of Science, the American Public Health Association and the American Medical Association where general membership is open to anyone but where there is a second or higher classification Members may qualify as fellows" and this classification carries with it additional dues and the privilege of holding office and serving on committees I think that sooner or later we shall have to study very carefully some revision of our membership classification

We have had an unusual meeting and the dedicatory exercises of course have been the high point Next year's meeting will naturally be different from this one and we are looking ahead to

Portland, Oregon, as the next stop in the line of stations along the highway this ASSOCIATION is traveling I am glad we are going into more or less virgin territory for we shall have an opportunity to do some constructive work in bringing to the people on the West Coast the activities of the AMERICAN PHARMACEUTICAL ASSOCIATION I hope that all of you will coöperate throughout the year and endeavor by your interest and attendance to make the Portland meeting an outstanding one President Swain and his co-workers have set a very high mark for his successors to shoot at but we are going to do our very best

It is very pleasing to have as our First Vice President Dr George Beal whom I count among my friends and on whom I know I can call when necessary to assist our progress during the year

I am hopeful that the Council will so arrange its business that sometime during the year, there will be a meeting, at which we can perhaps submit progress reports, and map out certain activities more definitely and obtain consent to carry them out I am also hopeful that I may be granted a page or two in each issue of the JOURNAL to maintain a monthly contact with the membership

Dr Swain, I greatly appreciate your remarks regarding my work, and you need not feel for one minute that you are going to rest easy in the coming year I intend to avail myself of your advice and counsel and I know that Doctor Kelly already expects that and he is not going to be disappointed

Announcements were made by the Committee on Entertainments

There being no further business the Chair declared the Eighty-Second Annual Convention of the AMERICAN PHARMACEUTICAL ASSOCIATION adjourned

---

ABSTRACTS OF PAPERS PRESENTED BEFORE SECTION ON EDUCATION AND LEGISLATION A PH A, WASHINGTON MEETING 1934

'Research in Pharmaceutical Education," by W J Husa

In pharmaceutical education a great deal of attention has been given to improvements in curricula and teaching methods There is one phase of pharmaceutical education whose paramount importance must never be lost sight of, *i e*, the correctness of the material that is taught A discussion is given of the factors involved, such as the training of the teacher and the accuracy of available text and reference books The importance of research carried out for the improvement of teaching is stressed Examples are given of successful research of this type which has cleared up discrepancies in the textbook and thus has lead to improved teaching

'Amendments to the Federal Food and Drugs Act Proposed by Doctors Wiley and Kebler Nearly a Generation Ago,' by L F Kebler

This paper calls attention to various amendments that were proposed and embodied in Representative Richardson's bills in 1911 and 1912, after President Taft urged amending the Food and Drugs Act to provide for the breach caused by the United States Supreme Court decision The amendments in brief cover all advertising separate and apart from the package, therapeutic devices, cosmetics, increasing the number of drugs to be declared on the label and a method for controlling irresponsible parties sending medicines direct to the consumer The hearings held on the bills are briefly reviewed and attention called to the procedure that resulted in amending the law by including the phrase "False and Fraudulent" This phrase is now much discredited although at the hearing it was considered an all-sufficient cure for the injury caused by the decision Dr Wiley and Dr Kebler did not favor this amendment

'Demonstrating the Practical Application of Subjects in the Pharmaceutical Curriculum," by V Lewitus

The writer indicates how, by means of a simple experiment carried out by pupils in the drug store, as part of the introductory lesson in materia medica, students will convince themselves as to just what proportion of the theoretical training they are about to undertake will actually come into play as a part of their every day duties in the drug department The students keep a tally of each sale over a period of one day, and classify these under the headings of Chemistry, Pharmacy and Materia Medica, the latter including toxicology This inventory furnishes them with evidence which establishes the worthwhileness of the major subjects in the pharmacy curriculum

HOUSE OF DELEGATES, AMERICAN PHARMACEUTICAL ASSOCIATION

ABSTRACTS OF THE MINUTES OF THE SESSIONS HELD IN THE SHOREHAM HOTEL, WASHINGTON, D C, MAY 7–12, 1934

The First Session of the House of Delegates was convened by Chairman P H Costello at 1 30 P M, Tuesday, May 8, 1934, he welcomed the delegates present The roll call showed that a quorum was present and the House of Delegates was declared organized for business

The names of delegates and organizations represented follow The name of the organization or state is in Italics names of delegates in capitals and small capitals, and the names of voting delegates in bold face

The minutes of the House of Delegates are printed here and to avoid duplication in printing will also answer for the reports of the transactions made to the General Sessions—the reports are abstracts of the minutes

The names of the delegates follow

FRATERNAL DELEGATES

Brooklyn College of Pharmacy—F C A Schaefer, New York City W C Anderson Brooklyn

Secretary Stanbury of the Canadian Pharmaceutical Association was recognized and extended greetings and best wishes from the pharmacists of Canada

Chairman Costello thanked Secretary Stanbury

In the absence of Vice Chairman Williams, former Chairman Slocum was requested to take the chair while Chairman Costello read his address which was under the By-Laws referred to the Committee on Resolutions See pages 454–456, May JOURNAL, A PH A

Chairman Costello announced the appointment of the following committees

Committee on Nominations *Chairman*, W B Day, Illinois, Walter D Adams, Texas, H H Schaefer, New York, Wesley McClung Childs, Kansas, A Ziefle, Oregon, M N Ford, Ohio, R C Schultz Wyoming, G W Rhodes, Delaware, N N Brakke, North Dakota

Committee on Resolutions *Chairman* C Leonard O'Connell, Pennsylvania, Rowland Jones, South Dakota, John W Slocum, Iowa, A O Mickelsen, Oregon, R B Cook, West Virginia, R C Wilson, Georgia, W P Herbst, District of Columbia, W N Hankins, Florida, W H Rivard, Rhode Island

Upon request the reports of the Council and of the Treasurer were deferred until the Second Session The report of the Secretary was read and accepted for publication

REPORT OF THE SECRETARY

June 30, 1933 to April 30, 1934

This report will cover a short ASSOCIATION year and one of more than usual importance It will be limited so far as is possible, to such matters of interest as are not dealt with in the reports of other officers and of the special and standing committees As the Secretary's office cooperates with the officers and committees of the ASSOCIATION, a good part of his work is reflected in their reports

From the viewpoint of its general activities, the year closing with this meeting has brought improved conditions for the ASSOCIATION as compared to those of the preceding year and although the conditions are still far from satisfactory, there has been a decided change for the better, with indications that the improvement will be continued It has been necessary, due to reduced income from membership and other sources, to continue the reductions previously made in the operating budget, and to defer or forego activities which should have been undertaken As reported last year, it has not been necessary to discontinue or materially reduce any important activity and some new ones were begun

Considered altogether, the ASSOCIATION has come through the recent trying times very satisfactorily and, again the credit can be given to those who long ago determined its objects and policy and built up its very sound economic structure, to its interested and loyal members who have supported it so faithfully and to the officers who have administered its affairs so conservatively

The ASSOCIATION has also undergone during this year, a fundamental change in occupying for the first time in its more than eighty years of existence, its own home No estimate can be made of what pharmacy and the ASSOCIATION have lost during these years, through the lack of a home of its own where the wealth of historical material that it has possessed at some time could have been preserved where the various organizations promoting the profession of pharmacy could have been consolidated and provided with the required equipment and personnel, and where other activities so necessary to the advancement of our profession could have been developed

A splendid foundation has now been laid in the building and grounds which we are dedicating and a good beginning has been made toward utilizing them The partial occupancy of the building represents a great effort and future progress will be more apparent With the improved facilities now available, one may expect greater interest and greater results It is most encouraging to record that the ASSOCIATION during such disturbed times has carried this work to a completion which is beyond our earliest dreams and has been able to meet the increased expenses incidental thereto through its accumulated reserves

The 1933 Meeting—Following the usual procedure, the proceedings of the meeting were fully reported in the next three numbers of the JOURNAL, in this case the September, October and November 1933 issues, they were also reported in the pharmaceutical press and to a limited extent in the daily press

Our custom is to report the addresses of the officers, the proceedings of the Council, and the resolutions in the issues of the JOURNAL following the meeting, the proceedings of the General Sessions of the House of Delegates, the American Association of Colleges of Pharmacy and the

National Association Boards of Pharmacy in the second issue, and the proceedings of the five sections and three conferences in the third issue A complete report of the meeting thus reaches all the members within three months The papers presented at the meeting are published, as far as this is possible, throughout the year The number of papers presented and the interest in the work of the sections and conferences is steadily increasing and, while this result is encouraging it is becoming embarrassing These contributions must not be discouraged but it is necessary that the contributors economize in time and words as much as can be done The ASSOCIATION should as far as is within its power, provide the place in its program and those of its branches and in the publications for every discussion and proper dealing with pharmacy in order that its records may provide, as heretofore a complete review of the progress of the professions Such a comprehen sive plan, however, is expensive, and requires careful planning and supervision if the result is to be creditable to the profession

The ASSOCIATION is deeply indebted to the officers of the state association, to the officers of its affiliated organizations, to the officers of the sections and conferences and to the officers of the branches for the thought and effort which they give to the professional work carried on for phar macy during the year as well as at the annual meetings of the ASSOCIATION This work is more extensive and more fundamentally valuable than is generally appreciated by pharmacists or by the public

The pharmaceutical press should also be commended for the space and attention they give to professional pharmacy, and for the increased emphasis they place on the necessity for a sound professional policy

The resolutions adopted at the last meeting were promptly sent to the publications, to the state and national associations, to the boards and schools of pharmacy and to others interested The accompanying request that those resolutions of concern to each group be supported has been more generally complied with each succeeding year

Even though our annual meetings are well reported it is important that each delegate make a carefully prepared report of the meeting to his association and it is respectfully suggested that these reports do not deal with details but that they explain the accomplishments of the ASSOCIATION during the year and its plans for the future If each organization represented here should receive such a report, the work and influence of the ASSOCIATION would be better under stood and more generally supported by individual pharmacists

The 1934 Meeting —The District of Columbia Pharmaceutical Association promptly under took the arrangements for this meeting There was a serious delay due to the difficulty of deciding on the time for the meeting Governmental and other unusual activities have crowded the hotel accommodations of Washington beyond expectations However, the officers of the Committee on Arrangements, the Local Secretary and others interested have worked hard to make their visitors comfortable and happy as they trust will be the case The contributors and others who have cooperated so well deserve our sincere appreciation

The only changes in the standard program for this meeting are those made necessary by dedication exercises and the award of the Remington Medal The time allotted to the three divisions of the ASSOCIATION—the Council, the House of Delegates and the Sections and Confer ences—to carry on their work is now so crowded that it was not considered wise to curtail it even for such an important occasion

It was therefore decided to make such changes as were required, in the program of the Gen eral Sessions The dedication exercises proper will take the place of the first General Session usually held on Wednesday morning

The General Program —It is recognized that our program has developed into such a com plicated one as to be confusing to those not experienced To carry it out requires so many con current meetings of sections and conferences as to prevent attending all of them even for a short time It is already necessary for three affiliated organizations to hold their meetings in advance and if the present growth continues it will soon become necessary to consider either further sub divisions or the extension of the meeting over a longer period than one week

From my close contact with each subdivision now existing, I do not believe that any one of them could be spared as each is doing a necessary work Some consolidations might be worked out to good effect In the meantime, the patience and cooperation of those attending our meet ings are requested and will be deeply appreciated

The Headquarters Building—This subject will be given major consideration in other addresses and reports to be submitted later in the meeting The offices of the ASSOCIATION heretofore located at 10 West Chase Street, Baltimore Md , were removed to the Headquarters Building 2215 Constitution Avenue during the first week in January Although the building was officially accepted from the contractors on September 14, 1933 it was thought advisable not to occupy it until January 1934 in order that any minor defects which appeared might be corrected

Time and care have been taken in equipping and operating the plant, and in landscaping and planting the grounds These important phases of the undertaking are only partly completed as will be observed and they should not be completed hurriedly This is especially true of the library and museum which are comparatively new activities for the ASSOCIATION Only by experience can we learn how they can be made most serviceable, and how to avoid duplicating facilities already available in this wonderful city

We have operated the building long enough to learn that the annual cost will be surprisingly small considering the character and size of the building, the extent of the grounds and the superb location The low cost of operating is due to several causes First and most important the ASSOCIATION as a professional and scientific organization, not operated for profit, is exempted from taxation of any kind Then the building was constructed of the best materials and under very careful supervision and workmanship The plans for the grading and planting of the grounds were revised several times to simplify them and to reduce the initial cost

In addition every effort has been expended to eliminate the need for elevator and other special services, and by adopting automatic features wherever feasible The heating plant, the telephone service and the sprinkler system for the grounds are automatic in whole or part

The result is that the total cost of operation will not be a burden to the ASSOCIATION especially if the other professional organizations that are expected to later occupy the building bear a reasonable share of the operating cost

Under the tax exemption it is not permitted to accept rental from the building but affiliated professional organizations may bear their share of the actual operating cost The operating cost referred to does not include the maintenance of the library or museum or other added activities which must be supported by separate funds

The architects both of the building and grounds, the builders the firms that did the grading and planting and the furnishing have cooperated splendidly and were keenly interested in seeing that the work was in keeping with the character and location of the project

I should like also to record appreciation of the interest and support of the Commission of Fine Arts, the National Capital Park and Planning Commission the Commissioners of the District of Columbia, the Congress and the President of the United States As our purposes and plans were made known we have had splendid support and encouragement from those connected with the enterprise, and full recognition from the Government

For several years the completion of the building and grounds has required a great deal of thought and attention From this time, the splendid facilities provided should facilitate the work of the ASSOCIATION and should enable it to broaden and increase the scope of its activities This result will require the consolidation, in the institution, of the organizations and personnel now engaged in promoting professional pharmacy thus developing the closely associated directing group that our profession has so badly needed This first step of consolidation will add but little to the financial burden as many duplicating expenses can be eliminated

The power of a well-organized group representing as rapidly as this can become possible, the various professional organizations now affiliated with the ASSOCIATION is difficult to estimate This task and that of financing additional activities should have the active interest and support of all who are concerned with the preservation and the future development of pharmacy

The Progress of Pharmacy—However contradictory this statement may seem, in view of present conditions pharmacy as a profession is making steady progress

The four year course based on high school training is now in effect with few exceptions The number of schools and colleges now 67 is not too high although they could be distributed to better advantage The total number of students in 1931 was about 9900 and of this number about 2900 were graduated Probably both numbers are greatly reduced in the present year Considering the number of registered pharmacists in our country the number of pharmacists graduated annually will not replace the normal losses taken as a whole and over a period of time

Just now the conditions are, of course, abnormal With prerequisite laws in effect in forty two states and the District of Columbia and with the return of normal conditions, the excess of registered pharmacists should soon be corrected As it is, the unemployment and distress as reported to the ASSOCIATION is not so acute as in other professions The reasonable control of entrants into our profession should have careful investigation and study

There is evidently a growing interest in professional pharmacy among dispensing pharmacists, both in private practice and in institutions The demand for information on professional phases is increasing and guidance in this connection is a splendid opportunity for the ASSOCIATION

The laws now in effect in the states for the regulation of the private practice of pharmacy are reasonably adequate but enforcement of them is a subject of major importance Pharmacy should be represented on each board of health and on every agency regulating the profession Arrangements have been made for the compilation of a case book concerning court decisions affecting pharmacy and such a work should be of great value in this connection

The regulation of the practice of pharmacy in hospitals and institutions has not been so satisfactory Many of these institutions have not observed the state laws regulating the handling of drugs and medicines After a careful study, the ASSOCIATION decided that the best way to correct the situation was to request that a requirement covering pharmacy should be included among the requirements or essentials governing the admission to the list of registered hospitals of the American Medical Association

Our request has just been granted and in the recently published list of Essentials is one entitled 'Pharmacy" and requiring that ' The handling of drugs shall be adequately supervised and shall comply with state laws," which means that the practice of pharmacy in hospitals will in time conform to the same requirements as in drug stores This step represents splendid cooperation between the two professions and means much toward the protection of the public When the practice of pharmacy in the Army and Navy is placed on a satisfactory basis the entire field of practice will be on about the same status for the first time

Pharmacy and the Government —The relations of the ASSOCIATION with various divisions of the National Government will become even closer with the location of its offices in Washington

As previously reported, those who enter the Government service on a Civil Service status are now on a professional basis This applies to the Veterans' Administration, the Food & Drug Administration and to the various bureaus and divisions in which pharmacists are employed

In the three military branches, pharmacists have commissioned status in the Public Health Service are privates and non commissioned officers in the Army, and chief pharmacists in the Navy rank with that below ensigns The status in the Public Health Service is satisfactory although the number of commissioned positions is too small The situation in the Army is entirely unsatisfactory and that in the Navy, while much better, is not satisfactory

The ASSOCIATION, with the coöperation of other pharmaceutical organizations will not be content until pharmacy is placed on the proper basis in all three branches of service It is, of course, equally important to have available pharmacists with such training and experience as will ensure the satisfactory discharge of the duties expected of them The advancement in its educational standards has done most to change the attitude of the Government toward pharmacy

The ASSOCIATION has been deeply interested in the various measures proposed to amend or rewrite the Pure Food and Drugs Act It has coöperated closely with the National Drug Trade Conference in its efforts to promote a reasonable revision of this measure It will be recalled that this ASSOCIATION proposed and promoted the organization of the National Drug Trade Conference with the view that such an organization representing, as it does, every division of the profession and industry, would be an effective body to deal with matters of mutual interest and which are non controversial among its members In line with this policy, this ASSOCIATION has not taken individual action but has supported the Conference Its officials have also worked in close contact with representatives of the U S P in order to safeguard the interests of the Pharmacopœia and the National Formulary in connection with the proposed legislation As other officers of the ASSOCIATION will deal with this question in detail no further reference to it is necessary here The ASSOCIATION's delegates to the Conference for the present year are James H Beal S L Hilton and your Secretary

Other officers will also deal with the very important matter of the so called Retail Drug Code and the relations of the ASSOCIATION to this movement As is generally known, the Asso

CIATION supported the Code presented by the National Association of Retail Druggists When the amended Code was finally approved the ASSOCIATION was named as one of the organizations to be represented on the National Retail Drug Code Authority and your Secretary was selected by the Council to act as the temporary representative and was later elected Secretary-Treasurer of the Code Authority

The work has been interesting if at times discouraging and our aim has been to support in every possible way the efforts of all who are interested in improving conditions for the retail druggists and through them, for the entire profession and industry

Although the Code is intended primarily to promote trading and industry it has a very definite influence on the arts sciences and professions The provisions with respect to wages and hours, and to collective bargaining, have a very important bearing on professional pharmacy In the President's Agreement, pharmacy was definitely recognized as a profession and exempted from the Code This position has been modified in the Code and the results are not yet fully ap parent

For these reasons, professional organizations must be interested in codes and the NRA Furthermore we are affected by the provisions and the operations of other codes and our welfare can be protected only by watchful care This work has required great attention and much time which have very naturally, interfered with the routine work of the ASSOCIATION and became neces sary just when many other matters of pressing importance required attention If the delegates should desire additional information with respect to the Code, I shall be pleased to discuss it fur- ther at a later session of the House

As reported previously, the ASSOCIATION coöperated with the Department of Commerce in printing the ' Professional Pharmacy" in the July, August, September and October issues of the JOURNAL Reprints have since been made available and we are encouraged by the sales which have now practically reimbursed the ASSOCIATION for the actual cost of the printing This is a comprehensive study of the establishment and operation of a professional pharmacy and furnishes detailed and dependable information not heretofore available It represents a valuable addition to the survey and studies of pharmaceutical practice which to the ASSOCIATION is promoting, and a practical example of the coöperation which can be mutually advantageous to the Government and the ASSOCIATION

This brief review of our relations with certain branches and operations of the Federal Government, and there are many others, should emphasize the necessity for a more compact and representative professional organization of pharmacists

The State and National Association —Due to the unusual demands on their time, the officers of the ASSOCIATION were unable to visit as many meetings of these associations as in preceding years However, an effort has been made to have the ASSOCIATION represented as far as possible by an officer or some interested member These contacts are most important and the cooperation of the delegates here is requested in acting for us wherever possible

Membership —The membership has been further reduced during the year but there is evi dence that the improved general conditions are being reflected in the reduction of losses recently Since the last meeting, 24 members including 1 Honorary and 3 Life Members have died 20 have resigned and 453 have been suspended for nonpayment of dues In the same period, 253 members have been elected on payment of dues and 4 through subscriptions to the Headquarters Building Fund

The total membership is approximately 4000 and the suspensions will probably be lower as financial conditions improve A number have found it difficult to keep up even the nominal dues, and we need coöperation in bringing in new members as rapidly as possible

Local Branches —These organizations have kept up their programs very satisfactorily with one or two exceptions, and are to be commended for their fine efforts under present conditions

The following branches were active during the year Baltimore Cincinnati, Chicago De troit, New York, Northern Ohio at Cleveland North Pacific at Portland, Northern New Jersey at Newark, Northwestern at Minneapolis, Philadelphia Pittsburgh

Student Branches —Student Branches at the Pittsburgh College of Pharmacy, State College of Washington and at the Universities of Florida, Wisconsin, California and Western Reserve were active during the year A Student Branch at the St John's University College of Pharmacy was organized recently and others are being organized

These student organizations are doing splendid work and they should be established in other schools and colleges

Representatives of several student branches are in attendance

Receipts of the Secretary's Office —Attached are detailed financial statements of the receipts from January 1 to April 30, 1934, from Dues, Bulletins, Proceedings YEAR BOOKS, Badges and Bars, Buttons and Pins and Miscellaneous Items Remittances to the Treasurer and the balance on hand are also set out

The attached reports also give detailed information in reference to the printing, binding and sale of the National Formulary and the Pharmaceutical Recipe Book

The Secretary's annual financial report for the calendar year 1933 was submitted with that of the Treasurer and audited as provided for in the By Laws

SECOND SESSION

The Second Session of the House of Delegates was held in the Wardman Park Hotel, Washington D C , following the First General Session of the AMERICAN PHARMACEUTICAL ASSOCIATION

The minutes of the First Session were read and accepted (see minutes of the First Session of the House of Delegates)

The annual report of the Council to the House of Delegates was read and accepted It follows

ANNUAL REPORT OF THE COUNCIL TO THE HOUSE OF DELEGATES

This report is submitted to summarize the proceedings of the Council which are printed in full in the JOURNAL

The reorganization meeting of the Council for 1933–1934 was held in Madison Wisconsin, on Friday, September 1, 1933 S L Hilton was elected Chairman, C H LaWall Vice Chairman and E F Kelly, Secretary E G Eberle was elected Editor of the JOURNAL, A G DuMez Editor of the Year Book, C E Caspari, member of the Commission on Proprietary Medicines for a term of five years, H V Arny and C H LaWall members of the Committee on Research for a term of five years The Committee on Recipe Book was continued for one year and the Committee on Unofficial Standards was discontinued

The President was authorized to make such appointments as are unauthorized, to fill vacancies as they may occur and to make additional appointments as may be necessary or desirable

The Chairman was authorized to appoint an executive committee of the Council should the occasion arise A meeting of the Council or of an executive committee was not found necessary and the business of the Council has been transacted by mail Eight Council Letters covering

forty-two pages and submitting fifty three items and seventeen motions have been sent to the Council members Among the more important business transacted, the following items are mentioned

Arrangements were completed for the transfer of property between the U S A and the ASSOCIATION as provided for in Public Resolution No 18, in Square 62, N W, Washington D C The deeds and agreements involved are quoted in full in Council Letter No 3

E F Kelly was elected as temporary representative on the National Retail Drug Trade Council, later, however, as the National Retail Drug Code Authority

Certain of the Liberty Bonds, Fourth Issue, held by several permanent and trust funds were called for payment These were sold and the proceeds reinvested in uncalled bonds of the same issue at approximately the same price Five thousand dollars of the accumulated interest of the Life Membership Fund was transferred to the Current Fund to balance the budget

The contract for printing and mailing the JOURNAL for 1934 was awarded to the Mack Printing Co of Easton, Pa

A budget totaling $33 680 for the current expenses for 1934, was adopted The budget for 1933, totaled $39,525

The accounts of the ASSOCIATION were audited by W A Johnson & Co, Baltimore, Md, Certified Public Accountants, and their report, with a summary of the accounts, was published in the JOURNAL for March 1934, pages 264–268

May 7th to 12th was chosen as the time for the 1934 meeting, Frank A Delgado as Local Secretary and the Hotel Shoreham as Headquarters

The officers of the ASSOCIATION were transferred from 10 W Chase St, Baltimore, Md, to the Headquarters Building, 2215 Constitution Ave, Washington, D C, during the first week in January 1934

The application and Constitution and By Laws for the St Johns University, College of Pharmacy, Student Branch, New York, N Y, were approved

The ASSOCIATION, by invitation of the officers of Section N, American Association for the Advancement of Science, held a joint session with the American College of Dentists, during the annual meeting of the A A A S in Boston, December 26–29, 1933 Dr J C Krantz Jr, *Councillor*, arranged for the joint session and presided

Dr H W Youngken represented the ASSOCIATION at a meeting of the American Joint Committee on Horticultural Nomenclature in New York City, on January 15, 1934

The second and third meetings of the Council were held in Washington, D C, on Monday, May 7th, and on Thursday, May 10, 1934

Annual reports were received from the Committees on Property and Funds, on Finance, on Publications, on Student Branches, on Research, on Standard Program, on Recipe Book and on National Formulary, and from the Editors of the JOURNAL and of the YEAR BOOK The Commission on Proprietary Medicines reported progress These reports covering the property, funds and publications of the ASSOCIATION were given careful attention and they show that the affairs of the ASSOCIATION are in a sound condition

Mr J K Lilly was nominated to the House of Delegates for election as Honorary President for 1934–1935 E F Kelly as Secretary and C W Holton, as Treasurer

Mr Charles Moore, *Chairman* of the Commission of Fine Arts, was elected an Honorary Member

The Research Fund of $1000 was awarded to Dr W J Husa for the continuation of his studies of extraction and arrangements were made to publish the reports on the work so far done under similar grants

The proposal to establish a Council on Pharmaceutical Practice was submitted by Prof E Fullerton Cook and a committee was appointed to study the plan and report later to the Council

Permission to partially reproduce the text of the N F V was granted to several applicants for which the usual charge was made except in two cases

Two hundred and sixty applicants were elected to membership during the year

Respectfully submitted
S L HILTON, *Chairman*

The report of the Treasurer, deferred from the First Session, was read by Treasurer Holton and accepted

Total		$647,762 19

Of the securities owned by the ASSOCIATION only one $1000 bond of the City of Detroit (in the Life Membership Fund) has failed to pay interest to the amount of forty dollars

The property entry represents the actual payments on the site in Washington, D C , for the Headquarters Building including recording insurance of title and other incidental charges and advance payments on architects' and engineers' fees etc The entry does not include the cost of furniture, equipment, approach, grading or planting Record should be made of the fact that the original deposit on the site, amounting to $5000 was paid by Dr H A B Dunning personally and credited to his subscription and therefore this amount does not appear in the bank deposits of the Headquarters Building Fund although it is included in the total of collections for the fund

The net total of subscriptions to the Headquarters Building Fund on March 31, 1934 was approximately the same as on June 30 1933 $817,156 43, and the total of collections, including the $5000 deposit toward the purchase of the site made by Dr H A B Dunning which was credited to his subscription was $506,024 30 The Chairman of the Campaign Committee will give further details in his annual report

The campaign has cost in total $63 087 76 of which amount $13,023 94 was spent in 1924 $11,944 05 in 1925, $10,007 06 in 1926, $9297 31 in 1927, $10,627 34 in 1928, $3333 61 in 1929, $1031 25 in 1930 $1495 98 in 1931 $1512 90 in 1932 and $814 32 in 1933 The cost of the campaign has been paid from the interest on the fund and all collections have been used for the purchase of the site to pay taxes and insurance architects', engineers' and builders' fees, etc , or are in hand as shown in the yearly reports

The Secretary's report will show receipts from Dues, the JOURNAL, the National Formulary, Recipe Book, YEAR BOOKS, Proceedings Bulletins, Badges and Bars, Buttons and Pins and Miscellaneous Items, which are collected by him and deposited in the Secretary's account in the Baltimore National Bank These receipts are transferred by check accompanied by itemized deposit slips, to the ASSOCIATION'S checking account in the Merchants and Newark Trust Company from which all budget expenses are paid by voucher check

The annual report of the Treasurer for the calendar year 1933 was audited and approved by W Albert Johnson, the auditor approved by the Council A summary of this report, together with the report of the auditor appears in the JOURNAL for March 1934 pages 264–268, and both reports will be published in full in the next YEAR BOOK

CHARLES W HOLTON *Treasurer*

The reports of the Council and of the Committees on Pharmacy Corps in the U S Army and on Legislation were by request deferred to the Third Session

E F Kelly reported progress for the Committee on the Study of Pharmacy—it was accepted The Report of Prescription Tolerances was discussed by R L Swain and S. L Hilton and will be further reported at the next session of the House of Delegates and as part of the program of the Section on Practical Pharmacy and Dispensing

A communication from the Council was read nominating to the House Mr J K. Lilly of Indianapolis Ind as *Honorary President* E F Kelly as *Secretary* and C W Holton as *Treasurer*

of the ASSOCIATION for 1934–1935 On motion, President Swain was authorized to cast the unanimous ballot of the House for the election of those nominated which was done and they were declared elected

Chairman W B Day presented the report for the Committee on Nominations

REPORT OF THE COMMITTEE ON NOMINATIONS

The Committee on Nominations of the House of Delegates respectfully submits the following nominations

For Chairman of the House of Delegates Rowland Jones, South Dakota

For Vice Chairman of the House of Delegates S A Williams Alabama

For *President of the* AMERICAN PHARMACEUTICAL ASSOCIATION P H Costello, North Dakota, A Ziefle, Oregon F E Mortensen, California

For *First Vice President* Frank A Delgado, District of Columbia, C L O'Connell, Pennsylvania, Roy M Riley, Kansas

For *Second Vice President* John P Jelinek, Minnesota, J Lester Hayman West Virginia, Herbert W Parker, Arkansas

For *Members of the Council* James H Beal, Florida, C H LaWall, Pennsylvania, C E Caspari Missouri, R L Swain, Maryland, Theodore J Bradley, Massachusetts, John C Krantz Jr , Maryland, J G Beard North Carolina, Frank Milne, Kansas, Walter F Meads Iowa

On motion, Rowland Jones of South Dakota and S A Williams of Alabama were elected as *Chairman* and *Vice Chairman*, respectively, of the House for 1934–1935 The nominees for President, First Vice-President, Second Vice-President and Members of the Council were approved for submission to the members by mail ballot as provided in the By-Laws

Chairman Bradley submitted reports for the Committee on Transportation and on Place of Meeting

REPORT OF THE COMMITTEE ON TRANSPORTATION

The Committee on Transportation submits the following brief report This committee has considerable work of an executive character to do during the year, and we were pleased to receive all available concessions from the railroads for this meeting, including round trip tickets for one and one-third fares, a wide spread of time for the sale of these tickets, a thirty day time limit for the return to the starting point and going and returning by different routes if that be desired The round trip ticket was used before beginning the going journey and only needs to be validated by the stamp of the ticket agent in the Washington or Baltimore station at the time of beginning the return journey No additional concessions are allowed to anyone, to our knowledge These arrangements are in effect in all sections of the United States and Canada except the Southeast, where special limited excursion tickets are on sale at equally low or lower rates

T J BRADLEY, *Chairman*

REPORT OF COMMITTEE ON PLACE OF MEETING

Chairman Theodore J Bradley stated that practically the same committee had served for the past 18 years and is governed by a purpose to serve the ASSOCIATION Efforts are made to select meeting places so that in turn all sections of the country are visited He then referred to the rotation of prior meeting places If it had not been for the World's Fair in Chicago the Northwest would have been presented last year and the Dedication again interfered this year The pharmacists of Montana, Washington and Oregon are becoming conscious of the AMERICAN PHARMACEUTICAL ASSOCIATION and have worked up an enthusiastic attitude The members of the committee present in Washington are unanimously agreed that the 1935 meeting of the ASSOCIATION be held in Portland the time to be determined by the Council and the Local Committee

A O Mickelson, of Portland, spoke of the attractions of this section of the country and the opportunities for creating a greater interest in the AMERICAN PHARMACEUTICAL ASSOCIATION

Seconding the report of the Committee on Place, S L Hilton moved the selection of Portland for the 1935 meeting

Both reports (Transportation and Place) were adopted, the time of meeting to be named by the Council

A O Mickelsen expressed appreciation because of the selection and assured the efforts of the pharmacists of the Northwest

The meeting then adjourned

Third Session

The Third Session of the House of Delegates was held in the Shoreham Hotel, Friday forenoon, May 11th, Chairman Costello presiding The minutes of the Second Session were approved as read (See Second Session of the House of Delegates)

Chairman James E Hancock of the Committee on Procter Memorial presented a verbal report explaining the development and present status of the proposal to place a suitable statue of William Procter, Jr, in the Headquarters Building He also submitted a resolution which was referred to the Committee on Resolutions The report was received (See Resolution No 15, page 476)

Chairman Hancock spoke in part as follows

'At the semi centennial meeting of the Association in Philadelphia the characters of some of the early masters of Pharmacy were outlined, and it was there developed that William Procter, Jr, more than any other man, had forecast the destiny of this Association He had practically defined what was to be the set up of the Association and its scientific character

In the several years that followed men like Ebert Remington, my father and others developed and delivered papers on Professor Procter, and in view of the fact that 1917 was the Centennial year of Procter s birth, the idea germanated that he should be given some tribute for his work for this Association and for American Pharmacy

'A committee was appointed to formulate such plans, and on the committee's report that the proper thing to do was to erect a statue to Procter in the City of Washington, the committee was continued to collect money to approve a site and to approve a model for such a monument By 1914 all the money for this monument had been collected The marble had been selected and the site had been approved, after consultation with the trustees of the Smithsonian Institution They because of Procter s scientific work were very glad to have a monument on these grounds

'The World War in 1914 interfered and when we got into the War, in 1917 it was absolutely impossible to bring Congress to the consideration of a site for the Procter Memorial, because of the confusion at that time So the Centennial Year passed although we were ready to erect the monument

'In 1921 we began to consider the American Institute of Pharmacy, and, in 1923, when it took shape this committee proposed to the Association that the Procter Monument should be erected in conjunction with the building That demanded, of course, a recasting of the figure to adapt it to the foyer which had been selected by the Building Committee, instead of having an outside figure There is on exhibit in the building a figure of Procter that has met the approval of our committee, with but two minor criticisms One is from Dr Wellcome who thinks that the head and the face probably could be a little softer and Dr A R L Dohme thinks that there should be a stoop in the figure I have a letter from a sister of William Procter in which she pridefully speaks of the very erect carriage of her brother

'We have concluded to report to you the approval of the proposed statue by the committee, subject to the endorsement and the help of the architect of the building

"I would like to get some information As I understand it this committee was appointed with power to act and I would like to make this résumé We not only have the money for the monument, but when it is finished there will be a substantial balance that will be turned into the treasury for other purposes The model has been approved by the committee and the site has been selected We had hoped that Mr Pope the architect would be at this meeting but unfortunately he is in Europe and the matter of the base of the monument is to be carefully considered

'We ask the opinion of this body when those details have been worked out if it is within our power to proceed with the casting of the monument and its erection in the place that has been selected for it, so that it can be unveiled at some proper time at a meeting either of the House of Delegates of the whole body or at some other time in the City of Washington I don't

think there is anything else that I can say but I have been desirous to let you know, because of the long continuance of this committee, the conditions that we have been up against"

Charles J Clayton moved that the report be received and take the usual course

The motion was duly seconded and carried

The reports of the committees on Physiological Testing on Pharmaceutical Syllabus on Legislation on Weights and Measures, on Local Branches were presented and received for publication (The reports follow in the order of the stenographic transcript)

The report of the Committee on Physiological Testing will be printed under Committee Reports in a succeeding issue of the JOURNAL

The report of the Committee on Pharmaceutical Syllabus was read by H M Burlage

REPORT OF THE COMMITTEE ON PHARMACEUTICAL SYLLABUS

During the nine months that have intervened between the last and the present report of the Chairman very little of interest has developed in regard to the Syllabus

The volume has been declared official by the AMERICAN PHARMACEUTICAL ASSOCIATION the American Association of Colleges of Pharmacy, and, with a slight qualification, by the National Association of the Boards of Pharmacy The last-named organization has perhaps given the new Syllabus more thoughtful and favorable consideration than has either of the other bodies mentioned

Certain concrete suggestions or criticisms of a constructive nature have been offered to and gladly accepted by the Chairman but since these can only be employed when the Syllabus is revised they need not be discussed at this time

There is however, one matter that perhaps merits your attention since it may explain why the last or even the next revision will not satisfy every one having occasion to use it as a guide It must be clear to any student of the subject matter employed in pharmaceutical education that there is doubtless less unanimity of opinion about it than is true of any other type of organized education There is no real semblance of unity or agreement about nomenclature content sequence or distribution of courses shown in our several school catalogs It is only a slight exaggeration to say that in the fifty seven member colleges of the national association there are fifty seven definitely different curricula offered Can this be said of any other type of professional or even undergraduate instruction?

We have had no standard to guide us save the very elastic and general one required for membership in the A A C P The present Syllabus represents an effort to supply such a standard, a standard that is specific and not general

It is easily understood why the nomenclature together with the outlines and lengths of courses laid down have not met with general approval in spite of the fact that fifty representative people were engaged in the task of setting up a sort of compromise syllabus that was designed as nearly as possible to suit the needs of Board and College members The fact that we attempted a liberal curricular standardization did not mean that we expected our product to be perfect That it has been criticized sometimes severely, is not surprising Each succeeding revision is going to meet opposition just as each new Pharmacopœia fails to satisfy every one Humorously enough it is often true that the loudest criticism comes from those who were asked to criticize beforehand but who wait until it is too late to be of much value to turn loose the floodgate of their objections Instead of such an attitude it would be better if every person who will be involved with the next Syllabus were to offer every helpful criticism possible and at the same time be willing to make minor concessions to major policies

In the Chairman s fiscal report for August of last year a cash balance of $143 18 was indicated Up to May 1 1934, the receipts have been $87 25 (representing the sale of 41 copies of the Syllabus) and the disbursements have amounted to $23 This leaves a current balance of $207 43

J G BEARD, *Chairman*

The report of the Committee on Pharmaceutical Syllabus was accepted with thanks to Chairman Beard

The report of the Committee on Physiological Testing was read by Chairman James C Munch and accepted —To be printed under ' Committee Reports " in a succeeding issue of the JOURNAL

The report of the Committee on Legislation was read by R L Swain, who advised that he was not a member of the committee, on behalf of Chairman Burdine, he stated the Chairman was of the opinion that the Chairman of the Committee should not be from Washington The report was accepted it follows

REPORT OF THE COMMITTEE ON LEGISLATION

The ten months, since the Madison meeting of this ASSOCIATION, has been fraught with anxiety, indecision, despondency and disgust on the part of the pharmacists, both professional and commercial They are anxiously concerning what the final set-up of the food and drug laws will be They cannot decide as to the method of conducting their businesses due to the multiplicity of proposed federal and state laws Their despondency is the result of the failure of the NRA to give them the expected and long sought relief from 'cut throat" competition, even though the manufacturers dozen lot list price was granted as minimum resale price Finally, they are extremely disgusted with the whole economic set up which allows certain practices to be legal in one industry and vicious when applied to the drug field

You are thoroughly acquainted with what has transpired in these ten months You are and have been suffering with the Coditis epidemic, ' and are therefore, as well or better informed than we of this committee on the legal phases of the happenings of these few months Our esteemed Secretary E F Kelly and President R L Swain, W Bruce Philip and R E Lee Williamson, a member of this committee, have kept close to the courses of these happenings and have done wonderful work in the interests of the pharmacists Dr James H Beal's work on the proposed Pure Food and Drug Legislation was a masterful effort in your behalf and he is the one who can be commended for informing the authorities and keeping the bills in *status quo* Therefore, we, the Committee, feel that your officers have kept you fully informed concerning the legislative activities and that there is nothing we can add

But we do wish to cite some conditions that have a trend of vitally (?) concerning every pharmacist and in a way that present conditions will seem minor and unimportant Let us take your Code difficulties as an illustration Local code authorities in the drug field are having great difficulty in collecting the assessments as specified by law, because the individual who had high hopes of benefits and improvements has not received them and feels that he has been additionally burdened to the point of economic exhaustion Again, the rank and file are dissatisfied with the codes because they do not provide the necessary rules that make it possible to take care of wages and hours out of profits instead of capital

What will be the result of all this dissatisfaction on the part of the pharmacists on the one hand and the NRA on the other? Just this—You will find that you will be if you are not now, a private in the regiment of business endeavor that the Government will enforce the military system of rule strictly officered by those not of your own choosing You will be forced to comply in every way to any and all orders and regulations Along with this may come, if the difficulties persist the operation of each and every business whether big or small, by license meaning that to be able to continue in business you will be required to secure a license from the Government That license will not be given until your business has been inspected your books examined and a figure set on the amount of profits you can make Should your business, by ability personality advertising or other promotion exceed the set amount allowed then all profits over this amount will revert to the Government

If you don t believe so, then we recommend that you study Tugwell s new book, "Our Economic Society ' and especially the last few chapters wherein is stated that the policy for the future will be the limiting of profits Mr Tugwell contends that business should not be operated for profits but for service only It is contemplated by the author or the publishers (probably the latter) to have this book used as a textbook in all the high schools of this country, if it is possible to do so

This seems a dreary prospect and let us hope it never comes true Sit down around a table with other men and do some thinking and planning ahead We should spend a good many days and consult a good many people We should try to forecast the picture of what the situation may be six months a year or more, hence Then we should go home and do something about it and do it right away

You are going to see some unanticipated developments from what has transpired in Washington Better keep an ear to the ground

A V BURDINE, *Chairman*

The report of the Committee of the Establishment of a Pharmaceutical Corps in the United States Army was presented by R L Swain He made an explanatory statement preceding the presentation of the report He said it was understood by Chairman Leigh of the American Association of Colleges of Pharmacy and the Chairman of the Committee of the AMERICAN PHARMACEUTICAL ASSOCIATION (R L Swain) that this would be a joint report, although it would be submitted separately to the respective organizations He explained that the agreement came about after some correspondence between Chairman Leigh and Chairman Swain and other members of the committee It was arranged that Dr Leigh should come to Washington and he and Secretary Kelly and the reporter were in conference with Surgeon General Patterson discussing the present existing conditions in the United States Army, expressing firmly our objective and having him state as clearly and as frankly as he could the Government's reaction to the whole matter

This report contains a verbatim statement of a letter received from Surgeon General Patterson by the committee in which he reaffirms his brief previous statement that he is in complete accord with the efforts of the ASSOCIATION to improve pharmacy and pharmaceutical service and that he stands committed to cooperate in the furtherance of that objective just as soon as the economic situation improves to warrant his asking the Secretary of War to approve a general project which he has in mind for the re organization of the Medical Department of the Army

He again expressed his disagreement to any effort on our part to establish a separate and distinct pharmaceutical corps, his reason being that it is in conflict with their larger plans for pharmaceutical service in the army, and that there are present enforcement difficulties, administrative difficulties, which make it highly undesirable from the military point of view He wants it understood, however, that that has not the slightest reference to his desire that the pharmaceutical service meet our requirements, nor is it to be construed, so he says, as indicating any lack of interest in our program

The reporter thinks it can be said truthfully and without the slightest effort at exaggeration, that Surgeon General Patterson's views are in keeping with the later views of his predecessor, to the effect that the pharmaceutical service should be improved in the army, and that it should be done just as promptly as conditions warrant

Chairman Swain then presented three recommendations, concurred in by the joint committee which are embodied in resolution No 17, page 476 The report follows

REPORT OF THE COMMITTEE ON THE ESTABLISHMENT OF A PHARMACEUTICAL CORPS IN THE UNITED STATES ARMY

(Thirty fifth Annual Meeting of the American Association of the Colleges of Pharmacy)

At the 1933 meeting of the ASSOCIATION, the Committee on the Establishment of a Pharmaceutical Corps in the United States Army was instructed to continue its effort to secure the proper recognition of pharmacy in the United States Army The ASSOCIATION indeed, went on record for the recognition of pharmacy on a parity with the Dental, the Veterinary and the Medical Administrative Corps within the Medical Department of the United States Army

The Committee has, during the past year endeavored to carry out the wishes of the ASSOCIATION both by correspondence and interviews A number of the leading pharmaceutical organizations including some of the state pharmaceutical associations have continued, or appointed special committees on the establishment of pharmacy properly in the United States Army Interest and effort have increased since our last report, and while we have not accomplished our objective, we have made some progress

Your Chairman upon the approval of the Chairman of the Executive Committee met, by appointment with the President and the Secretary of the AMERICAN PHARMACEUTICAL ASSOCIATION in the office of the Surgeon General on April 9th, of this year The Executive Officer, Lieutenant Colonel Robert C McDonald, Medical Corps received us courteously and we conferred with him for some time After the interview which was very satisfactory from an infor

mational standpoint, we requested him to transmit to us in writing the chief features of the conference as contributed by him in order that we might convey to the ASSOCIATION a report free from any misinterpretation He kindly and promptly complied We now quote at length from his letter

'The Surgeon General realizes the high standard of training being offered by the colleges of pharmacy of the leading universities of the country, as explained by Dr Leigh While the general management of Army pharmacies is and has always been satisfactory because a sufficient number of qualified pharmacists have been secured through the enlistment of qualified men or the training in the service of enlisted men in pharmacy the Surgeon General will overlook no opportunity to improve the pharmaceutical service in any manner possible Furthermore the Surgeon General will take the first favorable opportunity to improve the pharmaceutical service through securing legislation authorizing the commissioning of an adequate number of recent graduates of the best colleges of pharmacy The Surgeon General does not however, believe that the present is an opportune time for securing such legislation

In 1932 the Surgeon General recommended to the War Department that legislation be secured authorizing certain increases in Medical Department personnel including a reorganization and increase in the Medical Administrative Corps In the reorganization of the Medical Administrative Corps he proposed that the name be changed to Medical Auxiliary Corps and that approximately one-third of this new corps consist of registered graduate pharmacists The Surgeon General still believes that a maximum of forty commissioned pharmacists is adequate for the Army Medical Department The Surgeon General is not in favor of a separate Pharmacy Corps in the Medical Department of the Army The proposed Medical Auxiliary Corps would not only provide the necessary pharmacists but also a limited number of specialists other than medical needed by the Army Medical Service

' The Surgeon General does not favor any plan proposing to provide commissioned pharmacists for the Army except in connection with a bill for increasing the personnel of the Medical Department generally including a reorganization of the Medical Administrative Corps so as to include pharmacists Piecemeal legislation, in other words is not desired

' The Surgeon General hopes that before the termination of his present detail next year that a favorable time will come for him to resubmit to the War Department his plan for reorganizing and increasing the personnel of the Medical Department "

We made it evident to the Executive Officer that we would not be satisfied with any provision tending to restrict the usefulness and rank of the commissioned pharmacist We were informed that the proposed policy does not place a limitation upon his advancement This assertion is in accord with the opinion previously expressed by an officer of the Medical Corps

Some of you will recall the statement of Lieutenant Colonel Arnold D Tuttle Medical Corps, United States Army, given before the House of Delegates at the Miami meeting in which he described the scheme for promotion and grade of pharmacists commissioned in the proposed Medical Auxiliary Corps as follows

"A practical example of how this promotion scheme will work out can be illustrated by taking the case of the young physician and the young pharmacist aspiring to a commission in the Army The pharmacist enters as a Second Lieutenant at the age of twenty four, after four years service or at the age of twenty-eight he is commissioned a First Lieutenant At this time at the age of twenty eight the young physician is first commissioned and he is given an original appointment in the grade of First Lieutenant in recognition of this age differential (However the M A C officer has already been in the Army four years drawing pay and allowances, while the young physician at his own expense has been in civil life preparing himself for a commission) These two officers are both appointed First Lieutenants at the age of twenty-eight after three years more service or a total of seven years the M A C officer is promoted to the grade of Captain The First Lieutenant of the Medical Corps is promoted to the grade of Captain after three years' service Both therefore, reach their Captaincy at the age of thirty one The Captain of the Medical Corps is promoted to Major after twelve years of service and the Captain of the M A C after sixteen years' service both reaching the grade of Major at the age of forty The same principle applies on up to promotion to the grade of Colonel Both officers reach the grade of Colonel together at the average age of fifty four years

'Under this scheme of promotion you will observe that the young pharmacist will have

the same opportunity to rise in the service as the young doctor, dentist, veterinarian or other professional man aspiring to an Army career "

This scheme seems just and fair to your Committee, so far as opportunity for the promotion of the commissioned pharmacist is concerned, but it does not contemplate a special pharmaceutical corps

In the opinion of some of the army officers a plea for a separate pharmaceutical corps would bring about the restriction of the pharmacists' usefulness and rank In support of this belief they cite Bill H R 5531 introduced in the Sixty-fifth Congress first session, which provides That the Army Pharmaceutical Corps shall consist of one pharmacy director with the rank of Major ——, five deputy pharmacist directors with the rank of Captain and such number of pharmacists, with the rank of Lieutenant, and of pharmacist apprentices as may be needed for the service "

They also refer to H R 16278, Seventieth Congress, second session, a bill to amend the National Defense Act by providing for a Pharmacy Corps in the Medical Department U S Army, which provides That pharmacists shall have the rank, pay and allowances of first lieutenant and chief pharmacists shall have the rank pay and allowances of Captain, except that chief pharmacists who have served for a period of sixteen years as an officer in the Pharmacy Corps of the Regular Army shall have the rank, pay and allowances of Major " This is the highest grade mentioned in the bill

Your Committee has received serious objections from several prominent pharmacists to the scheme of the Surgeon General whereby pharmacists would be commissioned in the proposed Medical Auxiliary Corps because in their opinion pharmacy would always be subordinated where there was any conflict of interest and that we would never have the authority or the freedom necessary to develop the highest type of pharmaceutical service They feel, too, that our identity would be lost and medicine would reap the credit that justly belonged to pharmacy

The report of the Committee on Pharmacy Corps in the U S Army was received and the recommendations referred to the Committee on Resolutions

The report of the Committee on United States Pharmacopœia was received and the recommendations referred to the Committee of Revision of the U S P The report will be printed in a succeeding issue of the JOURNAL

REPORT OF THE COMMITTEE ON LOCAL BRANCHES

The Local Branches were characterized by a year of unusual activity as is evidenced by their published proceeding in the JOURNAL In the main they had in spite of present unfavorable business conditions a highly successful year

The branches in the larger areas are experiencing considerable difficulty in providing sufficient funds to carry on their work of circularizing their members Some of them have had a local branch dues of $1 per year and of course are suffering during the present trying times

An examination of the vigor of Local Branches clearly shows that the influence of the branch is in direct proportion to the success it has had in giving to its area something not provided by any other group As one of the members of the committee states it, 'The Local Branches must have an object other than to be just another organization " Briefly a local branch to be really successful must fill a real need in the community in which it is operating

The committee desires to record its satisfaction at the activity of and the growth in number of the student branches

C LEONARD O CONNELL, *Chairman*

Chairman O'Connell was thanked for his efforts and the report accepted

The report of the Committee on Weights and Measures was presented by Robert P Fischelis and discussed by Robert L Swain, S L Hilton E F Kelly, L M Kantner, Roy C Reese and the Chairman (To be published)

The report of the Committee on Membership was made by Secretary E F Kelly and discussed at considerable length by Robert L Swain Ralph W Clark, A L I Winne W J Husa Frank B Kirby, and others (Abstracts will be published in a succeeding issue of the JOURNAL)

The reports of the Committee on United States Pharmacopœia and on Horticultural

Nomenclature will be printed under Committee Reports in a later issue of the JOURNAL

The report of the Committee on Press Relations was read it follows

REPORT OF THE PRESS RELATIONS COMMITTEE

The Press Relations Committee was appointed by President R L Swain early this year and its work thus far has been largely devoted to studying the task which confronts the ASSOCIATION in seeking good, healthy, constructive publicity for pharmacy

If one will look back through annual volumes of the ASSOCIATION JOURNAL he will find recorded the reports of many publicity committees and their trials and tribulations It has been with considerable caution, therefore, that this new committee has approached its task

When the Drug Trade Bureau of Public Information ceased to function due to the withdrawal of financial support by the organizations it represented it was a keen disappointment to this ASSOCIATION Because our president is a firm believer in the value of publicity to the ASSOCIATION however this new committee has come into existence The duties of the committee fall into two general classes—regular publicity during the year and special convention publicity

The committee has approached its first duty with extreme caution and thus far its work has largely been in contacting various newspapers, news syndicates and news magazines in an attempt to sound them out and determine just what sort of material would be most likely to find its way into the news columns We have been tremendously encouraged and stimulated with what we have learned and feel that given the proper tools we may be able to do a constructive job Only one release has been distributed since the committee was organized—the announcement of the recipient of the Remington Medal

The committee's second task that of convention publicity, has been more aggressively tackled The clippings presented with this report show graphically the results of the committee's work during the past week Washington at this particular time is perhaps the hardest city in which to get publicity for between Congress in session and the NRA newspaper space is at a premium The committee however, has been encouraged by the reception its releases have had at the same hands of the Capital press

The work of the committee at this convention has consisted of attending meetings and taking notes on what transpires, preparing news releases sending the releases to the various newspapers and syndicates and guiding reporters and news photographers that they may meet those of our members whom they wish to interview

We have distributed approximately twenty news releases—six copies of each The twenty releases approximately represent sixty typewritten pages It was necessary for the committee to have a stenographer to take the releases by dictation and make the required number of copies of each release It was necessary to have each release delivered to the newspaper by Western Union messenger service in order to make headlines

We use releases for two reasons *First* the material is given to the newpaper in comprehensive convenient form and as a result we get more space than we would if we depended solely upon what a reporter would pick up at our meeting and *second* by using releases we are able to interpret the convention reports—to select those subjects which are most constructive and worth while for pharmacy rather than the most sensational and we feel that by actually writing the report the committee is able to regulate the impression received by the public when it reads of our work

This has all required considerable money The publicity in connection with this convention cost approximately fifty dollars to prepare and distribute This amount I have been willing to contribute, for this year's work was an experiment It is necessary however, for the ASSOCIATION to decide whether publicity at future conventions is worth this cost The committee feels that it is, and recommends that the sum of fifty dollars be appropriated annually for this purpose

Still more expensive will be the cost of news releases and publicity material during the year We feel that by starting in a small way and gradually increasing its activities the publicity program can be made one of great value to pharmacy

With the coöperation of our Scientific Section and individuals engaged in pharmaceutical research we feel that we can give the public a new picture of the pharmacist and what his services mean to them

The committee recommends that the ASSOCIATION give deliberation to the question of publicity and if it decides to continue such a program we recommend the establishment of a regular budget for general publicity during the year

The money invested in a publicity program will not pay dividends for some time and the ASSOCIATION must realize that the results of the work may not be recognized for several years

The committee thanks those who have helped make its task at this year's convention easier and more effective, and takes this opportunity to express its appreciation to President Swain for the opportunity he has given it to serve the ASSOCIATION and pharmacy

(Signed) JOHN C KRANTZ, JR, H C CHRISTENSEN,
E F KELLY, WALTER D ADAMS
R L SWAIN, C LEONARD O'CONNELL
ROBERT W RODMAN, *Chairman*

The report was accepted with a vote of thanks and referred to the Council

The report of the Committee on Resolutions was deferred to the Final Session of the House of Delegates and the Third Session then adjourned

FINAL SESSION

The Fourth Session of the House of Delegates was held in Shoreham Hotel, Washington D C at 7 30 P M, May 11th, Chairman P H Costello presiding

The minutes of the Third Session of the House of Delegates were read and approved (see Third Session of House of Delegates)

The report of the National Pharmacy Week Executive Committee was read by Chairman Anton Hogstad, Jr, it follows

REPORT OF THE NATIONAL PHARMACY WEEK EXECUTIVE COMMITTEE

The tenth annual observance of the National Pharmacy Week movement will be celebrated October 8–13 1934 Let us all endeavor to make the forthcoming birthday party of this splendid movement one of the best possible

During the course of the past three years, an attempt has been made better to define the aims and purposes of Pharmacy Week In this connection the advice and counsel of many leaders in American pharmacy has been sought All heartily agree that the movement is a splendid one and that it has a function to perform, but on the other hand it is seemingly quite difficult to define properly the issue It is quite apparent that any effort of a propaganda nature must have a firm foundation upon which to rest

The advice and counsel of the leaders in American pharmacy have emphasized the point that the work of this committee should be directed toward making the movement one of a constructive force in American pharmacy and not simply mere propaganda

A review of the situation clearly indicates that the best agency at hand in this connection is that of our colleges of pharmacy During the past decade or so pharmaceutical education in this country has made great progress, not only in its requirements but likewise in modern and well equipped institutions of learning To day many of our colleges of pharmacy maintain medicinal plant gardens, museums and other features that can be made to serve the Pharmacy Week movement The National Pharmacy Week Executive Committee feels that the colleges of pharmacy are in a position and should take an active interest in promoting the activities of this splendid movement, for they are well equipped to render helpful service in this connection

The Committee recommends that in order for the colleges of pharmacy to participate to the fullest possible extent that the date be changed from the month of October to the last week in April or the first week in May for the year 1935 Under the present arrangement that of celebrating Pharmacy Week during the month of October, the colleges of pharmacy are just getting under way for another scholastic year By adoption of a change of date there will be ample time for the deans and their associates as well as our splendid organization to enter into the spirit of the occasion in a whole hearted and practical manner Further, this change of date would also allow for the featuring of living medicinal plants from the plant gardens such as is not possible in certain sections of the country when observed during the month of October

The following suggestions are offered at this time in regard to a fuller participation by our Colleges of Pharmacy

1 The inauguration of an "Open House Night" at the College to which members of the laity and allied professions would be extended cordial invitations to attend A number of the colleges of pharmacy have sponsored an Open House Night in the past with gratifying results On such occasions the students should demonstrate the activities of the various departments In addition there should be many interesting displays on exhibit to express in a visual manner the professional aspects of pharmacy

2 That our colleges of pharmacy secure a prominent exhibit space in the heart of the city for the featuring of a comprehensive professional display at which time the various features of same would be explained to those inspecting same

3 That the deans, their associates and members of the student body appear before as many civic organizations as possible for the presentation of talks dealing with the romance and spirit of achievement of pharmacy There are many human interest appeal stories to be found in the archives of pharmacy which when presented in the proper manner will do much to build up a professional prestige in the mind of the laity That the deans, their associates and student body likewise appear before medical and dental organizations including medical and dental schools in order to acquaint members of the allied professions with the manner in which pharmacy can best serve the allied professions

4 That our colleges render all assistance possible to retail pharmacists in the matter of professional displays as well as supply data for talks before various civic groups

During the course of the next month a letter will go out to each dean asking that the institution in question cooperate to the fullest possible extent The Committee believes that this procedure will mark an important step in making the Pharmacy Week Movement one of a constructive force in American pharmacy and it is hoped that every college of pharmacy will assist in every way possible

ANTON HOGSTAD, JR *Chairman*

The question of date was discussed by Messrs Husa Schicks Lyman (The report was received, but no definite action seems to have been taken —EDITOR)

Report of the Scientific Section —The Scientific Section held three lengthy sessions in addition to the joint evening session with the Section on Practical Pharmacy and Dispensing The attendance was good and of the 75 titles 55 papers were actually presented and the others read by title

New officers were elected by the Section for the ensuing year as follows *Chairman*, E V Lynn, *First Vice Chairman* H M Burlage *Second Vice Chairman* R E Schoetzow, *Secretary* F E Bibbins *Delegate to the House of Delegates*, L W Rowe —L W ROWE *Secretary*

Report of the Section on Practical Pharmacy and Dispensing —Interest in the Section on Practical Pharmacy and Dispensing is manifestly on the increase Its scope of activity is constantly being enlarged and its attendance is growing This year 39 papers were presented three of which were read before the joint session with the Scientific Section A variety of subjects was dealt with Symposiums were devoted to Hospital Pharmacy Dental Pharmacy and Professional Pharmacy Single papers were given on many other subjects such as dispensing galenical and manufacturing pharmacy and teaching pharmacy

The Section adopted resolutions continuing the report of the Committee on Prescription Tolerances, and instituting an information collecting service designed to furnish pharmacists with a central source for material having to do with U S P and N F propaganda and related subjects

The officers elected for the ensuing year are *Chairman*, H M Burlage, *First Vice Chairman*, L W Rising, *Second Vice Chairman*, Frank L Black *Secretary* L W Richards, *Delegate to the House of Delegates*, R W Clark —L W RISING *Delegate to the House of Delegates*

Section on Commercial Interests —The Section held two regular sessions Eight papers were read and discussed and the attendance was good The following officers were elected for the ensuing year *Chairman*, Henry Brown *Vice Chairman* Robert Rodman *Secretary* R T Lakey, *Delegate to the House of Delegates* John A J Funk —JOHN A J FUNK *Chairman*

Section on Historical Pharmacy —Two sessions of the Section on Historical Pharmacy were

held, both were well attended and 24 papers were enthusiastically received and discussed Of special interest were two illustrated papers, one by Dr J T Lloyd on 'The History of Cactus in Medicine," the other by Professor and Mrs Charles H LaWall on 'The Squibb Collection of Pharmaceutical Antiquities"

The following recommendations were unanimously approved

1 That the Chairman s Address be referred for publication

2 That the ASSOCIATION recommend that those entrusted with the future plans of the American Institute of Pharmacy shall make arrangements for the development in the latter of a suitable historical division which by its gradual growth may become an outstanding asset to the Institute

3 That the ASSOCIATION shall again voice a plea, through its official publication for pharmacists to take a greater interest in historical pharmacy and for Schools of Pharmacy to introduce more of the subject matter of Historical Pharmacy into their curriculum

4 That a cablegram of greetings be sent by the ASSOCIATION to the Internationales Kongres fur Geschichte der Pharmazie upon the occasion of its meeting at Basle, Switzerland on May 20 1934

5 That the JOURNAL of this ASSOCIATION direct attention to the members of the A Ph A of the History of Science Society with the suggestion that the support of the work of that organization is desirable

6 That it be the policy of the ASSOCIATION to procure tone pictures on talking records of the leaders in Pharmacy and that arrangements be made through F H Freericks and J T Lloyd to procure talking records of Dr John Uri Lloyd and Dr James H Beal in Cincinnati next week.

7 That contributors of papers hereafter cite references wherever possible and that when references are given the authors endeavor to follow the method of citation of some standard text or of *Chemical Abstracts*

The following officers were unanimously elected for the ensuing year *Chairman* C O Lee, *Secretary*, H W Youngken *Delegate to the House of Delegates* Louis Gershenfeld, *Historian* E G Eberle —HEBER W YOUNGKEN *Secretary*

Section on Education and Legislation —Nine papers were presented before the Section on Education and Legislation on dentistry medicine, hospital pharmacy, legislation and pharmaceutical research There were two meetings of the Section and one joint meeting with the Conference of Pharmaceutical Law Enforcement Officials and the Conference of Pharmaceutical Association Secretaries each very well attended The interest of the audience was attested by the great amount of constructive discussion of papers

The following resolutions were presented and adopted

To the end that helpful information regarding ways and means of encouraging the prescribing of U S P and N F drugs and preparations be disseminated and made available to the pharmacists of this country, and to the end that the good work of one community or state may not be lost to other communities or states, *be it resolved*

"That a committee be appointed—to be known as the National Committee on Professional Information Its specific function shall be

'*First*—To study the methods used by the various local county and state organizations in their efforts to bring before dental men usable information on U S P and N F drugs and preparations

'*Second*—To present to the pharmacists of the nation at our next annual convention or before if the committee deems it advisable, a digest of constructive ideas gathered from such a survey

Third—The committee is to act as a center for receiving and disseminating information which will increase the pharmacist's opportunities for professional scientific service

'*Fourth*—The chairman of the committee and two other members are to be appointed by the incoming chairman of this Section Others may be added if the chairman desires, to make the committee workable"

Be it resolved that this Section on Education and Legislation appoint a committee to study the problem of coöperation with hospital pharmacists

The officers elected for the ensuing year are as follows *Chairman*, Oscar E Russell, *Vice*

Chairman C W Ballard, *Secretary*, L W Rising, *Delegate to the House of Delegates*, Geo C Schicks —W H Rivard *Delegate to the House of Delegates*

Conference of Law Enforcement Officials —The conference held several meetings also a joint meeting with the Conference of Pharmaceutical Association Secretaries and the Section on Education and Legislation

The following officers were elected for the ensuing year *Chairman* Robert L Swain, Maryland, *Secretary and Treasurer*, M N Ford Ohio, *Delegate to the House of Delegates*, Fred Schaefer, New York

The following officers were elected for the ensuing year *Chairman*, Robert L Swain, Maryland, *Secretary and Treasurer* M N Ford Ohio *Delegate to the House of Delegates* Fred Schaefer New York

The Conference of Pharmaceutical Law Enforcement Officials has mapped out a very ambitious program for the future We have slowly built up a substantial fund in our treasury which will allow us to do a lot of things that we have hoped to do in the past Among these will be a campaign for the deletion of the exceptions and exemptions contained in our pharmacy laws which nullify wholly or in part many of the pharmacy laws of the various states

Another task which we have set for ourselves is a compilation of the decisions in the various states as they affect pharmacy laws and their enforcement We hope to have this cross indexed as to states and subject matter

It was voted by the Conference in addition to the State boards to ask the State associations for donations to the work of this Conference —Rowland Jones *Reporter*

Conference of Pharmaceutical Association Secretaries —The Conference of Pharmaceutical Association Secretaries had scheduled two sessions in addition to a joint session with the Section on Education and Legislation and the Conference of Pharmaceutical Law Enforcement Officials A total of approximately thirty state association secretaries were present at the various sections

No set papers were read but a number of topics were outlined for discussion and among them Is it desirable if so is it possible to form a National association from the various associations with every member of the State association to become automatically a member of the National association without payment of additional membership dues?"

Is a State Drug Code desirable in addition to the National Code?"

' Since the State associations have been ignored in the National Drug Code what should be the attitude of the State associations to code matters?

Other similar questions were discussed each subject being introduced by some member of the organization A resolution was finally adopted, providing for the appointment of a committee to confer with the officers of the American Pharmaceutical Association relative to the formulation of a plan of membership for a greater national organization

The following officers were elected for the ensuing year *Chairman*, F B McCullough Indiana *Vice Chairman*, John Slocum, Iowa, *Second Vice Chairman* Roy C Reese Kansas, *Secretary Treasurer* Charles G Harring Massachusetts *Delegate to the House of Delegates* Charles J Clayton Colorado

On motion of R E Terry and second by W J Husa and a vote, the reports were received

Secretary Frank B Kirby reported on the **Pharmacy Exhibit at the Century of Progress,**

You may recall that in the Madison meeting we came to you with a request, hoping for $15 000 to cover the estimated budget It is our pleasure to report that we reduced the amount of the budget to $10 000 and closed the year in the red to the amount of $400 As the Association has signed the contract for the Pharmacy Exhibit for 1934 it is very pleasing to tell you that we have nearly collected the estimated budget for this year so we are not here this year to ask for any money

' Having the foundation the equipment and the flooring we hope to operate this year on a budget of less than $6000 While last year it was a rather burdensome piece of work to send out letters by the thousand, so much so that the Committee said they would not operate unless they had the money in advance and this year the first forty letters sent to contributors of last year brought in close to $5000 and we have no fear but what the balance of the money will come in

Without making any actual count of the attendance we assume that we are really within the limit of reason to estimate that the exhibit was seen by four thousand people per day We

expect an equal number this year, because improvements are under way, a number of changes which we believe will make the exhibit this year equally interesting to those who saw it last year

' I would like to close with this one request, that so far as possible you notify the chairman of the Committee, if you or any of your faculty members including the scientific staff of the manufacturing houses represented may be in Chicago during the period of the Fair by which you can have the opportunity of addressing the public on subjects of popular science

It is arranged with the Century of Progress that we shall have a lecture hall available and we already have a fair number of volunteers who are willing to fit in with this opportunity We consider it a real opportunity by which to further impress on the American public the importance of Pharmacy and what it is doing in the nature of first aid, hygiene and all of those things for which pharmacy stands

It is unfortunate that Chairman Christensen and Treasurer Riemenschneider have had to leave for home, but it is a pleasure for me to give this report "

Anton Hogstad Jr , said that in his opinion at least one million people visited the Pharmacy Exhibit at the World Fair during the year He had done considerable checking of the exhibits and the Pharmacy Exhibit was one of the best attended of all the exhibits in the Hall of Science

On motion duly seconded the report was accepted

The report of the Committee on Resolutions was read by Chairman C Leonard O Connell and he explained the points of the resolutions On motion duly seconded and a vote the resolutions were unanimously adopted (The resolutions are printed on pages 474–476 in the May issue of the JOURNAL)

Secretary E F Kelly stated that 36 states were represented in the House of Delegates

Chairman Costello announced the installation of officers Owing to the absence of S A Williams L C Lewis of Alabama, represented him as proxy

Chairman Costello installed Rowland Jones as Chairman of the House of Delegates and presented the gavel to him Chairman Jones thanked Mr Costello for his words of commendation and the members for the honor bestowed and on behalf of the pharmacists of South Dakota

L C Lewis, as proxy of S A Williams thanked the members on behalf of the pharmacists of Alabama and pledged the support of Vice Chairman Williams

On motion duly seconded the House of Delegates was adjourned

STATE PHARMACEUTICAL ASSOCIATION MEETINGS HELD DURING JUNE

Alabama—19–21, Montgomery
Arkansas—12–14 Texarkana
California—3–7 Sacramento
Colorado—12–14 Colorado Springs
Connecticut—27–28 New London
Delaware—27–28, Rehoboth Beach
Georgia—12–14 Savannah
Idaho—15–26, Lewiston
Indiana—19–21, Lake Wawasee
Kentucky—19–22 Paducah
Maine—27–29, Belgrade
Maryland—19–21, Baltimore
Massachusetts—18–20, Swampscott
Michigan—26–28, Pontiac
Mississippi—19–20 Jacksonville
New Hampshire—24–26, Portsmouth
New Jersey—13–15 Asbury Park
New York—18–22 Bolton Landing
North Carolina—25–27 Durham
North Dakota—12–14 Dickinson
Ohio—June 24–July 1, Cleveland
Oregon—July 9–11 Gearhart
Pennsylvania—19–21 Wernersville
Rhode Island—25–26 Watch Hill
South Carolina—20–21 Charleston
South Dakota—11–13, Brookings
Texas—18–21, Mineral Wells
Vermont—17–19, Fairlee
Washington—27–29 Olympia

The AMERICAN PHARMACEUTICAL ASSOCIATION is in receipt of the records requested by the Section on Historical Pharmacy of the voice of Prof J U Lloyd and James H Beal The Section on Historical Pharmacy is thankful for the prompt compliance of their request and the records undoubtedly will prove of great interest to listeners in years to come

PHARMACEUTICAL DISPLAY AT IOWA MEDICAL SOCIETY

The Iowa Pharmaceutical Association held a display of U S P and N F preparations at the meeting of the Iowa State Medical Society in Des Moines, May 9th–11th This display was sponsored by the Intraprofessional Relationship Committee, composed of Messrs George Judisch, Ames, *Chairman*, John Waizenegger Des Moines, and B P Bogan, Sioux City, to promote cooperation between physicians and pharmacists

The display was set up in the Scientific Section of the exhibits, in a space donated by the State Medical Society Many physicians stopped at the display during the three days of the meeting A gourd of Aloes without a label, aroused much curiosity and many physicains enjoyed seeing, for the first time, a drug, in the crude form which they had often prescribed This led to various discussions of the other items on display and gave the members of the committee an opportunity to explain the merits of the U S P and N F preparations In addition to the gourd of Aloes there were several species of *Aloe* plant and a species of *Artemisia* The most attractive part of the display was a digitalis plant in bloom

Pharmaceutical Display at Iowa Medical Society

One of the most valuable parts of the display was a series of eleven frequently found incompatibilities These were prepared showing the correct and incorrect method A sign placed near the incompatibilities, read 'INCOMPATIBILITY—Why a knowledge of Chemistry and Physics is so essential to the expert pharmacist The value of a medicine and even the life of the patient may depend on the skill of the pharmacist See the correct and incorrect method of compounding

---

PYORRHŒA AND MOUTH WASHES

Dealing with the treatment of pyorrhœa, Pitts (London) refers to the use of mouth washes and remarks that the most important ingredient in these is the water Their main purpose is to flush out the mouth and to remove debris Claims that this or that drug will destroy bacteria found in the mouth may be true of experiments *in vitro* but it is a fallacy to imagine that any antiseptic can be used in the mouth of such a strength that it will reduce the bacterial flora to any appreciable degree Experiments show that any reduction is temporary and quickly made up When it is remembered that in pyorrhœa there are irregular pockets round the teeth lined with infected tissue it will be obvious that the antiseptics used in a mouthwash can only play a minor part in its treatment But few patients will believe this, so if only to inspire confidence, a mouth wash containing some antiseptic is a useful measure Astringent mouth washes are recommended Hydrogen peroxide (five vols) is useful as the mechanical flushing action is increased by the effervescence of the nascent oxygen —*The Prescriber* June 1934

EDITORIAL NOTES

Because of association matter in this issue a number of items were omitted from this department

MEMBERSHIP AWARDS BY SCHOOLS AND COLLEGES OF PHARMACY

MASSACHUSETTS COLLEGE OF PHARMACY

Prizes consisting of a nomination to membership and a year's dues in the AMERICAN PHARMACEUTICAL ASSOCIATION are offered by several officers and teachers These prizes are awarded to members of the graduating class who have made good averages on the senior work in all subjects and exceptional records in separate subjects, as noted

1 *All subjects*, awarded to John A MacKenzie 2 *Pharmacy*, offered by Professor LaPierre and awarded to Isidor S Tolpin 3 *Organic Chemistry* offered by Treasurer Gammon and awarded to Phyllis Toon 4 *Materia Medica* offered by President Glover, and awarded to Sylvia Rapaport 5 *Commercial Pharmacy*, offered by Vice President Ellis, and awarded to Angelo P Papulis 6 *Analytical Chemistry*, offered by Dean Bradley, and awarded to Elizabeth H Wismer

DUQUESNE UNIVERSITY SCHOOL OF PHARMACY

Bernard J Schiller Duquesne University School of Pharmacy Pittsburgh, was awarded membership in the AMERICAN PHARMACEUTICAL ASSOCIATION for excellence in *Pharmacy* by Prof W A Jarrett, of Duquesne University School of Pharmacy Other memberships were awarded as follows by Duquesne Benjamin Elkind by Prof H W Werner for excellence in *Materia Medica*, John J Ilcisin, by Dean C Muldoon, for excellence in *Chemistry* Paul J Lucas was awarded a membership prize for the best paper presented during the year before Duquesne University Pharmaceutical Association

PHARMACEUTICAL EXHIBIT AT THE CENTURY OF PROGRESS

THE AMERICAN PHARMACEUTICAL ASSOCIATION is as last year, sponsoring the exhibit A significant indication of the enthusiastic approval given last year's enterprise is the fact that the committee this year received almost 100 per cent favorable responses from participants to the questionnaire sent to the leading contributors to the 1933 exhibit The pharmaceutical showing of last year proved to be one of the most popular of the exhibits in the medical division

SCIENTIFIC DISCOVERY

A correspondent in *Science* questions whether a more fascinating readable and informing essay on the rise and counter influences of scientific discovery by Dr Welch has ever been written It must have been a sympathetic labor of love to Doctor Welch merely to compile the data since medicine as a discipline for the pursuit of science shines out so dazzlingly For does he not record that, "I have collected without pretense to exhaustiveness, the names of over a hundred physicians or men trained for the practise of medicine or pharmacy who have made contributions to physics sufficiently notable to secure them a place in the history and records of this science "

POISONING BY METHYL CHLORIDE

Quite recently Gorham (Bristol), has again called attention to this gas 'Toxic effects" he says, are produced usually by unnoticed leaks happening in closed or ill ventilated places Often the leak may not be noticed, but at higher concentrations toxic symptoms may arise The gas when inhaled is excreted slowly, small amounts are thus apt to be cumulative and may not cause symptoms until after some days Some persons appear to be more susceptible than others" Gorham describes four cases illustrating the symptoms of a mild attack—chiefly nausea and vomiting The collected records show that the effects begin with drowsiness and apathy, leading to stupor, nausea, vomiting and abdominal pain Muscular tremors may be present, and anuria is usual in severe cases Treatment consists in first getting the patient into the fresh air, and early administration of oxygen Alkalis should be given freely It may be necessary to control convulsions, but on no account should chloral or chloroform be used for this The anæmia may have to be treated The gas is oxidized slowly, and the aim of the treatment is to hasten oxidation —*The Prescriber*, June 1934

Dr James Henry Breasted has completed a new screen picture entitled 'The Human Adventure" Press reports state that faculty members of the University of Chicago and

newspaper men sat "popeyed" when the picture was presented in the University's Oriental Institute Before them a panorama of the human race was unrolled on the screen in a preview of the film showing how the secrets of dead empires are brought to light by archæologists The film was shown to the public in Chicago on June 6th

Dr Breasted is a graduate in pharmacy, although he has not practiced pharmacy for many years

PERSONAL AND NEWS ITEMS

Dr Walter A Bastedo, president of the U S P Convention, **Dr Horatio C Wood, Jr**, well known author of medical and pharmaceutical textbooks **Prof E N Gathercoal**, chairman of the N F Revision Committee and **Dr Oscar W Bethea**, of Tulane University, received the honorary degree of 'Master of Pharmacy' from Philadelphia College of Pharmacy and Science The latter delivered the Commencement address

Among those knighted by King George on his birthday are Dr F G Banting, discoverer of Insulin and Major R G Archibald, director of the Wellcome Tropical Research Laboratories in the Sudan

Dr Frank Kirby has announced that beginning on Sunday June 24th it is expected to have weekly lectures on scientific subjects in the Hall of Science at the Century of Progress The first lecture of the series was given by Dr Arthur Osol assistant professor of Chemistry and Physics at the Philadelphia College of Pharmacy and Science on the topic, 'A B C of Vitamins"

Samuel S Dworkin has been named *associate editor* of 'Drug Store Retailing"

Sir Henry S Wellcome, a native of Wisconsin the Remington Medalist for 1934 was awarded the degree of Doctor of Science, *honoris causa*, by Marquette University, on June 13th The ceremonies took place at the Milwaukee Auditorium

Miss Edna Gleason, Stockton, Calif former president of the Southern California Pharmaceutical Association, and also of the Stockton Chamber of Commerce, was one of the speakers at the meeting of Texas Pharmaceutical Association held in Mineral Wells Miss Gleason represented the N A R D

Dr George F Zook, U S Commissioner of Education has resigned to accept the directorship of the American Council on Education His resignation will become effective on July 1st

Prof J A Haefliger, Basel Switzerland was elected vice president of the Society for the History of Pharmacy At this meeting an address was delivered by Professor Haefliger and among the number who listened to him were representatives of sixteen states and fifteen university pharmaceutical institutions, and many prominent in pharmacy and as members of organizations There were present the *Honorary Dean* of the Pharmaceutical Faculty, Paris, Dr F Hauser and Dr Labhardt

Dr A Richard Bliss, director of the Reelfoot Lake Biological Station, Tennessee, delivered the address at the 84th annual Commencement of Cincinnati College of Pharmacy

Dr P A Foote, professor of Pharmacy at the University of Florida, is spending the summer visiting points of pharmaceutical interest in Europe Part of the time is being spent in England, in Brussels he is studying crude drugs, and in other sections of Europe Dr Foote is finding interest in the museums, libraries and laboratories

Robert L Swain, former president of the AMERICAN PHARMACEUTICAL ASSOCIATION, delivered the principal address at the Commencement Exercises of the Connecticut College of Pharmacy He was given the honorary degree of Doctor of Pharmacy, and the same honor was conferred on Robert P Fischelis, president of the A PH A Dr Robert L Swain delivered the address at the commencement exercises of the College of Pharmacy of Columbia University

Wilhelm Bodemann, veteran of veterans celebrated his 88th birthday on June 6th He was the recipient of congratulations from many friends in various sections of the country

T L Swenson, associate bacteriologist, Bureau of Chemistry and Soils, U S Department of Agriculture, was recently given a Kappa Psi (pharmacy fraternity) scholarship key Among those at the presentation were Carson P Tralley, president National Drug Trade Conference, Dr Swenson, Editor E G Eberle, W Bruce Philip N A R D counsel and Secretary E F Kelly

In recognition of his service to the drug industry and the pharmaceutical profession, the Indianapolis College of Pharmacy at its recent commencement exercises conferred the degree of Bachelor of Science in pharmacy on A Kiefer Mayer, Indianapolis

Peter A Brannon, a pharmaceutical chemist in Alabama, and for ten years in the profession, now curator of the Department of Archives and History of the State of Alabama, is a collector of glass bottles He is particularly interested in early blown bottles, and has some fine specimens of old original containers dating from about 1665 down to 1790 Some of those in his collection are proved of European make They were obviously, in the Indian trade and were preserved and buried with the natives

Mr Brannon is actively seeking the smaller globular show bottles of drug store days as late makes as 1875, and now finds that though they were quite common and in use as late as 1910, except in the hands of a few collectors and in the museums they cannot be found

Samuel C Davis, Nashville Tenn, has been appointed by NRA Administrator Hugh S Johnson to be an administration member of the code authority for the retail drug trade Mr Davis, a former member of the State Legislature of Tennessee, has owned and operated a number of drug stores although at the present time is not in the business

Dr Donald D Van Slyke, of the Rockefeller Institute for Medical Research, New York delivered the Charles E Dohme Memorial Lectures for 1934 at Johns Hopkins University School of Medicine April 26th–28th The "Physiology of the Amino Acids and "Factors Controlling Urea Excretion" were the subjects of the addresses

Z E Marvin, owner of a number of Dallas (Texas) pharmacies, is chairman of the local Society for Crippled Children and is working to raise a fund to help the unfortunate children of Dallas On the committee with him is Mayor Charles E Turner, a former druggist

Lieutenant Commander Louis H Roddis advises that "The Pharmaceutical Recipe Book" has been added to the approved list of professional books carried on the 'Standard Book List of the Supply Table of the Medical Department, U S Navy' This list is revised annually and will now be readily available to the medical activities of the ships and store stations of the Navy About 200 copies have already been asked for to meet the demand

W Bruce Philip, former president of the AMERICAN PHARMACEUTICAL ASSOCIATION has received the degree of Master of Law from the National University, Washington As is generally known Mr Philip is Counsel for the N A R D

F J Gleason, D D S, is now associated with the research work of Merck & Co, in a dental advisory capacity

William C Downey, Washington, *honorary president* for 1932–1933 (School of Pharmacy, U of Md), was one of the speakers at the Alumni Association Banquet of the University of Maryland *Fred Sultan, of St Louis* was elected *honorary president* for 1934–1935 Both of these are graduates of the class of 1884

E Allen Newcomb, son of Dr and Mrs **E L Newcomb**, Montclair, N J, was married June 3rd His bride was Miss Catherine Purcell, East Milton, Mass The young couple will reside in Indianapolis after July 1st, where Mr Newcomb will be associated with Eli Lilly & Co, pharmaceutical manufacturer Mr Newcomb was graduated with a Master's degree from the Harvard School of Business this year He received his B S degree from Massachusetts Institute of Technology in 1932

VETERAN DRUGGISTS ASSOCIATIONS HONOR SAMUEL L HILTON

Members of the Baltimore and Washington Veteran Druggists associations and their ladies met in joint session at the Olney Inn for the season's closing session, and honored Samuel L Hilton He was rather surprisingly informed that he was observing the fiftieth anniversary in the profession He has been a member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1890, and has assisted in a number of revisions of the United States Pharmacopœia and the National Formulary He has held various high positions in organized pharmacy and was president of the A PH A in 1921–1922

Among the speakers were Edward A Smyser president of the Washington association, for the Baltimore association, Charles L Meyer, Robert L Swain former president of the AMERICAN PHARMACEUTICAL ASSOCIATION, R E Lee Williamson, of the Federal Wholesale Druggists' Association, Editor E G Eberle, W Bruce Philip, attorney for the National Association of Retail Druggists at Washington and a former A PH A president A beautiful scroll, signed by all in attendance was presented to the guest of honor

Dr Hilton, recently presented a large assortment of books to the ASSOCIATION and has been instrumental in securing a number of other donations He has been interested in the building of the American Institute of Pharmacy, since the ground breaking

OBITUARY

W B Brazelton, Waco, Texas, president of Behrens Drug Co, died at his home, June 16th aged 77 years Mr Brazelton was not a pharmacist but interested in many commercial activities and civic affairs in Texas

WILLARD OHLIGER

Willard Ohliger, member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1903, chairman of the Board of Directors and General Manager of Frederick Stearns & Company, died in Detroit, June 8, 1934, at the age of 56 He is survived by his widow

Willard Ohliger was born in Ohio and received his early education in his home town of Wooster Later he attended the Philadelphia College of Pharmacy from which he was graduated in 1900 with the degree of Doctor of Pharmacy Not satisfied with this training, he entered the University of Pennsylvania to continue the study of chemistry After graduation he came to Detroit and became identified with the House of Stearns entering as a chemist Very shortly afterward he was promoted to the position of chief chemist, having charge of the Analytical Department In 1905 he became general director of all manufacturing and then in 1911 superintendent of production In 1913 he was elected second vice president, in 1915 general manager and in 1916 first vice president and general manager In 1921 Mr Ohliger was elected president and general manager At the time of his death he was chairman of the Board of Directors and general manager

ROBERT G ECCLES

Dr Robert G Eccles member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1885 and active in the ASSOCIATION for many years died as a result of injuries sustained by being hit by a street car in Brooklyn N Y Dr Eccles was formerly a member of the faculty of Brooklyn College of Pharmacy a chemist for a number of years with the U S Department of Indian Affairs and editor of *Merck's Archives*

The deceased was born in Scotland and came to this country in his youth, in 1848 Until 1876 he was engaged in educational work in the West Before returning East he was married and on coming to New York Mrs Eccles entered the Women's Medical College in Manhattan and Dr Eccles began his medical studies at Long Island Hospital Both were graduated and received their degrees in 1882

DR I V S STANISLAUS

Dr Ignatius Valerius Stanley Stanislaus, associate professor of pharmacy in the Brooklyn College of Pharmacy, Long Island University, since 1923, and prominent in pharmaceutical and chemical circles, died suddenly of a heart attack while dining with friends at a New York restaurant June 1st He was born at South Bend, Ind about sixty years ago

Dr Stanislaus was a graduate of the School of Pharmacy of the University of Illinois and had taken degrees at Zurich as well as at Notre Dame Brooklyn and Providence in this country He was dean and professor of industrial chemistry in the Department of Pharmacy of the University of Notre Dame in 1896–1901, dean and professor of pharmacy and organic chemistry in the old School of Pharmacy of the Medico Chirurgical College, Philadelphia in 1906–1912, and was a special lecturer on drug chemistry at Temple University Philadelphia

MRS JOHN F HANCOCK

Mrs John F Hancock widow of the late Dr John F Hancock Baltimore, former president of the AMERICAN PHARMACEUTICAL ASSOCIATION 1873–1874, died June 21st In former years, she attended many meetings of the Association and remembrances of friends at these occasions entered into her delightful conversations also the visits of pharmacists, of earlier years at the home where are photographs of Procter, Parrish Maisch, Remington Shinn and many others and family paintings of those who contributed to Maryland and American history

The older members of the A PH A will remember Mrs Hancock when she was the center of visiting groups Until the last few days she was interested in passing events and her acquaintance with ASSOCIATION history, Maryland Pharmaceutical Association, and of Baltimore made visits with her entertaining In later years her physical infirmities made it difficult for her to move about, but her mind to the last was clear

For about forty years, the deceased was president of the Women's Auxiliary of the Free Summer Excursions, provided for the children of Baltimore

Mother Hancock was born January 13 1841, her living children are James E Hancock Miss Fannie Despeaux Hancock of Baltimore and Mrs E G Eberle of Washington D C The many beautiful flowers and messages spoke of the affectionate regard in which she was held

SOCIETIES AND COLLEGES

AMERICAN MEDICAL ASSOCIATION

The president-elect of the American Medical Association, Dr James Somerville McLester, comes to office with a distinguished career of service to organized medicine He was born in Tuscaloosa Ala , January 25, 1877 He received his A B degree from the Univerity of Alabama in 1896 and the M D degree from the University of Virginia Department of Medicine in 1899 Then followed postgraduate work at Gottingen and Freiburg in 1901 and 1902 He became professor of pathology and later professor of medicine in the Birmingham Medical College, holding this position from 1902 till 1912 This period also included postgraduate study in Berlin and Munich during 1907 and 1908 In the World War he acted as major and chief of medicine in the Base Hospital at Camp Sheridan and was promoted to lieutenant colonel in the American Expeditionary Forces, becoming commanding officer of Evacuation Hospital 20, in 1918 During this time he was a consultant in the medical service In 1919 following the World War he became professor of medicine in the University of Alabama School of Medicine

NATIONAL ASSOCIATION OF BOARDS OF PHARMACY

Delegates from thirty four states participated in the deliberations of the National Association of Boards of Pharmacy, including Porto Rico One hundred per cent attendance was shown by Connecticut, District of Columbia, Kansas Maine, New Hampshire and North Carolina

A report of the Executive Committee recommended that the offices of the Association be moved to the American Institute of Pharmacy, Washington by May 1935 if possible

Congressman Thomas, of New York who is a pharmacist, was guest speaker at the banquet

Provisions were made for a scroll for the officers of the Committee on Pharmacy Exhibit, World's Fair

Dr Lopez, delegate from Porto Rico, delivered a message from the Island and gave an interesting account of pharmacy in Porto Rico

F W Hancock, of North Carolina was elected *Honorary President* Charles H Evans of Georgia, *President,* the *Secretary* and *Treasurer* were reelected

AMERICAN PHARMACEUTICAL MANUFACTURERS ASSOCIATION

Details of the tentative program for the annual meeting of the American Pharmaceutical Manufacturers Association to be held June 25th to 28th, inclusive on Cape Cod at the Chatham Bars Inn Chatham, Mass have been issued and the schedule includes a number of interesting and important subjects including addresses by prominent individuals in the industry

OFFICERS OF THE PROPRIETARY ASSOCIATION

The officers elected by the Proprietary Association at its recent annual meeting are as follows *President* Frank A Blair, New York City, *Honorary Vice President,* Dr V Mott Pierce, Buffalo N Y , *First Vice President* Henry P Bristol, New York City, *Second Vice President,* E K Hyde, Buffalo N Y , *Third Vice President,* James H Howe, St Louis Mo , *Secretary Treasurer* Charles P Tyrrell, Syracuse, N Y , *General Representative* E F Kemp, 425 Star Building Washington, D C , Harry B Thompson, 422 Star Building, Washington D C , *Executive Committee* Z C Patten Jr Chattanooga, Tenn , J F Hindes Baltimore, Md , A H Beardsley Elkhart Ind

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

The ninety fourth meeting of the American Association for the Advancement of Science was held in Berkeley, Calif , from June 18 to 23, 1934 This is the fourth summer meeting of the association on the Pacific Coast previous meetings having been held at San Francisco in 1915 at Portland Oregon in 1925 and at Pasadena in 1931 All these have been joint meetings with the Pacific Division This year the University of California and the Pacific Division of the association are coöperating as hosts Sessions were held for the most part in lecture halls of the University of California on the campus at Berkeley As has been found desirable in summer meetings symposia and invited programs are emphasized and field trips are numerous

OFFICERS OF WEST VIRGINIA PHARMACEUTICAL ASSOCIATION

The following officers were installed for the current year *President* Fred C Allen Marlinton, *First Vice-President*, Robert R Pierce, Morgantown, *Second Vice-President*, Herman Wild, Huntington *Third Vice President*, H J Matthews Mannington, *Secretary Treasurer*, J Lester Hayman, Morgantown, *Council Member*, W R Crane Fairmont

The following were nominated, election to be made by mail ballot, for the Association officers to be installed at the next annual meeting *President*, Robert R Pierce, Morgantown, G S Flesher, Cairo, *First Vice President*, John A Greear Huntington E B Moore, Elkins *Second Vice President* James A Patterson, Martinsburg, J R Hertzog Worthington, *Third Vice-President*, H A Goodykoontz, Bluefield, W S Coleman, Lewisburg, *Secretary Treasurer*, J Lester Hayman, Morgantown Carl E Furbee, Clarksburg, *Council Member*, Chas V Selby Clarksburg, L C Harlan, Huntington

The next annual meeting will be held in the City of Parkersburg, in June 1935

Among the speakers of the convention were, Jerry McQuade, Albert Fritz Dr Roy B Miller, Fred L Fox, Thurston Merrell and F J Nichol

A resolution adopted is to the effect that pharmacists should be represented on the Board of Health The federation of State Pharmaceutical Associations was endorsed

OFFICERS OF MARYLAND PHARMACEUTICAL ASSOCIATION

Maryland Pharmaceutical Association elected the following officers *Honorary President*, H R Steiner *President*, Andrew F Ludwig, Baltimore, *First Vice President*, Harry W Matheney, Cumberland, *Second Vice-President* Melville Strasburger Baltimore *Third Vice President*, A A M Dewing, Centreville *Secretary*, E F Kelly Baltimore *Treasurer* Harry S Harrison, Baltimore *Editor*, Robert L Swain Baltimore *Executive Committee Chairman*, Charles C Neal, Baltimore, W B Spire, Mt Rainier, Aquilla Jackson, Baltimore, L V Johnson St Michaels, Samuel Y Harris Baltimore Simon Solomon, Baltimore

TEXAS BOARD OF PHARMACY

The Texas Board of Pharmacy held its final examination for non graduate pharmacists at Waco Texas, May 14th, 15th and 16th, with 203 applicants in attendance The Board elected new officers at the meeting They are John A Weeks, Ballinger, *President*, W H Cousins of Dallas was reelected *Secretary* C B Allison was reelected *Treasurer* All members of the Board, including J Dan Allen, Houston, Paul D Carroll, Texarkana, E E Weaver, Fort Worth, Erwin Joseph, Austin, Mr Weeks and Mr Allison were in attendance

C M Brewer, secretary of the Oklahoma State Board of Pharmacy, has been elected vice president of the National Association of Boards of Pharmacy Mr Brewer will preside over the sixth district, which includes Oklahoma, Texas Arkansas New Mexico, Kansas, Louisiana and Missouri

ALPHA ZETA OMEGA FRATERNITY

Members of sixteen chapters of colleges and schools of pharmacy met in Baltimore, June 24th Among the speakers were Doctors John C Krantz, Jr, E F Kelly and David I Macht

NARCOTIC THEFTS

Professional men and druggists, wholesale and retail are urged by the Bureau of Narcotics to store all narcotics under lock and key preferably in metal cabinets or safes, since the check up of many thefts by narcotic agents has shown that they were committed without trouble due to the use of wooden cabinets and unlocked cases Legal purveyors were cautioned also against letting the Government order forms issued to the drug trade and the medical profession fall into the hands of illicit traffickers and addicts

In addition to opium, morphine and heroin thefts, in the two year period, more than 700 ounces of cocaine, dionin, and other opium and coca leaf derivatives were stolen these drugs bringing considerable return in the illicit traffic when addicts find it difficult to obtain morphine or heroin While the manufacture of heroin is forbidden in this country, and the medical profession has voted against its general use, there are some small stocks on hand and it was from these stocks the thefts were reported

REFORM ADVERTISING

The newly formed advertising committee of the Proprietary Association will shortly establish headquarters in New York City with a staff of experts to make a study upon which to base its recommendations The new group has been

charged with the responsibility of developing a plan for voluntary advertising control, to eradicate such evils as exaggerated claims and bad taste An organization meeting in New York City during the week was attended by William Y Preyer, chairman, Lee H Bristol, chairman of the executive committee of the Association of National Advertisers, William S Groom, James F Hoge, legal expert, and Frank A Blair, president of the association

NEW JERSEY CODE MARK UP SUSPENDED

The fifteen per cent mark up provision contained in Article 12 of the code of fair competition for the retail trade in the State of New Jersey was suspended by the State Industrial Recovery Administrator, effective May 24th pending a study of distributive costs in the state The suspension was considered as only temporary however, and the provision may be either reaffirmed or revised within the next few weeks, depending on the results of the cost study

The action came as a surprise to retailers, inasmuch as the mark up had been granted for a trial period of sixty days and no change was expected before that time Since the code was approved by Governor A Harry Moore a few weeks ago the druggists had set up a code authority opened offices in the Industrial Office Building, Newark, and had circulated lists of prices including the mark up, for many nationally advertised products

BOOK NOTICES AND REVIEWS

Volumetric Analysis By H P STARCK M A , Head of the Science Department The Technical College, Kingston on Thames published by William Wood and Company Baltimore 1934, VIII + 228 + 31 pages Price $3 00

This text was originated in connection with the author s teaching of volumetric analysis to students reading for School certificate University Scholarship National Certificate and Pharmaceutical Medical and General examinations in chemistry in Great Britain Portions of the work are designated for certain classes of students by definite headings such as Inter and Final B Sc Students' 'For Degree Students," Estimations for All Advanced Students" The articles and preparations which should be estimated by pharmaceutical students have their Latin Titles mentioned in parentheses and exceptions are indicated by an asterisk

The subject matter includes a brief consideration of a large number of well known analytical processes Concise procedures are given and emphasis is placed on the explanation of equivalent weights The book is divided into five sections treating of I—Introduction, II—Acidimetry and Alkalimetry, III—Oxidation and Reduction, IV—Precipitation Methods, and V—Application Methods, appendices, index and qualitative analysis tables A number of well selected problems are included in each section

The book is well suited to the purposes for which it is intended no doubt Since we in this country do not have a type of examination similar to that which obtains in Great Britain it is not likely that a text covering so wide a variety of materials will find extensive use here The many pharmaceutical items treated of make the book of value and interest, however, to all who are engaged in the analysis of pharmaceutical chemicals—GLENN L JENKINS

The JOURNAL OF THE A PH A is indebted to Dr Edward Kremers, of the University of Wisconsin, for *Bulletin* Series No 1919, General Series No 1703, ' Phytochemistry ' by Edward Kremers and colaborers being No III of the Methane Series of Hydrocarbons '

NRA HANDBOOK

The National Recovery Administration has compiled an authoritative guide in the form of a 30 page document, entitled What Is the NRA?" Descriptions are given of the various steps taken in formulating codes and suggestions are advanced to show why no two codes of fair competition are alike They all must contain certain specified features

---

INTERNATIONAL RED CROSS SOCIETY

The International Red Cross Society will meet in Tokyo, October 19th to 29th Elaborate preparations are being made by the Japanese Red Cross Society for the annual meeting of the Red Cross Society in Tokyo which is to be held in the Japan Red Cross Society Building in Shiba Park

Reports of Local Branches had to be deferred to a succeeding issue of the Journal

MAINTENANCE AND ENDOWMENT FUNDS FOR THE AMERICAN INSTITUTE OF PHARMACY

FUNDS may be donated specifically for the maintenance of the Museum or of the Library of the American Institute of Pharmacy, for general research projects, for publicity for pharmacy, or for studies in any special field which may be suitable Such contributions may also be applied to any other specific purpose which the donor designates or they may be turned over to the general maintenance fund for the promotion and continuation of the other activities for which the Institute was established

Donations of materials or of funds to the Institution provide a splendid means of contributing to the advancement of pharmacy and to the improvement of the important public health service it renders, they provide the opportunity of contributing to the promotion of the profession which has given to many their opportunity and their success in life Donations may be named and suitable tablets or other acknowledgments will be provided in accordance with the wishes of subscribers Contributions may also be made in the name of the donor, of some other person or persons, or they may be made in the name of an institution which the donor wishes to commemorate Even though only small donations are possible, they add to the total and thus to the possibilities of service

For the convenience of contributors donations may be paid at once or over a period of years, they may be included in wills, they may be provided through life insurance or through trust estates, and they will be acceptable through any arrangement most convenient to the donor

The Constitution of the AMERICAN PHARMACEUTICAL ASSOCIATION provides that such funds as may be bequeathed or otherwise donated to it shall be invested in U S Government, State, Municipal, County or other securities acceptable as security for postal savings deposits In view of the scientific and educational nature of its work and since it is not operated for profit, donations to the ASSOCIATION may be deducted in computing income tax under the fifteen per cent proviso Full information relating to this matter will be furnished if desired

The American Institute of Pharmacy is a permanent service institution and also provides a splendid opportunity to memorialize those who have contributed their knowledge and endeavor to the preservation of public health and to the further advancement of science in pharmacy It is the hope of the ASSOCIATION that the work so auspiciously begun may advance by the generous support of all its members

ERNEST LITTLE

JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

VOL XXIII JULY, 1934 No 7

THE PRESIDENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY, 1934–1935

Ernest Little was born in Johnstown, N Y , June 9, 1888, the son of John and Martha Snook Little He received his earlier education in the elementary schools of his home city and Johnstown high school, from which he graduated in 1907 He pursued undergraduate work at the University of Rochester until 1911, when he was awarded the B S degree in Chemistry Here he continued graduate work, receiving the M S degree in 1913 His graduate work at the University was carried on under the direction of Dr Victor J Chambers, and largely in the field of nutrition, food and organic analysis, the thesis submitted was on "The Alkaline Copper Solution as Used in Sugar Analysis" It recorded a critical study of the various oxidation and reduction methods, both gravimetric and volumetric He then enrolled as a graduate student at Columbia University and was awarded the A M degree in 1918 The work followed the lines of his prior studies, including also physical and colloidal chemistry Continued graduate work at Columbia earned for him the Ph D degree, in February 1924 Research work for this degree was carried on in the department of analytical chemistry and was published in a treatise entitled "The Determination of the Acidity of a Tan Liquor," in which gross inaccuracies were shown in the methods heretofore employed and a simple accurate method involving the use of the cadmium half-cell was recommended

Dr Little has been a frequent contributor to various chemical publications and in recent years to pharmaceutical journals He is a member of Kappa Psi, Phi Beta Kappa, Sigma Psi and Phi Lambda Upsilon He is president of the Northern New Jersey Branch, A PH A , member of the Revision Committee U S P XI, chairman of the committee on Test Solutions and Reagents, Inorganic Chemicals, Tables, Weights and Measures He is member of the Committee on Membership Standards, A A C P and of the Standing Committee on Chemistry of the boards and colleges, District No 2 He is president of the Board of Education of Highland Park, N J , and member of the Board of Directors of Newark Rotary Club

In 1910, Dr Little was assistant in Physics and Mathematics at Mechanics In-

stitute, Rochester, from 1911–1914, he was member of the faculty of Rochester University, 1914–1918 he was instructor in Leather Chemistry at Pratt Institute, Brooklyn, and from 1918–1928 member of the faculty of Rutgers University professor of Physics and Chemistry, New Jersey College of Pharmacy (Rutgers University College of Pharmacy) and since 1926, dean and professor of Chemistry

---

"PROFESSIONAL" IN THE RETAIL CODES

The following is taken from *The Blue Eagle* of June 25th

"A 'professional' in the retail trade has been defined by the National Recovery Administration

"Under the definition given only the following can be properly classified as professionals Chemists, physicists, dentists, physicians and surgeons, registered nurses, chiropodists, pharmacists, optometrists, architects, artists and creative decorators, training directors whose entire time is devoted to education or training, research technicians, statisticians, engineers (who hold degrees from qualified institutions of higher learning)

"The interpretation defines as a professional 'a person whose work is (1) Predominantly intellectual or mental in character as opposed to purely physical work or work involving the application of manual, mechanical, physical or operative technique or skills, and (2) based upon educational training in a specially organized body of knowledge as distinguished from training of a manual, mechanical or operatively technical type, or the performance of routine mental processes in accordance with a previously indicated or standardized formula, plan or procedure, and (3) of a nature that is creative and cannot be carried on by anyone not having a similar training or qualifications without losing its unique characteristics'"

EDITORIAL

E G EBERLE, EDITOR 2215 Constitution Ave WASHINGTON, D C

HEROES IN HEALTH SERVICE

HISTORY abounds in records of valor stimulated by patriotism in defense of country and the world The acts longest and most generally remembered are those wherein lives are sacrificed in their country's cause, memorials are erected so that their names and deeds may be reminders of duties and service honorably rendered

Paintings, statues and printed pages remind us of outstanding deeds in military service and dedications to the unknown, honoring those who in large numbers had an essential part in the success of a just cause

The memory of those who have achieved great things in public health matters lives in the results of their researches, whereby sections of the world have been made habitable, destructive diseases have been conquered, and painful and burdensome afflictions have been made more bearable Among these benefactors are scientists who suffered greatly so that others may be happier and more comfortable, individuals characterized by heroic unselfishness, thinking modestly of themselves, but intensely desirous of aiding the afflicted, their viewpoint regarding them reaches millions represented in types they know and with whom they sympathize, because of their affliction

In the class referred to are many, their services differ, but all of them have made signal contributions to health, prosperity, discovery, education, commerce, industry, arts and professions, all closely linked in the benefactions derived from devotion, labor, study, investigation and, above all, the loftiness of purpose which prompts their efforts Reference may be permitted to discoveries which have converted to livable areas in which life was constantly endangered by disease and thereby development made impossible, laboratories conducting research are not free from dangers and its workers receive cooperation from laymen who desire a part in discoveries that may result in disease immunity, citing as a recent example the volunteers to submit themselves as tests for the efficacy of anti-paralysis serum There may also be included the hardships of carriers of food and medicines to afflicted sections Yellow fever was conquered because of the heroism of Gorgas, Lazear, Finlay, Agramonte, Reed and others, the achievements in Cuba and the Canal Zone were heroic and of inestimable value not merely through the immediate benefits and benefactions, but by proving that disease can be controlled and plagues checked, of which there is continued evidence

This editorial comment was prompted by the passing of a heroine, the discoverer of radium, Madam Marie Curie, who endured the hardships of poverty in early life and had the courage to carry on, resulting in her great achievements, she could appreciate that fortune was with her when she found employment at Sorbonne cleaning the furnace and washing bottles in the laboratory, and modestly accepted recognition of the great honors which came to her not very many years later With her passed out a heroine and one of the prominent figures in science and an outstanding benefactress of humanity One of the great days in her life was May 20, 1921,

when she received the gift of radium through President Harding, not for herself, but because she realized its great value for the afflicted, whom she relieved and served The effect of radium made itself known in her health and exacted its toll During the few days prior to her death Mme Curie gave directions concerning experiments being conducted in her Paris laboratory, and, later, she gave directions for her funeral

"Heroism is active genius, genius, contemplative heroism Heroism is the self-devotion of genius manifesting itself in action "

THE SERVICE OF PHARMACY

THERE is a growing development of the service of pharmacy and a greater realization of the need of closer cooperation of those engaged in the medical professions Discussions of the subject occupied much of the time at the recent AMERICAN PHARMACEUTICAL ASSOCIATION meeting in Washington, and at state medical meetings there was an evident desire to gain a better understanding of how to prescribe and how cooperation of the physician, dentist and pharmacist may serve the patient better This desire is in evidence everywhere, to impress that, parts from two addresses are quoted—one delivered before the pharmacists in Edinburgh, Scotland, and the other in far-off Bengal

Dr J M Johnston, pharmacologist to the Scottish Department of Health and a member of the Poisons Board set up under the Pharmacy and Poisons Act, 1933 (Great Britain), said in closing an address to the Edinburgh pharmacists that "the pharmacist has a part to play in the question of the use and misuse of drugs There is ample scope for the education of the public, and also, as opportunity arises, for the education of the medical profession I hope the pharmacists will rise to the occasion, and, steering clear of the dangers of commercialism, will raise the pro fession of pharmacy to its proper place in the battle against disease Much of the analytical work at present undertaken by pharmacologists could more properly be left to the pharmaceutical chemist, for whom there is also awaiting the promising field of biochemical investigations which are so necessary for modern clinical medi cine The keynote for the future of the pharmacist would appear to be a combined policy of education and investigation "

Lieut -Col Chopra opened his presidential address to the All-Bengal Com pounders' Association by saying that "as a pharmacologist who has to work with drugs I am very interested in the profession of pharmacy which you practice The important part which pharmacists play in relation to drugs needs no special em phasis You, as their representatives in this country (Bengal), are the custodians of drugs You prepare and compound drugs and on your efficiency depend the purity and efficacy of the preparations dealt with by you Your relation to the practice of medicine in every-day life is intimate and you are an integral part of it The busy physician dealing with diagnosis and treatment of disease has no time at his disposal to dispense his own medicine as he used to do in the old days Phar- macy has developed enormously along with medicine and the wider scope of the two sciences makes it impossible for the medical practitioner to devote himself sys tematically to the study of pharmacy In matters of drugs, their preparation and

dispensing, therefore, the physician has to depend entirely on the advice and guidance of the pharmacist The physician has sometimes to use very potent drugs which require to be handled with the most exact and scrupulous care Skilful dispensing is essential for the successful treatment of disease by those practicing medicine "

"A Suggestion for the Establishment of a National Council on Pharmaceutical Practice," has as the first objective a study of the needs of each field of activity and then a preparation for announcing these needs to the country, it also is proposed to make a restatement of codes of ethics and practice, for each group as the basis for a high professional standard

CODES

THE great hindrance in undertakings to be overcome is selfishness and the desire to stand out in public appreciation This, frequently, is also true in legislation, for while all statesmen are politicians, not all politicians are statesmen The work of recovery depends upon honesty, initiative, understanding, self-reliance and resourcefulness to meet conditions as they arise

The greater number of druggists have expressed themselves as favorable to a continuation of the National Retail Drug Code, and the *Literary Digest* survey shows that more than sixty per cent are in favor of the New Deal policy

The first year of NRA was devoted chiefly to codifying industry, more than four hundred basic codes of fair competition have been put into operation, representing 96 per cent of trade and industry in the United States, the next year's work will largely be directed to the enforcement of the codes

As seen from the press there is contemplated a reorganization of the Recovery Administration under a board, instead of a single administrative head The question arises as to the kind of administrative agency is best adapted to carry on the activities of the NRA When the change will be made seems to be undecided, however, the surveys indicate that the life of the Recovery Administration will be indefinitely prolonged The size of the administrative body has not been determined, but there is quite general expression that the members should have well-defined duties and share in the responsibilities of the administration and the work of the administration should be placed on a broader basis

Notwithstanding the different opinions as to the workings of the NRA we should seek and encourage "the greatest good for the greatest number," and "the highest law is that created to relieve the imperative needs of the people "

PHARMACY EXHIBIT AT PROGRESS OF SCIENCE

When you are in Chicago see the Pharmacy Exhibit The AMERICAN PHARMACEUTICAL ASSOCIATION is, as last year, sponsoring the exhibit A significant indication of the enthusiastic approval given last year's enterprise is the fact that the committee this year received almost 100 per cent favorable responses from participants to the questionnaire sent to the leading contributors to the 1933 exhibit The pharmaceutical showing of last year proved to be one of the most popular of the exhibits in the medical division

SCIENTIFIC SECTION

THE ABSORPTION OF CALCIUM *

(A PRELIMINARY REPORT)

BY A RICHARD BLISS, JR ,[1] ELLSWORTH O PRATHER, JR ,[2] AND ROBERT W MORRISON [3]

INTRODUCTION

The metabolism of calcium is intimately related to the calcium and phosphorus content of the ingested food, the activity of the parathyroids, vitamin D and possibly vitamins A and C Normally, the blood serum contains from 9 0 to 11 mg of calcium per 100 cc (1), but in sickness and wasting diseases the amount is lower In some forms of tetany (2) it has been found occasionally less than half the normal Updegraff, Greenberg and Clark (3) found that approximately 50 per cent of the total serum calcium is *non-diffusible* or bound calcium, and the remainder is *diffusible*, but Kugelmass and Shohl (4) showed that only a portion of the diffusible calcium is ionized Some are of the opinion that *ionic calcium* is the active portion, and that the serum calcium is consequently not a true index of the calcium balance Since ionic calcium diminishes cell permeability (5), excessive amounts decrease cellular activity

It has been estimated that 99 per cent of the calcium in the body is stored in the bones and teeth as phosphate and carbonate These compounds provide a reserve to keep the blood calcium normal Vitamin D is concerned in the development of the teeth, and Bauer and Marble (6) have demonstrated that this vitamin increases the absorption of calcium and phosphorus from the gastro-intestinal tract In low calcium supply and in chronic states of debility, the bones slowly atrophy through being thus drawn upon for calcium In acidosis the bone calcium is apparently not readily available Although the average adult requires about 0 45 Gm of calcium a day, Sherman (7), to insure the optimum concentration in the blood for both adults and children, advises a minimum of 1 Gm Sherman and Booher (8) have shown that in growing children the bones may grow in size while calcium poor During lactation and in the last months of pregnancy, the mother requires double the usual supply of calcium, and, if it is not furnished by the food, loses it from her own bones and teeth Rickets is associated with inadequate calcification of the bones, and is dependent on derangement of calcium and phosphorus metabolism It is well known that premature infants are especially predisposed to rickets, since they have less than the normal supply of calcium and phosphorus at birth

Absorption of calcium takes place in the intestines, but it is influenced by a number of factors Absorption is *diminished* by (A) an *excess of phosphorus* in

[2] Instructor in Pharmacology University of Tennessee

[3] Associate Professor of Pharmacology, University of South Carolina

the food, resulting in the formation of the unabsorbable tribasic calcium phosphate, (B) an *excess of fat* in the diet or the incomplete utilization of fat, resulting in the formation of insoluble calcium soaps, (C) *intestinal alkalinity*, as from the ingestion of alkalies, or after meals when there is an abundance of the alkaline pancreatic and intestinal juices and bile (Zucker and Matzner (9) by adding sodium bicarbonate to the diet produced rickets in rats), (D) *hurried loose stools*, as in diarrheas, (E) *stools bulky with cellulose* and roughage The greater the bulk of the feces, following the ingestion of bran, carrots, spinach, agar, and cellulose flour for bulk, the greater is the loss of calcium

The absorption of calcium is *favored* by (A) *intestinal acidity*, as that which may follow the administration of diluted acids, acidified milks and acidotic diets (Aub, *et al* (10) claim that an acidotic diet may double the urinary calcium, an indication of increased absorption, but if a neutralizing amount of sodium bicarbonate is given with this diet, the urinary calcium is not increased), (B) *the addition of lactose to the food*, which according to Roe and Kahn (11) is probably due to the formation of lactic acid in the intestines

Calcium chloride and calcium lactate have been extensively studied to determine their absorbability when given orally Clark (12) with rabbits, Kramer and Howland (13) with rats, and Denis and Minot (14) and a number of others with humans, obtained no significant rise in the blood calcium However, some observers have reported their absorption From single doses of 5 Gm in each of nine human subjects, Aub, Bauer, Heath and Roper (15) reported a rise of 5 to 14 per cent, and from 10 Gm in eight subjects, a rise of 5 to 28 5 per cent The maximum rise was found between the first and the fifth hours, and in thirteen of the seventeen subjects, the calcium did not return to the pre-ingestion level for twelve hours With 5 Gm doses of the lactate dissolved in water and given on an empty stomach, Roe and Kahn (11) obtained in ten men an average maximum rise in blood calcium of 80 per cent at six to seven hours, the calcium remaining above normal for nine hours, while with 2 Gm doses they obtained an average maximal rise of 41 per cent at six hours, the calcium remaining above the pre-ingestion level for one and one-half hours longer Mason (16), Myers and Fine (17), and others reported the lactate inefficiently and the chloride readily absorbed

According to Meltzer (18), the most effective way to deprive the body of calcium is to give magnesium Mendel and Benedict (19) and others have demonstrated that magnesium forces calcium from the system It appears that an excess of magnesium ion exercises a marked specific inhibitory effect on calcification (20, 21, 22, 23) Kramer, *et al* (24) found that, following the administration of magnesium chloride or sulphate, the inhibition of calcification began when the magnesium of the blood rose above normal They reported also that as the inorganic phosphorus increased more magnesium was required for the inhibition It appears that there may be some hazard in the repeated administration of milk of magnesia, at least to children or to those with fractured bones A diet deficient in calcium is the more harmful if it is at the same time rich in magnesium Since the magnesium of the cereal grains is mostly in the bran, some pediatricians advise against bran and whole wheat for children In milk and many vegetables the calcium is high and the magnesium low

THE METHOD

The method is based on the antagonism between magnesium and calcium, which, in earlier experiments was observed in animals narcotized by magnesium and awakened by injections of calcium chloride In these experiments white mice were used The calcium salts were given by mouth, and, after a certain length of time, the magnesium sulphate ($MgSO_4 7H_2O$) was injected subcutaneously At the same time controls were run If some of the ingested calcium were absorbed, then a greater amount of magnesium sulphate is necessary to produce narcosis than is the case where no calcium is given or absorbed

For from twelve to fifteen hours before the calcium salts were administered the mice received no food or water The calcium salts were given in 3% to 10% aqueous solutions or suspensions injected into the stomach by means of a thin stomach tube fitted with a small syringe The time interval between the feeding of the calcium and the injection of the magnesium was two hours Magnesium sulphate was injected subcutaneously in a 10% aqueous solution A definite degree of narcosis was required which the authors determined to be at the point where the mice lie on their backs without movement or attempts to turn over This degree of narcosis is usually reached by effective doses in from twelve to twenty minutes after the injection

On the basis of an extensive series of preliminary experiments (Table I), 0 9 mg of magnesium sulphate per Gm of body weight proved to be just sufficient to produce the desired state of narcosis in the mice The amount of each calcium salt administered in mg per Gm of body weight is equivalent to 0 3 mg of calcium per Gm of body weight

* mg $MgSO_4 7H_2O$ per Gm of mouse

DISCUSSION

In Table I are shown the effects produced by various amounts of magnesium sulphate ($MgSO_4 7H_2O$) Nine-tenths of a milligram (0 9 mg) per Gm of body weight was shown to be the amount required to produce the desired state of narcosis in white mice

Tables II through VIII show the effects produced by magnesium sulphate in various doses following the oral administration of equivalent quantities (Ca) of the six calcium compounds studied By subtracting 0 9 mg from the magnesium sulphate values given in these tables (II–VIII), the amounts of magnesium sulphate required to completely antagonize the *absorbed* calcium are obtained The greater the quantity of magnesium sulphate required to produce the narcosis, the larger the amount of *absorbed* calcium

When arranged according to relative efficacy the calcium compounds used in this study place themselves in the following order

(1) Calcium lactate
(2) Calcium gluconate
(3) Calcium chloride
(4) Inosite hexacalcium gluconate
(5) Calcium diphosphate
(6) Calcium glycerophosphate

When arranged quantitatively according to the actual amounts of the calcium compounds themselves administered and expressed in grams per Gm of body weight of mouse, the order is

(1)	Calcium chloride	0 00082425
(2)	Inosite hexacalcium gluconate	0 00120096
(3)	Calcium diphosphate	0 00129375
(4)	Calcium glycerophosphate	0 00161150
(5)	Calcium lactate	0 00163635
(6)	Calcium gluconate	0 00336241

The foregoing quantities represent equivalent amounts of calcium

Attention is called to the fact that this preliminary study leaves relatively wide gaps between the various quantities of magnesium sulphate used to neutralize the absorbed calcium (gaps between 1 0 and 1 25, 1 25 and 1 50, 1 50 and 2 00), and also that but one time interval (2 hours) was involved Consequently further studies are underway in which the effects of longer time intervals between the doses of the calcium compounds and the doses of the magnesium sulphate are being recorded, as well as the effects of increases of 0 1 mg of magnesium sulphate per Gm of body weight of mouse between the values (1 0 and 1 25, 1 25 and 1 50, 1 50 and 2 00) which appear in the present tables

THE SOLUBILITY OF CALCIUM LEVULINATE IN WATER

BY GERALD J COX,[1] MARY L DODDS[2] AND CLARENCE CLASPER [3]

Calcium levulinate has been shown to be more satisfactory for parenteral administration of calcium than any other known salt (1, 2) Anticipating the prob

[1] Senior Industrial Fellow [2] Industrial Fellow [3] Fellowship Assistant

able early adoption of this compound in therapeutics, we have determined the solubility of calcium levulinate in water over a range of temperature as an aid in the technology of both the preparation of solutions and the purification of the salt by crystallization

The calcium levulinate samples for this study were purified by repeated crystallization from water and alcohol mixtures and dried in air at room temperature The criteria of purity were the absence of color in concentrated solutions and the calcium content The latter was determined by permanganate titration of the precipitated calcium oxalate from nine samples and found to average 13 33% calcium compared with the theoretical value of 13 09% from $Ca(C_5H_7O_3)_2\ 2H_2O$

Saturated solutions of calcium levulinate in distilled water were prepared by immersion in appropriate baths at seven different temperatures of (1) water and excess calcium levulinate, and (2) solutions of calcium levulinate saturated at higher temperatures After about six hours, samples were withdrawn isothermically and weighed Calcium was determined on aliquots of the samples by permanganate titration of the precipitated oxalate The temperature of saturation was determined by means of short stem immersion thermometers calibrated by the Bureau of Standards

The means of at least four determinations at each temperature were used in the calculation of an equation which shows the composition of a saturated solution at temperatures from 0° to 55 4° C This equation is

$$p = 27\ 58 + 0\ 173t + 0\ 0031t^2$$

in which 'p' is the number of grams of calcium levulinate, $Ca(C_5H_7O_3)\ 2H_2O$ per hundred grams of solution and 't" is temperature in centigrade degrees

Comparison of the observed solubilities with those calculated from the equation are shown in Table I

TABLE I

Temp °C	Mean p Observed	p Calc'd
0	27 6	27 58
15 8	31 1	31 08
25 0	34 0	33 81
30 0	35 5	35 56
37 0	38 7	38 32
45 3	41 4	41 48
55 4	47 0	46 67

For "p" = 100, "t" is found to be 127 4° C The temperature, 127 4° C therefore is the calculated point at which calcium levulinate dissolves in its water of crystallization Melting points for the material used were found to range from 108° to 125° C depending on the rate of heating The latter melting point was obtained by immersion of open capillary melting point tubes in a bath at 125° C The time rate of melting was approximated to those of benzoic acid in a bath at 122° C and of urea at 132° C As the observed melting point is in fair agreement with the calculated, the equation can be applied safely for temperatures above 55 4° C, the maximum used in this study

PHYTOCHEMICAL NOTES *[1]

No 110 DIGITONIN AND PHYTOSTEROL FROM THE SEED OF DIGITALIS PURPUREA

BY OLE GISVOLD

A kilo of seed, not comminuted, was extracted with a liter of alcohol in a continuous extraction apparatus for 8 hours and the extract tested for digitonin with cholesterol The extraction was repeated with a like amount of solvent for 10 hours and a third time for 12 hours The third extract gave but a slight precipitate with cholesterol

The same process was repeated with comminuted seed So far as the digitonin was concerned, the results appeared to be about the same However, the comminuted seed gave up more of its fatty oil These results might have been anticipated, since the digitonin is located in the seed coating, whereas the fatty oil is located in the cotyledons

The balance of the available seed, 25 pounds, all of which had been raised in the Garden of the Pharmaceutical Experiment Station under the direction of Prof W O Richtmann, was ground and extracted in the Lloyd extractor

The first alcoholic concentrates removed had separated a considerable amount of fat with which was mixed a solid substance that was removed by force filter Hence the alcoholic concentrate yielded two products, *viz*

1 The solid that remained in the filter and which was shown to be a digitonide, and digitonin

2 The filtrate which consisted of the alcoholic extract plus dissolved and separated fat

1 Purification and identification of the digitonide The greenish material which had remained in the filter was several times suspended in hot petroleum ether to remove fat which was added to the other petroleum-ether extracts After that it was suspended several times in hot alcohol to remove any alcohol-soluble material The substance thus purified was designated "A," the combined alcoholic filtrates were designated "B"

(A) The purified and pulverized solid weighed 18 5 Gm It was suspected to be digitonide, since the digitonin from the seed coats and the sterol from the cotyledons would naturally be brought together in the alcoholic extract In so far as the two dissolved substances met within the tissue of the seed, the insoluble digitonide resulting should be found in the extracted marc In so far as the two substances reacted in the percolate, they would precipitate each other

---

* From the laboratory of Edward Kremers

[1] Scientific Section, A PH A, Madison meeting 1933

In order to test this hypothesis, the substance was treated with boiling xylene in the usual manner (1) The extract precipitated digitonin (2) and gave good positive color reactions with both the Liebermann-Burchard (3), and the Salkowski (4) tests Hence it was pronounced a sterol It melted at 137° to 138° (5) and yielded an acetate which melted at 130° to 131° No change in the melting point of the alcohol could be observed when mixed with the sterol obtained from stramonium seed According to Windaus' test, it contained no stigmasterol (6) Culter reports that the sterol isolated by him (7) melted between 93° and 105°, which very fact proclaimed it as impure Examination revealed his impure sterol to contain hydrocarbons, too minute in quantity to be identified When purified by the removal of this hydrocarbon it had the same melting point as that found by the writer

The residue in the extraction capsule was digitonin It had the capacity to precipitate sterols, also gave the Keller color reaction (10)

(B) The alcoholic filtrate "B" upon cooling and standing yielded a light greenish precipitate Its solution in 85 per cent alcohol, after boiling with animal charcoal, yielded a colorless filtrate which upon cooling deposited a white crystalline material Inasmuch as it had the capacity to precipitate cholesterol, it was assumed to be digitonin It likewise gave a positive Keller color reaction (11)

The original alcoholic concentrate, from which the substances described above had been removed by filtration, was defatted in a manner described and illustrated in another paper (8)

I The petroleum-ether residue, consisting, no doubt, for the most part of fatty oil, was set aside Culter not long ago reported on the constituents of the fatty oil of digitalis seeds (7) If deemed desirable, the fat may be reexamined later

II To the defatted alcoholic concentrate, heated almost to the boiling point, successive portions of cholesterol (9) dissolved in 95 per cent alcohol were added until no further precipitate occurred The combined precipitates were suspended several times in hot alcohol to remove alcohol-soluble impurities The air-dried and powdered material weighed 275 Gm

The digitonide thus obtained was decomposed in 15-Gm portions, with boiling xylene in the usual manner (1) The mixed, impure digitonin was extracted four times with hot 95 per cent alcohol To the first extraction, while warm, ether was added until the cloudiness first produced just disappeared Upon cooling, the digitonin crystallized out The subsequent extractions were concentrated before the ether was added to the warm concentrate From the mother liquids additional digitonin was obtained by cooling in a salt and ice bath Subsequently the combined mother liquids were evaporated under vacuum to a syrupy consistence and the residue dissolved in the smallest amount of hot 95 per cent alcohol The digitonin thus obtained was more highly colored than the products previously separated

The combined residues of the xylene-treated material in the capsules, after exhaustion with alcohol to remove the liberated digitonin weighed 94 Gm , apparently undecomposed digitonide This was again treated with xylene but again a residue of 40 Gm of apparently undecomposed digitonide resulted A third treatment still yielded a small residue which was set aside temporarily

The total amount of crystalline, sterol-precipitating material, *i e*, digitonin, thus obtained was about 155 Gm corresponding to 1 16 per cent of the seed It should be remembered, however, that a small amount of precipitated digitonide was not resolved into its components, also that some of the digitonin had been separated from the alcoholic extract as insoluble digitonide, having been formed during the process of extraction As yet it has not been ascertained whether the digitonide, removed as previously described, constitutes all of the digitonide formed during the extraction As previously pointed out it seems reasonable to assume that digitonide may be precipitated in the tissue during the process of extraction, hence may be lost in the marc

That the 155 Gm of material, separated as described, consisted of digitonin was demonstrated not only by its method of preparation which is sufficiently specific to exclude other compounds, but by its m p 227° to 240° (10) (not very conclusive it is true), its ability to precipitate sterols (quite conclusive), also by a positive Keller color reaction (11)

The defatted alcoholic concentrate from which the digitonin had been precipitated with cholesterol was set aside to be investigated at a later date, if deemed desirable

LABORATORY OF EDWARD KREMERS
MADISON, WIS

TWO SPECIES OF THE GENUS LEDUM *

BY RUSSELL A CAIN AND E V LYNN

Several years ago we reported (1) on the volatile oil of *Ledum grœnlandicum* Oeder, which grows abundantly in the numerous bogs of Washington We have now collected specimens of this plant from a dry bog near Seattle and examined them more carefully We have also gathered samples of *L columbianum* Piper, which is found along the coast of Oregon and Washington It is differentiated from *L glandulosum* by some and by others is considered identical It is distinguished from *L grœnlandicum* by being glabrous and by its larger, not revolute-margined leaves, which are not tomentose Like the other species it is reputed to be poisonous to stock, but no one has hitherto investigated it scientifically

* Scientific Section A PH A Madison meeting, 1933

A preliminary study having demonstrated that the composition is little influenced by the wetness of the soil in which the plants grow, the samples were collected at random They were thoroughly cleaned, allowed to dry in the air and then submitted to a proximate analysis, using the A O A C methods

Alkaloid—Since the plants are considered poisonous to stock and because the leaves have been employed considerably in medicine and for killing insects, there was a possibility that an alkaloid is the responsible agent Accordingly 100 Gm each of the leaves and of the roots of both plants were separately exhausted with alcohol containing 1 per cent of tartaric acid The resulting solutions were concentrated under reduced pressure to a syrupy consistency, poured into water and filtered The filtrates were evaporated under reduced pressure to a small volume, made slightly alkaline with ammonia and extracted with 1 per cent sulphuric acid The acid solutions were treated separately with Wagner's, Marme's, Mayer's and Scheibler's reagents, with gold chloride, picric acid and tannic acid Since none of these materials gave any precipitate, we conclude that alkaloids are absent from the roots and leaves of these two species

VOLATILE OIL FROM L GRŒNLANDICUM

Immediately after being picked and separated from the stems, some of the leaves were transferred to a large still and subjected to distillation with steam From 362 pounds there was obtained a total of 226 cc, or 204 Gm of oil, representing a yield of approximately 0 12 per cent, 0 21 per cent on the dry basis By a previous maceration with water before distillation, this yield could be increased by about 50 per cent

The oil was light amber in color, possessed a characteristic odor and was neutral to litmus On standing it darkened somewhat and the odor became more pronounced The constants were d_{25} 0 9031, $[\alpha]_D^{20}$ +1 36°, n_D^{20} 1 4900, acid number 2 46, saponification number 28 81 (ester as bornyl acetate 9 32 per cent), after acetylization 97 20 (combined alcohol as borneol 7 24 per cent, free alcohol as borneol 11 57 per cent), methoxyl value 13 19 (Zeisel method) equivalent to 3 45 per cent of methyl eugenol

Free Acids—From 200 cc of the oil the free acids were extracted by means of five per cent sodium carbonate solution which was washed with ether to remove adhering oil and then evapo

rated to a small volume After acidification with sulphuric acid the residue was distilled and acetic acid identified in the distillate by characteristic reactions It is possible judging by odor, that there is also a small amount of butyric or valeric acid The total free acid amounted to about 2 5 per cent

Phenols —From the residual oil there was extracted by 5 per cent potassium hydroxide solution 0 49 Gm of phenols, or 0 27 per cent The index of refraction at 25° C was 1 5045 Carvacrol was identified by color reaction with ferric chloride, by the Fluckiger test and by the phenyl urethane melting at 135° C The total amount of phenols in the oil, as determined in a cassia flask was found to be 11 per cent Since carvacrol can be extracted from its alkaline solution, the total percentage in the oil may be much more than 0 27

Levo α phellandrene —The remaining oil was distilled repeatedly up to 105° C at 35 mm , giving a distillate of 36 5 cc which was found to be almost entirely α phellandrene It boiled at 170–175° C at atmospheric pressure had a specific gravity of 0 8628 at 20° C and a specific rotation in alcoholic solution of −10 45° at 20° C The nitrite when purified had a melting point of 113° C

Combined Acids —The rest of the oil was saponified with alcoholic potash and the alkaline solution was separated carefully and evaporated to a small volume This was then acidified and distilled and acetic acid was identified in the distillate as before Apparently there was also at least one more acid in the distillation residue, but it was in very small amount

The bulk of the oil after saponification was submitted to fractional distillation at 30–35 mm pressure and repeatedly refractionated The first 2 cc were found to be entirely α phel landrene

Levo borneol —At 140–142° C there was obtained a crystalline solid and a liquid, both of which gave identity tests for borneol The melting point of the crude solid was 203° C and a phenyl urethane could be obtained from either portion melting at 138° C The specific rotation of an alcoholic solution of the solid was found to be −37 64°, which indicated that the borneol is chiefly levo It is probably present in the oil, partly free and partly as acetate

Levo α caryophyllene —The third fraction, boiling at 145–170° C , was found to contain caryophyllene The blue nitrosochloride melted at 175° C , by rapid heating at 177° C , with decomposition The nitrosate melted at 166° C with decomposition which is somewhat higher than that usually given The specific rotation in alcoholic solution of this fraction was found to be −5 77°

Ledum Camphor —Although all attempts to freeze out this compound from the upper fractions failed, its presence was strongly indicated by the preparation of a phenyl urethane melting at 145° C Hjelt (2) gives this as 144–145° C There was also found a small amount of caryo phyllene in this same portion The presence of a ketone, such as was reported by Lomidse (3) in *Ledum palustre*, could not be established

The highest fraction was dark blue and probably contained azulene It gave a red solution in syrupy phosphoric acid and with hydrochloric acid in acetic acid solution a red color changing to violet The crystalline picrate was not obtained

OIL FROM THE FLOWERS

From the fresh flowers of *Ledum grœnlandicum* there was obtained by distillation with steam 0 058 per cent of oil, or 0 195 per cent on the dry basis This was mildly aromatic, of a red color and slightly acid to litmus The constants were d_{25} 1 0332, n_D^{20} 1 51025, acid number 28 03, ester number 77 97, after acetylization 161 31 These would indicate a much higher content of alcohols and esters than in the leaf oil

VOLATILE OIL FROM L COLUMBIANUM

From 397 pounds of fresh leaves, collected in June near North Bend, Oregon, there was obtained a total of 704 cc or 641 4 Gm , which represented a yield of 0 35 per cent, or 0 95 per cent on the dry basis Previous maceration with water before distillation increased this yield by 60 per cent

The oil was neutral to litmus, amber in color and possessed a mild odor similar to that from the leaves of *L grœnlandicum* The constants were d_{25} 0 9111, $[\alpha]_D^{25}$ +9 13°, n_D^{20} 1 4954, acid number 0 716, ester number 17 83 (6 24 per cent as bornyl acetate), after acetylization 79 56 (combined alcohol as borneol 4 90, free alcohol 12 07 per cent as borneol), methoxy value 10 73 (2 80 per cent as methyl eugenol)

Free Acids —From 200 cc of the oil the free acids were extracted by means of 5 per cent sodium carbonate solution as before Acetic acid was identified in the same way, its amount being less than 0 1 per cent There was also possibly a small amount of butyric or valeric acids

Phenols —Estimated volumetrically by a cassia flask, the amount of phenols was about 5 per cent, but by extraction with alkali and subsequent washing of the latter with ether only 0 15 per cent could be obtained This had an index of refraction of 1 5134 at 20° C Carvacrol was identified as before by color tests and by a phenyl urethane melting at 135° C

From the remaining oil the terpenes were separated by repeated distillation up to 100° C at 35 mm pressure The distillate, amounting to about 60 cc , was then carefully fractionated at ordinary pressure

Levo α pinene —In the first fraction, boiling point 155–162° C , d_{20} 0 8501, n_D^{20} 1 4700 $[\alpha]_D^{20}$ in alcoholic solution—27 04° a nitrosochloride was obtained which melted at 103° C Pinene was further identified by oxidation to pinonic acid whose semicarbazone melted at 204° C

Levo α pinene —The second fraction constituting over half of the terpenes, distilled at 162–170° C , d_{20} 0 8553, n_D^{20} 1 4750, $[\alpha]_D^{20}$ −16 85° in alcohol Oxidation by the method for β-pinene gave an acid melting at 95° C instead of 125° C Although none of the other terpenes could be identified, the presence of β pinene must remain in doubt

Dextro α phellandrene —The third fraction boiling at 170–175° C , d_{20} 0 8401 n_D^{20} 1 4772, $[\alpha]_D^{20}$ +26 68°, comprised about 10 per cent of the oil It consisted almost entirely of phel landrene, nitrite melting at 105° C

The remainder of the terpene fraction boiled at 175–185° C and was dextro Neither dipentene nor limonene could be identified

Combined Acids —The oil was saponified with alcoholic potash and the alkaline solution was separated and evaporated to a small volume After acidifying and distilling acetic acid was identified in the distillate There was probably a small amount of other acids judging by the odor and by the fact that ether extracted a few drops from the residue

Levo borneol —The rest of the oil was submitted to fractional distillation at 30–35 mm pressure and repeatedly refractionated The first portion was practically solid and consisted of borneol melting point 203° C , d_{20} 0 8972, n_D^{20} 1 4891, $[\alpha]_D^{20}$ in alcohol −33 59°, phenyl urethane melting at 138° C It amounted to about 15 per cent of the total oil

Levo α caryophyllene —The second fraction boiling point 170–185° C , d_{20} 0 9082, n_D^{20} 1 5054 $[\alpha]_D^{20}$ in alcohol −1 42°, was found to be caryophyllene The blue nitrosochloride melted at 177° C and the nitrosate at 166° C , both with decomposition The amount was about 10 per cent

Ledum Camphor —The third fraction, boiling point 195–200° C , d_{20} 0 9414, $[\alpha]_D^{20}$ +15 27°, n_D^{20} 1 5120 which made up 15 per cent of the oil gave copious quantities of a phenyl urethane melting at 145° C , which served to indicate ledum camphor All attempts to freeze out the material failed and at no time could solid ledol be obtained

As with the oil from *L grœnlandicum*, no semicarbazone could be obtained from any of these fractions, which would seem to indicate that the ketone of Lomidse (3) is not present

The highest fraction was dark blue probably because of the presence of azulene Although the characteristic color reactions were obtained as before, no crystalline derivative could be made

Columbenol —By subjecting the original oil to a temperature of −15° C for several hours there was obtained from it about 10 per cent of crystals which we were unable to identify with any known compound and have tentatively named columbenol The compound crystallized from alcohol and then from ligroin, was in the form of beautiful prismatic plates, varying somewhat in general appearance depending upon the solvent The constants found were melting

rated to a small volume After acidification with sulphuric acid the residue was distilled and acetic acid identified in the distillate by characteristic reactions It is possible judging by odor, that there is also a small amount of butyric or valeric acid The total free acid amounted to about 2 5 per cent

Phenols—From the residual oil there was extracted by 5 per cent potassium hydroxide solution 0 49 Gm of phenols, or 0 27 per cent The index of refraction at 25° C was 1 5045 Carvacrol was identified by color reaction with ferric chloride by the Flückiger test and by the phenyl urethane melting at 135° C The total amount of phenols in the oil as determined in a cassia flask, was found to be 11 per cent Since carvacrol can be extracted from its alkaline solution the total percentage in the oil may be much more than 0 27

Levo α phellandrene—The remaining oil was distilled repeatedly up to 105° C at 35 mm, giving a distillate of 36 5 cc which was found to be almost entirely α phellandrene It boiled at 170–175° C at atmospheric pressure had a specific gravity of 0 8628 at 20° C and a specific rotation in alcoholic solution of −10 45° at 20° C The nitrite when purified had a melting point of 113° C

Combined Acids—The rest of the oil was saponified with alcoholic potash and the alkaline solution was separated carefully and evaporated to a small volume This was then acidified and distilled and acetic acid was identified in the distillate as before Apparently there was also at least one more acid in the distillation residue but it was in very small amount

The bulk of the oil after saponification was submitted to fractional distillation at 30–35 mm pressure and repeatedly refractionated The first 2 cc were found to be entirely α phel landrene

Levo borneol—At 140–142° C there was obtained a crystalline solid and a liquid both of which gave identity tests for borneol The melting point of the crude solid was 203° C and a phenyl urethane could be obtained from either portion melting at 138° C The specific rotation of an alcoholic solution of the solid was found to be −37 64°, which indicated that the borneol is chiefly levo It is probably present in the oil partly free and partly as acetate

Levo α caryophyllene—The third fraction, boiling at 145–170° C, was found to contain caryophyllene The blue nitrosochloride melted at 175° C by rapid heating at 177° C with decomposition The nitrosate melted at 166° C with decomposition which is somewhat higher than that usually given The specific rotation in alcoholic solution of this fraction was found to be −5 77°

Ledum Camphor—Although all attempts to freeze out this compound from the upper fractions failed its presence was strongly indicated by the preparation of a phenyl urethane melting at 145° C Hjelt (2) gives this as 144–145° C There was also found a small amount of caryo phyllene in this same portion The presence of a ketone such as was reported by Lomidse (3) in *Ledum palustre*, could not be established

The highest fraction was dark blue and probably contained azulene It gave a red solution in syrupy phosphoric acid and with hydrochloric acid in acetic acid solution a red color changing to violet The crystalline picrate was not obtained

OIL FROM THE FLOWERS

From the fresh flowers of *Ledum grœnlandicum* there was obtained by distillation with steam 0 058 per cent of oil, or 0 195 per cent on the dry basis This was mildly aromatic, of a red color and slightly acid to litmus The constants were d_{25} 1 0332, n_D^{20} 1 51025, acid number 28 03, ester number 77 97, after acetylization 161 31 These would indicate a much higher content of alcohols and esters than in the leaf oil

VOLATILE OIL FROM L COLUMBIANUM

From 397 pounds of fresh leaves, collected in June near North Bend, Oregon, there was obtained a total of 704 cc or 641 4 Gm, which represented a yield of 0 35 per cent, or 0 95 per cent on the dry basis Previous maceration with water before distillation increased this yield by 60 per cent

The oil was neutral to litmus, amber in color and possessed a mild odor similar to that from the leaves of *L grœnlandicum* The constants were d_{25} 0 9111, $[\alpha]_D^{25}$ +9 13°, n_D^{20} 1 4954, acid number 0 716, ester number 17 83 (6 24 per cent as bornyl acetate), after acetylization 79 56 (combined alcohol as borneol 4 90, free alcohol 12 07 per cent as borneol), methoxy value 10 73 (2 80 per cent as methyl eugenol)

Free Acids—From 200 cc of the oil the free acids were extracted by means of 5 per cent sodium carbonate solution as before Acetic acid was identified in the same way, its amount being less than 0 1 per cent There was also possibly a small amount of butyric or valeric acids

Phenols—Estimated volumetrically by a cassia flask the amount of phenols was about 5 per cent, but by extraction with alkali and subsequent washing of the latter with ether only 0 15 per cent could be obtained This had an index of refraction of 1 5134 at 20° C Carvacrol was identified as before by color tests and by a phenyl urethane melting at 135° C

From the remaining oil the terpenes were separated by repeated distillation up to 100° C at 35 mm pressure The distillate amounting to about 60 cc was then carefully fractionated at ordinary pressure

Levo α pinene—In the first fraction, boiling point 155–162° C, d_0 0 8501, n_D^{20} 1 4700, $[\alpha]_D^{20}$ in alcoholic solution—27 04°, a nitrosochloride was obtained which melted at 103° C Pinene was further identified by oxidation to pinonic acid whose semicarbazone melted at 204° C

Levo α pinene—The second fraction, constituting over half of the terpenes distilled at 162–170° C, d_{20} 0 8553, n_D^{20} 1 4750, $[\alpha]_D^{20}$ −16 85° in alcohol Oxidation by the method for β pinene gave an acid melting at 95° C instead of 125° C Although none of the other terpenes could be identified, the presence of β pinene must remain in doubt

Dextro α phellandrene—The third fraction boiling at 170–175° C, d_0 0 8401 n_D^{20} 1 4772, $[\alpha]_D^{20}$ +26 68°, comprised about 10 per cent of the oil It consisted almost entirely of phellandrene, nitrite melting at 105° C

The remainder of the terpene fraction boiled at 175–185° C and was dextro Neither dipentene nor limonene could be identified

Combined Acids—The oil was saponified with alcoholic potash and the alkaline solution was separated and evaporated to a small volume After acidifying and distilling, acetic acid was identified in the distillate There was probably a small amount of other acids judging by the odor and by the fact that ether extracted a few drops from the residue

Levo borneol—The rest of the oil was submitted to fractional distillation at 30–35 mm pressure and repeatedly refractionated The first portion was practically solid and consisted of borneol, melting point 203° C, d_{20} 0 8972, n_D^{20} 1 4891, $[\alpha]_D^{20}$ in alcohol −33 59°, phenyl urethane melting at 138° C It amounted to about 15 per cent of the total oil

Levo α caryophyllene—The second fraction boiling point 170–185° C d_0 0 9082, n_D^{20} 1 5054, $[\alpha]_D^{20}$ in alcohol −1 42°, was found to be caryophyllene The blue nitrosochloride melted at 177° C and the nitrosate at 166° C, both with decomposition The amount was about 10 per cent

Ledum Camphor—The third fraction, boiling point 195–200° C, d_0 0 9414, $[\alpha]_D^{20}$ +15 27° n_D^{20} 1 5120 which made up 15 per cent of the oil, gave copious quantities of a phenyl urethane melting at 145° C, which served to indicate ledum camphor All attempts to freeze out the material failed and at no time could solid ledol be obtained

As with the oil from *L grœnlandicum*, no semicarbazone could be obtained from any of these fractions which would seem to indicate that the ketone of Lomidse (3) is not present

The highest fraction was dark blue probably because of the presence of azulene Although the characteristic color reactions were obtained as before, no crystalline derivative could be made

Columbenol—By subjecting the original oil to a temperature of −15° C for several hours, there was obtained from it about 10 per cent of crystals which we were unable to identify with any known compound and have tentatively named columbenol The compound, crystallized from alcohol and then from ligroin, was in the form of beautiful prismatic plates varying somewhat in general appearance depending upon the solvent The constants found were melting

point 55 7° C boiling point with some decomposition 277° C , $n_D^{58.5}$ 1 5169, n_D^{62} 1 5155, $[\alpha]_D$ in 1 per cent alcoholic solution +5 2°, *molecular refraction at 20° C about 73* Analysis gave Carbon 82 45, 82 70 82 55 82 46, hydrogen 10 55, 10 04, 10 17, 10 13 per cent Calculated for $C_{15}H_{26}O$ requires 82 53 and 10 32 per cent

Columbenol is colorless, odorless and bland in taste, is neutral to litmus, freely soluble in all of the usual solvents except water or dilute alcohol It dissolves in sulphuric acid to a red brown color and in nitric acid to a light brown, both turning gradually darker A mixture of the two acids gives a violent reaction, finally resulting in an almost black solution Addition of sulphuric acid to a chloroformic solution gives a deep red color which slowly changes to purple No chemical derivatives could be prepared, such as phenyl urethane semicarbazone, oxime benzoate, etc Bromine was not decolorized in ether solution notwithstanding that the molecular, refraction indicated an unsaturated compound It is, therefore, impossible to classify columbenol but since dehydration seemed to form a hydrocarbon, we have assumed that it is a tertiary alcohol of the sesquiterpene series

OIL FROM THE FLOWERS

From the fresh flowers of *L columbianum* was obtained 0 59 per cent of oil or 2 87 per cent on the dry basis It was neutral, light amber and strongly aromatic, d_{20} 1 0182, $[\alpha]_D^{20}$ in alcohol −8 41°, n_D^{20} 1 5119, acid number 7 27, ester number 23 61 (as bornyl acetate 8 26 per cent), after acetylization 128 65 (combined alcohol 6 49, free alcohol 28 89 per cent as borneol) By freezing, columbenol could be separated from the oil in about the same proportion as in that from the leaf

ARBUTIN

This glucoside is reported to be present in some species of *Ledum*, including *L grœnlandicum* (4), but we have been unable to find any record of its isolation Uloth obtained hydroquinone by dry distillation, but most of the evidence seems to be based upon color reactions using an aqueous solution

We have extracted the leaves of both our own species with water in the usual way in order to determine if arbutin is present After precipitation with neutral and basic lead acetate and removal of the excess lead, the solution was evaporated under reduced pressure to a small volume Since nothing separated even after some time, the syrupy residue was extracted with spirit of ether and the solvent was evaporated The addition of ferric chloride to an aqueous solution of the residue gave a dark blue color, while phosphomolybdic acid produced an intense blue in an ammoniacal solution (Jungmann's test) Since these are typical of arbutin, we admit the possibility of its presence, but could not prepare hydroquinone, quinhydrone or quinone from the aqueous residue In any event the amount must be small because it would otherwise have separated from the evaporated solution Extraction of uva-ursi in a similar manner gave crystals of arbutin which responded to the above color reactions and yielded readily hydroquinone and its oxidation products

ERICOLIN

Throughout the literature are numerous references to a glucoside, ericolin, and to its occurrence in several plants, chiefly ericaceous It was first separated by Rochleder and Schwarz (5) from the leaves of *Ledum palustre* L as a brownish yellow resin with an intensely bitter taste Upon hydrolysis they obtained a volatile oil which Willigk (6) assumed to have the same composition as the oil obtained

directly by distillation with steam Although others have claimed that about thirty other plants contain ericolin, including *Ledum grœnlandicum*, we can find no reference to actual separation and purification of a glucoside The only evidence is based upon the oily hydrolytic product, which was given (7) the formula $C_{20}H_{26}O$

In order to learn more about this substance, we have worked with the aqueous extract as obtained under arbutin, using the leaves of each of our own species The syrupy residue was extracted by a mixture of alcohol and ether and the resulting solution was dried and evaporated The residue was made acid with sulphuric acid and distilled with steam, giving a product which had a strong odor typical of the higher fractions previously described Extraction with ether yielded an amber-colored oil in small amount, n_D^{20} 1 5213 for *L grœnlandicum*, 1 5130 for *L columbianum* In each case there could be prepared from this oil a phenyl urethane melting at 145° C We conclude from these results that the leaves of both species contain a glucoside which hydrolyzes to give ledum camphor or a similar substance If this glucoside be the unknown ericolin, which could not be isolated in the pure state, the formula given above for the hydrolytic product may not be right

TOXICITY

Emulsions of the two oils were separately fed to adult white rats in increasing doses up to 1 44 Gm per Kg weight Except for some slight irritation during administration, the oils gave no outward physiological effects

The powdered leaves of each species were rolled with glucose into pills and fed to a rabbit in doses up to 10 Gm of the leaves per Kg weight Again no observable effects were noted

Finally adult white rats were fed equivalent doses of columbenol, with similar negative results

We can safely conclude that the leaves and oils of our two species are certainly not poisonous under the conditions here, because the doses used were extraordinarily high

SUMMARY

After a partial analysis of the leaves of *Ledum grœnlandicum* and of *L columbianum*, during which alkaloids were found absent, the volatile oils were more carefully examined

Fresh leaves of the former yielded 0 12 to 0 18 per cent of oil containing 20 per cent of l-borneol, partly as acetate, 15 per cent each of l-α-phellandrene, l-α caryophyllene and ledum camphor, a smaller quantity of phenols, chiefly carvacrol, some free acetic and probably other acids, probably some azulene The fresh flowers gave 0 058 per cent of oil with much different constants

Fresh leaves of the other species yielded 0 35 to 0 56 per cent of oil containing 3 per cent of l-α-pinene, 17 per cent of l-borneol, partly as acetate, 15 per cent each of ledum camphor and an unidentified terpene, probably l-β-pinene, 10 per cent each of d-α-phellandrene, l-α-caryophyllene and columbenol, a stearoptene, probably $C_{15}H_{22}O$, a small amount of phenols, chiefly carvacrol, some free acetic and other acids, probably some azulene The fresh flowers gave 0 59 per cent of oil with quite different constants and containing about 10 per cent of columbenol

Contrary to previous reputation, they were found not poisonous to rats or rabbits, even when given in enormous doses

No evidence could be found for the presence of arbutin which had been claimed as a constituent of *L grœnlandicum* The glucoside ericolin may be in the leaves of both species, as attested by hydrolysis to an oil probably containing ledum camphor However, since no one has ever isolated this glucoside in the pure state from any vegetable source, we have doubts as to the uniformity of its composition

DETERMINATION OF CERTAIN MEDICAMENTS UNDER THE INFLUENCE OF LIGHT *

BY H V ARNY, A TAUB AND R H BLYTHE

I —INTRODUCTION

This report covers the third and fourth years of research on the deterioration of chemicals and pharmaceuticals when stored in colored glass containers A complete report of the work of the years 1929–1931 conducted by Dr Abraham Steinberg under the personal direction of Professor Abraham Taub and the senior author was presented by Dr Steinberg as an "Arbeit" submitted in partial fulfilment of the requirements set for the degree of Doctor of Pharmacy of Columbia University, while the material in condensed form was published as a paper by Arny, Taub and Steinberg in the JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION, 20 (1931), 1014 and 1153

During 1931–1932, a second fund of $2000 was raised to continue the work where it was discontinued by Dr Steinberg The second fund of $2000 was obtained through the generosity of the following firms and organizations

Subscriptions of $100 each from Burroughs Wellcome & Co , London and New York, Dow Chemical Co Midland Michigan Hynson Westcott and Dunning Baltimore Md , Lehn & Fink Bloomfield N J and New York City, Merck & Co Rahway N J and New York City, Charles Pfizer & Co Brooklyn and New York City Smith Kline & French Laboratories Philadelphia Pa E R Squibb & Sons Brooklyn and New York City, the Upjohn Co Kalamazoo Mich and the Proprietary Association

A subscription of $200 from William R Warner & Co , Inc , New York

A grant of $300 from the Breitenbach Fund of the College of Pharmacy of the City of New York A grant of $500 from the Board of Trustees of the U S Pharmacopœial Convention

As research fellow for 1932–1934, the senior author selected Rudolph H Blythe, B S , who gave the subject his devoted attention during two years as a stu-

* Joint Session Scientific Section and Section on Practical Pharmacy and Dispensing Washington meeting 1934

dent of the graduate course of the College of Pharmacy of Columbia University His efforts won the degree of Doctor of Pharmacy of Columbia in June 1934, and in fulfilling the requirements set for the degree, Dr Blythe submitted an inaugural dissertation of 168 typewritten pages The present paper represents a condensation of the Blythe "Arbeit"

In connection with the research, the following firms donated bottles, chemicals and pharmaceuticals

Charles Cooper & Co Corning Glass Works, Dodge & Olcott Co, Fritzsche Bros, Inc, Heine & Co, Eli Lilly & Co, Mallinckrodt Chemical Works, Maryland Glass Corporation, Merck & Co, Monsanto Chemical Works, New York Quinine and Chemical Works, Owens Illinois Glass Co, Charles Pfizer & Co, Schieffelin & Co Sharp & Dohme, Smith, Kline & French Laboratories, E R Squibb & Sons and W R Warner & Co

To these firms we are very grateful

II —PHYSICAL MEASUREMENTS

(A Taub and R H Blythe)

As in the case of the Steinberg research of 1929–1931 each type of bottle used was submitted to spectrophotometric readings by means of the Bausch and Lomb apparatus of the physics laboratory of the College of Pharmacy This instrument gave measurements from 400–800 mμ For transmission values in the ultraviolet region, we employed a Hilger quartz spectrograph, kindly placed at our disposal by the Department of Physics of Columbia University Our readings gave practically the same values as reported on the graphs shown in the Steinberg paper of 1931 This is not surprising since the bottles employed were furnished by the same firms who contributed their glassware for the 1929–1931 investigation While there has been during the past two years considerable talk about new types of glass bottles, numerous requests on our part failed to bring us practical samples of new types The six types of bottles used by us represent the average run of the bottle market of to-day, as applied to the drug trade

III —DETERIORATION OF CHEMICALS AND PHARMACEUTICALS

(H V Arny and R H Blythe)

The procedure in the 1932–1934 investigation was identical with that described in the Steinberg paper of 1931 All chemicals studied were subjected to a complete physical and chemical examination as prescribed by the U S P or the N F and all pharmaceuticals were either prepared by Mr Blythe or were tested by him as per standards set by the Pharmacopœia or the Formulary In all but a few special cases, the observed substance was placed in a pyrex tube which in turn was placed in a colored container that was being studied The medicaments were then observed under the following conditions

(1) 15 liquids and 13 solids (all of U S P or N F strength and quality when prepared or received) were stored in pyrex test tubes (or ampuls) and these tubes placed into commercial glass containers (2 flint, 2 amber, 1 blue and 1 green) Five sets of these specimen chemicals (1300 samples in all) were exposed to light on the roof of our College building, in cases protected by a single sheet of window glass

(2) One set of specimens (225 samples in all) was exposed in diffused light in cases in the office of the senior author
(3) One set (170 samples in all) was kept in a closet in our dark room
(4) Of the five sets on the roof, one was brought in after one month's exposure and studied The second set was examined after two months' exposure The third, fourth and fifth sets were examined after exposures representing 4, 6 and 12 months, respectively

As to our results, we submit three tables of comparison, two based upon exposure to light during one year Results obtained after exposure for 1, 2, 4 and 6 months will be found in the original Blythe "Arbeit" As to these tables, the first discusses, in general terms, the effect of direct light, diffused light and darkness upon the chemicals examined The second table gives degree of deterioration when the chemicals were exposed in diffused (day) light for one year, while the third table shows time limit of stability when exposed to direct (sun) light The first 10 chemicals in Table II were assayable, hence the change can be expressed mathematically The others on the list were judged by the degree of color change or by special types of qualitative tests

Table I —General Findings as to Deterioration

Exposure for 1 Year

Stable in All Types of Glass Containers under All Conditions	Stable in All Conditions of Diffused Light	Unstable in Light Stable in Dark
*Ferrous carbonate, saccharated	Acetyltannic acid	Aloin
Solution of picric acid (1%)	Chloramine	*Quinidine sulphate
	Dichloramine	*Quinine
Unstable in All Conditions of Light and Darkness	Gallic acid	*Quinine sulphate
*Elixir of glycerophosphates, compound	Liquid petrolatum	
*Elixir of iron, quinine and strychnine	*Solution of ferric chloride	
*Nitric acid	*Solution of formaldehyde	
*Compound solution of iodine	Strontium salicylate	
*Oil of bitter almond	Tannic acid	
*Syrup U S P		
Compound syrup of hypophosphites		

* See special notes following tables

Table II —Degree of Deterioration in Glass Containers after One Year of Exposure in Diffused Light

Group A

Percentage of Deterioration Shown by Actual Assay

(2) One set of specimens (225 samples in all) was exposed in diffused light in cases in the office of the senior author
(3) One set (170 samples in all) was kept in a closet in our dark room
(4) Of the five sets on the roof, one was brought in after one month's exposure and studied The second set was examined after two months' exposure The third, fourth and fifth sets were examined after exposures representing 4, 6 and 12 months, respectively

As to our results, we submit three tables of comparison, two based upon exposure to light during one year Results obtained after exposure for 1, 2, 4 and 6 months will be found in the original Blythe "Arbeit" As to these tables, the first discusses, in general terms, the effect of direct light, diffused light and darkness upon the chemicals examined The second table gives degree of deterioration when the chemicals were exposed in diffused (day) light for one year, while the third table shows time limit of stability when exposed to direct (sun) light The first 10 chemicals in Table II were assayable, hence the change can be expressed mathematically The others on the list were judged by the degree of color change or by special types of qualitative tests

TABLE I —GENERAL FINDINGS AS TO DETERIORATION

Exposure for 1 Year

Stable in All Types of Glass Containers under All Conditions	Stable in All Conditions of Diffused Light	Unstable in Light Stable in Dark
*Ferrous carbonate, saccharated	Acetyltannic acid	Aloin
Solution of picric acid (1%)	Chloramine	*Quinidine sulphate
	Dichloramine	*Quinine
Unstable in All Conditions of Light and Darkness	Gallic acid	*Quinine sulphate
	Liquid petrolatum	
*Elixir of glycerophosphates compound	*Solution of ferric chloride	
*Elixir of iron quinine and strychnine	*Solution of formaldehyde	
*Nitric acid	Strontium salicylate	
*Compound solution of iodine	Tannic acid	
*Oil of bitter almond		
*Syrup U S P		
Compound syrup of hypophosphites

IV —PECULIARITIES OF CERTAIN CHEMICALS

Elixir of Glycerophosphates, Compound —This preparation darkens in diffused light and deposits a precipitate in sunlight It even darkens when kept in a dark place Amber glass is the best protective

Elixir of Iron, Quinine and Strychnine is another pharmaceutical that readily deteriorates This deterioration appears to be essentially a photochemical change, the preparation being especially susceptible to rays below 4800 Å The ferric salt appears to act as a sensitizer and is itself affected by the light rays As reported by Fry and Gerwe some years ago, the citric acid of the citrate is partially broken down to carbon dioxide and acetone, while some of the ferric ions are reduced to the ferrous form This preparation should be submitted to long and intensive study

Ferrous Carbonate, Saccharated —This preparation is one which sunlight improves Our ferrous assays indicate the greatest deterioration after storing in the dark and the least in the sunlight In diffused light, flint glass is a better protective than amber glass When stored in loosely stoppered bottles, the reducing action of light seems counteracted by the oxidizing action of the air

Fluidextract of Ergot —In the original plan the deterioration studies of this fluidextract and also tinctures of aconite and digitalis were started Lacking facilities for pharmacologic assaying and failing to find what were to us, satisfactory colorimetric tests, work on these three pharmaceuticals was postponed

Nitric Acid —The erratic results obtained in the study of this chemical were largely due to evaporation In all cases of exposure to light, the acid suffered serious loss in strength Color of glass container had apparently little influence except that amber was the best protective Sample stored in the dark in its original glass-stoppered container for one year lost only 1 per cent of HNO_3

Oil of Bitter Almond was studied from its change in color, from its loss of benzaldehyde and from its deposition of benzoic acid crystals Decrease in benzaldehyde occurred even in the dark, being about 9 per cent loss within 1 year Direct sunlight produces as much as 50 per cent deterioration except when the oil is stored in amber bottles

Quinidine Sulphate, Quinine and *Quinine Sulphate* are uniformly stable when stored in the dark In the light, amber glass affords the best protection

Solution of Ferric Chloride keeps fairly well in diffused light, almost as well as when stored in the dark In sunlight, ferrous iron begins to appear within one or two months

Solution of Formaldehyde —In diffused light, this solution suffers little or no loss in strength In fact, as shown in Table II, Group A, two samples (those indicated by the letter "G") actually gained a fraction of 1 per cent in strength, due undoubtedly to evaporation of the solvent

Solution of Iodine, Compound —When stored in containers provided with cork or rubber stoppers, deterioration proceeded rapidly whether stored in light or dark On the other hand, a sample stored in the dark in a glass-stoppered bottle during one year showed only little or no deterioration Likewise a sample sealed in an ampul and exposed to sunlight for 4 months suffered no loss in strength

Syrup U S P —Our experiments were based upon degree of inversion Those

samples exposed to sunlight showed inversion within 4 months Samples stored in the dark for one year, indicated over 10 per cent inversion The sample exposed to diffused light for one year in the second type of flint bottle gave such a discrepant figure that it is omitted from the table

Syrup of Hypophosphites, Compound —The color of this preparation darkens even when stored in the dark The darkening is greater in sunlight than in diffused light The deterioration is evidently an oxidation phenomenon In sunlight, precipitation occurs, while in diffused light and in the dark, the darkening of the color is the only indication of change Color of glass container has evidently little or no influence

Tincture of Aconite and *Tincture of Digitalis* —See Fluidextract of Ergot

Lard, Expressed Oil of Almond and *Ointment of Rose Water, U S P* were studied from the standpoint of rancidity While no authoritative statements may be made by us concerning this annoying phenomenon we venture to express the following opinions

(*a*) Rancidity progresses in the dark as well as in the light
(*b*) In actual practice, the color of the glass container seems of little importance
(*c*) Oxygen (of the air) and moisture are essential factors in producing rancidity Light acts as an accelerator but is not an essential factor in the reaction

V —BIBLIOGRAPHY

Dr Blythe's dissertation includes a bibliography of 162 titles Limitations of space prevent its inclusion in this paper

VI —CONCLUSIONS

(1) Amber glass affords the most protection of any glass now commercially available

(2) Red and green Corning filters, used as described in our paper of 1931, offer the greatest protection of any glass tried These are not, however, available as commercial glass containers

(3) The ordinary easily available green glass containers are not, however, as good protectives for medicaments as is amber glass

(4) The following tables summarize the Steinberg and the Blythe studies of the deterioration of 50 medicaments classified as to causes of deterioration (*a*) light, (*b*) simple volatilization, (*c*) chemical changes produced by factors other than light In the first table "A" indicates that amber glass was the best protective, while "G" means that green glass also acted as protective

(A) Deterioration Due to Light

Acetyltannic acid	A	Hydriodic acid syrup	
Adrenalin hydrochloride	A	Hydrobromic acid	
Aloin	A	Liquid petrolatum	A
Benzoic acid	A	Mercuric oxide, red	
Betanaphthol	A & G	Mercuric oxide, yellow	
Chloroform	A & G	Mercurous chloride	A & G

Chloramine	A
Dichloramine	A
Ephedrine hydrochloride	
Ether	A & G
Ferric chloride solution	
Ferric citrate	
Ferric phosphate soluble	A
Ferric pyrophosphate soluble	A & G
Formaldehyde solution	
Gallic acid	A
Hydriodic acid	
Mercurous iodide	
Pyrogallol	A & G
Quinidine sulphate	A
Quinine	A
Quinine sulphate	A
Resorcinol	A & G
Santonin	A & G
Strontium salicylate	A & G
Tannic acid	A
Thymol iodide	A & G

(B) To Volatilization

Hydrocyanic acid diluted
Nitric acid
Solution of chlorinated soda
Solution of chlorine, compound
Solution of iodine, compound
Spirit of ethyl nitrite

(C) To Chemical Changes Produced by Factors Other Than Light

Apomorphine hydrochloride
Elixir of glycerophosphates, compound
Elixir of iron, quinine and strychnine
Oil of bitter almond
Physostigmine salicylate
Silver nitrate
Solution of arsenous and mercuric iodide
Solution of hydrogen dioxide
Sulphurated potassa
Syrup U S P
Syrup of hypophosphites, compound

(D) Stable to Light

Ferrous carbonate saccharated[1]
Ferrous iodide, syrup[1]
Mercuric iodide, red
Liquefied phenol
Picric acid solution (1%)[2]
Silver proteins (mild and strong)

VII —UNSOLVED PROBLEMS

A research of the character just described usually brings in its trail a series of questions more puzzling than the original investigation We have studied the 50 medicaments as summarized above and we find that among these 33 cases of deterioration due to light, 6 due to volatilization and 11 due to chemical changes produced by factors other than light These bare facts immediately inspire such questions as (*a*) How does the light react upon the chemical? (*b*) Why does syrup hydrolyze in the light and to a lesser extent in the dark? (*c*) Why does lard turn rancid in the dark as well as in the light?

These queries coming within our ken, set us to work on certain experiments which we hoped would explain some of the phenomena observed, but up to the present time, the results of this phase of our work have been far from satisfactory Hesitatingly we raise the following questions

(1) Of the many possible causes of deterioration the four outstanding are heat, light, air and moisture Is it possible that air and moisture play a more important rôle in the deterioration phenomena than does light?

[1] Actually improved by action of light rays

[2] When preserving catalyst is present

(2) In the case of the average light-sensitive chemical, does light act directly or merely as an accelerator of oxidation or reduction?

(3) In certain cases, notably the halide salts of such metals as silver, mercurous mercury and iron, the reducing action of light is clearly discernible Thus photographic studies have cleared up the situation as far as the silver halides are concerned Will further investigations of other metallic compounds indicate definitely which deteriorations due to light are reducing and which are oxidizing phenomena?

(4) In rancidity, is not the deterioration due to presence of air and moisture rather than to light?

We hope in the near future to make further efforts toward answering these interesting questions

THE STABILIZATION OF SYRUP OF FERROUS IODIDE, U S P X*[1]

BY WILLIAM J HUSA[2] AND LYELL J KLOTZ[3]

INTRODUCTION

Ferrous iodide was discovered by Courtois (1) who reported its preparation in 1811 It was introduced into medicine in 1824 by Dr Pierquin (2) who used the chemical as prepared by Caillot (3), a French pharmacist In 1831, Pierquin (4) published formulas for the administration of ferrous iodide in the form of a water, chocolate, pastille, salve, tincture and wine and added that 2 oz of the salt in sufficient water might be used for bathing The voluminous literature concerning Syrup of Ferrous Iodide has been adequately reviewed (5) The purpose of the present investigation was to evaluate previous work, determine the mechanism and rate of decomposition and effect a satisfactory method of stabilization

EXPERIMENTAL

Chemicals and Reagents—Two kinds of iron wire were employed, *i e*, card teeth and Merck's Reagent Iron The former assayed 99 6% iron and contained 0 07% of sulphur as well as some carbon and silicon, the latter showed 99 9% iron and contained 0 05% sulphur as well as traces of silicon Sulphur was determined by the cadmium acetate absorption method (6)

Mallinckrodt's U S P and Merck's C P and Reagent Iodine were used Mallinckrodt's U S P Hypophosphorous Acid assaying 31 04% H_3PO_2 was employed Colgate's C P glycerin, Merck's C P dextrose and U S P Honey were used The sucrose satisfied all U S P requirements, its specific rotation at 22° C was 66 15 determined according to the U S P method Distilled water having a p_H of 5 7 was used throughout

General Methods—All volumetric and gravimetric work was carried out using calibrated weights and apparatus The progress of decomposition was followed in most cases by titration of free iodine using approximately 0 01*N* solution of sodium thiosulphate and freshly prepared starch T S

---

* Scientific Section, A PH A, Washington, D C, 1934

[1] This paper is based on a dissertation submitted by Lyell J Klotz to the Graduate Council of the University of Florida in partial fulfilment of the requirements for the degree of Doctor of Philosophy, June 1934

[2] Head Professor of Pharmacy, University of Florida

[3] Graduate Scholar, University of Florida, 1932–1934

Assays for total iodide were performed by the U S P method using approximately 0 1*N* silver nitrate V S and titration with approximately 0 1*N* potassium thiocyanate V S according to the Volhard method

Since ferrous iron cannot be determined in solutions of an iodide by means of permanganate and the dichromate method is tedious and unsatisfactory, a modified permanganate method was developed This method consisted in the addition of excess silver nitrate to the sample thus precipitating the iodide, and subsequent determination of ferrous iron with potassium permanganate V S The procedure was as follows An accurately measured quantity of the solution to be assayed is placed in a flask and a slight excess of 0 5*N* silver nitrate solution added after dilution of the sample with distilled water An excess of Diluted Sulphuric Acid is then added and the mixture titrated with potassium permanganate V S The validity of this method was established by standardization of a permanganate solution against weighed quantities of ferrous ammonium sulphate separately and in mixtures containing iodine, iodides, ferric iron or combinations of these substances

Hydrogen ion concentrations were determined by means of a La Motte block comparator and color standards the hydrogen electrode and the quinhydrone electrode being unsuitable for use with ferrous salts

Storage of solutions and syrups was made in ordinary prescription bottles or in bottles of comparable alkalinity A Freas thermostat maintaining a temperature of 30° C ± 01°, a Freas electric oven maintaining a temperature of approximately 50° C and an electric refrigerator maintaining a temperature of about 6° C were employed

The effects of various spectrum bands were obtained by the use of a series of light filters obtained from the Corning Glass Works Quartz flasks were used for determinations involving ultraviolet light

Variations in Reaction Time —It has been stated that despite the simplicity of this reaction, the direct union of iron and iodine in aqueous solutions does not proceed uniformly to completion in various instances (7) Solutions of ferrous iodide were prepared from card teeth and from iron wire (Reagent grade) using various grades of iodine, and the reaction vessel was maintained in every case at constant temperature ranging between 21° and 26° C for various samples Efficient, uniform mechanical stirring was provided and the end-point taken as the time at which the solution was free from iodine In no case was there a significant difference in the time of reaction Ten solutions were prepared, the time ranging from one hour and twenty-five minutes to one hour and fifty minutes The addition of carbon to solutions prepared from Reagent iron did not alter the reaction time Insoluble residues from card teeth solutions were invariably black in color, those from Reagent iron samples were light brown

The Effect of Variations in Manufacture —The U S P X directions for the manufacture of Syrup of Ferrous Iodide allow considerable latitude in interpretation The phrase "cooling the flask as necessary" implies that volatilization of the iodine should be prevented, but no definite instructions as to the reaction temperature are given Similarly, the end-point of the reaction is not well defined It was found in this investigation that the green color so eagerly sought in this preparation is due, not to the salt at the concentration present, but to the presence of minute traces of iodine In the preparation of aqueous solutions, this is best avoided by allowing sufficient time for the reaction and testing for the end-point with starch T S before subsequent application of heat

In this investigation, solutions of ferrous iodide were prepared by direct union using various grades of chemicals and by double decomposition In the direct

union reaction, various degrees of heat were used during the progress of the reaction and at its completion No visible differences were apparent in the finished preparations On the other hand, these solutions had different p_H values, contained different quantities of iron and left different types of residues upon filtration of the reaction mixtures

Using card teeth as the source of iron, it was found that regardless of the amount of heat employed or the quality of the iodine used, the p_H varied between p_H 3 2 and p_H 4 2 with the usual value at p_H 3 2 for the preparation of 2 liters of solution On the other hand, a variation between p_H 3 4 and p_H 4 7 was noted in the case of samples prepared from Reagent iron In this case, the usual value was p_H 4 1 These values resulted from 30 determinations

Solutions prepared by double decomposition between Mallinckrodt's barium iodide and Merck's Reagent ferrous sulphate varied between p_H 3 2 and p_H 4 7

Residues from card teeth samples were invariably black in color while those from Reagent iron were light brown The former residues were apparently carbon and the latter were ferric hydroxide

The formation of ferrous iodide from iron and iodine has always been considered to be a simple direct union reaction However, as the reaction proceeds, hydrolysis of the product occurs thus giving rise to hydrogen ions and iodide ions Since iron reacts according to the equation

$$Fe + 2\,H^{+} \rightleftharpoons Fe^{++} + H$$

it was thought that the solution might contain iron in excess of the quantity calculated from the iodide content Gravimetric determinations of the amount of iron remaining unconsumed after expiration of the reaction indicated that more iron was used than could be accounted for upon the basis of the iodide content of the solution Volumetric analyses of the solutions further indicated that this excess iron appeared in the solution The excess amounted to approximately 2×10^{-3} mols/L of ferrous iron in the case of card teeth solutions and approximately 8×10^{-3} mols/L of ferrous iron in the case of the Reagent iron samples

An analysis of the residues remaining after filtration of the reaction mixture indicated that nearly twice as much iron was present in the ferric state in Reagent iron samples as in card teeth residues In solutions prepared from Reagent iron in an atmosphere of pure hydrogen, however, the quantity of ferric hydroxide formed was negligible

The addition of carbon and ferrous sulphide to reaction mixtures of Reagent iron and iodine did not have any significant effect upon the p_H values of the resulting solutions

Previous washing of the card teeth used with strong alkali solutions and dilute acid, did not alter the results as outlined above

The Evolution of Gases—It has been suggested that reduction of the carbon present as impurity in the iron results in the formation of unsaturated hydrocarbons On the other hand, it appeared possible that if carbon acts as a reducing agent, carbon dioxide might be formed

The gases were passed through standardized potassium permanganate solutions in certain instances and through lime water in others Negative results were

obtained in every case with both Reagent iron and card teeth The addition of carbon to Reagent iron reaction mixtures was without effect.

The Variation of Hydrogen-Ion Concentration with Time—As a result of 50 experiments, it was found that regardless of the form of iron or iodine used or of the original p_H value of the solution, the p_H dropped rapidly to p_H 3 2 No further changes occurred during the observation period of 1 year Precipitation accompanied this drop in p_H value although it continued after the hydrogen-ion concentration had reached stability It was found that solutions of high p_H, *i e*, 4 1 or higher, remain at that point for some time before gradually becoming more acidic Tests showed that ferrous sulphate solutions of comparable concentration exhibit a similar behavior

The Hydrolysis of Ferrous Iodide—Since ferrous iodide is the salt of a weak base and strong acid, it is logical to expect hydrolysis to occur Despite this fact, the U S P VIII specified that the preparation should be neutral in reaction The ionization constant for the base concerned is not available in the literature, consequently, experimental determinations were necessary in order to determine the degree of hydrolysis Obviously, it is possible for hydrolysis to occur in either of two ways [1]

$$\text{(I)} \quad FeI_2 + HOH \rightleftharpoons Fe(OH)I + HI$$
$$\text{(II)} \quad FeI_2 + 2HOH \rightleftharpoons Fe(OH)_2 + 2HI$$

wherein the mechanism of equation (I) is represented by the ionic equilibria

$$\text{(III)} \quad (FeI)^+ + (OH)^- \rightleftharpoons Fe(OH)I$$
$$\text{(IV)} \quad (H)^+ + (OH)^- \rightleftharpoons HOH$$

which may be combined in the simple equilibrium equation

$$\text{(V)} \quad (FeI)^+ + HOH \rightleftharpoons Fe(OH)I + (H)^+$$

Applying the Law of Mass Action to equation (III), denoting concentrations by square brackets and neglecting activity coefficients,

$$\text{(VI)} \quad K_h = \frac{[FeI^+]\,[OH^-]}{[Fe(OH)I]}$$

Since $(OH)^- = K_w/(H)$, where K_w is the ion product of water, equation (VI) may be written

$$\text{(VII)} \quad \frac{K_w}{K_h} = \frac{[Fe(OH)I]\,[H^+]}{[FeI^+]}$$

Upon making the simplifying assumptions that the salt and acid are completely ionized, letting v be the molar dilution of salt and z be the fraction hydrolyzed, then

$$[FeI^+] = 1 - z/v, \quad [H^+] = [Fe(OH)I] = z/v$$

whence[2] we have from equation (VII),

[1] Similar expressions for salts containing multivalent ions were developed by Denham (8)

[2] This expression is true only if we neglect the hydrogen-ion concentration of the water used The latter, however, is small compared with that furnished by the hydrolysis of the salt Such an assumption is usually made in cases of this kind

$$\text{(VIII)} \qquad \frac{K_w}{K_{b1}} = \frac{z^2}{v(1-z)} = K_1$$

If, on the other hand, we treat equation (II) similarly, we have, using identical nomenclature,

$$\text{(IX)} \qquad \frac{K_w^2}{K_{b1}} = \frac{[Fe(OH)_2]\,[H^+]^2}{[Fe^{++}]}$$

In this case, however,

$$[Fe^{++}] = 1 - z/v, \quad [Fe(OH)_2] = z/v, \quad [H^+] = 2z/v$$

and, substituting these values in equation (IX),

$$\text{(X)} \qquad \frac{K_w^2}{K_{b2}} = \frac{4z^3}{v^2(1-z)} = K_2$$

Thus, since K_w may be taken as approximately 1×10^{-14}, $[H^+]$ can be determined experimentally and v is known, it is possible to calculate definite values for z, K_1 and K_2 A constant set of values for K_1 is taken as evidence of the applicability of equation (VIII) and similar values for K_2 indicate that equation (X) may be applied

A solution of ferrous iodide was prepared in an atmosphere of hydrogen, using Reagent grade chemicals and recently boiled, distilled water One-half of this solution was allowed to stand until p_H 3 2 was attained, the other was immediately treated Both solutions were subjected to a series of dilutions, the p_H values being determined at each dilution and the values of z, K_1 and K_2 calculated in each case These data follow in Tables I and II wherein the column 100 z refers to the degree of hydrolysis on the basis $z = v\,[H^+]$, since equation (VIII) was found applicable

A COMPARISON OF NEOARSPHENAMINE AND SULPHARSPHENAMINE WHEN THEY ARE DIALYZED *

BY A E JURIST AND W G CHRISTIANSEN

It is well known that both neoarsphenamine and sulpharsphenamine are colloids, at least in part Several investigators have subjected neoarsphenamine to dialysis and thereby demonstrated this fact Extensive investigations have been made on neoarsphenamine by Freundlich, Stern and Zocker (1), Hirschfelder and Wright (2), and Raiziss and Gavron (3), but none of these investigators have compared neoarsphenamine and sulpharsphenamine In this paper we shall describe a method for carrying out the dialysis of neoarsphenamine or sulphars-

* Section on Practical Pharmacy and Dispensing Madison meeting, 1933

phenamine under anærobic conditions and the results obtained when this method is used

These results show a very distinct difference in the behavior of these two compounds upon dialysis When neoarsphenamine is dialyzed for twenty-four hours with running water 61 4% of the arsenic and 17 5% of the sulphur remain in the dialysis bag, these are averages from a number of experiments with a single brand of neoarsphenamine in which the undialyzable arsenic varied between 51 7 and 75 5% and the undialyzable sulphur between 13 6 and 21 7% During the dialysis a precipitate forms in the originally clear solution, this precipitate dissolves upon addition of sodium hydroxide and re-forms when CO_2 is passed into the alkaline solution On the other hand sulpharsphenamine shows only 39 7% of the arsenic and 28 9% of the sulphur still undialyzed, these are averages of several experiments with a single brand of sulpharsphenamine in which the undialyzable arsenic varied between 28 0 and 55 18% and the undialyzable sulphur between 16 7 and 35 77% Sulpharsphenamine solutions remain clear throughout the dialysis

Since the per cent arsenic lost by dialysis of sulpharsphenamine is greater than with neoarsphenamine and since the reverse is true for the sulphur content, there is strong evidence that a distinct difference exists in the structures of neoarsphenamine and sulpharsphenamine This fact was first pointed out by Jurist and Christiansen (4) However, in addition to the differences in the chemical structure of these compounds a distinct dissimilarity in colloidal character is indicated This can be ascribed either to the fact that the colloidal particles of neoarsphenamine are much larger than those of sulpharsphenamine or to the fact that a much larger portion of the latter is in the true solute form The latter is the more probable explanation since the dialyzing membrane used here is of a type which usually retains colloids even when highly dispersed

In addition to these experiments on a single brand of neoarsphenamine and a single brand of sulpharsphenamine a series of experiments were carried out on single lots of the different market brands of neoarsphenamine The results of these experiments are briefly summarized in the following tabulation

Brand of Neoarsphenamine	% of Original Arsenic Undialyzed	% of Original Sulphur Undialyzed	Condition of Undialyzed Solution
A	76 8	16 4	Precipitated
B	44 9	11 2	Clear
C	73 9	10 4	Precipitated
D	63 0	19 0	Precipitated
E	57 7	9 8	Precipitated
F	29 3	21 5	Clear
G	54 6	14 8	Precipitated

These results show wide variations in the undialyzable arsenic ranging from 29 3% to 76 3% and definite, but smaller differences in the undialyzable sulphur ranging from 9 8 to 21 5% The results obtained with brands "C" and "G" are very similar to those obtained with sulpharsphenamine and further these two brands show one of the other characteristics of sulpharsphenamine, namely, that the undialyzed solution is clear and not precipitated This series of experiments further emphasizes the fact that there are wide differences between different brands of neoarsphenamine, especially since two brands show characteristics more like those of sulpharsphenamine than neoarsphenamine The differences in the chemi

cal composition of market brands of neoarsphenamine pointed out by Elvove (5) and by Jurist and Christiansen (6) appear to extend also to differences in behavior on dialysis

EXPERIMENTAL

A solution of 6 Gm of Parlodion (DuPont) in 50 cc of ether and 50 cc of ethyl alcohol is prepared according to the directions of Eggerth (7) This solution is poured into a clean, dry 500 cc Erlenmeyer flask, and by rotating the flask as the solution is poured out slowly the entire inside of the flask is coated with the solution The flask is then allowed to drain, inverted for 15 minutes Then the membrane in the upper part of the neck of the flask is loosened by means of a knife blade The inside of the flask containing the membrane is filled with water and then emptied to insure wetting the entire inner surface of the membrane then water is poured between the membrane and the wall of the flask, loosening the membrane from the side of the flask as the flask fills When the membrane has been loosened from the flask it can be easily pulled out, it must not be allowed to dry out Immediately cut off that portion of the membrane which was inside the neck of the flask Carefully open the membrane at the top so that a glass tube $^1/_2$ inch in diameter can be inserted for a distance of $^3/_4$ of an inch Then the membrane is attached to this tube by wrapping around the tube a $^1/$ inch wide strip of adhesive tape This should fit as tightly as possible Then the membrane in the collapsed state is put in the dialysis bath and suspended in it by means of a clamp on the glass tube The membrane is filled, through the glass tube, with water and lifted slightly so that 1 5 inches of the membrane are out of the water and exposed to the air Then the exposed portion of the membrane as well as the strip of adhesive tape and the glass tube for a short distance are painted with a complete but thin coat of shellac Any excess of shellac lying on the surface of the water of the dialysis bath is immediately skimmed off before it can harden When the shellac is dried (about one hour is required for this), the exposed portions of the membrane, etc , are painted with a coat of the same Parlodion solution which was used in preparing the membrane When this has dried the membrane is carefully emptied by removing it from the clamp and inverting it This also serves to sweep the air out of the membrane as it collapses It is then put back in the bath and the neoarsphenamine solution put in it In our experiments 0 9 Gm of neoarsphenamine was dissolved in 20 cc of water The atmosphere above the neoarsphenamine solution is cleared of air with a nitrogen stream using care to avoid breaking the membrane Then a slight positive pressure of nitrogen is obtained by closing the glass tube with a one hole stopper which is connected to a small gasometer Before the membrane is expanded by the gas pressure it should be lifted by means of the clamp and glass tube to such a position that the surface of the neoarsphenamine solution inside the membrane is just below the surface of the water in the dialysis bath The membrane containing the solution must then be lowered from time to time as the dialysis proceeds and causes it to increase in volume Such an apparatus as this has been found to be entirely leak proof and can be maintained under anærobic conditions A sufficiently extensive dialysis of neoarsphenamine has been obtained by dialyzing in running water for 24 hours The temperature of the water was maintained at 20° C through out

When the dialysis has been completed the solution is transferred anærobically to a glass stoppered cylinder Any precipitate present is dissolved by means of sodium hydroxide Then aliquot portions of this solution are used for arsenic and sulphur assays The arsenic was determined by the Newbery (8) method and the sulphur by the method described by Elvove (5) The per cent of the total sulphur and arsenic remaining after dialysis can then be readily obtained by the following

$$\frac{\text{Gm Arsenic Undialyzed} \times 100}{\text{Gm Total Arsenic Present}} = \% \text{ Arsenic Undialyzed}$$

$$\frac{\text{Gm Sulphur Undialyzed} \times 100}{\text{Gm Total Sulphur Present}} = \% \text{ Sulphur Undialyzed}$$

This method has been applied successfully to both neoarsphenamine and sulpharsphenamine and typical results are given in the table below It is interesting

to note that at the end of 24 hours' dialysis there was a precipitate in the solution remaining in the dialysis bag in the case of neoarsphenamine, but none in the case of sulpharsphenamine This precipitate was flocculent in character and was readily soluble in sodium hydroxide

TABLE I

Compound	Total Arsenic Present—Mg before Dialysis	Total Sulphur Present—Mg before Dialysis	Undialyzed Material			
			Arsenic		Sulphur	
			Mg	%	Mg	%
Neoarsphenamine	178 2	56 4	111 0	66 3	10 4	18 5
Sulpharsphenamine	197 5	95 4	72 4	38 4	29 7	31 1

CONCLUSIONS

1 These results show that neoarsphenamine has a larger undialyzable arsenic content than sulpharsphenamine

2 It is also shown that the sulphur content of sulpharsphenamine is less readily removed by dialysis than that of neoarsphenamine

3 In the course of the dialysis of neoarsphenamine a portion of the material remaining undialyzed precipitates in the dialysis bag This is not true in the case of sulpharsphenamine

4 The previous conclusion of a fundamental structural difference between neoarsphenamine and sulpharsphenamine is confirmed

THE POTASSIUM MERCURIC IODIDE REAGENTS FOR ALKALOIDS

BY JANET TRAVELL, M D

A number of potassium mercuric iodide solutions have been recommended as precipitating reagents for alkaloids Of these, Mayer's reagent is the most widely used and is regarded as an exceedingly sensitive qualitative solution for alkaloids in general It was found, however, that this reagent would not detect codeine unless present in a concentration of at least 1 in 5000 parts, but that modification of the reagent rendered the reaction with codeine and other alkaloids much more delicate These experiments show that Mayer s reagent, which is advocated as a qualitative test solution by the United States Pharmacopœia X and by textbooks generally, is probably the least sensitive of the potassium mercuric iodide reagents which have been described It seemed worth while, therefore,

to review the literature in some detail, which I have found rather inaccessible, and to call attention to certain practical points concerning the use of these reagents, which may not be familiar to those not working constantly with them, or to whom the early literature is not available

It is conceded that Winckler, court pharmacist at Zwingenberg (1), in 1830 prepared the first iodomercurate of an alkaloid (2) The introduction of the potassium mercuric iodide solutions as general qualitative reagents for the alkaloids is attributed to A von Planta Reichenau (3), who in 1846 in a dissertation at Heidelberg gave them a prominent place among the alkaloidal reagents (4) After a lapse of several years, interest in this type of alkaloidal reagent reappeared in several parts of the world Delfs (5) in 1854 observed that twelve non-volatile alkaloids were precipitated by his potassium iodomercurate solution, some even in high dilution, but he did not state the strength of his reagent Nessler (6) in Germany in 1856 adapted the potassium mercuric iodide reagent as a qualitative test for ammonia in strongly alkaline solution, incidentally calling attention to its property of precipitating certain alkaloids in acid or slightly alkaline solution de Vrij (7) in Holland in 1857 stated that 1/50,000 grain of strychnine could be detected if a drop of liquid were suspended in a capillary tube and a solution of the iodide of mercury and potassium added Groves (8) in England in 1858 described the properties of a class of compounds, the bromo- and iodomercurates of the alkaloids, which he believed had escaped general attention He did not directly describe the reagent which he used, but studied the properties and composition of the crystalline precipitates obtained with nine alkaloids

Finally, in 1862 Valser (9) in Paris and Mayer (3) in New York published reports almost simultaneously on the use of potassium mercuric iodide solutions as general alkaloidal reagents Valser alluded to de Vrij as the originator of the test, Mayer, to Groves Valser's thesis, dated July 22nd, was the prize essay of the Société de Pharmacie (not a student dissertation) for the year 1862 (10) He advocated the use of a reagent which he prepared by saturating a 10 per cent (10 100) solution of potassium iodide with mercuric iodide to detect the presence of an alkaloid in an extract obtained by the method of Stas He analyzed some of the alkaloidal precipitates and arrived at practically the same general formula for them as had Groves He also used his reagent quantitatively to determine the molecular equivalents of certain alkaloids, and concluded that quinidine was an isomer and not a polymer of quinine He noted that the presence of albumins and extracted principles might interfere with the results when the reagent was employed for the quantitative titration of alkaloids Abstracts (11, 12, 13) of Valser's thesis promptly appeared in several journals in different countries, and it is difficult to understand why the Valser reagent received so little recognition except that none of these abstracts contained the exact formula for his reagent, and so far as I have been able to learn, his original paper was not printed in one of the scientific journals, nor did any further papers by Valser follow

Mayer's (3) original paper on this subject was read at the annual meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION in August 1862, and the next year an abstract (14) was published in the same number of the PROCEEDINGS as was a brief abstract (11) of Valser's thesis Mayer claimed to have developed a new method for the volumetric estimation of alkaloids by means of titration with his potas-

alkaloids (21) He noted that Mayer's solution contained an excess of potassium iodide, while in the reagents described by other authors there was a slight excess of mercuric iodide He pointed out that the concentration of the potassium iodide solution from which the reagent was prepared affected the composition of the reagent Thus in a solution saturated with potassium iodide, the double iodides which he depicted as $(HgI)_2KI$ and HgI KI were formed, for under these conditions 3 mols of mercuric iodide required 2 mols of potassium iodide for solution, but owing to secondary decomposition of the salt $(HgI)_2KI$ a dilute solution ultimately contained only the iodide HgI KI He found that 10 Gm potassium iodide in 10 per cent solution dissolved 14 73 Gm mercuric iodide at 20° C , instead of the theoretical 13 68 Gm required for the formation of the iodide HgI KI, or the 21 44 Gm of the iodide $(HgI)_2KI$ alone He concluded, therefore, that the solution of potassium iodide directed in the preparation of Valser's reagent was sufficiently concentrated to retain in solution a certain amount of the compound $(HgI)_2KI$

Tanret (21) compared the sensitiveness for various alkaloids of Mayer's and of Valser's reagents His purpose in making this comparison is implied in his statement "I observed that the iodohydrargyrates of the alkaloids are all more or less soluble in iodide of potassium, from which it must be concluded that the Mayer's solution which contains an excess of this latter salt is inferior to that of Valser" Alkaloids were tested both as the free base and as the salt, and the results obtained with both reagents were contrasted in a table which I have reproduced in part (Table I)

TABLE I —RESULTS OF TANRET'S TESTS WITH MAYER'S AND VALSER'S REAGENTS *

	Mayer s Solution	Valser s Solution
Atropine base or salt	7,000	40 000
Cocaine base or salt	60,000	240,000
Codeine base	3 000	40 000
salt	8,000	40 000
Morphine, salt	2 000	10 000
Nicotine base	1,200	160 000
salt	17 000	600 000
Pilocarpine, salt	9 400	60 000
Quinine, base	150	360 000
salt	180 000	480 000
Strychnine [1] salt?	50 000	150,000

* The table indicated the number of parts of water in which the alkaloid might be dissolved and yet yield a distinct precipitate with the reagents

[1] Added from the text of the article

Tanret (21) also studied some of the properties of the alkaloidal precipitates, and mentioned several substances which might interfere with the reaction He recommended that tests with Valser's reagent be carried out in neutral solution, and suggested that an alkaloid might be detected in the presence of albumin in acid solution by heating to boiling, filtering while hot and observing the reappearance of the alkaloidal precipitate in the cold

Quite recently attention has been redirected by Munch, Crossley and Hartung (22) to the fact that Mayer's reagent is not the most delicate possible potassium

mercuric iodide reagent, that the sensitivity of successive lots may vary, and therefore they have suggested some modifications in its method of preparation to render it more sensitive Fulton (23) in a classification of the reactions of 91 precipitating agents with alkaloids mentions four types of potassium mercuric iodide solutions which he terms "Mayer's reagent, concentrated Mayer's reagent, acid Mayer's reagent, and Mayer's and KI" All these reagents are prepared from mercuric iodide rather than from mercuric chloride which Mayer used, and the second one, prepared from 10 Gm KI in 100 cc water saturated with HgI_2 (about 15 Gm required), very closely resembles Valser's reagent

In spite of the marked superiority of Valser's over Mayer's reagent, which Tanret demonstrated so strikingly, none of the European Pharmacopœias, not even the French, recommend the use of Valser's reagent, and several of them (24) describe what is essentially Mayer's reagent as a qualitative test solution for alkaloids

EXPERIMENTAL

Reagents—I Mayer's reagent was prepared according to the directions in the United States Pharmacopœia X mercuric chloride 1 358 Gm , potassium iodide 5 0 Gm distilled water to make 100 cc amounts nearly identical with those in Mayer's original formula

II Following a search of the literature with reference to the potassium mercuric iodide reagents, the general description of Valser's reagent was found (21) A reagent was then prepared by adding slowly from a burette a 10 per cent solution (W/V) of potassium iodide to a known weight of red mercuric iodide until the latter just dissolved Under these conditions it was found that at 20° C , 10 Gm of potassium iodide (U S P) would dissolve almost exactly 14 Gm of mercuric iodide (U S P) This differs slightly from the figure 14 73 Gm obtained by Tanret, but 10 Gm of the former salt would not accomplish the solution of 14 73 Gm of the latter even when allowed to remain in contact with it for 24 hours, and after standing in contact with this excess of mercuric iodide the solution contained free iodine It is not clear from the references available by what method Valser s reagent was prepared In any case, the reagent prepared by the method of titration by which the complete solution of the mercuric iodide is just effected by the potassium iodide solution and which proved to be in general the more delicate will be referred to throughout this paper as the Valser reagent

The Valser reagent is a clear, bright yellowish green heavy liquid with a specific gravity of 1 1811 at 25° C When cooled to a temperature of 4° C , red mercuric iodide does not separate out, nor is there any change in the appearance of the solution The reagent does not contain free iodine nor does any develop on standing On diluting the reagent several times with distilled water red mercuric iodide precipitates No precipitate occurs when Mayer's reagent is similarly diluted The Valser reagent does not decompose nor deteriorate with reference to its alkaloidal sensitivity when kept on a shelf in the light (not in direct sunlight) for at least three months, and probably longer

A study was made of the relative sensitiveness of Mayer's and Valser's reagents for some of the commoner alkaloids in pure solution Because of the marked solubility of the precipitates in an excess of Mayer s reagent, and in order to avoid undue dilution of the alkaloid the conditions were arbitrarily fixed so that for each test 0 5 cc of the reagent was added to 5 cc of the alkaloidal solution Tests were usually performed both in neutral and in acid solution, for the latter, dilutions of the alkaloid were made with tenth normal sulphuric acid It was noted that whereas the relatively concentrated solutions of the alkaloids yielded a definite precipitate with the reagents in the more dilute solutions only a characteristic bluish fluorescence appeared, similar to that shown by pure solutions of quinine and quinidine Slight degrees of fluorescence could be seen only when the test tube was held against a background in a suitable light and not by artificial light Disappearance of fluorescence rather than the absence of a precipitate was considered as marking the limit of sensitivity Because of the slowness with which fluorescence may develop when the alkaloid is present in low concentration observations were made for about ten minutes

alkaloids (21) He noted that Mayer's solution contained an excess of potassium iodide, while in the reagents described by other authors there was a slight excess of mercuric iodide He pointed out that the concentration of the potassium iodide solution from which the reagent was prepared affected the composition of the reagent Thus in a solution saturated with potassium iodide, the double iodides which he depicted as $(HgI)_2KI$ and HgI KI were formed, for under these conditions 3 mols of mercuric iodide required 2 mols of potassium iodide for solution, but owing to secondary decomposition of the salt $(HgI)_2KI$ a dilute solution ultimately contained only the iodide HgI KI He found that 10 Gm potassium iodide in 10 per cent solution dissolved 14 73 Gm mercuric iodide at 20° C , instead of the theoretical 13 68 Gm required for the formation of the iodide HgI KI, or the 21 44 Gm of the iodide $(HgI)_2KI$ alone He concluded, therefore, that the solution of potassium iodide directed in the preparation of Valser's reagent was sufficiently concentrated to retain in solution a certain amount of the compound $(HgI)_2KI$

Tanret (21) compared the sensitiveness for various alkaloids of Mayer's and of Valser's reagents His purpose in making this comparison is implied in his statement "I observed that the iodohydrargyrates of the alkaloids are all more or less soluble in iodide of potassium, from which it must be concluded that the Mayer's solution which contains an excess of this latter salt is inferior to that of Valser " Alkaloids were tested both as the free base and as the salt, and the results obtained with both reagents were contrasted in a table which I have reproduced in part (Table I)

TABLE I —RESULTS OF TANRET'S TESTS WITH MAYER'S AND VALSER'S REAGENTS *

	Mayer s Solution	Valser s Solution
Atropine base or salt	7,000	40 000
Cocaine base or salt	60,000	240,000
Codeine base	3 000	40,000
salt	8 000	40 000
Morphine salt	2 000	10 000
Nicotine, base	1 200	160 000
salt	17 000	600,000
Pilocarpine salt	9,400	60 000
Quinine, base	150	360,000
salt	180,000	480 000
Strychnine [1] salt?	50 000	150,000

* The table indicated the number of parts of water in which the alkaloid might be dissolved and yet yield a distinct precipitate with the reagents

[1] Added from the text of the article

Tanret (21) also studied some of the properties of the alkaloidal precipitates, and mentioned several substances which might interfere with the reaction He recommended that tests with Valser's reagent be carried out in neutral solution, and suggested that an alkaloid might be detected in the presence of albumin in acid solution by heating to boiling, filtering while hot and observing the reappearance of the alkaloidal precipitate in the cold

Quite recently attention has been redirected by Munch, Crossley and Hartung (22) to the fact that Mayer's reagent is not the most delicate possible potassium

mercuric iodide reagent, that the sensitivity of successive lots may vary, and therefore they have suggested some modifications in its method of preparation to render it more sensitive Fulton (23) in a classification of the reactions of 91 precipitating agents with alkaloids mentions four types of potassium mercuric iodide solutions which he terms "Mayer's reagent, concentrated Mayer's reagent, acid Mayer's reagent, and Mayer's and KI" All these reagents are prepared from mercuric iodide rather than from mercuric chloride which Mayer used, and the second one, prepared from 10 Gm KI in 100 cc water saturated with HgI_2 (about 15 Gm required), very closely resembles Valser's reagent

In spite of the marked superiority of Valser's over Mayer's reagent, which Tanret demonstrated so strikingly, none of the European Pharmacopœias, not even the French, recommend the use of Valser's reagent, and several of them (24) describe what is essentially Mayer's reagent as a qualitative test solution for alkaloids

EXPERIMENTAL

Reagents—I Mayer's reagent was prepared according to the directions in the United States Pharmacopœia X mercuric chloride 1 358 Gm potassium iodide 5 0 Gm , distilled water to make 100 cc , amounts nearly identical with those in Mayer s original formula

II Following a search of the literature with reference to the potassium mercuric iodide reagents the general description of Valser s reagent was found (21) A reagent was then prepared by adding slowly from a burette a 10 per cent solution (W/V) of potassium iodide to a known weight of red mercuric iodide until the latter just dissolved Under these conditions it was found that at 20° C , 10 Gm of potassium iodide (U S P) would dissolve almost exactly 14 Gm of mercuric iodide (U S P) This differs slightly from the figure, 14 73 Gm obtained by Tanret, but 10 Gm of the former salt would not accomplish the solution of 14 73 Gm of the latter even when allowed to remain in contact with it for 24 hours, and after standing in contact with this excess of mercuric iodide the solution contained free iodine It is not clear from the references available by what method Valser's reagent was prepared In any case the reagent prepared by the method of titration, by which the complete solution of the mercuric iodide is just effected by the potassium iodide solution and which proved to be in general the more delicate, will be referred to throughout this paper as the Valser reagent

The Valser reagent is a clear, bright yellowish green heavy liquid with a specific gravity of 1 1811 at 25° C When cooled to a temperature of 4° C red mercuric iodide does not separate out nor is there any change in the appearance of the solution The reagent does not contain free iodine nor does any develop on standing On diluting the reagent several times with distilled water red mercuric iodide precipitates No precipitate occurs when Mayer's reagent is similarly diluted The Valser reagent does not decompose nor deteriorate with reference to its alkaloidal sensitivity when kept on a shelf in the light (not in direct sunlight) for at least three months and probably longer

A study was made of the relative sensitiveness of Mayer's and Valser s reagents for some of the commoner alkaloids in pure solution Because of the marked solubility of the precipitates in an excess of Mayer s reagent and in order to avoid undue dilution of the alkaloid, the conditions were arbitrarily fixed so that for each test 0 5 cc of the reagent was added to 5 cc of the alkaloidal solution Tests were usually performed both in neutral and in acid solution, for the latter dilutions of the alkaloid were made with tenth normal sulphuric acid It was noted that whereas the relatively concentrated solutions of the alkaloids yielded a definite precipitate with the reagents in the more dilute solutions only a characteristic bluish fluorescence appeared, similar to that shown by pure solutions of quinine and quinidine Slight degrees of fluorescence could be seen only when the test tube was held against a background in a suitable light and not by artificial light Disappearance of fluorescence rather than the absence of a precipitate was considered as marking the limit of sensitivity Because of the slowness with which fluorescence may develop when the alkaloid is present in low concentration observations were made for about ten minutes

The results of the comparison between the two reagents are shown in Table II It was found that in the case of each of the nine alkaloids examined, Valser's reagent permits the detection of the alkaloid in much lower concentration than does Mayer's reagent The relative sensitive

TABLE II —LIMITS OF SENSITIVITY OF MAYER'S AND VALSER'S REAGENTS *

Alkaloid	Lowest Concentration of the Alkaloid Which Can Be Detected by		Relative Sensitiveness of Valser s / Mayer s
	Mayer s Reagent One Part in	Valser s Reagent One Part in	
Atropine sulphate	6,000	43,000	7 2
Cocaine hydrochloride	125,000	600 000	4 8
Codeine phosphate	5,500	43,000	7 8
Morphine sulphate	1,300	7,000	5 4
Nicotine	15,000	225,000	15 0
Pilocarpine hydrochloride	16,000	80,000	5 0
Quinidine sulphate	300,000	1,500,000	5 0
Quinine sulphate	300,000	1,500 000	5 0
Strychnine sulphate	100,000	500,000	5 0

* 5 cc of the alkaloidal solution acidulated with sulphuric acid and 0 5 cc of the reagent were used for each test, except in the case of pilocarpine and atropine which were tested in neutral solution

ness of the former to the latter ranged from about 5 to nearly 8 times, with the exception of nicotine for which Valser s was approximately 15 times as sensitive as Mayer's reagent

III In order to test the effect of dilution of the reagent upon alkaloidal sensitivity, a third reagent, which we shall call the dilute Valser reagent, was prepared by the same method as employed for the Valser reagent, but using a one per cent solution of potassium iodide for titration of the mercuric iodide instead of a 10 per cent solution (W/V) Under these conditions, 10 Gm of potassium iodide (U S P) dissolves only 11 8 Gm of mercuric iodide (U S P) instead of 14 0 Gm The dilute Valser reagent does not contain free iodine On dilution with distilled water, mercuric iodide does not separate out

A comparison was made of the sensitiveness for alkaloids of the dilute Valser reagent with that of the undiluted It was found the ratio of sensitivity of one reagent to the other was not constant for the group of alkaloids named in Table II, thus the alkaloidal sensitivity of Valser's reagent ranged from 1 5 times that of the dilute reagent for quinidine to 6 5 times for nicotine The dilute reagent was in all instances more sensitive for these alkaloids than was Mayer's reagent

Alkaloidal Iodomercurates —The precipitates formed by Mayer's and Valser's reagent with the alkaloids listed in Table II are readily soluble in 10 per cent potassium iodide solution (W/V), dilute ethyl alcohol and tenth normal sodium hydroxide A concentration of alcohol as low as one or two per cent may diminish the sensitivity of the test The precipitates are moderately or readily soluble in concentrated acetic and hydrochloric acids, but much less so in these acids when dilute In dilute sulphuric acid the precipitates appear to be not at all soluble except those of pilocarpine, which is quite soluble in this acid when as dilute as tenth normal, and of atropine, which is moderately soluble The behavior of pilocarpine is peculiar among the alkaloids tested in that its iodomercurate is exceedingly soluble in dilute acetic, hydrochloric and sulphuric acids All the precipitates of this group of alkaloids disappear on heating to boiling or in some instances at a temperature considerably lower than the boiling point

Tanret noted that Mayer's and Valser's reagents yielded precipitates in much lower concentrations of certain of the alkaloidal salts than of the corresponding free bases This observation was confirmed to some exent by the author but the differences were not so striking as those obtained by Tanret It was found that when nicotine base was dissolved in distilled water the limit of sensitivity for Mayer's reagent was about 1 1300 and for Valser's reagent, 1 25,000, whereas in a solution of nicotine sulphate, prepared on the basis of the formula $C_{10}H_{14}N_2\,H_2SO_4$, the limits were 1 3000 and 1 100,000 respectively Solutions of quinine and strychnine bases, however, gave precipitates with both Mayer's and Valser's reagents in only slightly higher con

centrations than did similar solutions of their salts The lower sensitivity of the reagents with nicotine base, as compared with the salt, is probably due to the alkalinity of the solution

Proteins—The behavior of several proteins, namely, egg albumin serum albumin, hemoglobin and gelatin, was studied with the various potassium mercuric iodide reagents described Mayer's, Valser's and the dilute Valser's, the last two of which contain little or no excess of potassium iodide In addition, tests were made with a reagent similar to Mayer's but containing a smaller excess of potassium iodide, prepared according to the formula mercuric chloride 1 358 Gm , potassium iodide 3 422 Gm , distilled water to make 100 cc

Colloidal solutions of the several proteins were prepared in distilled water Precipitation in neutral solution did not occur with any of the potassium mercuric iodide reagents, precipitates appeared only in acidulated solution (sulphuric acid) In the case of each of the proteins, the limit of sensitivity was the same for all four reagents The highest dilution of egg albumin which gave a positive result was approximately 1 70,000, of serum albumin, 1 15,000 of hemoglobin, 1 40,000 and of gelatin, 1 400 000

The protein iodomercurates are difficultly, if at all, soluble in 10 per cent potassium iodide solution, or in ethyl alcohol, and they are intensified on heating, facts which serve to differentiate them sharply from the alkaloidal precipitates The protein precipitates, like those of the alkaloids, dissolve readily on alkalinization with sodium hydroxide

Tanret made the difference in the effect of heat on the alkaloidal and protein precipitates the basis of a method (described above) for the detection of an alkaloid in the presence of albumin Although this method serves for alkaloids in moderately dilute solutions it was found that the process of filtration necessary to remove the albuminoid precipitate markedly reduces the sensitiveness of the test for the alkaloid, probably owing to adsorption

DISCUSSION

There is a lack of agreement regarding the composition of aqueous solutions of potassium mercuric iodide Briefly, it appears that a number of complex iodides may be formed upon the addition of a solution of potassium iodide to mercuric iodide or chloride Five complex salts in all have been reported (25) On the basis of results obtained by a number of investigators, Dawson (26) concluded that when employing dilute solutions of potassium iodide in the preparation of these reagents, the tetraiodide, $2KI\ HgI_2$, is the chief complex salt present, and that as the concentration of potassium iodide is raised and the relative proportion of mercuric iodide in the solution increases, this complex iodide is gradually transformed into one containing a relatively larger amount of mercuric iodide, either $3KI\ 2HgI_2$, or $KI\ HgI_2$ together with equimolar quantities of $2KI\ HgI_2$, probably the former Exception to these conclusions has been taken by Dunningham (27) who calculated that in a 3-component system $KI–HgI_2–H_2O$ at 20° to 30° C , potassium mercuric triiodide, $KHgI_3$, and its hydrate, $KHgI_3\ H_2O$, were the only complex iodides formed Both potassium mercuric triiodide and tetraiodide have been prepared and their properties studied, the former is decomposed by water with precipitation of red mercuric iodide, while the latter is relatively stable (25) On treating mercuric chloride with potassium iodide as in Mayer's reagent, a complex iodide is first formed from which mercuric iodide rapidly separates owing to a secondary reaction with the mercuric chloride (28) The general conclusion is that aqueous solutions of mercuric iodide in potassium iodide contain the complexes $2KI\ HgI_2$ and $3KI\ 2HgI_2$, and that under certain conditions, when using saturated or very concentrated solutions, potassium mercuric triiodide, $KI\ HgI_2$, may also be formed

Two factors in the main seem to influence the sensitivity of the potassium mercuric iodide reagents for alkaloids the presence of an excess of potassium iodide

in which the precipitates are soluble, the nature of the complex iodide, which is determined by the relative amounts and concentration of the reacting salts, and probably by the temperature and a variety of other conditions which have not been adequately determined The fact that on diluting the Valser reagent mercuric iodide precipitates out, whereas on dilution of the relatively dilute Valser reagent (Reagent III) no such precipitate is obtained, suggests the presence in the former of the triiodide, KI HgI_2, and in the latter, of only the more stable tetraiodide, 2KI - HgI_2 That the difference in sensitivity of the undiluted and dilute Valser reagents does not vary uniformly for the alkaloids tested, suggests further that these two complex salts behave differently toward these alkaloids, yielding alkaloidal iodo mercurates with different solubilities

Chemical analyses of the alkaloidal iodomercurates are comparatively rare Fran-ois and Blanc (29) prepared crystalline iodomercurates of eleven alkaloids The majority of these contained one molecule of mercuric iodide in combination with one molecule of the iodohydrate of the alkaloid (HgI_2 Alkaloid HI or 2HI), but three other types were described

Certain differences obtain for the absolute limits of sensitivity of Mayer's and Valser's reagents for alkalo ds as determined by Mayer, Tanret and myself This is not surprising since it is certain that in 1863 Mayer was working with impure preparations of some of the alkaloids, Tanret likewise probably did not have specimens identical with those available at the present time Furthermore, slight differences in the preparation of the reagents, especially in the relative amounts of potassium iodide and mercuric iodide, or chloride, cause considerable variation in sensitiveness When using Mayer's reagent, the relative amounts of the alkaloidal solution and the reagent may also influence the results The degree of acidity of the solutions constitutes another factor In the present investigation, dis appearance of fluorescence rather than absence of a precipitate was used as an end-point in determining the limits of sensitivity, whereas Tanret refers to a "distinct precipitate," a fact which would serve to explain possibly the higher limits of sensitivity obtained by the author with Valser's reagent, but not the lower limits for morphine and nicotine Tanret, nevertheless, found that for the salts of seven alkaloids excluding nicotine, Valser's reagent was on the average 4 5 times as sensi tive as Mayer's reagent, while the author determined the average ratio for the same alkaloids with the addition of quinidine to be 5 6 times

The Valser reagent may prove useful for the quantitative estimation of small quantities of an alkaloid not in perfectly pure solution It may also be possible to determine with relative ease any appreciable decomposition occurring in stock solutions of the alkaloids during a period of time Thus, a solution of codeine sul phate did not alter in its behavior toward the reagent during a period of two months, a solution of morphine sulphate, on the contrary, became markedly more sensitive on standing This would seem to indicate the decomposition or oxidation of the morphine into a compound or compounds detectable in higher dilution by the potassium mercuric iodide reagents than morphine itself

For qualitative use the Valser reagent is to be preferred to Mayer's reagent, for the former yields a positive test in much lower concentrations of the alkaloids than does the latter, and possesses the added advantage that at the same time it is no more sensitive than is Mayer's reagent for certain protein impurities Testing

with both these reagents provides an additional means of distinguishing between the iodomercurates of proteins and those of the alkaloids

SUMMARY AND CONCLUSIONS

1 A potassium mercuric iodide reagent, which closely resembles a reagent described by Valser, the exact formula for which was not available, was prepared by slowly adding a 10 per cent (W/V) solution of potassium iodide to red mercuric iodide until the mercuric iodide was just completely dissolved Under these conditions, 10 Gm of potassium iodide made up to 100 cc in distilled water dissolves approximately 14 0 Gm of mercuric iodide at 20° C

2 The Valser reagent is much superior to the widely used Mayer's reagent as a qualitative test solution for alkaloids For the nine alkaloids tested in pure solution, the former reagent was found to be from 4 8 to 15 0 times as sensitive as the latter

3 The alkaloids investigated yielded a positive test with the Valser reagent in concentrations which ranged from approximately 1 7000 for morphine sulphate to 1 1,500,000 for the sulphates of quinine and quinidine

4 Each of several proteins, which in low concentrations also form precipitates in the potassium mercuric iodide solutions, possesses virtually the same limit of sensitivity with all these reagents prepared regardless of their concentration or the presence of an excess of potassium iodide Thus Valser's reagent was not more sensitive than Mayer's reagent for any of the proteins tested

5 Attention is directed to the variability in the individual behavior of the alkaloids with solutions of potassium mercuric iodide For example, the exceptional solubility of the iodomercurate of pilocarpine in dilute sulphuric acid (tenth normal) is pointed out, whereas the solubility of the iodomercurate of nicotine diminishes on acidulation with sulphuric acid

6 Certain differences are noted between the properties of the iodomercurates of the alkaloids and those of the proteins investigated

7 Factors which may influence the sensitivity of the potassium mercuric iodide reagents with alkaloids are discussed, and the literature regarding their use as precipitating reagents for alkaloids is reviewed

VEHICLES FOR MEDICINES *

BY BERNARD FANTUS, H A DYNIEWICZ AND J M DYNIEWICZ

VI SYRUP OF CINNAMON

Syrup of cinnamon has been recommended as an "almost specific" vehicle for salicylates As the syrup of cinnamon has a brown color, its use would coincide

* From the Laboratory of Pharmacology University of Illinois, College of Medicine, and assisted by a grant from the AMERICAN PHARMACEUTICAL ASSOCIATION

with the idea expressed by Lucas and Henderson,[1] to use colored vehicles, such as syrup of glycyrrhiza or compound syrup of sarsaparilla, for salicylates in order to make the discoloration that salicylate undergoes on keeping, less obvious to the patients

Dissolving 0 30 Gm of sodium salicylate in 4 cc of syrup of cinnamon yields a preparation that is disappointedly disagreeable to our taste As the syrup of cinnamon itself has an astringent and somewhat acrid taste, the disagreeableness may be due to the tannin and cinnamic acid present in the cinnamon, for the syrup is prepared by extraction of the cinnamon with alcohol (almost 10%) in cinnamon water We have noticed that the presence of even a small quantity of acid brings on an acridity in salicylate solutions, presumably due to liberation of salicylate ions

Inasmuch as this syrup is merely intended as a flavoring vehicle, it may well be questioned why we should make this preparation from the drug itself, and include various undesirable, because disagreeably tasting, ingredients, when the oil of cinnamon represents the cinnamon flavor so fully

EXPERIMENTS ON FLAVORING A SYRUP

We therefore set about to experiment on the question of preparing a syrup directly from the oil itself, starting with cinnamon water, and using it in the percolation of the sugar (*Process 1*)

Cinnamon Water	450 0 cc
Sucrose	850 0 Gm

Percolate until 1000 cc of the syrup are obtained This results in a clear rather mildly cinnamon flavored syrup

With the hope of increasing the strength of the preparation and saving the clarification of the cinnamon water by filtration through absorbent material, we shook up oil of cassia with water and percolated the sugar with this mixture (*Process 2*)

Oil of Cassia	1 0 cc
Distilled Water	450 0 cc
Mix by vigorous agitation and percolate through Sucrose	850 0 Gm
until 1000 cc of the syrup are obtained	

The resulting syrup is slightly opalescent, but practically clear, and of stronger flavor than that resulting from Process 1, and of pleasantly burning taste

To determine whether we might introduce a still larger quantity of cinnamon oil into the syrup by better subdivision of the oil of cassia, we triturated the sugar with the volatile oil and percolated with water (*Process 3*)

Oil of Cassia	1 0 cc
Sucrose	850 0 Gm
Triturate thoroughly and percolate with Distilled Water	450 0 cc
until 1000 cc of the syrup are obtained	

This yielded a decidedly turbid fluid of rather strong cinnamon flavor and taste By reducing the oil of cassia to one-fourth the amount that is employed in the preparation of cinnamon water and distributing this oil over sucrose, we secured a preparation practically identical in appearance, odor and taste with that yielded by Process 2 It is obvious, therefore, that Process 3 is more economical in

[1] *Canadian Medical Journal*, April 1931

the use of the oil of cassia than are any of the previously enumerated processes, obviously because of the presenting of a larger surface of the volatile oil to the solvent than in the other methods

In an attempt to possibly still further increase the cinnamon content of the preparation—though this seems hardly necessary—we dissolved the oil of cassia in a small proportion (5%) of alcohol and distributed the alcoholic solution over the sugar which was then submitted to percolation with water in the preparation of the syrup (*Process 4*)

Oil of Cassia	1 0 cc
Alcohol	50 0 cc
Triturate this thoroughly with Sucrose	850 0 Gm

Then percolate with Distilled Water until 1000 cc of the syrup are obtained

The result is surprising in that odor as well as taste are less prominent than in the syrups resulting in Processes 2 and 3

In view of the above-stated facts, it is an interesting question as to what happens to the oil of cassia used in the various processes In Process 1, in which cinnamon water was employed, the large excess of oil that was used was filtered out, being left in the absorbent material In Process 2, in which the oil was shaken with the water, crude oil droplets were found on the walls of the funnel and on the cotton plug as could be clearly demonstrated by means of Sudan III Process 3 secures better subdivision and distribution and therefore enables one to obtain identical results with those of Process 2 with the use of a smaller proportion of oil In Process 4, there can be no doubt that a larger proportion of oil is in solution, for we are dealing with a better solvent and there certainly must be less loss of oil than in any of the previous processes, and yet the product appears to our senses decidedly weaker The answer as to the reason for this remarkable discrepancy in results is probably to be found in the physical fact that a substance will not exchange a good solvent for a poor solvent Hence, the oil of cassia is "disguised" better, *i e*, less prominent to odor and taste than it would be were it to find itself in supersaturated solution in a poorer solvent

We, therefore, recommend consideration of the following formula for the syrup of cinnamon of the forthcoming National Formulary

SYRUPUS CINNAMOMI

Syrup of Cinnamon

Syr Cinnam

Oil of Cassia	0 5 cc
Compound Tincture of Cudbear	60 0 cc
Sucrose	850 0 Gm
Water, a sufficient quantity	
To make	1000 0 cc

Distribute the oil of cassia over the sucrose by trituration in a mortar and percolate with 390 cc of water to which the compound tincture of cudbear has been previously added Percolate until 1000 cc of syrup are obtained

PRESCRIPTION FOR SALICYLATE

When we use the syrup thus prepared as a vehicle for salicylate with the addition of alkali, there is possibly a diminution of the cinnamon flavor of the syrup

by the addition of the just sufficient quantity of water to dissolve the salicylate and the alkali which should guard the salicylate against precipitation in the form of salicylic acid by the acid of the gastric juice The following prescription might, therefore, be recommended potassium bicarbonate having been chosen in preference over sodium bicarbonate because of its greater solubility in water

℞	Sodium Salicylate	10 0 Gm
	Potassium Bicarbonate	10 0 Gm
	Cinnamon Water	60 0 cc
	Syrup of Cinnamon, enough to make	120 0 cc

Mix and label Teaspoonful in glassful of seltzer water every two hours

One advantage of using the cinnamon syrup instead of colorless syrups is that the discoloration salicylate undergoes on standing is thereby rendered unnoticeable

IRON IN CINNAMON SYRUP

Another advantage of our synthetic formula for syrup of cinnamon is that it could be used as a vehicle for iron salts, while the syrup at present official in the N F is out of the question for this purpose, because of "ink" formation The following formula yields an actually delicious clear preparation

℞	Iron and Ammonium Citrate	10 0 Gm
	Water	10 0 cc
	Syrup of Cinnamon (made from Oil of Cassia) to make	120 0 cc

Mix and label Teaspoonful in water three times a day after meals

This would yield the average medicinal dose per teaspoonful In view, however, of the much larger doses favored by clinicians, a tablespoonful, which might carry 1 5 Gm of the medicament, would be more likely to produce striking results

---

DRUG STORE LOCATION *

BY I K ROLPH [1]

Perhaps no kind of retail business is more sensitive to good or faulty location than the drug store This is largely because the drug store, more than any other kind of store with a city-wide distribution, enters into competition with a great many other kinds of stores and because it is dependent, to varying degrees, upon both transient and resident patronage

TYPES OF LOCATIONS DEFINED

There may be said to be five different types of retail locations, irrespective of kind of business These five types of locations, each with its own definite characteristics, are Central shopping district location, sub-center location, neighborhood location, string-street location and the "not concentrated" location It is obvious that these location types are in relation to the retail structure of a city and, for that reason, are applicable to any large city (Figure 1) Further, because of

* Section on Commercial Interests A PH A, Washington meeting 1934

[1] Research Specialist, Bureau of Foreign and Domestic Commerce

the diffused distribution of drug stores, we find drug stores represented at every one of these locations (Table I)

TABLE I —THE RETAIL DRUG PATTERN

Locations	ST LOUIS Per Cent of Drug Stores Represented	ST LOUIS Per Cent of Drug Sales Represented	ST LOUIS Average Annual Sales per Store	BALTIMORE Per Cent of Drug Stores Represented	BALTIMORE Per Cent of Drug Sales Represented	BALTIMORE Average Annual Sales per Store
Total	100 0	100 0	$ 30,252	100 0	100 0	$ 30,000
Central shopping district	3 5	15 0	127,346	5 0	24 1	143 000
Uptown shopping district	1 6	4 8	88 338			
Sub centers	20 4	26 6	39,558	18 3	24 7	40,500
String streets	13 3	10 3	23,466	7 4	7 8	32 000
Neighborhood developments and not concentrated	61 2	43 3	21 585	69 3	43 4	19 500

The central shopping district location is obviously within a city's central shopping district—the heart of the business district The tendency in every city, outside of the heart of it, is for the population to group itself into communities Some communities are, of course, more clearly defined than others Sub-centers are the business centers of these urban communities As a city may be said to be composed of a number of communities, so each community may be said to be composed of a number of neighborhoods And neighborhood business reflects that part of the community in which it is located, and is governed, to an even greater degree, by the same considerations that govern the sub-center String-street locations are those business sites strung along a street, on one or both sides, for a considerable distance Business is not a definite part of the community around it, but rather draws its patronage from those persons using the street "Not concentrated" business is that business which is scattered without relation to any retail development It is business which stands alone, and may occur in any part of the city

TABLE II —THE CENTRAL SHOPPING DISTRICT IN THREE METROPOLITAN COMMUNITIES

	BALTIMORE	PITTSBURGH	ST LOUIS
Area of district in square miles	0 14	0 21	0 15

Per cent of city's sales represented	28 10	47 00	32 00
Average annual sales per store	$143 190	$210 000	$249 000
Per cent of sales done in this district by			
General merchandise stores	38 0	49 0	51 0
Apparel stores	19 5	14 0	18 0
Furniture and household stores	9 5	11 0	11 0
Jewelry stores	4 3	3 0	3 0
Automotive establishments	0 3	1 0	1 0
Restaurants and other eating places	4 2	4 0	4 0
Lumber and building establishments	2 9	1 0	0 3
Food stores	2 4	7 0	1 0
Drug stores	2 9	2 0	1 7
Other retail stores	16 0	8 0	9 0
Per cent of sales done in this district by			
Independent stores	64 1	59 0	72 0
Local chains	3 5	4 0	2 0
Sectional chains	15 7	10 0	4 0
National chains	10 9	26 0	19 0
Other types	5 8	1 0	3 0

THE CENTRAL SHOPPING DISTRICT LOCATION

The proportion of a city's drug store business done at central shopping district locations is between 15 and 25 per cent, if St Louis and Baltimore can be considered fairly typical of a metropolitan community And these amounts of business are carried by about 4 or 5 per cent of the total drug stores in the city (Table I) In relation to central shopping district business as a whole, drug stores do from 1 7 per cent to 2 9 per cent of all business in that district (Table II)

Since business in this district is entirely dependent upon transient patronage, accessibility is the chief consideration in choosing a site If accessibility is the chief consideration, then the amount of traffic that passes a location is important In connection with the National Drug Store Survey conducted in St Louis, the amount of traffic passing eight drug stores in the central shopping district was analyzed and compared with the net sales of these same stores By correlating this information with the rent paid, it was possible to determine the cost of rent for every 100 persons passing each site and the average sales derived from every 100 passersby

This analysis showed that these eight drug stores paid in rent all the way from 12 cents to 38 cents for every 100 persons that passed, and made sales of from $1 53

TABLE III —AN ANALYSIS OF EIGHT ACTUAL DRUG STORE SITES (ST LOUIS)

Site Number	Average Day s Traffic	Per Cent Rating on Basis of Traffic Flow	Sales Derived from Every 100 Persons Passing Store (Relation of Traffic to Sales)	Rent Cost for Every 100 Persons Passing Store (Relation of Traffic to Rent)	Per Cent Relation of Rent to Net Sales
1	37,000	100 00	$2 95	$0 38	12 7
2	32,500	87 84	2 62	0 12	13 1
3	30,000	81 08	3 38	0 28	8 4
4	22,000	59 46	2 15	0 31	4 7
5	21,000	56 76	3 94	0 33	16 6
6	20,000	54 05	1 53	0 25	14 7
7	17,500	47 29	4 59	0 24	5 2
8	11,000	27 73	2 31	0 30	8 2

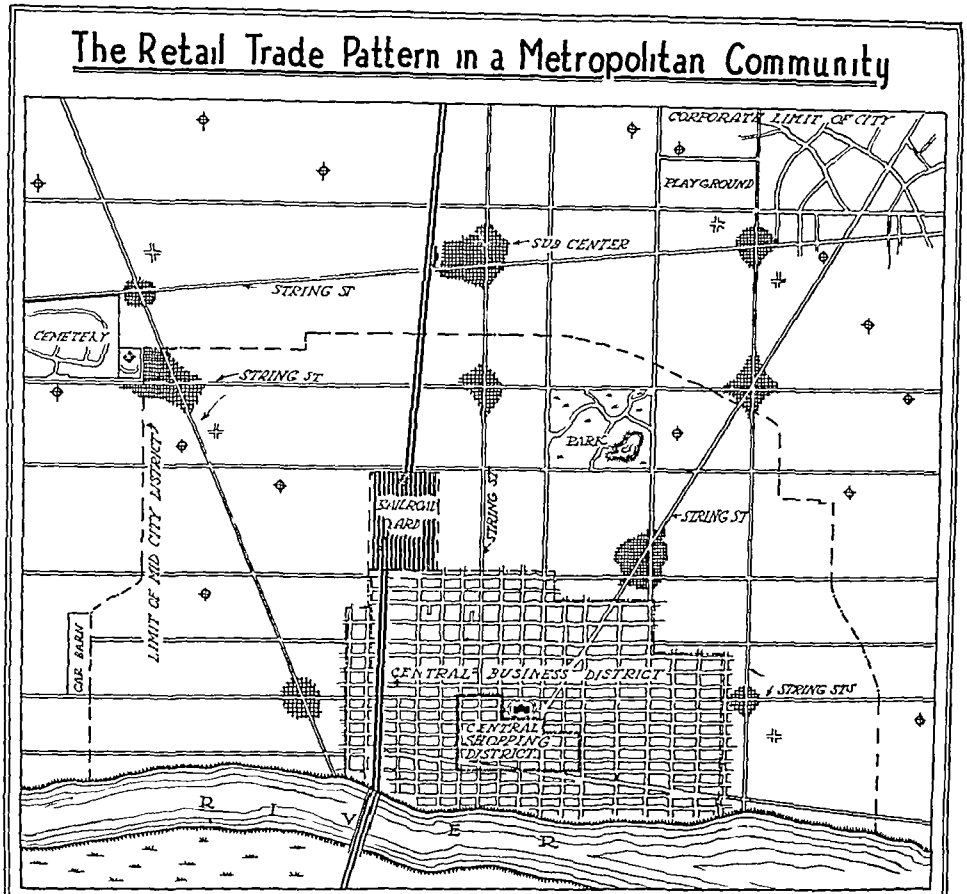
to $4 59 per 100 persons Table III gives the results of this analysis, with the sites arranged in the order of the volume of the average day's traffic

It may be seen that at those points where traffic is heaviest, traffic is not always of the greatest value In fact, the second lowest amount of daily traffic (17,500 persons) shows the greatest sales per 100 persons, and at a rent cost of only 24 cents per 100 persons passing

It is thus indicated that not only is traffic as such an unreliable measure of potential business unless related to the character of traffic, but that rent is also an unstable factor, frequently unrelated to the value of the traffic or the actual amount of business which such a site can produce

In connection with drug store rentals at central shopping district locations, you may be interested in learning about other drug store operating costs at these same locations contrasted with drug store operating costs at all other locations in the city Such a study has just been made in the Bureau of Foreign and Domestic Commerce It was based upon the Census of Retail Distribution, taken in St Louis, although it is not a part of the National Drug Store Survey

Salaries paid employees amounted to 12 2 per cent of sales in central shopping district drug stores, and 12 4 per cent of sales in drug stores located elsewhere



Types of Retail Business Development & Factors Determining their Growth

Factors of Influence	Central Shopping District	Sub Centers		String Streets		Neighborhood Groups		Not Concentrated locations	
		Mid-city	Outlying	Mid-city	Outlying	Mid-city	Outlying	Mid-city	Outlying
Present Population Density	Very Low	High	Medium	High	Medium	High	Low or Med	High	Low or Med
Patronage	City's Trading Area	Local & Transient	Mainly Local	Either Mainly Local or Mainly Transient		Local		Mainly Transient	
Income of Patronage	Income of Trade Area	Med. Low	Med to High	Low or Med. or High		Very Low to High		Low to High	
Racial Composition of Patronage	Race has been & will be Evident	White or Foreign or Negro	Usually Native White Americans	White or Foreign or Negro		White or Foreign or Negro		White or Foreign or Negro	
Transportation Facilities	Center of all Rail lines	Important street Car Intersection	Important street Car Intersection	Main thoroughfare for Auto or Auto and Street Car traffic		Usually None	Usually None	Usually a Main Thoroughfare for Auto Traffic	
Trade Barriers	Usually None	Usually None	May be one or More	Usually None	May be one or More	Usually None	May be one or More	Usually None	May be one or More

Fig 1—A typical urban community showing examples of its retail business developments together with a list of factors determining their character and growth

in the city Actual rent amounted to 7 1 per cent of sales in central shopping district drug stores, and 5 9 per cent of sales in stores elsewhere Other expenses amounted to 5 4 per cent of sales in central shopping district drug stores, and 5 6 per cent of sales in stores elsewhere Including a wage-compensation to owners (the average salary paid to employees and imputed to all owners who were reported as working in their stores), the total operating expense amounted to 24 8 per cent of sales for drug stores at central shopping district locations and 26 7 per cent of sales for drug stores at locations elsewhere in the city

It is interesting to know that 70 kinds of retail business were found to have locations both in the central shopping district and outside Of these 70 kinds of business, 37 were found to have lower total operating-expense ratios when located in the central shopping district than when those same kinds of business were located outside The remaining 33 businesses had, of course, higher total operating expenses when located in the central shopping district than when located outside The drug store is one of the 37 businesses whose total operating-expense ratio is lower (to the extent of 2 points) at central shopping district locations However, it is well to remember that the expense ratio for stores outside of the central shopping district represents an average ratio for all stores at four types of locations (the sub-center, the neighborhood, the string-street and the not-concentrated locations), while the central shopping district ratio is for stores at one type of location only, namely, the central shopping district location

Continuing with an analysis of expense ratios in the central shopping district, the above-average-sales stores were separated from the below-average-sales stores The average sales per drug store in the central shopping district were found to be $127,346, and six stores were found to have sales above that amount and 15 stores were found to have sales below The total operating-expense ratio for those six stores with above-average sales was found to be 22 9 per cent, and the ratio for the 15 stores with below-average sales was found to be 28 8 per cent—a 6 point difference To quote from this study—"The drug store reacts more consistently than any other kind of business in feeling the effect of increased sales Actual-rent, employee-salary and other-expense ratios vary in similar degrees, as sales go above or below average, resulting in the same consistent differences in total operating-expense ratios" Perhaps I should state that while the average sales for all drug stores in the central shopping district were $127,346, the average sales for those stores with above average sales were $303,541, and the average sales for those stores with below-average sales were $56,868

THE SUB-CENTER LOCATION

The second most important type of drug site is the sub center location If the two cities (Baltimore and St Louis) constitute an adequate sample, so that between 4 and 5 per cent of a city's drug stores are in the central shopping district, it is probably true that about 20 per cent of the drug stores are located in sub-centers (Table I) And it is undoubtedly the second ranking location type for a drug store, from the point of view of volume of business Volume depends further, however, upon the income area in which the sub center is located

Accessibility to the people of that community, which is largely determined by transportation facilities, is, of course, as much of a factor in sub-center location as

accessibility to the city as a whole is in central shopping district location And accessibility appears to be more correctly expressed in rent as related to sales at these locations than at central shopping district locations An analysis of rent-to-sales percentages at a considerable number of sub-center locations has revealed, generally, a small range due largely to the fact that actual value of these locations is an easier matter of judgment The survey in St Louis showed that the rent-to-sales percentages at sub-center locations there were almost 4 points lower than at central shopping district locations And those 4 points may be a contribution to net profit

A higher selectivity of locations is available, also, when selecting a sub-center site, for there are always many sub-centers in any one city, as against only one central shopping district Further, since sub-centers reflect very closely the income of the communities in which they are located, the volume of business one aims to do can be more closely related to a sub-center site than to any other type of site Also, the kind of people one wishes to serve, which is expressed in racial background and occupations as well as income, determining the kind and quality of stock to be carried, may frequently be selected at sub-center sites The population density of a community determines, in part, the stock turnover and volume

THE NEIGHBORHOOD LOCATION

Closely related to sub-center location is neighborhood location Neighborhood drug business reflects the income of the people living in those neighborhoods to the same degree that sub-center drug business reflects the income of the people living in sub center communities, which, after all, are simply the larger units of which the neighborhoods are part

There is even a higher selectivity of locations available among neighborhood sites And because it is a small part of a larger unit, a store at such a site is almost entirely dependent on the people immediately surrounding it While stores here do not offer such high volumes (the average is probably about $20,000, as shown in Table I), they can be very profitable if they are located in the right neighborhoods

The St Louis survey found that the rent-to-sales percentages at neighborhood locations were higher than at sub center locations Actual rentals were not higher but apparently they were out of proportion to the volume of business possible at those locations In some instances, it has been known that landlords take advantage of the possibility that the neighborhood may become a sub-center later on, and so charge accordingly It is believed better to pay a rental based on to-day's volume and a higher rental as the district develops rather than to speculate on the future of a district and pay on that basis The landlord rather than the merchant should do the speculating

THE STRING-STREET AND NOT-CONCENTRATED LOCATIONS

The opportunities for drug store business are less at string-street and not-concentrated locations than at any other location types (Table I) Their chief weakness is due to the fact that they lack a business focal point, and so are difficult locations at which to carry on a drug business Instances of considerable success are few and are accomplished only by exerting more than ordinary effort Usually

these locations cater only to a small and limited number of drug patrons and fill emergency needs rather than general drug needs

SUMMARY

The possibilities of drug business at locations outside the central shopping district may be said to be in this order Sub-center, neighborhood development, string-street development and the "not concentrated"

In choosing a central shopping district location, it should be borne in mind that the drug business at these locations accounts for less than one-fourth of all the drug business within the city limits, that character as well as amount of traffic should be considered in appraising a site's accessibility, and that rent also should be related as closely as possible to the actual amount of business which such a site can produce

From an accumulation of figures, over a period of time and in a number of cities, it appears that drug stores located in sub-centers have the most desirable operating figures and characteristics Sub-centers, generally, provide a high selectivity of profitable drug locations

Both the sub-center and neighborhood locations are greatly influenced by the income of the population around them The string-street location is greatly influenced by the character of traffic that uses the street and the degree and kind of business specialization that may exist there

In general, five factors determine the selection of any profitable drug store location *First*, it must be accessible to a sufficient number of people, either transient or resident patronage, or both Resident patronage can be estimated by knowing the population of the shopping area to be served If it is transient patronage, either partly or wholly, it is necessary to be assured of accessibility by street car, bus or automobile *Second*, the people within that shopping area must have sufficient purchasing power *Third*, if the racial composition or background of the people is conspicuous, it should be known so as to determine the kind and quality of stock to be carried In the case of a chain store, the selection of a manager may even be influenced by such knowledge *Fourth*, it is necessary to know the availability of transportation facilities, in all cases except where the patronage lives immediately around the store, as at the neighborhood location And transportation facilities may be misleading unless the character of traffic is considered along with number of persons A *fifth* factor is topography or other trade barriers (natural or artificial), which in residential areas, particularly, affect the limits of a shopping district It is believed that these five factors can be more correctly applied if thought of in terms of the structure of the entire city

---

ELECTIONS OF NATIONAL ACADEMY OF SCIENCES

At the meeting of the National Academy of Sciences held in Washington on April 23rd, 24th and 25th, Dr Thomas Hunt Morgan, director of the William G Kerckhoff Laboratories of the Biological Sciences of the California Institute of Technology and past-president of the academy, was elected foreign secretary to succeed Dr Robert A Millikan, director of the Norman Bridge Laboratory of Physics and chairman of the Executive Council of the California Institute of Technology, who asked to be relieved of the office, which he has held for the past fifteen years Dr Roger Adams, professor of organic chemistry at the University of Illinois, and Dr H S Jennings, professor of zoölogy at the Johns Hopkins University were elected members of the council —*Science*, May 4, 1934

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

Editor's Note Recently a state board member complained to me because as he said "No matter how simple a question I may ask about products of the National Formulary, I find that graduates have difficulty in answering it." We must recognize the fact brought out so well by Dr W J Husa in the paper which follows that the National Formulary is coming into use more and more and therefore we must see to it that our students are familiar with it and appreciate its value in the conduct of their drug stores Dr Husa's paper is timely and practical—C B JORDAN, *Editor*

THE NECESSITY FOR INCREASING EMPHASIS ON THE N F IN PHARMACY COURSES

BY WILLIAM J HUSA *

In pharmaceutical education, the United States Pharmacopœia has traditionally received greater emphasis than has been accorded to the National Formulary Forty years ago, the U S P, with its prestige based on seven decades of useful service, must have towered above the embryonic N F in the minds of pharmacists However, with the passing of the years, the N F increasingly justified its existence, and in 1906 the Federal Food and Drugs Act made it a legal standard, thus placing it on a par with the U S P in legal standing

In any comparison of the U S P and N F it is necessary to consider the fundamental distinction between the two books, which is that the U S P admits drugs on the basis of therapeutic usefulness, and aims to keep at a minimum the pharmaceutical preparations of these drugs, while the N F is essentially a book of pharmaceutical formulas, selected on the basis of their use by physicians but with no indorsement of their therapeutic worth, this being left to the judgment of the individual physician

As pharmaceutical educators, it is worth our while to consider where the difference in scope between the U S P and N F is leading us, and to give thought to other developments which seem to call for a revision of the content of our pharmacy courses

The changes which have been taking place with successive revisions of the U S P are reflected in the statement of a prominent retail pharmacist, who said that in his earlier experience, four or five copies of each revision of the U S P were worn out by use in his store, while more recently one copy has lasted more than ten years On the other hand, in recent years, many pharmacists have been saying that they use the N F a great deal more than the U S P We see here a definite trend which merits the thoughtful attention of every teacher of pharmacy

The reasons for the fact that many retail pharmacists are using the N F more than the U S P are not far to seek In the first place, by steadily pursuing the declared policy of keeping pharmaceutical preparations at a minimum, the U S P is becoming more and more a book of standards for individual drugs, and is thus

* University of Florida

naturally of more direct usefulness to manufacturers and enforcement officials than to retailers Furthermore the complexion of the list of drugs is changing, with the inclusion of increasing numbers of synthetics and biologicals, which require less compounding on the part of the pharmacist, so that there is less frequent necessity for referring to the U S P Then there is the spirit of therapeutic nihilism driving many drugs and preparations from the U S P, it being easier to superciliously throw a drug overboard than to study out the exact conditions of successful use which led to its reputation Some authorities think that too much emphasis has been placed on pharmacological methods in matters of deletion of drugs For example, it may not be possible to demonstrate the effect of an antipyretic on a dog of normal temperature The fact that a drug has been found useful by generations of practicing physicians should carry due weight Let us remember that chaulmoogra oil was used for leprosy for centuries before its value was demonstrated in a scientific way, and that burnt sponge, which contains iodides from sea water, was used in cases of goiter for a thousand years before iodine was recognized as an element Cod Liver Oil was used empirically for generations before vitamins were discovered, meanwhile bearing the brunt of much criticism to the effect that it was no better than other fats

With these changes in the U S P the types of preparations which can be made by the pharmacist have been shifting to the N F For example, there are two elixirs in the U S P and 65 elixirs in the N F, there are 3 emulsions in the U S P and 5 in the N F, of fluidextracts, we find 26 in the U S P and 104 in the N F, of liniments there are 5 in the U S P and 10 in the N F, of solutions there are 23 in the U S P and 37 in the N F, of mixtures there are 2 in the U S P and 13 in the N F, of ointments there are 18 in the U S P and 19 in the N F, of syrups there are 18 in the U S P and 37 in the N F, of tinctures there are 40 in the U S P and 55 in the N F, etc The N F also contains many other types of preparations such as petroxolins, sprays, mulls, oleates, dermatologic pastes, dental preparations, veterinary preparations, etc The presence of the various preparations in the N F is based on extensive surveys showing the extent of use of all items by physicians of the U S The group of N F preparations might thus be thought of as an All American selection, chosen by the physicians of the nation, the vote being the truest possible one, that of actual use

It is thus easy to understand the increasing use of the N F by pharmacists In bringing N F preparations to the attention of his local physicians, the pharmacist is thus making available to them the preparations found most useful by physicians of the U S

However, the policy of basing admission to the N F on the extent of use has a very serious drawback According to a line of reasoning now popular in pharmaceutical circles, when Edison was about to construct the first electric light plant, he should have made a survey of the country, which would have shown that there were no electric light plants in use, therefore he should have concluded that he should not start one

There should be a place in the N F for new preparations which should be introduced, featured and used in the same manner that new proprietaries or specialties are launched, otherwise the N F will stagnate Research should be sponsored on new preparations, new combinations incorporating modern scientific

medical ideas These products should be subjected to thorough pharmacological and clinical tests

Although the N F does not take the responsibility of indorsing the therapeutic value of its items, this policy should not deter the pharmacist from detailing the physicians with N F preparations, since we need only recall that the N F contains preparations of such drugs as the cinchona alkaloids, the bromides, strychnine, cod liver oil, cascara sagrada, iron, salicylates, senna, belladonna, santonin, ipecac, opium, digitalis, calomel and many other preparations containing drugs of unquestioned therapeutic value presented in combinations which have been found useful by physicians

The increasing use of the N F by pharmacists makes it necessary that we place increasing emphasis on the N F in our pharmacy courses Our conference here to-day gives us the opportunity of exchanging ideas regarding methods of teaching and content of courses which will place proper emphasis on the N F Our teaching could well be aimed to inspire some constructive thought on the part of the students, so that they will view the N F as a living, growing project which is theirs to use and to develop to an ever-increasing extent in the upbuilding of the profession of pharmacy in its service to humanity

---

EXTRACTS FROM THE SUMMARY OF PROCEEDINGS OF THE 1934 MEETING OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

The 35th annual meeting of the American Association of Colleges of Pharmacy was held May 7th and 8th Eighty six delegates from forty four member colleges were in attendance

Dean Theodore J Bradley presented a memorial on the death of Prof Florin J Amrhein

The address of President L D Havenhill is printed in the May number on pages 462 to 470

Secretary-Treasurer Zada M Cooper reported a membership of fifty seven colleges with one in arrears for dues A second series of visits to member colleges was completed early in the year

Cash on hand amounted to $1233 58 The report was accepted and an Auditing Committee appointed

Chairman C B Jordan of the Executive Committee submitted the following relative to fifty five colleges reporting The total number of entrants for 1933–1934 was 1902, the number of High School graduates, 1894, the number of special students, 8, the number that had previous college training 500 This report shows an increase of 7% over that of 1932 to 1933, the number of students having previous college training increased 3%, the total by 26 3% of all entering students

The report contained the following recommendations, which were adopted

(1) That a committee of three be appointed to cooperate with similar committees of the N A B P and the A Ph A to assist in straightening out code matters

(2) That credits earned in a standard college, one recognized by the state educational department or by the state university in which it is located, may be accepted for face value in a college of pharmacy in so far as such work applies in the course in pharmacy, but, regardless of amount of credit offered, no student will be permitted to complete the course in pharmacy in less than two collegiate years This recommendation was made a part of Paragraph 3 of Article VII of the by-laws

(3) That the Association request the American Council on Pharmaceutical Education to proceed without further delay to perform the functions for which it was created and that the secretary inform the President of the American Council on Pharmaceutical Education of this request

(4) The American Association of Colleges of Pharmacy is vitally interested in any attempt to improve the control of the sale and the advertisement of food, drugs and cosmetics, and it goes on record as highly in favor of legislation that will properly protect the public against the advertisement or sale of fraudulent, misrepresented poisonous or deleterious food, drugs or cosmetics

(5) That this Association goes on record as favoring Amended Senate Bill 2800 as reported by the Senate Committee on Commerce on March 15, 1934, or a bill of equal or greater merit

A resolution, relative to ideal qualifications for deans, which had been referred to the Executive Committee was considered and the following recommendation made and adopted

That the Executive Committee does not approve of the recommendation as written and recommends that it be referred to the American Council on Pharmaceutical Education for further study

In a supplementary report, Dean Jordan presented a request for the Conference of Teachers of Pharmacognosy and Pharmacology that the Executive Committee recommend the appointment of a committee to study the conditions effecting the study of Botany This was adopted and the committee appointed

Chairman J G Beard reported for the Syllabus Committee He directed attention to the fact that there is less unanimity of opinion about the subject matter of pharmaceutical education than of any other type of organized education

Dean R A Lyman presented a paper, "The American Association of Colleges of Pharmacy in Its Relation to the American Council on Education" He recommended the appointment of a Problems and Plans Committee as a standing committee of the Association whose function it will be to study the problems which most concern pharmaceutical education and work out plans for comparative research of a pharmaceutical and educational nature The report was adopted

Dean Ernest Little reported for the Committee on Qualifications for Admission to Membership in the Association Dean Little reported that the Committee had been out of work for three years, that last year a report had been submitted and the entire session had been given to its discussion The report was accepted and a copy sent to each member college The report was submitted and voted upon paragraph by paragraph, and adopted

Prof Charles Stocking reported for the Committee on Educational Standards, Prof A B Nichols for the Committee on Activities of Students and Alumni Prof Schlicting, through Dr C E Caspari reported for the Committee on Relations of Boards and Colleges

The report of the Committee on Student Branches of the A Ph A, by George L Webster, was read by Dr W F Rudd

The report of the Committee to study the list of crude drugs prepared by District No 2, Dr E V Lynn, Chairman, was read by Dr B V Christensen This Committee is to be increased and the work continued

The report of the representative on American Council of Pharmaceutical Education was presented by Dr A G DuMez He stated that the Council had not yet begun to function except to act upon some special matter because there has been a lack of funds Plans call for $200 from each Association to start work on methods for standardizing of schools

The Council has under advisement a matter of undertaking a study of practical experience, a question referred to it by the American Association of Colleges of Pharmacy Another question which has been referred to the Council was "What Advance Credit Shall Be Given for Work Done by Pharmaceutical and Non-Pharmaceutical Member Colleges?"

Dr H W Youngken reported on Biological Abstracts, Dr Glenn L Jenkins for the National Conference on Pharmaceutical Research, Dean J G Beard for the National Drug Trade Conference Dr Paul Olsen reported for the Druggists Research Bureau and Prof R E Terry for the National Association of Retail Druggists Dean Edward Kremers reported on the progress of his work as Historian The reports were accepted

REPORT OF THE COMMITTEE ON RESOLUTIONS

The Committee on Resolutions, consisting of Dr W J Husa, Chairman, Prof R E Terry, Profs C H Stocking, Dr B V Christensen and Dean A O Mickelsen submitted the following report

A Resolution of Appreciation of President L D Havenhill's services was adopted

"The President's address contained a recommendation that the Association view with disfavor the merging of schools of pharmacy with other schools or departments, that the Chairman of the Executive Committee register vigorous protest to any and all instances of this character We are in accord with the view that every effort should be made to prevent the loss of autonomy

and professional organization, but we foresee that cases may arise in which the merger of two or more colleges of pharmacy might be beneficial in states having too many colleges of pharmacy Accordingly we offer a restatement of the resolution as follows

WHEREAS, the merger of colleges or schools of pharmacy with other schools or colleges may result in serious loss of autonomy and professional organization,

Resolved, that the Executive Committee consider such mergers individually and take whatever steps seem to be advisable to maintain pharmaceutical education at a proper level of professional independence "

The president recommended that the Committee on Curriculum and Teaching Method make a study of the Syllabus to determine possible improvements and adjustments "—Approved

In connection with the previous recommendation the president recommended that the Committee on Curriculum and Teaching Methods be increased from five to ten members We feel that this change would result in a more unwieldy and less effective committee "

With further reference to the President's Address we do not concur in the suggestion that it would be feasible to divide the four year course into a two year lower division of non technical instruction, with all professional work to be crowded into the last two years "

Dean Adolph Ziefle made four recommendations regarding the relation of the pharmaceutical curriculum to premedical training The Committee takes the position that pharmacy should be viewed as an end in itself, as a preparation for service through pharmacy, rather than as a preliminary training for another profession

We therefore disapprove the four recommendations concerning steps to be taken to obtain greater recognition of pharmacy as premedical training In reaching this decision we also had in mind the careful study made recently by the Committee to confer with the Executive Council of the Association of American Medical Colleges "

Dean Ziefle recommended that steps be taken 'To determine whether it is feasible to offer the degree of Bachelor of Arts in Pharmacy' '—Not approved

Dean Ziefle recommended that certain steps be taken 'To encourage the members of pharmacy faculties to give lectures and demonstrations in the general courses in hygiene and first aid and to offer courses of instruction in nurses training schools' We do not feel that it is necessary to reestablish a committee to study this question "

We approve of the three recommendations in Dean W F Rudd's paper

" *First* That we urge our member colleges to give the teaching of public health increasing emphasis and as far as possible use city and state public health officials in our faculties' " The latter statement was interpreted by the committee as meaning that occasional lectures be given by public health officials

Second That inasmuch as all drug commodities are primarily health concerns we go on record as urging that the manufacture jobbing and retailing of these commodities be under the direct control of properly qualified pharmacists, and further that our action be broadcast to constituent members of all organizations represented in the National Drug Trade Conference and that we ask their support as a public health measure

"'*Third* That inasmuch as the matter of standards of drugs cosmetics, etc is of primary concern in public health and since the colleges of pharmacy are in a neutral position between manufacturers of these products and government officials who are responsible for the enforcement of proper standards that we offer our services as a sort of liaison group between the interested parties, whenever it would seem to either side that the educators can serve the cause of public health' ' The report was accepted and the recommendations adopted

The following papers were presented

The Relation of a Pharmacy Curriculum to Premedical Education," by Dean Adolph Ziefle

' The Public Health in Pharmaceutical Education " by Dean W F Rudd

The resignations of the Medical College of the State of South Carolina School of Pharmacy, and of Meharry Medical College Department of Pharmacy, were accepted

The following officers were elected *President* Dean Ernest Little, Newark N J , *Vice President*, Dean Antone O Mickelsen, Portland, Ore , *Secretary Treasurer*, Zada M Cooper Iowa City, Iowa, *Chairman Executive Committee*, C B Jordan La Fayette, Ind , *Members of Executive Committee* to serve two years Dean L D Havenhill Lawrence, Kans , A G DuMez Baltimore, Md , *Member of the Syllabus Committee*, L W Rising

JOINT SESSION

The Joint Session of the American Association of Colleges of Pharmacy and the National Association Boards of Pharmacy is reported in the report of the latter in this issue of the JOURNAL This also contains the title of discussions and other reports made at the Joint Session

TEACHERS' CONFERENCES

PHARMACY, CHAIRMAN DR FREDERICK V LOFGREN

The following papers were read and discussed Theory of Pharmacy and Academic Standards," by W Paul Briggs The Grading of Preparations Made in the Pharmacy Laboratory," by Adley B Nichols 'The Method of Approach in Teaching the Pharmacy of New and Non Official Remedies,' by Marvin J Andrews 'Teaching Students How to Approach the Physician," by L Wait Rising Some Observations after Many Years of Teaching Pharmaceutical Mathematics," by Edward Spease

Two papers were read by title A Comparison of the Four Year Curricula in Pharmaceutical Subjects " by Dr Burlage and one dealing with dental preparations by Dr Richards At Dean Beard's suggestion it was voted that two papers on the Syllabus should be presented at the next year's meeting

Officers elected for the ensuing year were Dr W G Crockett, *Chairman*, L W Richards, *Vice Chairman*, and Dean Emery T Motley *Secretary*

CHEMISTRY, CHAIRMAN, DEAN HUGH E MULDOON

The following papers were presented and discussed Teaching Urinalysis to Pharmacy Students," by Antoine E Greene, 'Teaching Organic Pharmaceutical Chemistry by Glenn L Jenkins, ' How Should Fundamental Courses in Chemistry Be Taught in a College of Pharmacy," by Ernest Little Teaching Organic Chemistry to Pharmacy Students," by J R Harrod

Officers elected for the ensuing year were *Chairman* Prof Marion L Jacobs and Dr John C Bauer, *Secretary*

PHARMACOGNOSY AND PHARMACOLOGY, CHAIRMAN, C W BALLARD, TEMPORARY CHAIRMAN, PROF F H EBY

The following papers were read and discussed 'Why Study Botany?" by C C Glover, ' The Botany Course as a Foundation for Pharmacognosy, by O P M Canis, The Botany Course as a Foundation for the Pharmacognosy of Root Drugs," by B V Christensen, The Botany Course as a Foundation for the Pharmacognosy of Stem and Bark Drugs," by C C Albers, 'The Botany Course as a Foundation for the Pharmacognosy of Leaf Drugs " by H W Youngken, "The Botany Course as a Foundation for the Pharmacognosy of Fruit Drugs,' by J Hampton Hoch, 'The Botany Course as a Foundation for the Pharmacognosy of Seed Drugs,' by F J Bacon, ' The Botany Course as a Foundation for Pharmacognosy ' by George W Fiero The Value of Habitats in the Study of Pharmacognosy " by E H Wirth

It was voted that the conference should draft an outline on the subject of botany and suggest the minimum number of hours which should be given on that subject in the pharmaceutical curriculum The Conference adopted a resolution requesting the Executive Committee of the Association to recommend the appointment of a committee to study the conditions surrounding the study of botany

Officers elected for the ensuing year were *Chairman* Prof A John Schwarz, *Secretary* Dean Charles E F Mollett

ECONOMICS

Owing to the illness and death of Prof Amrhein, no program of papers had been prepared Dr Paul C Olsen, *Secretary* presided

Wroe Alderson addressed the conference about NRA and its effect on the retail drug business The address was followed by general discussion

Officers elected for the ensuing year were *Chairman*, Dr Paul C Olsen, *Secretary* Dean John F McCloskey

ABSTRACT OF PROCEEDINGS OF THE THIRTY-FIRST ANNUAL CONVENTION OF THE NATIONAL ASSOCIATION BOARDS OF PHARMACY HELD IN WASHINGTON, D C, MAY 7 AND 8, 1934

The thirty-first annual meeting of the National Association of Boards of Pharmacy was exceptionally well attended, 88 delegates being present from 34 states, and also ten honorary members, making the total attendance 98

President Gilbert's address is printed in May issue of the JOURNAL, A PH A

The report of the Executive Committee included a statement of income and expense from July 1, 1933 to April 30, 1934, showing a cash increase of $289 88 with total cash assets of $5865 55 A new budget for the fiscal year ending June 30, 1935 totaling $14 400 was outlined—a reduction of $335 over the previous year The secretary was also authorized to sign a lease for one year at $110 per month for the offices at 130 N Wells St, Chicago

The report contained one recommendation—that the offices of the Association be moved to the headquarters building of the American Institute of Pharmacy in Washington by May 1935, if possible

Secretary Christensen, in opening his report of the activities of the central office, stated that he had completed his twentieth year of service, and then made an interesting comparison of conditions twenty years ago with those of to day

A detailed financial statement was included, showing cash in the secretary's accounts as of June 30, 1934—$1604 07 The number of official applications issued during the ten-month period was 414—the total for the fiscal year was estimated at 500

Treasurer J W Gayle reported total funds on hand in his accounts of $4261 48, this report also being accepted and filed

An important question came up—that of providing work for college students, under the code, who need practical experience to meet the board entrance requirements The students cannot get jobs at code wages and no employer will take them at less or even without salary, as doing so is a violation of the code The suggestion was made that a joint committee of the three associations—National Association Boards of Pharmacy AMERICAN PHARMACEUTICAL ASSOCIATION and American Association Colleges of Pharmacy, be appointed to study the situation and bring it to the attention of the code authorities so that some special provision for this training can be made

The new *Committee on Minimum Standards of Technical Equipment*, A C Taylor (D C) Chairman, had done a great deal of work The report included a list of essential equipment for a pharmacy—the list having been compiled with the idea of making this the minimum

Chairman Roy B Cook's report for the *Committee on Re-Districting* resulted in the amendment of the By-Laws, which see

Director R L Swain made a brief report for the *Department of Education*, with the recommendation that it be continued, although inactive for the time being on account of financial conditions

RESOLUTIONS

Chairman A C Taylor presented the following resolutions

Resolved, That the National Association of Boards of Pharmacy hereby recognizes that the stability and security of pharmacy and the protection of public health depend largely upon an adequate and honest enforcement of the pharmacy laws of the respective states, and that the Boards of Pharmacy or other duly legalized enforcement agencies be upheld and encouraged in their law enforcement efforts

Resolved, That the National Association of Boards of Pharmacy recommend to the member boards that an average of 75% be required for passing the practical examination and that this grade be made compulsory beginning with the graduates who graduate in 1936 and that it shall not be retroactive in reciprocity

Resolved, That the National Association of Boards of Pharmacy give its whole-hearted and unreserved approval to all efforts to improve Federal and State Food and Drug Laws so that these laws will make for the necessary protection of the consuming public, providing, however, that such legislation does not confer unwarranted arbitrary discretionary powers upon enforcement agencies

Resolved, That every member board at present without a college graduation requirement (Arizona, Delaware, Massachusetts, Nevada, New Mexico, Tennessee and Vermont) immediately and seriously undertake to work for the enactment of such legislation, setting the year 1940 as a goal when every board shall be operating under a compulsory graduation requirement

Resolved, That the Legislative Committee be instructed to make a study of the problem of abolishing the assistant grade of certificate under the various state laws and present a definite outline or uniform plan for accomplishing this, without granting to the holders of outstanding assistant licenses any privileges other than those originally conferred by the law

AMENDMENT CONSTITUTION AND BY LAWS

The member States of this Association shall be grouped into the following eight districts (grouping may include prospective member Territory)

District No 1	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut
District No 2	New York, New Jersey, Pennsylvania, Delaware, Maryland, District of Columbia, Virginia and West Virginia
District No 3	North Carolina South Carolina, Georgia, Alabama, Mississippi, Tennessee, Florida, Puerto Rico
District No 4	Wisconsin Michigan, Illinois, Indiana, Ohio, Kentucky
District No 5	North Dakota, South Dakota, Nebraska Minnesota, Iowa
District No 6	Texas, New Mexico, Louisiana, Arkansas, Kansas, Oklahoma, Missouri
District No 7	Montana, Idaho, Wyoming, Utah, Colorado
District No 8	Washington, Oregon, Nevada, California, Arizona, Alaska

The question of adding a paper on Pharmaceutical Jurisprudence to the regular board examination had been referred to the Committee on Constitution and By-Laws for report After considerable discussion, a special committee was authorized to give the matter a full and complete study for report in 1935, inasmuch as a more adequate law enforcement program is needed

The election of officers resulted as follows

Honorary President F W Hancock, North Carolina, *President*, Charles H Evans, Georgia, *Secretary*, H C Christensen, Illinois, *Treasurer*, J W Gayle, Kentucky, *Executive Committee Member*, C Thurston Gilbert, Connecticut, *Syllabus Committee Member* Robert W Sterling, Illinois, *Resolutions Committee Member*, Frank Milne, Kansas, *Vice-Presidents*, George Moulton, New Hampshire, John M Woodside, Pennsylvania, E V Zoeller North Carolina, Albert Ely, Kentucky, William Muesing, Minnesota, C M Brewer, Oklahoma, R M Shultz Wyoming, R W Fleming, Nevada

JOINT SESSION

Dr Mordecai W Johnson, President of Howard University, was the first speaker and delivered an address on Professional Education of the Colored Man "

A most distinguished visitor, Senator Royal S Copeland, reviewed the Pure Food and Drug Bill, S 2800

Dr B F Christensen of the University of Florida opened the discussion on "Shall we have a general standardizing agency for recognition of colleges of pharmacy by boards of pharmacy or shall each state board act as its own standardizing agency?" Considerable spirited discussion ensued, until finally the report of the American Council on Pharmaceutical Education, which is the logical standardizing agency, was called for and presented by Dr A G DuMez, secretary

Dr C B Jordan read a paper, "Acceptance of Credit from Colleges of Arts and Sciences toward a Degree in Pharmacy—Is the Spirit of the Four-Year Course Being Fulfilled?"

The action taken by the N A B P in redistricting was outlined and the A A C P approved of the new districts and will carry out the same plan

The closing paper was read by Dr R P Fischelis—' The Trend of Student Enrollment in Colleges of Pharmacy as Revealed by a Study of Enrollment Figures for Past Ten Years " In the discussion of the report, the loss of foreign students was emphasized and a motion was adopted requesting the AMERICAN PHARMACEUTICAL ASSOCIATION to consider the advisability of calling to the attention of the people of Central and South America the advantages of pharmaceutical education in the United States

PROCEEDINGS OF THE LOCAL BRANCHES

"All papers presented to the Association and Branches shall become the property of the Association with the understanding that they are not to be published in any other publication prior to their publication in those of the Association, except with the consent of the Council" —Part of Chapter VI Article VI of the By-Laws

ARTICLE III of Chapter VII reads "The objects and aims of local branches of this Association shall be the same as set forth in ARTICLE I of the Constitution of this body, *and the acts of local branches shall in no way commit or bind this Association and can only serve as recommendations to it* And no local branch shall enact any article of Constitution or By-Law to conflict with the Constitution or By-Laws of this Association"

ARTICLE IV of Chapter VII reads "Each local branch having not less than 50 dues paid members of the Association, holding not less than six meetings annually with an attendance of not less than 9 members at each meeting, and the proceedings of which shall have been submitted to the JOURNAL for publication, may elect one representative to the House of Delegates"

Reports of the meeting of the Local Branches shall be mailed to the Editor on the day following the meeting if possible Minutes should be typewritten with wide spaces between the lines Care should be taken to give proper names correctly and manuscript should be signed by the reporter

CHICAGO

The last monthly meeting of the Chicago Branch for the school year of 1933–1934 was held Tuesday evening May 15th, at the University of Illinois College of Medicine

The speaker of the evening was Dr William F Petersen, professor of Pathology and Bacteriology University of Illinois College of Medicine The subject was The Patient and the Weather" Dr Petersen gave a lengthy discussion, accompanied by lantern slides showing the relationship that has existed in many cases between the rise and fall of the health of patients and the barometer

It was pointed out that records prove that climates do have an effect upon the human being Next it was suggested that the condition of the air cannot be escaped by the human being, even if within the confines of a room Comparative graphs were shown which would lead one to believe that such a statement might be true It was also pointed out that maybe the weather has an effect upon our embryonic development that directs much of our physical and mental growth

Comparative graphs were flashed before us in such a rapid fire order it would be hopeless in this short space to give a detailed account of the discussion

LAWRENCE TEMPLETON, *Secretary*

NEW YORK

The May meeting of the New York Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held on May 14, 1934, at the College of Pharmacy Columbia University There were about forty five members and guests present

The meeting was called to order by President Charles W Ballard and the minutes of the previous meeting were read by the secretary and approved

Treasurer Currens reported the treasury with a balance on hand May 14th

Dr Bilhuber reported for the Audit Committee

Chairman Lehman, of the Committee on Education and Legislation spoke briefly on pharmaceutical legislation which was being supported by the State Association at Albany Unfortunately, changes had been made in Bill 417 regulating the sale of preparations containing poisonous or deleterious substances, which materially weakened the measure

Legislation was being encouraged which would make it a violation for a store without a pharmacy license to have on hand stocks of Tincture of Iodine for sale This was aimed especially at the so called Cosmetic Shops

President Ballard called upon Dr H H Schaefer to report on the A PH A Convention in Washington He stated that the attendance was as good as could be expected under the circumstances He called particular attention to the fact that the Remington Medal was presented to Sir Henry Wellcome at the banquet in the Shoreham Hotel on Tuesday night, May 8th

Dr Fischelis presided at the presentation On the forenoon of May 9th, the official dedication ceremonies were held for the new pharmacy headquarters building The exercises were held in front of the building and a very large group was present The services were very inspiring

President Ballard called attention to the fact that Dr Kassner[1] was seriously ill with pneumonia

The business part of the meeting having been completed, President Ballard introduced the speaker for the evening, Dr Johannes S Buck, who spoke on the Chemistry of Papaverine The speaker opened his address by discussing the occurrence of the alkaloid in the opium poppy Papaverine appears in the white poppy after 36 days and is present in opium to the amount of 0 5% to 1%, averaging generally about 0 5% There are about 20 other alkaloids present in opium The separation of the alkaloids is a long and tedious process of considerable expense, the method was outlined by the speaker He also pointed out that papaverine is usually separated out along with narcotine Papaverine was discovered by Merck in 1848 who reported its correct composition

Since Professor Diehl at Minnesota suggested the use of papaverine and codeine in the treatment of the common cold, very considerable interest has been aroused concerning the possibilities of a practical synthesis The success of the mixture in treating colds has made it necessary to investigate the possibility of synthesis since it is present in such small amounts in opium that the supply is negligible when compared with what the demand might easily become Since codeine is readily prepared from morphine a sufficient supply is available, however, since both ingredients are narcotics Dr Buck felt that the remedy would never become popular

The speaker discussed the early work done by Goldschmidt on the structure of papaverine This investigator worked for twenty years on the problem but did not solve it During this part of his address Dr Buck described the general process for determining the structure of an alkaloid by studying its degradation products formed by oxidation with potassium permanganate He described several processes for the synthesis of the alkaloid which have been employed experimentally The possibility of the commercial application of these was also considered Difficulties in manufacturing the necessary intermediates have thus far proved to be the greatest problem in a successful scheme Research on this part of the problem is being diligently pursued and it is hoped that a practical method giving good yields at reasonable costs will yet be developed

Considerable interest in the subject was shown by the audience in the numerous questions asked the speaker at the close of his address Dr Buck was voted a rising vote of thanks

RUDOLF O HAUCK *Secretary*

THE COOPERATION OF THE HOSPITAL PHARMACIST AND STAFF *

BY WILLIAM GRAY [1]

Pharmacy is an indispensable branch of medicine and the pharmacist who renders good service will receive the consideration and respect from his fellows that he deserves

The work of the hospital pharmacist differs materially from that of the pharmacist in the retail drug store, to the hospital pharmacist the most important part of his work is service while the pharmacist in a drug store is more interested in sales The hospital pharmacist must keep in close touch with the advances in professional pharmacy and be acquainted with the new remedies as they come into use, as well as with pharmaceutical progress in general He must always stand ready to coöperate efficiently with the medical staff and the administrative staff of the hospital

When new drugs appear on the market, the medical staff is usually in a position to know, or to desire to know whether the proposed remedy is of real value or meets a need in a new way, or whether it is just one more trade variation of a standard remedy or an old one dressed up in

[1] Deceased, see page 524, May issue of the JOURNAL

* Chicago Branch, A PH A

[1] Pharmacist to Presbyterian Hospital Chicago, Ill

new clothes The pharmacist should be in a position to furnish information on these points and should gladly assist in getting the necessary information to the staff In this way, needless loss of time to the staff and expense to the patients and the hospital can be avoided He must be able to suggest officially recognized and tested medicines as against more expensive proprietary or branded products This necessitates having at hand the most complete information available in such standards as the U S P , the N F and N N R He should suggest and be prepared to demonstrate to the individual members of the medical staff that although there are many valuable non competitive proprietary articles, many of these are the same in composition as official U S P and N F preparations We define as proprietary those articles with copyrighted names Attention should be called to the fact that there is a loss to the hospital when different brands of the same drug are prescribed, as this necessitates duplication of the drug stock and a heavier investment in the drug room and that unless the prescriber has a particular reason for doing so, no brand names should be specified

COÖPERATION WITH THE ADMINISTRATIVE STAFF

In the Presbyterian Hospital the pharmacy supplies about twenty units We have no dispensary or out-patient departments, these being taken care of by the Central Free Dispensary and Rush Medical College Our system is therefore designed to supply purely hospital needs

Each unit sends in a daily written order and the order is returned with the supplies to the unit With the exception of a few special prescriptions, there are no individual prescriptions put up in the pharmacy The individual doses prescribed by the physicians are taken care of by the nurses under the supervision of the head nurse on the floor

The dispensing of individual doses saves materials, it saves the time of the physicians and internes, it saves time in reaching the patient, and it makes for lessened demands on the time of the pharmacist, as such doses can be prepared in advance when he is not otherwise busy These stocks of standard drugs are kept, readily available, in the medicine cabinets on the hospital floors

Every conceivable dosage of medicine is prepared for use on the floors in such form that there is practically no danger of overdosage The nurse is not allowed to divide or multiply doses, that is to say, should the nurse have an order for 1/50 grain she must not use two 1/100 grain doses If 1/50 grain is not in stock the interne has to rewrite the order to read two 1/100 grains and by the same token she must not divide 1/50 grain to get 1/100 grain In the latter case the pharmacist must do the dividing This rule applies principally to ready made tablets No verbal orders for medicines are accepted by the nurses except in cases of emergency

All single doses of capsules pills and suppositories are safe that is, not above a maximum dose, and therefore taking the human equation into consideration should a wrong item be given it would not be a lethal dose

The only exception to this is in the operating room where mercuric chloride tablets are kept and used in making solutions for antiseptic purposes The mercuric chloride solutions used in the other units are prepared by the pharmacist, who with a few exceptions prepares all solutions used in the hospital We feel safe in saying that this system of handling drugs will safeguard all concerned

The need for keeping the expense of hospitalization as low as is compatible with efficient service is now widely recognized This need will be served if the prescriber can be induced to use official titles instead of trade marked names These names are listed in N N R a book that is in the hands of most prescribers

If we stocked all of the many brands of serums vaccines ergosterols cod liver oils malt extracts and compounds of the latter, we would tie up a lot of money that might be put to better advantage When a better product is sold under a trade name the specification of that particular brand may be warranted, but many of the trade marked brands comply only with the fixed minimum standards of the U S P

While the cost of ingredients is often passed on to the patient and therefore does not immediately concern the hospital both physicians and laymen are taking notice of the increasing cost of illness, and whatever is done to lessen the cost without lessening the efficacy of the treatment will be of direct benefit to the patient and indirectly will benefit the physician and the hospital

Another service that the hospital pharmacist may well be called on to give is the teaching of the rudiments of drugs, weights and measures to the nurses in training

At the Presbyterian Hospital we deal only with the practical side of such training We think a few lectures, in the time allotted would have little, if any, value, while a practical course has proved not only valuable to the nurse, but has the effect of safeguarding the patient as well as the hospital

The course is given to the student nurse only, and is of one month's duration The work is classified and checked All work is supervised, whether it be only filling small containers from larger ones, making dilute alcoholic and antiseptic solutions mouth washes, mixing, dividing and folding powders, filling capsules, making suppositories or preparing ointments

The first week is taken up with filling containers with simple items such as Boric Acid Magnesium Sulphate, etc , the second week in preparing medicinal solutions and in mixing powders This is where the nurses come into close contact with all sorts of weights and measures The last part of the training is taken up with preparing ointments, suppositories and miscellaneous items requiring more experience than is necessary in the early stage

Student nurses of the present day are exceptionally well qualified from the standpoint of previous education Many of them have taken or are taking college degrees All of them know the tables of weights and measures, and all have learned to translate percentages and decimals into common fractions and *vice versa* They have learned these things, however, in the way that most people have learned them—as abstract exercises, unconnected with actual practise The principal objective of their training in the drug room is to correlate this theoretical knowledge of weights and measures with the physical size of the various units

We do not give a final examination but give a review after the pupils have left the drug room The principal feature of the review is a quiz on pharmaceutical arithmetic, to satisfy us that the future nurse has developed a sense of proportion and has a thorough knowledge of weights and measures

As may be surmised, it is not possible to follow any set plan or course of instruction The demands on the Pharmacy from day to day or from hour to hour determine the work done by the pupils We believe, however, that the educational value of their work is all the greater since the purpose is not to pour into the minds of the pupils as large a mass of information as possible, but to vitalize what they do know

Finally, the successful hospital pharmacist is an enthusiast who loves his work and, no matter how exacting it may be, finds it interesting at all times

---

ARMY HOSPITALS TO BE STANDARD

Maj Gen Robert U Patterson, surgeon general of the Army, has taken steps further to improve and standardize the service of Army station and general hospitals, so they will be maintained on a standard well above the minimum required by the American College of Surgeons

WARNING ON POISON LABELS

The New York Pharmacist states "Section 122 of the Sanitary Code provides that all bottles or boxes containing poison shall bear a label upon which shall be conspicuously printed or stenciled in red ink in plain legible characters the name of the substance or article, the word 'POISON,' the name and place of business of the seller, or donor, a skull and crossbones, the word 'CAUTION' the maximum dose of the poison and the antidote therefor

The provisions of this section do not apply to medicinal compounds containing poisonous drugs in therapeutic doses when the maximum dose of such preparation is marked upon the container

'A Medicines of all types are not merchandise and therefore require the adoption of a policy, looking to the control of their sale

'B If a pharmacist wants to open a pharmacy, the State Board should have the right to approve or disapprove the project

"C The State Board should have the right to decide what products, preparations, etc , should be sold in registered pharmacies only

D By the same token, the State Board should have the right to license manufacturers

"E Any person or concern in the State, manufacturing any medicinal item, including cosmetics, should be required first to obtain a license to do so from the State Board "

THE SECTIONS OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

THE ABSTRACTS OF THE MINUTES OF THE SESSIONS HELD IN WASHINGTON, MAY 9 TO MAY 12, 1934

(See also brief summary in reports, Final Session House of Delegates, printed in the June JOURNAL and titles of papers will be given in the minutes, discussions, if any, will be printed when paper is published if not included in the minutes The Editor will be thankful for corrections of errors)

Abstracts of a large number of papers were distributed at the meetings, some have been printed Abstracts of some papers are still obtainable by addressing the JOURNAL A PH A , *2215 Constitution Ave , Washington, D C*

SCIENTIFIC SECTION

The First Session of the Scientific Section was called to order by Chairman F E Bibbins May 9th, at 2 15 The Chairman, in the absence of the Vice Chairman, requested Secretary L W Rowe to act as Chairman while he read his address The Chairman's Address follows

THE CHAIRMAN'S ADDRESS

BY F E BIBBINS

Members of the Scientific Section and Guests

By a custom followed for so many years that it has practically become a law, it is expected that the Chairman will open the session of the Scientific Section with the Chairman's Address "

It is a pleasure to welcome you who have found time to be present at our session, in spite of the many attractions and places of interest in this our Capital which are also calling you I wish also to extend our thanks to those who have contributed papers and thus made our program possible The meeting this year, coming so early with practically no advance notice, made it difficult for many of our members to finish their investigations and complete their papers in time for this early meeting

The Chairman's Address in times past has consisted of a brief review of the progress and developments in pharmaceutical research A glance at the list of papers on our program indicates that this review is unnecessary this year I think that we are to be congratulated upon the variety of papers, representing so many different pharmaceutical interests

At last year's session there was considerable discussion concerning the work and policy of the *Board of Review of Papers* This board has been in existence for several years, but for some reason or other they were seldom consulted or their advice sought regarding the publication of papers This year I appointed a committee of seven, with our Secretary as Chairman The personnel of this committee was selected so as to include men interested in Pharmacology, Chemistry, Pharmacy and Pharmacognosy With this representation we felt that we would have on the committee some one qualified to pass on papers relating to all the different subjects presented to our section It was necessary early in the year to pass a few papers for publication without referring them to the Board of Review of Papers in order to give Editor Eberle copy for the JOURNAL The balance of the papers was referred to the individual member of the committee best qualified for review before publication The committee report to be received later in these sessions will tell us more of their activity

The *Committee on Monographs* was continued with its original personnel so that there would be no interruption in their work of finishing the monograph on Aconite This was a formidable undertaking, much larger than the committee realized when they first took over the work This monograph is practically finished The question to consider now is How and where can it be published? Your Chairman has no recommendations to make but thinks we should all give this question some serious consideration

Committee on Ebert Prize —I wonder how many of you have given any thought to the operations of this committee and the difficulties under which they work We look forward each year to this report naming the author selected to receive this prize, little realizing the sacrifice that it

has meant on the part of some of the members of our committee to make this selection I was very much surprised about ten days ago to learn that this committee did not receive promptly all of the papers presented to the Scientific Section for consideration I found that the only papers which they can review between our annual meetings are those which Editor Eberle has been successful in publishing in the JOURNAL, then when the committee gathers for the annual meeting the real work begins The Editor turns over the manuscripts of the unpublished papers, some of which are very lengthy, and the committee with their limited time, has to consider both the published and unpublished papers This requires a lot of effort and hard work, and it also takes a lot of time I am sure that some of the committees on the Ebert Prize have worked far into the night on this job This is certainly unfair to the committee, to ask them to consider so many papers in so limited a time and may also be unfair to the authors because, without sufficient time for consideration a paper's value may not be recognized

To correct this condition, I believe the papers should be available to the committee soon after the annual meeting In order that this may be done I wish to recommend the following change in our By Laws Chapter IX, Article VIII reads as follows

'Disposal of Papers and Reports All papers and reports presented to the section become the property of the ASSOCIATION and shall be forwarded to the Editor of the JOURNAL immediately following the annual meeting by the Secretary of the Section "

I wish to recommend that it be changed to read as follows

"*Disposal of Papers and Reports* All papers which shall be in duplicate, and reports presented to the Section become the property of the ASSOCIATION, one copy of the papers and the reports shall be forwarded to the Editor of the JOURNAL immediately following the annual meeting of the Section, the other copy of the papers shall be submitted to the Committee on Ebert Prize by the Secretary of the Section "

At this time I wish to express my appreciation of the honor which you have conferred upon me by making me your Chairman during the past year I also want to acknowledge the splendid cooperation of the other officers and committees I wish to extend particular credit to our Secretary because it is largely through his planning and untiring effort that many of the papers on this year's program were obtained

I trust that we will have a pleasant and instructive session during our meeting here

On motion by James C Munch and seconded by E E Swanson, the Chairman's Address was referred to a committee Acting Chairman Rowe appointed as a Committee *Chairman* Glenn L Jenkins H W Youngken and James C Munch

Editor Eberle brought greetings and extended wishes for a successful meeting

The Secretary's Report was called for

Secretary Rowe reported verbally that the preliminary call for papers for the 1934 program of the Scientific Section was printed in the February number of the JOURNAL A PH A This was followed on March 21st by a notice to 270 members of the section The report was good considering the short time available, 75 titles and 70 abstracts were received for the program He stated that considerable correspondence was necessary and the assistance of the authors of papers as well as of the Chairman of the Section was very helpful and appreciated

The next order of business was Reports of Committees

Chairman E E Swanson of the Committee on Monographs requested that the report be deferred to the Joint Session It was so ordered

Chairman L W Rowe reported for the Board of Review of Papers He stated that seven members of the committee had cooperated in the examination of about 65 papers which were presented at the Madison meeting This has involved considerable correspondence and the fine spirit of cooperation evidenced by Editor Eberle and by other members of the committee is very gratefully appreciated by the Chairman The report was received

Chairman J C Krantz, Jr reporting for the Committee to cooperate with the National Conference on Pharmaceutical Research stated that there would be no report

Chairman Bibbins appointed the following on the Committee on Nominations *Chairman,* E E Swanson, F F Berg Fred V Lofgren

Chairman Bibbins said that before proceeding with the reading of papers it might be

well to state that if any changes in the By-Laws were made it would be necessary to bring in the report at the next session

The reading of papers was proceeded with as follows

"The Effect of Hydrogen Peroxide and Some Oxygenated Terpenes upon Ascaris Lumbricoides," by L W Butz and W A LaLande, Jr (No discussion)

"A New Method for Determining Acetyl Salicylic Acid in the Presence of Other Medicinal Products," by R M Hitchens The author supplemented the paper at considerable length

"Drugs and Bugs," by Ernst T Stuhr The paper was read by Adolph Ziefle, also 'Some Pharmacological Properties of Umbellulone" (No discussion)

Miss Nellie Wakeman was introduced by Dr Edward Kremers and presented a paper "A Chemical Examination of the Entire Plant of Celastrus Scandens" (No discussion)

Edward Kremers presented the following papers in abstract

'Analysis of Reduction Products of Catnip Lactone," and "Arsenoso Addition Products of Unsaturated Hydrocarbons" (No discussion)

Dr David I Macht presented the following papers 'A Pharmacological Note on Phyto lacca," and "Penetration of Volatile Oils and of Fixed Oils and Fats through the Intact Skin' The author introduced his subjects in the following

"I present two communications before this meeting with a purpose I understand that it will be the primary aim of the Institute of Pharmacy, which is to be established here in the near future, to investigate pharmacopœial and other officially recognized drugs I have recently been working on problems illustrating two different phases of such investigation One may be called a *de*structive problem because it reveals the uselessness of a preparation still officially recognized in the U S P and National Formulary The other research concerns a *con*structive problem and deals with the pharmacology of a large number of drugs officially recognized in the U S P but regarding the physiological action of which we know very little

'The first research deals with the pharmacology of *Phytolacca* This drug has been recommended by the old authorities for a large variety of conditions, yet there is practically no laboratory support for its therapeutic usefulness nor is there any strong clinical evidence in its favor I have been experimenting with a fluidextract of *Phytolacca* Its pharmacological action was studied by direct application to the mucous membranes, by injection—subcutaneously, intramuscularly and intravenously—into higher animals, and by various other methods, which will be described in a separate paper It was found that *Phytolacca* is very irritating to the mucous membranes This drug was also discovered to be very toxic on injection in mice, rats, guinea pigs and cats When administered to cats under ether anesthesia, *Phytolacca* was found to be very depressant for both circulation and respiration of these animals Additional studies made on kidney function and liver function revealed that neither of these was markedly affected by oral administration of the drug No other pharmacological finding, however, supported any of the therapeutic uses to which *Phytolacca* has been applied and the entire evidence indicated that this drug is absolutely worthless and might well be discarded from the National For mulary and Pharmacopœia of the United States

'The second investigation, of more constructive and profitable character, deals with the absorption of the fixed and volatile oils and fats through the intact skin I have undertaken this study because we have been interested in finding a vehicle which will promote the absorption of effective medicaments when applied to the skin The study was begun with a comparison of ointments prepared from vaseline, lanolin, lard, vanishing cream and falba base Ointments made with these vehicles contained a number of powerful pharmacological agents, but it was found that none of them promoted much absorption through the intact skin Contrary to the prevalent belief, there is little difference between lanolin and vaseline in effectiveness Of the fixed oils or fats which we studied lard seemed to promote absorption more than the other fats

"It then occurred to me that various volatile oils might perhaps be better carriers for medi caments than the ineffective fixed oils and fats This consideration was certainly supported by historical evidence because the ancients used volatile oils extensively in embalming and pre serving as well as in treatment of various skin affections I have therefore begun a study of a series of such officially recognized volatile oils as oil of cloves oil of wintergreen oil of lemon oil of orange, oil of sassafras oil of cinnamon etc It was found that these oils when applied

alone to the skin of such small animals as mice, were rapidly absorbed, produced toxic symptoms and usually led to death, if a sufficient amount was administered

"The next step was to incorporate a powerful pharmacological agent in some of these oils In this way it was found that absorption of certain drugs through the skin could be facilitated by dissolving them in the volatile oils The investigation is still in progress It is planned to study not only the volatile oils themselves but their various chemical constituents, and it is hoped that in this way some effective vehicle for carrying medicaments through the intact skin may be discovered "

Edward Kremers commented, in part, that in their physiological action, terpenes may act not as hydrocarbons as they are commonly regarded but as unstable peroxides into which they are readily converted in part by atmospheric oxygen

The next paper read was The Stabilization of Syrup of Ferrous Iodide, U S P X," by William J Husa and Lyell J Klotz It was discussed by Arthur Osol, H V Arny, H K Mulford and John C Krantz, Jr , and the author

Replying to Dr Osol, the author explained the method of determining the hydrolytic constants of ferrous iodide The effect of sunlight on color changes in the syrup was discussed by Dr Arny In reply to a question by Dr Krantz as to whether the preservative effect might be a function of the molar concentration of the dextrose or other sugar, Dr Husa pointed out that in the syrups containing hypophosphorous acid, free iodine could not appear, hence, dextrose was not to be considered as a preservative but merely as a substance giving the solution the properties of sweetness and viscosity characteristic of syrups H K Mulford asked whether the effect of ultraviolet light had been studied In response, Dr Husa stated that ultraviolet light does not hasten the decomposition of hydriodic acid, but that all parts of the visible spectrum do

The next paper, 'Drug Extraction I A Study of Various Menstrua from the Standpoint of Swelling Effects, Penetration and Extraction " by William J Husa and Louis Magid was presented by Dr Husa It was discussed by Messrs M W Quimby, J C Krantz, Jr , H V Arny and the author Mr Quimby asked whether the effect of the age of the vegetable tissues on the swelling properties had been considered, to which the author replied in the affirmative In regard to the results on extraction of drug powders of various degrees of fineness, Dr Krantz asked whether it was planned to work with powders of colloidal size Dr Husa replied that the work had been carried out on Nos 20, 40, 60 and 80 powders of the U S P and that when the fineness of powder reached a certain stage there was a decrease in efficiency of extraction due to adsorption of constituents by the greatly increased surface of the finer particles Dr H V Arny stated that the section had just listened to a historic paper Speaking as Chairman of the A PH A Committee on Research, Dr Arny pointed out that the research grants to Dr Husa marked a departure from former policies in that the awards were for specific research on drug extraction which would take more than one year for completion He pointed out the valuable services of W L Scoville in urging that a truly scientific study of drug extraction should be sponsored by the A PH A and in making plans for the scope of the work Dr Arny stated that the drug extraction research had been in progress for two years and that he hoped the grant would be made to Dr Husa for another year In conclusion Dr Arny said that he wished all of those present could have followed the progress of the work month by month as given in the detailed monthly reports submitted by Dr Husa to the sub-committee of five appointed to keep in touch with the work

The next paper, Investigation of Gleditschia Triacanthos," was read by Y T Oester

In presenting the next paper on 'Further Studies on Psyllium," the Chairman stated that other papers by the same author had appeared in the JOURNAL OF THE A PH A (No discussion)

The next paper entitled, ' Chemical Examination of Urographic Preparations," was read by George W Collins (No discussion)

The following papers were read A Continuous Reading Titration Apparatus," by L H Baldinger, and "Is Iris Versicolor N F V Adulterated?" by George M Hocking (No discussion)

The First Session of the Scientific Section was then adjourned

SECOND SESSION

The Second Session of the Scientific Section was convened by Chairman F E Bibbins May 10th, at 9 30 A M The reading of papers was continued

The first paper, Some Observations on the Stability of Quinine Sulphate during Storage," by L E Warren, was read

The three following papers were read by Horatio Wales The Water of Crystallization of Quinine Sulphate,' The Water of Crystallization of Codeine Phosphate," The Water of Crystallization of Emetine Hydrochloride " These were discussed by the author, John C Krantz, Jr and L E Warren

The following papers were read Some Considerations of Silver Picrate ' by John C Bird and Alfred Barol (No discussion)

An illustrated paper The Metabolism of Dulcitol and Dulcitan " by C Jelleff Carr and John C Krantz, Jr

The Effect of Isomannide on the Liver-Glycogen of the White Rat " by C Jelleff Carr and John C Krantz, Jr , was read by William Evans

C Jelleff Carr referred to work reported at the Madison meeting on the metabolism of mannitol and mannitan The studies have been continued using dulcitol and dulcitan The compounds are interesting from the standpoint of their metabolism and because of their relation ship to the widely used and important substances, glucose and mannitol In explaining the first slide the author stated that dulcitol is an interesting compound, apparently no one has investi gated it biologically, one of the reasons may be its cost It is used in bacteriological work The author explained the method employed in its preparation and the use they have made of it

William Evans said that no report on the metabolism of isomannide had been found in literature it was found that mannitol increased the blood sugar but did not affect the respiratory quotient Mannitan showed increase in the respiratory quotient but no rise in blood sugar Berthelet's method was used to separate the isomannide from mannitol

In feeding the rats a mixture of cacao butter and isomannide was used The liver glycogen obtained from these determinations indicates that the per cent was 41 compared with the normal In the experiments in which isomannide was administered by the stomach tube, rats were fasted for 48 hours and then given one Gm of isomannide and in these determinations the average per cent was 0 33 compared with 0 14 in the normal In feeding experiments the tissue liver glycogen was 700 per cent, compared with 1200 per cent in the normal, indicating a relationship The respira tory quotients obtained were slightly lower than those of fasting animals, administering 4 cc of a 50 per cent solution of isomannide there was a slight lowering of the respiratory quotient and somewhat less oxygen consumption Experiments showed that isomannide indicates that it is not a normal food in the body Toxicity experiments showed no toxic effects—the amount administered per 100 Gm of rat was 1 Gm , 1 5 Gm , 1 5 Gm and 5 doses of 2 Gm Further remarks are deferred to the publication of the papers

The next paper The Chemical Assay of Adonis, Convallaria and Apocynum," was presented by James C Munch

James C Munch presented 'Saliva Tests I Morphine " The paper was discussed by the author, Dr Penniman, and F A Upsher Smith (Discussion will accompany the paper)

The next paper presented was 'A Study of the Physical and Chemical Properties of a Number of Specimens of Calomel of American and European Manufacture " by Charles H LaWall and J W E Harrisson (No discussion)

An Experimental Study of the Assay of Citrine Ointment," by Thomas G Wright was next in order (No discussion)

The next paper The Active Constituents of Ergot A Pharmacological and Chemical Study," by Marvin R Thompson, was presented

In discussing the paper by M R Thompson on The Active Constituents of Ergot," John C Krantz, Jr , inquired whether the drug portion in the test-tube shown during the reading of the paper was devoid of all activity The author replied that it was devoid of all significant activity

E E Swanson inquired whether the liquid was an extraction of the new principle The author replied that it was, that every possible type of extract except that obtained by the use of petroleum ether changed the new alkaloid He stated that through the kindness of Dr A K

Hoff of Johns Hopkins University clinical confirmation was given of the pharmacological results that had been obtained His observations have been confirmed upon humans by the use of a technique similar to that employed by Moir in England

L W Rowe inquired relative to the stability of the new principle The author replied that he could say nothing very definite but observations indicate that the alkaloid is quite stable From observations upon crude extracts it seems that the prompt type of activity provides in these preparations for a much longer period than the whole individual delayed type of activity from ergotoxine and ergotamine

James C Munch inquired whether this new product affects the coxcomb method of assay The author replied that the currently accepted bioassay methods should be chosen purely with respect to accuracy and dependability, since the new alkaloid as well as ergotoxine or ergotamine is measured by the currently accepted methods including the colorimetric method of Smith None of these methods can distinguish the new from the old type of alkaloid It is for that reason that he was led to the conclusion some years ago that ergotoxine or ergotamine was completely representative of the drug itself The currently accepted methods can be made to serve as a means of insuring standardized amounts of oxytocic activity in crude ergot extracts

Dr M I Smith of the U S Public Health Service said that Dr Thompson in replying to Dr Munch stated that the new principle also gives the typical coxcomb reaction and epinephrine reversal reaction the same way as the old ergotoxine or ergotamine If that statement is correct it should be possible to have some means of evaluating the extracts It seems to him that there is now quite a little work which has been published indicating that ergot activity is measured by the well known pharmacological methods referring especially to the work of Clark some ten years ago He wondered if these apparent discrepancies could be reconciled

The author replied that one is not justified in assuming that aqueous extracts are all free from alkaloid If the figures are examined that have been published in the literature it will be found that especially with the coxcomb method the extracts are usually stated to be less than 25% of official potency requirements He had found that all reasonably good aqueous preparations of ergot similar to those used by Moir on humans had taken the amount of alkaloid which would provide 0 2 to 3 2 mg in doses of the size used by Moir The new alkaloid shows intense activity upon the human in a dose of one mg and therefore there is no real conflict of figures in an accurately determined alkaloid equivalent in these preparations

The next order of business was the report of the Committee on the Chairman's Address Secretary L W Rowe presided Glenn L Jenkins reported for the Committee, as follows

Our Committee highly commends the Chairman upon his excellent address We recommend that the work of the Committee on Monographs be continued We further recommend that the Scientific Section request a grant of a sum of money to cover in part or in whole the cost of printing the monograph on aconite from the Committee on Research of the AMERICAN PHARMACEUTICAL ASSOCIATION, if it is necessary

We approve the recommendation of the Chairman that Chapter 9, Article VIII of our By Laws be amended to read as follows All papers, which shall be in duplicate, and reports presented to the Section become the property of the ASSOCIATION, one copy of the papers and of the reports shall be forwarded to the Editor of the JOURNAL immediately following the annual meeting of the Section, the other copy of the papers shall be submitted to the Chairman of the Committee on Ebert Prize by the Secretary of the Section ' "

On motion the report was adopted

The reading of papers was continued as follows

The Bioassay of Squill Preparations ' by Harry Rosen

The Guinea Pig as an Hematopoietic Test Animal (A Preliminary Report)," by J W Landsberg and Marvin R Thompson (No discussion)

'Deterioration and Stabilization of Aconite Preparations ' by William B Baker

James C Munch was surprised to learn that aconite deteriorates so rapidly He had made considerable commercial experiments with it He wanted to know something about the storage conditions The author replied that on account of the shortness of time it was impossible to go into details, but the identification of aconite was made At the present time the results presented are mostly a confirmation of the work of E E Swanson The surroundings in which

the bottles were kept were the average room conditions as far as light and temperature conditions are concerned

E E Swanson stated that since the recent studies of aconite he had come to the conclusion that there should be a control for the standardization of aconite For example, the results in different laboratories and the animal variation is quite striking and he, therefore, thought that there should be a control of a standard

M R Thompson stated that the standard aconitine was used throughout this study as a control Standard aconitine prepared by recrystallization from alcohol and selected *in vacuo* had been used over a period of about three years

The following papers were read, on which there was no discussion The Rectal Absorption of Digitalis in Cats," by W Arthur Purdum, "The Bioassay of the Anterior Pituitary Like Sex Hormone," by L W Rowe A Simond and W O Nelson, and "Alkaloid Reagents VII Thallium," by James C Munch and Justus C Ward

The Second Session of the Scientific Section was then adjourned

THIRD SESSION

The Third Session of the Scientific Section of the AMERICAN PHARMACEUTICAL ASSOCIATION was convened on May 11th, at 2 15 P M by Chairman F E Bibbins

The following paper was read and discussed "The Comparative Antiseptic Action of Ointments and Related Products " by Arthur H Bryan

The following papers were read by title The Determination of Alcohol in Chloroform " by George D Beal and Chester R Szalkowski ' The Specific Gravity of Oil of Theobroma " by George D Beal and Chester R Szalkowski The Detection of Rosin in Balsams " by George D Beal and Chester R Szalkowski "The Gravimetric Determination of Camphor," by George D Beal and Chester R Szalkowski

The following papers were read (No discussion) A Note on the Arsenic Determination for Reduced Iron," by Margarethe Oakley and John C Krantz, Jr 'A Note on the Assay of Reduced Iron," by Margarethe Oakley and John C Krantz, Jr

Drug Extraction II The Effect of Fineness of Powder and of Variation in Solvents on the Percolation of Belladonna Root," by W J Husa and C L Huyck

Drug Extraction III The Function of Preliminary Maceration in Relation to the Percolation of Belladonna Root " by W J Husa and S B Yates

Drug Extraction IV The Effect of Variation in Solvents on the Extraction of Jalap," by W J Husa and Paul Fehder

(The foregoing papers were discussed, the discussions will accompany the publication of them)

The following papers were read and discussed (Discussions will accompany the papers) Pharmaceutical Applications of a Quantitative Barbiturate Test," by James M Dille 'Insulin Studies I The Effect of Insulin on the Blood Sugar of Mice," by James C Munch and Amelia M Ponce 'Pharmacognosy and Pharmacology of Ouari Nuts, ' by William J Stoneback, Harry J Pratt and James C Munch

The following papers were read by title Brom Alkyl Derivatives of Salicylic Acid ' by E Moness and W G Christiansen "An Attempt to Ketonize Ergosterol," by E Moness and W G Christiansen Sulfide Analogues of Azo Dyes Having Bactericidal Properties," W Braker and W G Christiansen ' Barbituric Acids and Structural Analogue," by W Braker T B Grave and W G Christiansen

The following papers were read and discussed The Potentiation of the Action of Strychnine by the Use of Various Drugs," by D A Spencer, J C Ward and F E Garlough ' The Pharmacology of Galinsoga—a Series of Micro Respirometer Studies," by Martin A Yavorsky and Edward C Reif U S P Standard for Digitalis," by F A Upsher Smith ' A Comparative Study of Absorbability of Seven Calcium Compounds " by A Richard Bliss, Jr and Robert W Morrison The Physiological Action of Synthetic *vs* Natural Camphor " by B V Christensen and H J Lynch 'Laboratory Notes on the Stabilization of Fluid Extract of Ergot by Elmer H Stuart and Francis E Bibbins 'Free Alkalinity in Glass," by L F Gabel

The following papers were read by title 'The Effect of Altitude on the Action of Strych

nine," by A W Moore and J C Ward "The Preparation of Chrysophanic Acid from Chrysarobin," by John H Gardner "A Note on the U S P Monograph on Chrysarobin," by John H Gardner 'Characteristic Tests and General Group Reactions for a Number of the Better Known Hypnotic Drugs," by Charles W Bauer

The Committee on Nominations reported, naming the following nominees *Chairman*, E V Lynn, *First Vice Chairman*, H M Burlage, *Second Vice-Chairman*, R E Schoetzow, *Secretary*, F E Bibbins, *Delegate to the House of Delegates* L W Rowe

James C Munch presided, Chairman E E Swanson presented the report On motion of John C Krantz, Jr , and a second, the chairman of the Committee on Nominations was directed to cast a unanimous ballot for the nominees

A vote of thanks was given the retiring secretary, L W Rowe, for his efficient services during the past six years

Under Unfinished Business the amendment embodied in the President's address, relating to Chapter IX, Article VIII of the Scientific Section, was re-read, on motion by F F Berg and a second the amendment was adopted

Frederick Greenbaum made a number of suggestions relative to arrangement of papers and the program He was of the opinion that 10 minutes should be allowed for presentation of papers, that only members should present papers and their connections should be given on the back of the papers presented He favored more discussion of papers, papers submitted by titles should be placed at the end of the program

Chairman Bibbins thanked Dr Greenbaum for his suggestions and stated that a number of them had been under consideration, the attendance varies from year to year and some are not familiar with the order of program

John C Krantz thought the suggestions made should be sent to the Committee on Review of Papers He also made a motion to the effect that the Committee on Review of Papers be given the power to suggest to the Editor of the JOURNAL the form according to which all scientific articles published in the JOURNAL should be in accordance and when this form has been selected that it be printed on the lower half of the inside of the second cover page of the JOURNAL He was of the opinion that there should be a uniform style in the JOURNAL

The Editor stated he would be glad to have the suggestions made and to coöperate with the Committee

Chairman Bibbins expressed appreciation of serving and thanked the members for co-operation

The officers were duly installed and they thanked the members for the honors conferred

(The Editor will confer with the Secretary relative to papers that may have been omitted, if any)

The meeting was, on motion duly made and seconded, adjourned

JOINT SESSION SCIENTIFIC SECTION AND SECTION ON PRACTICAL PHARMACY AND DISPENSING

The Joint Session of the Scientific Section and the Section on Practical Pharmacy and Dispensing was called to order by Chairman of the Scientific Section, May 10th at 8 30 P M Chairman Marvin J Andrews, of the Section on Practical Pharmacy and Dispensing, presided as Co Chairman

The first report called for was on The United States Pharmacopœia and presented by Chairman E Fullerton Cook (To be printed in these minutes or under Committee Reports) Motion was made that authority be granted to release the report and thereafter by a motion, duly seconded, it was received

The report of the Committee on National Formulary was called for (It is printed in the May JOURNAL, A PH A , page 513)

E Fullerton Cook said that the revision work on the National Formulary had gone aggressively forward It will be a book in which pharmacists may have pride The report was received

The report on the Pharmaceutical Recipe Book J Leon Lascoff, Chairman, was read and accepted (It is printed in the May JOURNAL pages 508–510)

The next item of the program was the report of the Committee on Glass Standardization The report was read by Ralph E Terry, it covers the third and fourth years of research on the deterioration of chemicals and pharmaceuticals when stored in colored glass containers (It is published in this issue of the JOURNAL under the title Deterioration of Certain Medica ments under the Influence of Light," by H V Arny, A Taub and R H Blythe) The report was accepted

The report of the Committee on Ebert Prize was read by Secretary Rowe and accepted It follows

REPORT OF THE COMMITTEE ON THE EBERT PRIZE

Mr Chairman and Members of the Scientific Section of the American Pharmaceutical Association

One member of the Committee on the Ebert Prize Award is not in attendance at the meeting of the ASSOCIATION and has not responded to the request of the Chairman for a written report on the evaluation of the papers read at the Scientific Section of the meeting at Madison The Chairman of the Scientific Section therefore, appointed another member of the ASSOCIATION to serve on the Committee of Award

All papers read at the Madison meeting of the Scientific Section both published and unpublished, have been considered It is the unanimous opinion of the Committee that no paper is of such outstanding merit as to be worthy of the award of the Ebert Prize Therefore the Committee recommends that the award be not made this year

(Signed) F F BERG
E E SWANSON,
L E WARREN *Chairman*

The report of the Committee on Monographs was read It follows

REPORT OF THE COMMITTEE ON MONOGRAPHS

After several years of careful work the monograph on aconite is nearing completion This monograph in book form will represent more than five hundred pages, counting of chapters on the botany, pharmacognosy, chemistry, pharmacology toxicology and clinical study of aconite The monograph consists of numerous illustrations of aconite plants roots and histological figures

Following the final corrections, vitamins and compiling of chapters the monograph on aconite will be turned over to the Chairman of the Scientific Section

The committee is now giving thought and careful consideration on the next subject for monograph study

(Signed) HEBER W YOUNGKEN,
JAMES C MUNCH
WILLIAM J HUSA
C J ZUFALL
E E SWANSON, *Chairman*

E Fullerton Cook moved the acceptance of the report with appreciation of the work duly seconded and carried

The following papers were read and discussed Determination of the Reasonable or Permissible Margin of Error in Dispensing III Suppositories " and the ' Determination of the Reasonable or Permissible Margin of Error in Dispensing IV Pills, ' by Marvin J An drews In reply to a question, the author stated that the question of deviation is a difficult one The work contemplated was the determination of weight and volume and this line has been followed The checking of amount of active ingredient contained in a prescription should be done by State Health Departments throughout the country and this will require work extending over a period of years

There being no further business, the Joint Session was adjourned

SECTION ON PRACTICAL PHARMACY AND DISPENSING

The First Session of the Section on Practical Pharmacy and Dispensing was called to order by Chairman Marvin J Andrews May 10th at 9 00 P M Vice Chairman Ralph W Clark pre sided during the reading of the Chairman s Address It follows

ADDRESS OF THE CHAIRMAN

BY MARVIN J ANDREWS

As Chairman of the Section on Practical Pharmacy and Dispensing it is my pleasant duty to welcome you to all the sessions to be held by this Section and we hope you will find these meetings inspiring so that you carry home with you some valuable information as well as a most gratifying list of new acquaintances

The opinion of the Chairman is that a new day has arrived for the Section on Practical Pharmacy and Dispensing with the completion of the new headquarters building of the AMERICAN PHARMACEUTICAL ASSOCIATION, The American Institute of Pharmacy," and I deem it a great privilege to have acted as your Chairman during the past year As history usually repeats itself, it may be well to review the outlook of Pharmacy at the time this section was formed some thirty-four years ago

The committee s first report was presented by its chairman, Dr Henry P Hynson, on the afternoon of September 5 1899 The Committee on Practical Pharmacy and Dispensing had been formed because of the waning interest of the practicing pharmacist in the affairs of the ASSOCIATION At its inception, the Committeee had as its purpose, to interest the retailer and to draw from him some of his rich store of information which daily experience and actual demand had given him To obtain the material necessary to form this section the work was divided between several persons and over 1000 members were interrogated by means of circular letters, personal contacts, etc It was noted, with interest, that the number of replies to the written communications was small, yet the Committee was not discouraged and the section was formed

We have often heard that pharmacy is not what it was in the good old days, and since this section was formed before your present Chairman was born, it seems fitting that he should quote parts of the first address and show that the section is in a much better position to day than it was in days gone by

Quoting from the address of the first Chairman we have the following interesting statements It has been said that pharmacy has degenerated and that much more was required of the dispenser in the 'good old days than at present We deny this and refer specifically to the scientific attainments, ready and comprehensive knowledge, and especially to technique Three prime facts are brought out—changes have occurred opportunities for galenical pharmacy still exist, and much dispensing knowledge is required We do not put up quite so many mixtures but we make many more solutions solutions of delicate and sensitive alkaloids which have to be accurately weighed, solutions which have to be made on a percentage basis unknown in the former periods We make less pills, but we fill more capsules, filled with masses and powders, soft elastic capsules filled with liquids, oils and alcoholics Ointments require more time, more good judgment than any other class of preparations You can hide your faults better *anywhere else* than you can in ointments! Tablets have come and in many instances are less trouble than pills or capsules Even a plaster must be spread occasionally, if not in a 1000 times then once in 5000 times That *proprietaries* have increased is, indeed a truth The 'good old days' show badly as compared with these hard times —the pricing of prescriptions is not a matter of individual caprice—we will invariably charge all that competition will allow—no more, no less Beyond and above all items the most encouraging fact established is that galenicals such as can be prepared by a competent pharmacist are still used '

The first committee suggested The Dispensary and Laboratory should be away from the public and apart from the sales department yet the two should be close together Apparatus and facilities should be plentiful Containers should be of sufficient variety and should be attractive " In conclusion Dr Hynson made the following statement "Not from without, but from within, does pharmacy need help—help that is practical "

It may have been unwise to take up so much of your time in briefly recalling the outstanding points of the first Chairman's report but it will at least remind us that the same problems that our predecessors had to face are with us today, and to point out more forcibly that we, as leaders in professional pharmacy should look forward with hope for the future of pharmacy, and allow the good old days" to remain as history

With the dedication of the American Institute of Pharmacy all who are in any way connected with our profession can look forward with pride to telling all classes of people, that the

home of American Pharmacy is located in one of the most beautiful spots in our National Capital After a long, hard struggle, the dream of having an ideal headquarters building is realized, yet we must all remember that *the future of our profession does not rest upon a beautiful building*, but that *it depends upon the cooperation of those interested in the advancement of pharmacy*

Since the formation of the American Association of Colleges of Pharmacy the standards of education in pharmacy have been steadily advanced The graduates in pharmacy to day receive an academic degree that is on a par with all other educational institutions With this active association we can rest assured that the educational requirements will be advanced to meet the professional demands of the future

The Section on Practical Pharmacy and Dispensing is primarily interested in the advancement of professional pharmacy which is accomplished through the following groups (1) recognized schools of pharmacy (2) hospital pharmacists, (3) retail pharmacists, and (4) manufacturing pharmacists It is my personal opinion that with the foregoing sources of obtaining information, this Section should be the outstanding section in the AMERICAN PHARMACEUTICAL ASSOCIATION or in any other association, for the advancement of professional pharmacy This will be the case provided those members who are interested in our work will give a few hours of their time in preparing papers or offering suggestions to the officers of the section The success will also depend upon the willingness of all future officers to do their share in making their meeting the outstanding meeting in our history

ACCOMPLISHMENT OF OFFICERS FOR THE PAST YEAR

Although this has been a short year to accomplish a great deal, it is with pleasure that your officers report progress since our last meeting Immediately after the sessions held in Madison, the officers began preparing a mailing list, which was to be used in an endeavor to stimulate interest in our section As a starting point, we selected the schools that hold membership in the American Association of Colleges of Pharmacy The first step in our program was to obtain catalogs from every school in this Association, and from these catalogs obtain the names of every person engaged in teaching either galenical, dispensing manufacturing or hospital pharmacy With this list, we then obtained from the issues of the JOURNAL of the AMERICAN PHARMACEUTICAL ASSOCIATION, the official programs presented before this section since 1920 With this information we then compiled our mailing list according to states This completed list gives the name and address of each school holding membership in the American Association of Colleges of Pharmacy, the pharmacy teaching staff of the respective schools, and the titles of the papers presented by each member of the pharmacy teaching staff before the Section on Practical Pharmacy and Dispensing according to the year presented, since 1920

This list reveals some very interesting facts, foremost of all, is that out of a total of 57 schools holding membership, only 29 have presented papers before our section since 1920 Out of a possible 211 teachers (professors, instructors and laboratory assistants) of galenical, dispensing, hospital or manufacturing pharmacy, only 49 have taken an active part during some of our meetings since 1920

We may well ask ourselves the following question Is this lack of interest due to the programs presented before our section or to the schools and their pharmacy teaching staffs? I prefer to think it is not caused by a lack of interest, but is probably due first to the known fact that a great many people are timid and are afraid to write papers, for fear they may be criticized, and second, to a want of encouragement on the part of the officers of our section The old worn out excuse that we do not have time to prepare a paper sometime during a period of five years is a direct admission that the members of that particular pharmacy teaching staff are overworked or are lazy It is always well to remember, ' Where there is a will there is always a way," and it is up to the officers of our Section to encourage that will

In addition to the above we have also prepared a list of hospital pharmacists, manufacturing pharmacists and retail pharmacists who should be interested in our section and we have invited each and every one to take an active part in the program this year A study of our program will show that we have been successful in interesting several newcomers in our section

The program for the 1934 meeting has been arranged so that Friday afternoon may be devoted entirely to Professional Pharmacy We have included on this part of our program, the papers dealing with hospital pharmacy, dental pharmacy and a majority of the papers dealing

with strictly professional pharmacy It is hoped that you will remain with us during both sessions

SUGGESTIONS FOR FUTURE OFFICERS OF THIS SECTION

In order for our section to progress in the future it will be necessary for the officers to adopt a definite program and see that the program is carried out until it is completed Very little will be accomplished if a great number of projects are started, without a long and tedious follow-up plan If you, as future officers become discouraged in performing your duties, don't give up, just remember that anything that is worth while is worth working for With this spirit continued for a period of five or ten years every one will look to our Section with pride

In order that our activities will advance in the future, we recommend that if you are selected as an officer for the Section on Practical Pharmacy and Dispensing do not accept the office unless you are willing to do your share in the work to be performed Your name appearing on the stationery will be an asset to the section if you work, or a liability, if you let every one else do the work and you try to take the credit Cooperation and team work are essential in any organization

Obtaining Papers—The officers for the past year have tried to encourage papers of *pharmaceutical interest* and have endeavored to refer the papers that should be presented before the Scientific Section to that section A mimeographed copy of Chapter IX of the By-Laws of our Section, accompanied each request for papers An invitation was extended to the younger members of the pharmaceutical profession as well as to our older friends It is hoped that the incoming officers will continue to follow this procedure

Types of Papers That Should Be Presented before the Section on Practical and Dispensing Pharmacy—Papers of real pharmaceutical and practical value can be prepared on the following subjects (1) *Professional Pharmacy*—(*a*) The successful operation of professional pharmacies, (*b*) publicity, which may include the professional relationship committees the U S P and N F publicity committees, or any individual or collective methods of placing retail pharmacy on a higher plane (2) *U S P and N F Preparations*—Suggested improvements for the now existing formulas and the devising of suitable formulas for the simples contained in the U S P or N F which may be adopted in the future (3) *Prescription Tolerances*—This topic is large enough for every one in the section to work on for three or four years, and still leave a great many phases to be worked out In pharmacy we need definite standards of this type which are now lacking (4) *Incompatibilities*—A detailed study should be made of the incompatibilities of the individual simples or preparations contained in the U S P and N F and in addition, the more important newer remedies (5) *Drug Extraction*—This alone is an endless field for research The above are only a few of the many problems that can be reported in papers before this section

Membership in the American Pharmaceutical Association—The officers as well as the members should endeavor to increase the membership in the ASSOCIATION Every person connected with the teaching staffs of our pharmacy schools specializing in any branch of pharmacy should be a member Membership among hospital pharmacists manufacturing pharmacists and retail pharmacists should be encouraged

Newly Elected Officers—It is suggested that the chairman divide the work to be accomplished for the year, and assign each officer a definite task to perform If the under officers perform their task well and prove that they are assets to the section, they should be advanced if not, they should be replaced

RECOMMENDATIONS

1 It is recommended that the nominating committee comply with the by-laws of our Section and nominate a second vice chairman This office has been vacant since 1928

2 It is recommended that a detailed report of the Committee on Prescription Tolerances be presented before the First Session of the Section on Practical Pharmacy and Dispensing each year until definite standards have been established It is further recommended that the President of the AMERICAN PHARMACEUTICAL ASSOCIATION in making the appointments to this committee, include, both the Chairman and Secretary of the Section on Practical Pharmacy and Dispensing either as associate or active members of this committee

3 It is recommended that the Section on Practical Pharmacy and Dispensing request the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION to appropriate an additional $[illegible]

for our Section This additional $50 to be used in collecting and correlating all propaganda that has been used in the various cities and states in this country for promoting professional pharmacy This propaganda will include the work of Interprofessional Committees U S P and N F Publicity Committees, Hospital Formularies, etc The purpose of this information is not for the AMERICAN PHARMACEUTICAL ASSOCIATION to carry on an expensive publicity campaign, but to assimilate data which will act as a guide for the various state and city associations that are interested in work of this nature

CONCLUSION

In conclusion I wish to express my sincere thanks to Secretary Ralph E Terry Vice Chairman Ralph W Clark Delegate L W Rising and to all other members of this Section who have cooperated with me in promoting the activities carried on by this group during the past year

Acting Chairman Clark commented favorably on the address and appointed as a Committee on Resolutions to whom the address was referred *Chairman* L Wait Rising, Leon Richards and H M Burlage

The following were appointed members of the Committee on Nominations *Chairman* W G Crockett J W Rose and J L Hayman

It was suggested by L M Kantner that the Chairman should hold office for another year The views were concurred in by J Leon Lascoff and others

REPORT OF THE SECRETARY

BY R E TERRY

Mr Chairman, Ladies and Gentlemen

Again it becomes necessary for the Secretary of this Section to render a report of his activities for the past year In the first place, unfortunately, it has not been a full year since the last meeting, this fact has been mitigated to some extent by the ready response the officers secured to their calls for papers The list as presented will tell more of the story of what has been accomplished than any sort of a detailed report

On the Secretary s part, the solicitation was carried out by means of personal letters This made it necessary to limit the number solicited, and while it is a rather large job the results warranted the effort A very high percentage of returns was secured in this manner

The Chairman carried a goodly part of the load, however, and it is through his endeavors, that the program is as well balanced as it is It was through his enthusiasm and labors that a number of new contributors was secured, and the Secretary wishes to pay tribute to the energy and activity of Professor Andrews

The only recommendation the Secretary wishes to make is to suggest to his successor that the practice of asking all who attend sessions of this Section to register in the book started at Madison last year be carried out This practice if continued, will give the Section a valuable historical volume of signatures It also offers a means of acquainting the officers with those attending and helps to knit the Section together

Again the Secretary wishes to acknowledge the help given him by the Chairman and to thank those present who have contributed papers at these sessions

The report of the Secretary was accepted

The report of the Committee on Prescription Tolerances was read by Chairman Hugo H Schaefer The Chairman stated that this report be made an annual feature (To be published with discussions under Committee Reports in a succeeding issue of the JOURNAL)

William F Reindollar stated that he was very much interested in the report and particularly the part on Capsule Tolerance He said the State Department in Maryland had made experiments to determine the weight of empty capsules and this confirmed the statement of Chairman Schaefer, which was to the effect there is so much variance in the weight of capsules due to air conditions that there is no uniformity

William J Husa said this report interested him very much and he referred to the fact that capsuls develop an odor

Chairman Andrews stated that a paper would be presented on Hand Filled Capsules" and further discussion would be deferred until after the presentation of that paper On motion

duly seconded the report of Chairman Schaefer was accepted (The report will be published in a succeeding issue of the JOURNAL and it is hoped to print with it abstract of the discussions which were part of the report of the Committee on Weights and Measures)

Referring to nominations, Chairman Andrews thought that both he and the Secretary felt they could do more constructive work as members than as officers He referred to a list of schools of pharmacy, members of which had been very much interested in this Section for a number of years This Section should be made the outstanding one of this ASSOCIATION

The following papers were read and accepted Accuracy and Speed Factors of Hand-Filled Capsules,' by John W Lee, Prescription Criticism," by J A Reese, Past, Present and Future in Pharmacy," by L M Kantner, Why Hand Molded Hypodermic Tablets Vary," by S W Bower

J Leon Lascoff inquired whether capsules filled by hand were more accurate than those filled by machine The author had made no comparisons William Gray said he had little trouble with variations in the weight of capsules

The other papers were not discussed

Secretary Terry stated that those who desired could have abstracts of papers (The JOURNAL has a few of the abstracts for those who desire copies, if they will address the JOURNAL office) Chairman Andrews referred to a display of foreign prescriptions by J Leon Lascoff (These prescriptions were donated to the American Institute of Pharmacy and with them a key translation)

Reading of papers was proceeded with as follows

"Studies on Bismuth Subsalicylate," by Wm F Reindollar

' The Problems of the Teachers and the State Board Examiners of Practical Pharmacy and Dispensing " by Harry W Mantz

' The Stabilization of Syrup of Hydriodic Acid, U S P X," by William J Husa and L J Klotz

'A Method for the Preparation of Parenteral Dextrose Solutions ' by H A K Whitney

Chairman Andrews announced that he would place this paper under ' Hospital Pharmacy ' He said there were four or five papers belonging under that sub head

Reading of papers was continued

'A Suggested Formula for White Liniment," by L H Baldinger

Shark Liver Oil," by W S Jones and W G Christiansen

' An Enteric Coating for Tablets," by Harold A Johnson and Ralph W Clark

Chairman Andrews announced that the next meeting would be a Joint Meeting with the Scientific Section and that the Second Session would be held on the next afternoon

It was announced that a paper by F W Nitardy not on the program, would be read on How Much Is a Teaspoonful?"

H Evert Kendig suggested that in view of the fact that the number of papers is increasing, instead of being read they should be presented in abstract so as to provide for more discussion The number of papers read in full permitted only very brief discussions and this is helpful

The First Session of the Section on Practical Pharmacy and Dispensing was adjourned (The Program of the Joint session with the Scientific Section is reported in connection with the minutes of the latter)

SECOND SESSION

The Second Session of the Section on Practical Pharmacy and Dispensing was convened at 2 00 P M, May 11th, by Chairman M J Andrews The reading of papers was proceeded with

The Place of a Field Representative in Cooperative Professional Advertising ' by L Wait Rising (No discussion)

The Committee on Chairman's Address presented the following report

It was not considered necessary to act on the recommendation of the Chairman relative to nominating a *Second Vice-Chairman* as that is provided for in the By-Laws

It was recommended that a detailed report of the Committee on Prescription Tolerances be presented before the First Session of the Section on Practical Pharmacy and Dispensing each year until definite standards have been established and it was recommended that the President of the AMERICAN PHARMACEUTICAL ASSOCIATION, in making appointments to this Committee to include

both the *Chairman* and the *Secretary* of the Section as associate or active members of this Committee The recommendation was presented in this way 'It is recommended that a detailed report of the Committee on Prescription Tolerances be presented before the First Session of the Section on Practical Pharmacy and Dispensing each year until definite standards have been established and they recommended further that the President of the AMERICAN PHARMACEUTICAL ASSOCIATION in making appointments to this Committee include both the *Chairman* and the *Secretary* of the Section on Practical Pharmacy as associate members of the Committee"

These recommendations were approved

The Committee recommended further that the Section on Practical Pharmacy and Dispensing request the Council of the A PH A to appropriate an additional $50 for the Section which is to be used in collecting and correlating all propaganda that has been used in various cities and states for promoting professional pharmacy This propaganda will include the work of interprofessional committees on U S P, N F Publicity Committees, Hospital Formulas, etc The purpose is to provide data as a guide for various state and city associations interested in this kind of work

The Committee presented the recommendation in this form, that $50 be appropriated by the Council of the A PH A for the purposes indicated

The recommendation was adopted

Chairman Rising said the Committee would like to suggest that inasmuch as the Section on Education and Legislation has considered a somewhat similar undertaking it would be invited to proceed in a cooperative plan

The recommendation was adopted

Chairman Andrews stated that it would be necessary to make a change in the program The first report was by R W Clark, "A Report on Interprofessional Relationship Work in Wisconsin" This article is printed in the *Wisconsin Druggist* for January and an editorial appears in the *Wisconsin Medical Journal*

The next paper presented was by F W Nitardy, 'How Much Is a Teaspoonful?"

The author had presented the paper, because the public is in the habit of using the teaspoon as a measure of dosage

On motion of I A Becker and a second by Aquilla Jackson, the paper was referred to the U S P and N F Revision Committees for consideration There was some further discussion and the motion made was adopted

Chairman Andrews requested that all members sign the official roster

Reading of papers was continued

"Problems in Dental Pharmacy," by A O Mickelsen

"Pharmaceutical Possibilities of Dental Supplies," by Leon Richards

Secretary Terry referred to a convention of dentists when there were about 4500 dentists in attendance

The paper as presented was published in the JOURNAL There was much interest in the subject at this meeting and to such an extent that he had received an invitation to attend the national meeting of the American Dental Association to be held in St Paul during the first week of August

Secretary Terry was appointed representative to the meeting in St Paul

The foregoing papers were discussed by Frank L Black, A O Mickelson and the authors The consensus of opinion was that this was a fertile field for pharmacists

Dr F B Kirby reported on two interesting state meetings which he had attended, one in Oklahoma and one in Kansas, where there was considerable interest manifested showing the growing contact with the dental profession He stated that at Marquette University, Milwaukee the dental students are taught to write dental prescriptions and he had been told that in Ann Arbor they also teach students to write prescriptions

The following papers were read

'The Successful Application of U S P and N F Publicity in a Retail Drug Store" by L S Williams

Chairman Andrews stated that this paper would be turned over to the Committee collecting information for U S P and N F publicity

"Professional and Commercial Pharmacy," by Aquilla Jackson

"U S P and N F Publicity in Maryland," by F L Black The author commented that in Maryland regional meetings were held and papers of this type were on the program Invariably these meetings prove helpful to those who attend

'A Professional Pharmacy," by Robert R Gaw

' The Extemporaneous Preparation of Intravenous Solutions Saline and Dextrose," by Robert S Fuqua

"Hospital Pharmacy," by Richard D Franklin

' Hospital Pharmacy Practice an Innovation," by J Solin Mordell

"Analysis of Magnesium Carbonate," by Harold A Bowers

"What Evils of the Present Day Are the Contributing Factors to the Destruction of the Professional Side of Pharmacy," by J B Tripeny

'A Professional and Scientific Basis for the Pricing of Prescriptions," by George L Secord

'The Phytochemical Study of Canchalgua Panamena," by R A Benedetti

A motion was made and duly seconded that the papers read be received —Adopted

The Committee on Nominations reported as follows For *Chairman*, H M Burlage of North Carolina, *Vice-Chairman*, L W Rising, Seattle, Wash , *Second Vice-President*, F L Black, Baltimore, Md , *Secretary*, L W Richards, Montana, *Delegate to the House of Delegates* R W Clark, Wisconsin

On motion duly made, seconded and voted the nominees were elected

Chairman Andrews thanked the members for their support and the honor of having been elected the presiding officer He hoped that the interest in professional pharmacy would grow and that the members would support the newly elected officers as he had been supported during the past year

L S Williams remarked that pharmacists in Baltimore are giving more attention to professional pharmacy and that physicians are contacted, all of which is helpful

W G Crockett said it was difficult to compare the results of work of one year with that of another but the program for this year is a most interesting one He thought that the method of working of one group of officers should be communicated to that of another year, so that advantage can be taken of the work done in the past

A rising vote of thanks was given the officers and the meeting was adjourned

SECTION ON EDUCATION AND LEGISLATION

The First Session of the Section on Education and Legislation was convened by Chairman George C Schicks, May 9th, at 2 30 P M

He regretted to advise that on account of serious illness in the family of Secretary Charles W Ballard, he would be unable to attend the meeting He, therefore, requested, W L Sampson to act as Secretary Chairman Schicks stated that there were few papers, so these could be freely discussed, he requested Vice-Chairman O E Russell to preside during the reading of his address It follows

ADDRESS OF THE CHAIRMAN

BY GEORGE C SCHICKS

A person on the outside, so to speak, may sometimes be in a better position to diagnose medical, dental and pharmaceutical ills than those whose daily contact with them has so altered their perspectives that the symptoms fail to have significance On the other hand it is sometimes difficult to prescribe even when symptoms point to a definite illness, for complications are not uncommon Each profession has its own ills, its own problems, but in the last analysis the problems of one profession are not so stangely unlike those of the other If one attends a meeting of physicians such topics as "Are you headed for the last round up?", "Dispensary abuses," and so on, are discussed, while dentists are discussing ways and means of overcoming cut-raters in their own ranks

Physicians have their problems with socialized medicine, hospital out-patient departments, dispensaries and organized medical centers, and the dentist finds that the same inroads are being made into his practice It has been determined that as high as 73 per cent of the

patients in some hospitals could afford to pay for the services of a private physician but instead accept free treatment

During the past few years the medical, dental and pharmaceutical professions have taken somewhat independent courses but kindred afflictions eventually foster closer harmony and there is at the present time a definite trend toward the renewal of associations with the consequent realization that mutual helpfulness is desirable

The basic training of the modern pharmacist is scientific The present day college course is so designed that the student not only learns pharmaceutical technique and the composition, preservation and compounding of medicinal products but it has been enlarged to include such subjects as bacteriology pathology biology, physiology and physics The inclusion of these and kindred subjects was not aimed merely to lengthen the college program but to make the man so trained more valuable scientifically

Having received his fundamental training and practical experience the graduate pharmacist if he desires to attain any degree of success must continue his study, not necessarily in a college, but he must keep informed concerning scientific research in the fields of medicine, dentistry and pharmacy He must place himself in a position to give the latest well-founded scientific information to members of allied professions He must be able to go even further, he must play the role of instructor to those seeking information regarding prescription writing, incompatibilities, official drugs and preparations, and new and non official remedies and accepted dental remedies

With such a scientific background upon which to build his business, the pharmacist must then look toward the creation of a demand for his scientific services But so much for the pharmacist

Pharmaceutical educators throughout the United States have during the past four years met with thousands of dentists before whom they have discussed U S P and N F preparations and at the same time urged them to use the scientific services of the pharmacist The eagerness to write prescriptions employing official drugs and preparations, as evidenced by members of the dental profession is almost astounding They have a most healthy desire to take guesswork out of the prescribing of dental medicaments

Here is the pharmacist's opportunity to enlarge the scope of his professional activity

Physician-Pharmacist meetings voice a similar interest in prescribing official drugs and preparations Physicians are frank in their criticisms of their own groups who depend too much upon pharmaceutical manufacturers for information regarding medicaments Here too is a definite trend toward the prescribing of official drugs and preparations—and here, too is the pharmacist's opportunity to enlarge the scope of his professional activity

Creating a demand for his scientific services requires that the pharmacist plan a definite, appealing and continuous campaign to urge the prescribing of U S P and N F drugs and preparations He must be alert to every opportunity so as to make the most of his professional contacts After planning his own campaign he should acquaint himself with the methods employed by other successful pharmacists—should become active in county state and national meetings held jointly with physicians and dentists

To the end that helpful information regarding ways and means of encouraging the prescribing of U S P and N F drugs and preparations be disseminated and made available to the pharmacists of this country, and to the end that the good work of one community or state be not lost to other communities or states, may I make the following recommendation for your consideration

That a committee be appointed—to be known as the National Committee on Professional Information Its specific function shall be

First—To study the methods used by the various local county and state organizations in their efforts to bring before medical men usable information on U S P and N F drugs and preparations

Second—To present to the pharmacists of the nation at our next annual convention or before if the committee deems it advisable a digest of constructive ideas gathered from such a survey

Third—The Committee is to act as a center for receiving and disseminating information which will receive the pharmacist s opportunities for professional scientific service

Fourth—The chairman of the committee and two other members are to be appointed by the incoming chairman of this section Others may be added, if the chairman desires, to make the committee workable

The report was on motion, duly seconded, accepted The Chairman stated that the Secretary's Address was embodied in his opening remarks Sympathy was expressed to Secretary Ballard The Chairman appointed as members of the Committee on Resolutions *Chairman*, W L Sampson H S Johnson and John A J Funk Members of the Committee on Nominations *Chairman*, H Evert Kendig, L W Rising and Ralph W Clark

Chairman Schicks advised that, unfortunately, it was impossible for Dr E J H Schneider who was to speak on Closer Relations between the Pharmacist and the Dentist, ' to be present The Chairman stated that Dr Schneider has many constructive ideas which can be advanced for the enhancement of the pharmaceutical profession

Dr Samuel M Gordon Secretary Council on Dental Therapeutics American Dental Association, found it impossible to be present on account of an earlier meeting but sent his paper on "Dentistry and Pharmacy ' which was read by the Secretary A O Mickelsen referred to this paper as a typical illustration of the cooperation of dentists and pharmacists Dentists, in the past, had not been trained to write prescriptions A great deal of good can be done in a professional way by coöperation, not so much in the group but with the dentists at home They should be invited to the college, the pharmacy, into the prescription department, using every opportunity to discuss individual problems with them They are eager to get information This affords one of the opportunities for pharmacy

Edward Ireland inquired whether dentists had been invited to talks or courses in pharmacy or prescription writing

Chairman Schicks replied that the invitation or, rather, the request came from them to our college, asking if we could be of assistance to them in giving information concerning drugs and their action, and in regard to prescription writing This last winter the college gave a series of six lectures to the Essex County Dental Society in New Jersey, free of charge to those dentists who would care to be present at those lectures This Society offers several branches of instruction to the members of their society each year, and of the six or seven courses offered we had a larger attendance in this particular course than any of the others The work was extremely successful " He said the lecture started about eight thirty, and at eleven thirty we were still there answering questions and conversing with the members of the dental profession We had six of those lectures and the work was entirely satisfactory to them and more than encouraging to our teaching staff

A F Marquier said he was glad to know that

Dean Evert Kendig concluded from his observation that the dentists have been brought in contact with the profession rather intimately during the last several years Although he is not connected with this particular work he reiterated what had been said, that dentists are anxious for information about drugs and it is only within the last five years and possibly a decade that they have become therapeutically conscious, due to the changes in the character of the dental profession This year they have introduced into the curriculum a year's study in what we would define as the practice of medicine At our own school in the Department of Dentistry, which is the old Philadelphia Dental College they have established a chair of oral surgery At the present time plans are under discussion for the erection of a building to house that particular phase of dental work This means stepping into the field of general surgery and those dentists will be trained to practice surgery of the mouth Unfortunately, the schools of dentistry have not been offered a proper course in therapeutics "

He referred to an experience recently in my own family The dentist supplied a few tablets for which he might have written a prescription He continued Last winter we celebrated the fifteth anniversary of the Philadelphia Temple University and in this connection the profession offered many lines The School of Pharmacy offered to dispense remedies suitable for the use of the different professions—The dental school the school of chiropody and so on—We had mimeographed copies of the formulas of U S P and N F products We mimeographed the same number of sheets to pass out, and we thought that the medical school would use a number largely in excess of the other schools Much to our surprise at the end of the first day the dental school had exhausted their supply of mimeographed sheets, and we had to run off some more In other

words, they are getting information they didn't know anything about It is a marvelous opportunity, if the pharmacists will only take advantage of it "

Marvin J Andrews said there is considerable discussion about pharmacists getting the dentists to prescribe He thought that it would be found that it is not only the dentists and the physicians who need to be informed in regard to U S P and N F products, but the pharmacists should be kept up to-date, to know what to give the physicians and dentists when they prescribe He did not think pharmacists should copy proprietary preparations, but inform the physicians how to prescribe and what vehicles are best suited

A B Nichols said "For several years I have been in close touch with medical association A man who is supposed to be trained in writing prescriptions still lacks the knowledge of how to write prescriptions These men come in and look at the exhibits and they become very enthusiastic Now when you have that situation in the medical profession, what must it be in the dental profession? There is no limit to what might be done In Philadelphia, we have had one or two small exhibits in a small way We have the coöperation of the Dental Association—a committee selected by the Association preparing standard preparations, things that they would like to see officially recognized as U S P and N F products The great difficulty is in getting pharmacists started on any one of these preparations Make them realize their opportunities by their own personal efforts and it will go over in leaps and bounds Of course it is a question of the individual You can't train all pharmacists "

A F Marquier wondered whether all this enthusiasm comes from the economic situation in which the country finds itself at the present time The dentists desire to learn something about drugs and medicine, how to write prescriptions and so on When it is all boiled down there must be a reason for it In every state where there is considerable emergency relief work there is a limited amount of funds These funds must be conserved, and it is the middle man who pays the bill The rich man and the poor man are well taken care of, but the middle man pays In a situation like this the medical society is very much interested in having the cooperation of the pharmacists, and he was of the opinion that it was the duty of pharmacists to give it

He said "In New Jersey, we have spent all winter going from one meeting to another, invited by the physicians, giving various talks on how to write prescriptions, and what are good things to prescribe " He considered this a wonderful opportunity, in his estimation, the biggest opportunity the pharmacist has had the last thirty or thirty five years

R A Lyman inquired whether the American Dental Society has a committee similar to the Council on Pharmacy and Chemistry of the A M A

Chairman Schicks replied that the Dental Association has a similar body and they have their own laboratory where they employ their own chemists, and have a council of dental therapeutics Analyses are made and are available to all pharmacists through the *Journal of the American Dental Association* They publish those separately and also give information concerning the analyses, and pharmacists can find enough information in any of these monthly publications to talk before any dental association they might have the privilege of addressing Chairman Schicks had been asked by a dentist where he could have dental prescriptions filled, he had tried unsuccessfully The dentist had gone 35 miles to have dental work done and he asked him why he did not go to a local dentist The dentist replied, ' No, I don't want to do that This fellow is a graduate of a very good school I feel he can do good work and I prefer going to him " Chairman Schicks said "All right—then, we have poor doctors and we have good doctors, we have good dentists and poor dentists, poor pharmacists and good pharmacists, and if you use discretion in choosing a dentist for yourself why don't you use the same discretion in choosing a pharmacist to fill your prescriptions for your patients?" He could see the logic in that In other words, there are plenty of good professional pharmacists, omitting those who are now taking care of the medical and dental demands, if they will take the trouble to search them out and use the same discretion as he used in obtaining treatment

Chairman Schicks welcomed several students of Rutgers University College of Pharmacy and invited them to participate in the sessions

Dr C L Whitman was introduced He spoke on "Dentistry and Pharmacy " He did not stick to the text but brought in experiences called to mind by the discussions He cited examples, among them the development of preparations containing sodium perborate He referred to the lectures mentioned by Dean Schicks

In summarizing, Dr Whitman said, in his opinion there were four ways in which the professions could coöperate *First*, individual contact between individual members of the profession *Second*, group contact by dental schools, pharmacy schools, societies of the two professions and student groups of the two professions *Third*, establishment of laboratories in pharmacies equipped for diagnosis And *fourth* constantly striving for the betterment of all the professions

R W Rodman was introduced by Chairman Schicks who referred to the publicity given by him at this convention Mr Rodman presented a paper on 'The Hospital Pharmacist and His Opportunity for Service to Pharmacy with the Medical and Dental Professions"

L W Rising considered this an opportunity for Schools of Pharmacy and Boards of Pharmacy to cooperate

O E Russell stated that in Indiana the hospital experience under a registered pharmacy is credited

O P M Canis did not think experience gained in drug stores filling only three prescriptions a day should be credited, but the law requires the recognition

A F Marquier referred to a practice of some hospitals to fill prescriptions for the public in their dispensaries, and this practice is carried beyond these limits

Secretary R B J Stanbury, of the Canadian Pharmaceutical Association, was introduced (Dr Stanbury has been a member of the A PH A for a number of years and a frequent attendant at the annual meetings) He said, in Canada the apprenticeship in hospitals is not of equal value to that in drug stores He also spoke of the increasing entrance requirements to schools of pharmacy in Canada He hoped for advancement in professional pharmacy

H W Mantz was of the opinion that good missionary work was possible in hospitals

A F Marquier discussed the difference of experience in hospitals and drug stores, experience is gained in the latter that does not obtain in hospitals

The discussion continued for some time on the experience question *pro* and *con*

W Bruce Philip introduced the subject of his paper on "Legislation in the Public Interest to Control the Sale of Drugs by Qualified Persons" by pointing out the purposes of legislation and the preparing of laws He discussed constitutionality, need of legislation, restriction by law, the public interest In closing his remarks the author said I welcome constructive criticism I do not care whether this bill or some other bill helps us to arrive at the desired point We must have something to shoot at and therefore center your shooting at this bill with the thought as President Roosevelt said—criticize if you will, but offer something to take its place"

Secretary Stanbury spoke of the codeine situation in Canada 'Some years ago we persuaded the department of National Health to remove codeine from the list of narcotics, particularly drugs, however, not from the poison list When a person buys codeine the druggist must register it as a poison That has removed a great deal of difficulty Codeine is used in cough mixtures and various preparations It removed a great deal of friction and difficulty with the physicians The physician can call up and order from his druggist a preparation containing codeine, he does not have to keep any record"

Harvey A K Whitney presented a paper on Some Notes on the Relationship of Physician to Pharmacist" A F Marquier read a paper on Timely Formulæ for Chiropodists" Dean Kendig considered this a timely paper which presented opportunities for the pharmacist

It was moved that all papers read before the Section be accepted—carried The First Session of the Section on Education and Legislation was then adjourned

SECOND SESSION

The Second Session of the Section on Education and Legislation was convened May 11th, at 2 15 P M, by Chairman George C Schicks

The first paper read was on Research in Pharmaceutical Education," by Wm J Husa (No discussion)

The report of the Committee on Resolutions was called for It was read by Chairman L W Rising The report was accepted

The resolutions are as follows

"To the end that helpful information regarding ways and means of encouraging the prescribing of U S P and N F drugs and preparations be disseminated and made available to the

pharmacists of the country, and to the end that the good work of one community or state may not be lost to other communities or states, *be it resolved*

' That a committee be appointed—to be known as the National Committee on Professional Information Its specific function shall be

First—To study the methods used by the various local, county and state organizations in their efforts to bring before dental men usable information on U S P and N F drugs and preparations

'Second—To present to the pharmacists of the nation at our next annual convention or before, if the committee deems it advisable, a digest of constructive ideas gathered from such a survey

'Third—The committee is to act as a center for receiving and disseminating information which will increase the pharmacist s opportunities for professional scientific service

Fourth—The chairman of the committee and two other members are to be appointed by the incoming chairman of this Section Others may be added if the chairman desires, to make the committee workable '

(The resolution did not reach the Committee on Resolutions in time to be acted upon, it will therefore, have to come before the next annual meeting—see minutes of the meeting of Executive Committee of the Council of July 17 1934)

Be it resolved that this Section on Education and Legislation appoint a committee to study the problem of cooperation with hospital pharmacists "

The Committee expressed appreciation of the splendid address of Chairman Schicks, the report was accepted

The Committee on Nominations presented the names of the following for officers of the ensuing year *Chairman*, Oscar E Russell, *Vice-Chairman*, C W Ballard, *Secretary*, L W Rising, *Delegate to the House of Delegates* George C Schicks

On motion of C L O'Connell and a second the report was received and the Chairman instructed to cast a unanimous ballot for the nominees

The next paper read was on ' Amendments to the Federal Food and Drugs Act Proposed by Drs H W Wiley and L F Kebler Nearly a Generation Ago," it was read by L F Kebler and accepted He stated that if anybody is interested in reading the hearing he may have the paper

Chairman Schicks thanked the acting secretary for his coöperation

The officers of the Section were duly installed

Chairman Russell took the chair and expressed his appreciation for the honor conferred and promised to continue the work along the standards set by his predecessor

Chairman Russell referred to the recommendations or resolutions wherein it was stated that the incoming chairman should name the two Committees the one on the National Dental Committee and the Committee on Cooperation with Hospital Pharmacists He named the chairmen of these committees and said he would appoint the members later On the Committee on Cooperation with Hospital Pharmacists he named as Chairman, R W Rodman, and on the National Dental Committee he named as Chairman, George W Schicks

The Second Session of the Section on Education and Legislation was then adjourned

SECTION ON COMMERCIAL INTERESTS

The First Session of the Section on Commercial Interests was convened by Chairman John A J Funk on May 9th, at 2 15 P M The Chairman welcomed those in attendance and stated that an interesting program would be presented

The first paper of the session was entitled ' Profit the Way Out ' by W Bruce Philip This was discussed at length by Henry F Heim, Edwin E Taiber Leo G Penn A V Burdine C Leonard O Connell and the author Discussion will accompany the paper in a later issue

The second paper was entitled ' Furthering Pharmaceutical Publicity through the Open or Partially Open Prescription Department " by W Bruce Philip

Lawrence Williams was pleased with the presentation he stated that he had in mind the installation of an open prescription department, but he could also see that it might not always work out very well He said the public is somewhat skeptical about the filling of prescriptions If the prescriptionist hesitates they begin to wonder whether there is anything wrong Also

there is sometimes the necessity of sending out for an item that is not in stock and required for the prescription, this is not easily done without observation in an open prescription department

Leo G Penn stated that he had found the open prescription department predominating in European pharmacies He was well pleased with his results

John F McCloskey was of the opinion that an open prescription department presented opportunities for good publicity He was in favor of a partially open prescription department

F P Kelly, Jr, stated that the open prescription department was working out very satisfactorily in his pharmacy It is necessary to maintain a well equipped clean department and do the work in a way that will impress the customers favorably

R R Gaw believed in an open prescription department He prefers a pharmacy wherein the public has full view of what is being done and the one who is doing the work

The next paper 'Detailing for Prescriptions" was presented by F B Kirby (No discussion)

The following papers were read

"Personnel Policies and Problems, by Dean Edward H Niles

Determining Cost," by Dean C L O'Connell

Secretary R W Rodman made a report (To be published)

Chairman Funk appointed the following as members of Committee on Nominations *Chairman*, C L O'Connell Francis A Britt and Fred Vilas

The Chairman stated that this concluded the program of the First Session and the Section was then adjourned

SECOND SESSION

The Second Session of the Section on Commercial Interests was convened by Chairman J A J Funk, May 10, at 9 10 A M

The following papers were read

"Price Stabilization and Selective Distribution," by Paul C Olsen

What Is an Adequate Order for the Prescription Department?" by Frank A Delgado

Drug Store Location " by Inez K Rolph

Vice Chairman Henry Brown stated that he had been informed by the Department of Commerce that there would be three papers The first paper Effect of NRA on Price Conditions," by Wroe Alderson and the next, "Discussion of Phases of the Drug Code " The discussion was in charge of R W Rodman

F A Delgado lead the discussion (To be published)

The Committee on Nominations reported the following list of officers *Chairman*, Henry Brown, Pennsylvania, *Vice Chairman* R W Rodman, New York, *Secretary* R T Lakey Michigan, *Delegate to the House of Delegates*, John A J Funk, Indiana On motion by John F McCloskey, duly seconded the report of the Committee on Nominations was accepted and the officers elected Chairman John A J Funk expressed his appreciation and thanked the members for the support given him The chairman elect expressed his appreciation and hoped for co operation in making the program for next year an interesting and profitable one R W Rodman the vice chairman, expressed regrets because of his absence during the sessions on account of publicity work He thanked Mr Brown for acting in his place which made it possible for him to look after publicity work for the ASSOCIATION

The Final Session of the Section on Commercial Interests was then adjourned (Parts of the minutes of the Section on Commercial Interests will be supplemented in connection with the publication of the papers and discussions of the Section, after submission to the authors and participants in the discussions)

The report of the Conference of Pharmaceutical Association Secretaries will be published in a succeeding issue of the JOURNAL, also that of the Conference on Law Enforcement Officials —*Editor*

SECTION ON HISTORICAL PHARMACY

The First Session of the Section on Historical Pharmacy was convened by Acting Chairman J T Lloyd at 9 40 A M May 11th The first paper presented was that by Charles H and Millicent R LaWall on A Pre Revolutionary Account Book of the Marshall Store in Philadelphia "

Mrs LaWall explained that the paper relates to a pre revolutionary account book of the Marshall Pharmacy in Philadelphia The book was exhibited, showing the handwriting which is legible There was no discussion, but the book was passed around among the members

The next paper on the program was by Dr Edward Kremers He stated that he was prepared in a way to give an illustrated talk but he regretted that he did not have the lantern slides with him The purpose of the slides was to show how these are used in teaching pharmacy, but not having these slides the lecture will have to be deferred to another meeting

Dr Kremers said that this month there will be a meeting in Basel, Switzerland, the first International Congress for the History of Pharmacy He had programs with him and in his opinion the Section on Historical Pharmacy, A PH A , should send a communication to the meeting in Basel and extend greetings by letter or cablegram in time so that these greetings may be received before the close of their sessions The suggestion was adopted

Chairman Louis Gershenfeld had arrived at this time and inquired how much work had been done

Edward Kremers explained the suggestion made by him and the adoption by the Section He also referred to the American History of Science Society which was now ten years old and stated that a local section had been formed in Washington He referred to the *International Journal* published by the Society and also to the eight-volume work on the History of Science in preparation by Dr George Sarton

Chairman Gershenfeld thanked Dr Kremers for his remarks He was of the opinion that something should be said regarding this Society in the JOURNAL OF THE A PH A and it was so ordered

Chairman Gershenfeld asked that the first order of business be taken up, namely, the reading of the Chairman's Address It follows

A PLEA FOR MORE OF THE HISTORY OF PHARMACY

LOUIS GERSHENFELD, CHAIRMAN

This week marks the formal opening of the American Institute of Pharmacy The importance of this structure to pharmacy has been emphasized by many speakers during the dedicatory exercises As important as the building is, both the museum and the library to be contained therein, much more important will be the spirit of the librarian and his staff and, especially the sincere endeavor they will display in giving these places a human aspect, a living thing, yes, in making them an integral part of living pharmacy

I am well aware of the fact that the Smithsonian Institution has a valuable museum devoted particularly to pharmacy The Library of the Surgeon General's Office has a valuable section of interest to pharmacy There are a few of the colleges of pharmacy and medical institutions which have valuable historical material suitable for a pharmaceutical museum or library but nowhere in this country do we have a distinct pharmaceutical historical institute We you and I this Section must guide the expansion of the historical facilities in the American Institute of Pharmacy so that the historical division will rank with the great historical institutes in other branches of science and especially with those interested in the history of medicine This must be done for the benefit of pharmacy so as to preserve and interpret the unity of scientific pharmaceutical effort The museum and library must be so established as to cooperate effectively with all schools of pharmacy and pharmaceutical organizations in furnishing displays and exhibits for informative and teaching purposes Facilities must be made available to develop more serious researches in historical pharmacy, with such an arrangement historical and bibliographical pharmaceutical research can be made to mean much for pharmacy Concerning the library and its place in historical pharmacy let us always remember Milton's words 'A good book is the precious life blood of a master spirit, embalmed and treasured up on purpose to a life beyond life" Ah yes it is this life beyond the life of its own day which must be revived and revitalized here as nowhere else so that you and I may comprehend and enjoy it

The time is also now at hand for this Section to take a more active interest in an attempt to have more of the historical element injected into pharmaceutical instruction The pharmacist is woefully ignorant of his profession Workers in pharmacy must be imbued with the fact that though they owe something to themselves as human beings, they owe something to the unity and

integrity of pharmaceutical science, yes, something to the traditions and heirlooms of pharmaceutical knowledge It is only by repeated inoculations that an historic appetite can be created and made permanent as part of the general make up, of any make up, of any individual It is by this means that it will be possible for the pharmacist to cultivate a liking for the history of his profession and to reveal for him the status of his particular branch of science in the circle of all other branches of science and particularly the natural sciences Historical pharmacy will teach him to look beyond a horizon limited by his own specialty into the great wide world of mental activity around and beyond him A pharmacist who knows only pharmacy knows but little of pharmacy The true spirit of pharmacy flourishes only through the fusion of the past and the present upon which it thrives Without historic perception the scientist lapses into the mechanic In the modern development of the pharmacist into a professional man or a scientist, let us not lose sight of the fact that we must start with the student in pharmacy and that somewhere in the educational system the former must be imbued with the fact that there is a tie up with the many branches of science in which instruction was given He must be made conscious of the noble history of pharmacy and the position that its study can occupy in aiding him through life The interweaving of the historic in pharmacy with the actual in instruction by radiating through all departments, can as a central force bring into closer relationship the many apparently separated departments so that all of them may bring about a more united front in attacking some of the greater problems in pharmacy which equally concern all of them The study of the history of pharmacy and pharmaceutical doctrines will broaden the viewpoint of workers in pharmacy and will liberalize their conception of their profession

In concluding these brief but I hope important remarks concerning historical pharmacy, may I voice a plea for a more active unit within our own Section? May I suggest that this Section go on record at this time in recommending to the parent body that those entrusted with the future plans of the Headquarters Building shall make arrangements in the latter for the development of a suitable historical division which by its gradual development may become a distinct pharmaceutical historical institute? May I also suggest that this Section recommend that the ASSOCIATION shall again voice a plea through its official publication for pharmacists to take a greater interest in historical pharmacy and for schools of pharmacy to have more of the history of pharmacy included in pharmaceutical instruction?

F H Freericks moved that the recommendations of Chairman's Address be referred to the House of Delegates It was so ordered

Chairman Gershenfeld stated that the interesting program was largely due to the efforts of Secretary C O Lee

The following papers were read by title

Medical and Pharmaceutical Contributions to Electrical Science," by Charles Whitebread

The History of the McNeil Laboratories," by Robert Lincoln McNeil

Historical Sketch of the Abbott Laboratories," by S DeWitt Clough

' History of Bauer and Black," by A E Tatham

The next paper read was on The History of Cactus in Medicine " by J T Lloyd The author stated that he hes tated a long time before he offered the title He obtained the history of the cactus from his father and made a trip to Mexico where he had obtained scenic views in connection with a study and collection of the cactus It was necessary for him to ask the Mexican government for permission to return and he was treated with greatest courtesy by the Mexican officials The author made further introductory remarks so that those present might understand the film

The cactus grows on the very crest of the steepest mountains, which presents the difficulties in gathering The native gatherers carry their loads down these steep mountains over precipices on their backs, to the uppermost point they can be reached by burros He thought this would make an interesting illustrated story but he was unable to get the desired picture and, instead, he presented moving pictures of his father prompted by the number of requests made by members of the ASSOCIATION

Heber W Youngken, Wm B Day and W E Warren expressed their appreciation of the illustrated talk presented by Dr Lloyd

A number of questions were asked relative to cactus and answered by the author

Edward J Ireland inquired whether it would be possible to have a record of Prof J U

Lloyd's voice in connection with a short talk when showing this film He thought that this would be of great interest to the Section on Historical Pharmacy

After considerable discussion it was requested that arrangements be made for recording the voice of Professor Lloyd This has been done and the record of the voice of Professor Lloyd, and also of former President James H Beal, has been placed on file and presented to the AMERICAN PHARMACEUTICAL ASSOCIATION

Chairman Gershenfeld suggested that it be the purpose of this Section, whenever possible to obtain records of voices of distinguished members

The next paper called for was that by John Kramer, presented by Prof Heber W Young ken, of Antoine Joseph Balard, pharmacist and chemist (No discussion)

The following papers were read, without discussion

'History of the Calcium Lactophosphate Preparations," by Wm J Husa and A P McLean

"Dante and the Florence Guild of Physicians Apothecaries and Merchants " by Edward Kremers

'American Pharmaceutical Journalism, Individual Journals," by Edward Kremers and Minnie Meyer

The First Session of the Section on Historical Pharmacy was adjourned

SECOND SESSION

The Second Session of the Section of Historical Pharmacy was convened by Chairman Louis Gershenfeld, May 11th, at 2 30 P M The first order of business was the reading of the Historian's report It follows

HISTORIAN S REPORT

BY E G EBERLE

The outstanding event of American Pharmacy is the completion of the Pharmacy building in Washington—the American Institute of Pharmacy— dedicated to those who have contributed their knowledge and endeavor to the preservation of public health and to the further advancement of science in pharmacy " The site is beautiful—the building faces the Lincoln Memorial, the historic river and Memorial Bridge may be seen from the building, also the Washington Monument and part of the dome of the Capitol

This Section passed the following resolutions

Resolved that the Local Branches of the AMERICAN PHARMACEUTICAL ASSOCIATION, State Pharmaceutical Associations, Boards and Colleges of Pharmacy as well as other organizations and individuals interested in the progress and development of pharmacy be urged to supply documents of historical interest, relics and museum material to the museum and library of the Headquarters Building of the AMERICAN PHARMACEUTICAL ASSOCIATION at Washington and be it further

Resolved that organizations and individuals interested in the progress of pharmacy be urged to prepare papers on matters of historical interest for presentation to the Section of Histori cal Pharmacy of the AMERICAN PHARMACEUTICAL ASSOCIATION

The Leadbeater pharmacy, in Alexandria, was bought at public auction for the AMERICAN PHARMACEUTICAL ASSOCIATION, and as stated an association in Alexandria purchased the build ing and will maintain the historic pharmacy as a museum

Pharmacy's exhibit at the ' Century of Progress" interested the public and the visitors obtained a better understanding of the service of pharmacy, many pharmacists were registered and quite a number of them were from foreign countries The ' Century of Progress" will be opened this month and the Pharmacy Exhibit will be continued as an interesting part of it

The dedication of the Headquarters will bring ideas forward for sharing in the great work for American pharmacy It is hoped also to have complete sets of state and national proceedings, laws applying to pharmacy, histories of early pharmacy photographs of pharmacists who had a part in the development of pharmacy Individuals have copies of rare and old books which may serve a larger purpose if made part of the library or museum

At the Madison meeting Dr Edward Kremers delivered an ' Introductory Lecture to a Course in History of Pharmacy " He also presented an historical paper on "The First Modern

Pharmacopœia" Dr H H Rusby has published "Jungle Memories" in which he brings to light his experiences encountered in his expedition to Bolivia and Chile from 1885 to 1887

The Liebig museum at Giesen has a collection of glassware, typical of the Apothecary shop known to Liebig Arrangements have been made for the reproductions by the Gesellschaft Liebig museum at Giesen These bottles lend a charming and distinct note to a pharmacy and may be obtained from the society mentioned

DONATIONS

Mention has heretofore been made of donations to the AMERICAN PHARMACEUTICAL ASSOCIATION

Chairman H A B Dunning in his address at the Madison meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION, referring to the progress of the American Institute of Pharmacy, said

"Three State associations have contributed special funds for designated purposes The Texas Pharmaceutical Association for furnishing the offices of the Editor, the Maryland Pharmaceutical Association for furnishing the offices of the Secretary, and the Kansas Pharmaceutical Association has not as yet decided for what its fund is to be used Suitable acknowledgment will be made of these splendid contributions and it is hoped that the other state associations will make contributions for special purposes, thus emphasizing the close relations between them and the AMERICAN PHARMACEUTICAL ASSOCIATION and associating the name of each of them with the project

Reference was made in the April JOURNAL to donations by Dr F B Tipton and James E Hancock Among other acknowledgments during previous years are those by Mrs H M Whelpley of a large number of photographs, lantern slides, a complete set of U S Pharmacopœias, a large collection of badges and other historical contributions Mrs Albert Schneider donated a complete set of Dr Schneider's writings on various subjects Dr James H Beal has stated that additions would be made to the comprehensive library heretofore donated by him Lawrence Williams, of Baltimore, has contributed a collection of beautiful show globes, bottles and other apparatus and containers, Dr James A Spalding, grandson of Dr Lyman Spalding, the father of the U S Pharmacopœia, the proof sheets of Dr DeButts, of the first U S Pharmacopœia and letters dealing with the founding of this standard through E G Eberle and these are now part of the historical collection of the AMERICAN PHARMACEUTICAL ASSOCIATION

Moses Lichtenstein, of Cumberland, Md , has given the ASSOCIATION an Indian mortar and another large stone mortar, D F Jones, a cod liver oil syphon For the class of 1887 of the Eclectic Medical Institute, Prof J U Lloyd has presented a Wedgwood mortar together with its history The family of Frank H Carter has given a bell metal mortar from the pharmacy of George W Sloan and a Loving Cup presented by the ladies of the AMERICAN PHARMACEUTICAL ASSOCIATION to Frank H Carter who was Local Secretary of the 1906 meeting, held in Indianapolis

The School of Pharmacy of the University of Minnesota, through Dean Frederick J Wulling, will present a display case of illustrations of medicinal plants

There are many other contributions, all of which will be cataloged so that the donors may be properly and gratefully credited A number have promised contributions which are holding until they can be properly taken care of Cooperation has been promised by Dr Charles Whitebread of the Smithsonian Institution

A charter for a non stock corporation has been granted under the name of Landmarks Society of Alexandria It was also voted unanimously to restore the Leadbeater Pharmacy and building, as far as possible, to the condition of 1792, using the material recently discovered in the attic of the old Stabler store for this purpose From the opinions of the architects who have been consulted this restoration of the 1792 conditions appears to be possible This work could not be completed in time for exhibition in May The Leadbeater (Stabler) Apothecary was recently acquired for the AMERICAN PHARMACEUTICAL ASSOCIATION by the generous gifts of Manuel Hendler, of Baltimore G A Pfeiffer, of New York, and H A B Dunning of Baltimore

The fact that Mr George A Ball, of Muncie, Indiana has donated $1000 to the Alexandria Association shows a more than local interest A brief history of the pharmacy is in preparation and will appear in the JOURNAL prior to the next annual meeting of the ASSOCIATION

Both the Library and the Museum will serve an interesting and useful purpose, the former to serve pharmacists in research work and in a like way the Museum will have value in depicting the history and development of pharmacy and supplement other libraries and museums of Washington No specific plans are laid down but will be developed according to the contributions made and opportunities afforded

IN MEMORIAM

The following have served pharmacy and record is here made of work well done in the memory of the deceased we pause for a moment, among them are Joseph M Armitage, Prince ton, Miss , Florin J Amrhein, Boston, Mass , H E Benfield Cleveland Ohio, L C Brenner, Gonzales, Texas, Joseph W England, Philadelphia, Pa , E H Gane, Montclair, N J , H G Greenish, London, England Joseph L Mayer, Brooklyn, N Y , Barnett Miller New York N Y , L Mayer, Brooklyn N Y C C Plitt, Baltimore, Md , Robert Simpson, Philadelphia Pa , Walter V Smith, Philadelphia, Pa , Frank B Stephens, St Augustine Fla , Leo Suppan, St Louis, Mo , Walter B Swindell, Baltimore, Md , James A Yates Pittsburg, Kansas, Harvey B Robinson, Baltimore Md Brief sketches of the deceased may be found in the JOURNAL

The Historian expects to make further reports on the development of the library and museum as far as historical material is concerned The removal from Baltimore and the work in connection therewith has interfered with making a more complete and detailed report at this time It is a pleasure to note the instructive program prepared for this meeting

The report was accepted

Heber W Youngken inquired whether the Whelpley collection of slides were in such shape as to be used from time to time The Historian stated that these slides were on hand but had not been arranged for lecture purposes at this time, but he agreed with Dr Youngken that this should be done

An illustrated lecture was given by Charles H and Mrs M R LaWall on the 'Squibb Collection of Pharmaceutical Antiquities Being the Joe Mayer Collection of Wiesbaden "

The following papers were read by title

"A Brief History of Apothecaries Hall," by S G Gessner

"History of the First Twenty-Five Years of the Oregon State Pharmaceutical Association," by Dean Adolph Ziefle

"William Longshaw, Jr —Naval Surgeon and Pharmacist, a Hero of the Civil War," by Louis H Roddis, Lt Comdr (M C) U S Navy, Editor, Naval Medical Bulletin

The next paper presented was on ' Patent Medicines," by J Hampton Hoch

After conclusion of the paper, Edward J Ireland stated that very frequently historical papers do not have references which detracts from the value of the paper He suggested and made a motion that whenever it is possible references should accompany papers This was carried

The next paper presented was on "Notes on Early Drug Legislation," by F W Nitardy

The following papers were read by title

"History in the Drug Store," by F B Kilmer

'Alchemy," by W H Blome

"A Brief Account of the First Fifty Years of Pharmacy Education at Purdue, ' by C O Lee

The following paper was presented

"United States Patents Granted for Medicines during the Pioneer Years of the Patent Office," by Lyman F Kebler, former Chief, Drug Division, Bureau of Chemistry U S Department of Agriculture

The author stated that the paper was prompted as the result of some investigation which he was engaged in in connection with patent medicines

Hugo Kantrowitz as Chairman of the Committee on Nominations reported the following nominees for the ensuing year *Chairman*, C O Lee, Indiana, *Secretary* H W Youngken, Massachusetts, *Delegate to the House of Delegates*, Louis Gershenfeld Pennsylvania, *Historian* E G Eberle, Washington, D C

The report of the Committee on Nominations was accepted and the Chairman of the Committee on Nominations was requested to cast a unanimous ballot of the Section for the officers named The officers of the Section were duly installed

Chairman Gershenfeld called on Heber W Youngken, secretary-elect, for a few words He expressed his appreciation for the honor conferred and stated that he was very much interested in historical matters

A vote of thanks was extended to Chairman Gershenfeld —Carried

The Second Session of the Section on Historical Pharmacy was then adjourned

---

AMERICAN MEDICAL ASSOCIATION

The American Medical Association adopted the following resolution

Resolved, That the House of Delegates of the American Medical Association endorses in principle the report of the Medical Society of the District of Columbia on the subject of hospitals and dispensaries maintained by the United States Government in the District of Columbia, and the protest of the said society against the extension of the activities of these agencies beyond the legitimate purposes for which they were created, and be it

Resolved, That the House of Delegates recommend that the constituent state associations take such action as may so influence their representatives in Congress that the taxpayers of the country may be relieved of the unjustified expenditure of public funds herein set forth, and that the protest of the medical profession of the District of Columbia may be supported by the voting strength of the national profession

U S P AND N F EXHIBIT AT A M A CONVENTION

Western Reserve University's School of Pharmacy and the Academy of Pharmacy had three exhibits among the scientific displays of the American Medical Association's convention Two of these, the U S P and N F displays were particularly effective Each display was housed in its own booth and was in personal charge of the faculty of the School of Pharmacy

By means of show cards and samples mounted on the three walls of each booth the visiting physicians were told the why and wherefore of specifying U S P and N F preparations, among them 'The professional pharmacist is your source of information concerning the art of compounding Use him," "Your prescription is the final expression of your effort in the treatment of disease Without intelligent prescribing all else is almost useless," "These N F preparations are used in the hospitals of Cleveland," 'These official products may be obtained in any prescription pharmacy" The displays were supplemented by three neatly printed and bound brochures prepared especially for the occasion which were handed out freely to all interested physicians The titles of these were "A Message from the United States Pharmacopœia to Practicing Physicians," The United States Pharmacopœia and Your Prescription," 'The National Formulary Can Help the Physician"

Dean Edward Spease had charge of the arrangement and direction of the display

AMERICAN PHARMACEUTICAL MANUFACTURERS' ASSOCIATION

Reaffirmation of its position in favor of sound and constructive revision of the Federal Food and Drugs Act was voted by the American Pharmaceutical Manufacturers' Association in annual meeting, June 25th–29th The revision that the association favors and desires would outlaw false advertising of drugs and prohibit the sale of articles and devices which are dangerous to health when used as directed on their labels but it must preserve the principle of constructive variation privilege with respect to official drugs subject to label notice of such variation The association also insisted that such revision provide for an administrative board to review Resolutions were adopted relating to revision of the law

The election for officers resulted as follows *President,* Carl N Angst, Indianapolis, *Vice Presidents,* Jesse L Hopkins, New York, and R H Thompson Toronto, *Secretary,* C W Warner, Newark, *Treasurer,* Frank A Mallett, Des Moines, *Members of the Board of Directors,* George R Flint Decatur, Ill, H B Johnson, Pittsburgh, and Frank Schopflin, Kansas City

COMMITTEE REPORTS

REPORT OF THE COMMITTEE ON INTERNATIONAL PHARMACEUTICAL NOMENCLATURE

BY A G DUMEZ, CHAIRMAN

To the Members of the House of Delegates

Your Committee on International Pharmaceutical Nomenclature has been inactive for the past year This does not mean that the members have not been alert and willing to serve, but that the opportunity to participate in the development of a project in pharmaceutical nomenclature, international in scope, did not present itself Such work as is being done along these lines at present is apparently being confined to the countries in which it is inaugurated and no attempt is being made to develop it in an international way

Every now and then an international movement is begun to unify and improve the nomenclature in some fundamental branch of the sciences upon which the foundations of pharmacy rest but toward which we have little or nothing to contribute, except our moral support Such a movement was begun in the field of organic chemistry several years ago The objective of the movement was to formulate a set of definitions and rules to govern the nomenclature of organic chemistry so that greater uniformity would prevail A commission was appointed by the Council of the International Union of Chemistry to carry on this work This commission rendered its first report in September 1930 and a second report in 1932 A translation of these reports from the French was made by Austin M Patterson, and published in the *Journal of the American Chemical Society* last year

The rules for nomenclature laid down in the above report will be followed by the Committee on Nomenclature of the United States Pharmacopœia, and no doubt also by the committees of revision of other national pharmacopœias, so that indirectly the work of the commission on Revision of the Nomenclature of Organic Chemistry will play a part in the unification of pharmaceutical nomenclature

It would seem that, if this Association is sincerely interested in promoting greater uniformity in pharmaceutical nomenclature among the nations of the world it will have to take the initiative in inaugurating the movement designed to accomplish this purpose To be effective, however, any movement of this character will have to be financed and this is not a propitious time for financing new projects

REPORT OF COMMITTEE ON PHYSIOLOGICAL TESTING *

Your Committee has continued the bioassay of Tincture of Digitalis, made for this purpose in 1928, by the U S P X one hour frog method, as well as by other recognized methods The assay results indicate somewhat higher values this year than during the preceding year, and further studies are contemplated to determine whether these variations fall within the limits of experimental accuracy of the method Detailed results are given in the accompanying tables

During the coming year it is planned to continue these studies on the 1928 Tr Digitalis stored in 5 gallon unopened containers, assaying it by several methods against (1) ouabain, (2) a standard digitalis leaf, (3) a tincture prepared from (2) by the Chairman Close cooperation is being maintained with other organizations engaged in digitalis bioassays from other view points

Some progress has been made during the year in compilation of a Who's Who in Bioassays "

Clinical cooperation has been obtained and much time spent in completion of the AMERICAN PHARMACEUTICAL ASSOCIATION monograph upon "Aconitum " Clinical coöperation is now being sought for similar studies upon digitalis and its preparations

The Committee has been requested to consider the suitability of various standards of reference in routine bioassays, and an attempt is to be made to collect information to serve as the basis of recommendations to the U S P XI Revision Committee

* Washington meeting May 11 1934

THRIFTY DRUG STORES (CALIFORNIA) ORDERED TO SURRENDER BLUE EAGLE

The Thrifty Drug Stores, a California chain with headquarters in Los Angeles, was ordered by NRA to surrender its Blue Eagles for violation of the trade practice provisions of the retail drug code

The case has been referred to the Litigation Division, with the request that suit be filed to obtain an injunction restraining further violation

According to press reports this order was made non effective by a court action Compliance with codes depends on confidence in the officials and in assurance that no partiality is shown in enforcing them

BUSINESS SUBSIDIES UNDER NRA

It is not right to say that business has received no Government subsidy Yet relatively a small percentage of those who went under the codes and volunteered to shorten hours and increase pay rolls were Government beneficiaries They put up the additional money needed out of their own reserves, and if reserves had already been exhausted they borrowed from private sources

EDITORIAL NOTES

Because of association matter in this issue a number of items were omitted from this department

COMPARISON OF CYANIDE ANTIDOTES

Sodium nitrite combined with sodium thiosulphate, sodium nitrite, methylene blue and sodium thiosulphate, in order of decreasing efficiency, have been found to be clinically useful and experimentally effective in protective and resuscitative treatments of fatal cyanide poisoning, according to a recent paper of P J Hanzlik and A P Richardson of Stanford University, School of Medicine They also found glycerinic aldehyde to be experimentally effective but clinically inadvisable

NATIONAL BOTANIC GARDEN IN WASHINGTON

The House Library Committee in coöperation with botanists and others has provided for the appointment of sub committees to carry on the work of establishing a great national botanic garden Frederic A Delano, chairman of the National Capital Park Planning Commission, has agreed to act as chairman of the general committee and will appoint the sub committees The project is of general interest including pharmacists More than 400 questionnaires have been addressed to botanic gardens in all parts of the world, seeking information, and many replies have been received

NORTHWEST RECTANGLE, WASHINGTON

'The Northwest Rectangle under plans announced by the National Capital Park and Planning Commission, promises to become an architectural rival of the downtown triangle, one of the world's most imposing cluster of Government buildings

'This site plan, released by the Park and Planning Commission shows graphically the composition of the proposed Northwest Rectangle On the extreme left (west) are the Naval Museum and Navy Building of the future Then come the National Institute of Health and Naval Hospital now in use Next are the projected War Department, three undesignated buildings and the Interior Building A strip along E Street between Eighteenth and Twenty-Third would be transformed into a chain of small parks To the south, between C Street and Constitution Avenue, are indicated the *American Institute of Pharmacy* National Academy of Sciences, Public Health Service and proposed administration building of the Pan-American Union The square bounded by Twentieth and Twenty-First Streets, C Street and Constitution Avenue and now occupied by a temporary building housing the Federal Trade Commission would be the site of some future semipublic building '

PERSONAL AND NEWS ITEMS

We are advised that the names of Mr and Mrs W Paul Briggs and of Mr and Mrs George M Hocking of Washington, D C, were not included in the List of Registrants in May JOURNAL, A PH A

At recent commencement exercises of St John's University, **Dean John L Dandreau**, of the College of Pharmacy, was awarded the degree of Doctoris Judicæ Scientiæ (S J D)

Samuel C Henry, former secretary of the N A R D, has been named associate editor of the *American Druggist*

Dean J G Beard was honored at the commencement exercises by associates at the University of North Carolina, on the completion of his 25th year as teacher in the School of Pharmacy

Thurston Merrell spoke on 'The Personal Factor in Pharmacy," at the recent meeting of West Virginia Pharmaceutical Association

A Kiefer Mayer was awarded the degree of bachelor of science in pharmacy at the commencement exercises of Indianapolis College of Pharmacy The degree was conferred by **F E Bibbins**, president of the Board of Trustees

E V Zoeller, of Tarboro, N C, was, on June 14th, presented with a national certificate of honorary membership in the Rho Chi Society The presentation was made at a dinner given at the State University by the local chapter after tributes had been paid to his life and career The other members of the Board of Pharmacy as well as the teaching staff of the School were present as invited guests Mr Zoeller became a member of the A PH A in 1878

John W Power was appointed to be an Administration member of the Code Authority for the package medicine industry Mr Power is now serving on other code authorities of New York

James M Penland, president of the Southwestern Drug Corporation, former president of the National Wholesale Druggists' Association and widely known financier and jobber, was married to Miss Ethel McLaughlin Dunn of New York City and Savannah, Georgia, June 13th, at Whitewright, Texas

Vice President John Nance Garner, a citizen of Uvalde, Tex, who got his political start from a drug store mishap, has been made a member of the Texas Pharmaceutical Association A sterling silver membership card was presented to him by representatives of that organization during the recent convention of the AMERICAN PHARMACEUTICAL ASSOCIATION in Washington

Clyde Eddy, member of the AMERICAN PHARMACEUTICAL ASSOCIATION, well known pharmacist, writer and explorer whose thrilling 800 mile voyage down Colorado River has been given wide publicity, will again make that trip, associated with Dr Russel G Frazier of Bingham Canyon, Utah It will be known as the 'Eddy-Frazier Colorado Expedition"

The purposes of the expedition are to complete a pictorial record begun by Mr Eddy in 1927, to compile temperature records through Grand Canyon, and to accumulate geographical data concerning the river and canyons above Boulder Dam The Expedition will also place a bronze plaque at Separation Rapids where three members of Major Powell's party left his exploring party in 1869 and were killed on the rim of the canyon by Indians

The story of the first expedition by Mr Eddy was published in Down the World s Most Dangerous River ' English edition—' Danger River"

Purdue University has published in booklet form the address delivered by Edward Kremers at the Convocation celebrating the 50th anniversary of the Purdue University School of Pharmacy, entitled 'The Old Northwest Territory and Pharmaceutical Education"

The Oregon State Monthly has an article by Dean A Ziefle on "Pharmacy as a Vocation" Publicity plans have been started for the 1935 A PH A meeting to be held in Portland Ore in 1935

A study of the efforts of the drug industry to correct uneconomic price practices through carefully controlled distribution by E Allen Newcomb, son of E L Newcomb, secretary of the National Wholesale Druggists Association, was submitted to the faculty of Harvard University School of Business for his Master's degree

News-Week, of June 16th, states "Faculty members of the University of Chicago and newspaper men sat popeyed last week in the University's Oriental Institute Before them a panorama of the human race was unrolled on the screen It was a private view of 'The Human Adventure,' by Dr James Henry Breasted,[1] a film showing how the secrets of dead empires are brought to light by archeologists"

A reproduction of the establishment of Eli Lilly, Sr, which stood at Pearl and Meridian Streets, Indianapolis, fifty eight years ago is to be erected in a two story brick building The structure will contain as near as possible the same equipment that Eli Lilly, Sr had in the original laboratory in 1876 Some of this equipment has been preserved, and the instruments that have been lost or destroyed will be rebuilt The replica will be opened for the first time at the dedication of the research building in October

The Pharmaceutical Echo is published by the Student Branch, A PH A, State College of Washington The editor is Marlowe Dittebrandt, assistant editor, Alice Swanson The April number is dedicated to Miss Belle Wenz, member of the Faculty Board of Control Articles of that issue are of interest and well selected

OFFICERS OF STATE PHARMACEUTICAL ASSOCIATIONS

Reports on some of the State Associations were made in previous issues of the JOURNAL and additional items are added in this number

The JOURNAL will thank association officers for corrections of the list printed in each issue of the roster, in the advertising section The JOURNAL will also welcome reports and photographs of officers and donations of historical material for the museum of the American Institute of Pharmacy

A number of reports had to be omitted, and will follow in the next issue of the JOURNAL

[1] A pharmacist in earlier years

Idaho Pharmaceutical Association will sponsor a caravan of Idaho pharmacists to attend the meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION in Portland, Ore

ALABAMA

General Hugh S Johnson was called upon by the Alabama Pharmaceutical Association to include a markup covering labor cost as a part of the cost definition of the Retail Drug Code Another resolution called upon the United States military and naval commands to recognize the profession of pharmacy

Officers for the ensuing year are *President*, C C Thomas, Selma, *First Vice President*, N G Hubbard, Birmingham, *Second Vice President*, Sam Watkins Dora, *Treasurer* Wilbur Ward, Tuscaloosa *Secretary*, W L Bingham, Tuscaloosa W E Bingham[1] was presented with a loving cup as the oldest living member of the organization

ARKANSAS

The Arkansas Pharmaceutical Association met in Texarkana, June 12th 14th The members decided to make a special study of the model narcotic law and encourage policies in keeping with the ideas of the drug industry

The following officers were elected *President*, John F Cox, Hope, *First Vice-President*, Purcell Smith, Little Rock, *Second Vice-President*, T Howard Warfield, Stuttgart, *Treasurer*, Joseph Poch, Jr, Little Rock, *Secretary Manager* Ira Brite, Fort Smith Offices of the Association will be established in Little Rock

CALIFORNIA

The twenty eighth annual convention of the California Pharmaceutical Association held at Sacramento, June 3rd–6th, registered an attendance of about 400 It was one of the most definitely fruitful meetings ever held Discussions centered on codes and fair prices Mrs Edna Gleason gave fully of her time and energy in the past year and presided over the sessions with vigor and dispatch

The following officers were elected for the ensuing year *President*, C R Brogan, Los Angeles *First Vice President*, W E Rutherford, Santa Rosa, *Second Vice-President* Charles R Seward Pasadena, *Third Vice-President*, L J Fischl Berkeley, *Treasurer*, John Wagner, Long Beach, *Secretary*, Roy S Warnack Los Angeles *Executive Committee Chairman* Edna Gleason, Stockton, George H Frates, San Francisco, R M Leise, Los Angeles

COLORADO

Colorado Pharmaceutical Association had the largest meeting in its history Alfred W Pauley, of St Louis, was one of the speakers Among the resolutions was one urging the education of the public to the menace of price-cutting and misuse of the word drug "

The following officers were elected *President*, William C Alexander Salida, *First Vice President*, Paul G Stodghill, Denver, *Second Vice-President*, Clyde C Phillips Colorado Springs, *Treasurer*, V N Lagerquist, La Junta, *Secretary*, C J Clayton, Denver

FLORIDA

The following officers were elected by Florida Pharmaceutical Association *President*, Don Evans, Orlando, *First Vice-President*, Victor Wray Haines City, *Second Vice-President* George Taylor, Miami Beach, *Third Vice President*, J A Jones, Daytona Beach, *Secretary-Manager*, M S Adler Tampa *Members of the Executive Committee Chairman*, J K Clemmer, Miami, E P Purcell, Tampa, L H Penberthy, Tampa F Lindeman, Leesburg, and D G Perry, Avon Park

GEORGIA

Georgia Pharmaceutical Association elected the following officers *President*, W T Knight, Jr Savannah, *First Vice-President* R Lee Olive, Augusta, *Second Vice President*, Walter West, Sandersville *Third Vice President*, H Peters Manchester Robert C Wilson, of Athens was named *Secretary Treasurer* by the board of directors, in the post-convention session of the group

Discussion of price stabilization," the adoption of the mail ballot method of voting for elective officers in the future and the appearance of speakers of national renown attracted the largest assemblage of retail druggists ever recorded at a Georgia convention

IDAHO

The 28th annual meeting of Idaho Pharmaceutical Association was held at Lewiston, June 25th–26th No outside speakers were on the program and President J B Ostrander made no address The secretary's report was distributed in printed form the net assets of

[1] Deceased July 10, 1934

the Association were shown to be $1458 52

The following officers were chosen to serve for the year 1935 *President*, Charles Carter, Moscow, *First Vice President*, C R Isenburg, Rupert, *Second Vice President*, Earl Evans, Idaho Falls, *Secretary-Treasurer*, Elmer B Williams, Boise

ILLINOIS

Illinois Pharmaceutical Association elected the following officers *President*, George V Haering, Chicago, *First Vice President*, H M Anderson, Monmouth, *Second Vice-President*, L Brown Hamilton, Galesburg, *Third Vice President*, E J Merriman, Joliet, *Secretary*, W B Day, 715 S Wood St, Chicago, *Treasurer*, George Bennett, Urbana La Salle was chosen as the 1935 convention city

IOWA GROUP ASSOCIATION MEETING

An important meeting was recently held of Association officials including presidents and secretaries of various group organizations in Iowa Seventeen of the twenty one group presidents were present and fifteen secretaries All officers of the State association were present The purpose of the meeting was to coordinate the work of the various groups and come to a more definite understanding as to what may be accomplished

INDIANA

The following officers were elected by Indiana Pharmaceutical Association at its annual convention held at Lake Wawasee *President* E A Ridgely, Gary, *First Vice-President* Ed Harper Muncie, *Second Vice President* G D Revington, Monticello, *Third Vice President*, Ralph E Thornburg Syracuse and *Secretary*, F V McCullough New Albany

KENTUCKY

Kentucky Pharmaceutical Association elected the following officers *President* Henry Frankel, Louisville *First Vice President* W E Albritton, Paducah, *Second Vice President* E C Williams Adairville, *Third Vice President*, Herman Schuler, Covington, *Recording Secretary*, J W Gale Frankfort, *Corresponding Secretary*, R A Gale Frankfort *Treasurer*, William J Johnson Mayfield

LOUISIANA

Louisiana Pharmaceutical Association elected the following officers for the ensuing year *President*, William A Worner, *Vice Presidents*, Joseph Clesi, New Orleans A J Boudreaux, Opelousas, Henry Richardson New Orleans, Raymond Ware Monroe, and John P Campbell, Alexandria, *Treasurer* Elmo Cire, New Orleans, *Secretary* Paul Wellbacher, New Orleans, *Members of Executive Committee*, Roy A Dean, Monroe, and Eugene Vogt, Ferriday

MARYLAND

See June JOURNAL for officers of the Association

Among the speakers at the meeting were President Robert P Fischelis of the A PH A, A E Hungerford, Maryland Director of International Emergency Relief President Ernest Little of the A A C P, Dr Robert H Riley, Maryland Director of Health, and Dr Huntington Williams, Commissioner of Health of Baltimore President L V Johnson's address was forceful in many respects Evidently, he is not in full accord with all provisions of the New Deal

MASSACHUSETTS

Recommendations by Mr Adamo which were adopted by the convention include Reorganization of Massachusetts druggists by enrolling every registered pharmacist of desirable character, a paid executive for continuous administrative responsibility, revision of by laws, endorsement of the New England Drug Show, after a study by the executive committee when the time arrives, continuation of the usual scholarship in the Massachusetts College of Pharmacy

Officers for the ensuing year are *President*, Joseph A Martin Malden *Vice Presidents*, T Joseph McAuliffe Lynn, and John E F Cusick, Fall River, *Secretary* Carl G A Harring Newton Center *Treasurer* Lyman W Griffin, Allston, *Trustees of Permanent Funds*, John R Sawyer, Herbert Packard and P J Cuddyer

MISSISSIPPI

The Mississippi Pharmaceutical Association met in Jackson, June 18–20, 1934 An effort is being made in Mississippi to return the drug business to pharmacists

The following officers were elected *President*, Lew Wallace Laurel *First Vice President* J S Puller, Starkville, *Second Vice President* John C Hodge Natchez *Secretary*

Treasurer, S B Key, Jackson Tupelo was chosen as the convention city for 1935

NEW YORK

The New York Pharmaceutical Association met in convention at the Sagamore Hotel, Lake George, June 21st–24th The attendance was unusually large, meetings well attended, and one of the high lights of the occasion was a splendid address by Dr R L Swain During the convention more than one thousand names were added to the membership

The following officers were elected *Honorary Presidents*, John Scavoc, New York City, and Jacob Diner, New York City, *President* John F O'Brien Rochester, *First Vice President*, Henry Wildhack, Newark, N J , *Second Vice President*, Morris Brodkin, New York City, *Third Vice-President*, Charles Heimer sheimer, Brooklyn, *Executive Secretary*, Robert S Lehman, Brooklyn *Treasurer*, Richard Austin Cairo

It was recommended that the convention in 1935 be held at Hotel Sagamore

NORTH DAKOTA

The following officers were elected by North Dakota Pharmaceutical Association *President*, L G Beardsley New Rockford, *Vice-Presidents*, Cap H Saunders, of Minot, and A E Erickson, of Fargo *Secretary*, W H Sudro, Fargo, *Treasurer*, P H Costello, Cooperstown

The convention asked abolition of the classification of assistant pharmacists now established under state law, and suggested that special privileges to take examinations to become full-fledged pharmacists be accorded to men now holding positions under the assistant classification

PENNSYLVANIA

The 57th annual convention of the Pennsylvania Pharmaceutical Association met on June 19th, at South Mountain Manor, Werners ville, the largest number in the history of the Association, nearly six hundred being present

The officers for the ensuing year were elected as follows *President* Frank P Kelly, Car bondale, *First Vice President*, Harry E Wertz, Johnstown, *Second Vice President*, Henry V DeHaven West Chester, *Third Vice-President* J W Garlick, Upper Darby *Secretary Treasurer*, J B Pilchard, Harrisburg, *Executive Committee Chairman* Henry Brown, Scranton, John C Walton, Philadelphia Robert R Gaw Pittsburgh

The following were elected to honorary membership in the Pennsylvania Association Dr W O Frailey, Sr , Lancaster, Dr George A Gorgas, Harrisburg, Dr Richard V Mattison Ambler, Dr E F Kelly, Washington, D C

In 1935 the Association will cruise on Lake Erie, June 17th–21st

Much constructive work was accomplished and altogether the 1934 convention was conceded quite a success

(*To be continued*)

OBITUARY

OTTO P MEYER

Otto Paul Meyer, member of the AMERICAN PHARMACEUTICAL ASSOCIATION, vice president of the Meyer Brothers' Drug Company, St Louis, died June 20th, in Port Huron Mich aged 64 years Pneumonia was the direct cause of his death

Mr Meyer was born in St Louis in 1870 son of the late C F G Meyer He received his education at Smith Academy and at the University of Michigan graduating in 1892 and became affiliated with the drug company on the completion of his studies Mrs Meyer, two daughters two brothers and one sister survive the deceased

W E BINGHAM

William Ellison Bingham one of the veteran pharmacists in the AMERICAN PHARMACEUTICAL ASSOCIATION and an *honorary president* of the National Association Boards of Pharmacy, died July 10th at his home in Tuscaloosa, following a heart attack, aged eighty years

Mr Bingham helped to organize the Alabama Pharmaceutical Association in 1878 He was chairman of the Committee which drafted the first Alabama pharmacy law, a member of the Alabama Board of Pharmacy and its secretary for many years At the recent meeting of Alabama Pharmaceutical Association he was presented with a loving cup in recogni-

tion of the esteem in which he was held, and as the oldest living member of the organization and its secretary for thirty four years

Mr Bingham is survived by a daughter and a son

E B SHUTTLEWORTH

Widely known and respected in both the Provincial and Dominion fields of pharmacy, Prof Edward Buckingham Shuttleworth died in Wellesley Hospital, June 24th, aged 92 years A veteran of the American Civil War and known as an artist, Professor Shuttleworth made pharmacy his life work teaching on the staffs of two colleges and acting for many years as Toronto bacteriologist His early education was obtained in Ireland, where he studied chemistry under Sir Robert Kane at the Royal College of Science, Dublin He came to Canada with his parents, he engaged in the drug business in Montreal and later conducted a wholesale drug establishment in Toronto

When the Ontario College of Pharmacy was founded, he was appointed its first dean and also established the *Canadian Pharmaceutical Journal*, in 1868, and edited the publication for many years In 1893, Professor Shuttleworth was made a Doctor of Pharmacy by Trinity University, and he was also an honorary member of a number of Canadian and American pharmaceutical organizations

LEGAL AND LEGISLATIVE

THE DRUG CODE BEST IN THE FIELD

The following is quoted from an editorial of the *Kanas Pharmaceutical News*

'With all its faults and weaknesses, its lack of vital parts which we believe are necessary for the complete success of NRA and the Retail Drug Code our (The Retail Drug) Code is the best yet of the many retail merchandising codes No other retail merchandising code has a 'cost provision' in it equal to ours The 'dozen price list' clause is in no other retail Code as yet We are far ahead of other retail groups Of course it is admitted that the 'cost' provision alone will not cure all of the many ills of price cutting but it puts a stop to selling below list price which is an important milestone along the highway to recovery and recovery is what we are striving to attain The next milestone to try for is an 'overhead' or 'operating cost to be added to price list' cost'

RETAIL DRUG CODE BOARD DISAGREES WITH DARROW FINDINGS

Small druggists have found in the retail drug code real protection against "the predatory practices of large operators according to a resolution of the Retail Drug Code Authority" The resolution, forwarded to NRA Administrator, Hugh S Johnson, 'condemns as intemperate 'unjust and unfair' the recent report of the 'Darrow Board" that the operations of NRA codes oppress the 'small man" and the resolution emphasizes that the retail drug code has neither created nor fostered monopoly

The administration, according to the resolution, has recognized the fundamental fact that the curbs on predatory competitive practices must differ between various fields of business activities, and the code authority expressed its confidence that all codes will be administered fairly by the administration 'to the benefit alike of the small man and the consumer"

PROHIBITED ADVERTISING IN THE CANADIAN FOOD AND DRUGS ACT

1 Subsection one of Section three of the Food and Drugs Act, Chapter seventy six of the revised Statutes of Canada, 1927, is amended by adding thereto the following paragraph immediately after paragraph (*h*) thereof

"(*i*) Adding to or removing from the list contained in Schedule A hereto such abnormal physical states, disorders, diseases or symptoms of diseases, and adding to or removing from Schedule B hereto such material, as may be deemed by the Minister to be necessary in the public interest"

2 The said Act is further amended by adding thereto the following section immediately after Section six thereof

'6*a* No persons or company shall import, offer for sale or sell any remedy represented by label or by advertisement to the general public as a treatment for any of the diseases, disorders or abnormal physical states named

or included in Schedule A to this Act or in any amendment to such schedule "

SCHEDULE A

Alcoholism, Appendicitis Arteriosclerosis Blood Poisoning, Bright's Disease, Cancer Diabetes, Diphtheria, Dropsy, Epilepsy, Erysipelas, Gall stones, Kidney Stones, Bladder Stones, Gangrene, Gastric and Duodenal Ulcers, Goitre, Heart Diseases, High Blood Pressure, Infantile Paralysis, Influenza, Lockjaw, Locomotor Ataxia, Obesity, Pleurisy Pneumonia, Ruptures, Scarlet Fever Sexual Impotence, Smallpox, Spinal Meningitis, Trachoma, Tuberculosis, Tumors, Typhoid Fever, Venereal Diseases

5 This Act shall come into force on the first day of January 1935—*Canadian Pharmaceutical Journal*

BOOK NOTICES AND REVIEWS

Handbuch der Experimentellen Pharmakologie HERAUSGEGEBEN VON A HEFFTER UND W HEUBNER, Dritter Band 2 Teil, with 66 figures, pages 621–1503 Julius Springer Berlin, 1934

This volume gives an extensive discussion of the pharmacological properties of iron, manganese, cobalt, nickel and their compounds The review of iron and its compounds is given by Professor Starkenstein (Prague) and covers more than 600 pages The book is written in an authoritative way, with a critical discussion of the very extensive literature and should be of great value to any pharmacologist The following two parts of Volume III, dealing with silver, mercury, copper, zinc lead, gold metals of the platinum group, aluminum, rare elements, bismuth, tungsten molybdenum uranium, chromium, cadmium, tin, vanadium will be published in the near future An excellent general chapter on the pharmacology of metals is contributed by Professor Heubner which should be of interest to any chemist and pharmacist Inorganic and organic compounds containing metals are discussed a critical review of oligodynamic action and of the effect of metals on growing organisms are found among other topics in this chapter Peculiarly enough, the beneficial effect of traces of certain elements upon the growth of plants and other organisms is not mentioned

The part dealing with the physico chemical properties of iron and its compounds is not entirely satisfactory The statement, for example that a strongly acid solution of ferrous iron is not oxidized by air (page 702) is wrong, actually such solutions are extremely sensitive to air oxidation

On page 730 it is mentioned that positively charged hydrous ferric oxide sols mainly adsorb negative substances Primarily however, we are dealing in these cases with a hydrogen ion adsorption with a subsequent secondary adsorption of negatively charged ions or complexes The outstanding role of the hydrogen ions should have been pointed out more clearly

The above mentioned statements do not detract from the merits of the book The printing and appearance are excellent In addition, the publisher deserves praise for his optimism in making available a handbook of this size in these times—I M KOLTHOFF

International Formulary of Ships' Medicines, 1934, issued by the International Pharmaceutical Federation, 43 Leeuwenkstraat, Leiden, Holland

In 1929 the Netherland Association for the Promotion of Pharmacy drew attention to the difficulty experienced by pharmacists in seaports in replenishing Ships' Medicine Chests There is not only a difficulty in ascertaining the formula required but delay may be occasioned and result in a ship leaving without being able to obtain the necessary medicines It is to overcome these difficulties that the International Pharmaceutical Federation prepared this volume issued under the direction of Dr J J Hofman, President, and Dr T Potjewijd, General Secretary The Board of the Federation expresses indebtedness to Secretary H N Linstead, of the British Pharmaceutical Society, Dr Fritz Wartenberg of Berlin and Prof E Collard of the Faculty of Pharmacy Strasbourg The Board states that it is hoped this book will be used extensively and that it will simplify the work of pharmacists in seaports and those responsible for the care of medicines on board of ships

The countries represented in this volume are Belgium, Denmark Finland France, Germany Great Britain Greece, Italy, Netherlands Norway, Portugal, Spain Sweden and the United States

It is not compulsory for American ships to carry any medicine, but a list of preparations has been recommended by the American Marine Standards Committee of the Department of Commerce These preparations include aromatic spirit of ammonia, aspirin tablets, sodium bicarbonate tablets, bismuth subnitrate tablets, mercuric ointment, sodium bromide tablets, brown mixture tablets, calomel ointment, castor oil potassium chlorate tablets, compound cathartic pills, Dover's powder, ear drops, eye solution, gargle solution tablets, epsom salt morphine sulphate tablets, oil of cloves, camphorated tincture of opium potassium permanganate tablets, rhinitis tablets, soap liniment, strychnine sulphate tablets, sulphur ointment, sun cholera tablets spirit of nitrous ether, ointment of zinc oxide

The names of preparations listed by other countries are indexed and described The volume contains an Index which makes it possible to look up preparations under various foreign titles To us it seems a timely compilation and should be useful as indicated in the abstract of the Preface

DONATION OF A VOLUME TO AMERICAN INSTITUTE OF PHARMACY BY L C PARSONS, BOSTON, MASS

The first part of the treatise on minerals, in which is explained the separation of gold from rocks sand, clay and other components of the earth by the use of spirits of salt (hydrochloric acid) which is the only method by which such separation may be effected, and in which is also made known a Panacea or Universal Medicine, antimonial, with explanation as to its use by Hans Rudolph Glauber, translated into French by M Du Teil, Paris, Thomas Lolly Iure Bookstore Rue St Jacques, at the corner of the Rue de Parcheminerie at the Arms of Holland A D, 1659, with the Privilege of the King

PREFACE TO THE READER IN ABSTRACT

The author explains that there are many people who not knowing his experience his travels, etc, have accused him of inability to put into print what he has maintained in regard to his scientific ideas He accuses his enemies of having spread a rumor that either he knows nothing new or that what he knows he has obtained from other people He states that if he were to follow the inclination of his nature he would be too proud to reply to them and would keep silent, but that his better sense and his regard for his fellow men demand that he give to the world the results of his studies Thereafter he explains that many people will not understand him because they are ignorant and that many other people will not want to understand him because they are envious, that for the glory of God and for his love for his fellow man he is determined to give to the world what he knows not in an artful way to please literary dilettants, but with a probity of words so that his great secrets may be understood by those sincerely desirous to know them

The author gives a brief description of his work, Treatise on Minerals," which he divides into three parts Part I, the separation of gold from other metals in rocks, sand, etc Part II the generation and death of minerals and metals Part III, the possibility of the transmutation of metals which the author states is his great desire to accomplish for the glory and benefit of the human race

The Merck Manual of Therapeutics and Materia Medica A source of ready reference for the physician Sixth Edition, Fabrikoid 1379 pages Price $2 Compiled and published by Merck & Co, Inc Rahway N J

"From an original two hundred and fifty pages in 1899, the Merck Manual has grown to one thousand three hundred and seventy nine pages The new edition has been entirely rewritten, yet maintains the characteristics of preceding editions which have made it a standard reference publication for physicians students pharmacists and nurses

'The therapy has been outlined by Dr Bernard Fantus Professor of Therapeutics, College of Medicine at the University of Illinois and has been approached, not only as a science, but as an art For this purpose ripe experience has been culled for the practical application of what has been emphasized so frequently, namely, that the patient should be treated as well as the disease

' This feature of combining savoir faire with medication and accessory regimen represents a departure from stereotyped therapeutics.

In the therapeutic portion of the more than thirteen hundred pages two hundred and fifty seven pathological conditions are presented alphabetically with reference to etiology diagnosis and therapy Over two thousand prescription formulas chiefly covering official constituents with metric system equivalents, are provided These are arranged in numercial sequence with reference to the use of each in the therapy "

THE FOUNDING OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

PRESIDENT ROBERT P FISCHELIS, in addressing the New Jersey pharmacists, who were registered on June 28th, used as a text the code of ethics formulated at the time of the organization of the AMERICAN PHARMACEUTICAL ASSOCIATION It has been a practice for several years to have the Governor of New Jersey present the Certificates of Registration and have members of the Board and other pharmacists present The ceremonies should and doubtless do impress the young pharmacists with their responsibilities and the citizens gain confidence from the evidence of regard in which pharmacists hold their profession The code of ethics adopted in 1851 follows

1 To improve and regulate the drug market by preventing the importation of inferior, adulterated or deteriorated drugs and by detecting and exposing home adulterations

2 To encourage such proper relations among Pharmacists Druggists, Physicians and the people at large, as may promote the public welfare, and tend to mutual strength and advantage

3 To improve the science and art of Pharmacy by diffusing scientific knowledge among Pharmacists and Druggists fostering pharmaceutical literature, developing talent, stimulating discovery and invention, encouraging home production and manufacture in the several departments of the drug business

4 To regulate the system of apprenticeship and employment, so as to prevent, as far as practicable, the evils flowing from deficient training in the responsible duties of preparing, dispensing and selling medicines

5 To suppress empiricism, and to restrict the dispensing and sales of medicines to regularly educated Pharmacists and Druggists

6 To uphold standard of authority in the Education, Theory and Practice of Pharmacy

7 To create and maintain a standard of professional honesty equal to the amount of our professional knowledge with a view to the highest good and greatest protection to the public

President Fischelis continued

"That was in 1851 If we were to ask any group of practicing pharmacists to day to list the important problems confronting the profession they would unhesitatingly mention every one of the objectives which the organizers of the AMERICAN PHARMACEUTICAL ASSOCIATION set out to attain in 1851 This does not mean that there has been no progress in eighty-three years It does mean, however, that the tasks set by our professional forebears have not yet been completed You who are to receive the sanction of the state to practice pharmacy this morning are therefore entering a field of activity in which much remains to be done In some respects this is very fortunate for you because you will be stimulated by the challenge of unsolved problems and unfinished tasks, and if you can survive the stress of the times economically, I am sure that you will contribute to the continuation of the steady and sound progress which has been made through the decades immediately preceding

"The pharmacists who met in New York in 1851 formed the AMERICAN PHARMACEUTICAL ASSOCIATION which has not only become the outstanding spokesman for the pharmaceutical profession in the United States but has been directly or indirectly responsible for the formation of our state pharmaceutical associations and the various national associations serving specialized fields of pharmaceutical practice such as manufacturing, wholesaling, teaching, etc In short, it is the Mother of Pharmaceutical Associations in America"

F V McCULLOUGH

JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

VOL XXIII AUGUST, 1934 No 8

FRANK V McCULLOUGH

Frank V McCullough, president of the Conference of Pharmaceutical Association Secretaries for 1934–1935, is a native of the Hoosier State He was born in 1880, reared on a farm and after his earlier education taught in a rural school He entered Purdue University School of Pharmacy, receiving his diploma from that institution in 1905 Thereafter he engaged as clerk in a drug store and from 1907 to 1929 he operated a pharmacy in New Albany, Ind For two years he was a member of H K Mulford Sales force, doing detail work in Louisville territory

In 1927, Mr McCullough was elected full-time secretary of Indiana Pharmaceutical Association and has served in that capacity since then and also as editor of the *Indiana Pharmacist*

He takes an active interest in civic affairs and served as member of New Albany City Council for eight years, as county chairman for six years and secretary of the Congressional District organization for two years

Mr and Mrs McCullough were married in 1906, they have one son

THE MISSION OF PROFESSIONS

A potent measure in bringing about an understanding of the mission of professions is reasonable, rational discussion, with the purpose of devising the best means for being of service to the public The Pharmacopœia, the National Formulary, "New and Nonofficial Remedies" influence pharmaceutical and medical practice and, reversely, medical and pharmaceutical thought are developed by acquaintance with the standards The attitude of medical practice toward individual drugs should be based on clinical confidence, and the activities of pharmacy should represent the thoughts developed by research in the field of medicine, dentistry and the divisions of pharmaceutical practice and of related sciences

Dr Lewellys Barker, speaking before the Section of Pharmacology and Therapeutics of the American Medical Association, said "Pharmacotherapy is seen at its best when, through the use of a drug, the cause of a disease is removed or rendered harmless (etiologic pharmacotherapy) before the patient has sustained irreparable injuries The organism can then right itself, so that its activities can resume the normal or physiologic course" Neither the Pharmacopœia nor the National Formulary meet all the requirements of medicine and pharmacy, and as a result the "New and Nonofficial Formulas," "Useful Remedies," hospital and dental formularies and the "Recipe Book" issued under authority of representative organizations find a worthy place in the libraries, laboratories and respective professional work rooms

Gratifying progress is being made through cooperative efforts of the members of the several professions The American Medical Association had a display in its scientific section at its recent meeting in Cleveland acquainting its members with the officials of the standards and the preparations representing these drugs The motive of the United States Pharmacopœia booth was the use of the Pharmacopœia in hospital practice and its adaptability to the needs of the practicing physician, in that connection the rules formulated by the New York Hospital, Cornell University Medical College, were brought to the attention of physicians, these may be found in the December JOURNAL, A PH A, 1933, page 1281

Recently a formulary of U S P and N F drugs and preparations has been issued under the auspices of the Philadelphia County Medical Society with the endorsement and cooperation of the Pennsylvania Pharmaceutical Association and the director of the Emergency Relief of Pennsylvania

Splendid work has been done by local associations in bringing into cooperation physicians, dentists and pharmacists, and is evidence of serious thought to raise the professional standard of pharmacy and determination to meet the responsibilities and opportunities in supplying the official preparations The papers of all of the Sections of the AMERICAN PHARMACEUTICAL ASSOCIATION show the trend and a number of them, printed in this issue of the JOURNAL, detail the practice followed by pharmacists and the measure of success achieved by them

Manufacturing pharmacists and chemists have rendered and are engaged in developing and perfecting useful materia medica and their interests as those of medicine, pharmacy and chemistry are largely common interests, in a sense and in degree the work of one branch is incomplete without the other, and full measure of credit is dependent on the recognition of all of them in the welfare of those they serve

Every divisional activity seeks the opportunity for advancement and rendering better service which will gain higher esteem, likewise, there are shortcomings in one way or another, when mutual consideration would result in general good In these columns it has been cited on other occasions that pharmacy has been somewhat over-shadowed by an over-emphasis of the commercial features in some drug stores, as a result, the public has not gained the significance of the professional value of pharmacy, for public opinion is shaped by publicity—pharmacy can be denounced or its importance pronounced—made known by printed word and by the appearance and activities of the drug store Every pharmacist owes it to himself and to pharmacy to aid in acquainting the public with the service rendered by pharmacy and its importance Every opportunity that will lend itself to the purpose should be utilized to acquaint the public with the part pharmacy has in public health service, by informing the people that pharmacists have been the chief exponents of regulations applying to the profession, for its protection against misuse of drugs, and seriously engaged in the development of a materia medica which enables medical men to make the best use of it The earnestness of this cooperation is shown by the growing interest in the discussions and exhibits to the end that therapy may be improved, that among the drugs there are agents which can be employed by physicians with confidence and reasonable expectancy of results Pharmacists are concerned, and their part in the work is not only to supply remedial agents, but also to see that preparations are supplied which represent them most effectively—that is a mission of pharmacy

---

THE CHAIRMAN'S ADDRESS OF THE BRITISH PHARMACEUTICAL CONFERENCE

THE chairman of the British Pharmaceutical Conference, as is well known, does not discuss varied phases of pharmacy but usually selects for his address a subject with which he has been engaged Thus, Chairman C H Hampshire selected for his discussion "Pharmacopœias and Formularies" *The Pharmaceutical Journal*, speaking editorially, said "As Secretary to the British Pharmacopœia Commission he must live most of his life in, as it were, a pharmacopœial atmosphere, where the most important changes are those caused by the advent of foreign and the revision of British Pharmacopœias"

The chairman reviews briefly the pharmacopœias of recent revision The British, Italian, Belgian, Spanish, Danish, Swiss, Yugoslavian, Hungarian, United States, and then discusses the Agreement which resulted from the deliberations of the Second International Conference, held in 1925 The Agreement consists of forty-one Articles, which give consideration or approval to principles of the prepara-

tion of galenicals, a definition of a standard dropper, nomenclature, maximum doses, poison table, etc

The chairman refers to formularies which have been published—the National Formulary, the British Pharmaceutical Codex, the German Erganzungsbuch, the Canadian and the Australian Formulary

The closing theme, while addressed to British pharmacists, has thoughts which have bearing on our own activities Without comment the paragraphs referred to are quoted

' The theme of this address, like that of many others delivered from this Chair, leads to the subject of pharmaceutical research The materials for the construction of pharmacopœias and formularies, provided largely by the papers contributed to this Conference, have proved of value in suggesting subjects to those desirous of contributing something to the sum of pharmaceutical knowledge, and one is led to inquire whether there are any possible extensions of the usefulness of the Conference in stimulating research The organization of cooperative investigations suggests itself as a sphere in which the Conference might carry out valuable work There are many subjects particularly the standardizing of the technique of analytical methods and processes of manufacture which are best investigated by groups of workers who are prepared to experiment with identical material and to pool results

The recent work done by a Committee of the Health organization of the League of Nations in standardizing the technique of the assay of opium provides another instance of successful effort on these lines The formation of the investigating Commissions by the Second International Conference to which reference has been made indicates the appreciation by that assembly of the value of such methods Much good work of this kind was also done by the voluntary efforts of Sub Committees of the British Pharmacopœia Commission with results which were eventually included in the British Pharmacopœia 1932, and it is hoped that similar efforts will continue with much benefit in increasing the value of the Pharmacopœia as a book of standards

' The range could be widened however, and all works of reference would be enriched and increased in value by the inclusion of precise and accurate methods There is need for a central organization which will undertake the collection and distribution of material, the comparison of results and the publication of agreed recommendations I venture to suggest that this Conference might well add to its service to pharmaceutical science by acting, through a Research Committee appointed for the purpose, as an organizing body in relation to pharmaceutical investigation "

In an earlier editorial of the same publication it was asked "Would it be too much to hope that when the Society's (British) new building is erected part will be set aside as the headquarters of pharmaceutical investigations, a National Institute for Pharmaceutical Research, at which inquiries into the pharmaceutical aspects of problems affecting the health of the nation can be made?" The editorial concludes that there was no evident reason why the Society should not provide a research laboratory adequately equipped for its needs

---

PRICE-FIXING UNDER THE NRA

RUSSELL OWEN in discussing various phases of the NRA in the *New York Times* of August 5th, states that nearly all groups have tried to live up to the codes The price-fixing regulations were dropped partly because some industries could not live under them and pay a living wage and because of the difficulties of the enforcement There was difficulty in enforcing the fair practice and price-fixing regulations in the service codes, but there have been requests for reimposing emergency price-fixing to prevent price-cutting and unfair competition It is difficult

or impossible to regulate one group of industries by rules which may not apply fairly to another group

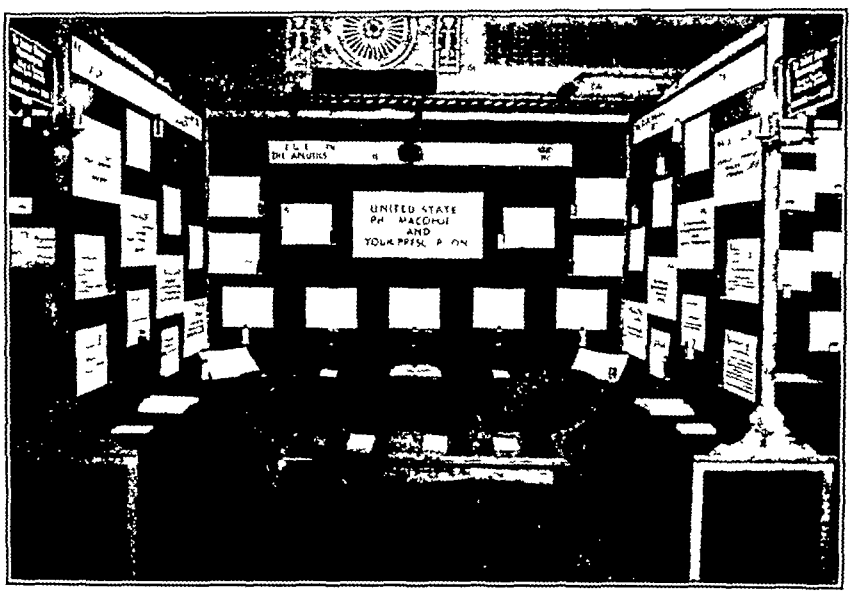
The probability of a merger of the Federal Trades Commission with the NRA is discussed by Mr Owen in the following closing paragraphs

"When General Johnson rewrites the NRA—as he will probably do very soon—some merger of these two bodies will be recommended Since the Trade Commission was created by Congress Congressional action will be necessary to abolish it but its functions may be taken over by NRA by Presidential order

"There are those close to the President who believe that this will be done in the Fall and that the new NRA, stimulator and restrainer of industry at the same time, will start out on a new field of activity which will firmly implant it in the nation's economic system With all its faults, they say, there are few industrialists or labor leaders who want to see it entirely destroyed '

THE 1934 U S P EXHIBIT AT THE CONVENTION OF THE AMERICAN MEDICAL ASSOCIATION

The United States Pharmacopœial Convention authorized the School of Pharmacy of Western Reserve University to prepare a booth on the United States Pharmacopœia for the American Medical Association convention June 11 to 15, 1934, in Cleveland



U S P Exhibit, Cleveland meeting of American Medical Association

The booth was located in the Scientific Section beside that of the AMERICAN PHARMACEUTICAL ASSOCIATION on the National Formulary Across the aisle the School of Pharmacy had its booth on the medicinal plant garden and its work in hospital pharmacy

The prescriptions of the booklet distributed— The U S Pharmacopœia and Your Prescription"—were written upon placards and placed on the walls of the booth Beneath the placards small brackets were fastened to the walls containing bottles of the filled prescriptions

The interest in the displays was very marked and was extremely satisfactory to those in charge of the booths Rarely were there less than five people at the booth at any one time

SCIENTIFIC SECTION

SALIVA TESTS I MORPHINE *

BY JAMES C MUNCH [1]

The formation and secretion of saliva by the parotid, submaxillary and sub lingual glands have been shown to be controlled by the nucleus salivoratus in the upper pons (21, 34, 59) The secretion is readily augmented by sensory stimuli, readily depressed by narcotics Since the volume of saliva excreted daily by man normally amounts to 1000–1500 cc and may be markedly increased, this pathway for excretion of foreign substances appears to deserve study

It is reported that toad and cobra venoms are excreted in the saliva, as well as the virus of rabies and of mumps (5, 6, 7)

Rosenthal (5, 6) in 1893 appears to have been the first to demonstrate that morphine is eliminated in the saliva Therapeutic doses were given to a number of hospital patients The saliva was collected at half-hour intervals, and tested chemically with iodic acid, Husemann's and Froehde's reagents Saliva from a number of normal and pathological individuals not receiving morphine or opium alkaloids gave uniformly negative results When 19 mg were administered daily, saliva tests were negative on the first and second days, then positive until one or two days after the morphine was discontinued The saliva was estimated to contain between 0 05 and 0 2 mg of morphine

A detailed series of experiments on the excretion of medicinal substances by the salivary glands were conducted by Howe (23) Gelatin capsules containing test products were given by mouth and the saliva collected every five minutes for several hours Many products appeared in the saliva within twenty minutes, and their presence was continually detected over a period of nine hours, but not after twenty-four hours Attempts have been made to correlate the salivary excretion of NaCNS and KCNS

The following products have been reported to be excreted in the saliva Aconitine, amino-acids, ammonium compounds, arecoline, atropine, bismuth salts, bromides, brucine, chlorides, chlorates, creatinine, formic acid, glucose, guaiacol cinnamate, histamine, indican, iodides, iron salts, lead salts, menthol, mercury salts, methenamine, morphine, oil of peppermint, ouabain, potassium salts, quinine, salol, sodium benzoate, sodium salicylate, sodium sulphate, strophanthin, strychnine, thiocyanates, tyramine, urea and uric acid The following are reported as not excreted in the saliva Atropine, physostigmine, sodium ferrocyanide and sodium lactate (2, 3, 5, 6, 7, 9, 10, 11, 13, 16, 17, 19, 23, 24, 33, 37, 39, 43, 44, 45, 48, 53, 55, 57, 61, 62, 63, 66, 67, 70, 72, 74)

Saliva tests were developed to detect the "doping" of race-horses Stimulants have been given to race-horses to obtain better (or poorer) performances *Varron*

---

* Scientific Section, A PH A Washington meeting, 1934

[1] Director Pharmacological Research, Sharp and Dohme, Glen Olden, Penna

(69), in 1533, reports that anise seed, honey and sandarach were given to race-horses, as stimulants An English regulation dated June 14, 1666, prohibited the use of exciting substances and methods in races run at Worksop (50) The prohibition of doping has been the subject of various circulars and regulations by racing authorities in Argentine, Austria-Hungary, Belgium, Brazil, Chile, Czechoslovakia, Denmark, England, France, Germany, Italy, Poland, Spain and United States (12, 65) Published information (8, 12, 18, 27, 28, 29, 35) indicates that horses may be stimulated with alcohol, atropine, brucine, caffeine, cocaine, digitalis, heroin, kola nut, nitroglycerin, nux vomica, quinine, scopolamine, strychnine and veratrine Thoroughbred horses are more sensitive to the action of drugs than ordinary work horses (15) Strychnine and cocaine have been used to dope hares for sport in England (32)

The parotid gland of a horse weighs about 400 Gm , the submaxillary 86 Gm and sublingual 23 Gm By cannulating Stensen's duct, 100 to 700 Gm of saliva have been collected from a horse in 15 minutes (54)

Professor S Fraenkel, of Vienna, apparently made the first scientific study of the detection of doping race-horses Theobromine was apparently suggested as the "dope " Studies were made of excretion in the sweat, feces and urine (35, 73) but it appeared that the saliva was the most feasible medium for examination (14) Professor Kaufmann developed a specific chemical technique for testing saliva under race track conditions (3, 4, 27, 28, 29, 71) Based upon his tests, the winners of several large races were disqualified and barred from tracks Neuter (47) states that doping was very common in Belgium Shortly before the World War, chickens of the guardian of the race-track of Stokel invariably died after pecking at the dung of competitors of the previous day

A technique for collecting saliva was developed in France (12) A veterinarian, a representative of the Racing Commission and an assistant lead the horse into a box-stall The veterinarian washes his hands in soap and water, then 95 per cent alcohol and dons sterile gloves A wad of sterile gauze moistened in distilled water is introduced into the mouth of the horse and squeezed over the surface of tongue and lips, the escaping fluid being caught in the collecting basin The tongue, lips and cheeks are then wiped with another piece of gauze An attempt is made to express any saliva from the Wharton canals The gauze and gloves are then placed in a jar, sometimes covered with alcohol, and sealed to prevent tampering with the sample

Chemical methods of detection have been employed with only partial success The method of Fraenkel (14) slightly modified by Lander (36) appears to be an improvement over the standard toxicological processes (1, 49) The saliva is extracted several times with 90 per cent alcohol, plus dilute acetic acid, the filtrate evaporated and extracted with ether This is evaporated to a tacky consistency and exhausted with small amounts of warm absolute alcohol The alcohol is removed and the residue dissolved in hydrochloric acid This solution is made alkaline with sodium bicarbonate and extracted with chloroform and benzene With iodine and Mayer's reagents the limit of sensitivity by morphine was 0 01 mg , with phosphomolybdic acid and gold chloride, 0 001 mg , and with tannic acid 0 02 mg

Chemical methods of procedure may fail in instances where threshold amounts of stimulants have been administered Because tests upon animals are more sensi-

tive, a series of investigations were undertaken to determine their sensitivity for various stimulants which may be used on race-horses Only the results obtained with morphine are reported in this communication

Consideration of the bioassays for morphine (46) suggested the possibility of using the "mouse-tail reaction" (Mauseschwanzphanomens) developed by Straub (64) Mice weighing 15 to 20 Gm are injected with 0 5 cc of test solution under the skin of the back or abdomen If morphine is present the tail soon curves over the back in a characteristic S-curve On stimulation, the mouse becomes somewhat restless, paresis of the posterior extremities becomes more noticeable, the back is humped and the fur stands out in a disheveled, shaggy manner The mechanism of this reaction is still unsettled (20, 22, 25, 26, 30, 31, 38, 40, 41, 42, 51, 56, 58, 60, 64, 68) Other alkaloids may give a somewhat similar response, but different symptoms are produced Positive reactions may be obtained with doses of 0 01 mg of morphine and heroin (46, 56) to 0 02 mg (42) amounts which are far below the sensitivity of chemical procedures on an extract of an organ or on the saliva

Van Rijn (56) reported in 1914 on twenty-five cases of morphine poisoning A corpse was examined and extracts of viscera prepared 59 days after death and again 38 days later The extracted morphine injected subcutaneously under the skin of the back of white mice caused their tails to become stiffly erect in S-shape curves in two to twenty minutes

Maier (42) injected 10 mice at each of a series of increasing doses, from 0 01 mg per 20-Gm mouse to 0 50 mg per 20 Gm (0 5 to 25 mg per Kg) (Table I) The animals showing a questionable reaction were divided arbitrarily, half being considered positive and half negative A definite relationship was found between the dose administered and the duration of the reaction, but this relationship was not as close as the dose percentage response relationship Using the factors of duration and percentage, he tested a series of samples of unknown potency, obtaining results which, in general, were ten per cent less than theory He concluded that this method was suitable for legal and toxicological assays, and had a sensitivity of 0 02 mg of morphine, an amount much less than could be determined by chemical methods Keil and Kluge (31) confirmed the nature of the dose percentage and dose time relationships, using 100 mice at each dose from 1/100 mg of morphine hydrochloride per 10-Gm body weight, down to 1/40 mg (1 to 2 5 mg per Kilo) (Table I) Solutions containing amounts of morphine unknown to the investigator at the time assays were made, were tested with an average error of 6 per cent by the dose percentage reaction, and 2 per cent by the dose time reaction, or an average of 4 per cent For the determination of morphine, 0 0125 mg can be determined with an accuracy of about 5 per cent

A review of the literature showed that about 0 01 mg of morphine may be detected with an accuracy of five per cent by means of the tail reaction of white mice

EXPERIMENTS

In my investigational work preliminary experiments showed that the presence of morphine dissolving in saliva could be detected by the mouse-tail method with the same precision as when morphine had been dissolved in distilled water A large number of tests with differing doses of morphine led to the development of a

specific technique for this test It did not alter experimental results to inject solutions under the skin of the abdomen rather than under the skin of the back, as recommended by previous workers The volume of injected solution did not make much difference in the nature of morphine response produced, but for uniformity it was decided to inject approximately 25 cc of solution per kilo, which corresponds to 0 5 cc for a 20-Gm mouse In those instances where weak solutions were tested and larger volumes injected up to 4 cc per 20-Gm mouse, dependable results were still obtainable, although a somewhat longer time period was usually necessary for the development of the characteristic phenomena

After injection the mice were placed in individual cages in a quiet place and observed every minute or so for a period of half an hour It was arbitrarily decided to fix a time period for reading the results of the injection as fifteen to twenty minutes after injection Those animals which showed positive reactions in five minutes, for example, still showed a positive reaction in fifteen to twenty minutes On the other hand, those animals which showed uncertain responses in fifteen to twenty minutes and gave questionably positive reactions in half an hour when injected with a given dose usually failed to show a consistent response in subsequent trials with the same quantity given to the same animal

The degree of response varied with the dose of morphine injected (1) Doses below the accepted threshold gave evidence of somewhat increased irritability and alterations in respiratory rate, the tail did not leave the ground voluntarily or after stimulation of the back These responses were noted, but considered negative (2) Threshold doses producing the satisfactory response caused definite alterations in respiratory rate The mice tended to stand with the back arched and head depressed When they were gently stimulated by a current of air or stroking the back with a lead pencil, the back became more arched The hair tended to stand out in a shaggy manner The posterior limbs showed rapid fibrillary twitchings tending toward paresis and the tail was lifted from the floor of the cage to or toward a definite S curve After the stimulus was discontinued, the tail reaction and the appearance of the posterior extremities extended for several seconds to several minutes (3) When a supramaximal dose was administered, a very rapid development of the characteristic symptoms was followed by marked apnea, the fibrillations tending to extend to the anterior portions of the injected animals and the tail response developing normally without external stimulus and persisted for some time In conformity with the literature findings, the duration of the effect was roughly proportional to the dose administered One mouse in Fig 1 shows the supramaximal effect, another shows the threshold

Fig 1 —Tail response of mice after injection of morphine derivatives

The procedure, based on my experiments, was outlined Weigh a series of mice of either sex with an accuracy of one gram, inject morphine solution in a dose of approximately 25 cc per kilo subcutaneously under the skin of the abdomen, place injected animals in a quiet place Between fifteen and twenty minutes after

injection of the threshold dose gentle stimulation produces arching of the back, posterior partial paresis and elevation of the tail to or toward an S-curve A number of animals (at least ten) should be injected, after preliminary tests have indicated an approximate threshold concentration Animals should show a positive response within 15–20 minutes in determining the threshold dose

In applying this procedure to the determination in the saliva of horses, a series of trials have been made Collections of about 2 cc of saliva from each of fifty horses not injected with morphine were made, 1 cc and, in many instances, 2 cc of each saliva were injected by the method outlined, and no response obtained This appears to justify the conclusion that the normal saliva of a horse not injected with morphine does not give symptoms suggesting a tail reaction A series of doses of morphine, ranging from 100 mg to 1 Gm per horse were then injected, in general, the horses weighed about one thousand pounds Typical results of this test are given in Table II

No chemical tests were made upon the samples of saliva In each instance a control sample of saliva was collected immediately before the injection, then saliva samples taken fifteen minutes and thirty minutes after injection In some instances samples of saliva were collected at periods greater than thirty minutes after injection, but in general, the results obtained with them were in agreement with the results obtained at the thirty-minute interval Injection of saliva in the pre-

* 1/4 grain arecoline

liminary tests was made in doses of 0 25, 0 5 and 1 cc into each of three mice Based upon these results, further samples were injected in proper dilutions, as indicated

No effort was made to follow through a complete collection of saliva at various intervals after injection in order to obtain the absolute amount of morphine quantitatively eliminated in the saliva This rather complicated problem is being considered and will be reported subsequently No difficulty was encountered in detecting morphine in the saliva of horses that had received subcutaneous injections of 100 mg of morphine sulphate per 1000 pounds of horse (approximately 0 2 mg per kilo body weight of horse, or $1^1/_2$ grains of morphine sulphate per horse) The therapeutic dose of morphine for a horse (15) is listed as 0 3 to 0 6 Gm It would, therefore, appear that after the administration of large therapeutic doses of morphine its presence might be detected in the saliva over a period of half an hour Doses of morphine suggested for "doping" race-horses correspond to 3 to 5 grains of morphine sulphate per horse, amounts which may be detected by this procedure, even without attempting to concentrate the saliva If the saliva is concentrated by chemical procedure, the sensitivity may be greatly increased The administration of $^1/_4$ grain of arecoline per horse increased salivation, but did not appear to affect the elimination of morphine

CONCLUSIONS

1 Morphine may be quantitatively determined by the mouse-tail reaction

2 The amounts used in "doping" race-horses can be readily detected in the saliva fifteen and thirty minutes after administration

3 A standardized technique has been developed for this test

ABSTRACT OF DISCUSSION

W B D Penniman said he would discuss this report by Dr Munch, in view of the fact that we are collaborating on this race track work, to a certain extent 'It must be remembered that the collection of saliva from a race horse is not a quantitative procedure, although a specific technique has been developed for this purpose. The race horse is most emphatically *not* a laboratory animal After the sample is obtained the toxicological difficulties develop because of the presence of iron from the bit, traces of blood and other substances which may interfere with our tests By a chemical method I have succeeded in detecting or identifying fractions of a mg of the morphine alkaloids caffeine, strychnine and cocaine These are only four of the substances which we have to seek Everybody who has worked on this subject to date seems disposed to keep it a secret If any chemist or any pharmaco ogist is interested in this matter, I know I am speaking for Dr Munch as well as my own organization in saying we will be glad to confer with them and get, as well as give any possible assistance In making saliva tests at this time, the chemist is in a little better shape than the pharmacologist Tests upon the saliva by chemical and pharmacological methods may be depended upon to show whether horses have been 'doped ' "

F A Upsher Smith said that this matter is of tremendous importance because when you

find harmful poisons in a horse's mouth after a race, you are questioning the honor of the men who own and train the horses ' The work Dr Munch is doing is a credit to him and to the country, because all decent racing men will appreciate the fact that it is only the rotters' who are doping their horses and the good men don't want it I would like to suggest that the perspiration from under the saddle would be a more handy substance to use than the gooey saliva The favorite mixture for doping horses is nitroglycerin, strychnine, digitalis and heroin Is it possible to get an accurate result between the time the horse comes back from weighing in and the time he returns to the stable?"

The author stated that the chemical methods developed by Dr Penniman are much more sensitive than those published in the literature and he deserves to be commended for his studies on this subject We are uncertain whether the chemical or biological methods are the most delicate, as well as the most specific, for testing the horse's saliva With the animal test you get definite symptoms more rapidly than with the chemical with the chemical method you can often isolate the specific alkaloids and identify them The combination of both methods appears highly desirable I have had no experience with perspiration from under the saddle, but believe that it might be contaminated with too much dirt It is hoped that the application of these methods of chemical and biological testing will stop the doping of race horses "

THE STABILIZATION OF SYRUP OF FERROUS IODIDE, U S P X

BY WILLIAM J HUSA AND LYELL J KLOTZ

(*Concluded from page 683, July Journal*)

As indicated in Table II, the hydrolysis of aqueous solutions of ferrous iodide corresponds predominantly to the equation

$$FeI_2 + HOH \rightleftharpoons Fe(OH)I + HI$$

and apparently, two equilibria exist since reasonably constant values of K_1 were obtained for solutions having either a p_H of 3 2 or 4 1 In the former case, the degree of hydrolysis is approximately 0 30% at the concentration of the U S P Syrup, in the latter instance, it is approximately 0 027% Solutions of ferrous iodide of p_H 4 1 are hereafter designated as solutions at primary equilibrium, those at p_H 3 2 are considered to be at a condition of secondary equilibrium

The Mechanism of Iodine Formation —The decomposition of aqueous solutions of ferrous iodide consists in the formation of free iodine and ferric hydroxide If sucrose, or other peptizing agent is present, however, ferric hydroxide does not precipitate and the appearance of iodine is dependent upon the rate at which the peptizing agent reacts with free iodine as well as upon the rate of auto-oxidation The presence of soluble ferric ion is prohibited by the presence of iodide ion which reduces it to the ferrous state

Several equations to account for the decomposition of ferrous iodide preparations have been advanced Salzer (9) and Sadtler and Coblentz (10) formulated the equation

$$(I) \qquad FeI_2 + 2HOH + {}^1/_2 O \rightleftharpoons Fe(OH)_3 + HI + I$$

Mylius (11) suggested

$$(II) \qquad 2FeI_2 + 3O_2 + 3HOH \rightleftharpoons 2Fe(OH)_3 + I_2$$

and Bentley and Driver (12) account for the decomposition by two reactions

$$(III) \quad 2FeI_2 + O_2 \rightleftharpoons 2FeOI + I_2$$
$$(IV) \quad FeOI + 2HOH \rightleftharpoons Fe(OH)_3 + HI$$

On the other hand, Phillips (13) believed the decomposition to result from deterioration of the hydriodic acid formed by hydrolysis of the salt, no experimental evidence was offered in support of this hypothesis

The above equations require, from a stoichiometric standpoint, the loss of two mols of ferrous iron for each mol of free iodine formed Equations (I) and (IV) indicate, however, that this ratio would decrease slightly as the result of subsequent deterioration of the hydriodic acid formed Thus, the validity of these equations may be established by analyses of partially decomposed solutions of ferrous iodide, a 2 1 ratio or smaller indicating that such formulations are acceptable

In order to determine the validity of these theories of decomposition, samples of aqueous solutions of ferrous iodide were stored under conditions of excess air, in completely filled, tightly stoppered bottles and in sealed pycnometers and the loss of ferrous iron in mols per liter compared with the free iodine present The result of such a series of analyses upon a sample stored in the presence of air and prepared from Reagent grade chemicals follows in Table III

TABLE III —RATIO OF MOLARITY OF IRON AND IODINE IN AQUEOUS SOLUTION OF FERROUS IODIDE STORED AT 30° C IN THE PRESENCE OF EXCESS AIR

Hours.	Loss Fe^{++} Mols/L	I_2 Mols/L	Fe^{++}/I_2
0			
172½	0 00772	0 00144	5 36
240	0 00799	0 00177	4 52
292	0 00705	0 00197	3 58
340	0 00705	0 00220	3 20
384	0 00705	0 00313	2 26
436	0 01089	0 00337	3 21
557	0 01614	0 00418	3 86
774	0 02094	0 00561	3 72
918	0 02093	0 00666	3 14
1178	0 01983	0 00897	2 21
1538	0 03675	0 01300	2 82

As indicated by the data in Table III, no evidence exists for the disappearance of 2 mols of ferrous iron per mol of iodine formed Moreover, similar results were obtained in other samples stored in the presence of air Samples stored in completely filled, tightly stoppered bottles apparently remained near the condition exemplified by the early readings in Table III, and ranged in ratio between 8 64 and 2 21 as determined from 11 analyses Samples stored in sealed pycnometers, showed no loss of ferrous iron over a period of 1127 hours although they contained traces of free iodine It was concluded that the equations previously advanced were not acceptable as representing the mechanism of decomposition

An examination of the precipitates contained in the samples of solution stored in completely filled, tightly stoppered bottles gave some indication of basic salt formation during the early stages of decomposition In general, however, the precipitate proved to be ferric hydroxide

In order to test the effect of a common ion on the rate of decomposition, a solution containing 1 mol per liter of potassium iodide in addition to its ferrous

iodide content and another solution containing 0 22 mol per liter of excess ferrous sulphate were stored together with a control Analyses for free iodine showed that the presence of either iodide or ferrous ion in excess results in an increased rate of decomposition

The Rate of Decomposition of Ferrous Iodide Solutions—In order to elucidate further the mechanism of decomposition of aqueous solutions of ferrous iodide, the rate and order of reaction were determined A solution of ferrous iodide was prepared from Reagent chemicals and stored in the thermostat at 30° C in darkness in a container with an excess of air The progress of the decomposition was followed by titration of the liberated iodine Results were treated mathematically according to equations (I) and (II) below, in order to determine the order of reaction (14)

$$\text{(I)} \qquad K_m = 2\,303/t \log a/a - x$$
$$\text{(II)} \qquad K_b = 1/t\, x/a(a - x)$$

where K_m represents the specific reaction rate as calculated for a first order reaction and K_b represents that for a second order reaction The fraction decomposed in time t is represented by x, and the initial concentration by a All calculations are based upon the total iodide content of the preparation, thus regarding the oxygen content as sufficiently large to be considered constant Data follow in Table IV

TABLE IV —RATE OF DECOMPOSITION OF FERROUS IODIDE SOLUTIONS PREPARED FROM REAGENT IRON AND REAGENT IODINE AND STORED IN THE THERMOSTAT AT 30° C IN DARKNESS

Total Hours	Segment Hours	Iodide Mols/L	Ferrous Iron Mols/L	Iodine Mols/L × 10^3	$K_m \times 10^5$	$K_b \times 10^4$
0	0	0 22710	0 2348			
95	95	0 22672	0 2354	0 87	4 05	1 79
148½	53½	0 22648	0 2348	1 22	1 51	4 46
215	66½	0 22710	0 2334	1 43	1 06	4 20
263	48	0 22680	0 2244	1 63	0 98	6 65
315½	82½	0 22672	0 2263	1 83	1 74	6 86

411	52	0 22651	0 2263	2 72	1 80	10 29
532	121	0 22694	0 2244	3 41	1 32	5 57
719	187	0 22643	0 2159	4 46	1 29	4 73
863	144	0 22643	0 2165	5 03	2 76	6 95
1123	260	0 22620	0 2155	6 38	2 38	4 92
1483	360	0 22679	0 2094	7 89	1 89	4 42
2400	917	0 22683	0 2052	11 55	1 84	2 60
3120	720	0 22659	0 2003	14 35	1 82	1 14
					Mean 1 79	

As indicated in Table IV, the values of K_m are in good agreement while those of K_b show considerable variation The iodide content, including free iodine present, remained practically constant For the 14 values of K_m given, the standard deviation (S D) is 0 72 × 10^{-5}, the standard deviation of the mean is 0 19 × 10^{-5}, the probable error (PE), is 0 48 × 10^{-5} and the probable error of the mean is 0 13 × 10^{-5}

As further verification of the order of reaction, three samples of aqueous solu-

tion of ferrous iodide, prepared from card teeth and Reagent iodine and differing in concentration were stored under the conditions outlined above and the rate of reaction determined The data are shown in Table V

TABLE V —RATE OF REACTION OF AQUEOUS SOLUTIONS OF FERROUS IODIDE PREPARED FROM CARD TEETH AND REAGENT IODINE AND STORED IN THE THERMOSTAT AT 30° C IN DARKNESS

Conc FeI_2 Mols/L	No of Det ns	Total Hours	$K_m \times 10^5$ Mean	S D of $K_m \times 10^5$	$K_b \times 10^5$ Mean	S D of $K_b \times 10^5$
0 47935	9	3048	3 21	0 27	23 91	11 43
0 22594	17	3007	3 22	0 76	6 86	3 36
0 11770	6	2086	3 88	0 25	63 30	15 21

It was concluded from the data shown in Table V that the first order reaction equation is applicable to this decomposition The standard deviation of the mean at the concentration of the U S P Syrup being $0\ 18 \times 10^{-5}$, the mean may be stated as $3\ 22 \pm 0\ 18 \times 10^{-5}$

The rate of decomposition for card teeth solutions is greater than for solutions prepared from Reagent iron, nearly twice as much iodine being formed per hour in terms of per cent decomposition per unit time

The Effect of Type of Glass upon the Rate of Decomposition —Containers used for determination of the rate of reaction as shown in Tables IV and V, imparted alkalinity to distilled water upon standing To ascertain the effect of a container imparting no alkalinity to glass, similar determinations were made upon an aqueous solution of ferrous iodide stored under conditions identical with the above, in such a container (Pyrex bottle) Ten analyses were made upon the solution which assayed 0 22693 mols/L of ferrous iodide These determinations were made over a period of 1675 hours The mean value for K_m was $6\ 96 \times 10^{-5}$, the standard deviation was $0\ 57 \times 10^{-5}$, the standard deviation of the mean was $0\ 18 \times 10^{-5}$ Thus K_m may be stated as $6\ 96 \pm 0\ 18 \times 10^{-5}$

It was concluded that the type of glass in the container exerted a marked effect upon the rate of decomposition, alkaline glass exerting a retarding effect

During the progress of this investigation, alkaline glass was employed in order to obtain results directly applicable to common pharmaceutical containers

The Effect of Surface Area upon the Rate of Decomposition —Since decomposition of aqueous solutions of ferrous iodide requires oxygen, it is probable that the rate of reaction would depend directly upon the rate of oxygen absorption, provided auto oxidation is appreciably more rapid than absorption This rate of absorption would in turn depend to some extent upon the surface exposed, *i e*, the reaction would be of the zero order

In order to extend the previous determinations of reaction rates to include conditions of minimal practical surface area exposed, an aqueous solution of ferrous iodide was stored under conditions identical with those of previous reaction rate determinations In this case, however, a container was chosen of such shape that only about $1/5$ of the previous surface exposure occurred This container was typical of common prescription bottles Ten determinations of the rate of reaction over a period of 2986 hours gave a mean value for K_m of $3\ 15 \times 10^{-5}$ The standard deviation was $0\ 37 \times 10^{-5}$ and the standard deviation of the mean was $0\ 11 \times 10^{-5}$ Thus, K_m may be stated as $3\ 15 \pm 0\ 11 \times 10^{-5}$

It was concluded that under ordinary conditions, the absorption of oxygen is more rapid than auto-oxidation and that, therefore, the reaction is not one of the zero order

The Effect of Limited Availability of Oxygen —Fifty samples of aqueous solution of ferrous iodide were stored in darkness in the thermostat at 30° C , in completely filled, tightly stoppered bottles Stoppers were protected from the action of iodine and the containers sealed with paraffin A sample was removed and assayed for iodine content at intervals over a period of 3122 hours Variable results, ranging from $1\ 90 \times 10^{-4}$ mols/L to $9\ 51 \times 10^{-4}$ mols/L of free iodine, were found present in 14 determinations It is significant that low values were impartially distributed over the duration of the experiment

It was concluded from the distribution and magnitude of the results, that upon expiration of the contained oxygen, little decomposition occurs in aqueous solutions of ferrous iodide stored without access to atmospheric oxygen

A series of samples of aqueous solution of ferrous iodide was next stored in sealed pycnometers All water used in the preparation was vigorously boiled before use and allowed to cool in completely filled, tightly stoppered bottles No precipitate appeared in these samples during 792 hours The value of K_m was $2\ 59 \times 10^{-6}$ Bubbles of gas appeared at the surface of the liquid in these preparations but did not appear in solutions of ferrous sulphate similarly prepared and stored It appears probable that a slow secondary decomposition occurs in the absence of oxygen according to the equation

$$2HI \rightleftharpoons H_2 + I_2$$

The Effect of Viscosity upon the Rate of Decomposition —As a means of determining the effect of viscosity upon the rate of auto oxidation of solutions of ferrous iodide, aqueous solutions of the salt were rendered viscous with tragacanth and the rate of reaction evaluated in terms of the specific reaction rate, K_m Tragacanth was chosen as being a neutral non-reactant carbohydrate Viscosities were determined by means of viscosimeter tube and stop-watch (15) Preliminary experiments showed that tragacanth in the concentrations used was without effect upon free iodine during the duration of the experiments Table VI shows the data obtained Values of a solution without added tragacanth are from Table V

TABLE VI —RATE OF DECOMPOSITION OF AQUEOUS SOLUTIONS OF FERROUS IODIDE RENDERED VISCOUS WITH TRAGACANTH AT 30° C

Conc of FeI_2 in Mols/L	Relative Viscosity (30°/30°)	No of Det ns	Time Hours	$K_m \times 10^5$ Mean	S D $\times 10^5$	$K_m \times 10^5$
0 22594	1 072	(See Table V)		3 22	0 25	3 22 ± 0 18
0 22811	2 507	5	1227	1 73	0 10	1 73 ± 0 04
0 22783	6 296	5	1227	1 01	0 01	1 01 ± 0 01
0 21323	19 8	5	1848	1 05	0 07	1 05 ± 0 03
0 21490	539 7	5	1848	0 79	0 02	0 79 ± 0 01

As indicated in Table VI, increases above a relative viscosity of approximately 6 have little effect upon the specific reaction rate From these data it was concluded that the specific reaction rate is a hyperbolic function of the viscosity or of some factor proportional to viscosity

The Effect of Variations in Temperature upon the Rate of Decomposition of Aqueous Solutions of Ferrous Iodide—In order to determine the effect of variations in temperature upon the auto-oxidation rate of aqueous ferrous iodide solutions, samples of various viscosities were stored in the oven at 50° C ± 2° and in the refrigerator at 6° C ± 1° All samples were stored in containers with an excess of air Reaction rates were determined in the usual manner, viscosities are stated relative to water at 30° C although determined at the reaction temperature, and tragacanth was used as the substance imparting viscosity Data in Table VII referring to solutions at 50° C were determined after short intervals of exposure since the solutions increased greatly in viscosity with time These results, therefore, are only approximate

TABLE VII—THE EFFECT OF VARIATION IN TEMPERATURE UPON THE SPECIFIC REACTION RATE OF AQUEOUS SOLUTIONS OF FERROUS IODIDE OF VARIOUS VISCOSITIES

Conc FeI₂ Mols/L	Relative Viscosity	Temp °C	Total Hours	No of Det ns	Mean $K_m \times 10^4$	S D $\times 10^4$	$K_m \times 10^4$
0 22690	1 062	50	575	5	3 21	0 27	3 21 ± 0 12
0 22525	1 200	50	68	1	1 25		
0 22811	2 26	50	336	1	0 60		
0 22383	5 13	50	336	1	0 59		
0 21225	26 74	50	1126	5	0 61	0 19	0 61 ± 0 01
0 22690	1 075	6	1012	5	0 38	0 05	0 38 ± 0 02
0 22810	64 32	6	840	3	0 22	0 005	0 22 ± 0 003
0 22380	89 68	6	840	3	0 10	0 04	0 10 ± 0 002
0 21007	525 0	6	1152	3	0 35	0 02	0 35 ± 0 01

It was concluded that solutions of ferrous iodide at 50° C have a temperature coefficient of approximately 3 for each ten degree rise in temperature The curve of viscosity against reaction rate is hyperbolic and the greatest variation is between relative viscosities of 1 and 26 At 6° C, however, the reaction is more rapid than at 30° C, and the curve of viscosity against specific reaction rate is nearly linear for relative viscosities below 100

The Effect of Light upon the Rate of Decomposition of Aqueous Solutions of Ferrous Iodide—That light catalyzes the auto-oxidation of iodide ion has long been known and Berthoud and Nicolet (16) have shown that all light from the visible spectrum is active It has not previously been shown, either that the decomposition of ferrous iodide is typical of iodide ion, with respect to the catalytic effect of light, or is sensitive to certain spectrum bands To evaluate this factor, aqueous solutions of ferrous iodide were stored in containers with excess air, behind a series of light filters in direct sunlight, and a control run with the experiment No s ificant difference in specific reaction rate could be found in any sample, althou the auto-oxidation proved to be more rapid than in solutions stored in darknes ider similar conditions of heat and exposure It was concluded that the auto oxidation of ferrous iodide is catalyzed by all rays of the visible spectrum and is thus typical of iodide ion oxidation

The action of ultraviolet light was evaluated indirectly The specific reaction rate of solutions stored in sunlight in quartz flasks was compared with that for solutions similarly stored in pyrex Since results were identical, it is probable that ultraviolet light has no catalytic effect upon this decomposition

The Appearance of Permanent Dark Coloration in Syrup of Ferrous Iodide—Obviously, the liberation of free iodine in Syrup of Ferrous Iodide results in dark coloration, this, however, seldom occurs due to the hypophosphorous acid content of the preparation Nevertheless, the Syrup, upon standing, assumes a very dark brown or black color rendering it unfit for use Since neither aqueous solutions of ferrous iodide nor aqueous solutions of ferrous iodide containing hypophosphorous acid show this phenomenon, the discoloration must be ascribed to the presence of sucrose or its decomposition products The change has commonly been misnamed caramelization

Preliminary experiments showed that either ferrous ion as ferrous sulphate or hypophosphorous acid was capable, the latter much more efficiently than the former, of producing a dark coloration in simple syrup if present in the proportions found in the U S P Syrup of Ferrous Iodide Phosphoric acid also possesses this property, but free iodine was slowly and completely decolorized

Samples of Syrup of Ferrous Iodide with the hypophosphorous acid omitted, stored in direct sunlight or in the oven at 50° C rapidly became black in color and contained a black precipitate Thus hypophosphorous acid does not cause this change to occur although it may act as a catalyst

Sucrose, upon inversion, forms equimolecular quantities of dextrose and levulose, and Krantz (17) has shown that inversion is 96 2% complete in Syrup of Ferrous Iodide in 20 days Accordingly, samples of Syrup of Ferrous Iodide were prepared, substituting in one case 2 484 mols/L of Merck's C P dextrose for the sucrose, and in the other, 2 484 mols/L of Cenco pure levulose In one month's exposure in the oven at 50° C , in the presence of air, the sample containing levulose was black, that containing dextrose was yellow, but no darker than a sample of simple syrup containing an equivalent quantity of ferrous sulphate and stored under the same conditions Similarly, samples of U S P X Syrup of Hydriodic Acid also turn black in color under these conditions This Syrup contains hypophosphorous acid

It was concluded that levulose, formed by hydrolysis of the sucrose present in the official Syrup, is the cause of the dark coloration appearing in Syrup of Ferrous Iodide

The Effect of Various Preservatives upon Free Iodine—The action of any preservative or stabilizer in Syrup of Ferrous Iodide may be twofold it may decrease the rate of auto-oxidation and it may cause the disappearance of free iodine Adding the stipulation that it must not cause side reactions to occur, gives three criteria for the evaluation of preservatives from a chemical standpoint Thus a substance may act as a stabilizer under one of these criteria, yet be rejected on the basis of another Sucrose is typical of this class

In order to evaluate various stabilizers on the basis of their action on free iodine, solutions containing approximately 0 01 mols/L of free iodine as Compound Solution of Iodine, U S P X, and 2 484 mols/L of the preservative were stored in darkness with excess air in the thermostat at 30° C Free iodine was determined at intervals A control showed no loss of iodine during the duration of the experiment The value 2 484 mols/L was used to give results directly comparable with sucrose, this figure representing the sucrose content of Syrup of Ferrous Iodide

Merck's Lactose, Merck's C P dextrose, Merck's U S P citric acid, Merck's

U S P tartaric acid, Colgate's C P glycerin, U S P sucrose, U S P alcohol and U S P honey were tested in this manner Only 170 Gm /L of lactose were used due to its low solubility and honey was weighed as dextrose It was found that sucrose, dextrose, lactose, honey, and to a lesser degree, citric acid, exert a slow chemical action upon free iodine in the presence of iodide ion in aqueous solution

To determine the effect of ferrous ion upon this reaction, solutions were prepared containing approximately 0 236 mol/L of ferrous iodide, 2 484 mols/L of either honey, sucrose or dextrose and approximately 0 01 mol/L of free iodine They were stored either at 30° C or at 50° C and free iodine frequently determined The quantity of iodine reacting with the preservative is the difference between that originally present and the quantity present at the time of analysis plus free iodine formed at that temperature and viscosity by decomposition The latter values were obtained from the equation

$$K_m = 2\,303/t \log a/a - x$$

where x is the quantity of iodine formed in time t from a solution of original concentration a Values of K_m were obtained from Tables VI and VII by interpolation to the proper viscosities

It was found that heat accelerated the carbohydrate reaction to a greater degree than the auto-oxidation since samples at 50° C rapidly became free from iodine Samples at 30° C were decolorized slowly in the case of sucrose and more rapidly in the case of honey, although honey was more efficient in this respect at 30° C, sucrose was more rapid than honey at 50° C The action of dextrose was not so rapid, but at room temperature, about 22° C, none of these sugars reduced iodine as rapidly as it was formed Apparently, the ferrous ion present exerted a catalytic effect since reduction of iodine was more rapid than in simple aqueous solution The presence of some relatively rapid reducing agent in honey is indicated by the rate of reaction which is much greater than with sugars alone

TABLE VIII —THE EFFECT OF PRESERVATIVES UPON AQUEOUS SOLUTIONS OF FERROUS IODIDE AT 30° C STORED IN EXCESS AIR IN DARKNESS

Preservative	Hours	No of Det ns	$K_m \times 10^5$ Mean	S D $\times 10^5$	$K_m \times 10^5$	Rate of Decomp $\times 10^5$
Sucrose (Card teeth)	3003	6				0 85
Sucrose (Reag iron)	2824	5				0 85
Honey calc as dextrose	2520	4				1 56
Dextrose	2956	5	0 53	0 23	0 53 ± 0 10	1 05
Lactose 170 Gm /L	2525	4	1 77	0 61	1 77 ± 0 30	2 5
Glycerin	2478	4	1 25	0 64	1 25 ± 0 32	2 1
Citric acid	2775	5	1 75	0 36	1 75 ± 0 16	1 5
Tartaric acid	2394	5	2 71	0 95	2 71 ± 0 44	1 65
Alcohol	2374	4	1 95	0 43	1 95 ± 0 19	2 07

The Chemical Evaluation of Preservatives—To verify conclusions reached above, samples of aqueous solutions of ferrous iodide containing 2 484 mols/L of preservative were placed in the thermostat at 30° C in darkness with an excess of air in the container Iodine was determined at frequent intervals The data are summarized in Table VIII The quality of chemicals has been noted above Column 7 shows the rate of decomposition to be expected from viscosity readings performed upon these solutions These data are interpolated from Table VI

As indicated in Table VIII, true preservative effect beyond the effect of the viscosity imparted to the solution is shown by sucrose, honey, dextrose, lactose and glycerin Alcohol is apparently without effect and citric and tartaric acids increase the rate of decomposition This is probably due to the increased hydrogen-ion concentration of these acid solutions, the p_H was 0 4

The Pharmaceutical Evaluation of Preservatives —Solutions of ferrous iodide, approximately 5% except as noted, were prepared, except as noted, from card teeth and U S P iodine and contained the following honey, 500 cc /L , honey, 250 cc /L , sucrose, 425 Gm /L and honey, 425 cc /L , sucrose, 800 Gm /L and honey, 50 cc /L , 10% FeI_2 and 800 Gm /L of dextrose, sucrose, 850 Gm /L and H_3PO_2, 5 cc /L , sucrose, 850 Gm /L and $Na_2S_2O_3$, 1 Gm /L , 10% FeI_2 and sucrose, 850 Gm /L , sucrose, 850 Gm /L and NaOH, 0 1975, 0 2949 and 0 6908 Gm /L in separate samples, sucrose, 850 Gm /L , prepared with Reagent iron, sucrose, 850 Gm /L and hydroquinone, 5 Gm /L , glycerin, 800 cc /L , sucrose, 850 Gm /L and H_3PO_2, 5 cc /L (control), and sucrose, 850 Gm /L with H_3PO_2, 5 cc /L , prepared from Reagent iron Samples of these solutions were stored both in half-filled and in completely filled, tightly stoppered bottles in diffused light and in darkness at room temperature, in direct sunlight and in the refrigerator at about 6° C

At the end of 3 months, those samples stored in direct sunlight in the presence of air were black in color with the exception of those containing dextrose or glycerin, the dextrose sample alone contained free iodine Free iodine was contained in all samples stored in the refrigerator except those containing H_3PO_2 which had, however, darkened somewhat

In general, after 9 months' exposure, the following observations were made storage in completely filled bottles is desirable, sunlight hastens the appearance of black coloration although the increased temperature accelerates the reduction of iodine to a greater degree than the auto-oxidation of iodide, the addition of NaOH decreases the rate of iodine formation but is undesirable due to the coloration produced in the freshly made solution, Reagent iron samples show less free iodine than those prepared from card teeth, honey alone is valueless as a preservative, glycerin is ideal in sunlight but valueless in darkness or diffused light, $Na_2S_2O_3$ gives a cloudy preparation by liberation of free sulphur, hydroquinone is a valuable anti-oxidant except at low temperatures, and free iodine added to blackened preparations of ferrous iodide containing sucrose or honey, rapidly disappears

It was concluded that none of the combinations used was entirely satisfactory as offering a stable preparation

The Stabilization of Syrup of Ferrous Iodide —It has been shown that sucrose is incompatible with aqueous solutions of ferrous iodide It has likewise been shown that dextrose is compatible with both ferrous iodide and hypophosphorous acid Thus, it would appear that the ideal preparation would contain dextrose to give the properties of a syrup and hypophosphorous acid to prevent the liberation of iodine

Solutions of ferrous iodide containing the official quantity of H_3PO_2 and either 700 Gm /L of C P dextrose, commercial dextrose[1] or 400 Gm /L of U S P Glu-

[1] A brand of dextrose, ' Penford Crystal Sugar," made by Penick and Ford Cedar Rapids, Iowa was employed

cose were subjected to a temperature of 50° C for 3 months both in half-filled and in completely filled, tightly stoppered bottles A U S P control was run in conjunction The freshly prepared solutions varied in color with the purity of the dextrose used, C P dextrose gave a perfectly colorless preparation but that from U S P Glucose was definitely yellow

At the end of one month, the control was black but all other samples remained unchanged In 4 months, the syrups containing dextrose were pale yellow and contained a slight sediment, the change was more pronounced in samples stored in the presence of air and varied in direct proportion to the purity of the dextrose Samples containing Glucose, U S P X, had become very dark

One month's exposure in the oven at 50° C is roughly equivalent to 1 year under ordinary conditions, hence it may be assumed that dextrose samples would be acceptable for 4 years at ordinary temperatures

It was concluded that Syrup of Ferrous Iodide may be stabilized by substituting 700 Gm of dextrose for the sucrose contained in the official formula, either C P dextrose or the commercial grade being satisfactory The resulting preparation is very palatable The syrup so prepared is best kept at room temperature as some of the dextrose may crystallize at low temperatures

DISCUSSION OF RESULTS

It can be shown by solubility product data and p_H values that precipitation of ferric hydroxide cannot occur in Syrup of Ferrous Iodide On the other hand, similar calculations in conjunction with the quantity of air present, indicate that precipitation occurs in the reaction mixture of preparations at secondary equilibrium before dilution, but does not take place until after dilution in preparations from Reagent iron at primary equilibrium

It has been shown that no stoichiometric expression is applicable to the decomposition of aqueous ferrous iodide solutions On the other hand, hydrolysis has been shown to occur predominantly as

$$\text{(I)} \qquad FeI_2 + HOH \rightleftharpoons Fe(OH)I + HI$$

and therefore, the solution contains iodide and ferrous ions in the presence of hydrogen ions Iodide ion is oxidizable by oxygen according to the equation

$$\text{(II)} \qquad 2I^- + {}^1/_2O + 2H^+ \rightleftharpoons I_2 + HOH$$

Secondary hydrolysis of the basic ferrous iodide formed as shown in equation (I) furnishes small quantities of ferrous hydroxide

$$\text{(III)} \qquad Fe(OH)I + HOH \rightleftharpoons Fe(OH)_2 + HI$$

which may then be oxidized,

$$\text{(IV)} \qquad Fe(OH)_2 + {}^1/_2O_2 + HOH \rightleftharpoons Fe(OH)_3$$

This reaction may occur even in faintly acid media Thus the relative amounts of ferric hydroxide and iodine formed will depend entirely upon the relative ease of oxidation of ferrous hydroxide and iodide ion The normal oxidation potentials being

$$\begin{array}{lll} (Fe^{+++}, Fe^{++})Pt & = & 743 \\ ({}^1/_2I_2\ I^-\quad)Pt & = & 538 \\ (O_2\ OH^-\quad) & = & 396 \end{array}$$

As indicated in Table VIII, true preservative effect beyond the effect of the viscosity imparted to the solution is shown by sucrose, honey, dextrose, lactose and glycerin Alcohol is apparently without effect and citric and tartaric acids increase the rate of decomposition This is probably due to the increased hydrogen-ion concentration of these acid solutions, the p_H was 0 4

The Pharmaceutical Evaluation of Preservatives —Solutions of ferrous iodide, approximately 5% except as noted, were prepared, except as noted, from card teeth and U S P iodine and contained the following honey, 500 cc /L , honey, 250 cc /L , sucrose, 425 Gm /L and honey, 425 cc /L , sucrose, 800 Gm /L and honey, 50 cc /L , 10% FeI_2 and 800 Gm /L of dextrose, sucrose, 850 Gm /L and H_3PO_2, 5 cc /L , sucrose, 850 Gm /L and $Na_2S_2O_3$, 1 Gm /L , 10% FeI_2 and sucrose, 850 Gm /L , sucrose, 850 Gm /L and NaOH, 0 1975, 0 2949 and 0 6908 Gm /L in separate samples, sucrose, 850 Gm /L , prepared with Reagent iron, sucrose, 850 Gm /L and hydroquinone, 5 Gm /L , glycerin, 800 cc /L , sucrose, 850 Gm /L and H_3PO_2, 5 cc /L (control), and sucrose, 850 Gm /L with H_3PO_2, 5 cc /L , prepared from Reagent iron Samples of these solutions were stored both in half-filled and in completely filled, tightly stoppered bottles in diffused light and in darkness at room temperature, in direct sunlight and in the refrigerator at about 6° C

One month's exposure in the oven at 50° C is roughly equivalent to 1 year under ordinary conditions, hence it may be assumed that dextrose samples would be acceptable for 4 years at ordinary temperatures

It was concluded that Syrup of Ferrous Iodide may be stabilized by substituting 700 Gm of dextrose for the sucrose contained in the official formula, either C P dextrose or the commercial grade being satisfactory The resulting preparation is very palatable The syrup so prepared is best kept at room temperature as some of the dextrose may crystallize at low temperatures

DISCUSSION OF RESULTS

It can be shown by solubility product data and p_H values that precipitation of ferric hydroxide cannot occur in Syrup of Ferrous Iodide On the other hand, similar calculations in conjunction with the quantity of air present, indicate that precipitation occurs in the reaction mixture of preparations at secondary equilibrium before dilution, but does not take place until after dilution in preparations from Reagent iron at primary equilibrium

It has been shown that no stoichiometric expression is applicable to the decomposition of aqueous ferrous iodide solutions On the other hand, hydrolysis has been shown to occur predominantly as

$$\text{(I)} \qquad FeI_2 + HOH \rightleftharpoons Fe(OH)I + HI$$

and therefore, the solution contains iodide and ferrous ions in the presence of hydrogen ions Iodide ion is oxidizable by oxygen according to the equation

$$\text{(II)} \qquad 2I^- + {}^1/_2O_2 + 2H^+ \rightleftharpoons I_2 + HOH$$

Secondary hydrolysis of the basic ferrous iodide formed as shown in equation (I) furnishes small quantities of ferrous hydroxide

$$\text{(III)} \qquad Fe(OH)I + HOH \rightleftharpoons Fe(OH)_2 + HI$$

which may then be oxidized,

$$\text{(IV)} \qquad Fe(OH)_2 + {}^1/_2O_2 + HOH \rightleftharpoons Fe(OH)_3$$

This reaction may occur even in faintly acid media Thus the relative amounts of ferric hydroxide and iodine formed will depend entirely upon the relative ease of oxidation of ferrous hydroxide and iodide ion The normal oxidation potentials being

$$\begin{array}{lll} (Fe^{+++}, Fe^{++})Pt & = & 743 \\ ({}^1/_2I_2\ I^- \quad)Pt & = & 538 \\ (O_2, OH^- \quad) & = & 306 \end{array}$$

it is evident that when both are present in the reduced form, ferrous iron will be oxidized more readily than iodide ion This is in accord with the experimental results

The oxidation of iodide ion in this preparation has been shown to be a first order reaction and dependent in rate upon the purity of the iron, the temperature, the action of light, access to air and viscosity or of some factor proportional to viscosity Its dependence also upon the hydrogen-ion concentration has been shown by Husa and Magid (18) Consequently, aside from slight increases in viscosity, changes in the ferrous iodide content of the preparation can have no effect upon the rate of iodine formation and increases in concentration of ferrous iodide will increase the quantity of iodine formed

It would appear, from data on preservatives, that levulose is a very efficient reducing agent for iodine in faintly acid media The action of honey is very rapid as regards the reduction of iodine, dextrose is much slower than sucrose and free iodine added to blackened ferrous iodide syrups is rapidly reduced, all these factors point to the action of levulose in this respect Thus it appears highly probable that the true decomposition of Syrup of Ferrous Iodide is the darkening caused by the oxidation of levulose by iodine or oxygen Darkening due to free iodine is not a factor in this decomposition since the appearance of free iodine is effectively prevented by hypophosphorous acid

The reducing action of glycerin in sunlight may be due to the formation of glyceric aldehyde which in turn is oxidized This aldehyde is formed only in light (19)

Obviously, Syrup of Ferrous Iodide may be stabilized by omitting sucrose from the formula Dextrose serves to give the characteristic properties of a syrup to the preparation and by its use the darkening is avoided

SUMMARY

A study has been made of the preparation, deterioration and stabilization of Syrup of Ferrous Iodide Impurities present in card teeth were found to cause variations in the progress of the reaction

Equations previously advanced to represent the decomposition of ferrous iodide preparations are shown to be unsatisfactory The present study indicates that the deterioration involves several different changes which occur simultaneously, but at different rates according to the conditions

The darkening of Syrup of Ferrous Iodide, U S P X, has been shown to be due chiefly to decomposition of levulose formed by hydrolysis of sucrose This darkening can be avoided by using dextrose in place of sucrose

The most practical means for the preservation of Syrup of Ferrous Iodide is the use of hypophosphorous acid to prevent the liberation of free iodine and the addition of dextrose rather than sucrose to give the properties of a syrup The use of 700 Gm /L of either C P or commercial dextrose yields a satisfactory product

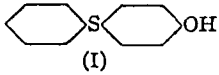
THE PREPARATION AND BACTERIOLOGICAL STUDY OF CERTAIN THIAZOLE AZO DYES *

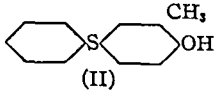
BY W A LOTT AND W G CHRISTIANSEN

In view of the recent demonstrations of the germicidal activity of divalent sulphur compounds such as *p*-hydroxy diphenyl sulphide, I,

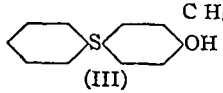


(I)

prepared by Hilbert and Johnson (1), and 3-methyl 4-hydroxy diphenyl sulphide, II, and 3-ethyl 4-hydroxy diphenyl sulphide, III,



(II)

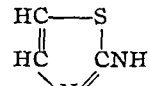


(III)

prepared by E Moness, W Braker and W G Christiansen (2), it seemed possible that divalent ring sulphur, as it appears in, for example, the thiazole heterocyclic ring  might also carry bactericidal activity The most readily available

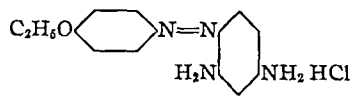
starting material of this type was the easily synthesized amino thiazole, IV,

* Scientific Section, A Ph A, Madison meeting 1933



(IV)

Inasmuch as some azo dyes such as 4-ethoxy 2′,4′-diamino azobenzene mono hydrochloride, V (Serenium), are bactericidal, it was thought that



(V)

compounds containing both the ring divalent sulphur and the azo groupings might be useful bactericides Some compounds of this type have been prepared by diazotizing amino thiazole and coupling with phenolic substances

PREPARATION OF AMINO THIAZOLE

The amino thiazole was prepared by the method of V Trauman (3) in which 53 Gm of thiourea in 250 cc water was condensed with 100 Gm α,β-dichlorethyl ether After the two liquid layers merged, refluxing was continued 10 minutes, after which the reaction mixture was evaporated until the characteristic odor of the α,β-dichlorethyl ether had disappeared After making the solution strongly alkaline it was extracted repeatedly with ether

The combined residue from these ether extracts was recrystallized out of alcohol, and a yield of 30 Gm of red crystalline amino thiazole of melting point 88 5° to 90 5° C was obtained

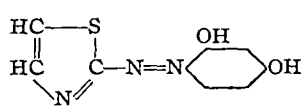
Analysis Found—S, 31 94% Calculated for $C_3H_4N_2S$ S, 32 00%

PREPARATION OF THIAZOLE AZO RESORCINOL

The diazotization of amino thiazole was very slow and incomplete by the usual method, but when all of the sodium nitrite is added at one time to the acidified solution of the amino thiazole, thereby obtaining a high concentration of nitrous acid, an acceptable yield of the diazonium salt is obtained

5 Gm of amino thiazole (0 5 mol) was dissolved in 13 cc of hydrochloric acid (1 5 mol) and 125 cc water This was diazotized at 0–5° C by adding 3 5 Gm of $NaNO_2$ as fast as possible without allowing the temperature to rise above 5° C , using efficient agitation and an external cooling bath of ice and salt There upon, 5 5 Gm resorcinol in 10 cc of cold water was added The precipitated azo dye was agitated without cooling for an hour in order to induce its change from a gelatinous material to a granular one

4 5 Gm of crude material having a low sulphur content was obtained Repeated reprecipitation out of alkaline solution by dilute HCl gave about 1 5 Gm of material which was shown by analysis to be thiazole azo resorcinol, VI,



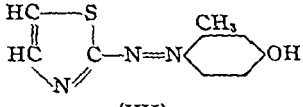
(VI)

Analysis Found—S, 14 99% Calculated for $C_9H_7ON_3S$ S, 14 47%

Bacteriological test showed that although this substance (when dissolved in aqueous alkali) had no germicidal activity, it inhibited growth of both Typhoid and Staphylococcus at a dilution of 1 to 8000

PREPARATION OF THIAZOLE AZO-*m*-CRESOL

5 Gm of amino thiazole was dissolved in 100 cc 20% H_2SO_4 and diazotized at 0–5° C with 3 5 Gm $NaNO_2$, the latter being added as in the above preparation When the excess of HNO_2 was very low, as indicated by starch iodide papers, 5 4 Gm meta-cresol in 10 cc water at 0° C and enough 10% NaOH to keep it in solution were added After agitating two hours at room temperature, the precipitated dye became granular This was filtered and reprecipitated several times out of alkaline solution by dilute HCl A yield of 5 8 Gm of thiazole azo *m* cresol, VII, was obtained

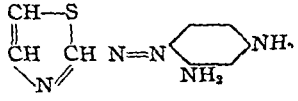


(VII)

Analysis Found—S, 13 33% Calculated for $C_{10}H_7ON_3S$ S, 14 60%

Although this material showed no germicidal action it inhibited the growth of Typhoid and Staphylococcus at dilutions up to 1 to 16,000 The dye was dissolved in water with a minimum quantity of sodium hydroxide for germicidal test

By coupling diazotized amino thiazole with metaphenylene diamine a dye was obtained which probably had the following structure



This product was not obtained in a sufficiently pure form to warrant biological tests

The biological tests on compounds reported herein were made in the Biological Research Laboratories of E R Squibb & Sons and we gratefully acknowledge their assistance

SUMMARY

Thiazole azo resorcinol and thiazole azo *m*-cresol were prepared by the diazotization of amino thiazole with subsequent coupling of the diazonium salt with the respective phenols Although solutions of these two azo dyes failed to kill, they restrained the growth of Typhoid and Staphylococcus in dilutions of 1 to 8000 and 1 to 16,000, respectively

A STUDY OF THE ACRYLIC AMIDES AND UREIDES AS HYPNOTICS*

BY W A LOTT AND W G CHRISTIANSEN

It has long been known that the amides and ureides of acids of fairly high molecular weight are more or less hypnotic The variation in the hypnotic potency is very great and, in the unhalogenated acids, this potency seems to depend upon (1) the molecular weight, (2) the degree of branching of chain (ramification) and (3) the presence or absence of unsaturation

For those acids which can be viewed as derivatives of acetic acid, the correlation between the above factors and the potency has been rather well worked out For the derivatives of acrylic acid, $CH_2 = CH - COOH$, this correlation has, however, not previously been worked out It will be seen that acrylic acid and its derivatives are not derivatives of acetic acid, since there cannot be three separate substituents attached to the alpha carbon

It was the purpose of the work reported in this paper to evaluate as hypnotics the amides and the ureides of several major types of substituted acrylic acids, and in so far as it is possible over the limited field covered, to set up correlations between physiological activity and molecular weight, type of substituents and configuration

The acids from which these compounds are derived fall into three major classes from the standpoint of structure, *viz*

(1) Aliphatic substituted acrylic acids
(2) Substituted cinnamic acids
(3) Furane substituted acrylic acid

No new synthetic methods have been devised

ACIDS

The acids have been prepared by one of five well-known methods

(A) Oxidation of corresponding aldehyde (1)–(2) by means of silver oxide

(*a*) α-Ethyl-β-propyl acrylic acid
(*b*) α-Amyl cinnamic acid

(B) Condensation of an aldehyde with malonic acid in presence of pyridine (3)

(*a*) Furfuracrylic acid
(*b*) β-Propyl acrylic acid
(*c*) β-Propenyl acrylic acid (sorbic acid)

(C) Perkin Synthesis Condensation of benzaldehyde with the sodium salt of an acid which has no substituents in the alpha position, in the presence of acetic anhydride (4)

(*a*) α-Propyl cinnamic acid

(D) Claisen Synthesis Condensation of benzaldehyde with an ester of an acid which has no substituents in the alpha position, by means of sodium

* Scientific Section, A PH A , Madison meeting, 1933

(*a*) α Methyl cinnamic acid
(*b*) α Ethyl cinnamic acid
(*c*) α-Isopropyl cinnamic acid
(*d*) α-Ethyl *p* methoxy cinnamic acid
(*e*) α Ethyl *o*-chlor cinnamic acid

(E) Reformatsky Synthesis Condensation of acetophenone (or a homologue) with bromacetic ester by means of zinc (6)

(*a*) β Methyl cinnamic acid

ACID CHLORIDES

The acid chlorides were all readily prepared by heating the acids with a 100% excess of thionyl chloride under a reflux condenser When the reaction was complete the excess thionyl chloride was removed in vacuum at room temperature In most cases the acid chloride was then distilled in vacuum This was not necessary but facilitated the purification of the end products

AMIDES

The amides were prepared by the dropwise addition of the acid chloride to a 28% aqueous solution of ammonia, with mechanical agitation and external cooling The crude amide separated, usually as a discolored solid mass The ring-substituted cinnamides tended toward greater discoloration It was found that recrystallization from anhydrous methyl alcohol was the best means of purification, being facilitated sometimes by treatment with decolorizing carbon Yields in most cases were not good Earlier in the work, dilute ethyl alcohol and sometimes 95% alcohol were used as the crystallizing solvent

The following amides were prepared

(1) Furfuracrylic amide, melting point—168–169° C
Previously recorded melting point—168–169° C

(2) α-Ethyl β propyl acrylic amide, melting point—66–67° C
% N—9 22, calculated for $C_6H_{11}ON$ 9 88

(3) α Methyl cinnamic amide, melting point—125 5–126° C
Previously recorded melting point—128° C
% N—8 96, calculated for $C_{10}H_{11}ON$, 8 70

(4) α-Ethyl cinnamic amide, melting point—135–137° C
Previously recorded melting point—128° C
% N—7 84, calculated for $C_{11}H_{13}ON$, 8 00

(5) α Isopropyl cinnamic amide high melting isomer This isomer was obtained by crystallization from dilute alcohol
Melting point—127–129° C
% N—7 98, calculated for $C_{12}H_{15}ON$ 7 40

(6) α-Isopropyl cinnamic amide, low melting isomer This isomer was obtained by repeated recrystallization from ethyl alcohol
Melting point—111–111 5° C
% N—7 48%, calculated for $C_{12}H_{15}ON$, 7 40

(7) α Amyl cinnamic amide high melting isomer This isomer was obtained by recrystallization, first from dilute alcohol, and finally out of hot water
Melting point—124–124 5° C
% N—5 88, calculated for $C_{14}H_{19}ON$ 6 45

(8) α Amyl cinnamic amide, low melting isomer This isomer was obtained by re crystallizing the high melting isomer several times from 95% alcohol
Melting point—117° C
% N—6 47, calculated for $C_{14}H_{19}ON$, 6 45

(9) α Ethyl *p* methoxy cinnamic amide
Melting point—170–170 5° C
% N—6 95, calculated for $C_{10}H_{13}O_2N$, 6 83

(10) α Ethyl *o*-chlor cinnamic amide
Melting point—93–94° C
% N—7 16, calculated for $C_{11}H_{12}ONCl$ 6 70
% Cl—16 50, calculated for $C_{11}H_{12}ONCl$, 16 95

(11) α Ethyl cinnamic N ethyl amide
Melting point—99 5–100° C
% N—6 81, calculated for $C_{13}H_{17}ON$ 6 88

(12) β Methyl cinnamic amide
Melting point—115–116° C
Previously recorded melting point—115–116° C
% N—9 27, calculated for $C_{10}H_{11}ON$, 8 70%

UREIDES

The ureides were in all cases prepared by triturating the acid chloride with three equivalents of dry urea in a mortar, then warming in an oven at 70° C for 3 hours Purification was effected by leaching with cold water in order to remove urea, then with dilute sodium bicarbonate solution in order to remove any free acid or unreacted acid chloride The ureide was recyrstallized repeatedly from dilute alcohol

The following ureides were prepared

(1) Furfuracrylic ureide
Melting point—204–206° C
% N—15 43, calculated for $C_8H_8O_2N_2$ 15 55

(2) *n* Propyl acrylic ureide
Melting point—181–183° C
% N—18 11, calculated for $C_7H_{12}ON_2$, 17 94

(3) β Propenyl acrylic ureide (sorbic ureide)
Melting point—226–228° C
% N—18 10%, calculated for $C_7H_{10}ON_2$, 18 19%

(4) α-Methyl cinnamic ureide
Melting point—160–162° C
% N—14 55, calculated for $C_{11}H_{12}ON_2$, 13 72

(5) α Ethyl cinnamic ureide
Melting point—189–190 5° C
% N—13 70, calculated for $C_{12}H_{14}O_2N_2$, 12 84

(6) α Propyl cinnamic ureide
Melting point—184–186 5° C
% N—12 41, calculated for $C_{13}H_{16}O_2N$ 12 07

(7) α-Isopropyl cinnamic ureide
Melting point—190–191° C
% N—12 55, calculated for $C_{13}H_{16}O_2N_2$, 12 07

(8) α-Amyl cinnamic ureide
Melting point—158–159° C
% N—11 13, calculated for $C_{15}H_{20}O_2N_2$, 10 77

BIOLOGICAL TESTS, ALBINO RATS

Minimum sleep inducing doses (M E D), and minimum lethal doses of the several amides were first determined on albino rats In the cases where the drugs are inactive in very high doses, no attempt was made to determine these values within narrow limits, whereas in the cases of those drugs which were fairly active sufficient data were obtained to gain closer estimates of the true M E D and M L D

Amides (albino rats)

Drug	M E D Mg /Kilo		M L D Mg /Kilo
α Ethyl β propyl acrylic amide	275		525
α Methyl cinnamic amide	ca 625		>1500
α Ethyl cinnamic amide	350		> 400
α-Isopropyl cinnamic amide (high melting)	750–1500	= or	>1500
α Isopropyl cinnamic amide (low melting)	ca 700	ca	1350
α-Amyl cinnamic amide (high melting)	>2000		>2000
α Amyl cinnamic amide (low melting)	>2000		>2000
β Methyl cinnamic amide	300		> 900
α Ethyl *o* chlor cinnamic amide	500–800		1000–1200
α Ethyl *p* methoxy cinnamic amide	>3000		>3000
α Ethyl cinnamic N ethyl amide	ca 1750		1750
Furfuracrylic amide	100		< 100
α Bromo diethyl acetic ureide (Adalin)	350		525
Allyl isopropyl acetic ureide (Sedormide)	350		> 400

Ureides (albino rats)

Drug	M E D Mg /Kilo		M L D Mg /Kilo
β Propenyl acrylic ureide (sorbic)	>2000		>2000
β Propyl acrylic ureide	>2000		>2000
α Ethyl β propyl acrylic ureide	>2000		>2000
α Methyl cinnamic ureide	>2000		>2000
α Ethyl cinnamic ureide	>2000		>2000
α Propyl cinnamic ureide	>2000		>2000
α Isopropyl cinnamic ureide	>2000		>2000
α Amyl cinnamic ureide	>2000		>2000
Furfuracrylic ureide	ca 500–600	ca	500–600
α Bromodiethyl acetic ureide (Adalin)	350		350
Allyl isopropyl acetic ureide (Sedormide)	350		400

AMIDES AND UREIDES (DOGS)

In the cases of those drugs which were active against rats, further tests were

Drug	M E D Mg /Kilo	M L D Mg /Kilo
α Bromodiethyl acetic ureide (Adalin)	ca 75	
Allyl isopropyl acetic ureide (Sedormide)	ca 40	
α Ethyl cinnamic amide	>250	>250
α Ethyl *o*-chlor cinnamic amide	>450	
β Methyl cinnamic amide	>150	
α Ethyl β propyl acrylic amide	Due to vomiting of all higher doses, results were vitiated	
Furfuracrylic amide	ca 25	25 (after 48 hours)

carried out with dogs Wherever there was no hypnotic activity at 250 mg /Kilo no attempts were made to obtain a narrower evaluation except in one instance

All dogs died after three days Autopsy showed hemorrhagic condition of intestines and moderate congestion of stomach

Furfuracrylic ureide	>175	<75

Autopsy showed hemorrhagic condition of intestines and congestion of lungs

NOTE Retest of both furfuracrylic derivatives on rats were carried out Rats were in good condition after five days Autopsies disclosed no intestinal irritation or congestion

DISCUSSION OF BIOLOGICAL RESULTS

It is to be seen from the biological tests of the amides with rats that (1) the entirely aliphatic α-ethyl-β-propyl acrylic amide is the most active, (2) that in the alpha-alkyl cinnamic amides the activity reaches its peak in the α-ethyl cinnamic amide, and (3) that the β-methyl cinnamic amide is much more active than the α-methyl cinnamic amide Increasing the molecular weight above that of α ethyl cinnamic amide seems *per se* to decrease the potency When this increase of M W is due to substituents in which there is inherent tendency toward hypnotic action there is some compensatory action and the decline in potency is less drastic, *i e*, α-isopropyl cinnamic amide, and α-ethyl *o*-chlor cinnamic amide When the increase in molecular weight is through non-hypnotic substituents as in α ethyl *p*-methoxy cinnamic amide, or is above a certain limit as in α-amyl cinnamic amide this compensatory action is lacking and the hypnotic action is practically obliterated

The furane ring seems to be very toxic and since there is no sleep produced below the lethal doses with any of its derivatives, it seems to carry no characteristic hypnotic activity This has also been shown in the case of furoic amide (unreported)

It is to be seen from the biological tests of the ureides with rats that in no case has any characteristic hypnotic action been demonstrated In the case of the furfuracrylic ureide the sleep produced cannot be ascribed to any characteristic hypnotic action of the drug since it occurred only at lethal doses

The interpretation of these results is difficult since the resorption and fate of the molecules in the organism have not been studied Some assumptions are, however, suggested It seems, for instance, that the ureides are hydrolyzed completely in the intestines of the rat, whereas probably the amides are hydrolyzed much less rapidly The precipitate drop in activity when the molecular weight is increased beyond that of α-ethyl cinnamic amide and α-isopropyl cinnamic amide suggests that resorption fails due to low solubility

In the tests with dogs there seems to be evidence that the amides are much more rapidly hydrolyzed in the intestine of the dog than in the intestine of the rat Other instances of the more rapid destruction of amides and ureides in the higher animals are recorded in the literature

Structurally, the grouping  seems to contribute little hypnotic activity and deprives the molecule too greatly of its water solubility

The results with α-ethyl cinnamic N-ethyl amide support the belief that low resorbability is an important factor throughout the series In this compound it would be expected that both the hypnotic potency and the toxicity should be increased and that the therapeutic ratio potency/toxicity should be decreased The facts are (1) that the therapeutic ratio decreased greatly so that the hypnotic dose equalled the lethal dose, and (2) that the absolute values of both the potency and toxicity decreased These facts seem explainable only if it be assumed that only a small part of the dose was resorbed

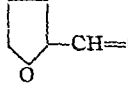
The biological tests on compounds reported herein were made in the Biological Research Laboratories of E R Squibb and Sons and we gratefully acknowledge their assistance

SUMMARY

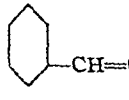
1 An extensive series of ureides and amides derived from the substituted acrylic acids were prepared A large number of these acids were substituted β-phenyl acrylic or cinnamic acids One example of a β-heterocyclic acrylic acid, *viz*, furfuracrylic acid, was included

2 The biological results with rats seem to indicate that the whole series of compounds were characterized by low resorbability and that the ureide series were further characterized by rapid intestinal hydrolysis This rapid intestinal hydrolysis seems to be shared by the amide series in the intestine of higher animals (dog) The net hypnotic action and toxicities were, therefore, quite low

3 The furane ring is considerably more toxic than the benzene ring, and contributes no characteristic hypnotic action, so that in practical terms—



—CH=CH—CONH$_2$ is non hypnotic and toxic, whereas—



—CH=CH—CONH$_2$ is hypnotic and non-toxic

THE WATER OF CRYSTALLIZATION OF QUININE SULPHATE *

BY H WALES [1]

Quinine sulphate crystallized from water has been variously reported as containing 7 and 8 molecules of water It has also been reported that when exposed

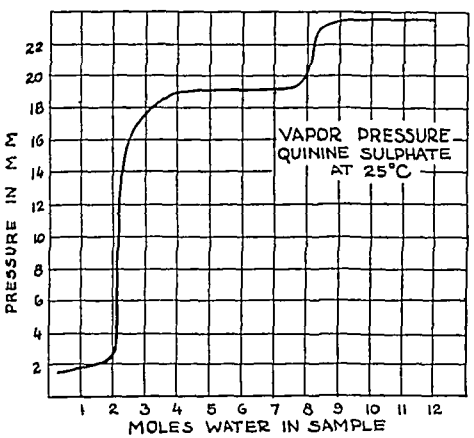
* Scientific Section A PH A, Washington meeting, 1934

[1] Drug Control Food and Drug Administration

to the air it loses water until the dihydrate is formed (Hesse, *Annalen*, 166 (1873), 217, 176 (1875), 213, Beal and Szalkowski, JOUR A PH A, 22 (1933), 1219) In all of the experiments reported, the water content has been determined by drying the quinine sulphate in an oven to constant weight Such tests while showing the amount of water which the quinine sulphate contains do not show how much, if any, exists as water of crystallization, and how much is simply ab sorbed or dissolved in the quinine sulphate

It is well known that any water-soluble substance when exposed to the air takes up or loses water until the vapor pressure of the solid solution is equivalent to the pressure of the water vapor in the atmosphere One method of determining the manner in which the water in a product is held is to measure the change in vapor pressure as small increments of water are removed at a constant tempera ture

Theoretically, if water is progressively removed from a hydrate the vapor pressure at a constant temperature remains constant as long as any of that hydrate remains At this point the pressure drops to that of a lower hydrate, if one is present, or to that of the anhydrous substance In practice, however, these breaks are not always sharp Beutell and Blaschke (*Centr Mineral Geol*, 1915, 199) found that in all cases where there is more than one hydrate, the dehydration on the surface of the particles proceeds further than in the interior "where cohesion hinders the evolution of water vapor" The inside of the particles, therefore, may consist of hydrates higher than those at the surface This prevents a sharp transition from one hydrate to the next and causes the break to become rounded in the plotted curve This rounding becomes more pronounced the greater the pressure difference between two hydrates



On the other hand when dealing with a compound in which the water is not present as a hydrate the pressure drops as the water is removed The curve showing the relation of vapor pressure to water content will not have the breaks characteristic of the hydrate curves, but will be perfectly smooth, its slope being determined by the tenacity with which the water is held

METHOD

Quinine sulphate was recrystallized from water and a weighed quantity of the wet crystals used for the determination Wet quinine sulphate was used in order to avoid any partial desicca tion of the highest hydrate The apparatus used was that described by Wales and Nelson (*J Am Chem Soc*, 45 (1923), 1657) The product to be tested was placed in a glass bulb sealed to a manometer A tube containing phosphoric anhydride was placed between this apparatus and the vacuum pump The system was evacuated for a few seconds the stop-cock between the drying tube and the manometer system closed and the pressure permitted to come to equilibrium before readings were taken By this method the vapor pressure was determined to ± 0.5 mm By weigh- ing the phosphoric anhydride tube after each evacuation the amount of water removed was deter

mined The total quantity of water in the quinine sulphate was determined from the total gain in weight of the tube containing phosphoric anhydride In order to insure complete dehydration the last traces of water were removed by long evacuation at 100° C

The accompanying table and chart show the results obtained at 25° C using this method The highest portion of the curve is approximately the vapor pressure of water at 25° C and represents the excess moisture since a wet sample was used The breaks in the curve correspond to 8 and 2 moles of water showing the existence of an octohydrate having a vapor pressure of 19 3 mm at 25° C and a dihydrate having a vapor pressure of approximately 2 mm at the same temperature No evidence of a heptahydrate is shown Due to the fact that the apparatus used was not capable of determining pressures below 2 mm with any degree of accuracy the possibility of a third hydrate having less than two molecules of water of crystallization has not been precluded

VAPOR PRESSURE AT 25° C OF QUININE SULPHATE CONTAINING VARYING AMOUNTS OF WATER

Water in Sample Per Cent	Moles Water in Sample	Pressure Mm	Water in Sample Per Cent	Moles Water in Sample	Pressure Mm
19 36	10 31	23 5	9 78	4 49	19 0
19 18	9 83	23 5	8 02	3 93	19 0
18 36	9 32	23 2	7 69	3 45	18 4
17 71	8 92	23 0	7 13	3 18	18 0
16 86	8 40	23 0	6 49	2 88	17 0
16 22	8 02	20 0	5 87	2 58	16 5
15 33	7 50	19 8	5 25	2 29	14 0
13 85	7 00	19 3	4 92	2 15	8 5
13 66	6 56	19 3	4 84	2 11	4 6
13 02	6 20	19 5	4 78	2 08	2 2
12 25	5 79	19 2	2 51	1 10	1 8
11 56	5 42	19 1	1 02	0 43	1 6
10 74	4 98	19 0			

As stated above, quinine sulphate when exposed to the air takes up or loses water until its vapor pressure is in equilibrium with the vapor pressure (humidity) of the air in the room Since the octohydrate has a vapor pressure close to that of water (corresponding to a humidity of about 82% at 25° C) it will lose water unless exposed to very moist air The dihydrate on the other hand would be in equilibrium with the air only under desert conditions Inspection of the accompanying curve shows that under ordinary conditions equilibrium with water vapor in the air will be reached somewhere on the sharp break in the curve and that quinine sulphate stored in an open container will contain slightly more than 2 moles of water

CONCLUSIONS

By means of vapor pressure measurements it is shown that the water content of quinine sulphate is present as water of crystallization Quinine sulphate crystallizes from water at room temperature with eight molecules of water of crystallization This is not stable when exposed to the air and is transformed to the dihydrate No evidence of quinine sulphate containing seven molecules of water of crystallization was found

THE LEAVES OF PENTSTEMON COBÆA, NUTT *[1]

BY LOYD E HARRIS AND RUTH ANN CONNER [2]

Pentstemon cobæa, Nutt , of the Scrophulariaceæ family, is commonly called Beard-tongue (1), Cobacea (2) and Balmona (3) Nuttall discovered it in Arkansas in 1833 and named it cobæa in "Collection towards a Flora of the Territory of Arkansas" (4) in 1834 It is still widely distributed in calcareous soil from Missouri to Central Texas, where in the malarial districts its use for prevention of "the chills" is still practiced according to Indian custom It is said to have been used in the Chickasaw nation as a cathartic Some use the entire plant but the majority of the laity make a "tea" from either the freshly gathered or the dried leaves and take it in one teaspoonful doses as a tonic

Fig 1 —Pentstemon Cobæa (Picture taken northeast of Norman, Okla 1932)

EXPERIMENTAL

The leaves were collected June 20, 1931, soon after flowering had ceased Only leaves of the flowering stem were gathered as the basal leaves live all winter A sample collected in 1932 was used in a comparison of moisture determinations (5)

	Wt of Sample	Gm Lost	Per Cent Moisture
1931	10 0038	0 9323	9 52
	10 0025	0 9590	9 58
1932	5 0	0 5055	10 11
	5 0	0 5044	10 08

Ash determinations according to the method of the Association of Official Agricultural Chemists gave the following results

Wt of Sample	Total Ash	Water Sol Ash	Insol Ash
2 0 Gm	8 36 per cent	2 75 per cent	5 61 per cent
2 0 Gm	8 16 per cent	2 76 per cent	5 39 per cent

Extraction with selective solvents was carried out according to the method of Dragendorff (6), using some modifications, with the following results

* Scientific Section A PH A , Madison meeting 1933

[1] An abstract of a thesis submitted to the Graduate School, The University of Oklahoma in partial fulfilment of the requirements for the degree of Master of Science in Pharmacy

[2] Graduate assistant in Pharmacy

Solvent	Sample No 1 10 6594 Gm	Sample No 2 11 6613 Gm	Per Cent Sample No 1	Per Cent Sample No 2
Pet ether	0 0445	0 0490	0 41	0 42
Ether	0 1445	0 1514	1 35	1 29
Alcohol	1 7427	1 9054	16 34	16 34
Water	2 0050	2 1970	18 81	18 97
Dil alkali (2 per cent)	2 3710	2 5890	22 25	22 21
Dil acid (1 per cent)	1 3222	1 4824	12 42	12 37
Crude fibre	1 7830	1 9292	16 61	16 55
Moisture	(Previously determined)		9 55	9 55
Total	9 5445	10 5051	97 54	97 50

ALCOHOLIC EXTRACT

During the preliminary extraction, crystals were noticed in the alcoholic extract, as the alcohol was allowed to evaporate spontaneously In order to get enough of this material for study two large samples, or a total of one thousand one hundred fifteen and one-tenth grams of the ground leaves were exhausted with petroleum ether, then extracted with dehydrated alcohol The results were

Weight of sample	490 1 Gm	625 0 Gm
Total residue	78 8815 Gm	101 08 Gm
Per cent extracted	16 09 Gm	16 17 Gm
Impure crystals separated	3 0 Gm	15 2 Gm

The impure crystals were separated and washed with warm dehydrated alcohol The use of a suction filter was found necessary The washing was continued until no more green color was removed After taking up in hot dehydrated alcohol the solvent was allowed to evaporate spontaneously The crystals appeared cream colored and had a characteristic, although faint, sweet taste

Solubility of the Crystals

Readily soluble in warm	Glycerine Water
Slightly soluble in hot	Methyl Alcohol Benzene
Fairly soluble in hot	Amyl Alcohol Acetone Ethyl Acetate
Readily soluble in boiling	Ethyl Alcohol Isopropyl Alcohol
Insoluble	Acetic Acid

The melting point of the crystals was 163° C (unc) After repeated recrystallization the melting point was unaltered, however after boiling with water a substance was separated giving a different melting point (70–72° C) Crystals from the filtrate continued to meet at 163° C

An aqueous solution (1–20, W/V) had no effect on polarized light

The crystals did not reduce Fehling's solution and the results were still negative after attempts to hydrolyze them with diluted hydrochloric acid in a sealed glass tube Qualitative analysis showed the absence of sulphur, nitrogen, chlorine, bromine and iodine

PHARMACEUTICAL PREPARATIONS

Since *Penstemon cobæa* is administered medicinally in the form of a "tea" it was decided to prepare pharmaceutical preparations that would represent the constituents expected to be found in the tea

A decoction prepared according to the U S P directions and then evaporated to dryness gave the following results

	Wt. of Powdered Leaves	Wt of Residue	Per Cent of Water Soluble Extractives
Sample No 1	5 0 Gm	1 9325 Gm	38 65
Sample No 2	5 0 Gm	1 9403 Gm	38 80

An infusion was also prepared according to the general formula of the U S P and the total water-soluble contents determined The results were

	Wt of Powdered Leaves	Wt of Residue	Per Cent of Water Soluble Extractives
Sample No 1	5 0 Gm	1 8794 Gm	37 58
Sample No 2	5 0 Gm	1 8809 Gm	37 61

THE UNIVERSITY OF OKLAHOMA, NORMAN, OKLAHOMA

NATHANIEL LORD BRITTON

In the following sketch, Dr H H Rusby's tribute to Nathaniel Lord Britton in *Science*, August 3rd, is quoted, in part

"This learned and productive scientist, whose death occurred on June 25th in his seventy-fifth year, was in all respects a son of the state and city in which he lived and died Born and bred in Staten Island, of local ancestry, his early life and interests, which even in childhood were directed toward nature loving and studying, were closely bound up with the life of that island and have left their eternal imprint on the scientific and educational character of its community

"While the scientific world will be content to read and refer to his published works we, who knew him more intimately, may do well to look behind the work and consider the conditions under which it was performed and the manner of its doing and form an estimate of the character and life of the man

"Professionally educated at Columbia he became connected with it as instructor immediately upon his graduation and the educational relationship thus established continued throughout life Into the affiliation of Columbia's faculty with the scientific activities of the city Dr Britton entered most heartily and soon he became recognized as one of the dependable supporters of the work of several of these societies He became active in the proceedings of both the Linnæan and Microscopical societies, but his special interest was in the academy and the Torrey Botanical Club, the successful development of both of which has been largely due to his service and influence at the same time that he was equally active in the work of the now flourishing Natural History Association of Staten Island His later connection with the Botanical Garden, a city institution, brought him into close relations with the city government, so that he became associated with many of those who have conducted its political and financial affairs for a third of a century Thus, while the many interests in this and foreign countries which have profited by his labors will feel his loss as a scientist, our city will also miss him as an active and distinguished citizen"

BIBLIOGRAPHY OF PHARMACEUTICAL RESEARCH

Compiled by A G DuMez, Reporter on the Progress of Pharmacy

All articles in these lists will be presented in abstract form in the bound volumes of the YEAR BOOK, which is issued annually Those desiring abstracts immediately can obtain them for a fee of one dollar each by communicating with A G DuMez, University of Maryland, School of Pharmacy, N W cor Lombard and Greene Sts , Baltimore, Maryland

PHYTOCHEMICAL LITERATURE *

BY EDWARD KREMERS

Friedrich Rochleder was born May 15, 1819, in Vienna, the son of the apothecary Anton Rochleder He died Nov 5, 1874, as professor in the University of the capital of Austria

Not satisfied with the routine of the apothecary shop, he began the study of medicine in his native city, receiving the doctor's degree in 1842 While thus engaged he took a special liking to chemistry for which his pharmaceutical apprenticeship had prepared him in part Hence, after the completion of his medical studies he went first to Prag and then to Giessen His knowledge of vegetable drugs and of botany coupled with his chemical training under Liebig caused him to specialize in phytochemistry toward which most of his experimental and literary efforts were directed

Having spent several months in Paris and London, at the age of 26 he was appointed Professor of Technical Chemistry at the Academy at Lemberg In 1849 he succeeded his friend Redtenbacher at Prag, whom he again succeeded in Vienna in 1870

A fairly complete list of his publications may be found in Poggendorff's *Biographisch-literarisches Handwoerterbuch* It is noteworthy that, whereas the more general literary productions appeared between 1847 and 1858, his activities after the latter date were restricted to more specific investigations Optimistic as he was with regard to the fundamental importance of phytochemistry to plant physiology, he realized that only a mere beginning had been made and that much more detail work was necessary before worth-while generalizations could be indulged in with profit

His literary contributions in book form are

PHYTOCHEMICAL LITERATURE *

BY EDWARD KREMERS

Friedrich Rochleder was born May 15, 1819, in Vienna, the son of the apothecary Anton Rochleder He died Nov 5, 1874, as professor in the University of the capital of Austria

Not satisfied with the routine of the apothecary shop, he began the study of medicine in his native city, receiving the doctor's degree in 1842 While thus engaged he took a special liking to chemistry for which his pharmaceutical apprenticeship had prepared him in part Hence, after the completion of his medical studies he went first to Prag and then to Giessen His knowledge of vegetable drugs and of botany coupled with his chemical training under Liebig caused him to specialize in phytochemistry toward which most of his experimental and literary efforts were directed

Having spent several months in Paris and London, at the age of 26 he was appointed Professor of Technical Chemistry at the Academy at Lemberg In 1849 he succeeded his friend Redtenbacher at Prag, whom he again succeeded in Vienna in 1870

A fairly complete list of his publications may be found in Poggendorff's *Biographisch-literarisches Handwoerterbuch* It is noteworthy that, whereas the more general literary productions appeared between 1847 and 1858, his activities after the latter date were restricted to more specific investigations Optimistic as he was with regard to the fundamental importance of phytochemistry to plant physiology, he realized that only a mere beginning had been made and that much more detail work was necessary before worth-while generalizations could be indulged in with profit

His literary contributions in book form are

* Section on Historical Pharmacy, A PH. A, Toronto meeting 1932 Continued from JOUR A PH A 21, 365

1847 *Beitrage zur Phytochemie*
1852 *Die Genussmittel und Gewuerze in chemischer Beziehung*
1854 *Phytochemie*
1858 *Chemie und Physiologie der Pflanzen*
1858 *Anleitung zur Analyse von Pflanzen und Pflanzentheilen*

The last was translated into English and appeared as *Proximate analysis of plants* in 1861 and 1862

The biography for the *Allgemeine Deutsche Biographie* was written by Anschuetz It is evidently based on the more detailed account written by Rochleder's student and friend, H Hlasiwetz, for the *Almanach der kaiserlichen Akademie der Wissenschaft* for 1875 (pages 195–212), of which society Rochleder had been a member since 1848 This ' Nekrolog" was reprinted in the *Berichte der d chem Gesellschaft*, for 1875, *viz* , in Vol 8, page 1702

Fr Rochleder—Beitraege zur Phytochemie Wien, 1847 Aus der kaiserl koenigl Hof- und Staats-Druckerei One vol 8°, pages 51

This is Rochleder's first attempt to rationalize the numerous observations made in the chemical study of plants and parts of plants Liebig's theory of radicles, the "true elements" of organic compounds, afford him the means of studying the structure of phytochemical substances and of seeking genetic relationship between them That, with the limited number of radicles known at the time, there should be so many organic substances produced in the vegetable kingdom, he attributes not only to their capacity to combine with different elements and radicles, *e g*, oxygen, sulphur, cyanogen, sulphocyanogen, etc , but above all to their capacity to form "gepaarte Verbindungen" such as salicin, amygdalin, etc (page 22)

The complaint that so much of phytochemical investigation has been merely qualitative and not quantitative is readily understood when one considers that elementary organic analysis, as simplified and perfected by Liebig, had been in use for about twenty years It finds expression in the small number of phytochemical substances enumerated with their formulas The modern chemist, however, will be impressed less with the paucity of formulas than with the daring formulas assigned to pectin and other members of the "carbohydrate group "

Following the trend of v Uslar and de Saussure, more than half of the small treatise is devoted to what is generally conceived as phytophysiological considerations In the biochemistry of the plant he recognizes desoxidation as the principal function or chemical process of plant metabolism

Inasmuch as this treatise has become rare, the table of contents may here be given

Ueber die Zusammensetzung der organischen Bestandtheile der Pflanzen im Allgemeinen (pages 7–11)

Ueber die Zusammensetzung der Pflanzenstoffe im Besonderen (pages 11–22)

I	Familie	Kohlehydrate	VIII	Familie	Bioxyde
II	Familie	Fettsäuren	IX	Familie	Æther
III	Familie	Gerbstoffe	X	Familie	Acrodyle
IV	Familie	Lichenyle	XI	Familie	Albuminoide
V	Familie	Tetryle	XII	Familie	Alcaloide
VI	Familie	Decatryle	XIII	Familie	Gepaarte Verbindungen
VII	Familie	Camphene			

Ueber die Metamorphosen welche die Stoffe in den Pflanzen während des Lebens derselben erleiden (pages 23–45)
Einjahrige und perennirende Gewachse (page 46)
Ueber die Vertheilung der Pflanzenstoffe in den Pflanzen (pages 47–49)
Schluss (pages 49–51)

Fr Rochleder—Phytochemie Leipzig Verlag von Wilhelm Engelmann, 1854

This attempt at a general phytochemistry in which the author was the pioneer, is best revealed by the table of contents The bulk of the work is devoted to a record of constituents, by no means all chemical units, that had been isolated from plants The author points out that the gaps are much more numerous than the known constituents and he indicates constantly where more work seems desirable and profitable This part of the book is, therefore, a sort of precursor to Wehmer

Part three is in its essence an attempt to bring out genetic relationships with reference to the several families Even before Kekulé's theories were advanced, he endeavors to bring out what was regarded as structural relationship at that time

Part four has to deal largely with what we call plant metabolism, of some of the details of which the following table of contents will give further indication

Einleitung
Erster Abschnitt Analysen der Pflanzen mit besonderer Rucksicht auf ihre organischen Bestandtheile (pages 1–250)
Zweiter Abschnitt Analysen der Pflanzen, mit alleiniger Berücksichtigung ihrer unorganischen Bestandtheile (pages 251–255)
Dritter Abschnitt Ueber den Zusammenhang zwischen der Form und Zusammensetzung der Gewachse (pages 257–308)
Vierter Abschnitt Der Stoffwechsel in den Pflanzen (pages 309–344)

I Nahrungsmittel der Pflanzen
II Bestandtheile der Pflanzen
III Metamorphosen in den Pflanzen
IV Bewegung der Stoffe und ihre Folgen
V Einfachheit der Zusammensetzung der Pflanzen
VI Das Verhaltniss der organischen zu den unorganischen Bestandtheilen der Vegetabilien
VII Perioden im Stoffwechsel
VIII Pflanzengeographie

Anhang (pages 345–370)
Alphabetisches Verzeichniss der bis jetzt, ihrer Zusammensetzung nach, bekannten Bestandtheile der Pflanzen
Index familiarum
Index generum

Reviews of this work may be found in the following journals

Arch de Pharm, 133, 335, by H Bley (8 pages)
Neues Jahrb f Pharmacie, 18 355 by Remsch

Fr Rochleder—Chemie und Physiologie der Pflanzen Heidelberg Karl Winter, 1858

In this, his last attempt, the author discusses phytochemistry from two points of view, namely, that of chemical botany, and that of the chemical physiology of plants

In the first part, which constitutes the major portion of his treatise, the chemical constituents of plants, as revealed by so-called plant analysis, are arranged

according to botanical families, genera and species In this respect he supplements the first part of his *Beitræge zur Phytochemie* However, what, in the first attempt, is regarded as one of the principal aspects of phytochemistry, namely, the genetic relationship of chemical compounds based on their structure, receives no consideration whatever His chemical botany is but a catalog of phytochemical substances with references to original literature for details

The character of the second part becomes sufficiently apparent from the table of contents It also goes into much greater detail than his *Beitræge* of 1847 The object of the chemical physiology of plants is to investigate "which substances are taken up by plants from without, which products are produced therefrom by the plant, the method by which the plant metamorphoses the substances taken up from without, and the products that are secreted by the plant "

The contents of the volume are herewith revealed

Einleitung (pages 1–7)

(A) Chemische Botanik (pages 7–98)

Analysen vegetabilischer Körper

I Vegetabilia dicotyledonea
II Vegetabilia monocotyledonea
III Vegetabilia vascularia cryptogama
IV Vegetabilia Cellularia

(B) Chemische Physiologie der Pflanzen (pages 99–152)

I Endprodukte des Stoffwechsels
II Nahrungsmittel der Pflanzen
III Aufnahme der Nahrungsmittel und Vertheilung der Stoffe in den Pflanzen
IV Ueber den aufsteigenden und absteigenden Saftstrom
V Eigenwärme der Gewächse und Bedeutung der Warme und des Lichts fuer die Pflanzen
VI Licht
VII Electricitat
VIII Keimen der Samen

AUGUST HEINRICH HUSEMANN

The younger of the two cousins Husemann was born Sept 5, 1833 in Stolzenau, Hannover, then an independent kingdom His early education he received in private institutions and at the gymnasium in Detmold In 1848 he was apprenticed to the court apothecary in Detmold Later he acted in the capacity of assistant in Lamspringe, Aurich and Nienburg In 1857 he became a student at Goettingen where he passed the state board examination in the following year Devoting himself to the study of chemistry, he worked under Woehler and Limpricht and in 1860 was appointed assistant at the newly equipped physiological chemical laboratory In the same year, Aug 8th, he received the doctor's degree and in 1862 he became docent for pharmaceutical-juridical chemistry

Lung troubles necessitated residence in Italy during the winter of 1863/64 He returned to Goettingen but for a short time, having received a call to the "Kantonschule" in Chur Whereas in Goettingen his researches were devoted to phytochemistry, in Chur they dealt with the investigation of the mineral waters of Graubuenden Poor health necessitated his withdrawing from active work He died in Thusis (Graubuenden, Switzerland) July 17, 1877

A list of his book and journal publications will be found in Poggendorff, *Biogr lit Handwoerterbuch*, Bd III

Phytochemically his *Pflanzenstoffe*, which appeared in 1870–1871, is his principal contribution to scientific literature It was well received A second edition which appeared after his death, 1882, was edited by A Hilger and Th Husemann

The biographical sketch in the *Allg Deutsche Biographie*, by A Ladenburg, is based on the obituary in the *Arch Pharm*

ALBERT HILGER

Born May 2nd in Hamburg, Rhenish Palatinate, he served his pharmaceutical apprenticeship with the apothecary Joh Hoffmann in Langenkandel, Rhenish Palatinate Having passed his assistant's examination, he served for three years in this capacity in Mannheim, Karlsruhe and Saarbruecken He studied in Wuerzburg (1860) where he passed his "Staatsexamen" in 1862, also at Heidelberg, at which university he received his doctor's degree (Ph D) He then became Schenk's assistant in Wuerzburg, later the assistant to Scherer, and in 1869 "Privat-docent " In 1872 he was appointed Professor of Pharmacy and Applied Chemistry in Erlangen Twenty years later he became Buchner's successor in Munich He died May 18, 1905, in Possenhefen on the Starnberger lake

For additional biographical data with portrait, also for a long list of his book and journal publications, see B Reber, *Galerie*, etc , pages 218 and 363 An appreciation, more particularly of his life-long interest in pharmacy and food chemistry was written by Heger, editor of the *Pharmaceutische Post*, No 23, 1905

Poggendorff gives but a brief notice of his life and work (Bd III) The *Allgem Deutsche Biogr* does not mention him

THEODOR HUSEMANN

The older of the Husemann cousins was born Jan 13, 1833, in Detmold, Lippe From his father, an ex-apothecary whose hobby was botany, he acquired a love for the natural sciences These he studied, in addition to the required medical subjects at the universities of Goettingen (1850–1852), Wuerzburg (1852–1854) and Berlin (1854) From the last-named institution he received the M D , Dec 27, 1854

After several years as medical practitioner, he returned to Goettingen devoting himself to toxicological and pharmacological studies During the winter 1863–1864 he accompanied his sick cousin to Italy Early in 1865 he became "Privat-docent" for Pharmacology and Toxicology at the *Georgia Augusta* and in 1872 he was made professor

As medical practitioner, Husemann became active in a literary capacity writing on various subjects of medical history As toxicologist and pharmacologist he wrote extensively on subjects related to these fields With his cousin he edited the first edition of the *Pflanzenstoffe* (1869–1871) After his cousin's death, a second, enlarged edition was published in cooperation with A Hilger A promised third edition did not make its appearance

He died Feb 13, 1901

For more detailed biographical data with portrait, also references to other publications, see B Reber, *Galerie*, etc (1897), 63

Poggendorff contains but a brief note on his life and literary activities The *Allgem Deutsche Biogr* does not mention him

A more extensive biographical account will be found in the *Pharmazeutishe Zeitung* see 32 (1887), 443 and 451, also 46 (1901), 147

Aug Husemann, und *Theod Husemann—Die Pflanzenstoffe in chemischer, physiologischer, pharmakologischer und toxikologischer Hinsicht* Fuer Aerzte, Apotheker, Chemiker und Pharmakologen bearbeitet One vol, pages VII, 1178 Berlin, 1871 Verlag von Julius Springer

One of the authors, presumably August H, undertook the editing of the chemical part of the work, the other, presumably Theodor H, that of the pharmacological, etc, parts of the volume While such mixtures as volatile and fatty oils, resins, etc, receive consideration, extracts and other galenical preparations of plants are excluded The book apparently filled a long-felt want on the part of chemist and apothecary though it was also written for the medical profession

The arrangement, of special interest so far as date of publication is concerned, becomes apparent from the table of contents

Einleitung		1– 18
(A)	Reine Verbindungen	
	1 Die Pflanzenbasen oder Alkaloide	19– 522
	2 u 3 Die Pflanzensaeuren und indifferente Pflanzenstoffe	523–1073
(B)	Gemenge	
	Aetherische Oele—Harze—Fette	1074–1167
Register		1069–1178

As a means of subclassification the plant substances are arranged according to plant families

Contemporary appreciation and criticism of this work may be learned from the following book reviews

Arch Pharm, 194, 282 By E Hallier

Am J Pharm, 42, 315 By J M Maisch

After the death of Aug Husemann in 1877, his cousin associated himself with A Hilger Of the three authors of *Die Pflanzenstoffe*, two began their scientific careers as pharmacists The third was the son of an ex-apothecary and had inherited from his father a love for the natural sciences which he cultivated while pursuing his medical studies The second edition was published in two volumes The arrangement of the subject matter was altered as becomes apparent from the rearranged table of contents

I ALGEMEINER THEIL

A METHOD OF PREPARING GLYCERITE OF STARCH *

BY F L GEILER

INTRODUCTION

The purposes of this article are (1) to describe a simplified method of preparing Glycerite of Starch, (2) to show wherein this method differs from the present U S P X method of preparing this glycerite, and (3) to show why the difference or differences mentioned above will be advantageous

The writer has, for a number of years, assigned Glycerite of Starch as one of the preparations to be made by students in the laboratory The observations made over this period of years led to the conclusion that undue difficulty was being experienced by the students in making a comparatively simple preparation The trouble met with has been primarily that of obtaining a smooth, opalescent, translucent product by following the directions given for this preparation in the U S P X This primary difficulty usually has led to one of a secondary nature due to the effort made to obtain a temperature of around 140° C with the resultant scorching of the glycerite Upon questioning the students, almost invariably the scorching has been found to be the result of the use of high heat under the impression that it will eliminate the lumpy condition of the glycerite which has developed because of following the directions as given in the U S P X

During the time referred to above many students used the method of the U S P X and repeated the experiment as high as three or four times before a satisfactory glycerite was obtained This always seemed to the writer an uncalled-

* Section on Practical Pharmacy and Dispensing, Washington meeting, 1934

for waste of time and materials on a preparation which, as has been said before, should be rather simple

EXPERIMENTAL WORK

The conditions and results, as generally outlined above, led the writer to conduct experiments on this preparation At first one group of students was allowed to prepare the glycerite as directed in the U S P X The results were very unsatisfactory, many repetitions occurring due to a lumpy or a discolored preparation The same group was then directed to prepare the same glycerite by the method to be described subsequently The results obtained by using the second method were practically 100% as to smoothness, opalescence and translucency The above methods of preparation were repeated a year later and the same results obtained The writer, personally, has performed the same experiments with the resultant corroboration of those given above

The method proposed is as follows Ten grams of starch were weighed out and mixed with 20 cc of cold water until a homogeneous mixture was obtained Glycerin, to the volume of 70 cc , was poured into a small evaporating dish The aqueous starch mixture was then added to the glycerin and the entire volume was stirred until homogeneity was again obtained The evaporating dish and contents were then placed in a sand-bath on an electric hot plate The temperature was so regulated that the heat increased rather slowly and the preparation was stirred almost constantly The highest temperature registered inside the evaporating dish was 110° C The total time of making the glycerite, from weighing and measuring to removing from the hot plate, inclusive, was just one hour Equally satisfactory results can be obtained by using a Bunsen Burner in place of an electric hot plate

CONCLUSION

In view of the foregoing, I wish to call attention to the following conclusions

(1) The proposed method of preparation is less troublesome than that used in the U S P X

(2) This method requires practically no care other than constant stirring and temperature control

(3) Lumpiness and discoloration in the finished product are eliminated due to the fact that all ingredients are heated together at the same time and to the same temperature

(4) The present U S P X method is unsatisfactory because it gives a lumpy product and possibly a discolored one, due to the glycerin being heated far above the aqueous starch mixture when the latter is added

A JAPANESE PHARMACIST MUST CERTIFY IMPORTED MEDICINALS AND CHEMICALS SOLD IN JAPAN

The marketing of cosmetics, manicure preparations and medicinal preparations in Japan is contingent upon the issuance of a government license for such sale A license may be obtained by submitting samples to proper authorities accompanied by a chemical analysis of the product which has been certified to by a licensed Japanese druggist (Consul General Garrels, Tokyo)

A STUDY OF VEHICLES FOR MEDICINES *

BY BERNARD FANTUS, H A DYNIEWICZ AND J M DYNIEWICZ

VII AROMATIC SYRUP OF ACACIA

In the course of our studies on vehicles we have secured abundant proof that colloidality has distinct disguising value We, therefore, became interested in syrup of acacia which might be taken to represent colloidality to as high a degree as can be found in any pharmaceutic preparation

The deletion of this syrup from U S P VIII might possibly count against it in consideration as an eligible vehicle This deletion, we believe, was chiefly due to its poor keeping qualities In spite of the deletion, however, its usage, as shown by the Gathercoal survey, has been 15 per 10,000, which would entitle it to admission to the National Formulary merely on the basis of its use

That the syrup of acacia has disguising value can very easily be proved among other ways, by the following prescription for urea as a diuretic

℞	Urea	15 0 Gm
	Syrup of Acacia to make	60 0 cc

M and label Teaspoonful in water every 4 hours

The taste of urea is sharp and much more disagreeable when the solution is made with simple syrup instead of the syrup of acacia Similar results could be secured with any readily soluble and highly diffusible medicament, that has no intrinsically unpleasant taste We were indeed unable to find anything that was superior to or as good as the syrup of acacia for the disguising of urea, excepting that the lack of flavor gave one the impression of "flat taste" which might be possibly one of the reasons why the syrup of acacia is not more popular

We felt, therefore, that, to improve the syrup of acacia and increase its utility, we would have to do two things *First,* impart to it keeping qualities, and, *secondly,* give it a pleasant flavor

To improve the keeping qualities of this syrup, we increased as a first step the proportion of sugar from 80 to 85 parts per 100 which can be done by merely dissolving the powdered acacia directly in the syrup there being no necessity of dissolving the acacia separately as was done in U S P VIII To make assurance doubly sure, however, we would suggest the addition of 1 to 1000 of sodium benzoate, so as to protect the medicine against spoiling, even if the doctor had to use a little water in order to dissolve the medicament he intends to introduce in the syrup

It is strange that the delicious wintergreen flavor has thus far not been made use of in the production of vehicles After trying a number of flavors, it seemed clear to us that methyl salicylate was the ideal flavoring vehicle for the syrup of acacia, and we have the belief that, by using it for making the syrup of acacia more pleasant, we are at the same time enriching our flavoring resources to an important degree

As a result of these considerations and on the basis of our experimentations we herewith, respectively, suggest the following formula for admission to either the United States Pharmacopœia or the National Formulary

* From the Laboratory of Pharmacology of the University of Illinois, College of Medicine

SYRUPUS ACACIÆ AROMATICUS

Aromatic Syrup of Acacia

Syr Acac Arom

Acacia, in fine powder	100 0 Gm
Sodium Benzoate	1 0 Gm
Methyl Salicylate	1 0 cc
Syrup, a sufficient quantity, To make	1000 0 cc

Mix the acacia, placed in a dry mortar, with the sodium benzoate Add the syrup at first in small portions with active trituration, so as to avoid the formation of lumps, and, gradually, the remainder of the syrup Bring the preparation to a boil and when cool strain through cheese cloth Finally incorporate the methyl salicylate by thorough agitation and add enough syrup to make the product measure 1000 cc

---

HOW MUCH IS A TEASPOONFUL?*

BY F W NITARDY

During the last twenty years considerable effort has been made toward more accurate standardization of medicinal products Tolerances have also been developed for individual dose forms such as tablets, capsules, ampuls, etc, and these tolerances, determined upon very largely by a committee of the A D M A and A P M A, have received official sanction from the Department of Agriculture and other bodies In view of this effort for accuracy in potency and dosage, it appears wise to again give consideration to the dose measure most commonly used by the public in the use of liquid medicinal substances, namely, the teaspoon

Efforts have been made from time to time to supplant the teaspoon with an accurately graduated medicine glass, and while such idea is laudable it has met with little success, probably because of the convenience of the teaspoon and the almost universal habit on the part of the public to use it and, possibly, its belief that it represents a reasonably accurate measuring device for such purposes

Originally, a teaspoonful was considered the equivalent of the fluidram and because a fluidram is approximately 4 cc, the equivalent of 4 cc for a teaspoonful has been more or less generally accepted since the metric system became official, notwithstanding that it is quite an incorrect equivalent Unfortunately, this incorrect equivalent has official sanction, but a survey of literature indicates that attempts have been made to adopt the more nearly correct equivalent of 5 cc, also that these efforts received the approval of both the pharmaceutical and medical professions, but for some reason not clear failed in being adopted by the U S P, which still gives the approximate measure of a teaspoon as 4 cc

'Arny's Principles of Pharmacy' (Second Edition 1924) states, A teaspoonful is supposed to be one fluidrachm' Remington's Practice of Pharmacy (Seventh Edition, 1926) states A teaspoonful is estimated as 4 cc In almost all cases the modern tea cups tablespoons, dessert spoons and teaspoons after careful test by many authorities were found to average 25%

* Section on Practical Pharmacy and Dispensing A PH A, Washington meeting, 1934

greater capacity than the theoretical quantities given above" 'The American Illustrated Medical Dictionary,' Dorland (Sixteenth Edition, 1932), defines a teaspoon as "A spoon of small size containing about 1 fluidrachm or 4 cc"

In Europe the average content of a teaspoon is quite generally recognized as 5 cc, that figure being given in the French Codex, in the German Pharmacopœia VI (1926), the Danish Pharmacopœia VIII (1933) and in the Swiss Pharmacopœia (1933) The British Pharmacopœia includes a statement regarding the inaccuracy of dosages expressed in teaspoonfuls and dessertspoonfuls and recommends that dosages should be specified in terms of more definite units This Pharmacopœia does not give any capacity for a teaspoon A number of articles on this subject have been published during the present century Abstracts of these are as follows

Standardizing Dose Measures [1]—Attention is called to possible errors caused by the inaccuracy of medicine measures and that by the fact that these measures are poorly adapted for accurately measuring liquids in small quantities The author proposes certain regulations which had previously been adopted at a pharmaceutical meeting of the Philadelphia College of Pharmacy These resolutions recommended the use of graduated glass dose-measures so constructed that the heights of the contained liquid at a spoonful mark would be greater than its diameter, that where spoons are used as medicine measures, the French Codex definition of a spoonful be applied This definition reads as follows "A spoon is full when the contained liquid comes up to but does not show a curve above the upward edge or rim of the bowl The third recommendation was that 1 teaspoonful should be considered equivalent to 5 cc, 1 dessertspoonful 10 cc and 1 tablespoonful 15 cc These resolutions were seconded and adopted by the ASSOCIATION

Dose Measures and Measured Doses [2]—In a series of experiments it was shown that the average teaspoonful dose as measured with the same spoon by different people varied in measurement from 3 to 7 cubic centimeters Medicine glasses were also found to be inaccurate, varying considerably at the different graduations and most of them being so constructed that small quantities could not be measured with accuracy

The Approximate Measures of the U S P [3]—Wilbert states that the resolutions endorsed by the ASSOCIATION in 1902 were also adopted by the American Medical Association in 1903, in spite of which the members of the Committee on Revision of the U S P failed to adopt the measures recommended Wilbert made permanent casts of the capacity of a number of different sizes of spoons in common use as follows The bowl of the spoon carefully washed and perfectly dried was coated with a thin film of oil and then filled with the requisite quantity of dental plaster which had been previously mixed with sufficient quantity of water to give it the consistency of cream The spoon was supported until the plaster had set The weight of the cake was then determined and the capacity of the spoon calculated It was found that teaspoons evenly filled had a capacity of from 4 4 to 5 5 cc Wilbert recommends that the 5-cc equivalent for teaspoon be generally adopted

[1] M I Wilbert, PROC A PH A, 50 (1902) 408
[2] M I Wilbert, *Am J Pharm*, 74 (1902), 120
[3] M I Wilbert, PROC A PH A, 53 (1905), 301

The Tyranny of the Teaspoon [1]—Arguments very similar to those previously presented by Wilbert are given Arny found that capacities of 9 teaspoons ranged from 3 8 to 7 8 mils Only one of these approached the 4-mil basis All the others were closer to 5 mils than to the 4-mil mark

Standard Teaspoon Needed [2]—Examination of teaspoons of four different makes showed two to deliver 5 37 cc, one to deliver 7 39 cc and one to deliver 4 22 cc It is recommended that properly graduated glasses be used instead of teaspoons

Variation in the Capacity of Teaspoons and Other Measures [3]—Data are given showing the capacity specified by several pharmacopœias for the teaspoon, dessertspoon and tablespoon Because of the variations which occur in these specifications, the author recommends international unification Data as given showed a still greater variation in the capacities of these measures as actually found in general use

The writer checked up on capacity of teaspoons recently and found the following (Filled so the liquid is exactly level with the edge of the bowl)

1	Towle sterling teaspoon (Lady Diana)	5 0 cc
2	Community plate teaspoon (Patrician)	5 5 cc
3	Plated ware teaspoon (hotel ware)	5 0 cc
4	Plated ware teaspoon (restaurant)	5 0 cc
5	Plated ware teaspoon (5 and 10¢ store)	5 0 cc
6	Plated ware teaspoon (nondescript)	5 0 cc

It will be seen from the above that of six representative varieties of teaspoons, five hold just 5 cc and one 10% more than this It is believed that the sterling silver spoon given under "1" above is quite representative of the capacity of sterling silver spoons available in the market to-day as manufactured by Towle, International, etc, and that the community plate spoon given under "2" is probably quite representative of the better class of plated ware available in the market to-day

Aside from the above spoons, I also determined the capacity of a very old European teaspoon, definitely more than a hundred years old This spoon held 4 4 cc and it is my impression that old European spoons of this type are generally somewhat smaller and have a somewhat different shaped bowl than the teaspoon in common use in this country, but even this type of spoon seems to hold definitely more than 4 cc

It would appear that in view of the foregoing a renewed effort should be made to induce the U S P to recognize 5 cc as the most nearly correct metric equivalent for an average teaspoonful

VISIT THE CENTURY OF PROGRESS

Pharmacists, visiting the World's Fair, should see the Pharmacy Exhibit and register, thereby showing their interest and loyalty to the profession

A PROFESSIONAL PHARMACY *

BY ROBERT R GAW

The McKennan Pharmacy was founded in 1861 It was located for many years at 431 Market Street, Pittsburgh In 1910, Mr O F Wolf, who worked as a boy in the store and became registered before branching out for himself, purchased a half interest in the store, and in 1914 purchased the other half

In 1914 the McKennan Pharmacy moved to its present location 506-508 Penn Avenue and at that time discontinued the sale of soda water, proprietary medicines, candy, tobacco and toilet articles These items were discontinued with the idea of attempting to operate a professional pharmacy and devote our energies exclusively to prescriptions

We mention these historical facts to better enable us to visualize the progress of this business and its evolution from an ordinary drug store to a professional pharmacy Many druggists as well as physicians from a distance, who visit the store, are under the impression that it is one of recent birth and that it represents an idea capitalized by big interests, and launched over night like the sensational developments in commercial retail stores

The McKennan Pharmacy as a professional pharmacy is a result of years of development and of a radical departure from the deeply rooted customs of a business long established as a commercial drug store This evolution was a result of adopting a policy of extremes in eliminating many of the departments and classes of merchandise usually found in average drug stores When the McKennan Pharmacy decided to omit such lines as proprietary medicines, candy, cigars, soda water, tooth brushes and all toilet articles, we did it at a single stroke, and made it our business to acquaint the physicians with this action Our intention was to impress upon them the fact that we were determined to exert all of our efforts to give undivided attention to professional pharmacy, and to render a service to the profession which we felt we could not deliver without eliminating the commercial end of our business

Personal contact is a material factor in building a professional pharmacy It is necessary to keep in personal touch with the physicians as well as your customers We are in constant contact with the members of the medical profession of Allegheny County and its environs, and also in touch with their patients as they come into the store

Many practicing physicians are not familiar enough with the Pharmacopœia and the simple pharmaceutical formulas There is no easier way for a druggist, who is attempting to establish a professional pharmacy, to obtain the confidence of the physician than by impressing upon the physician's mind a knowledge of your profession

We attribute our growth to the fact that the medical profession, as well as the public, appreciates the services rendered by a strictly professional pharmacy We do no counter prescribing, nor do we fill any family recipes We limit our activities to the compounding and dispensing of physicians' prescriptions and materials used by the physicians in their office practice In addition, we supply sick-room necessities

* Section on Practical Pharmacy and Dispensing, A PH A , Washington meeting 1934

Physicians are supplied with freshly distilled water gratis, which is greatly appreciated and although no immediate remuneration is received, their good-will and subsequent cooperation is noticeable

Since adopting the policy we have before indicated, we have never hired any pharmacists A boy enters the store as an errand boy and develops until of sufficient age to enter the school of pharmacy If his preliminary education has not been sufficient, we supply him with the opportunity of adding sufficiently to his general education to enable him to enter the school of pharmacy, and then care for all his necessary expense in completing his pharmaceutical studies until he has passed the State Board Hence our young men are always allied to, and enthusiastic for, the policy of the store It is virtually bred in them Through the adoption of this policy we have never lost one of our employees whom we have helped to educate

Few organizations have a more enviable situation in this respect There are four registered pharmacists at McKennan's, two always being on duty in the evenings and on holidays, and four on duty during the day And yet McKennan's has not hired a pharmacist in fifteen years

Commendation of our pharmacy by physician to physician and to patients, the personal interest they take in us, advertises us in a manner we could never accomplish through the daily press

Any member of the profession of pharmacy who has learned its precepts and has practiced its ethics must clearly recognize the significant value of real professional service

We do not think that the retrogressive motion so noticeable in the practice of pharmacy to-day is entirely the result of a lack of familiarity with the principles or ethics of the profession, but rather a desire to ignore these ethics because of the disposition of present-day drug stores to work along the lines of least resistance They are influenced by the apparent prosperity of the commercial drug store, where the pharmacy department is relegated to an obscure corner of an institution which has all the earmarks of a variety shop or a miniature department store

We expect within a short time to see an absolute separation of the professional pharmacy from the commercial pharmacy, with legislation covering each class as a separate institution

The druggist who aspires to be a professional pharmacist should have all the information the physician should reasonably expect Knowledge is the key-note of success in any line of endeavor, and the druggist who does not have complete knowledge of his profession cannot hope to make much impression on the members of the medical profession

Professional pharmacies are developed only through hard work and careful study of the requirements of the physician and his patients Unless you comply with these requirements, your pharmacy will always be an average drug store and the profession of pharmacy cannot number you among those who recognize the duty and responsibility of the profession

It is true, in conducting a professional pharmacy, many specialties, such as Ampuls, Solutions, Stains, etc , put up by the various manufacturers, are sold on a close margin, but by rendering this service and making it possible for the physician to obtain them, he becomes familiar with your store, sends his prescription work there, and the volume of prescription business increases to the extent that it offsets

the loss in the sale of specialties many times In other words, it is just a different form of advertising your business

To-day more than ever before, we are trying to lead the drug store back to pharmacy

A plate glass sign hanging over the prescription counter sets forth with admirable directness McKennan's merchandising policy

PRESCRIPTIONS

Purveyors to Physicians and their Patients only We do not sell Patent Medicines, Tobaccos Soda Water or Toilet Articles

All Biologicals Vaccines, Serums, Ferments, etc , are kept under Refrigeration—Ice Cooled

Unless you are sick, we have not anything to sell you That has been the store's message to the public for nineteen years

This generous policy was Mr Wolf's idea and it is standing the test of time On October 23, 1930, the McKennan Pharmacy suffered a great loss by Mr. Wolf's death after a lingering illness of thirty months The writer, who was taken in as an errand boy by Mr Wolf, wishes to pay tribute to his memory We are doing our utmost to "Carry On" the institution which his idealism so firmly established

PROFESSIONAL AND COMMERCIAL PHARMACY *

BY AQUILLA JACKSON [1]

I suppose there is no more accurate way of describing the drug store than to refer to it as a professional-commercial institution No matter how ethical it is or how extensive its professional service, there is always the commercial side to be considered In other words, a sound business foundation must underly the store in all of its departments and branches

I believe this conception of the drug store is sound and fully consistent with the high purpose it is to serve The difficulty is, too many pharmacists have lost their sense of proportion and have sought to develop the drug store as a commercial institution only This practice has been carried to shocking extremes Every conceivable kind of merchandise has come into the drug store, it has become the subject of ridicule and criticism This, to me, is simply a public interpretation—that the pharmacist is little short of a fool in his extreme commercial practices

Several years ago, in fact early in 1930, the firm represented by the writer conceived the idea that it could render better pharmaceutical service by separating the business of the store into two divisions, one professional and confined to prescriptions, drugs and medicines and the closely and directly related side-lines, and the other, consisting of the soda fountain, cigar and candy departments, magazines, etc Fortunately, we had plenty of space

The large store room was divided by a partition reaching to the ceiling At each end were archway openings, permitting free access from room to room Two

* Section on Practical Pharmacy and Dispensing, A PH A Washington meeting 1934

[1] Retail pharmacist, Baltimore Md

entrances from the street were provided, one leading directly to the professional pharmacy, and the other to the commercial room This move, at first experimental, has turned out to be very satisfactory We have had any number of favorable comments from physicians and the public

From the beginning, our clientele seemed to feel that we had recognized a practical situation and had sought to meet it as best we could Our problem was how to conduct a professional and commercial calling in the most satisfactory manner

The advantages of our arrangement are many For instance, a person seeking drugs and medicines, or desiring to have a prescription compounded, or to purchase some sick-room necessity can come to our professional division and be served by a competent pharmacist There is no need to look around in an effort to ascertain who is the cigar clerk or the pharmacist This thought, simple and trifling as it may appear, is really important It emphasizes that the needs of the customer will be met by a competent pharmacist Also the noise and distraction almost invariably associated, at certain hours of the day at any rate, with the soda fountain trade, is conveniently confined to a separate room Young people, and older ones, too, come to the fountain, read, smoke and visit without interfering in any way with any other division of the store

Even with this arrangement we have never thought that we could go the limit in commercial lines We confine ourselves to the more or less traditional side-lines After all, we are pharmacists, and we have tried to conform to professional standards, recognizing quite frankly that we had to deal with conditions as they actually exist

I think pharmacists have made a tragic mistake in not recognizing the public interest in the drug store In coming to this conclusion, I have noted more times than once that subconsciously, perhaps, but none the less definitely, people react adversely to too much commercial emphasis in a drug store People seem to look upon certain phases of a drug store as something essential to them, something which means a great deal when sickness comes, and which they feel they can depend upon when required to do so This is true to a much greater degree than we as pharmacists seem to appreciate It is this same professional regard which people give to us that raises pharmacy to a professional plane On many occasions I have heard people pay complimentary references to drug stores of a high type, and I have heard many, many adverse criticisms of the other kind that use pharmacy as a cloak for a high-powered commercial exploitation Each reference springs from a high regard for pharmaceutical service and to a wide-spread public objection to associate it with a too flagrant commercial practice

We have persistently refused to handle beverage intoxicants, and we have kept our store scrupulously free from slot machines of all kinds While there may be many who do not object to such things in drug stores, it has been our experience that the greater part of the public are opposed to them If we did not feel that they were objectionable, we would still exclude them from our store, as a matter of principle We are selfish enough to believe that sooner or later the public will discriminate, and that what might appear to be profitable now may prove to be a decided loss later, there may be exceptions, due to peculiar geographical conditions, but generally speaking, I do think that some of us have gone too far

Much has been said during the last few months with reference to open prescription counters In my opinion and from expressions of others this is receiving much favorable comment, however, I would like to offer a few personal criticisms *First,* is it consistent to bring before the public the vital part of our stores without taking into consideration the general appearance of our stores? In other words, can we expect to educate the public properly by continuing to handle the type of merchandise which really has no place in public health? *Second,* if the prescription counter is open and the pharmacist is in full view of the public, will it not be embarrassing on those occasions when a prescription is badly written (and very frequently they are) and you decide that it is necessary to contact the physician before filling the prescription? What impression will this make on the person watching you?

I am heartily in favor of educating the public along these lines, I think the open prescription department is a fine thing, but that it should be worked out in a practical way, taking many things into consideration

In conclusion, I would like to tell you how I feel about the future of pharmacy I shall begin by asking questions *First,* are we necessary to public health? *Second,* how necessary are we? The answer to the first is obvious, the answer to the second question will decide about our future As I see it, every single accomplishment in pharmacy in a legislative sense has been due to our efforts to bring the importance of its effect on public health before the lawmakers It is the only thing that we have and can truthfully call our own When the number of drug stores that are needed for public health service only (and I mean drug stores in every sense of the word) are functioning, it is then and then only that most of our problems will be solved

---

DETERMINING COST *

BY C LEONARD O'CONNELL

Recent developments in retail codes have focused the attention of the public and business men upon the problem of ascertaining the cost of the merchandise to the retail distributor Strange as it may seem to competent and unbiased observers the approach to the entire problem is quite uneconomic A careful consideration of the facts involved in the matter amply warrants this conclusion

The New Deal, as it has happily or unhappily been designated by its champions, is ostensibly based upon what they choose to call a planned economy In intent we were led to believe that the codes were designed to root out unfair practices In their operation, particularly as they relate to the drug field, it begins to appear as if we are giving legislative sanction to and are perpetuating a system that is not only uneconomic but at the base is ethically unsound An unprejudiced observer studying the facts at first hand might with all justice conclude that what we need in pharmacy in place of ineffective codes is just some old-fashioned honesty

The orderly and economic flow of merchandise from its source to the ultimate consumer demands and should make use of the three agencies, that is, the manu-

* Section on Commercial Interests A PH A , Washington meeting 1934

facturer, the wholesaler and the retailer Until recent times this plan was the accepted mode of distribution With the rapid increase of the modern merchandisers who based their appeal for patronage chiefly upon price appeal through deep cut rates upon standard commodities as "loss leaders" there grew the urge among the more aggressive to eliminate the wholesaler in order to garner for themselves this legitimate distribution cost

This group of so-called direct buyers has increased to such a degree as to constitute a real problem when it comes to the point of determining the cost of merchandise That is, we have different classes of ultimate distributors, from the standpoint of buying, whose basic costs radically differ In consequence of this, an observer needs no great reasoning ability to see that any minimum price that equals or approximates the cost to small retail distributors affords a considerable margin to the group who can buy more advantageously

Few small distributors seem to recognize that having a legal right to purvey something at the basic cost to them with the added privilege of paying for the opportunity of distributing such commodities is a pretty empty victory It is certainly uneconomic to expect the ultimate distributor to defray the cost of retail distribution To argue about the wide distribution and use of the commodity is beside the point, because unless the retailer is using such commodities as bait there can be no profit in such transactions, however considerable

If the large unit distributors who prate about their more efficient methods of distribution were able to demonstrate their ability to get all the commodities they offer to the consumer at a great saving, there would be some merit to the argument that they can afford to distribute for less

Contrary to this, however, it might be baldly stated that the plan in brief is to supply well-known merchandise at a price of cost or less with the overt intention of driving home in the public mind that all such merchandise is sold upon a similar basis which we know in practice is decidedly not so This covert underselling plan is only successful to the extent that such distributors can sell "own brand" items at unusual profits to offset losses from standard underpriced articles

Why have not those whose business it is to see that proper codes and fair practices in retailing be the order, approached the problem from an economic viewpoint and establish minimum prices that tend to conform to prices that might well come about in an honest and orderly economy? In other words the tendency of fair competition, even when highly aggressive, always tends toward the level of normal price, which price is the cost of the merchandise plus the expense of selling In other words keen competition tends to reduce and finally to rule out net profits In no case would fair competition go to the point of demanding the expense of retail distribution to be borne by the retailer himself

The NRA was designed to afford more jobs and to increase wages One might with justice ask how such a thing can come to pass unless the individuals operating the businesses at least get the cost of the item plus the amount required to sell it

Original prices of $1, $0 50 and $0 25 come to have little standing in the minds of consumers who customarily have purchased such item at about 60% of the advertised price In the final analysis an item is only worth what it will command in the open market, and if manufacturers have permitted their goods to be tossed

about steadily losing original value in the public mind, the burden for restoration is upon them rather than upon the small retailer

Frankly, the matter is one easy of solution If the majority of retailers would refuse to distribute items that do not carry their costs of distribution the problem would speedily be solved Any item of unusual appeal has only gained this through the fact that the even flow of goods from manufacturer to consumer was maintained Just as soon as a considerable number of the ultimate distributors do not afford their service in distribution much of this appeal will be speedily dissipated

From any point of view neither the manufacturer nor the ultimate consumer should expect the dealer to pay for the cost of retail distribution This cost should be borne by the consumer and would be gladly assumed by him if prices were properly set

In other words, fairness and common sense would seem to argue that the ultimate consumer, while entitled to all the benefits of efficient distribution, certainly should be the one to pay for all the expense connected with the business of supplying him with his needs

Briefly, the fair minimum price for any commodity should be the basic cost of the item plus the honest efficient cost of selling Certainly most people would agree that any retail drug business no matter how efficiently operated, would require not less than 20% of the sales for expenses

Upon this basis the minimum resale price of any item is easily computed If an item costs $4 per dozen it would be sold for $5 per dozen or $0 42 per unit which price would absorb the 20% overhead or cost of doing business In the case of $8 per dozen it would sell for $10 a dozen or $0 83 per unit In a similar manner it could be extended to all classes of rapidly selling advertised merchandise Such a plan would not interfere with the volume sale of any product and would be an economic procedure in that all factors engaged in the distributive scheme would be assured compensation for the actual service rendered

In conclusion might it not be well again to remind the small retailer that such a plan will come about only to the extent that the manufacturers feel that the small retailers are earnest in their opposition to the perpetuation of a scheme that is not only ethically unsound but is also economically indefensible

---

WILLIAM LONGSHAW, JR.,* NAVAL SURGEON AND PHARMACIST, A HERO OF THE CIVIL WAR

BY LOUIS H RODDIS [1]

This sketch is an attempt to bring to your attention a former member of the AMERICAN PHARMACEUTICAL ASSOCIATION, who is one of the forgotten heroes of the Civil War When serving as an assistant surgeon in the Navy on the U S S LEHIGH he showed outstanding courage and devotion to duty in an engagement with Confederate batteries on Sullivan's Island on November 16, 1863 Under the

* Section on Historical Pharmacy, Washington meeting, 1934

[1] Commander, Medical Corps, United States Navy

fire of nine batteries in which the LEHIGH was struck 22 times, it was necessary to pass a hawser to the U S S NAHANT which had grounded The lines from the first two hawsers were carried by Longshaw in a boat manned by gunner's mate George W Leland and coxswain Thomas Irving Twice the hawser was shot away The LEHIGH was eventually floated and saved His gallantry on this occasion received official recognition The commanding officer of the LEHIGH in his report of the action says "I would especially mention the valuable service voluntarily rendered by Assistant Surgeon Longshaw "

The officer commanding the South Atlantic Blockading Squadron, Rear Admiral Dahlgren, in his report to the Navy Department states that "Twice he passed in a small boat from the LEHIGH to the NAHANT carrying a line bent on the hawser The shot and shell from cannons and mortars were flying and breaking all around " The Admiral gave appointments as acting master's mates to the two petty officers who rowed Doctor Longshaw on this perilous duty, recommended Longshaw to the notice of the Department as having risked his life as a volunteer in order to save a valuable vessel, and issued a general order commending the officers and men who took a prominent part in the saving of the NAHANT, directing it "to be read on every quarterdeck of the fleet at the next general muster after its reception "

WILLIAM LONGSHAW JR

The Secretary of the Navy, Mr Gideon Wells, acknowledged Longshaw's conduct with a letter of commendation which was made the subject of another general order by Admiral Dahlgren to be read on the quarterdeck at muster so that in the words of Longshaw's biographer, the late Medical Director Gatewood, "the gallant conduct of Doctor Longshaw was published twice on the quarterdecks of perhaps 60 vessels of the Navy "

Now what should interest us particularly about this brave young man was that prior to studying medicine he was a practical pharmacist Furthermore, while studying medicine at the University of Louisiana he worked as a drug clerk at Bayou Lara for 12 months He obtained his medical degree at the University of Michigan in 1859, with a special diploma in chemistry and pharmacy Doctor Gatewood alleges that he became a member of the AMERICAN PHARMACEUTICAL ASSOCIATION [1] In other words, he was a member of our own ASSOCIATION

Longshaw showed himself a hero at the engagement with the batteries on Sullivan's Island He showed himself again a hero in his death at the assault on

[1] ASSOCIATION records show that William Longshaw became a member in 1858 —*Editor*

Fort Fisher on June 15, 1865 [1] The report by the officer commanding the landing party from the MINNESOTA states "Assistant Surgeon William Longshaw, Jr, after adding to the reputation for bravery which he gained under fire of the batteries at Charleston while serving on board the iron-clad LEHIGH, was shot by the enemy as he was binding up the wounds of a dying man Their dead bodies were found lying side by side the next morning" The fleet captain, K R Breese, in his report states "Of Assistant Surgeon William Longshaw special mention should be made on account of his great bravery and attention to the wounded under the hottest fire, until finally he fell a victim in the very act of binding up the wounds of a marine"

A distinguished eye-witness, Rear Admiral Thomas O Selfridge, in his account of the attack on Fort Fisher in "Battles and Leaders of the Civil War," describes the death of Longshaw as follows "While kept under the walls of the fort, I was an eye-witness to an act of heroism on the part of Asst Surgeon William Longshaw, a young officer of the medical staff, whose memory should ever be kept green by his corps, and which deserves more than this passing notice A sailor, too severely wounded to help himself, had fallen close to the water's edge and with the rising tide would have drowned Dr Longshaw, at the peril of his life, went to his assistance and dragged him beyond the incoming tide At this moment he heard a cry from a wounded marine, one of a small group who behind a little hillock of sand close to the parapet, kept up a fire upon the enemy Longshaw ran to his assistance and while attending to his wounds was shot dead What made the action of this young officer even more heroic was the fact that on that very day he had received a leave of absence, but had postponed his departure to volunteer for the assault"

I draw your attention to that phrase of Admiral Selfridge's—"*Whose memory should ever be kept green by his corps*" As he was, too, a member of the AMERICAN PHARMACEUTICAL ASSOCIATION, I am glad to make him known to-day at a meeting of the ASSOCIATION that it, too, may honor his memory

Robert Louis Stevenson's famous eulogy of the medical profession is well known There is a tribute to the military surgeon which should be equally well known It was written by one of the most brilliant men of our generation in a forgotten book about a forgotten war It is a peculiarly fitting tribute to repeat in connection with the death of this heroic naval surgeon and pharmacist "The profession of medicine and surgery must always rank as the most noble that men can adopt The spectacle of a doctor in action among soldiers, in equal danger and with equal courage, saving life where all others are taking it, allaying pain where all others are causing it, is one which must always seem glorious, whether to God or man It is impossible to imagine any situation from which a human being might better leave this world, and embark on the hazards of the Unknown"

President Roosevelt participated in the ceremonies in which the American Legion presented to the brothers Dr William J Mayo and Dr Charles H Mayo, citations voted at the last national convention honoring them for their humanitarian services Dr Charles H Mayo is honorary member of the AMERICAN PHARMACEUTICAL ASSOCIATION

[1] PROCEEDINGS A PH A for 1865 concur and give his age as 28 years

DETAILING FOR PRESCRIPTIONS *

BY FRANK B KIRBY

Generally speaking the first consideration in developing a prescription pharmacy is a realignment of the internal arrangement of the store It is easily recognized that there is a rapidly growing sharp line of demarcation between the merchandising or commercial drug store and the professional pharmacy There is no question that the ordinary luncheon counter has no place in the latter although the professional pharmacy in a Medical Arts Building might render an acceptable and approved service to the doctors of the building if they catered to a light lunch only

However, to put a real meaning back of the sign "Prescriptions a Specialty" such a store must not be satisfied with eight per cent floor space for prescriptions and twenty-five or more per cent floor space for lunches

If we are to aim for a basis of prescription returns at least fifty per cent of the total income, then we must actually specialize in as many ways as possible We must bring the prescription department to the front, if not literally then potentially The swinging doors with the signs "keep out" and "no admittance" must be removed The department itself must show a rigid regard for cleanliness This done, you can consider the desirability of the open display prescription department Remove a section of the separating partition or show case Replace it with a glass partition or leave it open In fact we might even consider actually bringing your prescription department to the front so it will at least partly occupy the front window What better advertising appeal can you offer the transient public! Our bid for favorable attention is two-sided—one to the professional men who will write prescriptions to be sent to our store, the other is the public for whom these prescriptions are written To turn prospects to customers we must first find, then sell the prospects We aim to turn the window shopper to an active customer Consider then the open display prescription department and its desirability in the window

A studied plan of window displays is very good advertising It is not enough to cooperate with the splendid idea of Pharmacy Week Why not consider one week per month, rather than one week a year, always with a tie-up in the store on the show-cases

Of course our new program considers the elimination of questionable store practices Your patrons may shop for prices but don't you shop for business Name your price and hold to it Counter prescribing is of course absolutely taboo

Carry enough stock to have a workable assortment Put in a library of suitable pharmaceutical reference books and include books on materia medica and applied therapeutics and some trade and medical journals to encourage reference by your doctors

Now you have the atmosphere into which you can invite any doctor or customer Without this background your professional contacts will fall flat Now you can really qualify as a prescription specialist The next move is to determine your

* Section on Commercial Interests A PH A Washington meeting 1934

operative area You decide just how much territory you intend to cover, using your store as a center

You then make a card index of every last prospect in that area Your first call will eliminate many of them as undesirable Your object is an active call list of the cream of the entire list This card index will carry the accurate spelling of the name, address and hospital connection of every prospect It will show the office hours, day-off and specialty practiced and allow for columns to indicate the dates of calls and repeat calls, with enough space to record notes of interest, prod uct detailed, whether sample or circular was left and most of it in code so that if lost or stolen the cards will represent little if any value to the finder

Now comes the problem of time-finding We are considering nothing but the personal call as having many times the business building value of letters or phone calls

It is easily agreed that while we pay salaries by the week we are actually get ting more value per dollar of salary in the busy hours than the quiet hours We pay the same for the peak load hour as for the valley performance The object is to raise the valley hour values Therefore, we spot those hours and adjust them to the office hours of our prospects as shown by our card index One can easily reach any doctor within five blocks of the store in five minutes Allowing twenty minutes for the interview, that permits of two professional contacts per hour Sup pose you have only one hour per day, the question arises as to repeat calls Sub-ject to variations, two months is too distant and one month too frequent Assum ing that six weeks is reasonable for repeats, and using only five days a week, you are thereby easily scheduled for sixty doctors every six weeks This is just about sixty more than are regularly contacted right now If your call list, after weeding out the undesirables, is thirty or ninety, it is easy to adjust your schedule

Our next problem is what to detail First we would mention your own name goods, a formula of your own, either complete and perfected, or incomplete, as for instance a vehicle or cough syrup base, ointment base or some such product as a tooth paste base This suggests the growing value of the dental profession and the desirability of including the dentists in your operative area for your card index record One advantage in calling on dentists is the fact of all-day office hours as compared with the relatively few hours available for physicians Also one must recognize that dental colleges are not teaching prescription writing, neither the science thereof nor the economic principles involved

Getting back to the subject of what products to detail we would first caution against talking about too many products Four or five are too many Remember the twenty-minute limit to guarantee a welcome on your next call and you had better stick to one product Do not be too scientific, your doctor is a practical man and wants facts He wants to know the name of the product, its uses, indi cations, solubility, toxicity (if any), dosage and contraindications Omit the chemi-cal structure and pharmaceutical details

Pick your additional products from the U S P and the N F , also the N N R and the R B of the AMERICAN PHARMACEUTICAL ASSOCIATION These will give you all the material you will ever want considering one product (or even two) per call and eight calls per year

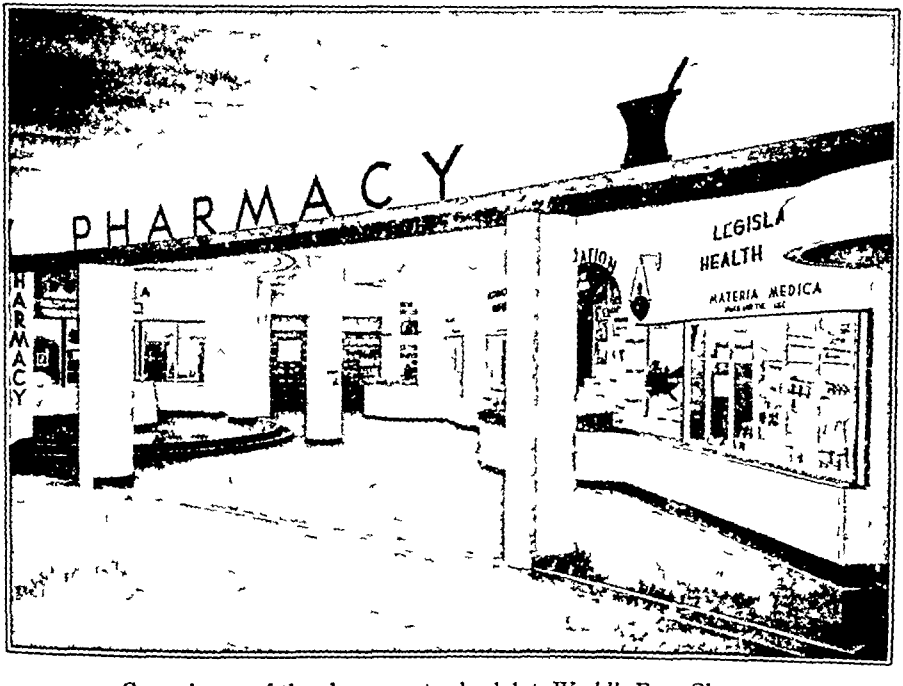
A word on team-work with the detail men of the many manufacturing phar-

maceutical houses They are here to stay and their acquaintance had better be cultivated They are asking you to fill the prescriptions they create You should expect them to cooperate with you They should give you the same presentation they give their doctors and a full list of all doctors detailed in your operative area Then, if you follow up on that list by personal call you are in line for twice the returns from half the effort—half your time expense Let those doctors know that you have that particular product in stock and want his prescriptions

Here is an idea that might be tried Go through the advertising in the medical journal either national or state most widely read by your doctors Pick out the products you have in stock and use them for a professional window display Use a sign calling attention to the name and date of the journal used Tell your doctors about your window

Finally the "thank you" letter Go through your files and list the doctors whose prescriptions you have filled in the last month Send them a letter of thanks and a request for more or continued business Vary the wording but systematically capitalize on the idea as you systematically work your call list

We are confident that based on the principles of action above outlined any professionally minded pharmacist can put on an effective business building program that will pay good dividends in continued good business



General view of the pharmaceutical exhibit, World's Fair, Chicago

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

Editor's Note With the placing of pharmacy upon a collegiate basis the pharmacist is in position to meet professional men on their own ground Pharmacy and medicine must work hand in hand if the public health is to be conserved, and such coöperation cannot be secured or maintained unless the pharmacist is willing to meet the physician on a professional basis and discuss their mutual problems In fact, it seems to me that it is incumbent upon the pharmacist to cultivate the acquaintance of the physicians whose prescriptions he is compounding and to discuss with them any difficulty involved The following paper by Dr L Wait Rising contains good ideas on how to teach students to approach physicians If the student has the proper profes sional attitude the proper cultural background the necessary self confidence and the natural desire to cooperate with his physicians it would seem, at least to your Editor, that he would be able to make the proper approach without being taught any special methods I agree with Professor Rising that every student should be thoroughly awake to the importance of this professional contact and cooperation —C B JORDAN, *Editor*

TEACHING STUDENTS HOW TO APPROACH PHYSICIANS

BY L WAIT RISING

Pharmacy is to-day making its greatest bid for the friendship and cooperation of the medical profession Better professional relationships between the two callings are being stressed with increasing vigor

The colleges of pharmacy are turned to as organizations which should have a large part in this movement Their task is primarily to equip the men responsible for these improved relationships, not only with a thorough knowledge of pharmacy but with an understanding of the personal equation problems incident to the inter locking of the two professions It is not enough that our schools should graduate men and women who, to use a not too elegant expression, "know their pharmacy" The mere possession of fundamental pharmaceutical knowledges does not grant any special ability to use that information advantageously in contacts with medical men Since these contacts are keystones in the structure of improved relationships, the value of any effort made by the colleges to aid in unlocking this knowledge and making easier its expression is obvious It is just as necessary and essential to train men in the verbal expression of their skill as it is to develop dexterity in the laboratory A few students have been blessed by nature with the faculty of logical exposition, so that after acquiring a thorough knowledge of their field they need no training in oral expression or human relations to enable them to tactfully and intelligently contact medical colleagues But the mass of students stand in need of at least some direction in the art of making the right sort of professional contacts

Our colleges must not fail in their increased responsibility to the profession by neglecting this added phase of instruction at a time when it is most needed That they have not measured up in the past is evidenced by the fact that when it becomes necessary for the druggist to call a physician about an error in a prescription, he all too frequently makes a hasty grab for the telephone and shouts into the doctor's ear, "You made a mistake in Mrs Brown's prescription What shall I do about it?" Or when he resolves to do some detailing he finds on entering the physician's

office that he does not know how to say what is on his mind The result is a lame and somewhat stereotyped "Doctor, we specialize in prescriptions Only the best ingredients are used We will call for prescriptions and deliver medicines promptly Come down and look over our prescription department Good-bye" These conversations are perhaps a trifle overdrawn, but they serve to illustrate the definite inability of the average pharmacist to express himself orally under certain circumstances He feels this deficiency, loses confidence in his ability to cope with such situations and builds up an inferiority complex with respect to all medical men

Some of our schools are making determined efforts to instruct the student in the art of verbal professional relations with the hope of eradicating this condition, but the movement is not sufficiently widespread to do a great amount of good It is the purpose of this paper, therefore, to once again call attention to this lack of ability on the part of our pharmacists and to the concomitant lack of initiative on the part of the schools of pharmacy in remedying the condition

Let us consider what might be done by the colleges to make telephone conversations a normal part of pharmaceutical technique They should be studied just as are any other subjects with which the student is not familiar The professor of dispensing pharmacy should handle this work and he might well begin it with a detailed analysis of professional calls By so doing he could satisfactorily impress his students with certain salient facts about this type of contact which, if thoroughly comprehended, would go a long way toward preventing misunderstandings between physicians and pharmacists

Let the analysis start with a consideration of the reason for the call The student probably already knows that in the majority of cases where the pharmacist finds it necessary to call a physician, the reason centers in that physician's prescription What he probably does not know, or at least does not fully realize, is that this call is basically a criticism of the physician, and further that, no matter how merited, unless diplomatically and tactfully stated it will not be pleasantly received If the approach is wrong, the writer of the prescription infers that he is somehow being placed on the defensive, and he immediately rises to the occasion with a typical defensive mental attitude, a sort of "I'll show you who is right" feeling Considerable palliative explanation then becomes necessary if the conversation is to accomplish the desired result

The professor can well point out here the serious consequences frequently resulting from a few colloquies bungled for this reason After a conversation has taken the trend indicated above, the physician's response is often such as to make the pharmacist feel that he is the one who is in the wrong and that he is unjustly being made the target for caustic comment Therefore many pharmacists prefer to guess at the intent of the prescriber or to alter the prescription in a fashion far beyond their authority rather than run the risk of another unpleasant encounter with the doctor Such procedure is manifestly unfair to the patient and the physician, and is a very poor advertisement for pharmacy The student is thus made aware through this method of approach that each occasion for calling a physician regarding a prescription is usually a necessary criticism, that unless properly introduced the criticism antagonizes, and that this antagonism frequently results in subsequent unethical handling of prescriptions

Now is the time to stress a revision of the proverb, "A soft answer turneth away wrath," which changed might read, "A soft suggestion bringeth ready acquiescence" In other words, a nicely turned, discriminating opening of the conversation will avoid all misunderstandings, will put the doctor in a receptive frame of mind, and will pave the way for a mutually agreeable conclusion to the affair

One of the major contributors to this satisfactory opening is a complete understanding of the point or points of difficulty in the prescription The vital necessity of being thoroughly sure of his ground before making any attempt to call the physician should be explained to the student There are certainly enough parallels that can be drawn from the daily recitation problems of a student to quickly convince him that knowledge brings confidence and confidence brings ease of mind with its consequent sureness of expression

In order to satisfactorily develop the opening statements and to facilitate the planning of the subsequent technical portion of the conversation, the student should be taught to ask himself the following questions All difficulties as far as an intelligent, well-spoken explanation of the topic of conversation is concerned normally will have vanished as the direct result

The first question is Precisely why is it necessary to call the doctor? This gets the difficulty so clearly fixed in the mind that explaining it becomes easy The diagnosis made, a treatment is indicated, hence Question two What means are available for remedying the condition? The answer to this question not only sets forth the possible solutions of the difficulty but should also suggest which will be the most suitable Question three Are the reasons for the suggestions to be made to the doctor valid, and can they be stated in a few words? The first part of Question three is a check on those who are prone to jump at conclusions Such people need something that will make them pause and reflect Many times what seems to be the obvious chemical or physical trouble in a prescription is in nowise responsible An examination into the validity of the arguments would avoid such error in judgment The last half of Question three is to prevent rambling after the conversation has begun For obvious reasons, the physician appreciates a simple, concise statement of the difficulty and its solution Question four Precisely what is the opening statement to be? This is perhaps where the greatest amount of tact is required, for the opening statement creates the first impression The value of that impression in gaining the respect and the willing cooperation of the physician has already been seen

Basically the same preparation is required for personal visitation work or other types of physician-pharmacist conversations in which the latter is endeavoring to enlist the aid and cooperation of the former The questions suggested point always to the fundamental structure of any interview of a professional nature They focus the proper attention on the objective, the building up of the case, and the fashion in which it will be executed The result is a well-planned interview, a rarity to-day Physicians cannot help reacting favorably to this new thoughtfulness on the part of the pharmacist Surely this reaction will indicate that the colleges are more than ever living up to their obligations to pharmacy

THE CONFERENCE OF PHARMACEUTICAL ASSOCIATION SECRETARIES

ABSTRACT OF THE MINUTES OF THE SESSIONS HELD IN WASHINGTON, D C, WEDNESDAY, MAY 9TH, THURSDAY, MAY 10TH, AND FRIDAY, MAY 11TH

The First Session of the Conference of Pharmaceutical Association Secretaries was convened May 9th, at 2 00 P M, by President Robert C Wilson The following responded to roll call W E Bingham, Alabama, Charles Clayton, Colorado, Albert Dougherty, Delaware, Robert Wilson, Georgia, William B Day Illinois, F V McCullough, Indiana, J W Slocum, Iowa, John F McCloskey, Louisiana, Roy C Reese Kansas, Prescott Loveland, New Jersey, George Mathers, New York, J B Pilchard Pennsylvania, James J Gill, Rhode Island, J M Plaxco, South Carolina, Walter Adams, Texas, A L I Winne, Virginia, J Lester Hayman, West Virginia, Ralph W Clark, Wisconsin

The members were requested to stand in silence in memory of Edgar D Oslin, of Arkansas Due to the absence of Secretary-Treasurer Carl G A Harring Roy C Reese was elected temporary Secretary The report of Secretary-Treasurer Carl G A Harring was read and accepted with thanks It follows

REPORT OF THE SECRETARY

BY CARL G A HARRING

Fellow Secretaries

The pleasant task of maintaining contact between the members of our Guild has been mine for another year, and although the responses to my efforts have not, at times, been as enthusiastic as I had hoped they might be, the fact remains that we are still acting in unison and with more interest than previously At our last conference in Madison, I was charged with the duty of preparing and mailing questionnaires upon topics of the day, every quarter—this duty I have tried to fulfil but owing to the fact that the time between meetings has been contracted by three months, only two questionnaires were sent out The replies to these questionnaires were not as numerous as your secretary had dared to hope, while questions of vital importance were discussed, the universal interest that we had hoped to create was still missing

If we could lay down a course of action to be followed by all secretaries, if we could induce each and every one of them to participate in this work, and impress upon our state associations that this work is going forward and must be the rallying point for those who have the good of pharmacy at heart, then we would be doing something, and starting the ball rolling in the right direction Too many secretaries are so occupied with their own affairs that the affairs of the state association must suffer, hence, when national associations endeavor to organize some concerted movement they are handicapped by the lack of practical working contacts

If every state association had a competent individual as its secretary and paid him a salary that would allow him to give all his time to the association and if these secretaries as part of their duty were to keep in contact by short monthly bulletins I feel certain that pharmacy would benefit to an amazing extent It is my sincere hope that during the coming season the questionnaire or bulletin system will voluntarily enlarge even at the sacrifice of some time on the part of secretaries, and that *your* secretary will be kept busy answering questions

The exchange of Pharmaceutical Journals has been of great practical value and your secretary wishes to extend his thanks to those secretaries who are thoughtful enough to send him every number of their publication

It is indeed unfortunate that many secretaries do not find it worth while to affiliate with our Conference Your secretary has taken pains to send all communications to every secretary in the United States, and would have appreciated the courtesy of an acknowledgment It is my firm belief that where a secretary is indifferent to a movement such as this conference, there you will find a state association that shows spasmodic signs of life, but accomplishes very little in the long run

Your secretary would recommend that the questionnaire and bulletin system be continued, in the hope that more interest will be evinced and that more of a spirit of coöperation may be developed There can be no question but that the conference plan is sound—it is up to us as individuals to make it an outstanding success

REPORT OF THE TREASURER

BY CARL G A HARRING

Jan 1, 1933 on hand	$359 46	Jan 15th, Printing minutes	$ 10 66

The address of President Robert C Wilson was read It follows

ABSTRACT OF THE REPORT OF THE CHAIRMAN

BY R C WILSON

Fellow Secretaries

I do not propose to burden you with an extensive address but am using this opportunity simply for a few remarks on some matters in which we are vitally interested I will not attempt a review of the various matters which have transpired during the year, but on the other hand while certain of these events are fresh in our minds I want to discuss one or two of them with you, which may have to do with our future welfare

1 I believe that this Conference should be enlarged in so far as membership is concerned to include all other officers in addition to the secretaries, thus by opening up the membership in this way would be very helpful by increasing the number attending this group and tend to bring together in a more general way the leaders in pharmacy throughout America and would stimulate a much broader interest in the work of this Conference

I, therefore, recommend for your consideration and action, if you deem advisable that the name of this Conference be changed to read "The Conference of State Pharmaceutical Association Officers" and include elected or appointed officials of any or all of our State and Territorial associations

2 American Pharmacy, as I see it has been subject to many calls within the past and sensing that a crisis confronted us, or we thought it did we have responded or attempted to respond to each of these calls, many of which were leading in diverse directions and getting us nowhere Events of the recent past should impress upon us the importance of being able to present a united front particularly in so far as our national objectives are concerned We should be subject to one call which should be promulgated by a properly constituted authority with the ability for real leadership

I would not deny to the AMERICAN PHARMACEUTICAL ASSOCIATION, the National Association of Retail Druggists, the Drug Institute and the National Drug Trade Conference the right to existence so long as their primary objective is for the welfare of pharmacy in America I do feel that if these organizations had given more attention to our State pharmaceutical associations, that their own work might have proven more worth while and our own State association's work would have been cemented one with another on a much firmer basis

We are not only subject to calls from these national organizations but also from various minor groups as well as individuals who, independent of all other groups, are also seeking to establish themselves as leaders This is not as it should be Unless and until some sort of a plan for the unification and centralization of our efforts and objectives is found American Pharmacy will continue to flounder as in the past, present conditions are the result

We have seen our State associations ignored at times by our National associations, they come into our States for organization purposes frequently without our knowledge or consent, seeking to build up their own organizations without due regard to or consideration for our State associations

Lastly we have seen the organization of District Drug Code Councils without any regard whatever for or relationship to the State associations What comes next we cannot tell, but unless and until this matter of the invasion of the individual states by any and every organization which may come along, intent upon ignoring the existence of our State associations, is controlled in some way, then there will be no place for our state organizations

I would, therefore, recommend that this Conference adopt some resolution covering the points I have just discussed with the idea of insuring some definite restraint against the possibility of future ignoring of our State pharmaceutical set ups

The address of the President was received and discussion deferred to the Second Session of the Conference, and a committee was appointed to present a report on the address at the Second Session

After further discussion William B Day moved to extend invitations to State associations to be represented by all their officers or as many as could attend F V McCullough moved that the recommendations of President Wilson be considered following the Joint Session with the Section on Education and Legislation It was so ordered

J J Gill reported the illness of Secretary Harring and on motion a telegram was sent to him, expressing sympathy and the hope for his early recovery

Walter D Adams moved that a committee be appointed to draft resolutions and spread them on the minutes on the death of Edgar D Oslin and that a copy of the resolutions be sent to his widow It was so ordered

President Wilson read a telegram of greetings from Secretary Elbert R Weaver of Oklahoma Pharmaceutical Association

Prescott R Loveland moved that an honorarium of fifty dollars be paid Secretary Harring and that the Secretary-Treasurer be authorized to draw a check to that amount payable to himself—carried unanimously

The list of topics for discussion were read It follows

(Instead of repeating the subjects they will be hereafter referred to by number)

1 "Is it desirable if so is it possible to form a National Association from the various State Associations with every member of the State Association automatically a member of the National Association without payment of additional membership dues?

Discussion opened by A L I Winne Secretary, Virginia Pharmaceutical Association

2 ' Is a State Drug Code desirable in addition to the National Code?"

Discussion opened by Prescott R Loveland Secretary, N J Pharmaceutical Association

3 'Since the State Associations have been ignored in the National Drug Code set-up, what should be the attitude of the State Associations to Code matters?"

Discussion opened by J Lester Hayman Secretary West Virginia Pharmaceutical Association

4 'Can a plan be evolved whereby one membership fee can be made to cover State and National Association dues?"

Discussion opened by R A Turrel, Secretary, Michigan State Pharmaceutical Association

5 ' The organization of Congressional Districts or County Units "

Discussion opened by J W Slocum, Secretary, Iowa Pharmaceutical Association

6 'Is the handling of liquor in drug stores under prohibition repeal on a satisfactory basis? What changes or improvements should be made?"

Discussion opened by F V McCullough, Secretary, Indiana Pharmaceutical Association

7 "Is it desirable, if so, is it possible to have this Conference submit to each State association each year some suggestions as to the program with the idea of unifying our efforts toward some definitive objectives, National in scope?"

Discussion opened by W D Adams, Secretary, Texas Pharmaceutical Association

8 "Is there a desirability and a possibility of holding joint meetings of the Pharmaceutical Associations with the State Medical and Dental Associations?"

Discussion opened by E F Kelly, Secretary, Maryland Pharmaceutical Association

9 "What steps can be taken through Association channels to curb the practise of manufacturers packaging 10¢ sizes of proprietary medicines and cosmetics for distribution through department stores?"

Discussion opened by Roy C Reese, Secretary, Kansas Pharmaceutical Association

10 ' To what extent can the professional phases of Pharmacy be made a part of our programs?"

Discussion opened by J G Beard, Secretary North Carolina Pharmaceutical Association

Editor Eberle extended greetings and offered to do whatever he could to help the cause of the Conference

On motion duly seconded the reports of the Secretary and of the Treasurer were accepted with thanks of the Conference

President Wilson stated that the topics for discussion would be taken up A L I Winne presented Topic No 1

Discussion was opened by A L I Winne on the program item entitled, 'Is it desirable, if so, is it possible to form a National Association from the various State Associations with every member of the State Association automatically a member of the National Association without payment of additional membership dues?" Mr Winne reviewed the circumstances which prompted the inclusion of this item on the Conference program, referring to an editorial appearing in the January *Virginia Pharmacist*, and discussed the proposition briefly, presenting the seeming advantages that might accrue from a federation of State Association members and at the same time pointing out the disadvantages and the possible conflict with the several existing national organizations

The chairman then opened the topic for discussion and views were expressed by a number of those present There was naturally a division of opinion and while a considerable number of the secretaries present thought that the plan might be successfully carried out others objected on the grounds of the difficulties to be encountered in the formation of another national organization, and of the possibility of a division of strength rather than the promotion of unity, and of the weakening effects which such an organization might have upon the already existing nation wide associations Those taking part in the discussion were Secretary Reese of Kansas, Secretary Adams of Texas Secretary Wilson of Georgia Secretary Clark of Wisconsin, Secretary McCullough of Indiana Secretary Loveland of New Jersey, Secretary Pilchard of Pennsylvania, Secretary Slocum of Iowa, Secretary Plaxco of South Carolina, Secretary Day of Illinois, Secretary Mather of New York Secretary Hayman of West Virginia and Mr Riemenschneider of Chicago

The discussion did not lead to any formal action but the incoming president was authorized to appoint a committee to give it further study and to empower this committee, under the direction of the President to call a special meeting of the secretaries of the several state associations, at a place to be designated to formulate plans and effect an organization, if deemed advisable

This committee was also authorized to bring to the attention of each state association secretary the outline of the plan and to request that it be presented at the impending annual meeting of each state association for discussion, and for such action as the association desired to take with reference to the proposition (Abstracted by A L I Winne)

Secretary E F Kelly expressed appreciation of the AMERICAN PHARMACEUTICAL ASSOCIATION for the work being done by the Conference and hoped that the relationship with State associations would be closer, for he believed firmly in the value of their coöperation These bodies should meet several times a year and hold longer sessions and for this purpose the American

Institute of Pharmacy presents the opportunity and the ASSOCIATION hopes that these bodies will be one of the strong units of the Headquarters project In Maryland there is a close coöperation of pharmacists with the medical and dental professions

Prescott Loveland referred to the cooperation of the medical, dental and pharmaceutical professions and other related organizations in New Jersey

Roy C Reese referred to these bodies in Kansas with the Public Health Council

President Wilson stated that in Georgia two pharmacists had been named on the State Board of Health

Prescott Loveland introduced Topic No 2 He said *In opening this discussion, I will* state that the week before last, the pharmacists of New Jersey succeeded in getting a State Retail Drug Code The primary reason for desiring a State Code was because the Code Authorities under the Federal set up seemed unable to get action on code violations within a reasonable time

Several months ago there was formed in the New Jersey Pharmaceutical Association the Retail Drug Trade Alliance a wheel within a wheel Dr Fischelis was the Chairman of the Alliance This newly formed body in cooperation with local and county organizations proceeded to prepare a State Retail Drug Code similar to the National Code which, under a law passed and signed by Governor Moore in July of last year, made it possible for a majority of any industry applying for a code to obtain the approval of the Governor for one subject

The services of a lawyer were obtained and Dr Fischelis of the Retail Drug Trade Alliance and representatives from the other organizations patterned a Code of Fair Competition for the Retail Drug Trade of the State of New Jersey A public hearing was called in Newark on April 17th A capacity crowd filled the largest room available in the Industrial Building Deputy State Administrator Tepper was in charge of the meeting and called for statements from proponents and opponents of the code Dr Fischelis led off for the proponents presenting the matter in a very comprehensive way He was followed by several other speakers

The opposition was represented by a woman attorney from New York She stated that her clients bitterly opposed the 21% mark up In response to a question by the Deputy Administrator, she stated that no such mark-up was necessary On being asked who her clients were, she refused to name them, but on Administrator Tepper's statement that he would expunge her remarks from the record, she stated that she would advise him privately who her clients were

The representative of the owners of a chain of cosmetic shops also opposed the 21% mark-up He stated that his firm was making money at the present time and did not need any such mark up A little cross questioning by the Deputy Administrator showed the weakness of his argument

One other opponent was heard, an officer of a department store, who said that his firm was not opposed to the code but was afraid that a 21% mark up in Newark and Jersey City would drive a lot of business across the river to New York City where no such mark up was in operation Administrator Tepper's reply to this was If New York business men want to do business at starvation prices, I don't see why New Jersey merchants should be compelled to do so "

At the conclusion of this hearing we were lead to believe that except for some minor changes the code would receive favorable consideration so that several days later, Dr Fischelis and the other members of the Committee were quite amazed on learning from the State Administrator that the code would be allowed to go through, but with the mark-up eliminated At a meeting of the Board of Trustees of the New Jersey Pharmaceutical Association, the members of the Board were unanimously in favor of notifying the authorities that we did not desire a State Retail Drug Code unless it contained a mark up and after the matter was discussed it was agreed that 15% would be the lowest mark up that would be acceptable, and the State Administrator was so informed

On April 27th another mass meeting was called this time in the Auditorium of the Elks Club, Newark, at which there were present about 1500 pharmacists Governor Moore and the State Administrator Colonel Eisner, and Deputy Administrator Tepper were present In a brief speech, Governor Moore stated that he was glad to be able to assist the pharmacists of New Jersey in making a decent living The next day, Friday he signed the code with the 15% mark up included, which was to take effect the following Monday, but as there was not sufficient time to start the machinery going, the code did not become effective for another week.

The Code Authority was originally intended to consist of 15 druggists and 4 members

representing perfume shops, department stores, etc , and one member, appointed by the Governor, who had no vote At the organization meeting of the Authority, the Drug Clerks Association thought they should have representation, so the Authority was enlarged and now numbers 21 George L Mederer, a retail druggist of Newark, was elected director of the State Retail Drug Code Authority The proposed set-up is, in addition to the director, one assistant director or counsel, 5 regional directors, each with a regional inspector working under him All information and material will be mailed from the Newark office of the Director On Monday of this week, a copy of the code and a list of prices was to have been mailed from the Newark office to every retail drug dealer of record in the state

As I understand it violations are to be brought to the attention of the regional director who will endeavor to induce the erring brother to comply with the code regulations If he fails to do so, the matter is to be referred to the Compliance Director

Secretary Loveland stated that the foregoing was a brief statement regarding the formation of the New Jersey State Retail Drug Code which was signed by Governor Moore on April 28th and which is just now being put into effect (Abstracted by Prescott Loveland)

In reply to F V McCullough and Ralph W Clark, Mr Loveland said that the wages named were $35 per week of sixty hours The Association of Drug Clerks desired seven 8 hour days He stated further that the Code is on probation for sixty days Ralph W Clark referred to several complications of the State code in Wisconsin

Mr Riemenschneider inquired whether the legislation is part of the State Recovery Act, in reply, Mr Loveland said it is

A L I Winne said Virginia had a law which paralleled the Federal Act, violation can be punished under the State law

Ralph W Clark favored concentrating on the Federal code

Prescott Loveland thought most druggists favored the State code

J W Slocum stated that cost must be added in dozen price unless assumed by the manufacturer He inquired whether the 15% mark-up was in addition to the defined cost Mr Loveland replied in the affirmative

President Wilson called upon J Lester Hayman, of West Virginia, to lead the discussion on the next topic— Since the State Associations have been ignored in the National Drug Code set-up, what should be the attitude of the State Associations to code matters?" (No 3)

Mr Hayman in the discussion took the attitude that it was the general opinion of most of the secretaries present that the State Associations had been ignored in Code matters with the exception of having been called upon to help in the organization of the Local Congressional District Code Authorities He called attention to the fact that State Secretaries were called upon by members of the Local Trade Authorities for information and advice and under the present set up such help could not be obtained either from the State Association or the National Code Authority, which resulted in unsatisfactory conditions in many of the districts

He said that it was not the attitude of the State Association toward code matters that was particularly important, since all State Associations wanted to be of as much service as possible, the important question is—What may they do under the circumstances, to be of service to their members?

President Wilson remarked that in answer to questions submitted to him, the National Code Authority replied that "We are busy corresponding with our districts and we haven't got time to talk with State Associations "

Mr Hayman explained the difficulty experienced in calling the meetings for the election of the members of the Local Code Authorities, the delay and difficulties being due entirely to lack of information from the National Authority in regard to whether or not druggists from stores in towns of less than 2500 population were eligible to vote for the members of the Local Trade Authority He thought the Local Trade Authorities, especially in the smaller districts, should be informed as to what they may or may not do under the code, and that at the present time due to lack of official information, are trying to follow rules and regulations of the larger cities, such as New York, Chicago, etc

Charles J Clayton said that he was under the impression that later on the operations of the code would be turned over to the various trade organizations, and that in their state the association

was drafting amendments to their constitution and by-laws so as to put their organization in a position to take care of the change if such was made

Roy C Reese and A L I Winne contributed to the discussion by questions and the relating of similar experiences

President Wilson appointed the Nominating Committee composed of the following Mr Hayman, Mr Winne and Mr Clark

Mr Slocum called attention to the lateness of the hour and the fact that there were several important topics to be discussed Several secretaries expressed themselves as feeling that the Secretaries Conference was not given sufficient time Mr Hayman moved that the session be continued immediately following the Joint Session on Thursday evening The motion was carried

Mr Reese moved for adjournment and the motion carried

The Extra Session of the Conference of Pharmaceutical Association Secretaries was convened May 10, 1934, at 11 15 P M by President R C Wilson

F V McCullough said one thing to be considered was the recommendation of the President that this organization ought not to be confined to secretaries but that all officers of State Associations should belong

Roy C Reese stated that if the membership is limited to not over three officers of any association he would support the recommendation

J Lester Hayman said that he believed it would be better to merely invite the other officers to the meeting next year and that if the response was favorable a change could be made

Prescott Loveland asked if it was the intention to invite all elected officers of a state association and President Wilson replied that he had in mind bringing to the attention of as many people as possible the work of this Conference He said some associations would continue to send only one or two, but some might send three, four or ten and that it would be helpful in distributing the information brought out in the Conference meetings

Roy C Reese believed it would be better to hold the membership down and that more could be accomplished by limiting it to the President Secretary and one other member He expressed the opinion that the Conference would get farther and much more would be accomplished He explained that a large group would consume hours and hours of argument and discussion

J J Gill moved that the membership be limited to the President and Secretary, the motion was seconded by Mr Reese

A L I Winne hoped that this motion would not be defeated He made mention of the fact that he was largely responsible for the organization of the group in St Louis and that at that time he had in mind the getting together of the secretaries who were the most active officers of the State associations He said however, that he wished that he had suggested a Conference of State Association Officials instead of State Association Secretaries He had no objection to having all the officials of the State associations present nor any reason why they should be excluded from the discussions He suggested that the name be changed to a "Conference of State Pharmaceutical Association Officials" and limit a vote to each State as represented in that body

J J Gill thought the membership should be limited to the President and Secretary

J Lester Hayman did not believe it would be a good move to enlarge the membership at this time He pointed out that Secretary Harring was absent on account of illness and that a copy of the by laws was not procurable This being the case it was not definitely known whether change in membership could be made in the by laws at this meeting He pointed out that the same purpose could be obtained by merely inviting the presidents or other officers for next year and if the response was favorable then the membership could be enlarged, he could see no point in doing so without knowing whether or not it was constitutional or without knowing whether or not the other officers would take an active part in the Conferences

After further discussion—in which Messrs Pilchard, McCullough Gill, Winne, Hayman, Reese, Loveland and Wilson participated—the motion of Mr Gill did not prevail

F V McCullough said that President Wilson had the good of the Conference in mind when he made the recommendation and, at first, he thought well of it but that after the discussion he didn't think so well of it He stated that the Conference was interested in organization work, how to make out programs and how to collect dues, how to run the association He thought that the Conference was primarily for secretaries and ought to be kept that way He moved that

the Conference disregard the recommendation of the President, seconded by A L I Winne The motion was carried

J Lester Hayman moved that the Secretary of the Conference be instructed to send a cordial invitation to the presidents of the State Associations to meet with the Conference next year and take part in the deliberations

Rowland Jones seconded the motion and moved to amend it to have the letter suggest to the President the importance of the Secretary attending these conventions, stating some state associations are not sold on the idea of having the Secretary attend The mover accepted the amendment and stated that last year in his address he had suggested that it be a duty of the President of the Conference each year, to so address the President of each State Association The motion was carried

J J Gill thought that the meetings of the Conference should be held a little earlier during the convention, in his opinion they were about as important as anything transacted during the convention As now held, in widely separated sessions, it was almost impossible to bring before the AMERICAN PHARMACEUTICAL ASSOCIATION matters of importance before adjournment

The matter of special business for this session, which was held over at the request of Mr Adams was postponed due to his absence

A motion to adjourn was carried

President Wilson appointed J Lester Hayman and A L I Winne members of the Committee on Nominations (The foregoing report was abstracted by J Lester Hayman of West Virginia)

SECOND SESSION

The Second Session of the Conference of Pharmaceutical Association Secretaries was convened by President Robert C Wilson, May 11th, at 2 00 P M President Wilson called on Walter D Adams to discuss phases of the President's address The first question was disposed of following the presentation of A L I Winne

The second question related to the activities of national associations in securing membership in states without conferring with state associations The question was freely discussed by Messrs Adams, Wilson, Clayton Slocum and others The following motion by President Wilson was adopted

"It is the conviction and the belief of this body that the interests of Pharmacy in America be best served if all national groups will conduct their activities by cooperating with the various State pharmaceutical associations"

Lester J Hayman presented the following resolution

WHEREAS the State pharmaceutical associations have been ignored in the set up and administration of the National Retail Drug Trade Code Authority and

WHEREAS, many of the local trade authorities set up under said code for the enforcement of the provisions seem not to properly understand their authority in many questions concerning the enforcement of the provisions and are not permitted to make interpretations of its provisions, and

WHEREAS, the local Trade authorities turn to State pharmaceutical association secretaries for counsel and advice in many questions concerning the interpretations of the code, as well as to their duties and authority under such code and

WHEREAS, it has been impossible to obtain the proper advice counsel and interpretations from the National Retail Drug Trade Code Authority and

WHEREAS such advice counsel and interpretations have extreme importance in the successful administration and enforcement of the code, therefore be it

Resolved, that the National Retail Drug Trade Code Authority be requested to take immediate steps to properly and promptly interpret the code when called upon to do so by either the local authority or the State pharmaceutical association secretaries

On motion of J Lester Hayman, seconded by Walter D Adams and a vote the resolution was adopted

Walter D Adams requested that he be permitted to prepare the resolution on the death of Edgar D Oslin after returning to his home Permission was granted to Mr Adams, copy of the resolution is to be sent to Mrs Oslin

F V McCullough suggested that steps be taken to have weekly bulletins issued from Washington, during the sessions of Congress advising State associations of legislative matters, brief

resumés of bills introduced That State associations address the AMERICAN PHARMACEUTICAL ASSOCIATION and the National Association of Retail Druggists to take up this matter

A motion to that end was made and carried

Topic 4, owing to the absence of R A Turrell, was not discussed at this time

Discussion on Topic 5 was opened by J W Slocum

He referred to a tri county organization in Iowa seven or eight years ago, this body has been functioning ever since and has been enlarged He attended as State Secretary, various district meetings but there was no great interest until the depression came when County groups were organized and then the druggists began to realize the possibilities The entire ninety-nine counties have been organized

Much good work has been done by Virgil C Smith in securing information which made the druggists conscious of the need of group organization At the monthly meetings items of importance are discussed and Mr Smith has brought much information to them exemplified by charts, for example, the relation of ten cent items sold in department and ten cent stores, proportionately containing more than regular sizes Druggists from adjoining states came to hear Mr Smith

Much enthusiasm was shown at the meeting of the State association Manufacturers were ready to confer and those that supplied filling stations and ten cent stores were told and made to understand the situation—they were shown by examples

Mr Slocum stated that Iowa druggists had discovered for the first time, the power of the retail druggists by getting together in groups the dealing must be fair and reasonable and then a fight made for the right This work cannot be done by a State association but better by smaller groups These groups have their own organizations and study their own problems Secretary Slocum is preparing monthly bulletins to be sent out to the various groups in which questions which are of interest and importance are presented This conforms with the thought of A L I Winne

President Wilson stated that Topic No 9 was in line with the subject discussed by Secretary Slocum and called on Roy C Reese who gave examples of ten cent sizes and the great variety of the products He referred to a meeting for which he had purchased a variety to illustrate his argument Mr Reese gave the relationship of some of these products in ten cent and regular sizes

The presentation made at the Kansas meeting was repeated at the Missouri convention

Mr Reese said that there will now be improvements in many of these matters He referred to an experience in New York City a number of years ago when he made an effort to call on the wholesalers, he found that many self styled wholesalers were only designated as such, or at least mainly so, for receiving wholesaler's discount

A L I Winne offered a motion that the Secretary of the Conference prepare a communication for transmission to the secretaries of the State pharmaceutical associations and bring the subjects to the attention of their respective organizations The wording was stated as follows, "that the Conference of Pharmaceutical Association Secretaries condemns the practice of any manufacturer who supplies medicines in a 10 cent size package to outlets other than drug stores and refuses at the same time to supply such packages to the drug trade at a price the same as that charged to other outlets, provided such manufacturers are selling to the drug trade packages of the same product of a larger size" The resolution was adopted

Mr Winne stated that he would like to have the suggestion go out to the secretaries which will explain to them that if they wish to get up some discussion at their annual meetings they should have a collection of some of these 10 cent samples In his opinion not all pharmacists are aware of the extent to which 10 cent packages are on the market nor do they know of the relation of the regular sizes to the sizes handled in 10 cent and department stores

Mr Reese said that he simply displayed the samples so that all could see for themselves

The next item in the list of topics was No 6 The discussion was opened by F V McCullough who explained the legislation in Indiana and how it applied to the drug stores Mr McCullough was of the opinion that if alcoholic beverages were handled with the same conscientious care as other medicines they could be handled satisfactorily A number of questions were asked relative to the stamps which must be affixed to package goods and whether a physician could write a prescription for blended whisky

He thought that if the prescription simply called for whisky then the official article had to be dispensed, but if a physician wrote for a blended whisky this could be dispensed as such

President Wilson stated that owing to the absence of Secretary Beard Question No 10 would not be discussed, unless some one desired to do so

A L I Winne and Walter D Adams presented the following

'*Resolved*, that the Conference of the Pharmaceutical Secretaries go on record as opposed to the policy of any manufacturer of distributing any of the medicinal products to filling stations, meat markets pool rooms, etc , in any town or county where there is located a retail drug store" The resolution was adopted

President Wilson referred back to Topic No 1 which was discussed at considerable length by A L I Winne and others Mr Winne referred to the address of President Swain of the A PH A to the House of Delegates, in which he spoke of his efforts to secure membership for the ASSOCIATION and that the results were disappointing and discouraging In Mr Winne's opinion the AMERICAN PHARMACEUTICAL ASSOCIATION would have to render a dual service if the object was to largely increase the membership, which might be affected by establishing a publication similar to that published by a number of State associations He referred to the work that the AMERICAN PHARMACEUTICAL ASSOCIATION is constantly doing for retail druggists and very often the value is not fully understood He hoped that the Conference would seriously consider taking up this matter with the AMERICAN PHARMACEUTICAL ASSOCIATION There is not in existence to day any national association of druggists that can lay claim to represent pharmacy in the United States He was of the opinion that the only way to accomplish this was by the cooperation of all states working in an organized way to bring into one group all the members of the various State associations He thought that State associations could increase their membership if they were in position to offer the benefits of both a local and a national tie-up

J B Pilchard was of the opinion that a monthly bulletin concerning national matters and sent to every State secretary each month might solve the question

A L I Winne thought such a bulletin should carry the information relative to the work going on in Washington in a legislative way and other matters in which the druggists all over the country are interested

J B Pilchard thought that instead of a separate journal which would incorporate the information the state publications could be built up by carrying such items to the members

A L I Winne stated that it was necessary for pharmacy to have the support of a sufficiently large number to speak as representative

President Wilson inquired whether a committee could be appointed from the Conference to confer with the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION on this matter

F V McCullough suggested the following resolution

Be it resolved that it is the opinion of the Conference of Pharmaceutical Association Secretaries that federation of State pharmaceutical associations should be formed at an early date and *further resolved* that the matter of such an organization be presented to the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION and to its Executive Committee" The motion was carried

A L I Winne did not want to make a motion but he hoped that when a committee is appointed the president of the Conference be included as a member of it

President Wilson thanked the members for their cooperation and interest

A L I Winne stated that President Wilson had requested him to present a report regarding conflicting dates of Association Meetings in adjoining states He said that consideration had been given but it is a very difficult matter to arrange for these meetings without conflicting at times

J Lester Hayman reported for the Committee on Nominations as follows For *President* F V McCullough of Indiana, *First Vice President* J W Slocum of Iowa, *Second Vice President*, Roy C Reese Kansas, *Secretary-Treasurer* Carl G A Harring of Massachusetts, *Delegate to the House of Delegates* Charles J Clayton Colorado, *Executive Committee*, Robert C Wilson J J Gill and W E Bingham

On motion duly seconded and a vote, W E Bingham was delegated to cast the unanimous vote of the Conference for the nominees At his request he being one of the nominees, J B Pilchard was instructed to cast the vote

The officers elected were then duly installed

President McCullough said that it was his purpose to serve the Conference to the best of his ability and hoped for the support of all the members He stated that soon after his return home he would prepare a bulletin from the notes he had made and send mimeographed copies to the members

A L I Winne asked the President to appoint the committee to confer with the AMERICAN PHARMACEUTICAL ASSOCIATION The following committee was named F V McCullough, J Lester Hayman, A L I Winne and R C Wilson

The motion was made and duly seconded giving a vote of thanks and appreciation to the retiring officers The meeting of the Conference was then adjourned

(Report of the Joint Meeting with the Section on Education and Legislation and Conference of Law Enforcement Officials, will be printed in the same issue with the Minutes of the Law Enforcement Officials)

COMMITTEE REPORTS

REPORT OF COMMITTEE ON PRESCRIPTION TOLERANCES *

BY HUGO H SCHAEFER, CHAIRMAN

The Committee on Prescription Tolerances has now been functioning for two years During the first year no actual data were collected but a general study of the problems involved was made, meetings were held with Dr Campbell Chief of the Bureau of Food and Drug Administration, a news bulletin was prepared and sent out and the entire subject given as much publicity as possible This was done with a view of obtaining sufficient publicity and to arouse enough interest to enable the Committee to obtain a large number of compounded prescriptions of which a study could be made The chairman wishes to thank not only the members of his Committee but also Dr R L Swain, of Baltimore and Mr John M Woodside, of Harrisburg Pennsylvania, for furnishing material and data

The chief factors to be studied in connection with prescription tolerances are as follows

(*a*) Moisture and allowable impurities in chemicals
(*b*) Decomposition and deterioration
(*c*) Unavoidable errors in the weight of the individual powders, pills or capsules
(*d*) Unavoidable losses due to a portion of the prescription ingredients remaining in the mortar or adhering to utensils
(*e*) Unavoidable errors in weighing and measuring

It was realized that not all of these points could be properly considered at one time and the work of the past year was chiefly in connection with making a study of the unavoidable and normal variations in the weights of individual powders and capsules

With this in view a prescription not subject to decomposition or moisture content changes was selected It represented a mixture of powdered charcoal and magnesium oxide Since the work of the Committee members consisted essentially of weighing the contents of the individual powders it was deemed necessary to first determine what losses this weighing operation involved For this purpose 15 grain powders consisting of 10 grains of charcoal and 5 grains of heavy magnesium oxide were prepared by weighing the ingredients directly on a counterbalanced powder paper The latter were then folded and placed in a prescription box This operation was repeated with 10 grains as well as 5 grains of the mixture per powder One set was prepared with ordinary powder papers and another with wax impregnated papers The papers were then unfolded and the contents carefully transferred to a watch glass and weighed The findings were as follows

AVERAGE LOSS PER POWDER

	Plain Paper	Waxed Paper
15 grain powders	0 05 grain	0 16 grain
10 grain powders	0 04 grain	0 14 grain
5 grain powders	0 035 grain	0 13 grain

* Presented before Section on Practical Pharmacy and Dispensing A PH A Washington meeting, 1934

It will be noted that these variations are negligible but, of course, become proportionately greater with the smaller powders While the above are average losses yet all of the 12 powders in any one set varied only very slightly from the mean All in all the losses were considered negligible and not taken into consideration in further powder weight determinations of this particular mixture although, no doubt, the character of the powder may at times increase this error considerably

Some 600 prescriptions of 10 powders each of the previously mentioned charcoal and magnesia mixture were obtained They had been prepared by pharmacists by students, by college instructors and by Board candidates as part of their practical examination In no case were the compounders aware of the fact that the preparation was to be used for any special purpose The contents of each of the powders were accurately weighed The tabulation of the 6000 weights showed many interesting facts

It was found that in a considerable number of prescriptions submitted the total weight of the contents of the 10 powders varied so greatly from the amount prescribed that it became apparent that the variations were due to one or more of the following factors

(*a*) Faulty weights or balances
(*b*) Errors in reading the prescriptions
(*c*) Errors in calculation
(*d*) Loss of powder through gross carelessness

Since this study had as its object the determination of normal and average variations in the division of the powder mixture it became obvious that the introduction of these enumerated errors would only lead to confusion Some 150 prescriptions which varied in total weight more than 10% from that prescribed were omitted from further study and consideration Over 90% of these had been compounded by students and by Board examination candidates

In general the prescriptions compounded by pharmacists varied only very slightly in total weights of contents

The following list shows the total weight of the contents of ten sets of 15 grain powders taken at random

146 5 grs	147 1 grs	154 2 grs	146 2 grs	151 7 grs
143 2 grs	143 8 grs	144 6 grs	148 3 grs	152 1 grs

The following can be taken as a cross section of the total weights of the 10 grain powders

104 5 grs	102 9 grs	99 0 grs	97 4 grs	103 3 grs
98 2 grs	97 6 grs	101 7 grs	102 6 grs	96 7 grs

The 5 grain powders showed the following

49 2 grs	48 7 grs	51 3 grs	52 6 grs	48 3 grs
47 9 grs	52 2 grs	51 9 grs	50 6 grs	49 6 grs

These figures are characteristic of the prescriptions compounded by pharmacists and show a considerable degree of accuracy The average variation in the 15 grain powders is ±0 383 gr per powder for the 10 grain powders ±0 261 gr per powder and for the 5 grain powders ±0 149 gr per powder The interesting point here is that the error becomes smaller as the powders become lighter although the percentage of error is about the same

These figures would indicate that in a mixture of this kind losses due to faulty weighing mixing in a mortar and transferring to powder papers are small when properly conducted Unfortunately, however, this cannot be said of the variations found in the weights of the individual powders It would seem that many physicians prescribe powders in order to be reasonably sure of proper dosage and the findings of this committee would indicate that there is much room for improvement of this phase of prescription compounding

The following is a tabulation of the weights in grains of some of the 15 grain sets of powders taken at random

No										
1	10 6	15 3	13 2	9 5	17 2	16 3	15 2	14 3	16 4	17 0
2	13 7	14 6	15 3	15 0	15 4	14 1	13 9	14 2	15 6	16 2
3	13 5	16 1	15 9	14 8	15 1	13 9	16 2	14 9	13 9	14 2

4	18 6	16 3	12 2	16 5	17 2	11 6	14 1	13 9	12 8	15 0
5	16 5	16 1	15 0	14 9	13 9	16 5	15 1	14 8	14 7	15 2
6	14 6	14 9	15 2	15 9	13 9	16 0	15 3	14 6	14 1	15 1
7	11 2	11 9	17 2	15 8	16 9	18 0	12 2	10 9	14 2	17 2
8	12 6	14 3	15 9	12 1	14 9	16 2	17 0	14 9	15 2	16 0
9	13 8	14 2	14 1	16 3	16 1	14 8	15 2	15 7	14 9	16 2
10	10 6	17 8	17 2	16 9	12 3	13 4	16 8	16 5	15 1	17 3
11	19 7	16 3	14 2	17 6	11 2	13 8	14 2	16 5	15 3	16 5
12	14 6	14 0	13 9	16 2	16 3	15 2	15 7	15 6	14 9	16 1
13	14 3	14 9	16 1	14 7	15 3	15 6	15 1	15 4	19 9	16 3
14	15 2	15 0	14 6	14 9	14 1	16 1	13 9	15 5	14 2	16 2
15	18 2	17 3	14 3	15 7	12 1	11 0	10 9	17 2	15 4	15 1
16	17 6	15 2	14 3	13 2	12 6	18 0	17 1	12 2	15 4	17 2
17	14 3	13 9	15 1	16 2	15 3	15 9	16 1	14 0	15 2	13 8
18	14 1	15 9	15 2	15 0	16 0	15 5	13 9	14 1	14 3	15 2

These represent a good cross section of the 180 sets examined The complete tabulation would be entirely too long and serve no good purpose at this time This complete tabulation, however shows that 53 3% of the sets consisted of powders which varied by less than ±1 5 grains from the theoretical 15 grains 72 2% of the sets were made up of powders which varied less than ±2 25 grains 83 8% of the sets were made up of powders which varied less than ±3 grains

The 10 grain powders showed the following cross section

No.										
1	9 2	8 0	12 0	10 2	10 9	7 6	11 9	11 9	8 1	10 3
2	12 2	10 6	10 1	11 9	8 6	8 7	9 2	10 3	9 6	8 6
3	9 2	9 6	10 4	10 6	9 1	11 0	9 7	9 1	10 7	9 9
4	9 7	10 2	10 6	9 3	10 2	10 3	9 2	10 1	9 7	9 2
5	10 3	10 6	10 7	9 2	9 1	9 7	10 8	10 6	9 4	9 7
6	7 3	8 9	13 6	13 9	7 9	10 4	10 9	12 2	12 1	7 4
7	8 1	11 7	11 3	8 9	9 1	10 8	11 7	11 9	8 8	8 2
8	8 4	8 9	11 7	10 2	11 6	9 8	10 1	8 8	11 2	10 2
9	10 6	10 5	9 5	9 8	9 9	10 2	10 0	10 9	9 1	10 7
10	9 7	10 0	10 1	10 5	9 6	9 8	9 6	9 2	10 7	10 2
11	7 9	7 4	6 9	14 2	8 9	10 6	10 1	7 8	9 2	14 5
12	8 7	7 9	12 1	12 3	10 8	10 7	9 2	9 9	10 2	10 8
13	10 6	10 1	9 8	9 2	9 5	10 6	10 1	10 0	9 9	10 4
14	10 5	10 2	10 3	10 1	10 0	9 1	9 2	9 4	9 4	9 2
15	10 4	11 0	9 9	9 7	9 5	10 3	10 2	10 0	9 7	9 1
16	7 2	8 4	12 3	10 6	10 2	10 1	11 9	11 8	9 6	9 9

The entire tabulation of 160 sets of 10 grain powders showed that 50 6% of the sets consisted of powders which varied by less than ±1 grain from the theoretical 10 grains 69 4% varied less than ±1 5 grains and 82 5% varied less than ±2 grains

The following will show the weight of the 5 grain powders

No										
1	4 7	4 9	5 2	5 1	5 3	5 4	4 9	4 7	4 6	4 8
2	4 1	4 3	5 7	5 2	5 6	5 7	5 9	4 3	4 7	4 1
3	4 9	4 6	5 3	5 4	5 0	4 5	4 7	4 8	5 1	4 5
4	4 0	5 7	5 9	6 1	3 9	4 2	4 9	5 8	4 1	3 9
5	3 8	7 1	7 0	4 1	4 3	4 6	4 2	4 7	5 1	5 5
6	7 0	6 9	3 9	4 7	4 6	5 2	5 4	4 7	4 9	4 6
7	4 7	5 2	5 3	4 6	4 5	5 4	5 4	5 2	4 9	4 6
8	4 6	4 8	4 7	4 9	5 2	5 5	5 0	5 1	4 7	4 5
9	4 7	4 6	5 2	5 3	5 4	5 0	4 7	4 9	4 8	5 3
10	5 1	5 7	5 4	5 2	4 6	4 6	4 9	4 5	4 7	4 7

No										
11	3 9	4 2	7 2	6 5	5 4	5 1	4 0	4 7	4 6	4 9
12	4 1	4 7	4 6	4 9	4 3	5 4	5 5	5 2	5 3	5 0
13	6 2	6 4	6 3	4 1	4 5	4 2	4 3	5 1	5 0	5 5
14	4 2	4 8	4 9	4 7	5 3	5 8	5 9	5 2	5 0	5 9

A total of 140 sets of 5 grain powders were tabulated as to their individual weights and showed that 50% varied by less than ±0 5 grains 70 7% varied by less than ±0 75 grains and 80 7% by less than ±1 0 grain

An abstract of all of the preceding findings would show the following

Number of powder prescriptions studied 600 (10 powders each)

Number eliminated because of excessive variation in gross weight 150 or 25%

	% of Sets within ±10% Variation	% of Sets within ±15% Variation	% of Sets within ±20% Variation
15 grain powders	53 3	72 2	83 8
10 grain powders	50 6	69 4	82 5
5 grain powders	50 0	70 7	80 7

It would seem therefore, that in ordinary powder prescription compounding there is little difference in the degree of accuracy obtained with powders of different weights It would also seem that there is considerable room for a greater degree of accuracy than that commonly practiced in the division of the powder mixture

No data were obtained as to the exact method by which the powders had been divided in the compounding of these prescriptions Probably most of them were divided by the "eye" method and not weighed individually as that seems to be the general practice In this connection it was reported by a member of this Committee that as much as a 1-grain variation was found in the weights of the powder papers in a box of 500 (No 40) papers examined This would indicate that if the powders are weighed individually it should be done by use of a counterbalanced watch glass and not by weighing with or on the paper Your chairman has found that a group of advanced pharmacy students when told in advance that the contents of the papers would be weighed could prepare 5-, 10- and 15 grain powders all within a ±10% variation by the eye" method A variation of 1 grain in the weights of the empty powder papers would prevent this degree of accuracy particularly in the lighter mixtures when made by weighing the individual powders on the papers It seems reasonable to suppose that the prescription pharmacist could use the same degree of skill in his ordinary work

CONCLUSIONS ON POWDER PRESCRIPTIONS

That in a prescription of this general nature the gross weight of the powders should not vary more than ±5% from the theoretical weight

That in the division of the powders the ' eye" method is satisfactory

That the variations in the weights of the individual powders should not exceed ±10% from the gross weight divided by the number of powders in the prescription

VARIATIONS IN CAPSULE PRESCRIPTIONS

A study was begun by our Committee of normal variations in the weights of capsule contents This study is far from complete and may therefore be considered in the nature of a preliminary report

Since the usual practice of pharmacists in filling capsule prescriptions is to weigh each filled capsule and using as a counterbalance an empty capsule it was thought important to determine variations in the weights of empty capsules with the following findings

	Number Weighed	Average Wt per Capsule	Wt of Lightest Capsule	Wt of Heaviest Capsule	Average ± Variation from Mean Capsule Wt
No 0 capsule	200	0 1084 Gm	0 0892 Gm	0 1262 Gm	11 9%
No 1 capsule	200	0 08809 Gm	0 0798 Gm	0 1012 Gm	9 2%
No 4 capsule	200	0 03740 Gm	0 0310 Gm	0 0411 Gm	8 1%

These figures prove that the variations in the weights of the empty capsules themselves are so great as to preclude a degree of accuracy comparable with the results obtained in the preceding study of the powder weights The average empty capsule weight varies about 10% from the average weight of a large number A few capsule prescriptions were obtained and the contents of the individual capsules weighed While the number of determinations were not considered large enough to allow of any final conclusions yet the following tabulation will give some insight as to what may be expected The same charcoal and magnesia mixture employed in the powder investigation was again used and 50 weights of each size were determined

5 Grain Capsules (5 Sets of 10 Capsules Each)

Gross weight of sets in grains	46 2	44 3	47 2	42 1	45 6

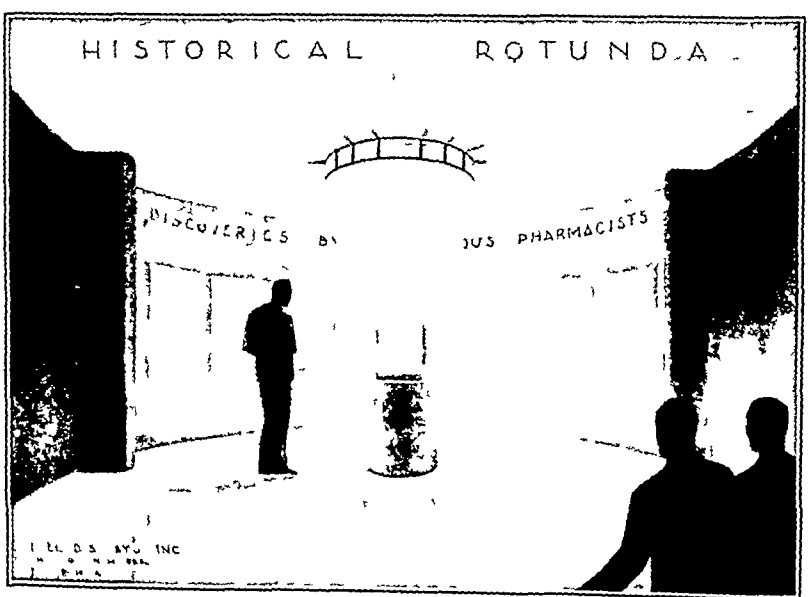
Average ± variation—14 2%
Highest individual capsule content—5 62 grains
Lowest individual capsule content—3 15 grains

3 Grain Capsules (5 Sets of 10 Capsules Each)

Gross weights of sets in grains	26 5	24 6	23 2	27 8	26 3

Average ± variation—16 3%
Highest individual capsule content—3 23 grains
Lowest individual capsule content—1 9 grains

A study of the tabulation made shows that in any single set the contents of the individual capsules run as a rule fairly constant for seven or eight capsules and then there are several which run far under or over weight This of course can be explained by the fact that the compounder filled the first capsules fairly uniformly but found toward the end that there was either too much or too little powder left for the last few capsules Further determinations and more study must however, be given to capsule compounding



The Historical Rotunda tells the story of discoveries, and spaces are assigned to portraits of famous pharmacists, the American Pharmacy Building is featured In order to interest the public a portion of Ebers Papyrus is shown of the World's oldest prescription

ASSOCIATION BUSINESS

THE COUNCIL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION 1934–1935

Office of the Secretary, 2215 Constitution Ave , Washington, D C

LETTER NO 2

July 19, 1934

To the Members of the Council

The following Council business is submitted to the Council for approval It includes the minutes of the organization meeting of the Council on May 11th, and the minutes of the Executive Committee meeting on July 17th

For the benefit of the new members of the Council it is pointed out that motions made by mail in the interim between meetings of the Council require no second

(*Motion No 1*) *It is moved by Kelly that the minutes of the First Meeting of the Council 1934–1935 as presented in Council Letter No 1, May* JOURNAL, *page 515, be approved*

20 Appointment of Executive Committee and Call of Meeting Pursuant to Item 12 Coun cil Letter No 1 Chairman Hilton, on July 10th announced the appointment of the following Executive Committee of the Council and called a meeting of the Committee for Tuesday July 17th, at the American Institute of Pharmacy at 10 00 A M (E S T) Robert P Fischelis H A B Dunning, A G DuMez, C H LaWall, C W Holton H V Arny, W Bruce Philip, E G Eberle, S L Hilton and E F Kelly

21 Meeting of the Executive Committee Upon call of Chairman Hilton, a meeting of the Executive Committee of the Council was held at 2215 Constitution Avenue, Washington, D C , on July 17th The minutes of the meeting are as follows

"The meeting was called to order by Chairman Hilton at 10 15 A M , with all members pres ent A message from former President Swain was read expressing regrets that he was prevented by a previous engagement from accepting the invitation to attend

"President Fischelis called attention to what he considered errors or discrepancies in the printed minutes of the reorganization meeting and, in connection with Item 19 in Council Letter No 1 to the fact that he had submitted a motion that the unfinished business of the Council and such new business as might come before it be considered at a meeting of the Council or of the Executive Committee to be called by the chairman

"After a general discussion of the proceedings and minutes of the first meeting of the Council it was moved by Fischelis that a committee of three be appointed to formulate a motion to be presented to the Council to approve the proceedings This motion was amended to read that the committee consist of the president, the chairman of the Council and the secretary The motion was seconded by Arny and carried

Dr Dunning chairman of the Committee on Maintenance, then discussed in detail his plans for securing a maintenance fund and plans for the utilization of the building as well as plans for additions to the building and equipment A general discussion followed in which details of the future plans of the ASSOCIATION in connection with the American Institute of Pharmacy were given careful consideration

'At 2 00 P M the meeting adjourned for lunch

' The meeting was called to order by Chairman Hilton at 3 00 P M

'The special committee provided for during the morning session reported that corrections in Items 1 and 12, Council Letter No 1 had been agreed to as well as the opening paragraph of Letter 2 and the motion to approve the proceedings The report was accepted on motion of LaWall seconded by Arny and carried

The recommendation from the Scientific Section that Chapter IX, Article VIII of the By-Laws of the section, be amended to read as follows

> 'All papers, which shall be in duplicate and reports presented to the Section become the property of the ASSOCIATION one copy of the papers and of the reports shall be forwarded to the Editor of the JOURNAL immediately following the annual

meeting of the Section, the other copy of the papers shall be submitted to the chairman of the Committee on Ebert Prize by the secretary of the Section"

was approved on motion of LaWall, seconded by Arny and carried

"It was moved by DuMez that all papers presented before the sections be submitted in duplicate and that the secretary so advise the chairmen of the sections The motion was seconded by LaWall and carried

'The following communication from the Section on Practical Pharmacy and Dispensing was read

"To the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION

"The Section on Practical Pharmacy and Dispensing at their Second Session held Friday afternoon, May 11th, passed the following resolution

'It is recommended that the Section on Practical Pharmacy and Dispensing request the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION to appropriate an additional $50 for our Section This additional $50 to be used in collecting and correlating propaganda that has been used in the various cities, counties and states in this country for promoting professional pharmacy This propaganda will include work such as that of the Interprofessional Relationship Committees U S P and N F Publicity Committees, and Hospital Formularies The purpose of this information is not for the AMERICAN PHARMACEUTICAL ASSOCIATION to carry on an expensive publicity campaign but to collect data which will act as a guide for the various city, county and state associations that are interested in work of this nature

'We further suggest that inasmuch as the Section on Education and Legislation has considered a somewhat similar undertaking it be invited to participate in a cooperative plan whereby its efforts will be devoted to the collection of dental propaganda and the efforts of this section to the medical and all other propaganda

"It is further suggested that this body go on record to the effect that the section's funds which might be appropriated for such work be disbursed only in the collection of the desired information

"In accordance with the By-Laws of our Section we therefore request that the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION appropriate the additional $50 to carry out this project

Respectfully submitted
MARVIN J ANDREWS, *Chairman*
L WAIT RISING, *Delegate to the House of Delegates*"

On motion of Philip, seconded by Holton and carried, the requested appropriation was added to the budget for 1934

"The following report was read

"The American Council on Pharmaceutical Education has not yet begun to function, except to act upon some matters referred to it by its constituent organizations and to lay the ground work for the future development of the main project The reasons for this are two in number, namely, there was a lack of funds with which to meet the budget agreed upon last year (at the Madison Wisconsin, meeting held on August 27, 1933) and conditions prevalent in the field of education during the preceding year were so bad that it was believed it would be unwise to intrude a new factor at this time The financial situation now seems to be clearing, and it is our intention to go ahead with the work as rapidly as possible during the coming year

'Our plans call for the immediate request of an appropriation of $200 from each of the associations represented on the Council which will give a total of $600 to work with This will be used largely to defray the expenses of cutting stencils and sending out letters to secure comments and criticisms of the plan for the standardization of schools submitted by Dean Leigh of Florida two years ago, and which we agreed to use as the basis for the beginning of our studies It is intended to send out copies of these standards to a selected number of outstanding educators with the request that they criticize and comment on them also to the AMERICAN PHARMACEUTICAL ASSOCIATION, the Secretaries of the State Boards of Pharmacy, the Deans of the Colleges of Pharmacy The latter will be requested to submit them to the members of their faculties so that the

viewpoint of the teacher may be obtained as well as that of the administrator and law enforcement official As these comments are received they will be classified and studied with a view to molding them into a composite whole which will be both idealistic and practical in character

"With regard to the matters referred to the Council by the constituent organizations the following report is made

'With respect to the question submitted by the chairman of the Executive Committee of the American Association of Colleges of Pharmacy, What advanced credit shall be given for work done in non-pharmaceutical and non-member colleges?' it is recommended that only such credits be accepted as are approved for the fulfilment of the requirements of a Baccalaureate Degree by a recognized standardizing educational body, the State Department of Education or the State University of the State in which the respective college is located

"The Council still has under advisement the matter of undertaking a study of practical experience which was also referred to it by the American Association of Colleges of Pharmacy Much thought has been given to this subject and it has been discussed at considerable length The consensus of opinion of the members of the Council is that the work involved in making the investigations required would be as great if not greater at this time than that of formulating standards for the colleges and that it is unreasonable to expect the Council to undertake both tasks at the same time

Respectfully submitted,

A G DuMez, *Secretary*"

The report was received and the requested appropriation was added to the budget for 1934, on motion of LaWall seconded by Holton and carried

'The following communication was read

"At the annual meeting of the American Association of Colleges of Pharmacy held in Washington last month the following recommendation was adopted 'That, inasmuch as all drug commodities are primarily health concerns, the American Association of Colleges of Pharmacy goes on record as urging that the manufacture, jobbing and retailing of these commodities be under the direct control of properly qualified pharmacists, and further that our action be broadcast to all organizations represented in the National Drug Trade Conference and that we ask their support as a public health measure"

The recommendation was endorsed on motion of LaWall seconded by Philip and carried

'The secretary advised that an official invitation to the members of the Council to attend the annual joint meeting with the members of the Executive Committee of the N A R D during the coming convention of that Association in New Orleans, had been received It was moved by LaWall that the invitation be accepted, that those members of the Council attending the convention be requested to attend the joint meeting and that the secretary be authorized to attend the convention as the official representative of the Association The motion was seconded by Arny and carried

"It was moved by Holton, seconded by Eberle that the loan authorized under Item 18, Council Letter No 1, be increased to *$40 000* The motion was carried

"As the Reading Room of the American Institute of Pharmacy had been equipped in honor of F M Apple, to the extent of funds bequeathed by him, it was moved by LaWall that the Apple Fund amounting to $1607 05 be transferred to the Headquarters Building Fund The motion was seconded by Holton and carried

On motion of Fischelis seconded by LaWall and carried, the Editor of the JOURNAL was authorized to attach a statement to the minutes of the Section on Education and Legislation when printed to the effect that the resolution of the Section in reference to a proposed National Committee on Professional Information did not reach the Committee on Resolutions in time to be acted upon and that it will therefore have to come before the next annual meeting for action

The President was furnished upon his request with certain advice and information with respect to his appointments and stated that he was not prepared to submit the entire list for approval until later

'After a further discussion of the subject it was moved by Fischelis that each member of the Council be requested to submit in written form, his ideas for the activities to be undertaken in

the American Institute of Pharmacy in addition to those already announced and that a digest of the suggestions received, be submitted to the members of the Council for comment The motion was seconded by Arny and carried

President Fischelis then asked the opinion of those present on the following subjects Proposed merger of the AMERICAN PHARMACEUTICAL ASSOCIATION and National Association of Retail Druggists as advocated by a number of state pharmaceutical associations, proposed federation of state associations and possible affiliation of such federation with the national associations, proposed consolidation of dues of national and state associations, possibility of organizing certain surveys and other activities in the American Institute of Pharmacy if funds are provided from outside sources, status of the American Institute of Pharmacy in relation to the AMERICAN PHARMACEUTICAL ASSOCIATION, proposed plan for a Council of Pharmaceutical Practice as advocated by Professor Cook, study of state codes, study of laws pertaining to the sale of drugs and medicines with the possibility of suggesting a model state law, possibility of enlisting support of the American Bar Association in studies of pharmaceutical legislation, plans for increasing the membership of the ASSOCIATION, better coordination of the programs and activities of sections of the ASSOCIATION and local branches, food and drug legislation, and program for the annual meeting

"A number of these topics were discussed in some detail It was decided to request the special committee of the Council appointed to study the proposed plan for a Council on Pharmaceutical Practice to arrange for a meeting at an early date for the purpose of discussion and making definite recommendations to the Council

'On motion of Arny seconded by DuMez and carried, the meeting adjourned at 8 10 P M"

(*Motion No 2*) *It is moved by Kelly that the minutes of the Executive Committee as presented herewith be approved by the Council and that the actions of the Executive Committee become the actions of the Council*

E F KELLY, *Secretary*

LETTER NO 3

July 31, 1934

To the Members of the Council

22 *Committee on Maintenance* The following communication has been received from President Fischelis

> "In view of the fact that the adoption of Resolution No 1 at the recent annual convention abolishes the previous Committees on Headquarters Campaign Site and Plans, and substitutes for these committees a committee to be known as The American Institute of Pharmacy Maintenance Committee,' I deem it necessary to announce the appointment of this committee without further delay
>
> Resolution No 1 passed at the recent Washington convention specifically states that Dr H A B Dunning be asked to assume the chairmanship of the Maintenance Committee
>
> 'At the meeting of the Executive Committee of the Council held in Washington on July 17th, Mr Dunning agreed to accept the chairmanship, and upon request of the president, suggested the following associates E F Kelly R L Swain S L Hilton and R P Fischelis
>
> "I ask that the Council approve these appointments so that the functioning of this committee will not be delayed in any way"

(*Motion No 3*) *It is moved by Eberle that the Committee on Maintenance as given above be approved*

23 *Applicants for Membership* The following applications properly endorsed and accompanied by the first year's dues have been received

No 1 George E Thornton 618 S Washtenaw Ave Chicago, Ill , No 2, Charles Salameno, 100 Prospect St , Paterson N J , No 3, Khau Bunnag, Government Chem Lab , Bangkok Siam, No 4 Edward Krajcik, 695 Madison Avenue, Bridgeport, Conn , No 5 M Joseph Fadgen 1552 Gorsuch Ave Baltimore Md , No 6 Lawrence DeWitt Robertson, Freewater, Oregon, No 7, Earl Mann, c/o Wm Beaumont General Hospital El Paso, Texas, No 8, John J Ilcisin, 1392 Hodgkiss St , Pittsburgh, Pa , No 9, James Burks Harley, 1101 O St , Lincoln, Nebr , No 10, C S Ladd, Box 568, Bismarck, N Dak , No 11, Harry H Harley 1101 O St ,

Lincoln, Nebr , No 12, Attilio Ralph Granito, 95 Main St , Hackensack, N J , No 13, Albert Coco, 546 Morris St , Orange, N J , No 14, Arthur Pfetsch Markendorf, 2201 W Broadway, Louisville, Ky , No 15, J Gilbert Joseph, 1513 Eutaw Place, Baltimore, Md , No 16, Edward Watson Woolard, 134 Garnett, Henderson, N C , No 17, Isidor L Berger, 3835 Fullerton Ave , Chicago, Ill , No 18, Martin M de Long, 5779 E Circle Ave , Chicago, Ill , No 19, Isadore Goldberg, 3014 Georgia Ave , N W , Washington, D C , No 20, Dorothy C McGovern, 736 Irving Ave , Syracuse, N Y , No 21, A Henry Weinstein, 1016 Eye St , N W , Washington, D C , No 22, Joseph Jenkins 3265 Romona Blvd , Los Angeles, Calif , No 23, Carmine R Auricchio, 143 Kingsland Ave , Brooklyn, N Y , No 24 Bernard J Schiller, 4107 Murray Ave , Pittsburgh, Pa , No 25, Everett Henry Behm Mondamin, Iowa, No 26, Benjamin Elkind 2036 Wightman St , Pittsburgh, Pa No 27 Benjamin S Goldstein 224 Norton St , Rochester, N Y , No 28, Sylvia Rapoport, 21 Waumbeck St , Roxbury, Mass , No 29, Angelo P Papulis, 30 Williams St , Chelsea, Mass No 30 Isidor S Tolpin, 418 Boston St Lynn, Mass , No 31, John A MacKenzie, 45 Regent Circle Brookline, Mass , No 32, Phyllis Toon, 33 Howitt Road West Roxbury, Mass , No 33, Elizabeth H Wismer, 83 Congreve St , Roslindale, Mass , No 34 Harry S Bernstein, 139 Chestnut St , Springfield, Mass , No 35 James N Stearns, Y M C A , Madison Ave , Memphis, Tenn , No 36, Russell Edward Brillhart, 885 E Market St , York, Penna , No 37 Lawrence S Stovall, Maupin, Oregon, No 38 Wm E H Schneider, Jr , 90 Engle St , Englewood, N J , No 39 Vernon T E Westervelt, 906 Benjamin Ave , Grand Rapids, Mich , No 40 Gerard Andrew Sormani, 374 Central Ave , Brooklyn, N Y , No 41, Susanne T Biechle, 1431 N Claremont Ave Chicago, Ill

(*Motion No 4*) *Vote on applications for membership in the American Pharmaceutical Association*

E F Kelly, *Secretary*

EDITORIAL NOTES

A CORRECTION

Throughout the article The Absorption of Calcium," JOUR A PH A, Vol XXIII (1934) 7, 656 "Inosite Hexacalcium Gluconate" should be ' Phosphate "—A R B Jr

THE BRITISH PHARMACEUTICAL SOCIETY'S EDUCATIONAL POLICY

H N Linstead Secretary and Registrar of the British Pharmaceutical Society, whose visit in this country—when the AMERICAN PHARMACEUTICAL ASSOCIATION held its annual meeting in Toronto, 1932—will be remembered by many who made the acquaintance of this well and favorably known pharmacist He discussed the Society s educational policy at a meeting of delegates on July 17th Before introducing his subject, he referred to the principal changes in the examination regulations as follows

1 The dividing of the old botany of the Preliminary Scientific examination into botany and zoology

2 The abolition of chemistry and botany as such from the Pharmaceutical Chemist examination

3 The introduction of physiology as a subject of both the Chemist and Druggist and Pharmaceutical Chemist examinations

4 The reversion to the old system whereby the Chemist and Druggist course becomes the first year of the Pharmaceutical Chemist course

5 The abolition of a period of apprenticeship for the Pharmaceutical Chemist qualification and the substitution of two years' practical experience before or after the examination but before registration

In discussing the need of wider education for pharmacists he presented the question by references and comments to the work which comes within the pharmacist s province

1 It is the function of the pharmacist to furnish the physician with the medicaments he requires,

2 By its charter, the Pharmaceutical Society of Great Britain is expressly charged with the duty of advancing chemistry and pharmacy,"

3 If we do not participate in this work, but leave it to others to perform, we are inevitably going to reduce ourselves to the position of mere dispensers, and in course of time mere handers out of ready compounded articles,

4 Unless pharmacy provides the facilities for this type of work the best students will either never enter our ranks or, if they do, will leave us to seek the opportunities for additional education and research elsewhere

5 For the benefit of every person on the pharmaceutical register we want to see within the Pharmaceutical Society all the best brains engaged on pharmaceutical work, we know that there is scope within pharmacy for the very best students turned out by the secondary schools and universities

In his closing remarks Mr Linstead said

'I am conscious that there are many of you who feel that we are to day as a calling, more than fitted for our daily needs That that is so I am not prepared to admit Judging by the standard of the work that falls to a large number of pharmacists to day there may be some truth in that statement But if we look at the problem from the point of view of what pharmacists might be doing or ought to be doing, then it becomes clearer that we cannot give too much attention to the scientific development of pharmacy Unless pharmacy is scientific it has no reason for its existence "

Nearly one hundred years ago Jacob Bell wrote in *The Pharmaceutical Journal*

" 'In conclusion, it may be as well to recapitulate the moral which may be drawn from our past history, namely, that political controversies and mercenary disputes are injurious to the interest and character of all parties—that the most effectual method which any class of men can adopt for securing their political rights, and advancing their professional standing, consists not in disputation and warm argument, but in a steady and persevering attention to intellectual improvement, and the establishment of such regulations as are calculated to ensure collective privileges by increasing the amount of individual merit '

' There is a good deal of smug Victorianism in that, but the main object is clear Those words are true to day, and always will be true "

REVISION OF THE NRA

In the order of development it was to be expected that the NRA would have to undergo revision It is not a fault of the Administration, but a second phase of the development, a very important one if it is to mean permanent establishment While admitting failures the new deal can certainly claim successes In the revision it is the task of the Recovery Administration to discard the bad and retain the good and not over-complicate by adding complications It is hoped and rightfully expected that the public will be patient and give the NRA time to vindicate itself confidence and faith in the Administration s efforts and fair dealing and direction on the part of the Administration offices are not only important but essential

PHARMACISTS PART IN ETHER AND CHLOROFORM ANÆSTHESIA

David F Jones, former president A PH A on the occasion of the State meeting of South Dakota physicians and surgeons installed a window representing a miniature operating room, which caused much favorable comment We do not know whether Dr Jones brought into his exhibit historical references to the part pharmacists had in the early use of ether and of chloroform The PROCEEDINGS of the ASSOCIATION and the JOURNAL have many articles on the discovery of ether anæsthesia—see editorial October 1933 JOURNAL A PH A, page 937 See page 70 (1932) JOURNAL A PH A for note on Chloroform Pharmacy ' See also ' The Centenary of Chloroform,' JOURNAL A PH A, for May 1931, page 481 Recently J P Gilmour, former editor of the *Pharmaceutical Journal* (Great Britain) has contributed a comprehensive article to the *Chemist and Druggist* on 'Simpson's Discovery,' wherein mention is made to David Waldie Duncan Flockhart & Co pharmacists of Edinburgh, and to E Northway Nutt, prominent in affairs of the British Pharmaceutical Society

MATÉ

From time to time efforts have been made to introduce maté Paraguay Tea as a daily beverage Just now the use of it is being studied for the Army troops Many references may be found in the Index to the PROCEEDINGS In the volume for 1884 an historical article by Dr Peckholt is abstracted and in the JOURNAL for 1922, page 609 is a comprehensive report on The Astringent Principle of Maté,' by Josiah C and Bertha L DeG Peacock. The content of caffeine according to Dr Peckholt varies greatly and seemingly, due to the source of supply It would, therefore seem that if the variation is as stated, the amount of caffeine in the product should be given

---

PERSONAL AND NEWS ITEMS

Among the speakers, not mentioned heretofore, at the Century of Progress in Chicago are Prof Charles E Smythe, of the School of Pharmacy, University of Minnesota, and Prof Freeman P Stroup, of the Philadelphia College of Pharmacy and Science

Edwin E Taiber, in a communication to the JOURNAL, commends the NRA in no uncertain terms

Dr Noel E Foss is now a member of the faculty of Duquesne University, School of Pharmacy he will supervise research in certain fields of organic chemistry

Ambrose Hunsberger, assistant administrator of the Federal Alcohol Board, is recovering nicely, following an appendicitis operation

Julius A. Koch, former president of the AMERICAN PHARMACEUTICAL ASSOCIATION, was guest of honor at the annual Alumni Reunion banquet of the School of Pharmacy, of the University of Pittsburgh This was the 50th anniversary of his graduation from the school

Heber W Youngken and Ivor Griffith were honored with the degree of Doctor of Science by Bucknell University This was the 25th anniversary of the graduation of the former from Bucknell with the A B degree

Among recent visitors at the American Institute of Pharmacy were Prof E N Gathercoal, Mr and Mrs Frank H Freericks, John E Kramer, registrar Philadelphia College of Pharmacy and Science W M Hankins Florida Board of Pharmacy, Prof St. Elmo Brady, Fisk University, Prof Leon Monell, Buffalo University S Ruffin Horne, Fayetteville, N C

R. R. Gaw, Pennsylvania Pharmaceutical Association, in his presidential address gave his views relative to the trend of pharmacy

Miss Mary Robinson—daughter of the late James Scott Robinson member of the AMERICAN PHARMACEUTICAL ASSOCIATION, 1869–1923 Memphis Tenn.—has erected a

building for his pharmacy as a memorial to her father It is a beautiful structure, expressive of Mr Robinson's conception of pharmacy For more than 60 years 36 000 prescriptions annually have been dispensed in this pharmacy, Frank W Ward long an associate, presides over this well and favorably known establishment

Dr Roland Schaffert has been made instructor in physics at Duquesne University

Prescott R. Loveland, secretary of New Jersey Pharmaceutical Association is secretary of the state committee on Public Health and Welfare

Charles H Blaney, of Baltimore donated a large brass counter balance with a set of block weights to the American Institute of Pharmacy The pans are 10 inches in diameter and the standard is about 29 inches tall, the arms of the beam are stamped "Baltimore

Mrs C W Richardson, of Washington, D C has donated a stone mortar from Southern s drug store, and an ointment jar, from the drug store of a brother of John Paul Jones, in Fredericksburg Va

THE UNITED MEDICINE MANUFACTURERS

The United Medicine Manufacturers of America will hold its annual business convention in the Waldorf-Astoria New York City, October 10th to 12th Among the most important subjects to be taken under consideration in the three day meeting will be the elimination of false and misleading advertising, wholesale and retail drug trade relations, Department of Agriculture and Federal Trade Commission activities, drug code developments and legal and legislative action

OBITUARY

GEORGE F BIGHAM

George F Bigham, member of the AMERICAN PHARMACEUTICAL ASSOCIATION, second vice-president of the National Association of Retail Druggists and a member of the Bigham-Dambach Drug Company of Buffalo New York died at his home, July 31st following a stroke suffered the day before He was born in Ontario 61 years ago He came to Buffalo N Y 35 years since and had been in the drug business there until now Mr Bigham had been president of both the Buffalo and New York State Pharmaceutical Association and the Greater Buffalo Drug Club, and was treasurer of the Western New York Trades Conference He is survived by his widow and a brother J Clayton Bigham of Vancouver

W E GREINER

W E Greiner vice president of the South western Drug Corporation and prominent in Dallas, Tex civic life for many years died August 16th He was a member of the Dallas Board of Education for many years serving as president for seven years, and he was the first president of the Dallas Athletic Club which he helped organize He also served as president of the National Association of Wholesale Druggists Mr Greiner graduated from Chicago College of Pharmacy in 1888 He is survived by his wife one son, William E Jr , and a daughter Miss Adelia Greiner

EDWARD CRAWFORD LONG

The funeral ceremonies for Edward Crawford Long son of Crawford W Long, were held in San Antonio, Texas, July 26th Mention is here made because of his father's discovery of ether as an anæsthetic Sketches of the latter have appeared in the PROCEEDINGS and the JOURNAL OF THE ASSOCIATION

James C Munn, former secretary of the Northern California Retail Druggists' Association and a pharmacist of Oakland died at the Johns Hopkins Hospital in Baltimore, Md June 1st

A native of South Dakota and a graduate of Northwestern University Chicago class of 1917 Mr Munn came to California ten years ago He took an active interest in association affairs, served as president of the Alameda County Pharmaceutical Association and was one of the prime movers in the formation of the Northern California Retail Druggists' Association

SOCIETIES AND COLLEGES

TENTH ANNUAL OBSERVANCE OF NATIONAL PHARMACY WEEK, OCTOBER 8th–13th

Chairman Anton Hogstad has announced that this year marks the tenth annual observance of the National Pharmacy Week movement, a movement that has accomplished a great deal in bringing the message of Pharmacy to members of allied professions as well as to the laity In addition, it has served as a means of arousing many pharmacists to greater achievements along professional lines, all of which speaks well for the fine support it has received *It is hoped that the 10th annual observance will far eclipse any previous observance* The Grand Prize of this year will be known as the "Robert J Ruth Memorial Trophy"

OFFICERS OF STATE ASSOCIATIONS—CONTINUED

CONNECTICUT

Connecticut Pharmaceutical Association held its annual meeting in New London A midwinter meeting will be held in Hartford The following officers were elected for the ensuing year *President* William J Coughlin, West Haven, *Vice-Presidents*, William J Cody, Bridgeport, Joseph A Murphy, Middletown, and Ernest A Opperman, Torrington, *Secretary and Treasurer*, P J Garvin, New Haven

MAINE

The Maine Pharmaceutical Association held its sixty seventh annual convention at the Belgrade Hotel Belgrade Lake, June 27th to 29th The Maine Cosmetic bill was freely discussed by proponents and opponents The officers were reelected for the ensuing year *President*, Burton K Murdock Kennebunk, *Vice-Presidents* Ralph A Lockhead Auburn, Horace T Poland Damariscotta, and Ralph H Trecartin Phillips, *Secretary* James H Allen, Waterville, *Treasurer*, George O Tuttle, Portland

MICHIGAN

Michigan held its annual meeting in Pontiac June 26th–28th, and registered a successful convention The following officers were elected for the ensuing year *President* James E Mahar, Pontiac, *First Vice President*, Ben Peck, Kalamazoo, *Second Vice President* Joseph Maltas, Sault Ste Marie, *Treasurer*, Henry Hadley, Benton Harbor, *Secretary* Clare F Allen, Wyandotte

MONTANA

Montana Pharmaceutical Association met in Helena, July 23rd–24th An anti peddlers' ordinance was endorsed Dean Charles E Mollett was one of the speakers The following officers were elected for the ensuing years *President* Emil Schoenholzer, Billings, *First Vice President*, George W Sparrow, Anaconda *Second Vice President*, Charles McFarland Helena, *Third Vice President*, Walter Clark, Havre, *Treasurer*, C A Challman, Hobson, *Secretary* J A Riedel, Boulder Anaconda was named as the meeting place for 1935

NEW HAMPSHIRE

New Hampshire Pharmaceutical Association elected the following officers *President*, Leo L Desparte, Lebanon, *First Vice President*, George Moulton, Peterboro, *Second Vice President*, William Ryan, Keene, *Third Vice President*, Lawrence E Cate, Rochester, *Secretary*, Rodney A Griffin Franklin, *Treasurer* Edgar E Goulet, Manchester

OKLAHOMA

Oklahoma Pharmaceutical Association elected the following officers *President* Coleman Davis, Seminole, *First Vice President* Cecil Carter, Shawnee, *Second Vice President* W R Franklin, McLoud, *Secretary*, Elbert R Weaver Stillwater, *Treasurer*, G C Cooper, Vian

Prof Anton Hogstad, Chairman of the National Pharmacy Week Committee, conducted a professional pharmacy program which created general interest

OREGON

The forty-fifth annual meeting of Oregon Pharmaceutical Association was held at Gearhart, July 9th–11th A larger number of retail pharmacists than usual were in attendance Fair Trade' and No Peddling" bills were favored The following officers were elected for the ensuing year *President*, Roy A Perry, Portland, *Vice President*, John F Allen, Corvallis, *Secretary*, Charles I Clough, Tillamook, *Treasurer* Louis Larson, Portland

RHODE ISLAND

The sixtieth annual meeting of Rhode Island Pharmaceutical Association was held at the Ocean House, Watch Hill The principal speaker was Dr Dennet L Richardson superintendent of Public Health Clarence A Vars of Westerly was elected *President* and James J Gill was continued as *Secretary and Treasurer*

SOUTH CAROLINA

South Carolina Pharmaceutical Association met in Charleston, June 20th–21st An open forum on business and professional subjects was the order of the day The following officers were elected *President*, L E Bishop Laurens, *First Vice-President*, J D Ashmore, Greenville, *Second Vice President* Samuel B Mitchell, Sr , Sumpter, *Third Vice President* Carson Luther, Hartsville, *Secretary-Treasurer*, J M Plaxco, Due West *Executive Committee* Hilton Ratteree, Rock Hill W L Steissegger, Charleston

SOUTH DAKOTA

The South Dakota Pharmaceutical Association met in Brookings There was an open protest against the sale of grocery items in drug stores

The following officers were elected *President*, George Lloyd, Spencer, *Vice President*, L A Daniels, Sioux Falls, *Secretary*, Rowland Jones Jr , Gettysburg *Treasurer*, F S Bockhoven, Clark

TEXAS

Texas Pharmaceutical Association held its annual session at Mineral Wells The officers of the Association were installed by Dean W F Gidley as follows *President* A H Seeley, Belton, *First Vice President* C C Harris, Houston, *Second Vice President* B B Brown Dallas, *Secretary Treasurer*, Walter D Adams, Forney *Executive Committee*, Shine Philips, Big Spring, H P Gaddis, Cotulla J P Frazier, Fort Worth

Lee Stinson who presided over the sessions was presented with a loving cup Former president Edna Gleason of California Pharmaceutical Association, was one of the speakers of the convention, she received from William Ochse as a memento of her visit a 44-caliber pearl handled revolver, with lessons in the art by Walter H Cousins

UTAH

The following officers were elected *President*, John E Booth Spanish Fork, *First Vice-President*, J W Christenson, Provo, *Second Vice-President*, Fred R Elledge, Salt Lake City, *Secretary* George F Flashman Salt Lake City *Treasurer*, June W Clark Ogden *Executive Committee* John E Booth, *Chairman* J W Christenson, George F Flashman

Taxes, new and old, were also subject to much discussion It was unanimously agreed to adopt the manufacturer's wholesale list price per dozen" provision for the State code to replace the original minimum price provision of ' cost plus 15 per cent " Further it was decided to add a 10 per cent mark-up for labor in Utah and to ask the Governor to sanction such a provision

VERMONT

The Vermont Pharmaceutical Association which met in Fairlee, June 17th–19th, was unusually well attended A proposed federation of state associations was discussed, plans set in motion for a fair trade law and the code came in for its share of attention The following officers were elected *President*, H E Coleman, Barre, *First Vice-President*, George T Donovon, Fair Haven, *Second Vice President*, Joseph W Blakely Montpelier, *Third Vice President*, Fred W Wheeler, Springfield, *Secretary-Treasurer*, Welcome B Eastman, St Johnsbury

WASHINGTON

Washington Pharmaceutical Association held its annual meeting at Olympia A new plan of organization for the Association was adopted Approval was given to a joint meeting in Portland with Oregon Pharmaceutical Association The following officers were elected for the ensuing year *President* Charles G Ajax, Seattle, *Secretary*, Harry W Ayres, Seattle, *Treasurer*, Walter H Hinman, Seattle, *Board of Managers* L D Bracken, Seattle, Frank R Robertson, Spokane, George A Todd, Tacoma, R M Ragsdale, Wenatchee and Graham A Condie, Seattle

WISCONSIN

Wisconsin Pharmaceutical Association met in Fond du Lac June 19th–21st It was decided to hold a winter convention as well as a summer one, and a committee was ap-

pointed to report back on the State code at that time

The following officers were elected *President*, S H Dretzka, South Milwaukee, *First Vice President*, Ed Schweger, Green Bay, *Second Vice President*, Karl J Henrich, Superior, *Third Vice President*, William Hoeschler, La Crosse, *Secretary*, Jennings Murphy, Milwaukee, *Treasurer*, B F Leidel, Milwaukee

It was reported that during the year the association membership had increased one hundred per cent

WYOMING

Wyoming Pharmaceutical Association met in Casper, June 25th–26th The meeting was the largest in the history of the Association The code came in for its share of discussion Casper was chosen for the 1935 convention

The following officers were elected *President*, George R Arnold Thermopolis, *First Vice President*, H H Cordiner, Laramie *Second Vice-President*, Rock Springs, *Secretary Treasurer* John B Tripeny Casper

MANUFACTURING CHEMISTS ASSOCIATION OF THE UNITED STATES

The Manufacturing Chemists Association of the United States met in the sixty second annual convention in New York City

The following officers were elected *President*, W B Bell, New York City *Vice-President*, E M Allen, New York City, George W Merck, New York City, *Treasurer* J W McLaughlin New York City, *Secretary*, W N Watson, Washington, D C

ANNUAL CONVENTION OF AMERICAN PHARMACISTS ASSOCIATION

A NATIONAL ASSOCIATION OF EMPLOYEE PHARMACISTS

The convention of the American Pharmacists Association was held in San Francisco, August 1st–4th Among the speakers of the convention were John Culley Edna Gleason, G H Frates, former presidents of California Pharmaceutical Association

N A R D IN NEW ORLEANS

The New Orleans Association of Commerce is giving publicity to attractions and history of the interesting city where the National Association will hold its annual convention, September 24th–29th

Fifty-two of the architectural treasures New Orleans has saved from historic days of long before the Civil War are being recorded, photographed and sketched in detail for posterity by the Historic American Buildings Survey being conducted by the United States Government in Louisiana

Fourteen of the projects in New Orleans and vicinity have been finished They include the home of Gen P G T Beauregard the Archbishopric, the Mississippi Valley's oldest building built in 1734, the original Spanish Customs House, the Cabildo seat of the Colonial government, the Presbytere, companion of the Cabildo, the old Spanish Arsenal, the René Beauregard house at Chalmotte the field of the Battle of Orleans, the original Louisiana State Bank building, the Girod House, built as a refuge for Napoleon, the House of the Daughters of 1812, Jackson Square, the Barbarra House and Garconniere at St Rose Ormond Plantation, Angelina Plantation Mt Airy

LEGAL AND LEGISLATIVE

NEW JERSEY REQUIRES POISON LABEL ON DI-NITRO PHENOL

In order to safeguard the public and to warn prospective users of its toxic properties it will be required in the State of New Jersey that all preparations of Di Nitro Phenol, as well as the chemical itself must be labeled poison" under the provisions of Schedule A of Section 6 of the Pharmacy Act and that sales of this chemical and preparations containing it must be registered The requirements for selling poisons listed in Schedule A are as follows It shall be unlawful for any person in this State to sell or deliver to any minor under twelve years of age or to any persons known to be of unsound mind or under the influence of liquor any of the substances enumerated in Schedule A or Schedule B appended to this section or any other poisonous drug chemical or medicinal substance

PETITION TO TERMINATE THE EXEMPTION GRANTED IN PARAGRAPH III OF ADMINISTRATIVE ORDER X 36

WHEREAS Administrative Order No X 36 in Paragraph III exempts from required payment of Code Authority assessments, those members of the Industry who are engaged in some other line of business which business is their principal line of business, and which Paragraph reads as follows

Pending determinations by NRA with respect to specific Codes upon cause shown by a Code Authority or otherwise, every member of a trade or industry is hereby exempted from any obligation to contribute to the expenses of administration of any Code or Codes other than the Code for the trade or industry which embraces his principal line of business provided that he shall submit such information and comply with such regulations with respect to such exemption as NRA may require or prescribe "

The Code Authority for the Soap and Glycerine Manufacturing Industry petitions that the Administrator terminate the exemption granted in Paragraph III of Administrative Order X 36 except as to members of the Soap and Glycerine Manufacturing Industry

The Administrator has given notice that any criticisms of objections to, or suggestions concerning said Amendment, Budget and Basis of Contribution and Application for Termination of Exemption under Administrative Order No X 36 must be submitted to Deputy Administrator Joseph F Battley, Room 4527, Department of Commerce Building, Washington, D C prior to Monday, August 20, 1934, and that the Administrator may approve said amendment, said budget and basis of contribution and termination of exemption in their present form and/or such form, substance, wording and/or scope as they may be revised on the basis of criticisms, objections or suggestions submitted and supporting facts received pursuant to this notice, or other consideration properly before the Administrator

---

BOOK NOTICES AND REVIEWS

A Textbook of Organic Chemistry By JOSEPH SCUDDER CHAMBERLAIN Ph D Professor of Organic Chemistry Massachusetts State College Published by P Blakiston's Son and Company, 1012 Walnut Street Philadelphia Pa 1934 Third edition revised, XXV + 873 pages Price $4 00

This book is a textbook of organic chemistry for undergraduate students In its method and order of treatment the volume is an expression of the author s many years of experience teaching organic chemistry to students—most of whom plan to take up chemistry as a profession The subject matter is presented in a sufficiently elementary manner so that it is not beyond the grasp of the student in his first course in organic chemistry, and at the same time the work is made sufficiently comprehensive to cover the whole field by taking up most of the important compounds

In effecting a revision for the third edition, the author has condensed the book by about two hundred pages This was done by creating a part III under the title 'Supplementary Topics " The content of this part is not new but has simply been transferred from preceding pages in earlier editions Part I treats of acyclic or aliphatic compounds, Part II treats of cyclic compounds and Part III treats of such subjects as Petroleum, industrial sugar and cellulose, amino acids and the constitution of proteins, coal tar, reactions of diazo compounds dyes terpenes, uric acid and alkaloids This arrangement was adopted to enable teachers to restrict the portion actually covered in class room teaching to the first two parts and use the supplementary topics for additional study when desirable A revision of portions of the text has been made to bring in modern theories and the latest researches in carbohydrate chemistry The chemical and physical conditions under which reactions take place have also been added where previously omitted

An especially valuable feature of this text is a comprehensive classified reference to laboratory preparations in organic chemistry which is placed in the appendix This compilation contains references to the methods of preparation of organic compounds in about twenty seven of the better known laboratory guides of organic chemistry This scheme makes it possible to ascertain readily where to find the

specific details of procedure for the preparation of a great number and variety of compounds

One might criticize the omission of certain important medicinal compounds from the text, such as epinephrine, ephedrine, tribromethanol, calcium gluconate and thryoxin The book is not written from a pharmaceutical viewpoint, however, and the author does not claim to have treated of all compounds or even all groups of compounds A sufficient number and variety of compounds and groups of compounds is considered to give the student who studies all of the text a sound basis for further study and a comprehensive knowledge of the most important relationships and compounds or groups of compounds representing the immense field of organic chemistry —GLENN L JENKINS

Nos Plantes Medicinales de France Another set of these beautiful cards has been published there are eight cards in the set—7½ by 5½ inches and the price of the set is three francs Address your order to L'Office National des Matieres Premières, 12, Avenue du Marne, Paris The illustrations depict the plants or parts of them with remarkable resemblance enabling one to recognize the plant in nature The backs of the cards give information relative to the plant, its botany, pharmacognosy, uses and names of plants in a number of languages - French, English, German, Italian, Spanish Chart 81 illustrates the cork tree, method of gathering the bark, the leaves, flower and fruit and explains its uses This set includes the following, Blackberry, Hazel, Bearberry, Barberry, Squill, Poppy, Rose geranium and Parietary

---

PRESCRIPTIONS, MEDICINES AND HOSPITAL SUPPLIES REPRESENT OVER 50 PER CENT OF DRUG STORE SALES

According to Frank A Delgado, Chemical Division, Department of Commerce, over 50 per cent of the sales of the 58 258 drug stores in the United States are devoted to prescriptions, drugs and patent medicines, rubber goods, surgical and hospital supplies and other products associated with the professions of medicine and pharmacy and the preservation of public health Details of drug store receipts are shown in the following table, broken down into 34,844 drug stores with soda fountains, 23,414 drug stores without soda fountains and 58,258 drug stores with and without fountains

Public Health Items and Service	With Fountain		Without Fountain		All Drug Stores	
	Million $	%	Million $	%	Million $	%

Total Sales	1149	99 6	531	100 0	1691	100 0

These figures have been compiled from a report entitled Drug Retailing, one of a series of special trade studies prepared from data assembled in the first nation wide Census of Distribution by the Bureau of the Census The report brings together, in one bulletin, much of the available information on the operation of drug stores and in addition is supplemented by certain pertinent facts about competing stores

PHARMACY WEEK

EXCERPTS FROM CHAIRMAN ANTON HOGSTAD'S MESSAGE

THE secretaries of our various pharmaceutical organizations are urged to secure a word of greeting from the Governors of the respective states Do not delay in this matter In previous years we have secured some worth while words of greetings from State Executives which supplement in a nice manner the President's proclamation

PHARMACY WEEK MAPS

Secretary E L Newcomb, National Wholesale Druggists' Association has informed the National Pharmacy Week Executive Committee that he has a goodly supply of beautiful lithographed Pharmacy Week maps on hand, including that interesting map dealing with the medicinal plants of the United States

These maps can be secured through your service wholesaler or by writing to Dr E L Newcomb at 51 Maiden Lane, New York City During the course of the past few years hundreds of requests have been received for these maps from High Schools and Colleges Here is a splendid opportunity for the retail pharmacist to assist the High School or College in the community by presenting these institutions with copies of these maps They will accomplish a great deal in bringing the message of Pharmacy to those attending these institutions

'OPEN HOUSE" AT THE COLLEGES OF PHARMACY

The Colleges of Pharmacy are in an excellent position to render the profession a real service during Pharmacy Week by having Open House' at the college in question, and to invite all members of the faculty and student body of the entire college or university as well as to extend invitations to members of allied professions and to the laity

MIMEOGRAPHED COPIES OF TALKS AVAILABLE

As in former years the National Pharmacy Week Executive Committee will distribute upon request some twenty or more human interest appeal stories in mimeographed form Arrange now with the secretaries of your various community organizations for the presentation of one or more of these interesting stories Simply address the Chairman at 2215 Constitution Ave, Washington, D C, and copies will be sent you free of charge

WINDOW DISPLAYS

Many pharmacists are prone to feel that it requires considerable money as well as an expenditure of considerable time for the preparation of a professional window display This is not altogether true, for in many cases all that is needed is a captivating title a few materials, a few well worded show cards all of which, if properly arranged will bring into being a dramatic and interesting display

Have a photograph made of your window display preferably by a commercial photographer The photographs best set forth the detail if they measure at least eight by ten inches The photographs should be submitted to the secretary of your State pharmaceutical organization on or before December 31, 1934 The State Secretary in turn will select the State winner and will then submit the prize-winning photograph for the state in question to the National Pharmacy Week Window Display Contest Committee The national winner will then be selected by this Committee which for 1934 will comprise outstanding personages in the Drug Trade Industry of New Orleans

The 1934 Pharmacy Week observance is just around the corner Let us impress the members of allied professions as well as the laity that Pharmacy is a profession, that you are glad of the fact that you are a pharmacist and that you have taken an active part in making the 10th annual observance one long to be remembered The year 1934 marked the dedication of the American Institute of Pharmacy your Institute at Washington D C In many respects the year 1934 has meant a great deal to Pharmacy—let us make the week, October 8th–13th, a Pharmacy Week in every respect

VOL XXIII SEPTEMBER, 1934 No 9

CHARLES H EVANS

Charles Hall Evans was born December 15, 1895, at Norwood, Ga , the son of William T and Mary Hall Evans He received his early education in the public schools and Warrenton High School In 1915, he graduated in pharmacy from Mercer University, Macon, Ga , and is a member of Eta Chapter, Sigma Nu and the Alembic (Science) Club After graduation he entered the pharmacy of his father and was admitted to partnership in the three stores operated by the firm in Warrenton, Norwood and Harlem, after the death of his father, in 1926, he became sole owner, he is now operating two pharmacies in Warrenton

Mr Evans has been a member of the Georgia State Board of Pharmacy since 1928, from 1932 to 1934 he served as vice-president and chairman of District No 7, and this year he was elected president of the National Association of Boards of Pharmacy He was chairman of the Georgia Board of Pharmacy when the college prerequisite amendment was enacted, and is chairman of the Legal Committee of Georgia Pharmaceutical Association in charge of a revision of the pharmacy law for presentation to the 1935 session of the legislature He is a member of the Board of Directors of Georgia Pharmaceutical Association

Mr Evans takes an active interest in civic affairs and is a past-president of Warrenton Chamber of Commerce, is chairman of the Board of Education of Warrenton public schools and of a number of other various local organizations He is a member of the Warrenton Methodist Church, a steward, trustee and the treasurer

February 6, 1917, Mr Evans married Miss Sarah Rodgers Lang of Danielsville, Ga , they have one son

OUR STAND ON FEDERAL DRUG LEGISLATION

BY ROBERT P FISCHELIS *

LAST year, due to lack of knowledge of the facts or misinformation, the profession of pharmacy was classified in the minds of many laymen and members of other professions as an opponent of new legislation to strengthen the Federal food and drug law Out of the maze of propaganda for and against the enactment of more stringent regulations to govern the manufacture, distribution and advertising of food, drug and cosmetic products, we emerged, in the eyes of the public, as weak proponents of obviously necessary reforms and as strong opponents of regulatory measures containing the necessary "teeth" to enforce the reforms which we really favored It is unfortunate that the AMERICAN PHARMACEUTICAL ASSOCIATION, which has prided itself since its organization in 1851, upon being a champion of legislation to suppress the distribution of inferior, adulterated and deteriorated drugs, should have been placed in this position Year after year, the ASSOCIATION has placed itself on record against fraudulent practices in the manufacture, sale and advertising of drugs and cosmetics It is also on record in favor of at least partial formula disclosure of so-called patent medicines and other secret remedies

In all of the publicity attending the various hearings on proposed drug and cosmetic legislation last year, the voice of the AMERICAN PHARMACEUTICAL ASSOCIATION was not heard because it was submerged in the unified opposition offered by the "drug trade" to certain features of the legislation proposed by the Government to stamp out evils which have crept into the food, drug and cosmetic industries and with which the Government is unable to cope under existing law

We can very well be proud of the efforts made by the AMERICAN PHARMACEUTICAL ASSOCIATION in its attempt to present pharmacal opinion in unified form through the National Drug Trade Conference which the ASSOCIATION called into being However, when interests represented in the Conference indulge in the type of propaganda which was used last year to defeat proposed food, drug and cosmetic legislation, we must take steps to make our position clear and let it be understood in no uncertain terms that we are not a party to such a program

The new Congress will undoubtedly give attention to food, drug and cosmetic legislation The AMERICAN PHARMACEUTICAL ASSOCIATION is convinced of the necessity for constructive and, in some respects, drastic revision of existing food and drug laws As the acknowledged representative of professional pharmacy in the United States, it will endeavor to lend the full weight of its influence toward the enactment of reasonable, effective and enforceable legislation which will protect the consuming public against fraud of all kinds in the drug and cosmetic industry

It is recognized that laws which do not provide for adequate enforcement machinery had better not be written into the statute books The law-abiding citizen must put up with many irksome restrictions of his liberties in order to make it possible to apprehend the enemies of society The food, drug and cosmetic industries cannot expect the Government to protect the public against exploitation by the unscrupulous, with its incident protection of the honest manufacturer and distributor, unless sufficient power is granted to make law enforcement a fact and not a farce

* President AMERICAN PHARMACEUTICAL ASSOCIATION

AN IMPORTANT MESSAGE

A prominent American pharmaceutical manufacturing firm, which has contributed on several occasions to the Headquarters Building Fund in increasing amounts, has recently made without any restriction as to its use, the largest single contribution so far received by the ASSOCIATION and has paid it in full

In their letter or transmittal this firm made certain observations and statements with respect to present conditions in the practice of pharmacy, the changes that are necessary to enable the profession to render the public health service expected of it, the urgency of dealing effectively with the present situation and the part that the ASSOCIATION is prepared and should be equipped to take in this important work, which are so clear and forceful that permission has been obtained to quote them, as follows

"We know of no organization that can, provided that it is adequately financed, contribute more to build up the reputation and prestige of pharmacy, and improve the service of pharmacy in the public health field than the AMERICAN PHARMACEUTICAL ASSOCIATION Our confidence is justified by the past achievements and efforts of the ASSOCIATION these have ever been sincere, helpful and altruistic Unfortunately, however, they were limited through lack of proper quarters for the ASSOCIATION and sufficient financial support Now at last one of these handicaps has been removed through the ASSOCIATION'S occupancy of its beautiful new structure

"There remains the urgent need to provide a maintenance fund so that the AMERICAN PHARMACEUTICAL ASSOCIATION may achieve its objectives of service to the profession of pharmacy and to the public

"We deemed it a duty and privilege to contribute to the New Building Fund of the ASSOCIATION, and now we desire to give support to the ASSOCIATION'S activities Accordingly, we enclose our check for fifty thousand dollars for such use as your Council may decide upon

"May we add that we do not consider this subscription a gift Instead, we look upon it as a subsidizing of work to improve the economic side of pharmacy through building up its prestige and improving its service This is work which we, as an individual concern or in cooperation with a group of manufacturers, are unable to carry on Unless the work is conducted effectively, we fear that the present confusion in pharmacy may culminate in the death of pharmacy We feel, therefore, that in subsidizing the work of the ASSOCIATION we are aiding the profession of pharmacy and the public, and, moreover, safeguarding the future of our own company, the pharmaceutical industry and the retail pharmacist

"We earnestly hope that the efforts of your Council to raise a maintenance fund may result in quick provision of the funds you need, for we believe the situation in the field of pharmacy and the services your ASSOCIATION will render require immediate action"

This estimate of the undesirable conditions which threaten the future of pharmacy and the urgent need for correcting them, is so sound and so correctly expressed that every one interested in promoting pharmaceutical progress should have the opportunity to read it —H A B DUNNING, *Chairman, Committee on Maintenance Fund*

AN OPEN LETTER TO RETAIL PHARMACISTS ON THE AMERICAN INSTITUTE OF PHARMACY

THE AMERICAN PHARMACEUTICAL ASSOCIATION does not need a million-dollar maintenance fund for the American Institute of Pharmacy immediately, and could probably fulfil its mission quite satisfactorily with half the amount mentioned, but it does require, within the very near future, approximately $100,000 00

The money which has been expended for the land, the building, its equipment, furnishings, planting, every expense included, amounts to $590,000 00 All but $76,000 00 of these costs have been met by the contributions received This $76,000 00 must be liquidated within the near future, and the ASSOCIATION, naturally, does not have the funds to take care of this relatively small debt, but is dependent upon those who are interested in the welfare of pharmacy and the ASSOCIATION to provide the money In addition to this, the ASSOCIATION, if it is to carry out effectively its conservative service plan, needs $12,000 00 to $15,000 00 additional income a year, and this would require several hundred thousand dollars to produce the necessary income

The service and development plan which has been formulated is one of great value to pharmacy in general, and is not only practical and conservative, but necessary

I can assure you that the emergency fund of $100,000 00 will be provided in one way or another, but I do hope that all who are interested in pharmacy will indicate their further approval of the work of the AMERICAN PHARMACEUTICAL ASSOCIATION by subscribing whatever may be deemed proper and equitable A few thousands of dollars will, I am sure, not mean much to the large interests, but will mean a great deal to this most worthy cause, which is in your interest and mine A few hundreds, or even a few dollars, from a large number of contributors would, in the aggregate, represent a considerable sum

I want to make clear that, under my guidance, the AMERICAN PHARMACEUTICAL ASSOCIATION has not over-reached itself in the development of this project, as represented by the American Institute of Pharmacy Building The quarters which have previously been occupied by the ASSOCIATION in Baltimore were entirely inadequate and the work has been carried out under most disadvantageous conditions and, yet, even though a special concession was made in the rent during the depressed times, the rental costs amounted to $1200 00 a year In the present building all operating expenses, including every cost, are less than $4500 00 This is due to the fact that the building is provided with automatic equipment of every kind, including heating, lighting, telephone, sprinkling system, etc , and, most particularly, that the property is tax free You will, therefore, understand that these splendid new quarters for the A PH A at present cost only $3300 00 more than the inadequate accommodations which they had here in Baltimore

The National Association Boards of Pharmacy have voted to place their executive offices in the building during 1935 and will share the expenses to the extent of $1000 00 minimum This will reduce the difference between the old costs and the new to $2300 00 Other non-profit organizations, such as the executive offices of the American Association of Colleges of Pharmacy, Enforcement Officers, and similar organizations, are seriously considering joining the Boards of Pharmacy organi-

zation in having their executive offices in this building and, in all probability, action will be taken within the near future This, you will understand, will reduce the overhead costs of the A PH A and of these associated organizations to a very reasonable basis and make the costs of operating in this fine building no greater, and perhaps less, than was formerly the case

The development of the museum and library is already progressing and will come through special contributions and donations So we need not worry about these two departments

The income from the membership dues of the A PH A just about pays operating expenses for the services given to the members of the ASSOCIATION There are special endowment funds which can be used for special purposes

The real reason for a maintenance fund is to give the opportunity to the A PH A to employ one or more outstanding pharmacists, having the crusader spirit, who will go into the building with the idea of developing educational propaganda and service features in the way of pamphlets, lectures, etc , which will aid in the regeneration of the practice of pharmacy

The immediate object of the A PH A and the service work in the Institute is to regenerate pharmacy through the education of the pharmacists and the stimulation of the public to demand a better professional service This can be accomplished by taking drugs out of the merchandising stores and establishing pharmacies which will sell drugs, sick-room requisites and accessories, but excluding the kind of merchandise which has no direct relationship to pharmaceutical practice This can, will and must be accomplished, because the public will demand it when it realizes the dangers of having inexperienced men dispensing drugs which are, in a large measure, poisons, and requires special knowledge and experience This regeneration will not happen immediately, because the public does not realize, as yet the full danger

I am convinced that, as long as drugs are used in the practice of medicine and for the cure of disease, the practice of pharmacy will be important, and I am equally confident that the public will realize it when the bad practice of pharmacy results in serious consequences, inclusive of accidental deaths, due to carelessness and inefficiency It is true that the pharmacist is better educated than ever before, but he has less opportunity to make use of his education, eventually he will, and that is the A PH A 's immediate job, to see that the pharmacist is provided with an opportunity to use the knowledge and information which he obtains in the schools I know you realize, as well as I do, that it would be a great loss to manufacturing pharmacy if we were obliged to distribute through merchandising stores having no professional aspects or prestige with the public

I have discussed the real purpose and plans of the A PH A as I see them, and can assure you that it is not attempting too large a program, not even a large program, and that it cannot fail and will not, but it can be seriously handicapped by having insufficient funds which could be so readily furnished by those who are interested in pharmacy and who would benefit greatly I am not a dreamer or an idealist, and I have never wasted money and do not intend to do so in this instance

Now, to explain the proposed research development This really represents an entirely separate proposition, in a sense An interested member has under consideration offering the first unit, of conservative size and practical value, of a build-

ing for research, immediately adjoining the present institute and in the rear of it This unit would probably cost $150,000 00 or more, but the plan involves the complete endowment of the undertaking, including the erection of the building, equipment, operating expenses and a fund to pay a limited number of research workers, entirely without cost to the ASSOCIATION The offer will not be accepted on any other basis You will understand that the research building will be no burden whatsoever on the ASSOCIATION, but will provide an opportunity for our workers on National Formulary and U S P problems, in cooperation with the voluntary work of the research divisions of the large manufacturing pharmaceutical houses I know you recognize that, although much of this investigative work is accomplished by individual voluntary workers and institutions, including the different drug institutions, it does and will require several investigators to confirm the tests, correlate the work and reach final conclusions

You, of course, know that the Food and Drug Division is demanding more and better service from the committees on the Pharmacopœia and National Formulary If they do not get the required standards from the present sources, they will, I fear, adopt their own standards, and this very important function of the Pharmacopœia and National Formulary may be lost to pharmacy, which would be a great catastrophe to pharmacy and the public There is quite a lot of necessary work that can be done in this laboratory building, if it is established, and, if not, in the small laboratory in the present building, which would be of great value to pharmaceutical practice, to the Food and Drug Division and to other divisions of the government The testing and standardizing of the vitamin content of cod liver oil and the distribution of standard samples of pharmaceutical manufacturers is a type of service that can be expected There is no doubt in my mind that the A PH A can be a great force in promoting satisfactory relationships between pharmacy, the Food and Drug Division and the various public health services which exist in Washington

I hope that all those interested in the practice of pharmacy and its importance to all phases of pharmaceutical endeavor and the public, will visit the American Institute of Pharmacy Building and take the opportunity to confer with Dr E F Kelly and others before making a final decision in regard to upholding the hands of the AMERICAN PHARMACEUTICAL ASSOCIATION by subscribing to the fund which is required to pay off the small indebtedness and establish a reasonable maintenance fund The subscription can be whatever amount might be considered proper, and any amount would be helpful—$25 00, $50 00, $100 00, $500 00, $1000 00 The whole amount may be paid in instalments over a period of five years A $25 00 subscription would represent $5 00 a year for five years, a $50 00 subscription would represent $10 00 a year for five years, a $100 00 subscription would represent $20 00 a year for five years, a $500 00 subscription would represent $25 00 each quarter for five years, a $1000 00 subscription would represent $50 00 a quarter for five years

Exclusive of my own donation, there has been subscribed, thus far, $61,250 00 —
H A B DUNNING, *Chairman, Maintenance Fund Committee*

SCIENTIFIC SECTION

THE ACTION OF ERGOT AND ITS ALKALOIDS ON THE PUERPERAL UTERI OF DOGS *[1]

BY EDWARD E SWANSON AND CHESTER C HARGREAVES

Since the isolation of the alkaloids, ergotoxine by Carr and Barger (1) in 1906 and ergotamine by Stoll (2), (3), (4) in 1920, the subject of ergot has been the source of considerable investigation Of distinct interest is the more recent work of Moir (5), who has shown clinically that ergotoxine is just as effective as ergotamine Moir (6) in the continuation of his clinical study, observed an effect with the fluidextract, when given by mouth, that has a much more rapid onset of action on the puerperal uterus than either ergotoxine or ergotamine

In our comparative pharmacological study of the fluidextract of ergot and its active principles by the various well-known methods the intact puerperal uterus of dogs has been helpful as a method of test

This method is based on the use of intact dog uteri, three to six days post-partum Under ether anesthesia, an elongated rubber balloon or bag (five inches long and one and one-half inches in diameter) is inserted through the vagina into either the right or left fallopian tube For definite location of the balloon in the uterine horn, an abdominal incision is made The balloon is attached to a tambour by a rubber tube Before each experiment this closed system is tested for leaks

In these experiments more than a hundred dogs were used The drugs were given by vein and by mouth in doses distinctly larger than that used by Moir (5), (6)

Clinically, Moir (5) has shown that ergotoxine or ergotamine in doses of 1 mg to 3 mg by mouth produces slow and erratic results on the uterus The onset of action is delayed for thirty-five minutes to one hour or more For the fluidextract or liquid extract B P 1914 given orally in doses of 2 to 4 drachms, Moir (6) observed that the onset of action on the uterus is strikingly shorter than that of the alkaloids

As shown in Table I, by the U S P Cock's Comb and Reversal Uteri Methods the various preparations, with the exception of the liquid extract of ergot B P, have approximately the same potency

By vein, as shown in Table II, the onset of action is approximately the same for the fluidextract, liquid extract B P 1914, ammonia extract, acetone extract, ether extract, ethylene dichloride extract, sulphur dioxide extract and alkaloids ergotoxine or ergotamine With doses of 0 2 cc per Kg of the fluidextract U S P, the liquid extract B P 1914, 0 1 mg of the various extracts or 0 1 mg per Kg of the alkaloids, the onset of action on the uterus is one to one and one-half minutes

* Scientific Section, A PH A, Madison meeting 1933

[1] This paper was passed by the Board of Review on Papers and returned to the authors for addition of kymographic tracings—*Editor*

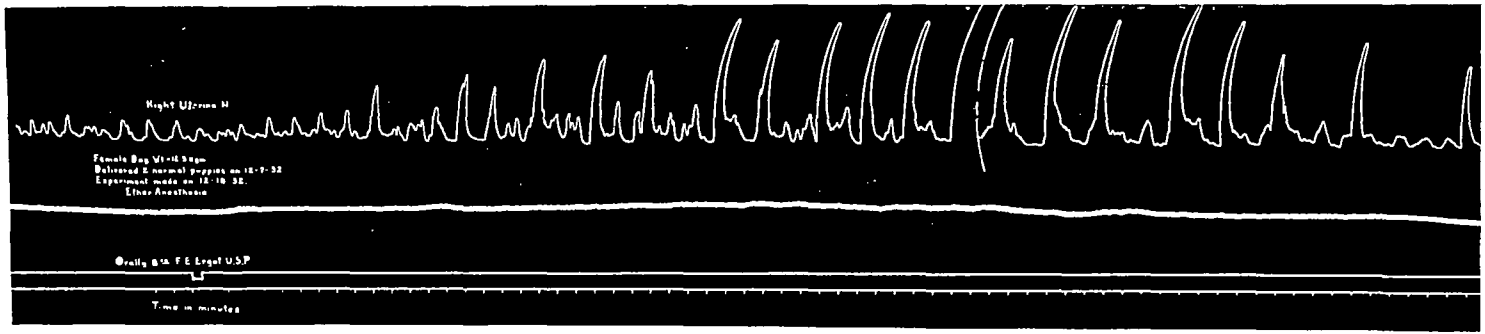

Fig 1 —Represents an etherized dog with recorded puerperal uterine contractions Fluidextract ergot U S P , 0 65 cc per Kg was given by mouth In ten minutes the uterus began to show increase in contractions These contractions increased in amplitude and remained strong for more than sixty minutes

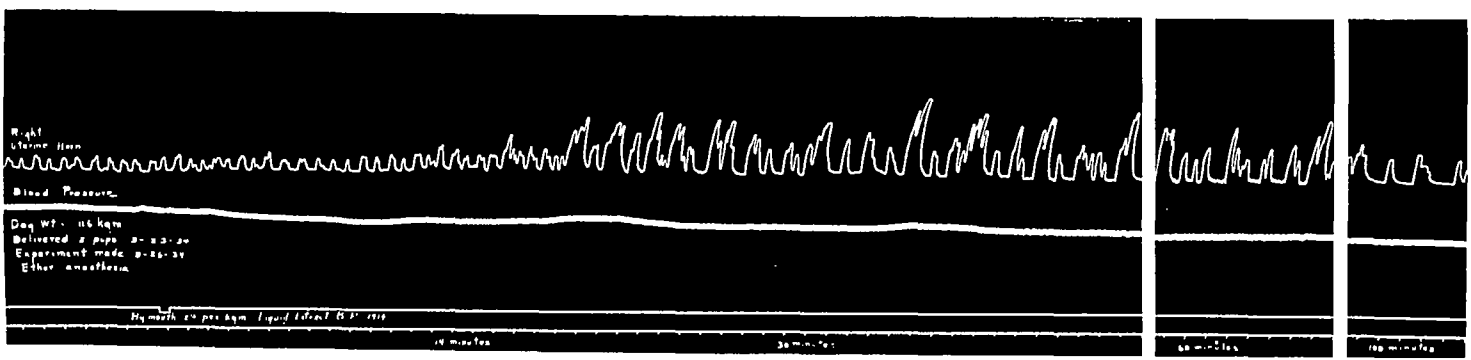

Fig 2 —An etherized dog with recorded blood pressure and puerperal uterine contractions Liquid extract of ergot B P 1914 2 cc per Kg was given by mouth In fourteen minutes the contractions of the uterus began to show stimulation The contractions were strong for more than one hundred minutes

Thus, by vein, the time of onset of action for the alkaloids is the same as that of the fluidextract of ergot U S P, the liquid extract of ergot B P 1914 or the various extracts

By mouth as shown in Table III, the onset of action of the fluidextract of ergot U S P, liquid extract of ergot B P 1914, various extracts of ergot (ammonia, acetone, ether, ethylene dichloride and sulphur dioxide) is more rapid than that of the alkaloids ergotamine or ergotoxine With a standard fluidextract of ergot U S P in doses of 0 2 cc to 1 cc per Kg (equivalent to 0 1 mg to 0 5 mg per Kg of the alkaloids) the onset of definite response is eight to twenty

TABLE I

Preparation	U S P Cock's Comb Method	Reversal Uteri Method
Fluidextract Ergot U S P	100%	100%
Liquid Extract of Ergot B P 1914	25%	40% to 50%
Ammonia Extract of Ergot	100%	90%
Acetone Extract of Ergot		100%
Ether Extract of Ergot		90%
Ethylene Dichloride Extract of Ergot*	110%	112%
Sulphur Dioxide Extract of Ergot*	100%	80%
Ergotamine Tartrate Sandoz	100%	100%
Ergotoxine Ethanesulphonate	110%	120% to 130%

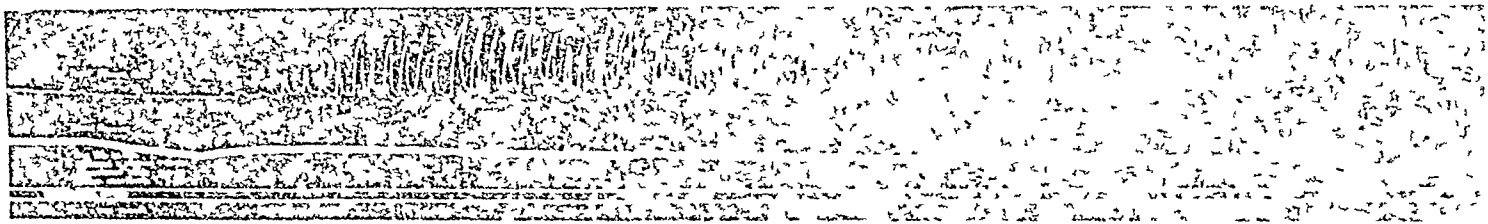
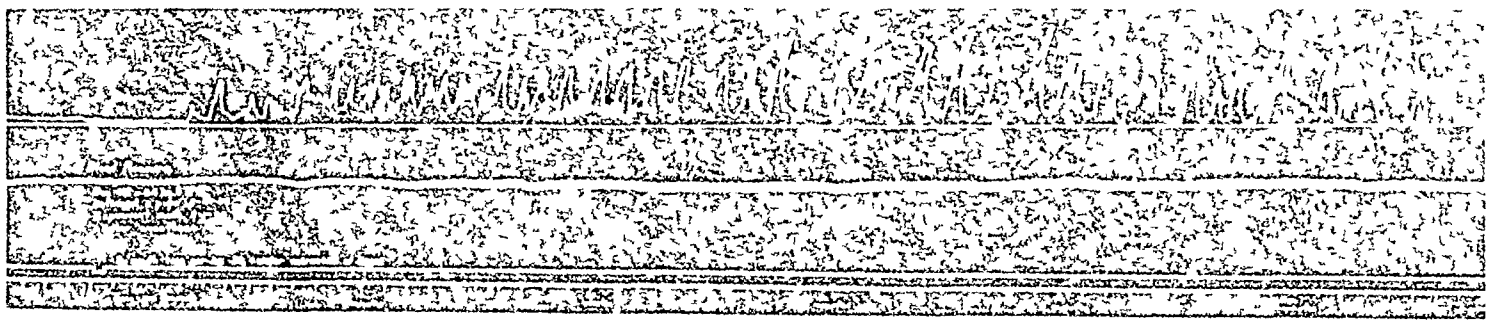
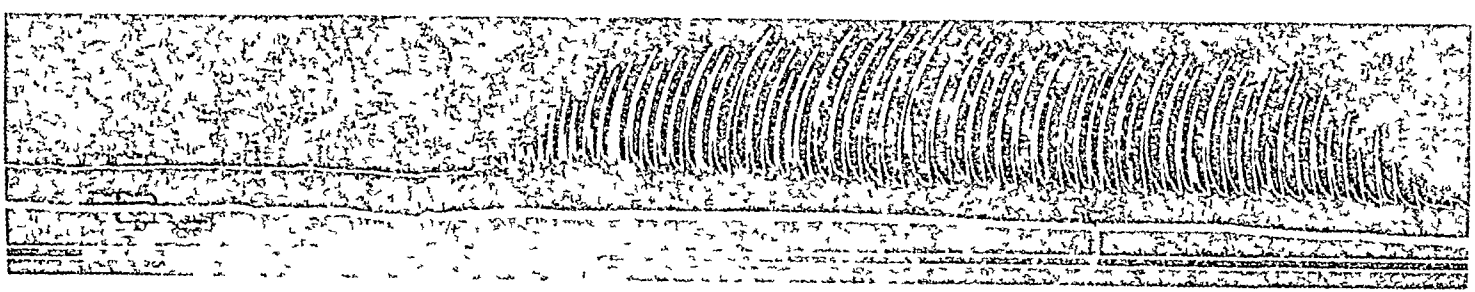
TABLE II—PUERPERAL UTERI OF DOGS INTRAVENOUS ADMINISTRATION

Dog No	Body Weight Kg	Number of Days Post partum.	Drug	Dose in Cc or Mg per Kg	Time of Onset of Definite Response Minutes	Duration of Action Minutes	Remarks Contractions
1	8 5	5	Fluidextract of Ergot U S P	0 2 cc	1 5	40	Strong
2	15 0	4	Liquid Extract of Ergot B P 1914	0 2 cc	1 0	25	Strong
3	9 8	4	Ergotoxine	0 2 mg	1 0	30	Strong
4	8 9	5	Ergotamine	0 1 mg	1 5	35	Strong
5	16 5	4	Ammonia Extract of Ergot	0 1 mg	1 0	50	Very strong
6	15 0	3	Acetone Extract of Ergot	0 1 mg	1 5	15	Fair
7	13 5	4	Ether Extract of Ergot	0 1 mg	1 5	25	Fair
8	17 0	4	Ethylene Dichloride Extract of Ergot	0 1 mg	2 0	30	Strong
9	9 2	3	Sulphur Dioxide Extract of Ergot	0 1 mg	1 0	50	Very strong

minutes In doses of 2 cc per Kg (equivalent to 0 5 mg per Kg of ergotamine as determined by the Reversal Uteri Method or the U S P Cock's Comb Method) the time of onset of action with the liquid extract B P 1914 is about ten to twenty minutes As shown in Table III, the various extracts of ergot (ammonia, acetone, ether, ethylene dichloride and sulphur dioxide) in doses of 0 1 mg to 1 mg per Kg (equivalent to ergotamine as determined by the Reversal Uteri and U S P







Cock's Comb Methods) produce definite response of action by mouth in four minutes to fifteen minutes Thus, by mouth, the fluidextract of ergot U S P, liquid extract of ergot B P 1914, or the various extracts of ergot as shown in Table III, have approximately the same time of onset of action on the puerperal uteri of dogs

As shown in Table III, with ergotamine in doses of 0 4 mg to 1 mg per Kg the time of definite response is forty to fifty minutes In doses of 0 5 mg to 1 mg per Kg with ergotoxine definite action is shown in thirty to sixty minutes Thus, both ergotamine or ergotoxine have a more prolonged definite onset of response on the puerperal uteri of dogs than that of the fluidextract of ergot U S P, liquid extract of ergot B P 1914 or the extracts of ergot (ammonia, acetone, ether, ethylene dichloride and sulphur dioxide)

60	8 9	4		1 00	3	5	60+	Powerful

CONCLUSIONS

1 As a pharmacological method the intact puerperal uteri of dogs is helpful in the study of the active principles of ergot

2 On the puerperal uterus the fluidextract of ergot U S P, liquid extract of ergot B P 1914 and the various extracts by mouth show a more rapid onset of definite contractions than that of the alkaloids, ergotamine or ergotoxine

3 Ergot contains a principle (not ergotamine or ergotoxine) that produces by mouth a rapid onset of action on the puerperal uterus of dogs

DIGITALIS GLYCOSIDES E Leger (*J pharm chim, Paris*, 18 (1933), 482) This review of the work of many authors upon the digitalis glycosides shows that although these glycosides differ, especially with respect to the number and nature of the sugar molecules with which the aglycones are associated, there is a close relationship between the aglycones themselves The knowledge of the constitution of one of these aglycones would furnish the key to the constitution of the remainder —G M MELHUISH in *Quarterly Journal of Pharmacy and Pharmacology* 7 (1934), 127

PRELIMINARY REPORT UPON CHEMICAL EXAMINATION OF THE ENTIRE PLANT OF CELASTRUS SCANDENS *

BY NELLIE WAKEMAN

(WITH CARL BUHLER, HARVEY KIMBEL, ALBERT NIEBAUR, ANDREW RUZEK AND VINCENT WASZ)

The entire plant was collected in the fall and separated into leaves, fruit, bark, wood and root, each of the five students being given a part for investigation The work, though still in the preliminary stages, has yielded extremely interesting products

The general plan followed in this examination was to dry the plant material, reduce it to powder, and then extract it by continuous percolation with petroleum ether, ether and alcohol successively Moisture determinations of both fresh and dried material, and ash determinations, were made of each plant part

Leaves—The dried and powdered leaves had a beautiful bright green color Both the petroleum ether and the ether extracts from this powder were rich in chlorophyll From these extracts a thick dark oily product resulted Its saponification value is low From it there has been obtained an unsaponifiable residue which is precipitated by digitonin and responds to the color reactions for sterols

From the alcoholic extract of the leaves there has been isolated a small quantity of a white crystalline substance which has a sweetish taste but does not reduce Fehling's solution Upon hydrolysis, however, it has reducing properties This material is difficultly soluble in cold alcohol, much more soluble in hot alcohol, soluble in dilute alcohol, especially when hot, and in water

Stem—The bark of the stems was tough and stringy when dried It could not be ground in a mill, so it was clipped with scissors into pieces about an eighth of an inch long, packed in a percolator and extracted in the same way as the leaves The extracts were somewhat greenish in color though little chlorophyll was extracted As from the leaves, an unsaponifiable substance which responded positively to tests for sterols was obtained, also the same, or a similar, white crystalline substance This melted at 182° Upon hydrolysis no evidence of a non-sugar material was found The hydrolyzed product reduced Fehling's solution and yielded, with phenylhydrazine, an osazone which melted at 190–191° and resembled, in its crystalline form, galactosazone

The wood of the stem also yielded a sterol-like substance and a white crystalline product which was, at first, thought to be identical with that from the leaves and bark, but which refused to hydrolyze and yield a reducing sugar This material resembles in appearance, taste and solubility the hexatomic alcohols, mannitol, dulcitol, sorbitol Its melting point, by repeated crystallizations, was raised to 186°, too high for mannitol or sorbitol but approaching that of dulcitol

Root—The red outer bark of the root was carefully removed with a knife, then ground to powder This powder was packed in a percolator and extracted by continuous percolation with low boiling petroleum ether (Skellysolv B, b p 65°) After extracting for about three hours the heat was removed, and the deep red

* Scientific Section, A PH A, Washington meeting, 1934

petroleum ether extract was allowed to stand over night In the morning beautiful ruby red crystals were found to have separated in the flask These were filtered on a pad of solid carbon dioxide and kept in a sealed tube filled with the gas They melt at 192°, the melting point of β-carotene, and resemble β carotene in solubility and crystalline form Longer extraction with petroleum ether produced more of the red product and, finally, an orange-colored powdery precipitate, which is easily separated from the red crystals by washing with ether

Work upon the woody portion of the root has scarcely begun There is being obtained, however, a sterol-like substance and a white crystalline substance resembling those from the leaves and stem

Fruit—The outer husk was separated from the fruit and it and the berry were dried separately The dried husks were ground in a mill The berries, after drying, were rubbed on a coarse sieve with a large cork, and the arillus was thus separated from the seed The coarse powder thus obtained was of a deep red color It and the powdered husks were extracted separately with low boiling petroleum ether From the deep red extracts no crystals separated upon standing The extracts were then concentrated by distillation of the petroleum ether, and red fatty masses resulted, that from the arillus of the seed being the more intensely colored This product was saponified by boiling with alcoholic potassium hydroxide After the alcohol was evaporated water was added to the reaction mixture and it was shaken out with ether Small deep red needle-shaped crystals separated upon evaporation of the ether Only a small quantity of this material has been obtained Neither it nor the other products of the hydrolysis have been investigated

There have, therefore, been isolated from the plant, and partly identified

One or more substances which respond to the tests for sterols

One or more red crystalline substances which resemble carotene, probably β-carotene

Two or more white crystalline substances, one of which yields upon hydrolysis a reducing sugar which forms an osazone with the melting point and crystalline form of galactosazone The other is non-sugar in character, probably a sugar alcohol, possibly dulcitol

All of these products, and others not so well characterized, are undergoing further examination and will be reported upon later

LABORATORY OF PLANT AND PHARMACEUTICAL CHEMISTRY,
THE UNIVERSITY OF WISCONSIN,
MADISON, WISCONSIN

SOME OBSERVATIONS ON THE STABILITY OF QUININE SULPHATE DURING STORAGE *

BY L E WARREN [1]

Under certain conditions quinine sulphate may crystallize from water with 8 molecules of water of hydration This product rapidly loses some of its water,

* Scientific Section A PH A, Washington meeting, 1934

[1] Food and Drug Administration, Washington D C

even while drying during the process of manufacture, so that the more usual form contains moisture, equivalent to about 7 or $7^1/_2$ molecules of water It has been known for many years that quinine sulphate containing more than 2 molecules of water of hydration is unstable On standing at ordinary temperatures the salt loses water until the equivalent of only about two molecules remain This change takes place very rapidly at 50° C After the two-molecule stage has been reached the product remains stable unless subjected to temperatures appreciably higher than those usual in the laboratory or to other unusual treatment, such as storage in a desiccator

The U S Pharmacopœia permits either 7 or 8 molecules of water of hydration It prescribes a maximum limit for loss on drying (16 2 per cent) which is very nearly the value corresponding to 8 molecules of water of hydration (16 16 per cent) It prescribes no minimum limit for loss on drying Concerning the instability of the fully hydrated salt the U S P X makes the following statement

"It effloresces rapidly when exposed to dry air or when heated to 50° C , losing all but two *molecules of its water of crystallization and becoming lusterless* '

Although there are several references in the literature to the instability of quinine sulphate during storage, exact information concerning the length of time required (at room temperature) for the crystallized salt to lose sufficient of its water to reach the stable form is inadequate

In 1876 Cownley[1] observed that freshly prepared quinine sulphate contained $7^1/_2$ molecules of water of crystallization and that it lost $5^1/_2$ of these when freely exposed to the air for 28 hours

In 1884 Parsons[2] reported that he had determined the water in 1015 samples of quinine sulphate by drying in a water oven The average water content was 13 849% or slightly above $6^1/_2$ molecules (13 56 %) He suggested that the stable salt with 2 molecules of water of crystallization be introduced in the U S P VII

In 1886 Spalding[3] reported that he had weighed the contents of two cans of quinine sulphate and repeated the weighings over a period of 12 months in one instance and 8 months in the other The total loss in the first case amounted to between 8% and 9% and in the second to 11 39% No information was given as to how long the containers remained open at the time of the weighings

In 1892 Thompson[4] reported that he had found an average water content of 11 74% in 183 samples of quinine sulphate on the market

In 1924 Linerseege[5] called attention to this problem in its relation to public analysts in Great Britain He says in part

Owing to some samples of medicine containing an excess of quinine, seven samples of the sulphate were bought from pharmacies The amount of moisture varied from 3 7 per cent to 12 0 per cent, with an average of 6 4 per cent not one of them corresponding with the $7^1/_2$ molecules or 15 3 per cent of water required by the B P description The 1898 B P required the freshly

[5] ' Quinine Sulphate ' Year Book of Pharmacy," 61 (1924) 756

prepared salt to lose 15 2 per cent of moisture on heating This test was omitted in the 1914 B P , and nothing put in its place Both Pharmacopœias remark under "Characters and Tests" that the crystals effloresce on exposure to dry air until two molecules of water remain What, therefore, is the amount of moisture in the B P salt? Is it $7^1/_2$ molecules, as required by the description, or anything between that and two molecules, as is suggested by the latter statement? This is a difficult question for an analyst who receives samples of quinine sulphate or medicine containing it The retail samples given above show how variable the salt is, and one wholesale sample contained 3 9 per cent of moisture

Linerseege suggested that the next revision of the British Pharmacopœia should describe a salt containing but two molecules of water of crystallization However, the new edition (1930) still describes a salt with $7^1/_2$ molecules of crystallization

Two one-ounce bottles of quinine sulphate of the same brand were obtained by Sage[1] from the manufacturer One was opened immediately and small portions were removed from time to time for a period of two years The other was kept sealed beside the opened bottle Water was then determined in each The salt from the frequently opened bottle lost 3 76% on drying and the other 13 28% The initial moisture content of the salt in the first opened bottle was not stated

In 1933 Beal and Szalkowski[2] determined loss in weight at 100° on twenty-eight specimens of quinine sulphate, representing market material A specimen containing 16 78% of H_2O and an anhydrous specimen were prepared The market material lost from 4 39% to 12 29%, or calculated as H_2O, from 1 9 to 5 8 molecules None of the market specimens conformed to the U S P which limits the loss at 100° to 16 2% Portions of both of the prepared specimens were exposed in desiccators 14 days to concentrated sulphuric acid, 3 1 sulphuric acid, 2 1 sulphuric acid, 1 1 sulphuric acid, saturated solution of potassium acetate (20% humidity), saturated solution of calcium chloride (30% humidity), saturated solution of potassium carbonate (40% humidity) and saturated solution of ammonium chloride (80% humidity) No marked changes took place after the ninth day The dihydrate (4 60% H_2O) is the most stable form The heptahydrate (14 43%), the octahydrate (16 16%) and the anhydrous salt tend to form the dihydrate In changing from the heptahydrate to the dihydrate the salt loses its long, flaky crystalline form which results in short needles that have almost the appearance of fine powder The salt also loses in bulk

Wales[3] has shown by vapor pressure measurements that two hydrates of quinine sulphate exist The octahydrate is unstable under exposure to the air and is transformed into the dihydrate His findings indicated that under ordinary conditions equilibrium with water vapor in the air would be reached somewhere on the sharp break in the vapor pressure curve and that the salt stored in an open container should contain slightly more than 2 moles of water

Because of the insufficiency of the information in the literature, and because of the bearing which the facts would have on the administration of the food and drugs act it was decided to carry out some tests in the hope of determining how rapidly the salt would lose its water under such conditions as would ordinarily obtain on

[2] 'Notes on the Water of Crystallization of Quinine Sulphate" Jour A Ph A , 22 (1933) 1219–1225

[3] *Ibid* , 23 (1934) 793

the shelves of drug stores Accordingly, in November 1932, seven packages of quinine sulphate were purchased directly from the manufacturer with the specifications that the material should all be of the same lot and that it should have been freshly made and packed The material was contained in six glass bottles with screw caps, each containing 1 ounce, and in one 8-ounce tin with tightly fitting telescopic cover The salt in the tin package was protected further by being placed in a sack of blue paper

The following disposition was made of the material

A 1-ounce package (A) was opened in the Washington Laboratory immediately after delivery and a small portion taken out for water determination,[1] the package being kept open for 15 minutes This procedure was repeated once each week until the material no longer lost weight, care being taken to keep the package open for exactly 15 minutes each time a portion was taken out for analysis, and to take the sample from the surface of the contents without mixing the remainder This was assumed to simulate conditions in prescription practice

The 8-ounce package (B) was given the same treatment as the 1-ounce package above mentioned

After an interval of 1 month another package (C), which had been kept sealed in the laboratory since purchasing, was opened and a sample taken for water determination, the container being kept open for 15 minutes This procedure was repeated once each month until the material ceased to lose weight

After an interval of 3 months a fourth package (D) (still sealed) was opened and a sample removed once each month for water determination, the package being left open for 15 minutes each time that a sample was removed The process was repeated until the loss became constant

After an interval of 4 months a fifth package (E) (still sealed) was opened and a sample removed for water determination once each month until the weight became approximately constant

One of the 1-ounce packages (F) was sent unopened to the Minneapolis Station of the Food and Drug Administration, and another (G) to the Denver Station with the request that they be opened once each week for 8 weeks and kept uncovered for 15 minutes each time The request was made also that the product be stored in such manner that direct sunlight would not fall on it As soon as the specimens had been returned they were opened and the treatment accorded the third specimen given each

Since all of the specimens were of the same lot it was assumed that the initial water content of all of the 1-ounce packages was the same as that of the two specimens which were first assayed

At the expiration of one year from the time of purchase all of the specimens were reexamined for loss on drying Also at the expiration of one year from the time of opening each specimen was again tested for loss on drying

The results obtained with the specimens which were analyzed weekly are recorded in Table I, those obtained from the analyses on the monthly basis are given in Table II The monthly results for Specimens A and B are included also in Table II, four weeks being considered as 1 month

[1] Water was determined by drying at 90° C

In Table III the principal results are condensed for ready reference

* Four weeks was considered as a month in these assays
** Initial assay

The results in Table I show that Specimen A became stable in 12 weeks and Specimen B in 7 months The stable stage was reached when the product contained approximately 4 60 per cent of water, or two molecules Specimen C contained 13 27 per cent of water after storage for one month unopened It became stable in 4 months after opening, or 5 months after purchase Specimen D contained 11 98 per cent of water after storage unopened for 3 months It became stable in 9 months after opening, or 12 months after beginning storage Specimen E contained 11 23 per cent of water on first opening 4 months after purchase It became stable in 7 months after opening or 11 months after purchase The specimens which were not opened until 1, 3 or 4 months after purchase contained nearly

as much water (initial analysis) as the specimens opened and assayed immediately after purchase The specimen which had been opened weekly in Minneapolis for 8 weeks (but not analyzed there) (F) contained 12 1 per cent of water after its return to the Washington laboratory, or nearly 6 molecules After monthly opening and sampling in Washington it became stable in 10 months after opening, or 1 year after purchase Likewise, the specimen which had been opened in Denver (G) contained 12 26 per cent of water (or nearly 6 molecules) after its return to Washington It became stable in 12 months after opening or 14 months after purchase

TABLE III —WATER CONTENT OF QUININE SULPHATE AFTER STORAGE FOR DIFFERENT PERIODS

These experiments show that during storage in a climate comparable to Washington, D C, crystallized quinine sulphate progressively loses water of crystallization until it contains about 2 molecules (4 60%) after which it remains practically stable The more frequently the specimen is opened the more rapid is the loss Specimens which are opened occasionally but which are not otherwise disturbed, such as the packages sent to Minneapolis and Denver, do not lose their water of crystallization very rapidly The conditions under which Specimens A and B were kept probably represent those obtaining in drug store practice more nearly than is the case with the other specimens

THE HYDRATION OF EMETINE HYDROCHLORIDE AND CODEINE PHOSPHATE *

BY H WALES [1]

I Emetine Hydrochloride —The statement in the tenth edition of the United States Pharmacopœia that emetine hydrochloride "contains variable amounts of water of crystallization" is the obvious conclusion to be drawn from the reports of those who have published data on this product

Paul and Crownley (1) state that considerable difficulty was encountered in obtaining the salt in a state fit for analysis on account of the large quantity of

* Scientific Section, A PH A, Washington meeting 1934

[1] Drug Control, Food and Drug Administration

mother liquor retained by the crystals, and decide that it contains six molecules of water of crystallization Hesse (2) states that emetine hydrochloride crystallizes from water with eight molecules of water of crystallization, that four molecules are easily given up on exposure to the air, and that the anhydrous salt will readily take up $4H_2O$ on exposure to the air He computes the data given by Frerichs and de Fuentis Tapis (3) as showing $4H_2O$ for a commercial sample and $8H_2O$ for one which they obtained by adding ether to an alcoholic solution of the salt Hesse states also that Keller (4) found nearly $4H_2O$ in a commercial sample and $3H_2O$ in one which was obtained by adding ether to an alcoholic solution Carr and Pyman (5) state that emetine hydrochloride recrystallized from water and "dried in air until of practically constant weight retains $7H_2O$" They claim that when recrystallized from methyl alcohol it contains $3^1/_2H_2O$ As indicated by Table I the same lack of consistency is shown in the standards provided by the various pharmacopœias for the water content of emetine hydrochloride However, only three of these pharmacopœias venture to ascribe a definite hydrate to the product The British and Brazilian Pharmacopœias state that it contains $7H_2O$ and the Swiss Pharmacopœia that it contains "about $4H_2O$" Incidentally the formula of $C_{30}H_{44}O_4N_2$ 2HCl given in the Pharmacopœias of the United States and Brazil is not as well authenticated as that of $C_{29}H_{40}O_4N_2$ 2HCl which is used by Netherlands, Great Britian, Switzerland and Denmark (5), (7)

TABLE I —MOISTURE STANDARDS FOR EMETINE HYDROCHLORIDE

	Min	Max
Pharmacopœia of Japan (1919)		15%
United States Pharmacopœia (1925)		19%
Deutsches Arzneibuch (1926)		10%
Nederlandsche Pharmacopee (1926)	10%	14%
Pharmacopœia Brazil (1929)		19%
British Pharmacopœia (1932)	15%	19%
Pharmacopœia Helvetica (1933)	10%	13%
Pharmacopœia Danica (1933)		15%

Coormans (6) calls attention to the variation in water content of emetine hydrochloride as provided by the different European pharmacopœias and finds that samples manufactured in different countries meet the pharmacopœial requirements of the country of manufacture The actual amount of water found in the samples of emetine hydrochloride examined by the several investigators is shown in the following table

The vapor pressure of emetine hydrochloride, progressively dehydrated at 25° C, was determined by the method already described for quinine sulphate (8) As can be readily seen from the accompanying table and curve no evidence of a hydrate is shown The vapor pressure of the solution of water in emetine hydrochloride is so low that the product will be in equilibrium with atmospheric conditions when it contains between 8% and 16% of water This water is, however, merely adsorbed or dissolved in the emetine hydrochloride It does not exist in the form of a hydrate

II Codeine Phosphate—Codeine phosphate is described in the British Pharmacopœia (1932) as containing one molecule of water of crystallization The German (1926), Swiss (1933) and Danish (1933) Pharmacopœias state that it contains one and one-half molecules of water while the United States (1926), Swedish (1925), French (1925) and Brazilian (1929) Pharmacopœias ascribe two molecules of water of crystallization to the product

Anderson (9) reports that codeine phosphate crystallized from water contains approximately $1^1/_2H_2O$ Schmidt (10) states that when crystallized from water it contains $2H_2O$ and from dilute alcohol $^1/_2H_2O$ Beilstein (11) and Tambach and Henke (14) both give the formula with $1^1/_2H_2O$ Schaefer (12) states that "all the preparations on the market contain only $^1/_2$ molecule of water of crystallization The salt with 2 molecules of water exists but it is a practical impossibility to produce it for commercial purposes" Henry (13) states that codeine phosphate contains 1, $1^1/_2$ or $2H_2O$

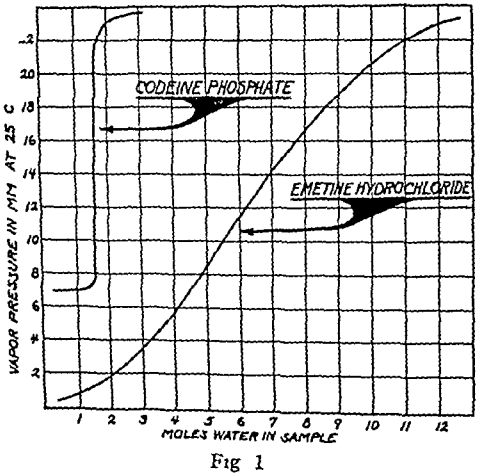

Fig 1

Codeine phosphate progressively dehydrated at 25° C by the method described above gave the following results

As will be seen from the accompanying curve codeine phosphate crystallized

from water at room temperature contains one and one-half molecules of water of crystallization No evidence of any other hydrate is indicated by these results

THE BIOASSAY OF THE ANTERIOR PITUITARY-LIKE SEX HORMONE (ANTUITRIN S) *

BY L W ROWE, A SIMOND AND W O NELSON

Although several bioassay methods for evaluating the anterior pituitary-like sex hormone from pregnancy urine have been suggested, none of them has been subjected to adequate critical scrutiny for accuracy nor has there been much basis for a comparison of values obtained by different methods It will be the purpose of this article to present in detail the method which has been used to control accurately the potency of a commercial product (Antuitrin S) as well as to give data comparing activities obtained in the assay of the same preparation by several other recognized methods

Zondek and Aschheim (1) suggested the use of baby female white mice weighing 6 to 8 Gm , for assaying anterior pituitary sex hormone preparations

In 1931, Fevold, Hisaw and Leonard (2) published a method for the assay of the anterior pituitary sex hormone using immature female white rats 20 to 25 days old as the test animals Later, Fevold, *et al* (3) used 21- to 23-day old rats and the same technique but they also reported that rabbits 12 weeks old were even more

* Scientific Section A PH A Washington meeting 1934

satisfactory, as they were not so susceptible to small amounts of luteinizing hormone as are rats and, consequently, differentiated better between the follicle-stimulating and the luteinizing action

Wallen-Lawrence and Van Dyke (4) utilized an assay method in which increase in size of the ovaries or seminal vesicles of immature rats is critically determined

Katzman and Doisy (5) suggest the use of 19 day old female white mice in which a dose given subcutaneously in six equal portions during the course of three days will cause opening of the vagina and *estrus* on the 22nd to the 24th day of age, as judged by vaginal smears, if the dose used contains one or more mouse units They also used 21-day old rats in which case one rat unit must produce these reactions by the 27th day of age

Friedman (6) has studied the effect of various agents on ovulation in the rabbit and suggests an assay method for anterior pituitary sex-regulating activity utilizing this physiological response

Friedman raised the objection to the rat method that rats reach sexual maturity normally at such a variable age that the ovaries of 3-week-old rats will be in such a widely scattered state of development that the same dose of an effective agent could not bring all of them into maturity at the same time Some attempt has been made recently by Davy (7) to overcome this objection by roughly standardizing the normal uninjected female rats She found that those animals which weighed between 35 and 45 Gm at 24 days of age possessed remarkably uniform ovaries, and drew the conclusion that at least one of three such rats may be expected to give a positive response to one M E D of gonadotropic substance injected in 5 daily doses This will be commented upon further a little later

Mention might also be made of the contribution by Swezy (8) in which she voices criticism of practically all the assay methods that have thus far been proposed Nothing of a constructive nature is offered

EXPERIMENTAL

In the early work in this laboratory thirty-day old female white rats, taken from a colony the members of which showed an average sexual maturity age of 50 to 60 days, were used for the potency control of experimental extracts containing the sex-regulating activity of the anterior pituitary as found in pregnancy urine The unknown solution was tested usually at five levels using only two rats at each level It was soon realized, however, that a method utilizing a relatively small number of animals is of qualitative value only but does not meet the rigid requirements of a commercial assay method It was also found that more accurate results could be obtained with the use of rats twenty-six days of age The details of our present method are as follows

Immature female white rats *26 days* old at the beginning of the test, from a colony with an average normal sexual maturity age of 55 days, are dosed subcutaneously twice a day for thee days and autopsy done 96 to 100 hours after the first dose At least *5 rats* and *usually 10* are used at each dosage level and a majority (6 out of 10) must show the definite development of one or more corpora lutea for the test to be positive at this level The weight of the rats and the condition of the vagina and uterus is also carefully noted at the end of the test but the real criterion is the formation of corpora lutea on the ovaries for we have often

found corpora lutea without the vagina being open and sometimes vice versa Usually four levels of dosage varying 10% to 20% with each other are selected and the smallest dose determined which meets the rigid requirements of the test A typical protocol is given herewith in detail

Activity is 175 rat units per cc (6 out of 10 positive)

In addition to the successful quantitative use of the method outlined in the assay of almost 1000 samples both experimental and commercial, we have conducted a rather intensive study of the stability of a particular experimental lot,

℞ 095286-B, and also of its activity by several methods By our regular method using immature rats this lot has been tested as follows

TABLE II

1	May 2, 1933	175 rat units per cc	
2	May 9, 1933	175	5 weeks old
3	June 6, 1933	150	9 weeks old
4	July 6 1933	150	14 weeks old
5	Aug 8, 1933	125	17 weeks old
6	Aug 29 1933	75	20 weeks old
7	Sept 19, 1933	75	24 weeks old
8	Oct 17, 1933	75	

Careful tests on this lot in September 1933 upon baby mice for results comparable to the Zondek and Doisy mouse units gave data as follow

TABLE III

Five out of 9 were positive at 20 units per cc and only 3 out of 10 were positive at 30 units, so 20 mouse units per cc is the activity of ℞ 095286-B Since this lot assayed 75 and 80 rat units per cc after August 8, 1933, 1 mouse unit is approximately equal to 4 rat units

A very recent check test on baby mice at the two critical levels of comparison resulted as follows

TABLE IV

℞ 095286 B Assaying 80 R U /cc

70% were positive at 15 rat units per cc or 1 mouse unit = 5 rat units
50% were positive at 20 rat units per cc or 1 mouse unit = 4 rat units

Only one mouse was positive out of 18 by the Katzman-Doisy technique and that was with the smaller dose of the two

Some preliminary work on mice a year previously showed that at 5 and 6 rat units per mouse unit only 50% of the mice were positive but this later relationship is more convincing and probably more nearly correct

This lot was also tested on 21-day old white rats with observation of vaginal smears at the end of the fourth day after the first injection in order to conform closely to the Katzman-Doisy technique for the purpose of comparing our unit with their rat unit Results of this test are given in Table V

TABLE V

Activity is 60 Doisy rat units per cc

Activity is 60 to 80 Parke, Davis rat units per cc on the 21-day old rats or 75 P D rat units per cc on 26- to 28-day old rats

The Doisy and Parke, Davis rat units are apparently very nearly equal even though the details of the two methods vary materially To prove further that

these two units are about the same and that assays of the same preparation conducted in different laboratories can agree very closely, the following series of tests made in Dr Doisy's and in our laboratories is given in Table VI

TABLE VI

Antuitrin S

Sample No	Our Assay Date	Our Assay Rat Units	Dr Doisy s Assay Date	Dr Doisy s Assay Rat Units
3008439	5/22/33	175	6/14/33	165
3008440	6/10/33	175	6/26/33	167
3009703	6/10/33	175	7/8/33	166
3009702	6/17/33	175	7/8/33	166
3010507	7/1/33	100	7/29/33	75
3013846	7/22/33	150	8/5/33	166
3013847	7/29/33	150	8/10/33	133
3015303	8/5/33	175	8/18/33	166
3016294	8/12/33	100	9/2/33	133
3014538	8/12/33	150	9/2/33	166
3016295	9/19/33	100	9/12/33	85
3016852	8/26/33	175	9/12/33	166
3017466	9/2/33	125	9/18/33	133
3018030	9/2/33	175	9/18/33	166

The agreement in the above assay values obtained in two different laboratories by methods that are not identical is indeed remarkable The slight variations are largely due to differences in selection of dosage levels

THE FRIEDMAN RABBIT OVULATION METHOD

One of us (W O N) has carefully studied the activity of this particular lot of Antuitrin S, ℞ 095286-B, by the Friedman method with results that may be tabulated as follows

TABLE VII

℞ 095286 B Rabbit Ovulation Tests

3 2	1 20 R U	+
2 5	1 20 R U	+
2 85	1 50 R U	+
2 4	1 80 R U	+
3 1	2,46 R U	+
2 70	3 70 R U	+

pp = postpartum animals
+ = ovulation
− = no ovulation

Actual dose means dose figured on the basis of the assay of 75 R U per cc Assay conducted without knowledge of actual potency

Table VII indicates a slightly greater sensitivity on the part of postpartum animals since at the 0 90 R U per Kg level 3 out of 4 postpartum animals ovulated while only 1 out of 5 of the ordinary isolated females did so, and at 0 96 R U per Kg all 4 of the postpartum animals ovulated while only 2 out of 3 of the others did so Also a few of the animals were used 2 or more times if they did not ovulate with the first dose, but Friedman has demonstrated that such animals are not rendered more susceptible to subsequent doses

TABLE VIII

Non-estrous Rabbits					
Weight Kg	Actual Dose per Kg	Result	2 27	3 0 R U	−
			2 8	3 0 R U	−
			2 8	4 5 R U	−
3 1	1 2 R U	−	2 5	4 5 R U	+
2 4	1 2 R U	−	2 3	6 0 R U	+
2 9	1 2 R U	−	3 2	6 0 R U	+
2 75	1 2 R U	−	2 85	6 0 R U	−
4 1	1 2 R U	−	2 8	6 0 R U	+
2 5	1 8 R U	−	2 4	9 0 R U	+
3 0	3 0 R U	−	2 8	12 0 R U	+
2 2	3 0 R U	−	2 95	12 0 R U	+

These animals were classified as non-estrous because their ovaries contained recent corpora lutea These corpora lutea had been formed by previous Antuitrin-S injections or the injection of some one of the Antuitrin-L extracts However, there was every reason to believe that ovulation might be induced, if the dose of Antuitrin-S were large enough, since fairly large follicles were present in the ovaries along with the corpora lutea

TABLE IX

Young Animals			1 9	9 0 R U	−
Weight Kg	Actual Dose per Kg	Result	1 85	9 0 R U	−
			2 05	12 0 R U	+
1 85	6 0 R U	−	1 90	12 0 R U	+
1 80	6 0 R U	−	2 1	12 0 R U	+

This table gives data on a very limited number of young animals approaching maturity which indicate that about 12 R U per Kg are necessary to induce ovulation

SUMMARY OF RABBIT OVULATION RESULTS

TABLE X

Estrous and Postpartum Animals

Actual Dose Injected per Kg	Number of Cases Positive	Number of Cases Negative
0 56 R U	0	1
0 60 R U	0	4
0 75 R U	0	3
0 84 R U	0	1
0 90 R U	4	5
0 96 R U	6	1
1 002 R U	1	0
1 02 R U	2	0
1 05 R U	5	0
1 20 R U	6	0
1 50 R U	1	0
1 80 R U	1	0
2 46 R U	1	0
3 70 R U	1	0

TABLE XI

Non estrous Animals

Actual Dose Injected per Kg	Number of Cases Positive	Number of Cases Negative
12 R U	0	5
18 R U	0	1
30 R U	0	4
45 R U	1	1
60 R U	3	1
90 R U	1	0
120 R U	2	0

TABLE XII —Young Animals

Actual Dose Injected per Kg	Number of Cases Positive	Number of Cases Negative
60 R U	0	2
90 R U	0	2
120 R U	3	0

In each injection for the induction of ovulation the desired quantity of the extract was taken and made up to 1 cc Injections were given intravenously and the response was determined in 24 to 36 hours by operation or autopsy

DISCUSSION

The tabulated experimental data submitted serve to show the practicability of the proposed method using immature white rats (26 to 28 days old for the control of the sex-regulating activity of the anterior pituitary with an accuracy of 10% to 20% In our opinion the use of rats of this age with autopsy at 96 to 100 hours after the first dose and examination for mature corpora lutea is more definite and practical than the use of younger rats with dependence on the opening of the vagina and upon the estrous stage for a positive reaction, or the use of baby mice where determination of mature corpora lutea is much more difficult

We do find from assays of the same preparations in different laboratories by our corpora lutea method on 26- to 28-day old rats and by the estrous stage method on 21-day old rats (Doisy) that very good agreement in values can be obtained by the two methods

As for the methods using baby white mice, we do not find them any more accurate and certainly they are less practical both because of greater difficulty in interpreting results by gross observation, and also because proper test animals cannot be secured very readily

The rabbit ovulation method appears to be of value and we have provided a basis of comparison between results obtained by it and by the other methods It is to be noted that our results check closely those reported by Dr Friedman However, it does not seem to possess any advantages over the other methods as to accuracy or specificity of the positive reaction and it is more time-consuming and expensive particularly if twenty rabbits are to be used in a test Friedman's objection to the rat methods that different rats reach sexual maturity at such a variable age is taken care of by the use of a number of rats (5 to 10) at each dosage level and by requiring that only a bare majority be positive at the end of the test, for it is admitted that some individual animals are backward in their ovarian development and could not be brought into sexual maturity by the minimum effective dose for the majority

SUMMARY

1 A practical and accurate method is presented for the standardization of the anterior pituitary-like sex hormone from pregnancy urine

2 The relationship between our rat unit and the mouse unit has been shown experimentally to be about 1 mouse unit equivalent to 4 rat units

3 The rabbit ovulation unit was found experimentally to be equivalent to 1 rat unit per Kg body weight of rabbit

DRUG EXTRACTION I A STUDY OF VARIOUS MENSTRUA FROM THE STANDPOINT OF SWELLING EFFECTS, PENETRATION AND EXTRACTION [1] [2] [3]

BY WILLIAM J HUSA [4] AND LOUIS MAGID

INTRODUCTION

The extraction of drugs is a time-honored process However, there has been a feeling in recent years that the fundamental principles involved in this basic pharmaceutical procedure have received insufficient attention Such factors as the swellings of drugs in liquids and the penetration of menstrua have not been studied quantitatively and many official formulas are based to a considerable extent on empiricism and tradition

The purpose of the present investigation has been to make a critical study of the fundamental principles of drug extraction with special reference to permeation of cell walls by a selected series of pharmaceutical solvents, to swelling of cellular tissue during maceration with selected menstrua, and to the influence of menstrua upon the structure of vegetable drugs and extraction of the constituents

SWELLING EFFECT OF SOLVENTS

Chestnut wood, being a relatively simple vegetable structure, was chosen as the first material to be studied with the idea that the methods evolved and the data collected would be applied in the course of the investigation in the study of various types of drugs Chestnut wood consists largely of fibrous tissue and one of its constituents is tannin

Swelling of Strips of Chestnut Wood —A study of the swelling effect of solvents on thin sections was deemed advisable as the first point of attack The liquids

[2] This investigation was aided by a grant from the AMERICAN PHARMACEUTICAL ASSOCIATION Research Fund

[3] This paper is based on a dissertation submitted by Louis Magid to the Graduate Council of the University of Florida in partial fulfilment of the requirements for the degree of Doctor of Philosophy

[4] Head Professor of Pharmacy University of Florida

customarily used to soften hard tissues for sectioning, such as solutions of hydrofluoric acid, potassium hydroxide, etc , obviously could not be used By the use of a "smoother" at a planing mill, thin cross-section shavings, suitable for microscopical study, were obtained A plan was devised of cutting a strip of a section of chestnut wood, 0 25 to 0 50 mm wide, so that the strip could be observed in the field of the microscope under low power and measurements made with a filar micrometer of the width of the strip before and after the addition of solvents The width of the strips ranged from 0 14 to 0 65 mm , and the length from 3 to 6 mm The thickness of the strips ranged from 0 045 to 0 070 mm The strips examined consisted largely of summer wood, inasmuch as strips of spring wood generally tore on the addition of water Measurements of swelling were made in units of the filar micrometer and for concise presentation in the tables which follow all results have been recalculated on a percentage basis with the width of the dry strip taken as 100 The results given are the average of 3 or more determinations in each case

Effect of Various Menstrua on Strips of Chestnut Wood —Scoville (1) has listed 20 different alcohol-water mixtures used as menstrua in official preparations and has suggested that some of these which differ slightly in percentage strength could well be eliminated From this list, 8 alcohol-water mixtures were selected and their effect on the width of strips of chestnut wood was determined Glycerin-water and glycerin-alcohol mixtures were studied similarly

The results in Table I indicate that mixtures of equal volumes of alcohol and water and mixtures containing less than this proportion of alcohol have practically the same swelling effect as water alone, causing an immediate swelling with very little further change during the two hours The weaker alcoholic menstrua apparently reach a swelling equilibrium within a few minutes With concentrations of alcohol exceeding 58 per cent by volume there is an increasing tendency toward a smaller immediate swelling and a more gradual approach to equilibrium (see Graph 1)

TABLE I —EFFECT OF VARIOUS ALCOHOL WATER MIXTURES

Per Cent Alcohol by Volume	Dry	After Time Intervals (Minutes)								
	0	1	5	10	20	40	60	80	100	120
0 (Water)	100	120	120	120	120	120	120	120	120	120
11 8	100	118	119	119	119	121	120	118	118	118
24 0	100	119	119	120	120	121	121	120	120	120
32 8	100	121	122	122	123	124	124	124	124	124
49 0	100	117	116	116	116	116	116	116	116	116
58 4	100	114	115	115	115	115	115	115	115	116
68 1	100	112	112	113	113	114	114	114	115	115
77 4	100	108	111	113	115	118	120	120	120	120
86 5	100	101	105	110	115	118	121	121	121	121
95 2	100	101	102	102	107	107	109	110	110	110
99 9	100	99	100	102	104	108	109	110	110	110

The results in Table II indicate that a mixture of 1 volume of glycerin and 7 volumes of water has practically the same effect as water alone With increasing concentrations of glycerin the primary rise decreases and a longer time is required for equilibrium to be reached Glycerin alone and a mixture of glycerin 9 volumes and water 1 volume both cause an immediate swelling of about 1 per cent with no further change during two hours (see Graph 2)

TABLE II —EFFECT OF VARIOUS GLYCERIN-WATER MIXTURES

Volume of Glycerin	Volume of Water	Dry	After Time Intervals (Minutes)								
		0	1	5	10	20	40	60	80	100	120
0	1	100	120	120	120	120	120	120	120	120	120
1	7	100	122	124	124	124	124	124	124	124	124
1	3	100	116	119	121	121	121	121	121	121	121
1	2	100	113	119	120	121	122	122	122	122	122
1	1	100	103	106	108	112	114	116	116	116	116
3	2	100	101	102	103	106	111	115	116	117	117
7	3	100	103	103	105	108	111	114	116	117	118
4	1	100	103	103	103	104	105	106	107	108	109
9	1	100	101	101	101	101	101	101	101	101	101
1	0	100	101	101	101	101	101	101	101	101	101

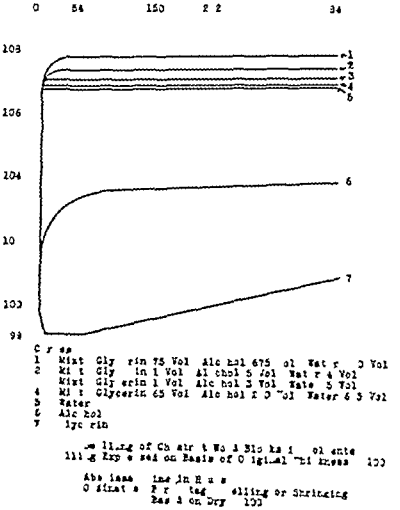

Graph 5

TABLE III —EFFECT OF VARIOUS GLYCERIN ALCOHOL MIXTURES

Volume of Glycerin	Volume of Alcohol	Dry	After Time Intervals (Minutes)								
		0	1	5	10	20	40	60	80	100	120
1	0	100	101	101	101	101	101	101	101	101	101
9	1	100	100	100	100	101	101	101	101	101	101
4	1	100	100	100	101	101	101	101	102	103	103
7	3	100	100	100	101	101	101	102	103	104	105
3	2	100	101	102	102	102	103	103	103	104	104
1	1	100	102	103	103	103	104	104	104	105	105
1	2	100	102	102	102	103	104	105	105	106	106
1	3	100	103	104	105	105	108	109	110	110	111
1	7	100	102	103	104	104	106	108	110	112	114
0	1	100	101	102	102	107	107	109	110	110	110

The results in Table III indicate that there is practically no swelling with glycerin and with a mixture of 9 volumes of glycerin and 1 volume of alcohol With increasing concentrations of alcohol there is an increase in the rate and amount of swelling (see Graph 3)

Effect of Acidity and Alkalinity on Swelling of Strips of Chestnut Wood —There is abundant evidence in the literature showing that acidity and alkalinity are important factors in the swelling of colloids and plant tissues In view of these facts and the established use of acids in menstrua of some official extractive preparations, it seemed desirable to know whether changes in acidity and alkalinity affect the swelling of drugs Using sodium hydroxide and hydrochloric acid, distilled water was adjusted to a series of p_H values by the colorimetric method with LaMotte indicators and standards The effect of these liquids on the swelling of strips of chestnut wood is shown in Table IV

TABLE IV —EFFECT OF WATER ADJUSTED TO VARIOUS p_H VALUES

p_H of Water	Dry	After Time Interval (Minutes)								
	0	1	5	10	20	40	60	80	100	120
0 9	100	121	121	121	121	121	121	121	121	121
1 9	100	120	120	120	120	120	120	120	120	120
3 1	100	121	121	122	122	122	122	122	122	122
4 7	100	120	120	120	120	120	120	120	120	120
5 7	100	120	120	120	120	120	120	120	120	120
6 9	100	120	120	120	120	120	120	120	120	120
7 5	100	120	121	121	121	121	121	121	121	121
8 9	100	122	122	123	123	123	123	123	123	123
10 5	100	120	121	121	121	121	121	122	122	122
12 0	100	119	121	122	122	123	123	123	123	123

From the above results it is seen that a variation in p_H of aqueous solutions from 0 9 to 12 0 has practically no effect on the swelling of simple woody tissue such as chestnut wood

TABLE V —EFFECT OF ACIDITY AND ALKALINITY OF ALCOHOL

Alcoholic Solution	Dry	After Time Intervals (Minutes)								
	0	1	5	10	20	40	60	80	100	120
Alcohol alone	100	101	102	102	107	107	109	110	110	110
0 01*N* NaOH	100	100	101	102	107	111	112	113	113	113
0 1*N* NaOH	100	102	103	105	108	113	115	117	117	117
0 01*N* HCl	100	100	101	102	105	107	108	108	108	108
0 1*N* HCl	100	101	102	102	102	102	103	104	104	105

The effect of varying the acidity and alkalinity of alcohol on the swelling of strips of chestnut wood is shown in Table V

The results indicate that in alcoholic solutions, an increase in alkalinity increases the swelling of strips of chestnut wood, while an increase in acidity decreases the swelling normally caused by alcohol

Effect of Successive Addition of Liquids on Strips of Chestnut Wood—The technique employed for determining the effect of successive addition of various liquids on the swelling of chestnut wood strips was that of adding the first liquid during a definite period of time to the strip removing as much as possible of the liquid by means of filter paper, and then adding the second liquid, etc The effect of successive additions of water, alcohol and absolute alcohol on strips of chestnut wood are shown in the following tables

TABLE VI —EFFECT OF SUCCESSIVE ADDITION OF WATER, ALCOHOL AND ABSOLUTE ALCOHOL

Time in Minutes	Dry	Water				Alcohol				Abs Alc	
	0	1	5	1	5	10	20	40	60	1	5
Average of 2 strips	100	114	115	112	112	112	112	113	114	110	111

It is seen that alcohol shrinks a strip swollen by water, and then causes a gradual swelling The addition of absolute alcohol at this point causes a shrinking

TABLE VII —EFFECT OF SUCCESSIVE ADDITION OF ALCOHOL AND WATER

Time in Minutes	Dry	Alcohol						Water	
	0	1	5	10	20	40	60	1	5
Average of 2 strips	100	101	102	103	105	109	114	124	127

The results show that alcohol causes the characteristic gradual swelling the addition of water after one hour causes an immediate marked increase in swelling

Experiments were also carried out on the successive addition of liquids as follows (*a*) absolute alcohol alcohol and water (*b*) alcohol and absolute alcohol, (*c*) water and absolute alcohol and (*d*) absolute alcohol and water Each liquid tended to exert its own effect regardless of whether this resulted in an increase or decrease of the swelling caused by the previously added liquid

Swelling Effect of Various Liquids on Extracted Strips of Chestnut Wood—To obtain materials for these tests, cross sections of chestnut wood were exhaustively extracted with water and with alcohol until the presence of tannin in the extraction liquids was no longer detected The sections were then air dried and used in the following experiments, using the technique of measuring the width of strips with a filar micrometer The following tables show the effect of various liquids and the successive addition of various liquids on strips of extracted chestnut wood The results in each case are the average of 3 or more determinations

TABLE VIII —EFFECT OF VARIOUS LIQUIDS ON EXTRACTED STRIPS OF CHESTNUT WOOD

Liquid	Dry	After Time Intervals (Minutes)								
	0	1	5	10	20	40	60	80	100	120
Water	100	118	119	119	119	119	119	119	119	119
5 per cent aqueous solution of tannin	100	119	120	120	120	120	120	120	120	120
Glycerin	100	100	100	100	100	100	100	101	101	101

TABLE IX —EFFECT OF SUCCESSIVE ADDITION OF VARIOUS LIQUIDS ON EXTRACTED STRIPS OF CHESTNUT WOOD

Abbreviations alc = alcoholic sol = solution, *N* = normal

Time in Minutes																				
0	1	5	10	20	40	60	120	1	5	10	20	40	1	5	10	20	40
Dry	Alcohol							0 1*N* alc HCl					Alcohol				
100	101	103	104	106	108	110	110	110	110	110	110	110	110	110	110	110	110
Dry	Alcohol							0 1 V alc NaOH					Alcohol				
100	101	102	103	104	107	109	109	109	109	110	110	111	111	111	110	110	110
Dry	0 1 V alc HCl							Alcohol									
100	101	102	103	105	107	107	107	108	108	108	108	108					
Dry	5 per cent alc sol tannin							Alcohol									
100	101	102	103	103	105	106	107	107	107	107	108	108					

Since the extracted strips of chestnut wood showed the same degree of swelling with various liquids as the unextracted strips, it is apparent that treatment with water and alcohol causes no permanent change in the structure of the tissues or at least no change capable of affecting the swelling properties, it is also apparent that the soluble constituents of this tissue are of no importance in swelling although a 5 per cent solution of tannin in alcohol decreased the swelling to a slight extent The results in Table IX show that on successive addition of liquids, usually each liquid tends to exert its own effect regardless of whether this results in an increase or decrease of the swelling caused by the previously added liquid

Swelling of Blocks of Chestnut Wood —The swelling of blocks of chestnut wood immersed in various solvents was studied The wood was cut into uniform 24 mm blocks, with the grain running the long way, and varying from 1 75 to 1 80 mm in thickness at the center (across the grain) Three blocks were placed in each solvent in stoppered flasks kept at a constant temperature of 30° C in a Freas large size water thermostat The blocks were weighted below the surface of the liquids by pieces of glass rod fastened by a thread The amount of swelling was based on the change in thickness (across grain), measurements being made with a micrometer caliper The results obtained from the effects of various liquids on the swelling of blocks of chestnut wood are given in Table X The results have been recalculated on a percentage basis, with the original thickness of the dry blocks taken as 100, and are based on the average of 3 blocks

TABLE X —EFFECT OF VARIOUS LIQUIDS ON BLOCKS OF CHESTNUT WOOD

Abbreviations alc = alcohol, abs = absolute, gly = glycerin, mixt = mixture, v = volume

Liquid	Dry 0	After Time Intervals (Hours) 6	12	24	54	150	222	384
Water	100	106 9	106 9	106 9	106 9	106 9	106 9	106 9

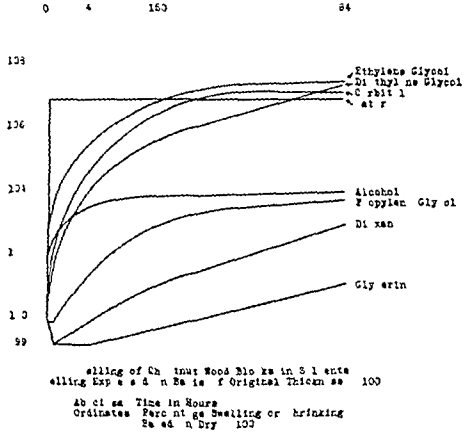
The results of the above table show that water causes greater swelling than alcohol, and alcohol causes greater swelling than glycerin Considering the binary mixtures of water, alcohol and glycerin, we find that a mixture of alcohol 1 vol —

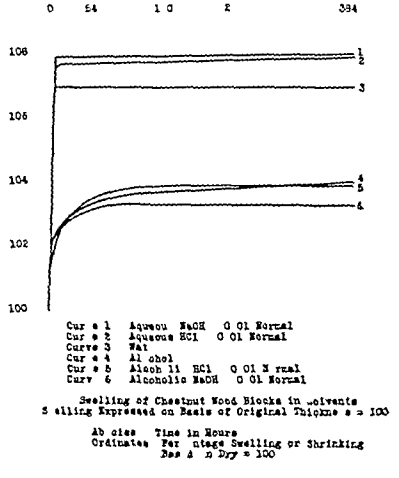
water 1 vol produces a swelling equal to that of water, but not reaching equilibrium quite as rapidly A mixture of equal parts of glycerin and alcohol produces greater swelling than a mixture of equal parts of glycerin and water, but the rate of swelling is slower (see Graph 4)

The ternary mixtures of water, alcohol and glycerin cause a slightly greater swelling than that brought about by water The ternary mixtures used are 4 of the glycerin-alcohol-water mixtures used in U S P and N F extractions The results indicate that the variations in the 4 official menstrua studied have practically no effect on swelling (see Graph 5)

Ethylene glycol, diethylene glycol and carbitol cause about the same percentage swelling as water, except that water comes to equilibrium more rapidly Dioxan and propylene glycol cause less swelling than alcohol but more than glycerin (see Graph 6)



Graph 6



Graph 7

The presence of 0 01*N* HCl and 0 01*N* NaOH in water slightly increases the swelling of blocks of chestnut wood, this slight difference was not observed in earlier experiments with strips, where individual differences are more pronounced In alcohol, 0 01*N* NaOH caused a slight decrease in swelling (see Graph 7)

Comparative Swelling with Grain and across Grain —It is a generally accepted fact that swelling is greater across grain than with the grain An experiment was carried out to secure quantitative data on this point Chestnut wood blocks of the same size used in the preceding experiment were placed in water and measurements of the length (with grain) and width (across grain) made at various time intervals Measurements were made both at the edge and at the center of the blocks The data, expressed on the basis dry = 100, were as follows, the results being based on the average of 3 blocks

TABLE XI

Swelling	Time in Hours 0 Dry	4	13	24	36 Water	72	124
Across grain (long way) edge	100	101 2	102 0	102 3	102 5	102 5	102 5
Across grain (long way) center	100	100 9	101 8	102 2	102 3	102 4	102 4
With grain (edge)	100	100 5	100 5	100 6	100 6	100 5	100 5
With grain (center)	100	100 6	100 6	100 5	100 6	100 6	100 6

The results show that swelling across grain is greater than with the grain Swelling at the center and edge of the blocks is practically the same

Photomicrographic Study of Swelling—The chief kinds of tissues in chestnut wood are fibres, vessels and medullary rays The structure is not uniform through out, on account of the variations in growth at different seasons Thus Plate 1 shows clearly the occurrence of spring wood, early summer wood and late summer wood

Photomicrographs were made of sections of spring wood and summer wood cut from blocks which had been immersed for 4 months in water, alcohol, glycerin and the respective mixtures of these liquids used in the swelling and penetration tests With water the cell walls appear filled out and under tension and the cavities appear fully opened From the difference in appearance of the tissues in alcohol and in glycerin it seems that alcohol may cause less swelling than glycerin With mixtures of equal volumes of glycerin and water and glycerin and alcohol, the cell walls appear to be completely swollen Ternary mixtures of glycerin-alcohol-water which were used, produced much the same effects as water alone Because of the variations in growth at different seasons there is a gradual change in the nature of the cells and it would not be safe to draw conclusions from fine measurements of cells from two different sections

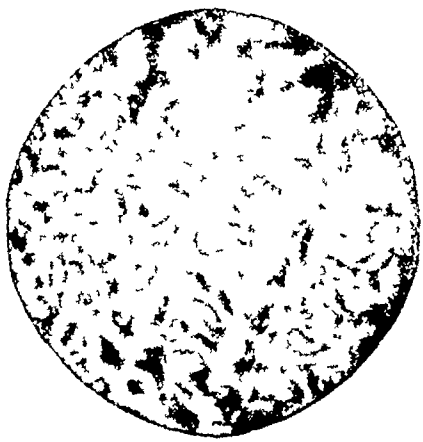


Plate 1—A section cut from a block immersed in alcohol for four months showing the different types of wood, namely spring wood (large cells), early summer wood and late summer wood (adjacent to spring wood)

Due to inherent difficulties standing in the way of direct comparisons between different sections, a study was made of the effects of consecutive addition of different solvents to the same section Since it was difficult to make thin sections of dry wood on the microtome, the procedure was adopted of obtaining sections from a block which had been immersed in alcohol for 4 months, the sections being air dried for several days before use, during which time they apparently reverted to approximately the original condition

Plate 2 shows the appearance of an air dried section of summer wood, and the appearance of the same section after successive treatment with alcohol (2 hours), water (1 hour) and glycerin (6 hours) By identifying certain cells and thus measuring the same cells after treatment with different liquids, the following measurements were obtained from the photomicrographs, using a reading glass and a metric scale, and expressing the results in mm Below are given the averages of the results

	Air Dried	Alcohol	Water	Glycerin
Across cavities	1 75	2 40	2 75	2 85
Between cavities (across double cell wall)	2 60	2 90	4 15	4 35
Between medullary rays	36	38	40	42

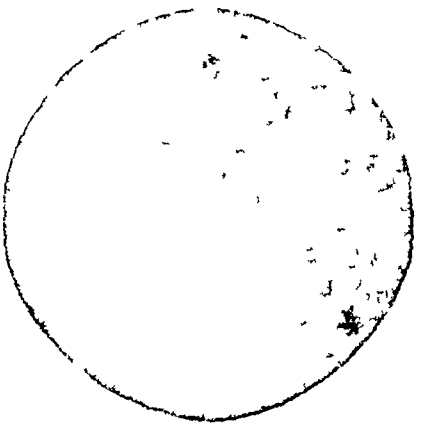

Fig 1

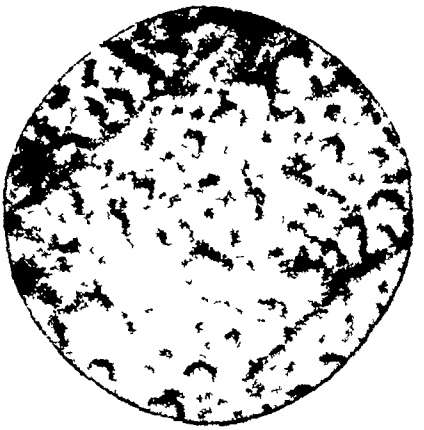

Fig 2

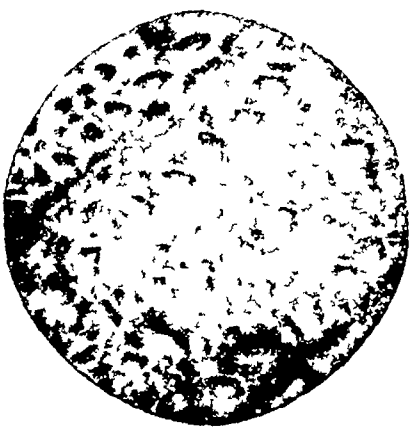

Fig 3

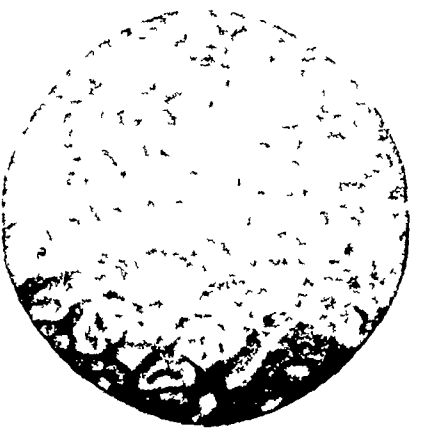

Fig 4

Photomicrographs of Chestnut Summer Wood

Plate 2 —A section cut from a block immersed in alcohol for four months was air dried (Fig 1), and treated consecutively with alcohol (Fig 2) water (Fig 3) and glycerin (Fig 4)

Thus it is seen that alcohol swells both the walls and cavities of the air-dried wood, both of which are enlarged by the successive addition of water and further slightly enlarged by glycerin

Photomicrographs were also prepared to show the successive treatment of an air dried section with (*a*) water, alcohol and glycerin, (*b*) glycerin and water, (*c*) glycerin and alcohol

Below are given the averages of measurements taken from photomicrographs of an air dried section of summer wood, treated consecutively with water (1 hour), alcohol (2 hours) and glycerin (6 hours)

	Air Dried	Water	Alcohol	Glycerin
Across cavities	1 65	2 00	2 00	2 25
Between cavities (across double cell wall)	3 85	5 30	4 75	5 15
Between medullary rays	34	38	36	37

It is seen that water causes a swelling of both walls and cavities, alcohol shrinks the walls but does not reverse the effect of water on the cavities, glycerin then increases the size of both the walls and cavities

Measurements were made between medullary rays in photomicrographs of an air-dried section treated with glycerin (6 hours) and then with water (12 hours), and are as follows air-dried 16 mm , glycerin 17 mm , water 18 mm Glycerin is thus shown to cause swelling There is a further swelling with water, which may be due to a more complete penetration by glycerin, since the addition of glycerin after water (Plate 2) caused an increase

An air-dried section was treated with glycerin (6 hours) and then with alcohol (12 hours) The distance between two medullary rays in photomicrographs of sections are as follows air-dried 29 mm , glycerin 33 mm , alcohol 31 mm It is thus seen that glycerin causes swelling and the subsequent treatment with alcohol caused some shrinking

Discussion of Results —In general, the results bear out the previous conclusions obtained on blocks and strips of chestnut wood, *i e* that alcohol causes some swelling, water causes a greater swelling than alcohol, while glycerin causes about the same swelling as water, although this effect is not shown when glycerin (undiluted) acts on dry wood, due to the very slow penetration by glycerin under these conditions

Swelling of Blocks of Other Woods —Tests were made on blocks of fresh oak sapwood of the water oak Quercus nigra, 1 (Fagaceæ), in three conditions namely, (*a*) fresh, (*b*) dried to constant weight at room temperature and (*c*) dried to constant weight at 90° C in an oven The blocks were about 25 mm square, about 5 mm thick (across grain) and averaged about 3 Gm in weight Using 3 blocks to each solvent, blocks were immersed in water alcohol and glycerin in bottles placed in a thermostat at 30° C After various intervals the blocks were removed and measured The results of the swelling tests are given in the following tables the figures in each case being based on the average of 3 blocks

TABLE XII —SWELLING OF FRESH OAK SAPWOOD BLOCKS IN LIQUIDS
(Dimensions of blocks stated on basis dry = 100)

Time in Hours	0	3	22	46	96	528	912	1536
				(Thickness—across grain)				
Water	100	100 0	100 0	100 0	100 0	100 1	100 1	100 1
Alcohol	100	100 0	100 0	99 9	99 8	99 9	99 9	99 9
Glycerin	100	100 0	100 0	100 0	100 0	100 0	100 0	100 0
				(Width—across grain)				
Water	100	100 0	100 0	100 0	100 0	100 1	100 1	100 1
Alcohol	100	100 0	100 0	100 0	100 1	100 2	100 3	100 3
Glycerin	100	100 0	100 0	100 0	100 0	100 2	100 2	100 2
				(Length—with grain)				
Water	100	100 0	100 0	100 0	100 0	100 0	100 0	100 0
Alcohol	100	100 0	100 0	100 0	100 0	100 0	100 0	100 0
Glycerin	100	100 0	100 0	100 0	100 0	100 1	100 1	100 1

The blocks of fresh sapwood of oak are apparently in a state of maximum size, inasmuch as there is practically no swelling in any of the three dimensions in water, alcohol or glycerin

TABLE XIII —LOSS IN SIZE OF BLOCKS OF FRESH OAK SAPWOOD ON DRYING

Time in Hours	0	3	22	46	96	528	912	1536
				(Thickness—across grain)				
Room temp	100	99 8	97 4	95 5	94 5	94 5	94 0	94 0
At 90° C	100	98 4	95 7	92 3	92 2	92 2	92 1	92 1
				(Width—across grain)				
Room temp	100	99 8	95 8	90 7	89 2	88 9	88 8	88 8
At 90° C	100	94 0	90 2	85 4	85 4	85 2	85 1	85 1
				(Length—with grain)				
Room temp	100	100 0	99 9	99 7	99 7	99 7	99 7	99 7
At 90° C	100	99 9	99 7	99 7	99 7	99 7	99 6	99 6

The loss in size of the blocks as shown in the table, occurs chiefly across the grain and is greater in the samples dried in the oven at 90° C than in the ones dried at room temperature It is strikingly shown that there is only a negligible shrinking with the grain on drying

TABLE XIV —SWELLING IN LIQUIDS OF OAK SAPWOOD BLOCKS DRIED AT ROOM TEMPERATURE

Time in Hours	0	3	10	24	72	240	720
(Dimensions of blocks stated on basis dimensions of fresh blocks *before drying* = 100)							
				(Thickness—across grain)			
Water	94 7	99 1	99 2	99 6	99 6	99 6	99 6
Alcohol	93 2	99 0	99 0	99 0	99 0	99 0	99 0
Glycerin	95 1	94 9	94 7	94 7	94 7	94 8	95 7
				(Width—across grain)			
Water	89 4	95 2	98 8	99 2	99 4	99 4	99 5
Alcohol	88 6	97 3	97 4	97 5	97 5	97 6	97 7
Glycerin	88 5	88 1	88 3	88 4	89 6	91 7	93 7
				(Length—with grain)			
Water	99 7	100 1	100 2	100 2	100 2	100 2	100 2
Alcohol	99 6	99 9	99 9	100 0	100 0	100 0	100 0
Glycerin	99 6	99 7	99 7	99 7	99 7	99 9	100 0

TABLE XV —SWELLING IN LIQUIDS OF OAK SAPWOOD BLOCKS DRIED IN OVEN AT 90° C

Time in Hours	0	3	10	24	72	240	720
(Dimensions of blocks stated on basis dimensions of fresh blocks *before drying* = 100)							
				(Thickness—across grain)			
Water	92 8	96 1	98 2	98 4	98 6	98 7	98 8
Alcohol	91 4	94 6	95 2	95 8	96 1	96 3	96 4
Glycerin	92 0	92 0	92 0	92 1	92 1	92 1	92 8
				(Width—across grain)			
Water	84 4	90 9	95 9	96 6	97 1	97 6	97 8
Alcohol	86 5	94 9	95 1	95 5	95 8	96 0	96 0
Glycerin	84 5	85 0	85 0	85 0	85 0	85 2	85 8
				(Length—with grain)			
Water	99 6	99 9	100 0	100 1	100 1	100 2	100 2
Alcohol	99 5	99 8	99 8	99 8	99 9	100 0	100 0
Glycerin	99 8	100 0	100 0	100 0	100 0	100 0	100 0

The dried blocks when immersed in liquids recover the slight decrease in length which occurred on drying, and the shrinkage across grain is reversed almost completely by water, less by alcohol and still less by glycerin

Results similar to those obtained on the effect of liquids on oak sapwood have been obtained on blocks of Elberta peach wood and on blocks of the sapwood of Sassafras varnifolium (Salisbury) O Kuntz (Lauraceæ) (*To be continued*)

BIBLIOGRAPHY OF PHARMACEUTICAL RESEARCH

Compiled by A G DuMez, Reporter on the Progress of Pharmacy

All articles in these lists will be presented in abstract form in the bound volumes of the YEAR BOOK, which is issued annually Those desiring abstracts immediately can obtain them for a fee of one dollar each by communicating with A G DuMez, University of Maryland, School of Pharmacy, N W cor Lombard and Greene Sts Baltimore, Maryland

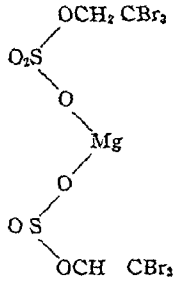
MAGNESIUM SALT OF TRIBROMETHYL SULPHURIC ACID *

BY E MONESS AND W G CHRISTIANSEN

As part of a research on rectal anesthetics we became interested in determining whether or not the anesthetic properties of magnesium sulphate and polyhalogen aliphatic compounds could be combined in a single, water-soluble compound Polyhalogen compounds such as ethyl chloride, methylene chloride and chloroform are inhalation anesthetics and tribrom ethanol is a rectal anesthetic It seemed

* Section on Practical Pharmacy and Dispensing, Madison meeting, 1933

possible that the magnesium salt of tribromethyl sulphuric acid (I) might be a useful, water-soluble, rectal anesthetic



The acid ester was prepared by reacting tribromethanol with fuming sulphuric acid in the cold It was then converted into the magnesium salt This salt was water-soluble but its activity as a rectal anesthetic was about one-eighth of that of tribromomethanol, *i e*, approximately eight times the quantity of this salt, as compared with tribromoethanol, were required to produce rectal analgesia

The tests were made using 5%, 10%, 15% and 20% aqueous solutions of the salts and injecting a constant volume (25 cc /Kg) into rats Results were entirely negative with the 5% and 10% solutions The 15% solution (dose 3 75 Gm /Kg) produced a weakened ataxic condition which persisted up to the time the animal was sacrificed four hours later The rat to which the 20% solution was administered failed to respond to tail pinching 55 minutes after dosage This analgesic condition, with marked and continually increasing weakness, persisted from then until the animal died 35 minutes later This behavior indicates that the compound cannot be advantageously used as a rectal anesthetic

EXPERIMENTAL

Preparation of the Magnesium Salt of the Acid Sulphate of Tribromethanol ($CBr_3\ CH_2\ OSO_4)_2$-*Mg*—The method is an adaptation of the one disclosed in German Patent 7278, December 31, 1893, for the preparation of sodium amyl sulphate

4 2 Gm of tribromethanol was placed in a small test tube and to it was added 1 5 Gm of concentrated sulphuric acid The viscous solution was cooled in an ice salt bath and 2 Gm of 60% fuming sulphuric acid was added from a small burette—one drop at a time, stirring with a thermometer, and not permitting the temperature to rise above 0° C—about 25 minutes were required After about half of the fuming sulphuric acid had been added, the reaction mixture became semi solid It was allowed to come to room temperature and poured into crushed ice and water The excess sulphuric acid was precipitated with a solution of a slight excess of $Ba(OH)_2$ and the barium sulphate was filtered off The excess barium hydroxide in the filtrate was then precipitated with a solution of magnesium sulphate the precipitate filtered off and the filtrate evaporated to dryness *in vacuo* at a temperature of 50° C The residue was now extracted twice with absolute alcohol, and the extract evaporated to a small volume by the addition of a large volume of ether The compound was precipitated from this solution as a white crystalline salt, which was washed with ether by decantation and dried *in vacuo* Yield—2 2 Gm of a water-soluble and alcohol soluble salt

Analysis	Found	Calculated for $(C_3H_2Br_3SO_4)_2Mg$
Br	58 4%	64 2%
Mg	4 72%	3 25%
S	9 06%	8 55%

The analysis shows that our compound was contaminated with a small amount of $MgSO_4$, but this was held not to interfere with the tests for rectal anesthesia

The compound, when heated for a long time at 100° C decomposes with the liberation of HBr, and the formation of water and alcohol-insoluble substance

The biological tests on compounds reported herein were made in the biological Research Laboratories of E R Squibb and Sons and we gratefully acknowledge their assistance

A METHOD FOR THE PREPARATION OF PARENTERAL DEXTROSE SOLUTIONS

BY HARVEY A K WHITNEY *

As a first premise it may be stated that a solution of dextrose suitable for parenteral administration may be made from a simple solution of chemically pure dextrose in chemically pure water This statement is made with due consideration for the arguments for and against such factors as distilling apparatus, water, dextrose, hydrogen-ion concentration, buffers, preservatives and glass ware These modifying factors must be given consideration and together with the following elements, introduced at the time of administration, such as infusion apparatus, temperature of solution, velocity of injection and individual idiosyncrasy serve to complicate the apparently simple procedure issued as the original premise

Distilling apparatus should be of a design that incorporates the following desirable and necessary features Preferably the entrance of the raw water to the boiling chamber should be through condensers, permitting a preheating of the raw water, and venting the consequent discharge of many volatile substances The insertion of a spray-trap or baffle-plates is also requisite to prevent the mechanical carry-over of boiling water or wet steam into the distillate And lastly, the final delivery of the pure dry steam into vented condensers that will permit, if necessary, the delivery of the distillate into a closed system It is pertinent to add that the whole interior of the distilling system should be lined with block tin

Water obtained from the apparatus described, and under the circumstances necessary for the proper operation of the still, will provide a suitable solvent that may be used for the preparation of Aqua Destillata Sterilisata, U S P Water distilled within the working hours of the morning or afternoon should be collected and disposed in a sterilized container of insoluble glass The containers should be stoppered and sterilized under steam pressure giving a temperature of 115° C for thirty minutes If an autoclave is not available, close the mouth of flask containing freshly distilled water with a plug of purified absorbent cotton wrapped in gauze, and boil contents actively for one hour Until ready for use, protect the mouth of flask, and plug from infection through dust, by wrapping top of flask tightly with paper Sterilized distilled water so prepared should be used within

* Section on Practical Pharmacy and Dispensing, A PH A , Washington meeting, 1934

twenty-four hours after its distillation That such water must be protected against microorganic contamination was definitely shown by Seibert (*Am J Physiol*, 67 (1923), 90) The product described by her as "pyrogen" is held to be greatly responsible for post-infusion "bad" reactions The observations of precautions enumerated by the United States Pharmacopœia are quite sufficient to prevent bacterial infection of water properly distilled

Dextrose of no less a quality than that defined by the Pharmacopœia should be used This provides definite limits for water content, ash, dextrin, lactose, soluble starch, sulphites, sulphates, chlorides, heavy metals and optical rotation Under no circumstances should impure glucose (corn syrup) be employed in this work

Hydrogen-ion concentration measurement of the simple dextrose solution reveals a figure that is probably never more acidic than p_H 5 0, after sterilization, unless excessive decomposition (caramelization) obtains In general this measure of hydrogen-ion concentration is indicative of the degree of decomposition after sterilization It should be further appreciated that this figure also discloses another significant fact in that *practically all available acidity is measured* Such knowledge should tend to minimize the anticipated physiologic effect of using such dextrose solutions that are more acid than the blood It may still be admitted, however, that in some extraordinary instances of excessive depletion of the alkali reserve, the extemporaneous addition of an alkali (buffer salts) at the time of administration may be discreet For the reasons just mentioned it may be concluded that the routine use of buffer salts is to be depreciated

Preservatives, generally, are not in use at the present time The use of such materials was quite generally discussed and disposed of by the Council on Pharmacy and Chemistry of the A M A Certainly the introduction of a preservative in this solution is to be regarded as an admission of lack of professional skill

Glassware, unquestionably, should be uninfluential to the hydrogen-ion concentration and chemical balance of the solution it contains To provide for this unchanging condition, the use of insoluble or alkali-free glass is advised Our own experience with "hard" and "soft" glass has developed some interesting observations It can well be imagined there are intermediate qualities of glass that make available qualities "harder" than "soft" At present we are using, with considerable satisfaction, such an electric-tempered "harder-than-soft" quality in the shape of a wide-mouth french-square bottle of forty-ounce capacity finished with a shallow continuous screw thread (G C A 400) that permits the use of a special 48-mm molded screw cap fitted with a packet liner These bottles will contain one liter of solution with sufficient residual void In use such bottles routinely receive a preliminary cleansing and subsequent processing generally in accord with the following routine They are filled with a solution of boric acid, autoclaved, and the solution dispensed for surgical purposes Upon return of the empty bottles to the pharmacy they are thoroughly washed, rinsed well with freshly distilled water, capped and dried and sterilized in a Lautenschlager-type sterilizer They are then regarded as conditioned for use with dextrose solutions Glassware in which the silicates (free-alkali) have been so fixed has proven itself suited for this particular use

Rubber tubing, unless carefully selected introduces a factor active in the pro-

duction of untoward reactions Only specially selected pure gum rubber tubing should be used for setting up the infusion apparatus This tubing should be prepared for use, when new, by thoroughly washing in running tap water Then soak, or better autoclave, in a 5% solution of sodium carbonate Finally a rinse in running distilled water for another thirty minutes will provide a suitable tubing After this preparation it may be wrapped in a towel and sterilized by autoclaving in the approved manner It is further suggested that after the apparatus has been set up for an infusion it is always best to discard the first fraction of solution being administered that will completely fill the length of tubing used

Solutions of dextrose in the distilled water should be brought about with all the pharmaceutical skill at one's command We prefer to pass this solution through a Berkefeld filter, under pressure, more with the thought of clarifying the solution than of obtaining a sterile product This solution is transferred into the containers described, capped and hooded with a parchment paper cap that protects the lip and neck of the bottle This hermetically sealed package is placed in the autoclave and processed as described for Aqua Destillata Sterilisata, that is, sterilization is to be preferably accomplished under steam pressure giving a temperature of 115° C and maintained for thirty minutes It should be reiterated that a common fault of "soft" glassware, if not properly prepared, is that at this temperature discoloration as by caramelization may develop Sample bottles are selected from each lot and tested chemically and bacteriologically The finished solution for parenteral use is a clear, colorless, sterile, physiologically compatible solution A printed label describing the solution as to composition and character, together with a control number identifying the batch, is then attached Such solutions remain stable for a considerable time

---

THE EXTEMPORANEOUS PREPARATION OF SALINE AND GLUCOSE SOLUTIONS FOR INTRAVENOUS USE *

BY ROBERT S FUQUA [1]

The use of intravenous therapy by physicians and surgeons has been constantly increasing in late years, especially in hospital practice While manufacturing pharmacists have done much to make intravenous medication safer and more convenient for the physician, it appears that most pharmacists outside the manufacturing field have been slow to accept responsibility for the extemporaneous preparation of suitable solutions for this form of medication Since the need for much of the intravenous medication is largely of an emergency nature, the writer can think of no valid reason why the trained pharmacist, in either the hospital or retail field, should consider this work to be the sole responsibility of the large manufacturing laboratories

As indicated in the title, this paper will discuss the preparation of only the two most frequently used solutions of this type—that of Physiological Saline Solution, or "Normal Salt," and the intravenous solutions of Dextrose Such information regarding these as the writer has been able to obtain, has been gained

* Section on Practical Pharmacy and Dispensing, A PH A , Washington meeting, 1934

[1] Chief Pharmacist Johns Hopkins Hospital, Baltimore, Md

over a period of years in the pharmacy department of one of the larger eastern hospitals, where large volumes of such solutions are prepared This experience has shown that with proper care, close attention to details and a supply of pure materials, the well-trained pharmacist can, with a little practice, soon become proficient in the preparation of satisfactory intravenous solutions

Regarding the materials required, it should be remembered that the standards of purity set up in our Pharmacopœia for some of these items are not established on the theory that all U S P chemicals, and the distilled water used for pharmaceutical compounding, must be of sufficient purity for intravenous therapy No super-judgment is required to determine those instances in which materials of a higher standard of purity than is necessary for oral medication should be used for this purpose In the case of dextrose, it is perhaps unfortunate that we must have in the Pharmacopœia the impure mixture of dextrins, dextrose and levulose recognized under the title "Glucosum," when physicans assume that medicinally the name Glucose applies only to the U S P Dextrose, or D—Glucose At this time however, it seems rather unlikely that any pharmacist would dispense the impure syrupy product when glucose is ordered by a physician for medicinal uses For making intravenous solutions, the U S P Dextrose, which usually contains traces of dextrin, and possibly sulphur dioxide, should not be used Only the variety of glucose marketed by standard chemical manufacturers as "C P Anhydrous Dextrose" should be used The processes employed in the dehydration and recrystallization of the latter product remove practically all traces of the above-named impurities, which may be present in the hydrated material

In making Normal Salt Solution, I would not hesitate to use sodium chloride of U S P purity specifications when a purer salt was not immediately available However, we may, and do, use a C P or Reagent grade of sodium chloride to insure maximum purity in saline solution for intravenous administration A point which I would like to stress here is that no chemical which has been freely exposed to contamination by dust and other atmospheric impurities should be used in solutions which are to be injected into the blood stream, regardless of indicated purity on label of container This applies with even more force to the distilled water which is to be used as a solvent The Pharmacopœia lists certain tests to which distilled water must conform to be satisfactory for ordinary pharmaceutical purposes Here again, water which conforms to these mandatory requirements as to purity may fall short of that degree of purity needed to produce satisfactory intravenous solutions Distilled water may pass all standard tests for chemical purity, and be more nearly neutral in reaction to hydrogen-ion indicators than is necessary to come within the p_H range of those specified in the U S P , and still be totally unfit for intravenous injection, because of bacterial contamination The specifications set up for the "Sterilized Distilled Water" of the U S P are in line with those generally held necessary for a suitable diluent for the sterile concentrated solutions supplied in ampuls by manufacturing laboratories, and for general hypodermic use For the extemporaneous preparation of these solutions, which must be filtered and sterilized as final steps, we need freshly distilled water, which has been exposed to bacterial or other contamination as little as possible, but not necessarily sterilized before use All distilled water contains traces of carbon dioxide and oxygen, which are absorbed when steam is condensed, and usually will

absorb more on standing in contact with air We have found however, that the usual slight acidity in distilled water, when due entirely to small quantities of CO_2 in solution, is of small consequence as compared to the dangers incident to undue exposure of the fresh distillate to contaminated atmosphere

Sterilization of solutions will kill all living bacteria which they contain, but will not remove the bacterial proteins and other related impurities which remain in the finished product This fact is well known to all interested persons, but seems to be frequently overlooked Perhaps we sometimes forget that the atmosphere in most places is loaded with bacteria and organisms of various sorts and that these furnish the proteins and other substances which produce most of the toxic symptoms observed when carelessly prepared intravenous solutions are used Under no circumstances should distilled water which has been purchased in bulk containers, commercially, be used in preparing intravenous solutions, unless same has been redistilled immediately before use, and according to the Pharmacopœial process Normal Salt Solution which has not been freshly prepared should likewise not be used as a solvent

I would like to depart from subject in hand momentarily, to say that Normal Salt solution should never be kept on hand in pharmacies for use when same is ordered as a solvent in any preparation We have had bacteriological tests made on such solutions which were made under aseptic conditions and stored in partly filled, cork-stoppered bottles, on prescription-counter shelves After two weeks many colonies of bacteria appear in cultures, and after one month such solutions are dangerous to use in preparations for local use on membranous surfaces, or in the eye if same has been injured

Regarding the process of making Normal Salt Solution for intravenous use, little need be said here Our procedure calls for the use of water which has been distilled the same day as used, and protected as far as possible from atmospheric or other contamination before use Solutions are now being filtered through a hard smooth-surfaced filter paper, in covered glass funnels, into a well covered, glass-lined receptacle When filtration is completed the finished solution is placed in flasks of suitable size, stoppered with a plug of non-absorbent cotton wrapped in close-meshed gauze, which has been previously flamed to remove adhering lint, capped with a strong paper cap which extends well down the neck of the flasks, and then sterilized Our sterilizing technique calls for autoclaving this solution at 125° C for a period of thirty minutes In the retail establishment not having facilities for autoclaving, sterilization may be accomplished for immediate use by boiling the solution for an equal length of time, providing an excess of water sufficient to take care of evaporation is added when solution is made Proper filtration of this solution appears to be the greatest problem encountered A complete absence of filter shred in filtrate is impossible to obtain with the standard grades of pharmaceutical filter paper, especially those with creped surfaces After a number of experiments we selected an extra-hard grade of smooth surfaced paper as offering the most practical solution Suction filtration through candle filters will give better results for a time, but on extended use these are not wholly satisfactory For large-scale production we keep a battery of these on hand for use in case a faulty lot of filter paper is encountered

In making intravenous glucose solutions we use freshly distilled water, col

lected directly from the still in large glass flasks The glucose is dissolved in this immediately, without heat, and solutions are filtered at once through chemically hardened filter paper, in Buchner type porcelain funnels, by means of vacuum suction, into flasks which have been thoroughly cleaned and rinsed Solutions are refiltered if necessary to secure a properly cleaned filtrate Filtered solutions which show only occasional isolated paper shreds are strained through sterile fine-meshed silk cloth to remove same, rather than risk further contamination in repeated filtrations Small squares of silk cloth are kept on hand for this purpose, immersed in 70% alcohol Filtration of solutions of dextrose is not difficult and vacuum-suction is not necessary when the softer grades of filter paper are used It should be noted, however, that only those grades of filter paper which are free from starch and chlorine should be employed in the filtration of solutions for either hypodermic or intravenous use More shreds will usually be found in filtrates when non-parchmentized papers are used, but these shreds can be removed if a silk cloth of very fine mesh is available for straining Silk bolting cloth (200 mesh per inch) is very satisfactory for this purpose, but is rather expensive These solutions are placed in flasks of proper size, stoppered and capped in the same manner as described for saline solution, and sterilized the same day as made After cooling, the flasks of sterile glucose solution are placed in low-temperature refrigerators to prevent possible fermentation before use Our routine age limit for the use of these sterile solutions, prepared and stored as indicated, is five days Bacteriological tests have shown them to remain sterile in the flasks for a much longer period, but the shorter time limit is placed as a safety precaution Sterilization of glucose solutions is accomplished by autoclaving at 120° C for fifteen minutes, with volume per flask being limited to not more than 600 cc Flasks are placed on hardwood boards in sterilizers to protect bottoms of flasks from overheating on metal shelves Solutions of 5 and 10 per cent strengths are turned out sterile and crystal clear under this treatment If an autoclave is not available, glucose solutions may be rendered sterile for immediate use by heating on a water-bath, partially immersed in boiling water, for one hour Depending on filtration through the usual type of candle filter to render glucose solutions sterile is not a safe procedure to follow

Questions regarding the advisability of buffering solutions of dextrose which are to be administered intravenously are frequently brought up, and considerable disagreement exists among physicians on this point At present the apparent consensus of opinion appears to regard the addition of buffer salts necessary in only a small percentage of cases Under other methods of preparing and preserving solutions, or for prolonged continuous administration, buffering might render these solutions safer to use In our institution several thousand gallons of intravenous glucose solutions are being used each year, and we seldom find it necessary to use buffer salts in same in order to secure satisfactory clinical results

A second question, on which there appears to be no consensus of medical opinion, pertains to the necessity of using double or triple distilled water in intravenous solutions in order to obtain satisfactory results No answer to this question which did not take into consideration the quality of raw water supply, type of distilling apparatus and other factors involved in individual cases, would be proper With a raw water supply of good quality, and with efficient automatic distilling

apparatus, to the operation of which we devote some care, we have found multiple distillations unnecessary

To sum up, I would say that if reactions are to be avoided in the use of these intravenous solutions, cleanliness and care in the preparation are necessary from start to finish The chemicals used must be of a proper degree of purity, and must be kept free from contamination by dust and moisture All utensils and apparatus used must be thoroughly cleaned, and then rinsed with freshly distilled water before being used The distilled water and finished solutions must not be contaminated by undue exposure to dust and bacteria in the air Sterilization will kill bacteria but does not remove them from solutions The presence of excessive numbers of killed bacteria in solutions may cause reactions Filtration and sterilization methods employed must be adapted to the particular product being handled, and suitable methods of preservation must be employed to protect unstable solutions packaged in containers which are not sealed The use of chemical preservatives, in sufficient quantities to keep solutions sterile, is not permissible where large volumes of dilute solutions are to be administered intravenously

STUDIES ON BISMUTH SUBSALICYLATE PREPARATIONS *

BY WILLAIM F REINDOLLAR

One of the important recent developments in syphilotherapy is the treatment of that disease by intramuscular injections of suspensions of insoluble bismuth compounds in oil This drug is alternated with the arsenicals in a course of treatment, thereby reducing the toxic effects, caused by prolonged administration of the latter, and at the same time preventing the spirochete from adjusting itself to the environment produced by either drug The serious consequences that may follow injections beneath the skin of any product of inferior quality, together with the toxic effects that follow an overdose, make the control both of the qualitative and quantitative aspects of the product a matter of paramount importance

Bismuth as a spirillicide has been said to be second to arsphenamine and superior to mercury It is less toxic than either arsenic or mercury, dose for dose, and apparently exhibits no predilection for any particular organ It is slowly absorbed and probably cumulative Although numerous forms of this drug are employed we are concerned only with the official product, bismuth subsalicylate This is described in the U S P X as "a basic salt of varying chemical composition, which, when dried to constant weight at 100° C yields upon ignition not less than 62% and not more than 66% of bismuth oxide "

In the venereal clinics of the Maryland State Health Department bismuth is administered as the subsalicylate in suspension in olive oil, the concentration being so adjusted that 0 1 Gm metallic bismuth is received in 1 cc of oil The injection is made deep into the gluteal muscles of the upper outer quadrant of the buttock, alternating the right and left sides For administrations of this type it is evident that a drug must not only contain the correct amount of active ingredient, but must exhibit certain physical and chemical properties, if it is to produce an opti-

* Section on Practical Pharmacy and Dispensing A Ph A Washington meeting 1934

mum effect with a minimum irritation In such a medicament the crystals must be small and uniform and readily suspended upon agitation If the crystals are too large they will irritate the surrounding tissue producing fibrosus and induration If they tend to clump they form irritating masses with the same effect In either case absorption is materially interfered with On the other hand if a uniform suspension cannot be obtained, it is impossible to withdraw a sample containing the proper dose of bismuth

The examination of bismuth subsalicylate suspensions therefore consists of two types of analysis, chemical and microscopic The former is a quantitative determination of bismuth as set forth in the official assay, the latter method is here described The sample is thoroughly agitated to produce a uniform appearance of suspension, and a thin glass rod is used to secure a drop and transfer it to a slide A cover glass is immediately placed on top of the drop of suspension and gently rotated and pressed until a thin uniform smear lies between the slide and the cover slip These smears are then examined under a magnification of about 450 diameters The number and size of clumped areas may serve as a basis for a system of grading such as is used for milk sediments, or permanent records may be made by taking photomicrographs

Six samples, representing well-known brands that are offered to the physician in Maryland, were analyzed by the foregoing procedure In every case the quantitative requirements for bismuth were met, however the microscopic fields varied considerably One sample was superior to all the rest, four samples were given intermediate ratings, while still another was distinctly inferior Thus the microscopic test demonstrates, that, in a group of bismuth subsalicylate preparations, all of which have essentially the same composition, and all of which meet the percentage requirements for active ingredient, there may still be a difference in quality and therapeutic efficacy based on physical properties of the suspended salt

PROBLEMS IN DENTAL PHARMACY *

BY A O MICKELSON [1]

To understand the pharmaceutical needs of the dental profession, not including prescription writing, necessitates a thorough understanding of modern dentistry The dentist's medicine cabinet for daily use and the pharmaceutical preparations and chemicals used in his laboratory work should be common knowledge to the pharmacist The dentist is constantly using acids, alkalies, oxidizing agents, reducing agents, solvents, abrasives, hæmostatics, antiseptics, germicides, anesthetics—local and general, analgesics, sedatives, hypnotics and tonics

A closer relationship between the two professions, discussing drugs or preparations used in dentistry, is undoubtedly the most effective way to understand the pharmaceutical needs of the dentist, and thus create new possibilities for professional pharmacy The interview with the dentist should not cover a general scope, but instead study a specific problem, study the problem with the aim of solving his problem with him Why should the pharmacist attempt to render

* Section on Practical Pharmacy and Dispensing A PH A, Washington meeting 1932

[1] Dean, School of Pharmacy North Pacific College of Oregon Portland

such a service to another profession? The answer is this The pharmacist is the counselor to the allied medical professions and the more efficient and extensive this service becomes the greater will be the demand and remuneration for the pharmacist In other words, the pharmacist must give professional service if he expects support from the correlated professions

Quoting from the cover of the A PH A JOURNAL, for February 1934, "Pharmacy Is Strengthened by That Which Makes It of Greater Service" A slogan on a publication by the Council on Dental Therapeutics, "We Serve Not for Our selves but for Dentistry" This slogan may apply to any profession The pharmacist is not serving the physician nor the dentist for the benefits to be derived for himself but for humanity, pharmacy and himself

The method of individual contact, and choosing or developing a specific problem is the method I have found most helpful The dental pharmacy problems are numerous—a new field full of possibilities The scope of dental pharmacy is evidenced by the extensive work that is being done by the Council on Dental Therapeutics The problem may require some cooperative research before it can be solved, but it is the solving of the technical and minute detail of a problem which give the most gratifying results The field of dental pharmacy is most interesting and especially to the pharmacist interested in professional pharmacy

The problems in Dental Pharmacy in this discussion have been suggested by personal contact with dentists There is a need for a general massing fluid to be used for incorporating various types of abrasives which are used in prophylactic work This massing fluid must possess the qualities of readily mixing with abrasives and with the desired amount of abrasive it should possess the quality of adhering sufficiently to the brush, rubber cup or whatever appliance may be used by the practitioner, as not to fly from the instrument as soon as the engine is in motion, throwing the abrasive powder on the clothing of the patient and the dentist It should readily disintegrate in water, it should have a pleasing taste, as well as being antiseptic to prevent infection During prophylactic treatment it is usual for the dentist to use more than one grade of abrasive The massing fluid should serve for any abrasive desired

The biggest problem confronting the dental profession is that of prescribing tonics which will build tooth structure in fetal life and in children, as well as tonics which will maintain tooth structure in permanent teeth Such tonics in conjunction with food and vitamins are indeed not impossible Considerable research work has been done by the dental profession, and favorable results have been reported in numerous cases There is no question that the minerals such as calcium and phosphorus put up in proper combination are of extreme value to proper development of deciduous teeth and permanent teeth, as well as aiding materially in the prevention of decay of permanent teeth It is evident that pharmacists can be most helpful in solving this problem

There is a demand for a suitable formula, highly germicidal in action, for the sterilization of dental instruments The sterilizing solution should be rapid in action, insuring complete sterilization in a few minutes' time without a corroding effect on the instruments The solution should be reasonably safe to use and nontoxic to human tissue

There are many individuals who fail to have their teeth cleaned and cared

for by the dentist at regular intervals, nor are they in the habit of using a tooth brush Under these conditions dense calcific deposit may form around the gum margins and on the teeth This is very difficult to remove A solvent which will penetrate and soften such densely glazed calcific deposits would be of use to the dental profession It must be taken into consideration that a solvent which would dissolve calcific deposits would also have a chemical action on the enamel of the teeth. However, a preparation in the hands of a skilful dentist would not come in direct contact with the enamel of the teeth

Dry-sockets are of common occurrence in the practice of dentistry, and at times very difficult to restore as well as most painful to the patient Help the dentist in your community solve his need for a treatment for dry-sockets

The problems in dental pharmacy are numerous We can only begin to realize the growing demand for dental pharmacy when we consider a national tentative curriculum in dentistry which includes subjects relating to treatment and diagnosis of abnormal conditions of the oral cavity as follows Bacteriology, Preventive (Hygiene), Physiological Chemistry, Materia Medica, Physiology, Pharmacodynamics, General Pathology, Oral Medicine (Pulp Canal), Oral Pathology, Prevention (Nutrition), Diagnosis, Anesthesia, Oral Surgery, Oral Medicine, Principles of Medicine

A curriculum including subjects as those mentioned gives us a picture of future dentistry The dental profession is aware of the importance of their specialized branch of medicine in the prevention of disease and restoration of the teeth We must contribute our part to the advancing profession if we are to maintain our recognition as professional men serving the needs of the correlated medical professions

---

A STUDY OF VEHICLES FOR MEDICINES *

BY BERNARD FANTUS, H A DYNIEWICZ AND J M DYNIEWICZ

VIII THE GLYCYRRHIZA VEHICLES

That glycyrrhiza is a valuable disguising agent may be gathered merely from the extensive usage of at least some of its preparations In Professor Gathercoal's (1) report this is given as follows

	Usage per 10 000 Rs.
Syrup of Glycyrrhiza, N F	14 8
Fluidextract of Glycyrrhiza, U S P	11 2
Elixir of Glycyrrhiza U S P	2 6
Fluidglycerate of Glycyrrhiza, N F	0 0
Aqueous Elixir of Glycyrrhiza N F	0 0

The remarkable validity of this verdict of the medical profession, as expressed by the relative frequency of use of these preparations, will become clear by the perusal of this study

* From the Laboratory of Pharmacology, University of Illinois, College of Medicine

THE DISGUISING OF SALTY TASTES

Experiment 1

(a) Dissolve 0 5 Gm of sodium bromide in 5 cc of Syrup
(b) Dissolve 0 5 Gm of sodium bromide in 5 cc of Fluidextract of Glycyrrhiza 1 part water 3 parts
(c) Dissolve 0 5 Gm of sodium bromide in 5 cc of Syrup of Glycyrrhiza

Those who taste the resulting solutions would, we believe, be in favor of the syrup of glycyrrhiza (*1c*) solution The bromide solution in syrup (*1a*) tastes more salty, and the saltiness lingers after the sweetness of the sugar has left the palate The fluidextract (*1b*) gives but little sweetness when the liquid enters the mouth, so that the saltiness predominates at first This is followed by a period of prolonged sweetness which outlasts the saltiness of the bromide The Syrup of Glycyrrhiza combines the immediate sweetness of the sugar solution with the prolonged sweetness of the glycyrrhiza

Experiment 2

Ammonium chloride, 0 30 Gm dissolved in 5 cc each of the three different solvents as above yields the same conclusion

Experiment 3

Potassium iodide, 0 30 Gm dissolved in 5 cc each of the above solvents, also verifies results obtained

Conclusion The Syrup of Glycyrrhiza is a better vehicle for halides (Experiments 1, 2 and 3) than is simple syrup or the Fluidextract of Glycyrrhiza

COLLOIDALITY LESSENS TASTE SENSATION

This disguising power of glycyrrhiza for saltiness appears to be more than a mere matter of sweetness because there seems to be less saltiness in the taste of, *e g*, the bromide glycyrrhiza preparations than in equivalent solutions not only in simple syrup, but also in such flavoring syrups as the Syrup of Raspberry and the Compound Syrup of Sarsaparilla There is apparently a loss of saline ions as far as taste sensation is concerned, and we attempted, by means of numerous experiments, to determine the reason for this loss

One's first guess might be that the colloid interfered with diffusion of the crystalloid True, established theory does not support this assumption We, nevertheless, performed diffusion experiments (using collodion and celloidin sacs) with methylene blue solution and conducted similar studies with bromide Whenever a difference was noted, this could always be ascribed to a leaky diffusion membrane We also studied the modification in the development of "Liesegang's rings" (2) produced by colloid, but likewise without sufficiently striking results That merely a difference in the rate of diffusion could hardly be the cause for the difference in taste might also have been obvious from the fact that the taste sensation is experienced immediately, while diffusion is a relatively slow process, at least as far as enabling one to demonstrate a difference by the experiments carried out

It may be that differences in surface tension might explain this interference with taste sensation Or, possibly, it might be due to adsorption of the saline ions by the colloid it being well known that, when colloid is present, it is most difficult to re

move the last traces of salt ions by diffusion No matter how the colloid acts, it is evident that *colloidality has disguising value*

THE BEST SOLVENT IS THE BEST VEHICLE

To test the disguising value of the Syrup of Glycyrrhiza as compared with the elixirs, we prepared the following solutions

Experiment 4

(*a*) Dissolve 0 5 Gm of sodium bromide in 5 cc of Syrup of Glycyrrhiza
(*b*) Dissolve 0 5 Gm of sodium bromide in 5 cc of Elixir of Glycyrrhiza
(*c*) Dissolve 0 5 Gm of sodium bromide in 5 cc of Aqueous Elixir of Glycyrrhiza
(*d*) Dissolve 0 5 Gm of sodium bromide in 5 cc of Aromatic Elixir

We believe that again the verdict would be in favor of the Syrup of Glycyrrhiza as compared with all of the elixir preparations The solution in Aqueous Elixir of Glycyrrhiza is less offensive than the solution in the Elixir of Glycyrrhiza and this is less offensive than the solution in the aromatic elixir It will be found that the bromide solution in syrup (*1a*) is more pleasant than are any of the alcoholic solutions, even though they contain glycyrrhiza, and the salty taste becomes progressively more noticeable with increase in alcohol concentration The probable explanation for the superiority of the aqueous over the alcoholic vehicle is to be found in the insolubility of sodium bromide in alcohol Evidently the presence of alcohol in the elixir makes the latter a poorer solvent than the watery medium of the tongue and palate It is well known that, when two different solvents compete for the same solute, the latter will rapidly enter the better solvent in greater proportion than the poorer solvent We might imagine, therefore, that the saline is quickly drawn from the alcohol containing solution into the more congenial aqueous medium of the mucous membrane The reason, probably, why the aqueous elixir of glycyrrhiza (containing less than 5% of alcohol) is so distinctly inferior in its disguising power for saline taste, lies in the relatively small proportion of glycyrrhiza contained in it We, therefore, believe that *it is a mistake to use elixirs for the disguising of water-soluble alcohol-insoluble salines* The relative disguising inefficiency of the aqueous elixir of glycyrrhiza as well as its very limited use justify the suggestion that it be deleted On the basis of observations such as the above and numerous others, we believe to be justified in pronouncing that, other things being equal, *the best solvent is the best vehicle* Conclusion the taste of the bromide in elixir is more offensive than that of a solution of bromide in Syrup of Glycyrrhiza

THE DISGUISING OF THE BITTER TASTE

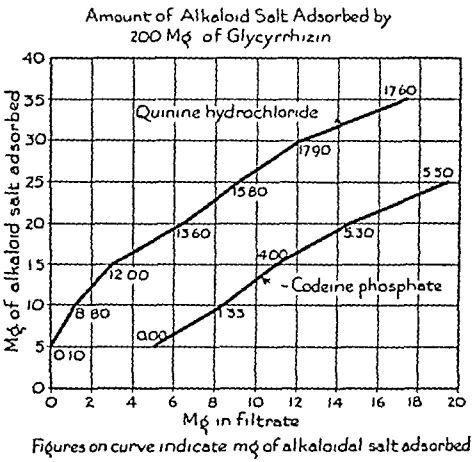
Experiment 5

(*a*) Dissolve 0 025 Gm of codeine phosphate in 5 cc of Syrup
(*b*) Dissolve 0 025 Gm of codeine phosphate in 5 cc of Syrup of Glycyrrhiza
(*c*) Dissolve 0 025 Gm of codeine phosphate in 5 cc of Aromatic Syrup of Eriodictyon
(*d*) Dissolve 0 025 Gm of codeine phosphate in 5 cc of Fluidextract of Glycyrrhiza and water, equal parts
(*e*) Dissolve 0 025 Gm of codeine phosphate in 5 cc of Elixir of Glycyrrhiza

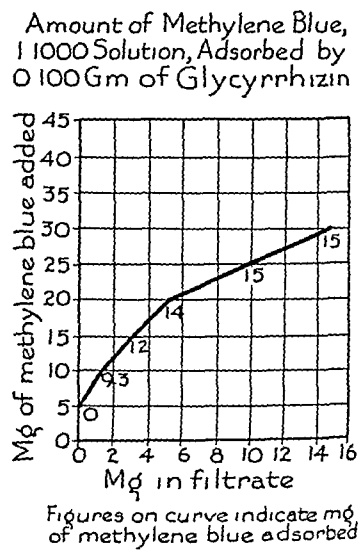
Again the solution in Syrup of Glycyrrhiza (*5b*) merits first place as far as palatability is concerned The Aromatic Syrup of Eriodictyon probably comes next

in order of pleasantness, but it is quite evident that the amount of codeine phosphate (0 025 Gm) exceeds the precipitating, hence the disguising power of the eriodictyon preparation In a previous study (3) we have found that 5 cc of the Aromatic Syrup of Eriodictyon were capable of disguising 0 008 Gm of codeine phosphate The subjoined Graph 1 gives the amount of codeine phosphate removed by glycyrrhizin from solutions of various strengths It shows that the adsorption power of glycyrrhizin for codeine is rather limited and definitely less than that of the resin of eriodictyon (cf 3) Nevertheless, its disguising power is obviously superior to that of eriodictyon, which must be due to the prolonged after sensation of sweetness produced by the glycyrrhizin, which is considered 150 times sweeter than sugar

As to the removal of quinine from solution, adsorption experiments (Graph 1) show glycyrrhizin to be again decidedly inferior to the eriodictyon resin, as it also



Graph 1



Graph 2

is in regard to the adsorption of methylene blue from solution (Graph 2) This is likewise borne out by tasting experiments Thus, a suspension of quinine ethyl carbonate (euquinine) in Syrup of Glycyrrhiza, while pleasant at first, becomes bitter soon thereafter and a prolonged bitter aftertaste is left Similarly, one fourth or one-half mg of strychnine sulphate added to Syrup of Glycyrrhiza, while pleasant at first, leaves a lingering bitter aftertaste We must conclude, therefore, that the Syrup of Glycyrrhiza is inferior to the Aromatic Syrup of Eriodictyon for the disguising of the bitter taste of alkaloids Neither glycyrrhiza nor eriodictyon are of any value for the disguising of the bitter taste of aloin

THE DISGUISING OF THE ALKALINE TASTE

Experiment 6

Dissolve (*a*) 0 60 Gm of potassium carbonate in 0 3 cc of water and add 5 cc of Syrup
(*b*) Repeat above and add Syrup of Glycyrrhiza instead of the Syrup
(*c*) Repeat above and add Aromatic Syrup of Eriodictyon instead of the Syrup

Again the Syrup of Glycyrrhiza gives the most pleasant disguise

THE DISGUISING OF THE SOUR TASTE

For the disguising of the sour taste glycyrrhiza is, of course, unsuitable, as the glycyrrhizin is precipitated by acid

VARIABILITY OF GLYCYRRHIZA PREPARATIONS

In view of the great disguising value of glycyrrhiza, the well-known variability of its preparations seems most unfortunate It is common experience, in their prescribing, that some patients like the medicine, while others complain of its "nastiness" That this is not due to taste idiosyncrasies of individuals, but to variability of the glycyrrhiza preparations, is suggested by the fact that patients sometimes complain the medicine tasted differently on refilling, as though the druggist "had made a mistake" Our studies show that there is actually an enormous difference between the palatability of supposedly equivalent preparations bought in the open market, as well as between preparations made in our laboratory by identical methods from different samples of the drug

TASTES OF VARIOUS SPECIMENS OF FLUIDEXTRACT OF GLYCYRRHIZA

Specimen	Prepared	Taste
1	In Laboratory	Sweet, slightly bitter
2	In Laboratory	Sweet, quite bitter
3	By Firm No 1	Bitter slightly sweet
4	By Firm No 2	Bitter sweet
5	By Firm No 3	Bitterish and flavor of scorching
6	By Firm No 4	Sweet, slightly bitter

Analogous differences were found in the Syrups of Glycyrrhiza made from these fluidextracts

SYRUP OF GLYCYRRHIZIN

The great variability of the glycyrrhiza preparations and the generally acknowledged difficulty of standardizing them, seems to us so serious an obstacle to their use as flavoring vehicles, that we undertook a great deal of experimentation with the view of discovering a method that would always yield a uniformly pleasant product We started these experiments with the active principle, glycyrrhizin The proportion of glycyrrhizin in glycyrrhiza is very variable, ranging from 6–14% No wonder, we thought, there is such variation in the taste of the glycyrrhiza products When we realize that, in addition to this, the sweetness of glycyrrhiza depends to a great extent upon the relative proportion of alkali metal, such as potassium, calcium or ammonium, with which the glycyrrhizin is associated, we can readily appreciate a reason for the difference in the taste of various specimens of rhizome from different sources as well as when they are kept in different ways It seems that some specimens of rhizome have undergone an actual souring from improper preservation We have found that the glycyrrhizin itself in such rhizomes is not changed, for though separated from even the bitterest fluidextract or rhizome, it is still capable of yielding a perfectly sweet product by combination with the proper amount of alkali Inasmuch as glycyrrhiza contains about 3% of a bitter principle, which is certainly undesirable in a vehicle intended to disguise a

bitter taste, it seemed quite logical to prepare the Syrup of Glycyrrhiza from the active principle, just as we no longer prepare syrup by extracting and evaporating beet juice or sugar cane juice

We found that the ammoniated glycyrrhizin is not as pleasantly sweet nor as colloidal as a more acid combination, *i e*, one containing a smaller relative proportion of ammonium hydroxide After experimenting with various proportions of glycyrrhizin and diluted ammonia water, the best results were secured by a proportion of 1 part of glycyrrhizin to 4 5 parts of *N*/10 ammonium hydroxide This yields so colloidal a liquid that a syrup made with 1% of the glycyrrhizin thus prepared becomes gelatinous Owing to this high degree of colloidality we cannot employ more than $^1/_2$% of the glycyrrhizin in this combination This is from $^1/_3$ to $^1/_7$ the amount of glycyrrhizin in its native, less colloidal state in the syrup made from the fluidextract And yet this syrup of glycyrrhizin is quite efficient in the disguising of salines This might serve as another proof of the idea, previously expressed, that it is the colloidality upon which the disguising power of these preparations for salines partly depends

We employed the following formula for the preparation of the syrup of glycyrrhizin

SYRUP OF GLYCYRRHIZIN

Glycyrrhizin	5 0 Gm
N/10 Ammonium Hydroxide Volumetric Solution	22 5 cc
Distilled Water	40 0 cc
Syrup, a sufficient quantity	
To make	1000 0 cc

Triturate the glycyrrhizin with the distilled water and, while actively triturating, add the *N*/10 ammonium hydroxide and triturate until solution is effected Then add enough of the syrup to make 1000 cc and mix thoroughly

At first thought this formula might be criticized as too expensive for consideration, owing to the high market price of glycyrrhizin, which is quoted at $4 40 a pound, or let us say, at about one cent per Gm This would, however, make the glycyrrhizin cost five cents per 1000 cc of the syrup, as against over sixty cents for the fluidextract or seventy cents for the fluidglycerate, which shows that the syrup of glycyrrhizin actually costs one-twelfth as much as far as the glycyrrhiza addition is concerned Inasmuch as glycyrrhizin could not be secured in the market, we prepared it either from the ammoniated glycyrrhizin or, what is much more economic, from the drug itself For this purpose, a concentrated aqueous percolate is acidified with hydrochloric acid The precipitate is washed by repeated decantation until free from chloride ions, as indicated by Silver Nitrate T S , and dried at moderate temperature

Unfortunately, the Syrup of Glycyrrhizin is so colloidal that it is "salted out" by the addition of bromide, which makes it turbid immediately and causes a deflocculation of the glycyrrhizin on standing We have not yet succeeded in determining what it is that keeps the glycyrrhizin from deflocculation when saline is added to a preparation made from the fluidextract Inasmuch as ammoniated glycyrrhizin, which is less colloidal, is also deflocculated, there is probably another reason than a difference in the relative proportion of glycyrrhizin and alkali We attempted to discover what it was in the extractives that kept from deflocculat

tion the glycyrrhizin in the syrup of glycyrrhiza, by adding the residue left after separation of the glycyrrhizin from extract of glycyrrhiza This, however, failed to stabilize the preparation It must be that the protective principle is denatured by the acid used in the separation of the glycyrrhizin

We believe that the syrup of glycyrrhizin has decided merit and that it might ultimately replace the cruder product, providing it can be suitably stabilized Owing to the advanced state of development of the forthcoming U S P and the N F revisions, we desire to have the privilege, which we also grant freely to others, to make further observations with syrup of glycyrrhizin before advocating introduction of a formula for it in one of our official books

AN IMPROVED FLUIDEXTRACT OF GLYCYRRHIZA

In the present state of the glycyrrhiza situation, it seems that we must concentrate our efforts upon minimizing the nastiness and the variability of the glycyrrhiza preparation from which the Syrup of Glycyrrhiza is to be made It is, in point of fact, being prepared from the fluidextract now, even though the N F specifies that it be made from the fluidglycerate The reason we believe this to be the case is that the fluidglycerate is not kept in drug stores, that, indeed, it is not even upon the market, and that manufacturers had to prepare it specially for us when we insisted upon ordering it As the specimens of fluidglycerate are just as variable as are those of the fluidextract, it presents no advantage from this standpoint, and furthermore it does not keep as well For these reasons, and especially on the basis of non-use we propose that the fluidglycerate be deleted from the National Formulary

It seems that the standardization of the Fluidextract of Glycyrrhiza from the standpoint of glycyrrhizin assay presents considerable difficulty as may be gathered from the literature on the subject (4–11) The simple methods are unreliable and the reliable methods, complicated Nevertheless, it should be easily possible to lessen the variability of the preparation, at least as far as the content of solid extractive is concerned This in preparations we have tested ranged between 20 and 30 per cent, as is shown by Table I

TABLE I —PERCENTAGE OF SOLID EXTRACT AND OF GLYCYRRHIZIN IN VARIOUS SPECIMENS OF FLUIDEXTRACT OF GLYCYRRHIZA

	Per Cent of Solid Extract	Per Cent of Glycyrrhizin in Extract	Per Cent of Glycyrrhizin in Fluidextract
Specimen 1	30	24 6	7 38
Specimen 2	27	24 2	6 54
Specimen 3	26	19 5	5 09
Specimen 4	25 7	23 1	5 94
Specimen 5	20	24 9	4 98
Specimen 6	23		
Specimen 7	25 4		
	Av 25 3		Av 5 98

NOTE We were unable to determine the amount of solid extract in two other commercial samples because they failed to dry after heating for five days The same difficulty was experienced with a fluidextract prepared in our laboratory by the U S P IX method, in which ammonia water was employed

It will be noted from Table I that, even though the amount of solid extract varied from 20 to 30 per cent, the average was practically 25 per cent It is of interest to note that the amount of glycyrrhizin present was in four of the instances exactly one-fourth the quantity of the dry extract For practical purposes, therefore, standardization in accordance with the amount of dry extract present in the fluidextract might suffice and the figure should be placed at 25 per cent

There are two ways by which we might develop a fluidextract of Glycyrrhiza of standard solid extract content

1 Exhaust the drug and concentrate the percolate to a somewhat greater extent than the ultimate bulk that the finished preparation is to have By determining the quantity of the solid extract in a portion of the liquid thus obtained and adding enough fluid to bring the total solid residue content up to the standard, the desired result would be secured What complicates the situation and makes the method just discussed unsuitable for the purpose is that the Fluid extract of Glycyrrhiza contains 25 per cent of alcohol and that the alcohol when added to the percolate produces a precipitate which is filtered out after sedimentation and decantation The alcohol would either have to be added before the final concentration, in which case it would be difficult to secure a standard proportion of alcohol in the finished product or else the alcohol would have to be added after standardization in which case it would render the previous determination invalid as the alcohol removes additional solid material from the preparation

2 The other method would be to dissolve the pure extract of glycyrrhiza, which contains a variable quantity (about 25%) of moisture, in a certain quantity of water an amount small enough so that the concentration will be excessive and dilution be required, adding the alcohol, separating the precipitate by sedimentation, decantation and filtration Then the percentage of dry residue is determined in a small portion of the fluid and the bulk is brought to the required amount to make the finished preparation carry 25 per cent of extractive by the addition of a sufficient quantity of a mixture of alcohol 1 part and water 3 parts This is obviously the method to be chosen

We, therefore, propose the following method for the preparation of the Fluidextract of Glycyrrhiza which we would like to submit to the U S P Revision Committee for consideration

FLUIDEXTRACTUM GLYCYRRHIZÆ

Fluidextract of Glycyrrhiza

Fldext Glycyrrh — Fluidextract of Licorice Root

The Fluidextract of Glycyrrhiza contains not less than 24% and not more than 26% of dry extractive The preparation should be of intensely sweet taste with but a slight tinge of bitterness, having the characteristic odor of glycyrrhiza and it should be free from even a suggestion of having become scorched in its preparation

Extract of Glycyrrhiza, Pure	**400 0 Gm**
Alcohol	
Water, of each a sufficient quantity	

Dissolve the pure extract of glycyrrhiza with the aid of the water bath in enough water to make the solution measure 750 cc Then add 250 cc of alcohol and agitate the mixture Set aside for 7 days, decant the clear liquid and filter the remainder Determine the amount of solid extractive in 5 cc of the liquid thus obtained by drying to constant weight From the weight obtained calculate the number of grams per 100 cc Calculate the quantity of solid extractive in the total quantity of liquid and add enough of a mixture of alcohol one part and water three parts to make the finished preparation contain exactly 25% of solid extract

In explanation of the process advocated it might be pointed out that the extract of glycyrrhiza should contain 25% of moisture, but that it may contain more or less In starting with an excess of the extract we save ourselves a preliminary determination of the dry extractive contained in it When we dissolve 400 0 Gm

of extract in 750 cc of water, we are certain that dilution will be ultimately required, so that we may add 250 cc of alcohol, confident that this will not be an excess, as the finished preparation will measure more than 1000 cc

AN IMPROVED EXTRACT OF GLYCYRRHIZA

We owe Dr Percy A Houseman the important information that the bitter principle of glycyrrhiza is extracted in much greater proportion toward the end of the percolation than in the beginning Before having been apprised of this we made the observation, without realizing its significance, that when we tasted the first portions of a percolate we thought we would this time get a very palatable product, only to be bitterly disappointed by the bitterness of the final preparation

When, for instance, we subject 200 Gm of glycyrrhiza to percolation, according to the directions of the U S P , but separate each successive 100-cc portion, we secure fractions with a progressively decreasing amount of dry extractive in each as shown in Table II

TABLE II

Percolate		Dry Extractive	Taste
100 cc portion	1	8 2188 Gm	Sweet
	2	9 3195 Gm	"
	3	6 2855 Gm	"
	4	5 0567 Gm	"
	5	4 3387 Gm	"
	6	4 3613 Gm	Sweet slightly acrid
	7	3 7498 Gm	"
	8	2 7183 Gm	"
	9	2 2088 Gm	"
	10	1 8353 Gm	Offensively acrid
	11	1 2655 Gm	" worse
	12	0 8989 Gm	"
	13	0 6730 Gm	"
	14	0 5160 Gm	"
250 cc final portion		1 1152 Gm	Bad
Total 1650 cc		52 5613 Gm	
		=26 28%	

It will be noted that the first 500 cc yield 33 2192 Gm of extractive or 16 6%, which is 63% of the total extractive, and has a sweet taste devoid of acridity

We, therefore, advocate consideration by the U S P Revision Committee of the following formula for the Pure Extract of Glycyrrhiza

EXTRACTUM GLYCYRRHIZÆ

Pure Extract of Glycyrrhiza

Ext Glycyrrh Pur	Pure Extract of Licorice Root
Glycyrrhiza, in coarse powder	1000 Gm
Boiling water, a sufficient quantity	

Moisten the drug with boiling water, and macerate in a covered container in a warm place for two hours Transfer the moist drug to a metal percolator (not iron) and percolate with boiling water until a yield of not over 150 Gm of extract on a dry basis is obtained, which is likely to be secured in the first 2500 cc of percolate Evaporate this percolate promptly on a water bath Not over 200 Gm of extract containing 25% moisture should be obtained

ALTERNATIVE FORMULA FOR AN IMPROVED FLUIDEXTRACT OF GLYCYRRHIZA

Should an alternative formula for the improved Fluidextract of Glycyrrhiza be desired in which the preparation is to be made from the crude drug, the following procedure might be considered

FLUIDEXTRACT OF GLYCYRRHIZA

Alternative Formula

Glycyrrhiza, in coarse powder	1000 Gm
Alcohol	
Water, a sufficient quantity	

Moisten the glycyrrhiza with 5000 cc of boiling water mix thoroughly and allow it to macerate in a covered container in a warm place for two hours Then transfer the moist drug to a tinned or enameled percolator and allow the percolation to proceed gradually adding boiling water until 2500 cc are obtained Evaporate the percolate on a water-bath or steam bath to 300 cc and when cold add 75 cc of alcohol and mix thoroughly Allow the product to stand for seven days in a stoppered container then decant the clear liquid, filter the remainder, and wash the residue on the filter with a sufficient quantity of a mixture of alcohol 1 part and water 3 parts to make the fluidextract measure 400 cc

Determine the amount of solid extractive in 5 cc of the liquid thus obtained by drying to constant weight From the amount obtained calculate the number of grams per 100 cc Calculate the quantity of extractive in the total quantity of liquid and add enough of a mixture of alcohol 1 part and water 3 parts to make the finished preparation contain 25% of solid extract

A "PALATABLE" SOLUTION OF CHLORAL HYDRATE

The disguising value of the Fluidextract of Glycyrrhiza is illustrated by the following prescription which yields the least offensive liquid administration form of chloral hydrate that we are acquainted with

℞	Chloral Hydrate	15 0 Gm
	Gluside	0 06 Gm
	Fluidextract of Glycyrrhiza	30 0 cc
	Syrup of Orange, to make	60 0 cc

M and label Teaspoonful in water at bedtime

The addition of sodium bromide is admissible as shown by the following prescription

℞	Chloral Hydrate	7 5 Gm
	Sodium Bromide	15 0 Gm
	Water	15 0 cc
	Gluside	0 06 Gm
	Fluidextract of Glycyrrhiza	30 0 cc
	Syrup of Orange, to make	60 0 cc

AROMATIC SYRUP OF GLYCYRRHIZA

We deplore the crudeness of the formula for the Syrup of Glycyrrhiza at present official in the N F Not only is there no possibility whatever for the prescriber to know whether the patient will receive a moderately pleasant or a nasty preparation, but, even granted that the most palatable glycyrrhiza product is used, the mere addition of syrup to it does not yield as pleasant a preparation as could easily be secured by the use of a little flavoring Every candy and chewing-gum manufacturer knows that the glycyrrhiza flavor needs to be improved by an anise bouquet Our formulary does not make use of this knowledge In experimenting to determine the most desirable flavor of glycyrrhiza, we find, after a trial of many

different formulas and proportions, that the anise flavor by itself is not sufficiently pleasing to be satisfactory It is much improved by the addition of a suitable proportion of oil of fennel If equal parts of oil of anise and oil of fennel are mixed, the anise flavor is almost completely overwhelmed by the fennel The most acceptable proportion seems to be 7 parts of oil of anise and 1 part of oil of fennel Even this combination is not perfectly satisfactory It has what might possibly be called a "musty" smell In looking over formulas for anise bouquets, we find that this evidently is very generally recognized, for all such formulas contain some additional flavor, the function of which seems to be to add "liveliness" to the bouquet We find oil of bitter almond, oil of spearmint and even nitrous ether used for this purpose To us the bouquet of the N F Elixir of Anise seems to be the most desirable

SYRUPUS GLYCYRRHIZÆ AROMATICUS

Aromatic Syrup of Glycyrrhiza

Syr Glycyrrh Arom

Oil of Fennel	0 05 cc
Anethol	0 50 cc
Benzaldehyde	0 015 cc
Fluidextract of Glycyrrhiza	250 cc
Syrup, a sufficient quantity, to make	1000 cc

Add the volatile oils to the Fluidextract of Glycyrrhiza and agitate until thoroughly mixed Then add enough of syrup to make the product measure 1000 cc

BROMIDE SYRUPS

To the prescribing physician these studies yield the practical result that Syrup of Glycyrrhiza, especially in its improved form, the Aromatic Syrup of Glycyrrhiza, yields a palatable preparation, when used as vehicle for bromide One might, therefore, suggest the following prescription

℞	Sodium Bromide	30 0 Gm
	Water, just enough for solution or	30 0 cc
	Aromatic Syrup of Glycyrrhiza to make	120 0 cc

M and label Teaspoonful in milk after meals and at bedtime

A parenthetic note might not be amiss, in this connection, to explain the consideration underlying the second line of the above prescription It is, of course, understood that the Syrup of Glycyrrhiza will not dissolve any considerable quantity of salt It is also well known that syrups are relatively permanent only as long as they are saturated solutions It is, therefore, necessary to add the minimal quantity of water that will dissolve the bromide so as to secure solution without dilution The determination of this quantity might well be left to the pharmacist who if necessary can easily refresh his memory as to the solubilities by consulting his reference books, while it is hardly to be expected that the physician should carry these figures in his mind

In this connection we would like to call attention to the joint responsibility of physician and pharmacist in the direction of delivering to the patient preparations that will keep without decomposition at ordinary room temperature It happens not infrequently that a medicine that lasts for several days or more has undergone fermentation and become effervescing, even to the extent as to blow out the stopper

Should this happen and the spoiled preparation be thrown away, it is even more fortunate than to have such a spoiled liquid forced down a child's unwilling throat, with possibly resultant digestive upset

INCOMPATIBILITIES

It might not be amiss at this point to recall to mind that glycyrrhiza has some of the following incompatibilities

1 Acids which precipitate the glycyrrhizin and destroy much of its sweetness
2 Alkalies which destroy the colloidality of the preparation
3 Heat which precipitates the glycyrrhizin
4 Ionized iron compounds, because of resultant colloidal precipitate Slightly ionized iron salts like iron and ammonium citrate may be added without precipitation

CONCLUSIONS

1 Glycyrrhiza is especially useful for the disguising of salines given in moderate dosage

2 It is generally less efficient than eriodictyon for the disguising of the taste of alkaloids

3 It is of but limited efficiency in the disguising of alkalies

4 Its disguising power is due to the colloidality and the sweetening property of glycyrrhizin

5 The Syrup of Glycyrrhiza is the most eligible of the glycyrrhiza preparations for disguising purposes in general

6 The N F Syrup of Glycyrrhiza could be very much improved by an anise bouquet and we advise its introduction and the change of the title to "aromatic syrup of glycyrrhiza"

7 Owing to variability in the glycyrrhiza rhizome, which may result in a bitter instead of a sweet preparation, formulas for an improved Extract of Glycyrrhiza and Fluidextract of Glycyrrhiza have been elaborated, and are submitted for possible inclusion in the Pharmacopœia

8 Other things being equal, the best solvent is the best vehicle Hence it is an error to add alcohol to water-soluble, alcohol-insoluble saline, such as bromide The taste of the bromide elixirs is more offensive than that of bromide syrups

9 The Fluidglycerate of Glycyrrhiza should be deleted from the National Formulary, and also the Aqueous Elixir of Glycyrrhiza, as neither of them are employed to a sufficient extent to justify their retention

UNITED STATES PHARMACOPŒIA

ABSTRACT OF PROPOSED CHANGES WITH NEW STANDARDS AND DESCRIPTIONS ELEVENTH REVISION

PART I—INORGANIC CHEMICALS

The Pharmacopœial Convention of 1930 recommended that 'abstracts of changes proposed for the U S P XI and new standards and descriptions' be published before final adoption, that those who are not members of the Revision Committee may have an opportunity for comment and criticism

In compliance with this recommendation the following abstracts are submitted The nomenclature and the exact wording does not necessarily represent that to be finally adopted and doses have not been appended

Comments should be sent to the Chairman of the Revision Committee

E FULLERTON COOK,
43rd and Woodland Avenue,
Philadelphia Pa

I GENERAL TESTS

1 Hydrogen Ion Concentration—A chapter on Hydrogen Ions and p_H" has been prepared for inclusion in the section of the Pharmacopœia dealing with special tests This monograph treats in a general way the theoretical considerations involved and sets forth in detail the *colorimetric procedure* for the determination of p_H The *colorimetric method* has been adopted as the official procedure However, owing to the fact that in many of the colored solutions of the Pharmacopœia this method is inapplicable the potentiometric method is recognized as an alternative procedure A table is included containing the salt error corrections and, also, suitable directions for the preparation of buffer solutions and indicator solutions accompany the chapter

The advisability of incorporating a monograph of this kind into a modern pharmacopœia requires no defense Precedent has already been established by the British Pharmacopœia of 1932, which has included such a monograph The policy of Sub Committee No 7 in respect to the application of the principles of hydrogen ion concentration to Pharmacopœial substances warrants comment The Sub Committee has not employed statements of p_H in the individual monographs for informative purposes only If the information does not contribute to the tests for identity or purity, it has not been included in the official monograph When however, the information is useful as a means of identification or in establishing purity, the p_H of the substance has been included in the individual monograph For the purposes of increasing stability and pharmaceutical elegance, p_H adjustment has been included in certain monographs

In addition to the application of the foregoing policy of the Sub-Committee in respect to the individual monographs an informative table setting forth the p_H of many of the official drugs in aqueous solution will be included in the section of General Tests"

2 Electrolytic Determinations—The U S P X recognizes the electrolytic deposition methods as alternative analytical procedures for the determination of zinc, silver, mercury and copper salts After much discussion and experimental work, the Sub Committee decided to delete these electrolytic methods on the ground that the volumetric and gravimetric methods used to assay these salts were better suited for U S P purposes than the electrolytic procedures

3 Heavy Metals Test—With certain minor modifications this test has been recommended for U S P XI After mixing the hydrogen sulphide T S and the liquid in question the mixture is allowed to stand 10 minutes at room temperature instead of 30 minutes at 35° C before examining for the appearance of a brown to black coloration

4 Assay for Acids (Alkalimetric)—This general test has been deleted and more specific directions have been given under the individual acids

---

* Permission to reprint for purposes of comment can be had on application to the Chairman of the Board of Trustees James H Beal Fort Walton, Fla

5 *Assay for Chlorides, Bromides and Iodides* —This general test has been deleted and more specific directions have been included under the individual salts

6 *Assay for Alkali Benzoates and Salicylates* —This general test has been deleted and special assays included for sodium benzoate and salicylate under the individual monographs These assays depend upon the titration of the alkali bound to the organic acid with half normal acid in the presence of a large amount of ether Methyl orange T S is employed in the assay of sodium benzoate and Bromphenol Blue T S is used as the indicator in the assay of sodium salicylate The precipitated organic acid is instantly dissolved in the ether by vigorous stirring and hence the vitiating of the end point is obviated This procedure with certain minor modifications is essentially the process employed in the British Pharmacopœia of 1932

7 *The Arsenic Test* —The arsenic test has been changed in many of its minor descriptive details Throughout this revision an effort was made to harmonize the U S P test with the arsenic test description and directions set forth in the Book of Methods of the Association of Official Agricultural Chemists 3rd Edition (1930), page 307

Bettendorf's Arsenic Test has been deleted This is recognized in the U S P X for bismuth salts and antimony and potassium tartrate It was observed that the general arsenic test was applicable to bismuth salts Fleitmann s modification of the arsenic test has been included for antimony and potassium tartrate The method depends upon the generation of hydrogen in alkaline medium, under this condition, arsine is formed but stibine is not formed Hence antimony does not interfere in the test

8 *Turbidimetric and Clarity Tests* —Apparatus has been described and procedure outlined to determine the degree of turbidity in various preparations and solutions The sample is matched against suspensions of fuller's earth (200 powder) in distilled water Turbidities are expressed in parts per million A description of the turbidimeter is given by J R Bayliss, *Ind Eng Chem* 18 (1926), 311 and also Claman Carr and Krantz, JOUR A PH A , 21 (1932), 670

II GENERAL POLICIES

1 *Descriptive Matter in Monographs* —It was considered beyond the scope of the Pharmacopœia to include descriptive matter in the individual monographs which does not definitely contribute to the tests for identity or purity of the substances These statements, some of them carried in the texts for three or four revisions have been deleted To illustrate this point with a specific case, the following statement in the U S P X under Boric Acid has been deleted in its entirety

"Heated to 100° C , Boric Acid loses water forming metaboric acid (HBO_2) which slowly volatilizes at that temperature Heated to about 160° C Boric Acid fuses to a glassy mass of tetraboric or pyroboric acid ($H_2B_4O_7$) At about 185° C the fused mass swells, loses all of its water, and becomes boron trioxide (B_2O_3), which fuses into a transparent non volatile, hygroscopic mass "

2 *Concentration of Diluted Acids* —The concentration of diluted acids is now based on a weight to weight percentage For convenience in preparation, the concentration has been expressed on a weight to volume basis Therefore in the preparation of the diluted acids from the concentrated ones the retail pharmacist need only measure a definite volume of the concentrated acid (corresponding to a definite weight) and make up to volume with distilled water

3 *Working Formulas* —Many working formulas for the preparation of inorganic chemicals have been deleted It is believed that such substances as precipitated sulphur, exsiccated alum and granulated ferrous sulphate are not prepared by the small prescription counter methods any longer and, therefore the recognition of these working formulas has outlived its usefulness

III INDIVIDUAL MONOGRAPHS

1 *Acidum Boricum* —The assay of boric acid has been modified by the addition of another 50 cc of glycerin when the end point of the titration is reached and then titrating further to the production of the pink color with phenolphthalein Results obtained by this modified method are somewhat higher than those obtained by the U S P X method and agree more closely with the theoretical value

2 *Acidum Hydriodicum Dilutum*—The working formula has been deleted If this formula were retained, any sample of the acid which did not contain potassium acid tartrate, which remains as an impurity in the acid made by the official process would be considered illegal This view is taken owing to the ruling of the courts The official definition contains also the statement "Diluted Hydriodic Acid also contains not less than 0 6 Gm or more than 1 0 Gm of H H_3PO_2 in 100 cc" An assay for the hypophosphorous acid content is included also in the monographs

3 *Acidum Hydrochloricum*—To conform with the concentration of commercial acids the concentration has been changed from "31 to 33 per cent" to "35 to 38 per cent"

4 *Acidum Nitricum*—To conform with the concentration of commercial acids, the concentration has been changed from 67 to 69 per cent" to 67 to 70 per cent"

5 *Acidum Phosphoricum*—The argentimetric assay has been deleted The alkalimetric assay using phenolphthalein as an indicator and saturating the titration mixture with sodium chloride is included This assay is far more expeditious than the silver method and yields results sufficiently concordant for the purpose intended

6 *Acidum Sulphuricum*—To conform with the concentration of commercial acids the concentration has been changed from ' 93 to 95 per cent" to "93 to 97 per cent"

7 *Aqua*—A p_H range (5 6 to 8 3) has been included The test for oxidizable substances has been deleted This has been found to be unreliable when applied to various municipal-treated water supplies

8 *Aqua Destillata*—A p_H range (5 8 to 7 0) has been included The test for oxidizable substances has been deleted

9 *Arsenii Iodidum*—This substance is assayed in the U S P X argentimetrically An oxidizing titration with tenth normal iodine has been adopted This conforms with the assay for arsenous oxide and determines the trivalent arsenic present

10 *Arsenii Trioxidum*—The statement regarding the size of particles and physiological potency has been deleted

11 *Barii Sulphas*—The following Bulkiness of Powder ' test has been incorporated

'Place 5 Gm of Barium Sulphate previously sifted through a No 60 sieve, in a 50 cc graduated cylinder provided with a glass stopper The extent of the graduation of the cylinder should be about 14 cm Add distilled water until a 50 cc volume is obtained Agitate the mixture briskly for exactly one minute and set it aside for sedimentation Within fifteen minutes the Barium Sulphate should not settle below a volume of 12 cc (bulkiness of powder)"

12 *Calx*—Calcium oxide has been deleted and calcium hydroxide, for the preparation of lime water, has been included

13 *Calcii Bromidum*—The argentimetric assay has been deleted The substance is directed to be assayed by the oxalate, permanganate method now employed for calcium carbonate

14 *Calcii Chloridum*—The argentimetric assay has been deleted The substance is directed to be assayed by the oxalate permanganate method now employed for calcium carbonate

15 *Carbonii Dioxidum*—Carbon dioxide of medicinal purity (99 per cent CO_2) has been admitted The absence of carbon monoxide is required and an appropriate assay has been described

16 *Ferri et Ammonii Citras*—In the assay for iron in this substance a change in procedure has been adopted Instead of allowing the hydrochloric acid solution of the sample to remain in contact with the potassium iodide for 30 minutes at 40° C the titration of the iodine is begun without preliminary heating The results obtained by this modification are practically identical with those obtained by the more lengthy process

17 *Liquor Ferri Chloridum*—The indigocarmine test for nitrate has been added to replace the ferrous sulphate test

18 *Liquor Hydrogenii Dioxidi*—The purity rubric has been changed from not less than 3 per cent to not less than 2 5 Gm or more than 3 5 Gm of H_2O in each 100 cc

19 *Liquor Magnesii Citratis* (Description and Assay)—Minor modifications of the assay have been included The preliminary evaporation and carbonizing of the solution has been

omitted A maximum and minimum magnesium oxide content will be incorporated The (minimum total citric acid) test has been omitted An identity test for citric acid has been included An assay for the citric acid content has been included

20 Liquor Potassii Arsenitis —The maximum and minimum standards have been changed from 0 975 to 1 025 Gm of As_2O_3 to 0 950 to 1 050 Gm of As_2O_3 in each 100 cc

21 Magma Magnesiæ —The working formula has been omitted

Methyl orange T S has been replaced by methyl red T S in the limit of soluble alkalies test

The test for soluble salts and soluble alkalies has been modified

Limits of heavy metals and arsenic have been included

Limit of calcium test has been included

22 Magnesii Carbonas —The purity rubric has been changed from 'not less than 39.2 per cent MgO" to not less than 40 per cent or more than 42 per cent MgO

The limit of calcium oxide permitted to be present has been reduced from 0 8 per cent to 0 4 per cent The cumbersome oxalate precipitation method employed for the determination of calcium has been replaced by a simple calcium sulphate precipitation procedure

23 Magnesii Oxidum —The limit of calcium oxide permitted to be present has been reduced from 2 per cent to 1 per cent

The cumbersome oxalate precipitation method employed for the determination of calcium has been replaced by a simple calcium sulphate precipitation procedure

24 Massa Ferri Carbonatis (Definition and Assay) —The purity rubric of not less than 35 per cent of $FeCO_3$ has been changed to not less than 36 per cent and not more than 41 per cent of $FeCO_3$

Diphenylamine T S as an inside indicator in the assay has replaced potassium ferri cyanide as an outside indicator

25 Nitrogenii Monoxidum —The following purity rubric has been incorporated 'Nitrogen Monoxide contains not less than 97 per cent by volume of N_2O "

A test for the absence of oxidizing impurities has been included This test has been added to preclude the possibility of the higher oxides of nitrogen being present

A detailed description of an assay has been added This assay depends upon the differential solubility of N_2O in water contrasted with the solubilities of the generally occurring impurities

26 Oxygenium —The purity rubric has been increased from 98 per cent O by volume to 99 per cent O by volume

A test to identify the presence of traces of carbon monoxide in oxygen has been developed This test depends upon the reduction of iodine pentoxide and the detection of the liberated iodine Description of the apparatus and a diagram accompanies the test Carbon monoxide in concentrations of 1 to 100,000 are easily detectable by this method

The assay has been described in complete detail The alkaline pyrogallol absorption method has been replaced by the more easily manipulated ammonio-copper solution absorption method

27 Pilulæ Ferri Carbonatis (Assay) —Diluted phosphoric acid has been used in place of diluted sulphuric acid for the solution of the pills

Diphenylamine T S has been used as an inside indicator instead of potassium ferricyanide T S as an outside indicator, in the assay of these pills

28 Potassii Carbonas —The following test has been included to control the water content of the compound

"Dry about 3 Gm of Potassium carbonate, accurately weighed, to a constant weight at 180° C the loss is not less than 10 per cent or greater than 15 per cent (*water*) "

29 Potassii Hydroxidum —In addition to sticks and fused masses, pellets and other forms of KOH have been recognized

30 Potassii Iodidum —The argentimetric assay has been deleted The iodate direct titration method has been included This latter method is specific for iodides and thus eliminates bromides and chlorides

31 Sodii Benzoas—The statement 1 Gm of Sodium Benzoate is soluble in 61 cc of alcohol at 25° C has been changed to "1 Gm is soluble in 50 cc of a mixture of 47 5 cc of alcohol and 3 7 cc of distilled water at 25° C"

32 Sodii Biphosphas—This salt is assayed argentimetrically in the U S P X As with phosphoric acid this assay has been deleted and the alkalimetric procedure employed

33 Sodii Hydroxidum—In addition to the sticks and fused masses, pellets and other forms of NaOH have been recognized

34 Sodii Iodidum—The limit of water has been reduced from 7 per cent to 5 per cent

The argentimetric assay has been deleted The iodate direct titration method has been included The latter method is specific for iodides and thus eliminates bromides and chlorides

35 Sodii Nitris—The assay has been made to conform with the assay of ethyl and amyl nitrites This assay depends upon the liberation of iodine by the action of the nitrite on potassium iodide in the presence of sulphuric acid and the subsequent titration of the iodine with tenth normal sodium thiosulphate solution in an atmosphere of carbon dioxide

36 Sodii Phosphas—In place of the efflorescent duodekahydrated sodium phosphate, the more stable heptahydrate has been recognized

The official definition is

Sodium Phosphate when dried to a constant weight at 110° C contains not less than 98 per cent of Na_2HPO_4 It contains not more than 50 per cent of water"

The argentimetric assay has been deleted and the more accurate magnesium pyrophosphate gravimetric procedure has been included

37 Spiritus Ammoniæ Aromaticus (Definition and Assay)—The following definition has been included

"Aromatic Spirit of Ammonia contains in each 100 cc not less than 1 7 Gm and not more than 2 1 Gm of total ammonia and not less than 3 5 Gm or more than 4 5 Gm of normal ammonium carbonate $(NH_4)_2CO_3$"

The following assay has been included

'*Total Ammonia*—Measure accurately 10 cc of Aromatic Spirit of Ammonia into a 200-cc Erlenmeyer flask containing about 50 cc of distilled water Add 30 cc of half normal sulphuric acid and boil until the solution becomes clear Cool and titrate the excess of acid with half-normal sodium hydroxide using methyl red T S as an indicator Each cc of half normal sulphuric acid corresponds to 0 0850 Gm of NH_3'

'*Normal Ammonium Carbonate*—Introduce another 10 cc of the spirit, accurately measured, into a flask of about 300 cc capacity Add about 30 cc of half-normal sodium hydroxide and boil this mixture, replacing the water lost by evaporation, until the vapors no longer turn moist, red litmus paper blue Cool, add 6 drops of phenolphthalein T S and half normal sulphuric acid until the color of the phenolphthalein is just discharged Now add about 3 drops of methyl orange T S and titrate with half normal sulphuric acid Each cc of half normal sulphuric acid corresponds to 0 0480 Gm of $(NH_4)_2CO_3$'

38 Tinctura Ferri Chloridi (Assay, Description and Definition)—The official definition has been changed to read

"A hydro alcoholic solution containing about 13 Gm of ferric chloride ($FeCl_3$) in 100 cc corresponding to not less than 4 5 Gm per 100 cc of Fe"

The indigocarmine test for nitrate has been added to replace the ferrous sulphate test

The assay has been simplified according to the procedure set forth by Oakley and Krantz, Jour A Ph A 21 (1932), 468

In the continual study and scrutiny of the monographs up until the time of publication small changes in manipulation may be made and errors will be eliminated, but this survey contains the essential changes in the monographs reported

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

Editor's Note Could we confine our attention to the medicinals and preparations that are official in the U S P and N F, our teaching would be very much lightened It is disappointing to the young graduate to go into a prescription pharmacy and find that a great deal that he had learned about U S P and N F medicinals will be of little use to him because of the infrequent calls for them on prescriptions There is no question but that it has become incumbent upon our colleges of pharmacy to give considerable attention to non official medicinals if we wish our students to be successful in the prescription department It is difficult to determine just how much time should be given to a study of these preparations It is impossible to cover the total number thoroughly and the teacher must select for the purpose of study those that he thinks are most important The following papers by Professors Andrews and Clark will be of interest to those who are confronted with this problem —C B JORDAN, *Editor*

THE PLACE OF SYNTHETICS AND PROPRIETARY REMEDIES IN THE CURRICULUM OF A COLLEGE OF PHARMACY

BY A H CLARK *

In the recent Prescription Ingredient Survey by Gathercoal, it is shown that about one-third of all the different items occurring in prescriptions are proprietary When we consider that the average pharmacist sells many proprietaries that are never prescribed, it is safe to say that half the number of items sold are proprietary If we add to this a number of items that are listed in the Survey mentioned above as U S P or N F and which are really "synthetic" remedies, and the great number of synthetics that are used in hospitals and otherwise, and are not official in either the United States Pharmacopœia or National Formulary, the importance of a knowledge of these two classes of medicaments cannot be denied

Granting, then, its importance, how can such a subject be best handled in a college of pharmacy? There are no doubt various ways that will prove satisfactory, and no doubt the method must vary with varying conditions in the different institutions The writer wishes to express his views in the hope that some may have their interest stimulated to such a point that they will undertake to give instructions in this line, and that the manner in which the subject is handled by him may prove helpful to others

The prime purpose of such a course should be to give the student an opportunity to acquire some knowledge of synthetic and proprietary remedies There are two ways to attain this end, the first one being to discuss all such medicaments in the regular courses in organic chemistry where they fit in with the subject matter of such a course Anything like a thorough treatment of proprietaries and synthetics greatly increases the hours devoted to the regular courses, which is objectionable in many cases Such a method is impractical in some cases, since the regular courses in organic chemistry are given by teachers unfamiliar with the special pharmaceutical aspects of the subject Furthermore, such a method does not

* Professor of Chemistry, University of Illinois School of Pharmacy

sufficiently emphasize the subject of synthetics and proprietaries, and students fail to get an appreciation of its value and are unable to remember the desirable things because they are subordinated to the general topic of organic chemistry

The second, and by far the most satisfactory method, is to present the subject in a special course, and here two lines of action are open In either case the subject should be presented after the regular courses in organic chemistry are finished One method is to group these medicaments according to their therapeutic action The writer has tried this and while it is very acceptable to medical students it lacks many of the advantages of the method followed for many years which is given below

These medicaments are classified according to their constitution, and arranged in groups, according to the system of grouping used by most organic texts Since a student has a knowledge of the entire field of organic chemistry, both aliphatic and aromatic substances may be grouped together, for example *all* the aldehydes, acids, alcohols, etc , may be studied at once and their properties compared If a medicament is heterogeneous in character, it may be placed in any one of several groups according to the teacher's best judgment If it is a pharmaceutical mixture it may be treated under the group to which its most important constituent belongs A great deal of latitude is allowed in this classification, as for example, chloral may be treated among the aldehydes, or the halogen derivatives, as may seem desirable Barbiturates may be discussed under urea derivatives, or given a special class Arsenicals may all be treated in one group, or the various types under their particular class Very frequently a combination of chemical and therapeutic character is desirable as in the case of local anesthetics

The writer has found the greatest advantage of this mode of treatment, regardless of the finer details upon which there is much room for differences of opinion, to lie in the fact that when it is given to senior students, it affords a most excellent method for review of the entire field of organic chemistry By emphasizing the relationships of these medicaments to the various classes of organic substances, and the fact that their properties are usually due to the characteristic class structures present, the student must refresh his mind about these properties in order to see the connection Finally, as time permits, there is no limit to the interesting discussions of the relationship between therapeutic activity and chemical constitution that may be introduced in a course arranged in this way, and there is no branch of chemistry that lends itself to the seminar system of instruction so well as this does, providing the class is not too large There is no limit to the interesting discussions, investigations, reports, outside assignments of work, library reading, etc , that a small group can indulge in, if wisely directed by the instructor in charge of such a seminar

---

METHOD OF APPROACH IN TEACHING THE PHARMACY OF NEW AND NON-OFFICIAL REMEDIES

BY MARVIN J ANDREWS *

For the past several decades, it seems that the chemical and pharmaceutical manufacturers have been trying to surpass one another in the production of new

* Assistant Professor of Pharmacy University of Maryland School of Pharmacy

remedies for nearly every disease from which mankind and other animals have been known to suffer For want of a better term, we usually refer to these products as "new and non-official remedies" Some of these so-called remedies have but little merit and physicians soon cease to prescribe them Others, which do have some real value as therapeutic agents, or are made to appear so through clever advertising, come into more or less general use Whether these products belong to the first or second group, the dispenser must know something about their pharmacy if he is to intelligently fill the prescriptions calling for them The method of approach to teaching this information to pharmacy students is the subject of this paper

At the University of Maryland School of Pharmacy instruction to this end is given in three different departments, namely, the departments of Chemistry, Pharmacology and Pharmacy This instruction is given primarily in the third year after the student has had the basic courses in chemistry, pharmacy and the biological sciences which are necessary for a proper understanding of the subject

In the department of Chemistry, new and non-official remedies are considered along with the official products in a course entitled "Chemistry of Medicinal Products" This course is divided into two parts One part deals with natural products, such as fatty oils, resins, carbohydrates, volatile oils, alkaloids, glycosides, enzymes, glandular products and vitamins, and the other part deals primarily with synthetics, such as the hypnotics, anesthetics, antipyretics, analgesics, pressor drugs, etc

The department of Pharmacology limits the instruction which it gives covering these drugs and preparations to a consideration of their physiologic, pharmacologic, toxicologic and therapeutic properties For purposes of study the drugs are grouped according to the physiological action which is of greatest therapeutic importance, methods of administration and dosage are emphasized

In so far as the instruction in the pharmacy of these remedies is concerned, the approach is the same as that followed in giving instruction covering the official drugs and preparations In our courses in pharmacy and dispensing, the more important of these remedies are covered in those cases where these products can be conveniently grouped with the official products In attempting to do this, however, two main difficulties have been encountered In the first place, these remedies are so numerous that it is difficult to determine their relative importance and to make a representative selection In the second place it is often difficult, if not impossible, to obtain reliable information on the pharmacy of these remedies We have attempted to overcome these difficulties by using some one of the various textbooks on new remedies, such as, "The Chemistry of Synthetic Drugs" by Percy May, or "New and Nonofficial Remedies" issued by the American Medical Association as a basis for the selection of the remedies to be covered The time which can be devoted to instruction along these lines will not permit us to give consideration to more than a comparatively small number of these remedies A few of the most widely used of these preparations are selected from each group as represented by similarity in chemical composition or in physiological action Where information on the pharmacy of these products is not available in textbooks, we have searched through the journals for it and, in a few instances, we have conducted laboratory experiments to secure the desired information

As previously stated, our method of approach to instruction to the students in

the pharmacy of these remedies does not differ from the method employed in teaching the official drugs and preparations Our method of instructing students in dispensing may, however, have some points of interest for you

The prescriptions containing the drugs and preparations to be studied are first classified into groups according to "New and Non-official Remedies," such as anesthetics, barbital compounds, silver preparations, etc , after which the students are assigned this chapter or group for study prior to the lecture and recitation Whenever possible original packages of the material under discussion are shown the students during the lecture An attempt is made to select preparations that have been previously studied in chemistry and pharmacology

The prescriptions are placed in a baloptican projector and flashed on a silver screen in the front of the room in full view of the entire class They are then read and discussed by the professor in charge during the first few lecture periods, or until the students become accustomed to the procedure, after which the students are called upon to read and discuss them

In conclusion, the general procedure followed in the discussion of individual products may be summed up briefly by the use of the following example

Name of Article	Luminal Sodium
The Manufacturer	
Composition or Formula	The monosodium salt of phenylethylbarbituric acid (All other information of this character is taken up in the department of chemistry)
Description and Physical Properties	A white hygroscopic powder very soluble in water, soluble in alcohol, practically insoluble in ether and chloroform An aqueous solution of luminal sodium has an alkaline reaction to litmus
Actions and Uses	The same as those of phenolbarbital sedative or hypnotic (All other information of this character is taken up in the department of pharmacology)
Dosage	1/2 to 5 grains
Forms on the Market	Powder in 1/2- and 1 oz bottles Ampuls (powder) 2 and 5 grains Capsules—5 grains Tablets—1/4 1/2 and 1 1/2 grains
Incompatibilities	Is neutralized with free acid or acid solutions and the normal salt is precipitated in aqueous or low alcoholic solutions (For example Compound Elixir of Pepsin and Rennin, N F , which contains free lactic acid)

RESEARCH IN PHARMACEUTICAL EDUCATION *

BY WILLIAM J HUSA [1]

The interest which pharmacists have in educational matters was evidenced many years ago by the establishment of this Section Through the subsequent organization of the American Association of Colleges of Pharmacy and through the activities of the Committee on Educational Methods established by the National

* Section on Education and Legislation A PH A , Washington meeting 1934

[1] Head Professor of Pharmacy, University of Florida

Conference on Pharmaceutical Research further impetus has been given toward stimulating an interest in educational matters and building up a literature in this field

Over the years a great deal of attention has been given to improvements in curricula and teaching methods and to various matters of educational technique such as types of examination, honors courses, etc The interest in educational methods on the part of pharmacy teachers is very commendable, but there is one phase of pharmaceutical education whose paramount importance must never be lost sight of, *i e*, the correctness of the material that we teach If the facts we are teaching are incorrect, or the explanations we offer are erroneous or highly improbable, of what avail are all the theories of educational procedure?

Lack of sufficient training on the part of the teacher of course leads directly to poor teaching On one occasion in a court trial an instructor in a naval academy was questioned regarding his preparation in his field In his reply he admitted that he was not well versed in the subject he was teaching, but stated that he endeavored to be a fair referee between the student and the book In our field I recall the statement of a man who had had no training whatever in pharmacy, but who claimed that he could teach pharmacy, stating that if he got half a dozen pages ahead of the students they would never catch up with him

However, in fields of wide scope, such as we have in the pharmaceutical sciences, in which changes are constantly occurring due to changes in medical practice and to the discovery of new facts in the underlying sciences, it is a real problem, even for the well-trained teacher, to keep his courses strictly up-to-date

When teaching loads are heavy, and much time is required for routine clerical and committee work, and when a teacher is assigned to teach several branches in the field it becomes necessary to depend more and more on standard textbooks In any case the mis-statements and discrepancies found in text and reference books are a hindrance to good teaching In some instances such errors may be due to insufficient study of the literature on the part of the author Frequently the error is due to discrepancies in the literature itself, and to differences of opinion which cannot be resolved without further research Every pharmacy teacher should be constantly on the lookout for commonly accepted material which from his own special experience appears questionable If he goes a step further and carries out literature studies and research work to determine which facts are correct, he is taking a great step toward improvement of his teaching If he publishes his findings, thus making them generally available to his colleagues, he is making a definite contribution to pharmaceutical education

By way of illustration, I will cite an example from my own experience A few years ago I observed that contradictory statements appeared in various reference books regarding U S P Benzoinated Lard The supposed effect of benzoin in retarding the development of rancidity in lard was variously ascribed to the benzoic acid, cinnamic acid, volatile oil, resin and odorous constituents This lack of agreement led me to make a search of the journal literature on this point, this showed many conflicting opinions but very little careful experimental work With the assistance of co workers, I have carried out several experimental studies to clear up this point Our first work (1) showed that benzoic acid and cinnamic acids are not effective in retarding the rancidity of lard Incidentally, a study of

other reputed preservatives was made (2), these were found ineffective with the exception of hydroquinone, which in concentration of 0 5% reduced the rate of development of rancidity about 50% Although the value of benzoin as a preservative seemed well established in the older literature, some question arose on this point We then found by experimentation (3) that plain lard deteriorated several times as rapidly as benzoinated lard It was also found that benzoin was responsible for the change in color from white to gray which was observed in Ointment of Potassium Iodide, N F V Finally the individual constituents of Siam benzoin were tested one by one and it was found that coniferyl benzoate is the constituent responsible for the preservative effect of Siam benzoin in lard (4) We thus have gained a satisfactory understanding of this preparation, which is official in a dozen of the leading pharmacopœias of the world

The unsatisfactory statements in reference books regarding Solution of Arsenous and Mercuric Iodide, U S P X led to studies which I will mention briefly in passing Textbooks gave the impression that this solution contained a double compound of AsI_3 and HgI_2, while in reality it is a solution of arsenous acid, hydriodic acid and hydrogen mercuric iodide A leading textbook stated that there was no chemical reaction in the making of this preparation, while as a matter of fact there are extensive chemical changes involving practically complete hydrolysis of the arsenous iodide and the formation of a complex ion A leading reference book stated that the aqueous solution of arsenous iodide is neutral, whereas we found the p_H to be 1 2 By searching far enough back in the literature, we found that the acidity of the solution was known over a hundred years ago and this had repeatedly been verified by research workers since that time but these published researches were overlooked or disregarded by the "swivel-chair scientists" who made the pharmacopœias and other books

It is logical that research for teaching should be done in our colleges Some of the preparations which require study may derisively be called "antiquated solutions" or "stagecoach remedies" but as long as they remain official and must be included in our courses it is not to our credit to allow our knowledge and teaching to be inadequate and incorrect No one teacher has the ability to find all such discrepancies or the time to study all that he might see, but if more such studies are made by more teachers it will be possible to eliminate a great deal of misinformation from our textbooks and place the teaching of pharmacy on a higher level

A REPORT ON INTER-PROFESSIONAL RELATIONSHIP WORK IN WISCONSIN *

BY RALPH W CLARK [1]

During the time since the Madison meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION, two senior thesis students, Gerald Belisle and Wilbur Dehmer, a committee of the Wisconsin Pharmaceutical Association consisting of three physicians, three dentists and three pharmacists, and the writer have worked with some regularity on inter-professional relationship To start the work, a meeting was held in Madison during the AMERICAN PHARMACEUTICAL ASSOCIATION convention in order to familiarize the members of the state committee with the national scope of the problem and the character of the work being done, by hearing Dr Fantus and Dean Schicks speak on the physician and the dentist, respectively, in relation to the pharmacist

The relationship between the physician and the pharmacist was discussed in a paper by the writer, Wilbur Dehmer cooperating, in the January *Wisconsin Druggist* A full-page editorial in the *Wisconsin Medical Journal* for April commented favorably on this discussion and indicated the willingness of the physicians to cooperate The writer has been asked to contribute to the latter magazine

The relationship between the dentist and the pharmacist was presented in a paper by the writer, Gerald Belisle cooperating, in the April *Wisconsin Druggist*

A meeting of the inter-professional relationship committee was held in Milwaukee in January at which Dr Frank B Kirby addressed the group An informal discussion followed with druggists, physicians and dentists taking part The members of the executive committee and the officers of the Wisconsin Pharmaceutical Association were present and physician and dentist members of the committee and guests

An interesting program has been planned for the balance of the year Rho Chi sponsors an annual open spring meeting at the University of Wisconsin This year the meeting is to be turned into an inter-professional relationship discussion Dr Frank B Kirby, M D , director of Education of the Abbott Laboratories, H P Greeley, M D , Madison, member of the editorial board of the *Wisconsin Medical Journal*, O M Dresen, D D S , Milwaukee, practicing dentist and member of the faculty of the Marquette Dental College, and Otto H Berndt, president of the Wisconsin Pharmaceutical Association, will speak A meeting of the executive committee of the Wisconsin Pharmaceutical Association has been called in Madison on May 22nd,[2] to bring these men to attend the Rho Chi gathering University pharmacy students and local druggists, physicians and dentists are being invited Displays of interest to physicians and dentists will be shown

A portion of the Wisconsin Pharmaceutical Association convention program

* Section on Practical Pharmacy and Dispensing, A PH A , Washington meeting, 1934

[1] Instructor in Pharmacy, University of Wisconsin, Department of Pharmacy, Secretary, Wisconsin Pharmaceutical Association, Chairman, Committee on Inter-Professional Relationship of the Wisconsin Pharmaceutical Association

[2] The meeting has been held, but the paper is printed to present this type of work This meeting and similar ones he'd in other cities were well attended and were characterized by enthusiasm on the part of those present —EDITOR

is also to be given over to a similar discussion Following the writer's report of his committee work, Dr Kirby will speak He will be followed by Dr J C Sargent, M D , Milwaukee, a member of the committee and Dr Dresen, who has consented to appear on this program also This part of the convention program was considered by many who attended, as one of the high spots of a paper read by the writer at the State Medical Socie y meeting on September 12th

The above concludes the report of work done this year in Wisconsin on inter-professional relationship The writer wishes to add a few comments which may provoke discussion

The inter-professional relationship between physician and pharmacist has been a problem which has always occupied the minds of members of these professions Pharmaceutical journals of both the popular and professional types, as well as medical journals, have devoted many pages to the subject Recently, there has been a renewed and comprehensive attack on the relationship between these two kindred professions

The inter-professional relationship between dentist and pharmacist, on the other hand, has been discussed only, comparatively, recently Extensive work, in this field, has been done by George C Shicks, Assistant Dean, Rutgers University, College of Pharmacy, and others since 1930

Why not also include veterinarians? With the "back to horse" movement in farming territory, diseases and injuries to these as well as other domestic animals and pets call for medication which the small town druggist could and should prepare

The writer believes that the real problem is to get the pharmacist to approach the physician or dentist in the proper way, knowing first that his own house is in order This problem can be handled only by means of an educational campaign along these lines carried on in the pharmaceutical press Recently, a great amount of material has been contributed pointing out methods of approach but neglecting emphasis on the fact that the pharmacist must put his own house in order, which includes discontinuing, to a large extent, counter prescribing and featuring of patent medicines and solving the problem of irregular prescription prices Then, quoting Glenn Frank, "there is no reason why, as independent pharmacists, they should cease to be upstanding, independent factors in the economic life of this Commonwealth "

A serious obstacle to overcome is the fact that various pharmaceutical manufacturers detail physicians and dentists Members of these professions would welcome a visit from their favorite pharmacist who could in this manner reduce the number of preparations prescribed and carried on his shelves In the long run who would suffer? By and large, nobody A certain pharmaceutical house might conceivably lose out in one case and gain in another

In conclusion, the writer is of the opinion that although much can be done with this work by holding joint state and national meetings or as Dr Kirby suggests, joint conventions with sections for the various professions, the real, final work must be done by and between individuals

COMMITTEE REPORTS

REPORT OF THE FAIRCHILD SCHOLARSHIP COMMITTEE

The Fairchild Scholarship Committee of last year was composed of Robert L Swain, L D Havenhill, C T Gilbert and E G Eberle, Chairman As the term of the three former officers terminated in May, the Chairman mailed the Fairchild Scholarship letters to these members The Committee of this year is composed of Robert P Fischelis, Ernest Little, C H Evans and E G Eberle, Chairman The University of Notre Dame, School of Pharmacy, presented no candidate for the examination and the Head of the Department of Pharmacy, Dr Lawrence H Baldinger, with the assistance of other members of the faculty, consented to prepare the questions for the examination and grade the answers

Twenty nine candidates participated in the examination, representing nineteen schools

The examinations were given under three subjects Pharmacy, Chemistry and Materia Medica The highest general average was made in Pharmacy, 76 10, next in Materia Medica, 66 83, lowest, Chemistry, 54 17, general average, all subjects, 66 58 The highest per cent was made in Pharmacy, 92, next in Materia Medica, 91, next in Chemistry, 85 The lowest average was made in Chemistry, 28, next in Materia Medica, 49, next in Pharmacy 56 The general average in Pharmacy was 76 10, sixteen made above that average, twenty-two made 70 or over The general average in Materia Medica was 66 83, sixteen made above that average, fourteen made 70 or over The general average in Chemistry was 54 17, eleven made above that average, four made 70 or over The average of the general averages was 66 58, thirteen made above that average, ten made 70 or more

Candidates of the same school did not have closely related records nor did the two candidates rank next to each other

Scheduled report follows

Candidate	Pharmacy	Chemistry	Materia Medica	Average
1	86	85	91	87 1/3
2	83	83	76	80 2/3
3	80	79	76	78 1/3
4	92	76	60	76
5	88	58	81	75 2/3
6	78	63	84	75
7	86	67	71	74 2/3
8	78	61	82	73 2/3
9	89	50	77	72
10	67	69	75	70 1/3
11	76	53	79	69 1/3
12	80	55	69	68
13	70	52	79	67
14	76	54	68	66
15	84	46	68	66
16	74	57	61	64
17	79	47	66	64
18	75	46	70	63 2/3
19	84	52	55	63 2/3
20	75	53	60	62 2/3
21	87	40	59	62
22	72	47	66	61 -/3
23	82	38	62	60 2/3
24	67	34	75	58 2/3
25	56	46	71	57 2/3
26	63	43	65	57
27	58	51	49	52 2/3
28	62	38	57	52 1/3
29	60	28	62	50

The candidate making the highest record made a general average of 87 1/3 and the next in line made 80 2/3 The chairman of the Grading Committee Lawrence H Baldinger, Head of the Department of Pharmacy, University of Notre Dame, states The candidate who made the highest average wrote excellent papers in all of the subjects, papers which were consistent throughout His marks were the highest in Chemistry and Materia Medica, in Pharmacy, however, he rated about sixth, but his paper was nevertheless very good "

The report of the Grading Committee was submitted to the members of both committees referred to at the beginning and all the members voted to accept the report of the Grading Committee

The chairman desires to thank his colleagues for their support and the members of the Examining and Grading Committees for their helpfulness

The winning candidate is Frederick F Johnson, of the University of Washington College of Pharmacy, a sketch of the prize-winner follows

E G EBERLE, *Chairman*

SKETCH OF FAIRCHILD SCHOLAR 1934

Frederick F Johnson was born in Seattle Washington, May 17 1912 He is a graduate of Roosevelt High School of Seattle and entered the University of Washington College of Pharmacy in September 1930 He received the degree of Bachelor of Science in Pharmacy in June 1934

Mr Johnson was admitted to associate membership in Sigma Xi on his scholarship record He is a member of Rho Chi and was president of Rho chapter of Rho Chi during his senior year He was elected to the honor roll of the Linton Memorial for 1934 This memorial in the form of a plaque, was established by the local chapter of Kappa Psi fraternity in memory of the late Professor Arthur Linton He is a member of Phi Sigma Kappa social fraternity He was graduated with the rank of Ensign in the United States Naval Reserve after having spent four years in the Naval Reserve Training Corps of the University of Washington

Mr Johnson's avocation is music and his recreation is mountaineering He will register in the graduate school of the University of Washington this autumn as a candidate for the degree of Master of Science in Pharmacy and expects to continue graduate study for the degree of Doctor of Philosophy

The winner of the Fairchild Scholarship for 1934 is a son of Dean C W Johnson of the University of Washington College of Pharmacy

F F JOHNSON

PHARMACEUTICAL SERVICE IN THE BRITISH NAVY

The Pharmaceutical Service consists of the following grades (*a*) Head pharmacist, (*b*) superintending pharmacists, (*c*) senior pharmacists, (*d*) pharmacists The age of pharmacists on entry must not be less than twenty-one nor more than twenty eight years Candidates must possess certificates that they hold either the Major or the Minor qualification of the Pharmaceutical Society of Great Britain or the certificate of competency granted by the Pharmaceutical Society of Ireland, and produce testimonials and a full record of training qualifications and experience Pharmacists will be paid a salary of £120 per annum on entry, rising by £7 10s annually to £180 — From *Chemist and Druggist*

CONFERENCE OF PHARMACEUTICAL LAW ENFORCEMENT OFFICIALS

R L Swain, *Chairman*
2411 North Charles Street
Baltimore, Maryland

M N Ford, *Secy-Treas*
State Office Bldg
Columbus, Ohio

TEMPORARY ABSENCE

under State Pharmacy Acts, as compiled by Chairman Swain

Alabama — temporary absence as defined and prescribed by the Board of Pharmacy

Arizona —By temporary absence is meant only those unavoidable absences which may occur during the day's work, and when the registered pharmacist in charge shall be within immediate call, ready and able to assume the direct supervision of said pharmacy

Arkansas —No provision

California —Temporary absence within the meaning of this act, shall be held to be only those unavoidable absences which may occur during a day s work and when the registered pharmacist in charge shall be within immediate call, ready and able to assume direct supervision of said pharmacy

Colorado —Temporary absence means absence of not more than eight hours out of a sixteen hour day, under the Rules and Regulations of the Colorado Board of Pharmacy

Connecticut.—*Provided for but not defined* By regulation of the Pharmacy Commission If a Pharmacy is conducted with only one licensed pharmacist engaged therein and in charge thereof and the absence of such licensed pharmacist from such store may become necessary for a greater period than one day such pharmacist or the owner of such store, may make application to the commission for and the commission may grant a leave of absence of such pharmacist for a reasonable temporary period greater than one day

Delaware —No provision

District of Columbia —No provision

Florida —No provision

Georgia —No provision

Idaho —The department of law enforcement may grant a permit to an assistant pharmacist for such time as the department may prescribe to conduct a drug store or pharmacy during the temporary absence of a regularly employed licensed pharmacist therein

Illinois —Any assistant pharmacist shall have the right to act as clerk or salesman in a drug store or pharmacy during the temporary absence of the registered pharmacist

Indiana —Temporary absence of a registered pharmacist shall be construed to mean that an assistant pharmacist may be left in personal charge of a registered pharmacy not more than two consecutive hours and not to exceed four hours in each twenty four hours

Iowa —"Temporary absence" shall mean necessary absence for meals and business or other necessary causes while the pharmacy is open for business

Kansas —No provision

Kentucky —Registered assistant pharmacist may have charge of a drug store during the temporary absence of the registered pharmacist, but such absence shall not be for a longer period than thirty days in a calendar year

Louisiana —No report

Maine —But such store may be under the charge of a qualified assistant during the temporary absence of such registered apothecary (Not otherwise defined)

Maryland —An assistant pharmacist shall not be left in charge of any pharmacy in this State for a period of more than twenty four hours and then acting only in the temporary absence of a registered pharmacist, regularly and continuously employed in that pharmacy

Massachusetts —No provision

Michigan —A registered assistant pharmacist may be employed in any pharmacy or drug store under the management and supervision of a registered pharmacist, and during his temporary absence therefrom (Not otherwise defined)

Minnesota.— or during the temporary absence of such registered pharmacist, in charge of a registered assistant pharmacist (Not otherwise defined)

Mississippi —No report

Missouri —No provision

Montana —No report

Nebraska —Temporary absence within the meaning of this act shall be held to be only those absences which may occur during a day s work and when the registered pharmacist in charge shall be within immediate call ready and able to assume the direct supervision of said pharmacy

New Hampshire —An assistant pharmacist may be left in charge of a pharmacy only during the temporary absence of a registered pharmacist, and such temporary absence shall in no case exceed forty eight hours at any one time, nor fourteen days in any one calendar year, unless consent is obtained from the commission

New Jersey —The term temporary absence as used in this section shall mean an absence of not more than four hours in any one day of twenty four hours

New Mexico —No provision

New York.—A junior pharmacist may subject to the rules of the Board, have temporary charge of a pharmacy or drug store, but during such temporary charge, shall not compound or dispense physicians' prescriptions

North Carolina —Provided, that during the temporary absence of the licensed pharmacist in charge of any pharmacy drug store or chemical store, a licensed assistant pharmacist may conduct or have charge of said store

The Board of Pharmacy of North Carolina gives the following interpretation The term temporary absence ' in the Pharmacy Act shall be held to mean that interval during the period the store is open for business, when the registered manager is out of the store but within call and ready to assume direct supervision of said pharmacy

The qualified assistant pharmacist may have charge of a retail drug store during such temporary absence of the registered pharmacist and exercise his right to do what the law and his certificate confer upon him

North Dakota — or during the temporary absence of such registered pharmacist, in charge of a registered assistant pharmacist

Ohio —No provision

Oklahoma — No provision

Oregon —Temporary absence within the meaning of this act shall be held to be only those unavoidable absences which may occur during a day's work and when the registered pharmacist in charge shall be within immediate call ready and able to assume the direct supervision of said pharmacy

Pennsylvania —An assistant pharmacist may also perform such duties during the temporary absence of the pharmacist regularly in charge

Rhode Island —No provision

South Carolina —The said Board shall make rules and regulations clearly defining temporary absence

South Dakota —Any registered assistant may take charge of the drug store or pharmacy during the temporary absence of the manager thereof Provided, that nothing in this section shall be construed as giving such assistant authority to perform continuously any of the duties herein mentioned, except under the supervision and in the presence of the manager

Tennessee —A registered assistant pharmacist shall have the right to fill prescriptions and dispense medicines in a drug store or pharmacy and during the temporary absence of the registered pharmacist in charge, provided such absence is not more than one third of the time per week that the store is open for business

Texas —No provision

Utah —Temporary absence within the meaning of this title, shall be held to be only those unavoidable absences which may occur during the day s work, not to exceed ten days and when the registered pharmacist in charge shall be within immediate call, ready and able to assume direct supervision of said pharmacy

Vermont.—No provision

Virginia — but during the temporary absence of such registered pharmacist a registered assistant pharmacist may act in place of the said registered pharmacist Board regu-

lations 2 (g) The term "temporary absence" as used in this act shall be construed to mean an absence from the pharmacy over which said registered pharmacist has personal supervision of less than one half the hours that said pharmacy is open to the public for business

Washington —Ruling of the Director of Licenses Temporary absence shall be held to be only those absences which may occur during a day's work, and when the registered pharmacist in charge shall be within immediate call ready and able to assume the direct supervision of said drug store or pharmacy

West Virginia —No provision

Wisconsin — a registered assistant pharmacist may have charge during the pharmacist's necessary absence, not to exceed ten days

Wyoming —No provision

Office of the Secretary,
September 7 1934

CONFERENCE OF STATE ASSOCIATIONS IN MIDWEST

The Midwest Conference of Pharmaceutical Associations was organized in Kansas City on September 3rd Officials of five Midwest states—Iowa, Missouri, Nebraska, Oklahoma and Kansas—were present The Colorado Pharmacal Association is expected to join the conference later, its officers being unable to attend this meeting An organization was perfected a Constitution and By-Laws adopted, officers elected and work started which is designed to be of benefit to the Independent Retail Druggists of these states

Incorporated in the By Laws is a clause which states the intent and purpose of the Conference One purpose is to aid, assist and cooperate with the National Associations at all times for the mutual interest of independent druggists Other purposes are to secure similar legislation in adjoining states and for the interchange of ideas and information valuable to the retail drug trade The Conference adopted a resolution to request the N A R D , at the New Orleans Convention, to approve and assist in organizing similar Conferences in other sections of the country It is expected that this Conference will show a fairly militant spirit in its operations

Officers elected were *President*, John W Slocum, Secretary of the Iowa Association, *Vice President*, Guy Butler, President Nebraska Association *Secretary-Treasurer* Roy C Reese, Secretary Kansas Association Others attending the Conference were President Otto Bjornstad Iowa Association, President Joe Knight, and Treasurer Murray Williams Missouri Association, Secretary J G McBride, Nebraska Association, Secretary E R Weaver Oklahoma Association President Otto Kuether and Treasurer Walter H Varnum Kansas Association

Future meetings are to be held quarterly

ROY C REESE, *Secretary-Treasurer*

SECTION OF ILLINOIS PHARMACY LAW WITH REFERENCE TO SUBSTITUTION

Section 14, Paragraph 2, of the Illinois Pharmacy Law provides as follows in regard to substitution

"Nor shall any druggist or other person being requested by means of a prescription, or in any manner, to sell, furnish, or compound any drug medicine, chemical or pharmaceutical preparation, substitute or cause to be substituted therefor without notification to the purchaser any other drug, medicine, chemical or pharmaceutical preparation Any person violating any provision of this section upon conviction shall be liable to all the costs of the action and all the expenses incurred by the State Board of Pharmacy in connection therewith and for the first offense shall be fined not less than ten dollars nor more than one hundred dollars, and for each subsequent offense shall be fined not less than seventy-five dollars nor more than one hundred and fifty dollars The State Board of Pharmacy is hereby empowered to employ an analyst or chemist expert, whose duty it shall be to examine into any claimed adulteration substitution or alteration or other violation hereof, and report upon the result of his investigation and if such report justify such action, the board shall cause the offender to be prosecuted"

Substitution of the sort covered by the state law is now a violation of the Retail Drug Code under the NRA and subject to action by the Code Authority—Editor C R D A News

ASSOCIATION BUSINESS

AD INTERIM BUSINESS OF THE COUNCIL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION, 1934–1935

Office of the Secretary, 2215 Constitution Avenue, Washington, D C

LETTER NO 4

August 28, 1934

To the Members of the Council

24 Local Secretary for 1934–1935 Dean A O Mickelsen of Portland is recommended for election as Local Secretary by those who have charge of arrangements for the 1935 meeting in Portland Dean Mickelsen is nominated as Local Secretary by E F Kelly If members of the Council desire to submit other nominations, it is requested that these be forwarded promptly in order that a vote may be called for as early as possible

25 Headquarters for the 1935 Meeting The local committee who have charge of arrangements for the meeting recommend that the Hotel Multnomah be chosen as headquarters This hotel is located at Fourth and Pine Streets, has eight stories, is a Class A fireproof, steel structure with 500 rooms, all outside, 400 of which have private baths or showers The hotel has garage service and has submitted the following rates

Room without bath—1 person	$1 75, 2 25, 3 00
Room without bath—2 persons	$2 25, 2 75, 3 50
Room with bath—1 person	$2 50, 3 00 4 00, 5 00, 6 00
Room with bath—2 persons	$3 50, 4 00 5 00, 6 00, 8 00
Room with bath—Twin beds	$5 00, 6 00, 8 00, 10 00
Suites—Parlor, bedroom and bath	$10 00, 12 00
Parlor, bedroom and bath twin beds	$12 00, 14 00, 16 00
PARTY BUSINESS, 10 or more—	
Single with bath	$2 50
Double with bath	$3 50 to $6 00
Twin beds with bath	$5 00 to $7 00

MAIN DINING ROOM, table d'hote, luncheon 65¢ to $1 00, also a la carte Dinner $1 00 to $1 50

COFFEE SHOP table d'hote and a la carte service at moderate prices

Dean Mickelsen has forwarded a plan of the mezzanine floor of this Hotel which shows ample accommodations as to meeting rooms, all on one floor, and so arranged that they can be easily located

26 Time of the 1935 Meeting The local committee recommends that the meeting be held either the week of August 5th or of August 12th and states that the average temperature for Portland on these dates is 67° The suggested dates were submitted to Secretary Christensen of the N A B P and to Chairman Jordan of the A A C P Secretary Christensen approved either date Chairman Jordan expressed satisfaction that the meeting is to be held earlier and the opinion that the week of August 12th would be more satisfactory because a number of schools and colleges of pharmacy hold summer sessions and it would be difficult for their representatives to reach Portland for the earlier date

Dean Jordan's statement was referred to Dean Mickelsen for consideration In the meantime the Oregon and Washington Pharmaceutical Associations have decided to hold their annual meetings for 1935 in Portland on Monday and Tuesday of the week of the A PH A meeting and the Idaho and Montana Pharmaceutical Associations are being invited to hold their meetings at the same time The meetings of the Oregon and Washington Pharmaceutical Associations will be held on Monday and Tuesday so that their members will be free to attend the A PH A sessions Wednesday, Thursday and Friday

President Perry of the Oregon Pharmaceutical Association has written that the annual Buyers' Week conducted by the two Portland drug wholesalers has been set for the week of

August 5th and urges that this week be chosen for the A PH A meeting since hundreds of drug store owners from Oregon, Washington, Idaho and even Alaska visit Portland for this Buyers' Week Dean Mickelsen and the Portland Chamber of Commerce, have written in support of the earlier date Dean Mickelsen advises that in case the earlier date is chosen, the Multnomah Hotel will give preference to our convention members as to rooms and meeting rooms so that the A PH A meeting will not be interfered with by the larger attendance

If the members of the Council have comments or suggestions please submit them promptly as a vote on the local secretary and on the time and headquarters for the meeting will be called for in about ten days

E F KELLY *Secretary*

LETTER NO 5

To the Members of the Council

27 Minutes of the First Meeting of the Council Motion No 1, Council Letter No 2, page 846 has received eleven affirmative votes and is carried President Fischelis is recorded as not voting

28 Committee on Maintenance Motion No 3 Council Letter No 3, page 849, has been carried and the appointments are approved

29 Election of Members Motion No 4, Council Letter No 3, page 849, has been carried and applicants numbered 1 to 41 inclusive, are declared elected

30 Joint Meeting Executive Committee N A R D and Council, A Ph A Secretary Dargavel has advised that the annual joint meeting will be held in the Hotel Roosevelt New Orleans La on Monday September 24th, at 10 30 A M All members of the Council are invited to be present and those who expect to attend are requested to notify the secretary as promptly as possible

The secretary was requested by Mr Dargavel to suggest the subjects which should be considered at this meeting and after consulting with the president and chairman of the Council wrote Mr Dargavel on August 31st as per copy attached Mr Dargavel has approved this list and advised that, for the present he has no additions to suggest

The secretary will appreciate an expression by letter of the views with respect to these subjects of those members of the Council who cannot attend the joint meeting

E F KELLY, *Secretary*

THE EDUCATION DEPARTMENT OF JAPAN ENCOURAGES SCIENTIFIC RESEARCH

The department of Education of Japan has decided to grant an official subsidy of 47 000 yen to encourage scientific research for the current year Among the persons who will receive subsidies for their research work are the following

Associate Professor Shigehiko Sugazawa (Dr of Pharmacy) of the Tokyo Imperial University for his study of papaverin compounds

Professor Takee Tsukamoto of the department of pharmacy in the Imperial College of Medicine at Kanazawa and his associate for his research into the decomposition of anæsthesin

Professor Etsuo Miyamichi of the Toyoma School of Pharmacy for his study of the disruption of unsaturated fatty acids

Professor Ryoji Sakai of the Kummamoto School of Pharmacy for his study of food substitutes

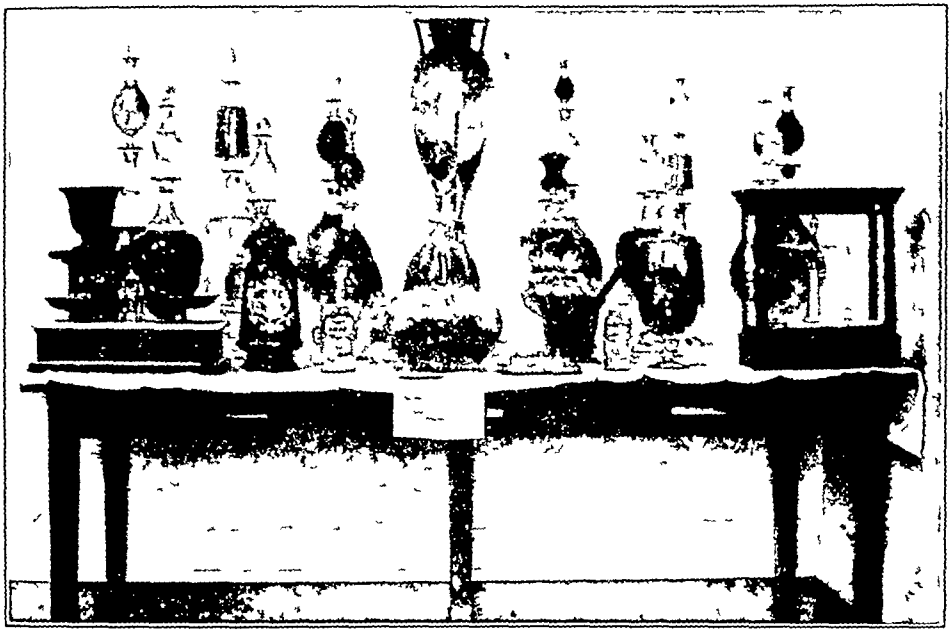
Professor Masanobu Teranishi of the Tokushima Technical Higher School for his study of the alkaloid contained by the root of *Orixa japonica*

The following persons are to receive subsidies for their studies of chemical problems

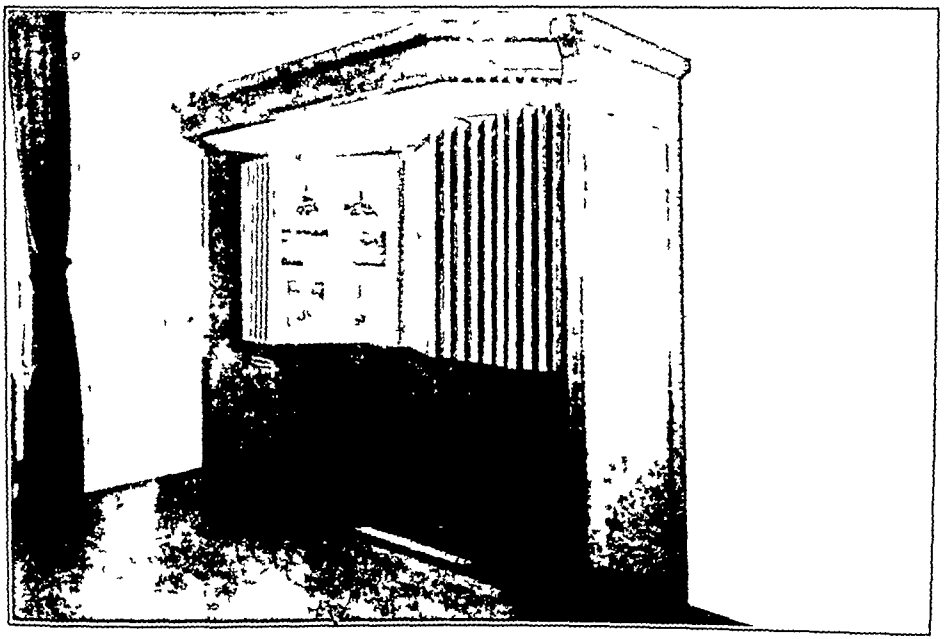
Professor Shoichiro Nagai of the Tokyo Imperial University for his investigation into the relations between the dissolvability of glass and chemical ingredients

Professor Seigo Minami of the Kyushu Imperial University for his study of the efficacy of vitamin D in skin diseases

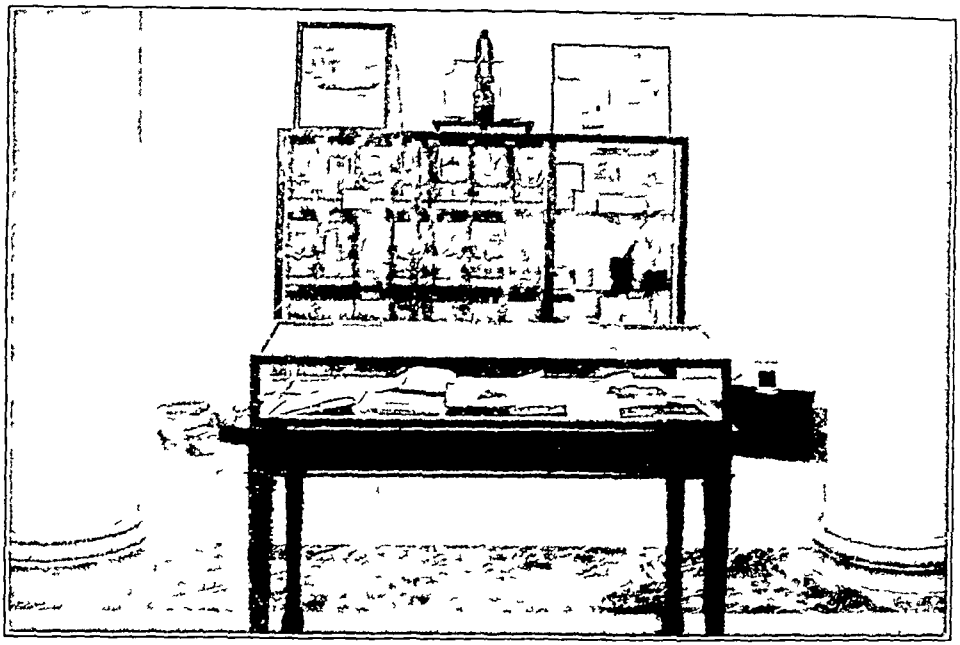
Professor Heihachi Yoshiamara of the Meiji College of Pharmacy for his study of *Ranunculaceæ* and related plants



Show globes bottles jars and balances presented by pharmacist Lawrence Williams of Baltimore Mr Williams has one of the largest collections of show globes in this country



The multiplex display fixture above and the photographs were presented by the University of Minnesota College of Pharmacy Frederick J Wulling Dean The illustrations are excellent and are displayed under twenty divisions including the drying ovens milling and cleaning apparatus, also green houses drug milling laboratory, medicinal plant laboratory, pharmacognosy laboratory pharmaceutical laboratory



A view in the Museum of the American Institute of Pharmacy AMERICAN PHARMACEUTICAL ASSOCIATION On top of the case, against the wall, is an early certificate of membership in the AMERICAN PHARMACEUTICAL ASSOCIATION of the late John F Hancock This design was discontinued

On the other side is displayed a frame of foreign prescriptions filled in the pharmacy of J Leon Lascoff and presented by him to the ASSOCIATION In the center, between the two frames, is a balance used in the pharmacy of the late John F Hancock of Baltimore

Inside the case are twenty-two large drug jars, presented by James E Hancock of Baltimore Each one of these jars has a coat of arms of a state, and the name of the drug is on the jar in gold leaf In the other part of the case is a mortar that came to Maryland more than three hundred years ago and belonged to the family of Governor Stone It was presented to the ASSOCIATION by Dr F B Tipton On the same shelf is a framed painting of Texas Bluebonnets presented by Austin pharmacists One of the lignum vitæ mortars was presented by Dr F B Tipton and the other by James E Hancock On the same shelf is a bottle with a chemical which probably, dates back to alchemical days, presented by Mrs H M Whelpley

In the front case is a display of National Formularies and photostatic copies of letters dating back to the Pharmacopœia of 1820 There is also a book of formulas compiled by Rev John Wesley, founder of the Methodist Church The book in the case is of the 26th edition showing that it had been quite widely distributed There are other items in the exhibit, which it is rather difficult to designate, except by viewing the display

SYNTHETIC RADIUM

According to Paris reports and *New York Times* press dispatch the discovery of synthetic radium has been made by the son-in law and daughter of the late Mme Curie, M and Mme Jean Joliot and is to be announced at an international gathering of scientists early next month in London

If the report is true, the discovery will be of immense importance in the fight against cancer, since it is stated that the artificial product is equally effective as natural radium and can be produced in large quantities comparatively cheaply The rarity and expensiveness of radium have greatly circumscribed its use in cancer work

M and Mme Joliot for years followed the work of Mme Curie and are now conducting the laboratory she founded in Paris

EDITORIAL NOTES

ELEMENT 91—PROTOACTINIUM

Element 91—named Protoactinium was isolated by Dr Aristid V Grosse at the Kaiser Wilhelm Institute, Berlin in 1927 The element was described in a paper, read by the discoverer, at the recent convention of the American Chemical Society in Cleveland Dr Grosse is now of the University of Chicago

CLAIM TO DISCOVERY OF ELEMENT 93 WITHDRAWN

There has been considerable interest in the announcement that Odolen Koblic director of the National Uranium and Radium Plant in Joachimsthal, Czechoslovakia, had discovered a new element, No 93, to which he proposed to give the name bohemium ' The steps by which the new element can be isolated as a silver salt appeared entirely logical and the working hypotheses sound Koblic presented his results in a clear straightforward manner, with unusually complete data even to an approximate atomic weight of 240

However, spectroscopic analyses made by experts both at Prague and Berlin show that the scientist was in error in identifying the heavy, difficultly soluble, brilliant yellow product which he isolated as element 93 Following the spectrum and X ray examination of the salt, it seems certain that it is silver tungstate and, agreeing with the interpretation of the analysis, Koblic has withdrawn his claim of discovery

In view of the straightforward manner in which this whole incident has come before us, one cannot avoid hoping that Koblic will continue in his research, and if there is an element No 93 to head the actinium series that he may be the one definitely to discover it —*News Edition, Industrial and Engineering Chemistry* (September 10 1934 page 318)

PHARMACEUTICAL EXHIBIT AT THE CONVENTION OF THE AMERICAN DENTAL ASSOCIATION

Sponsored jointly by the Revision Committees of the United States Pharmacopœia and National Formulary an exhibit of official medicines of interest to the dentist was shown at the American Dental Association annual meeting held in St Paul, Minnesota, August 6 to 10, 1934 More than 4000 dentists were registered They carried home the idea of Professional Pharmacy and its desire to cooperate in the practice of Dentistry The display consisted of a central section devoted to chemicals and galenicals official in the U S P and N F The display was prepared and exhibited by Prof R. E Terry of the College of Pharmacy of the University of Illinois

RECASTING THE NRA

The NRA is undergoing a change and that is in the direction of having General Johnson cooperate with others and do away with one-man rule It has been stated that the NRA will be patterned after the American government—executive legislative and judicial divisions, with the limits and boundaries of each clearly defined, the cooperation of industry and labor it is stated will be given positive and consistent direction

The NRA automatically expires June 16th, the President has announced that the basic ideas will be perpetuated, the problem is under consideration by him but few details of the proposed revision have been given out

Announcement has been made of the appointment of a General Code Authority to administer the basic code which covers the 252 industries that have no specific codes, the chairman of this body is Dr Willard Hotchkiss, president of the Armour Institute of Technology

THE LONDON PHARMACOPŒIA

The first London Pharmacopœia was published in 1618 An apothecary was not allowed to dispense or sell drugs unless these had been exposed to public gaze for a number of specified days and any physican had the right to prevent the apothecary from selling drugs or medicines which were in his opinion corrupt or decayed During the reign of James I a separate charter was granted and only practitioners in pharmacy were admitted to the apothecaries' guild

Between the years 1618–1851 thirteen editions of the London Pharmacopœia were published, each edition improved on the preceding There are several copies in the American Institute of Pharmacy, the earliest that of 1653

PERSONAL AND NEWS ITEMS

The Modern Hospital for August has an article An Affiliation Plan of Hospitals and the School of Pharmacy" by Dean Edward Spease, of the School of Pharmacy Western Reserve University Aside from giving the plan there are a number of excellent half-tones showing how the work of the hospital pharmacy is carried on

Matthias Noll, a verteran among Kansas pharmacists, several years ago, began collecting historical material relating to Kansas pharmacy This material has been collated and prepared in typewritten form with the purpose of preparing a printed volume dealing with historical pharmacy in Kansas

N G Hubbard, Birmingham, and John A Edwards, Anniston, have been appointed members of the Alabama Board of Pharmacy, the former succeeds Hal E Duncan, resigned and the latter succeeds the late W E Bingham Both of the appointees are active in Association work

Henry S Godshall, Lansdowne Pa , succeeds the late Raymond Hendrickson with Smith Kline & French Co Mr Godshall has been with the firm since his graduation in Pharmacy and is a member of the A PH A

Dr A R Bliss has been named director of the Birmingham Research Laboratories and elected professor of Pharmacology and dean of The School of Pharmacy of Howard College, Birmingham Ala

Sir Ronald Storrs, former military governor of Jerusalem, following the World War, was one of the visitors to register at the Pharmacy Exhibit in the Hall of Science at the Century of Progress Exposition General interest in the exhibit continues unabated with last Sunday one of the best days in the season from the point of registrations by physicians and pharmacists

Herbert Mayes former editor in chief of the *American Druggist,* has recently been promoted to the editorship of *Pictorial Review* He is succeeded on the *American Druggist* by Howard Stephenson, former managing editor with Samuel C Henry, former secretary of the N A R D , as associate editor

The new research laboratories of Messrs Eli Lilly & Co Indianapolis, will be formally opened with appropriate ceremonies on October 11th Sir Henry Dale will deliver the main address at the afternoon session Sir Frederick Banting and Dr Irving Langmuir will also speak At the dinner in the evening addresses will be made by Sir Henry Dale, Dr Elliott P Joslin, Dr George R Minot, Dr Frank R Lillie Dr Charles R Stockard, Dr George H Whipple, Dr Carl Voegtlin and Dr G H A Clowes, director of the Research Laboratories

S L Hilton has recently donated to the ASSOCIATION a number of volumes from his library and pharmaceutical, chemical and medical publications

Among recent visitors at the American Institute were A G DuMez, W F Rudd, A L I Winne, Ernest Little, Clyde W Graham Spokane, Paul E Eliason, Reno, Paul W Hildebrand Detroit, Robert William Rodman New York, W A Prout, Charleston, Ernest Bergeron Keen N H , Clyde S Wills Richmond Frequent visits are made by Washington pharmacists and quite a number of architects have inspected the building

F J Steele, of Bloomfield Pittsburgh, Pa has donated the following volumes for which the Association extends thanks 'A Manual of Microscopy,' L K Darbaker 'Notes on Equation Writing and Chemical and Pharmaceutical Arithmetic ' by J H Beal "The Pharmacist and Chemical Record" by N Gray Bartlett and Albert E Ebert Squibb's Materia Medica," 1906 Edition "North American Botany," by Amos Eaton and John Wright

Joseph Calloway Jr , who has been chief of the New York F D A station since April 1929 has been transferred to Baltimore, and Daniel W Walsh, chief of the Baltimore station since September 1920 will succeed Mr Calloway in New York

Mr Calloway's transfer to the chiefship of the Baltimore station has been at his own request according to W R M Wharton, chief of the Eastern district of the Food and Drug Administration The Eastern district embraces the stations in Atlanta Baltimore Boston, Buffalo New York and Philadelphia It is one of three districts of the administration and has its headquarters in New York

Victor E Levine, professor of biological chemistry and nutrition at Creighton University School of Medicine and Charles W Bauer, professor of chemistry at the School of Pharmacy, are spending four months in the Arctic in research among the Eskimo children They are making physical measurements and studies in nutrition An investigation will be made of the susceptibility of the Eskimo child to tuberculosis, diptheria and scarlet fever

OBITUARY

RAYMOND HENDRICKSON

Raymond Hendrickson Chester, Pa , member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1917, died suddenly while on his vacation in Ocean City, N J , on August 7th

Mr Hendrickson was born in California on November 12, 1878, but came east at an early age and entered the retail drug business He was graduated from the Philadelphia College of Pharmacy and Science in 1902 He successfully owned retail drug stores in Carlisle and Chester, which he sold at the time he entered the employ of Smith Kline & French Co , of Philadelphia

He was a charter member and one of the founders of the Phi Theta Sigma Fraternity and was an honorary member of the Holland Club of New York He was also a member of the Philadelphia Kiwanis Club Delaware County Druggists Association Philadelphia Association of Retail Druggists Pennsylvania Pharmaceutical Association Drug Club of Veterans Traveling Men s Association of the Pennsylvania Pharmaceutical Association and National Travel Club

Mr Hendrickson made his home at Twenty-first Street and Providence Avenue, Chester Pa He is survived by his widow and daughter Dorothy Jane Hendrickson

VAN AMBURG SANDLES

Van Amburg Sandles of McKees Rocks Pa member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1909 died Tuesday, August 14th He had been in ill health for about three years but was seriously ill only during the last two weeks

Mr Sandles was born at Wexford March 20, 1876 son of the late Mr and Mrs William H Sandles He was educated in the public schools of Beaver Falls afterward attended the Pittsburgh College of Pharmacy where he was graduated in 1896

Mr Sandles came to McKees Rocks in 1900 He was prominently identified with the business, religious and social life of the borough and community He operated a drug store at 1000 Chartiers Avenue since 1907 and was deeply interested in his profession He was a member of Allegheny County Retail Druggists' Association and the Pennsylvania Pharmaceutical Association, and a regular attendant at the annual conventions of the latter

He was a member of the Masonic bodies and of the Presbyterian Church of McKees Rocks Mr Sandles is survived by his widow Mrs V A Sandles and one son William W Sandles

We are advised of the death of the mother of our fellow-member, **Dr S E Massengill**, Bristol Tenn Mrs Massengill died September 6, 1934, aged 86 years

DEATH OF THE TREASURER OF THE BRITISH PHARMACEUTICAL SOCIETY

A H Jenkin, treasurer of the British Pharmaceutical Society since 1931, died suddenly on August 24th, of angina pectoris aged sixty-three years

During the war Mr Jenkin was one of the promoters of the Pharmacists' Volunteer Corps in which he was platoon commander He was active in pharmaceutical organizations and is known in connection with the case of Jenkin vs The British Pharmaceutical Society (1920)

The Jenkin Test Case

The suit was brought to test in court whether the British Pharmaceutical Society could engage in certain activities which seemed desirable to some The judgment declared that it was not within the objects, powers or purposes of the Society to undertake or perform any of the following

(1) To regulate the hours of business of members of the Society, (2) To regulate the wages and conditions of employment as between masters and their employees who are members of the Society, (3) To regulate the prices at which members shall sell their goods, and (4) To insure and to effect insurances of members of the Society against errors, neglect and misconduct of employees and against fire, burglary damage to plate glass, and generally against insurable risks or to spend any part of its funds upon the promotion, establishment and work of the Industrial Council Committee for the drug trade or industry "

One result of the *Test Case* was the formation of the Retail Pharmacists' Union —*Journal and Pharmacist* (September 1 1934)

For a number of years Mr Jenkin owned a pharmacy but for a longer period was engaged in hospital service, he served as chief pharmacist at the City of London and East London Dispensary until his death

SOCIETIES AND COLLEGES

DISTRICT OF COLUMBIA PHARMACEUTICAL ASSOCIATION

The election of officers of the District of Columbia Pharmaceutical Association will be held at its next session, in October The *President* of the Association is Bert A Smyser and the *Secretary* is Augustus C Taylor

DELAWARE STATE PHARMACEUTICAL SOCIETY

The forty eighth annual meeting of Delaware Pharmaceutical Society was held at Rehoboth Beach, June 27th–28th Among the speakers were Dr George L Secord and Andrew F Ludwig, President of the Maryland Pharmaceutical Association

The following officers were elected *President*, Harry Jones, Smyrna, *First Vice President*, George W Brittingham, Wilmington, *Second Vice President* William B Jester, Delaware City, *Third Vice President*, Edward J Elliott, Bridgeville, *Secretary* Albert Dougherty Wilmington, *Treasurer*, Albert Bunin, Wilmington

NEBRASKA PHARMACEUTICAL ASSOCIATION

Nebraska Pharmaceutical Association will hold its 1935 convention in Lincoln during the month of February while the State Legislature is in session Work on the program for the meeting is well under way

NEW JERSEY PHARMACEUTICAL ASSOCIATION

One of the most interesting conventions of the New Jersey Pharmaceutical Association, was held at Asbury Park, June 12th to 15th Among the speakers were President R P Fischelis of the AMERICAN PHARMACEUTICAL ASSOCIATION and Dr Ernest Little, of the Pharmacy Department Rutgers University

The report of the Committee on Pharmaceutical Education and Standards was presented by Chairman Fischelis

An interesting feature of the meeting was the presentation of the Pharmacy Week trophy donated by the Hudson County Retail Druggists Association and won by John H Hoagland of New Brunswick, of the features, one was the display of native medicinal drugs

The following officers were elected to serve for the ensuing year *President* David I Cohen, Jersey City, *First Vice-President*, Harry B Reibel Elizabeth, *Second Vice President*, Benjamin Schamach, Paterson, *Secretary*, Prescott R Loveland, 214 Chelsea National Bank Building, Atlantic City, *Treasurer*, Charles J McCloskey, Branchville

TENNESSEE PHARMACEUTICAL ASSOCIATION

Tennessee Pharmaceutical Association held an interesting meeting at Knoxville, July 17th to 19th The NRA was endorsed and a plan for constructive legislation was adopted The following officers were elected *President*, Robert R Ferrell Memphis, *First Vice President*, L S Elgin, Knoxville, *Second Vice President*, Phil P Vance, Chattanooga, *Third Vice-President*, Wm P Winter, Nashville, *Treasurer*, Homer J Berryhill, Jackson

At a meeting of the State Executive Board, held in Nashville, August 20th Tom C Sharp of Nashville was elected *Secretary*

TEXAS PHARMACEUTICAL ASSOCIATION

The Texas Druggist, official organ of the Association for September reports its 55th annual meeting The veterans elected Frank B Dwyer, with a business record of 56 years, president

A committee will be appointed by President Seeley for the purpose of studying the Pharmacy Law of Texas with a view of making such changes as will enhance public health and benefit all connected with pharmacy

Dr W J Danforth, Fort Worth, has been appointed field secretary, whose duty is to contact with Texas pharmacists

Lee Stinson now wears a past president's badge of Texas Pharmaceutical Association The members of the Executive Committee are *President*, A H Seeley, *Vice Chairman*, Shine Philips, John B Ray, Henry F Hein, H P Gaddis, E B Oliver, J C Frazier, Walter F Adams, *Secretary*

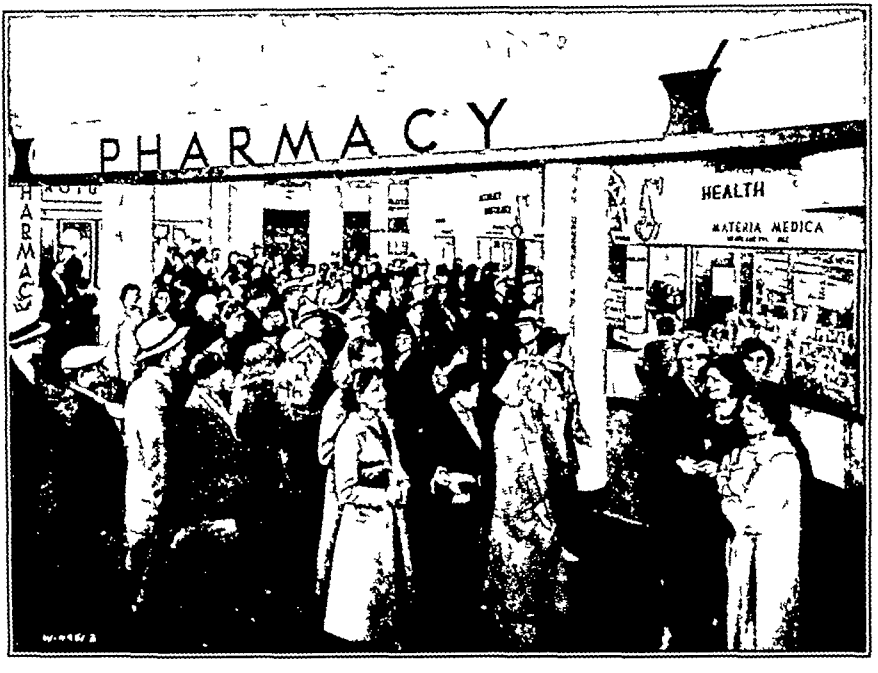
NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION

Among the speakers invited to address the convention of the National Wholesale Druggists' Association to be held October 1st–6th, at White Sulphur Springs, W Va , are representatives of the Food and Drug Administration, the Federal Trade Commission and the Na-

tional Recovery Administration It is hoped that General Hugh S Johnson, National Recovery Administrator, will be present as a speaker

At the present convention, an innovation will be introduced In the past it has been the custom for chairmen of the various committees of the association to read detailed reports of their activities during the year preceding the convention At the present meeting, these reports will not be read, they will be printed and, as each visitor at the convention registers, he will be given a complete set of the reports

Reports which are controversial in any respect will be read in abstract at some of the sessions of the convention, to afford an opportunity for discussion and questioning from members listening in



Pharmacy Exhibit at Century of Progress

The photograph shown herewith was taken on September 17th (Constitution Day) While the number of visitors on this occasion was larger than usual, the average attendance at the Pharmacy Exhibit compared favorably with that of other exhibits and shows that the public is interested in the service of pharmacy

BARBITURIC ACID POISONING *

It is pointed out by Purves Stewart and Wilcox (London) that while there is no objection to the administration of barbiturates under medical supervision, their repeated daily administration over long periods in hypnotic doses is not always free from danger, and may induce toxic symptoms in the central nervous system Persons addicted to the daily use of these drugs not uncommonly take a dangerous overdose, accidentally or otherwise The barbiturates should be obtainable, they say, only on medical prescription which should not be repeated without authority Several cases are cited showing that acute barbitone coma is materially improved by cisternal drainage, a method which should be borne in mind as supplementary to other measures — *The Prescriber* (September 1934) 288

LEGAL AND LEGISLATIVE

THE CODE OF FAIR COMPETITION AMENDED

A public hearing was held on June 7, 1934 on the Amendment (Loss Limitation Provision) as signed April 8 1934—see April JOURNAL, A Ph A page 382 The National Retail Drug Code Authority requested a continuation of the Amendment with the elimination of the proviso referring to discounts, free deals and allowance This proviso has been omitted in the Amendment signed on September 21, 1934, which follows In its stead the Administrator is given certain powers to be exercised in any particular case where unfair advantage is being taken of the Amendment

AMENDMENT TO THE CODE OF FAIR COMPETITION FOR THE RETAIL TRADE—APPROVED SEPTEMBER 21, 1934 EFFECTIVE IMMEDIATELY

Section 6 of Schedule A" of the Code of Fair Competition for the Retail Trade as amended is hereby amended as follows

Section 6 It is hereby declared an unfair trade practice for any drug retailer to sell any drugs, medicines cosmetics toilet preparations or drug sundries at a price below the manufacturers' wholesale list price per dozen provided however, that in the case of biologicals or other of the above mentioned products which are not customarily sold in dozen or greater lots, the Code Authority may fix a comparable unit quantity

The Administrator at the recommendation of the National Retail Drug Code Authority or otherwise, after such notice and hearing as he may deem necessary may suspend or modify the operation of this clause at any time when it appears that such operation does not tend to effectuate the purposes of Title I of the Act The Administrator shall suspend or modify the operation of this clause in any particular case where a manufacturer is found to be manipulating his prices because of this provision in such a manner as to maintain an unwarrantedly higher price to the ultimate consumer or to oppress small enterprises, or otherwise to defeat the purposes of the Act

RELIEVES SMALL BUSINESS FROM PAYING MULTIPLE ASSESSMENTS

The National Recovery Administration has taken a further step toward relieving wholesalers and particularly small retailers, from paying multiple assessments An Administrative Order issued by the National Recovery Administrator puts a stop, until an improved formula can be worked out, to collections by Code Authorities governing one of wholesale or retail distribution from wholesalers or retailers who deal principally in some other line.

The variety of merchandise handled by the small local store, or the general store which sells 'anything the farmer needs"—types which are important factors in the total retail business—bring their operations under a number of Codes The local store owner has been harassed by demands to pay assessments to all of those Code Authorities Department stores and wholesale distributors also are importantly affected Under the order issued to day they will pay assessments only to the Code Authority for the Code governing their principal line of business, with few exceptions

PLAN TO MAKE ORDER PERMANENT

While the present order is temporary, the National Recovery Administration now is working out a plan to make permanent both its general principle and its main features The permanent plan will provide, at the same time, for the adequate support of Code Authorities governing the distribution of merchandise sold through stores handling other products as their principal line

It was pointed out that where a wholesaler or retailer is also engaged in some other line of business, such as manufacturing, this order will not prevent collection of assessment on the other business by the Code Authority for that business —From *Blue Eagle*

NEW JERSEY CODE

Article 9 of the New Jersey act would create an Industrial Advisory Council composed of five members to be appointed by the governor to represent labor, industry and the public One of the three representatives of the consuming public would be chairman of the group The council would act as a price fixing commission Upon petition from the administrator, it would investigate complaints of unfair competition This council would have the power to establish price fixing in industries in which investigation showed this method was necessary in order to protect the business of the industries' members

Another section of the act would authorize the administrator to appoint a planning and research division to analyze wage and labor conditions investigate and analyze costs of operation of trades and industries where minimum prices are requested cooperate with the Industrial Recovery Council and furnish statistical and other data to the Administrator

LIABILITY OF A DRUGGIST IN COMPOUNDING PRESCRIPTIONS

A physician prescribed for the plaintiff a 1 per cent solution of gentian violet, the written prescription directing the use of the solution as a mouth wash The physician, however, orally directed the plaintiff to use the solution in her eyes also The drug company to which the plaintiff took the prescription gave her, not a 1 per cent solution of gentian violet, but a 3 per cent solution, and this, when used as an eyewash caused the plaintiff to lose her eyesight She sued the drug company The trial court sustained the demurrer interposed by the drug company The plaintiff then appealed to the Court of Appeals, and the judgment of the trial court was reversed

JAPAN PHARMACISTS UNION WANTS BETTER CONTROL OF NARCOTIC SALES

As a result of the action of the Japan Pharmacists Union, a recommendation was addressed to Baron Tatsuo Yamamoto signed by President Kametaro Kawai of the Union There seems to be an increasing tendency to the use of narcotics and while there have been more violations by pharmacists it has been largely due to the fact that those who seek to secure narcotics intimidate the pharmacists and not because the pharmacists desire to sell narcotics

In the petition sent to the government it is suggested that sanatoriums be established, that drug addicts be registered, that local limitations be placed on the use and quantities of prescribed narcotics and that uniform narcotic prescriptions be established, also that there be better control of handling narcotics by unqualified persons

PROPOSED REVISION OF THE REGULATION OF DANGEROUS DRUGS IN JAPAN

The basic aim of the proposed revision of the narcotic regulations is to prevent the abusive use of narcotics and the following measures have been advanced

1 To expand the definition of narcotics
2 To replace the existing system of registration by a permit system
3 To require physicians to report narcotic addicts they have treated and to place stricter control on their issuance of prescriptions and to inflict severer punishment on violators of regulations

The following are the principal items of the proposed revision

Article 1 Narcotics in these regulations include the following

1 Morphine, diacetylmorphine and other morphine esters and salts
2 Crude morphine, coca leaves and crude cocaine
3 Ecugonine, cocaine and other ecugonine esters and salts
4 Dihydro oxycodeinon dihydro codeine, in dihydro morphinon acetyl dihydro codeine, dihydromorphine and other esters and salts
5 Codeine ethyl morphine, benzyl morphine and other morphine esters and salts
6 5-nitro morphine and its derivatives
7 Dihydro codeine and tebine and their salts
8 Diacetyl-morphine and those containing 20 per cent or more of morphine and ester (excepting diacetyl morphine codeine ethylmorphine)
9 Those containing 0 2 or more per cent of the following dihydro oxycodeinon, dihydro-codeinon dihydromorphinon acetyldihydro-codeinon, dihydro morphine or their esters 5 nitro morphine and derivatives
10 Those containing ecugonine or cocaine and their ecugonine esters, their amount being 0 1 or more per cent
11 Indian hemp or those containing its resin

THE LABORATORY

O U Sisson, Chicago, who was the Pharmacy Week prize winner last year, has donated the picture of "The Laboratory" which was used as the background of his Window It is about 5 feet high and 7 feet wide a Hollywood production by Pathé The ASSOCIATION thanks Mr Sisson for his donation which has been placed in the Museum of the American Institute of Pharmacy

BOOK NOTICES AND REVIEWS

'Aan P van der Wielen" D B CENTEN'S Uitgeversmaatschappij N V Amsterdam 1934 205 pages The students and friends of European teachers have a happy custom of issuing a 'festschrift" when a teacher has completed a certain number of years of service This particular brochure is dedicated to Professor P van der Wielen upon the completion of his twenty-fifth year as professor of pharmacy at the University of Amsterdam Twenty of Professor van der Wielen's former students have each contributed a piece of original research in his honor These monographs are bound together with a tribute to Professor van der Wielen and a summary of his publications numbering eight books, twelve pamphlets and several hundred contributions to journals The space allowed the reviewer barely warrants more than the mention of the titles of the twenty monographs They are as follows (1) *The Bacteriological Nature of Bread* (W C de Graaf), (2) A Review of the Standards for Alcohol (D van Os), (3) A New Oxidation and Synthesis in the Dog-Kidney (I Snapper and A Grunbaum), (the isolated dog-kidney has been found to oxidize phenyl propionic acid to cinnamic acid which separates in combination with glycocol as cinnamoyl glycocol), (4) Pharmaceutical Investigation of Digitalis Leaves by the Aid of Biological Methods (U G Bijlsma) (5) The Forming of Exotoxins by Staphylococcus (E W Walch), (6) New Applications of Old Truths in Documentary Research (C J van L Hulsebosch), (7) Contribution to the Investigation of Fruit Lemonade Syrup (C Bakker), (8) The Merchandise Marks Act and the Price of Medicines (K Holm), (9) The Investigation of Various Kinds of Balsam Copaiba (J W Birza) (10) The Blood-Sucker as a Toxicological Test Animal (J T Groll), (11) The Determination of Hexamethylenetetramine in Anhydromethylene Citric Acid Hexamethylene-tetramine (Helmitol-Bayer) (M J Schulte), (12) The Quantitative Colorimetric Determination of Meconic Acid in Opium by Means of the Stufen Photometer (C G van Arkel), (13) The International Method for the Determination of Morphine in Opium (E C M J Hollman), (14) Rhizome and Extract of Aspidium (J Kok), (15) East-Indian Poisons (C J Blok), (16) The Behavior of Various Acids in Relation to Cinchona Tannins (E W Ansingh), (17) A Colorimetric Determination for Cysteine (E Hazeloop), (18) Exterior Influences upon the Crystallization of NaCl (H D van Oort), (19) Influence of Glucose upon the Rotation of Blood Serum of Patients in Health, with Hyperglycæmia and Others (G Sant), (20) Standardized Sieves (P Spaander)—ELMER H WIRTH

THE 1935 A PH A CONVENTION

The state of Oregon and the Pacific northwest boast quite justly of scenic wonders Within view of Portland, the 1935 convention city of the AMERICAN PHARMACEUTICAL ASSOCIATION, towers perpetually snow-capped Mount Hood like a sentinel To the north in Washington are Mt St Helens, Mt Rainier and Mt Baker To the south loom Mt Jefferson, the three peaks of the Sisters and Mt McLoughlin The Columbia river cuts its way seaward through the gorge with the precipitous bluffs of Oregon on the south and Washington on the north The Columbia river highway with its tortuous curves and famous waterfalls is a feat of engineering skill which is well worth the short trip from Portland In more distant parts of the state are other natural wonders Crater Lake, the Oregon caves, the famed Rogue river, the fossil beds in Central Oregon and the lava beds of the McKenzie Pass To the west is the rugged coast line with its numerous beaches These are just a few of the scenic marvels which abound within the state

The convention-bound pharmacists, however, will have opportunity to see not only the majestic beauty of the state, but, because of their natural interest and training, will appreciate the varied flora and the tremendous possibilities as a prospective drug plant haven

Nature has endowed Oregon with varied climates Geographically, the state is divided by the Cascade range into two divisions, commonly known as Eastern and Western Oregon Climatologically, it is divided into six sections Coast Region, Southern Oregon, Willamette Valley, Columbia Basin, Blue Mountain Division and Central Oregon

Editor s Note The foregoing is from a paper by Prof E T Stuhr, which we have been permitted to read, through the courtesy of F C Felter of the *Pacific Drug Review*

The same writer presented a paper on Medicinal Trees of the United States" before the Scientific Section, A PH A in 1929, and another, in 1931, on "Oregon Drug Plants," these two monographs have been separately printed by the author In the preface of the former monograph it is stated that 'of the 1177 different trees that make up our forests, as listed by George B Sudworth, in his "Check List of the Forest Trees of the United States," 137 are of special interest because of their medicinal virtues from products they supply The purpose of the other monograph is to present an authentic source of information to those possibly interested in Oregon plant life

Reference is here made for the members of the Plant Science Seminar and others who will embrace the opportunity of studying the plant life of this section of the United States during the meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION

GEORGE A GORGAS

JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

VOL XXIII OCTOBER, 1934 No 10

GEORGE A GORGAS

This is the fiftieth anniversary of membership in the AMERICAN PHARMACEUTICAL ASSOCIATION of George Albert Gorgas Mr Gorgas was born in Cumberland County, Pennsylvania, November 1858, he received his early education in the public schools and the Cumberland Valley State Normal at Shippensburg, Pa , and thereafter served an apprenticeship in the pharmacy of Daniel H Hamaker in Harrisburg In 1879 he matriculated at the Philadelphia College of Pharmacy and graduated in 1881

In 1883 Mr Gorgas engaged in business on his own account, purchasing the pharmacy of I D Lutz on Market Square, Harrisburg, here he conducted the establishment until 1893, when he moved to the present location, later he opened two branch stores, one of which was discontinued last year

The subject of this brief sketch has always shown interest in improving pharmaceutical practice for service of the public, he has been active in organization work and an outstanding member of the Pennsylvania Pharmaceutical Association, of which he was president in 1906, one of his presidential recommendations established Life Membership, in 1918 he was elected a Life Member and, this year, in recognition of his many services to pharmacy and years of loyal membership, he was elected an honorary member of that organization, he is also a member of the National Association of Retail Druggists

In 1932 the Philadelphia College of Pharmacy and Science conferred on him the degree of Master of Pharmacy, he is a member of the Board of Trustees of that institution, and its "Model Pharmacy" was made possible through the efforts of Mr Gorgas

Our fellow-member is active in civic affairs, Kiwanis Club and Masonic bodies

EDITORIAL

E G EBERLE EDITOR 2215 Constitution Ave , WASHINGTON, D C

THE PHARMACY EXHIBIT—A CENTURY OF PROGRESS INTERNATIONAL EXPOSITION

PHARMACY Week brings the message of pharmacy to the public each year, the Pharmacy Exhibit, in Chicago, brought its service to the attention of millions of visitors and the American Institute of Pharmacy, as the permanent home wherein the activities of pharmacy will be of record, acquaints the Government and the people that pharmacy has a most important part in standardizing materia medica and preparations in which these products are properly represented

The Pharmacy Exhibit will be closed at the end of this month but it will be made permanent so that the purpose so successfully established will be continued

In conformity with the general plan of A Century of Progress the Pharmacy Exhibit was arranged to appeal to the layman and under the direction of Chairman H C Christensen and the committee having the arrangements in charge the exhibit successfully met the test, attracted the interest of the visitors and received general favorable comment from them The success was made possible through the cooperation of all divisions of pharmacy and the publicity given by pharmaceutical publications In a dramatic manner visitors were told of the development of pharmacy and the use of drugs and the methods of standardization, so that they received a better understanding of the progress made educationally and otherwise in pharmaceutical service The efforts of those in charge were supplemented by the schools of pharmacy, boards of pharmacy, revision committees of the U S Pharmacopœia, National Formulary and Syllabus, organizations, and the manufacturing industries—to all of them much credit is due

The Exhibit portrayed the history of pharmacy, development of education and legislation—the purpose being to acquaint the visitors with the history of pharmacy, the progress made by contrasting old methods with new, showing the advances in educational and legal requirements, resulting in improved pharmaceutical service and protection of the public

A comment on the activities of those in charge of the exhibit was made in the February JOURNAL and reference is made here to render credit for the accomplishment which marks a most important effort in the history of American pharmacy In summing up, it may be repeated that the entire panorama of the exhibit informed the public of the great improvement in pharmaceutical service during the past century, from the crude products and utensils of the past to the uniform, standardized products of to-day with precision instruments and equipment, from the unsupervised practice of the past to the restricted and supervised practice of to day, thus guarding the public health and welfare, from the pharmacist of yesterday to the one of to-day, equipped for research as well as practice

The exhibit has been of benefit in bringing pharmacy's message to the general public and has had a distinct educational value for the professional man as is evidenced by the many registrations A very favorable impression has been given to the medical and dental professions and pharmacy has risen in prestige The pharmacist who has seen the exhibit has learned something more about his

profession and has come away with greater respect for it These are not idle theories, they are the judgments expressed by the many visitors in conversations with attendants Pharmacy has responded to an opportunity and profited thereby—the Pharmacy Exhibit and A Century of Progress have been eminently successful

---

DECENNIAL OF PHARMACY WEEK

THE thought which prompted and resulted in the annual celebration of Pharmacy Week was presented in the address of Robert J Ruth, as chairman of the Section on Practical Pharmacy, A PH A, at the Buffalo meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION

The underlying motive of a National Pharmacy Week is the education of the public relative to the mission and service of pharmacy, and any other purpose that will detract and confuse does not represent the idea which was uppermost in the mind of the founder of this annual occasion

The earlier celebrations were directed by Robert J Ruth and since by Anton J Hogstad, Jr The educational efforts of the latter and of E L Newcomb have brought pharmacy to the attention of schools and libraries by the series of maps—drug map of the World, chemical map of North America, map of pharmacy institutions and those engaged in educating and training pharmacists The publications have whole-heartedly given support and directed the thoughts of pharmacists relative to ways that will bring the message of pharmacy to the public All of the publications have contributed to the better understanding of pharmacy by the public, some have served in a larger way and these, no doubt, have been rewarded accordingly by the appreciation of those whose aim is to advance the profession

The associations—local, state and national—have aided in the cause according to their opportunities and thereby their organizations and their members have gained by recognition of the professional standing that pharmacy enjoys It remains for them to exhibit a greater interest, year by year, in order to make Pharmacy Week what it should be and to bring the message of pharmacy to the public in daily efforts through publicity of a high order, associating the service to a greater extent with matters that concern public health

In an earlier editorial it was said, in substance, that science had added years to the span of human life and improved hygienic conditions—pharmacy as a profession, as a science and in its business relations contacts with the public and thereby Pharmacy Week summarizes the daily efforts of pharmacists In years gone by drug stores were factors in the dissemination of news and formulating of plans far-reaching in their influence, to day pharmacists have great opportunities for dissemination of public health information What is needed is more publicity for pharmacy, more druggists who will actively express loyalty to pharmacy by doing their part and not letting others do it for them, those who have had an active part in Pharmacy Week have shown their loyalty by publicity which extends beyond the activities of the seven days so designated

Canon H J Cody, formerly Minister of Education for Ontario, in addressing the recent convention of the Ontario Retail Druggists' Association said to the members

"You are all, I am quite sure, prepared to regard yourselves primarily as ethical and scientific pharmacists Perhaps the term 'Druggist' has in some quarters become usual, but to my mind, the term 'Pharmacist' is undoubtedly a term most suitable for application to the ethical and scientific side of your calling Your work does require a broad foundation, not only of general knowledge, but of specific training It is not fair, in these days, for anybody to serve the public unless his outlook is unduly wide, and his knowledge of the basic principles of his calling correctly based "

Referring to Pharmacy Week in his presidential address President R L Swain said "Pharmaceutical legislation, pharmaceutical education, the whole of pharmaceutical service rests upon the professional character of pharmacy Pharmacists should be keen to recognize this, and diligent in their efforts to impress it upon the public mind I cannot be too emphatic in urging pharmacists to embrace every opportunity to advance and elevate their professional work as a basic and fundamental thing The principles underlying it are sound, and the whole idea is a dignified and worth-while approach to a most important subject "

FORTY-EIGHT LABORATORIES

BY ROBERT P FISCHELIS *

WHILE researches in chemistry, pharmacology and other medical and pharmaceutical sciences are being carried on with satisfactory progress in the laboratories of our colleges, research foundations and industrial establishments, other forms of research which profoundly affect the welfare of pharmacy and pharmacists are being neglected to some extent because of a lack of coordinated effort In the forty-eight states of our Union, forty-eight legislatures are passing statutes intended to regulate various activities for the welfare of the people as a whole Forty-eight Governors are issuing executive orders and directions for carrying out "the will of the people" as expressed in the legislative enactments of their representatives Forty-eight State health departments are enforcing forty-eight State health laws with varying provisions which include regulation of the manufacture and distribution of foods and drugs Forty-eight boards of pharmacy are enforcing forty-eight different pharmacy laws according to the powers conferred upon them to protect the public against incompetent prescription compounding and careless dispensing of drugs, medicines and poisons

Undoubtedly, greater uniformity in these legislative and administrative activities is a desirable end Yet there is also an advantage in lack of uniformity Under our system of government the forty-eight states are really forty eight laboratories in which a great variety of experiments can be carried on with much profit and advantage to the people as a whole As a matter of fact, State food and drug laws, and laws for the regulation of traffic in narcotic, hypnotic and other

* President AMERICAN PHARMACEUTICAL ASSOCIATION

deleterious or poisonous drugs have preceded and paved the way for federal regulation along similar lines The State laws have shown the weakness of some methods of regulation and the strength of others It is not uncommon for one State or group of States to establish procedures which may be considered radical or extreme in one decade only to become the minimum standards throughout the Country in the next

But to what extent is Pharmacy profiting by the researches and experimental developments in our forty-eight laboratories? Do the pharmacists of New York have any conception of what is going on in the profession in Oregon or do the members of the profession in Maine have available the results of regulatory experiments in the distribution of drugs and medicines or the public control of health matters in California? The answer is to be found in the multiplicity of outmoded and often unworkable proposals for regulation of various phases of the practice of pharmacy which crop out annually in every State when officers and committees are assigned to accomplish a progressive revision of unsatisfactory existing conditions

There appears to be no central agency to which pharmacists in the forty-eight states can turn to-day for summarized information as to what has been tried and found wanting or what has been tried and found effective This does not mean that the information cannot be had, for it certainly exists However, it is locked within the borders of individual states and frequently it can be had only through personal contact with individuals because no one has taken the trouble to record what months and even years of patient effort may have brought about

The Conference of Pharmaceutical Law Enforcement Officials is the brightest spot that has appeared on the horizon for some time as far as the coordination of legislative and law enforcement information is concerned The Conference of Pharmaceutical Association Secretaries is moving in the direction of providing a valuable interchange of information on State Association activities Both groups have been stimulated and encouraged by the AMERICAN PHARMACEUTICAL ASSOCIATION

However, these agencies as well as the National and State organizations representing the various subdivisions of Pharmacy, require the services of a clearing house where the results of surveys of local, State and National conditions may be recorded, digested and disseminated, where the results of pioneering researches in problems of social as well as technical and industrial significance to the profession may be collated and evaluated and from which sound bases for the development of pharmaceutical education and licensure and the control of the manufacture and distribution of drugs and medicines may emanate A coordination of the experimental work of our forty-eight laboratories so as to avoid waste and duplication of effort will advance the cause of pharmacy tremendously The coordinating agency or master laboratory should be set up in the Institute of Pharmacy of the AMERICAN PHARMACEUTICAL ASSOCIATION Here is a specific project of benefit to pharmacy as well as to the people of our country for which funds must and should be advanced promptly The National and State pharmaceutical associations could find no better common meeting ground on which to start cooperative work and give evidence of the sincerity of their expressed desire to advance the welfare of the profession

SCIENTIFIC SECTION

THE GUINEA PIG AS A HEMATOPOIETIC TEST ANIMAL *

(A PRELIMINARY REPORT)

BY J W LANDSBERG AND MARVIN R THOMPSON

Since the introduction of liver extract into clinical medicine, there has been the need of a dependable laboratory assay method to determine the potency of this therapeutic agent There have been various methods of assay introduced (1, 2, 3) but the practicability and the specificity of these methods may be questioned In two of the described methods, McGowan (1) and Vaughan, *et al* (3), used the domestic fowl and the pigeon, respectively In the other method, McGowan and Sinclair (2) used the domestic pig (*Sus scrofa*)

In a consideration of the first two methods, there are several factors worthy of mention The erythrocytes of both the domestic fowl and the pigeon belong to the nucleated series This fact detracts from the practicability of the methods due to the difficulty encountered in the enumeration of the reticulocytes This difficulty was evidently experienced by Edmunds, *et al* (4), as they state, in comparing their work to that of Vaughan (3), "This discrepancy may possibly be explained by the method of counting and classification" (page 92, par 3)

The presence of a nucleus in the erythrocyte causes some difficulty in determining which cell is a reticulocyte and which is not, leaving the final decision to the judgment of the worker This factor introduces a personal variation which may have considerable bearing upon the final result When a non-nucleated blood sample is used this difficulty cannot arise If the cell in question has a small or large amount of reticular material it is a reticulocyte and must be enumerated as such The worker is not confused by the dual presence of a nucleus and a reticulum and is therefore able to differentiate, without personal influence, those cells which are reticulocytes and those which are not

Another factor present in the published methods is that of housing the test animal The average animal room does not readily lend itself to colonies of pigeons and domestic fowls The confined area of the cages plus a reduced amount of sunshine and exercise must effect the general well-being of the animal These conditions are rather far removed from the natural habitat of such animals Peabody and Neale (5) make the following statement concerning this problem " it was noticed that long confinement on the rather restricted diet apparently produced subnormal blood conditions" (page 1231, par 2)

This difficulty also presents itself in the work of McGowan and Sinclair (2) who used the domestic pig (*Sus scrofa*) of about four months of age weighing about

* From the department of Pharmacology, School of Pharmacy, University of Maryland
Abstracted from a report presented before Scientific Section at the Annual meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION May 7 1934, Washington, D C

43 5 pounds The difficulties of maintaining an animal colony of such test objects are easily discernible without further elaboration

Previously suggested methods, in some cases, involve the use of an experimental animal with abnormal blood conditions Some investigators (1, 2, and 5) have used experimental animals suffering with various degrees of anemia Such circumstances we feel must certainly create a marked variation in the response of the test animal to the therapeutic agent As these anemias are present because of pathological conditions and are not produced by controlled artificial methods, the degree of anemia will vary from time to time in the same animal and will certainly differ in a group of animals The degree of anemia present, accompanied by the changes in the hematopoietic organs, and the efforts of the hematopoietic system to regenerate red blood cells must certainly influence the response produced by liver extract It is certainly possible and not highly improbable that the same dosage of liver extract would produce a greater reticulocyte response in a hematopoietic system in need of such a stimulant than in a normal one which did not, provided of course, that the blood-producing organs were not partially or completely exhausted

The present study was undertaken to find a normal, healthy experimental animal meeting the following requirements (1) having non-nucleated erythrocytes, and (2) thriving under the usual animal room environment We selected the guinea pig because it satisfied these two requirements and also because of the facility with which we could obtain the blood smears from the marginal veins of the ears of this animal It was our purpose to determine whether or not a normal, healthy guinea pig would give a reticulocyte response to liver extract and still remain essentially normal

These studies represent a preliminary endeavor to determine the practicability of using the guinea pig as a hematopoietic test animal and they should be followed by a more elaborate and comprehensive study

METHODS

General —The guinea pigs were selected without reference to particular breed Normal, healthy, adult pigs of male sex were chosen The weight range was between 500 and 800 Gm The diet upon which these pigs had been maintained and which had proved adequate, was not modified during the experiment Before an animal was used for experimental purposes an erythrocyte count and a blood smear were made to determine whether or not the blood of the animal was normal Reticulocyte counts were determined on each animal to be studied to establish a normal base line The animals were weighed before injection, several times during the injection period, and after the injection period Erythrocyte counts were made before, during and after the period of injection The incisions on the marginal veins were very small so as not to cause excessive bleeding which might result in a hemorrhagic anemia During the routine procedure the animal lost only two small drops of blood per day, in some few instances perhaps four or five drops, but at no time was the blood loss sufficient to cause an anemia, as will be demonstrated in the discussion The first drop of blood obtained was discarded and the second drop used for the reticulocyte enumeration The subcutaneous injections were given over a period of eight consecutive days The smears, made every day at approximately the same hour, were immediately followed by the injections

Hematological Methods —The ear was incised on the marginal vein and a small drop of blood was placed on a chemically clean cover slip With a sharpened toothpick a drop of alcoholic brilliant cresyl blue was added to the blood on the cover slip The blood and stain were mixed intimately with the toothpick, the second chemically clean cover slip was placed over the first

and the blood allowed to spread The smear was then pulled, the two cover slips were allowed to dry in the air and counterstained with Wright's stain

In the enumeration of the reticulocytes five hundred red cells were counted in consecutive fields The portions of the slides selected were thin and evenly spread in order that the red cells would not overlap The reticulocyte count was made with oil immersion and the field reduced so that not over twenty-five red cells were counted per field If the smear was at all difficult to count, one thousand red cells were examined The reticulocyte counts were made by one person through out the experiments Some of the smears (containing the higher percentages of reticulocytes) were sent to a technician, trained by one of the authors for a reticulocyte count The technician did not know the reticulocyte count and, in fact, was not aware of the investigations being carried on by us In all instances our reticulocyte count did not vary over one per cent from that of the technician

The red corpuscles were counted in a new Newbauer Counting Chamber using the Thomas red cell pipette Both of these instruments were certified by the Bureau of Standards The average of two red counts, the difference between the two being not over one hundred thousand, was taken as the red cell determination

Dosage —The experimental animals were injected with 1 cc (per day) of No 343 Lilly Liver Extract[1] at approximately the same hour each day As the liver preparations were injected subcutaneously in the abdominal region, great care was exercised not to penetrate the abdominal wall and expel the fluid into the visceral cavity With one exception, all the animals received the same dosage of liver extract over the same period of time (eight days) (This animal received ex tract for one day longer than the other animals and 2 cc of extract for the last two days) One cc of the extract was stated to be equivalent to five Gm of liver Each animal therefore, received a total equivalent of 40 Gm of fresh liver We have reason to believe that smaller doses will pro duce satisfactory responses

RESULTS AND DISCUSSION

Control Periods —As a control measure, each animal was observed for a period of about seven days before it was injected with liver extract During this time the reticulocytes and the erythrocytes were counted and the animal weighed The normal averages for reticulocytes ranged from 0 63 per cent to 3 54 per cent (Table I)

Effect of Iron on Reticulocyte Response —It was essential to ascertain if the method used was producing a post-hemorrhagic anemia through blood loss If the method was producing an anemia, there should be a definite response to iron and ammonium citrate which is used clinically for post-hemorrhagic anemia On the other hand, if no anemia was produced by the puncture of the marginal veins, but a reticulocyte response occurred as the result of iron present in the extract, this also could be demonstrated

For this experiment two pigs were used and subjected to the same method of procedure Normal findings were recorded for five days and the average of these used as a base line A solution of iron and ammonium citrate (U S P) was made with distilled water of such strength that one cubic centimeter of the solution contained 2 5 mg of iron and ammonium citrate The solution was given as described under "DOSAGE " The experimental animals were injected every day for eight days The reticulocyte counts were made during this period and for nine days following the injection interval to provide for a delayed response Neither the reticulocyte count, the erythrocyte count nor the weight was influenced by the iron and ammonium citrate

[1] We are indebted to Dr H W Rhodehamel of the Eli Lilly Company, for generously supplying us with the liver extract preparations

Following this procedure the pigs were left in their cages, under the same conditions as those preceding the experiment, for a period of one month At the end of this interval the reticulocytes were counted on four successive days to obtain a normal range, and the injections of liver extract were begun The injections were carried on for eight days The liver extract produced a definite reticulocyte response (Table I, animals number 1 and number 2), but did not effect the erythrocyte count nor the weight

As there was no response to the injection of iron and ammonium citrate, one may draw two conclusions (1) that no anemia was produced by the hematological methods, (2) that the experimental animals were not suffering from a nutritional anemia The hematopoietic system, in cases of post-hemorrhagic anemia, attempts to compensate for the blood loss without therapeutic stimulus which alone would have produced some reticulocyte response As iron preparations are clinically recognized in the treatment of post-hemorrhagic anemias a response should have occurred if this condition were present Schultze and Elvehjem (6) have demonstrated that iron (in the presence of copper) brought about a definite reticulocyte increase in conditions of nutritional anemia Our experimental animals were obtaining sufficient copper from the diet to utilize any iron present, therefore a reticulocyte rise should have occurred if this anemia were present

TABLE I

Experimental Animal No	Reticulocytes			Day of Maximum Increase
	Normal Average	Increase	Percentage Increase	
1	1 05%	3 95%	376 ± 95	8
2	0 95%	3 85%	405 ± 105	9
3	1 70%	5 10%	300 ± 58	10
4	1 30%	4 10%	315 ± 76	11
3 (Reinjection)	0 63%	3 77%	598 ± 158	7
4 (Reinjection)	1 23%	4 17%	339 ± 81	10
5	3 30%	1 70%	51 ± 33	9
6	3 70%	4 50%	121 ± 27	5

Effect of Liver Extract on Reticulocyte Response—The injection of liver extract produced a reticulocyte response in all the experimental animals tested (Table I) without an increase in the erythrocytes or the weight After the peak of the response had been reached the number of reticulocytes gradually returned to normal The question immediately arose as to whether the hematopoietic organs had been exhausted by such stimulation or whether they would again respond to liver extract After a period of one month two experimental animals, previously used, were again injected, the same technique being used There was a definite response to the liver extract (Table I, reinjection)

These studies are particularly interesting in that they point to the possibility of a standardized laboratory animal If such is the case, one could not only determine the potency of a preparation, but also could compare directly the action of various preparations upon the same animal

Effect of Heat on Liver Extract—The liver preparations injected produced a significant rise in the reticulocyte count With this fact in mind, we were desirous of determining what influence a modified sample of the preparation would produce

The sample was prepared as follows 16 cc of the extract were rapidly boiled to dryness without scorching To the residue was added enough distilled water to bring the volume to 16 cc , this sample was again boiled to dryness and the residue dissolved in enough distilled water to make the volume 16 cc

After the normal base line was obtained the same procedure of injection was carried out as in the previous experiments The response produced by the injection of the heated sample was definite, but less than that created by the unmodified sample (Table I, animals number 5 and number 6) The heating did not destroy the activity, but may have reduced the potency somewhat Additional study may clarify this point

In Table I the reticulocyte responses following the injection of liver extract are given The erythrocyte counts did not change significantly, and are therefore omitted to conserve space

From the data thus far obtained, we feel that the method described compares favorably with the other methods presented in the literature and is, therefore, worthy of further study, particularly with reference to its specificity

In a personal communication from Dr H W Rhodehamel, of Eli Lilly and Co , we have learned that the samples of liver extract used had shown clinical activity

CONCLUSIONS

1 A method suggesting the possibility of using the normal, healthy guinea pig as a hematopoietic test animal is introduced

2 Experimental test animals that did not respond to injections of iron and ammonium citrate later gave a reticulocyte response when injected with liver extract

3 The injection of liver extract over a given period caused a definite rise in the reticulocyte count without significantly effecting the erythrocyte count or the weight

4 A second period of injection produced a response in the reticulocyte count similar to that produced in the first period suggesting the possibility that a given animal may be repeatedly used for test purposes

5 The active constituent of liver extract which produced a reticulocyte response in the guinea pig is not readily destroyed by heating

6 This report is of a preliminary nature and is presented merely as a possibility worthy of further study

ALKALOIDAL REAGENTS V THE ACONITE ALKALOIDS *

BY JAMES C MUNCH AND HARRY J PRATT

The reactions of the aconitine group of alkaloids with the usual alkaloidal reagents, as well as with certain special reagents reported in the literature, contain

* Scientific Section, A Ph A , Madison meeting, 1933

conflicting statements regarding colors and precipitate formations (1–30) Data on aconitine, pseudoaconitine and benzoylaconine are given in Table I

with one drop of the reagent The development of colors and/or precipitates was followed by a hand lens or under a microscope In case a positive reaction developed, quantitative tests were made, using 10 millimolar solutions Since most of the precipitates were white, such reactions are recorded without differentiating between chalky-white, greyish white, yellowish white, brownish white or other shades of "white"

Little information regarding the chemical reactions of benzoylaconine and aconine were found Accordingly, 10 millimolar solutions were prepared and tested simultaneously with aconitine (Table II) In case positive results were obtained, confirmatory tests were conducted with other dilutions The 10 millimolar solutions were the most favorable for color tests Benzoylaconine may be differentiated from aconitine by confirmatory tests with a number of reagents, although no single reaction may be considered as absolutely definitive In further distinction, aconine may be differentiated from aconitine or benzoylaconine Only negative reactions were obtained with aconitic acid

TABLE III —SENSITIVITY OF TESTS FOR ACONITINE

* Limit of sensitivity A = Amorphous ppt

Very little information was found in the literature regarding the sensitivity of various tests for aconitine (9, 14, 16, 18, 23) Those reagents which gave promising results were tested with various dilutions of aconitine, ranging from 4 millimolar down to 0 00004 millimolar (Table III) No positive reactions were obtained with 0 04 millimolar or weaker solutions except Mayer's reagent, which gave a positive reaction at 0 04 millimolar, and thus proved the most sensitive of the reagents studied The limiting concentrations for the other reagents are reported No efforts were made to study intermediate concentrations In making taste tests, 0 02–0 05 cc of solution was placed upon the tongue one minute later the mouth was thoroughly rinsed with tap water Taste phenomena were recorded for fifteen minutes (bitterness, tingling, etc)

In order to determine the toxicological applicability of these reagents (5, 15, 23), a post mortem examination was conducted upon a dog which had died following the oral administration of Tincture of Aconite, U S P X The stomach and contents, the intestine and contents, a portion of muscle of the thigh, the liver, one kidney and the spleen were removed and examined separately Each tissue was chopped fine and extracted with alcohol containing 1 per cent of tartaric acid

When extraction was complete, the material was filtered, the alcohol evaporated off on a water-bath at a low temperature, and the residue taken up with water After standing until solution appeared complete, this was filtered and the solvent evaporated off on a water-bath This process was repeated with alcohol and water a second time, yielding eventually a residue which was completely soluble in alcohol and water This was dissolved in 5 cc of distilled water and tested (Table IV) Since tincture of aconite had been administered to this dog daily over a period of several months, it might be anticipated that distribution in the cadaver would differ from that to be expected following acute poisoning Positive results were obtained in tests conducted on extracts of the stomach and intestine, indicating that absorption was not complete in the interval of ten hours since the administration of the last dose Strongly positive results were obtained in testing the liver, but negative results were obtained from the kidney, spleen and the muscles Following the administration of a single dose of an aconite preparation to dogs, positive reactions have been obtained in extracts of the liver, and doubtful or negative reactions in extracts of the kidneys It would appear that the aconite alkaloids are excreted largely into the liver

TABLE IV —TOXICOLOGICAL TESTS FOR ACONITINE IN VISCERA

No	Reagent	F E Aconite	Stomach	Intestine	Liver	Kidney	Spleen	Muscle

A = Amorphous ppt

CONCLUSION

1 The behavior of aconitine, benzoylaconine and aconine have been determined with 71 alkaloidal reagents Characteristic reactions for the differentiation of these three alkaloids have been developed

2 Mayer's reagent, which was the most sensitive chemical test for aconitine, had a limiting threshold at a concentration of 0 04 millimolar, the taste test detected tingling at 0 004 millimolar, and bitterness at 0 0004 millimolar concentrations

3 A substance giving the chemical reactions of aconitine has been detected in the liver, stomach and intestines of dogs, but not in the kidneys, spleen or muscle

AUTHORS' NOTE We wish to express our appreciation to Richard I Grantham and the late Dr Herman Engelhardt for the benzoylaconine and aconine used in this investigation

GAMMA RAYS

Discovery of a way to make sodium give out gamma rays has been announced by Prof Ernest O Lawrence at the University of California on October 20th The radiation it is believed, will open a promising field for cancer research and a further study of how radiation acts on living tissues

DETERIORATION AND STABILIZATION OF ACONITE PREPARATIONS PART I [1] [2]

BY WILLIAM B BAKER

INTRODUCTION

The reports of early investigators on the value of aconite as a therapeutic agent were more often conflicting than otherwise It is now believed that this was due primarily to the fact that the drug and its preparations decreased rapidly in potency due to the instability of aconitine, which is the physiologically active principle The fact that aconitine is not stable has been known for some time, but it was not until comparatively recent times that attempts to measure accurately its rate of deterioration have been made, and likewise to stabilize the preparations of aconite and aconitine

In their studies of the deterioration of aconite preparations Swanson (1), Squibb Research Laboratories (2) and Swanson and Hargreaves (3), found that these preparations deteriorated rapidly within a year It was shown that deterioration is due to the hydrolysis of aconitine into benzaconine and aconine, and that deterioration is directly dependent upon the hydrogen-ion concentration of aconite preparations

With the object in view of determining the rate of deterioration of aconite preparations (this paper covers only the tincture) and of determining which of the stabilizers in use are the most efficient, the following experimental studies were made Incidentally, the accuracy of the U S P X method of assay was also studied

EXPERIMENTAL

Preparation of Samples —Dried tubers of *Aconitum napellus* were subjected to examination by a botanist and found to be as represented with respect to identity The drug was reduced to a No 40 powder by grinding, and two tinctures of aconite were prepared Tincture No 1 was prepared in strict accordance with the U S P X procedure for Tincture of Aconite (7) Tincture No 2 was prepared by the same method, but with the addition of 2 per cent acetic acid to the 70 per cent alcoholic menstruum, a procedure recommended as being the most desirable to insure stability

The tincture was selected as the preparation for this study as it is the preparation of aconite most frequently used, and because it is typical of the other liquid preparations of aconite in so far as lack of stability is concerned

Tincture No 1 —120-cc portions of this tincture were measured off by a burette into eleven amber-colored bottles of 125 cc capacity Before filling, the bottles were immersed for 24 hours in water acidulated with 2 per cent hydrochloric acid, to neutralize any possible alkalinity of the glass, then thoroughly rinsed with water

---

[1] From the laboratories of A G Du Mez Professor of Pharmacy, and M R Thompson, Professor of Pharmacology, School of Pharmacy of the University of Maryland Compiled, in part, from a thesis submitted to the Faculty of the Graduate School of the University of Maryland in partial fulfilment of the requirements for the degree of Master of Science, 1933

[2] Scientific Section, A PH A , Washington meeting 1934

Each portion, except one, which was used as a control, was acidified with a definite amount of acid as shown below, and the p_H values determined within a day or two

TABLE I —p_H VALUES OF PORTIONS

Portion	Per Cent Acid Added	p_H Value
1	None	5 7
2	0 1 hydrochloric acid	3 8
3	0 2 hydrochloric acid	2 4
4	0 3 hydrochloric acid	2 3
5	0 4 hydrochloric acid	1 9
6	2 0 acetic acid	4 6
7	2 5 acetic acid	4 5
8	3 0 acetic acid	4 45
9	3 5 acetic acid	4 4
10	4 0 acetic acid	4 3
11	2 0 hypophosphorous acid	1 15

Acetic and hydrochloric acids were used for acidifying as they had been used for this purpose by other investigators

Hypophosphorous acid was used because of its reducing properties and because it was thought that deterioration might be due, in part at least, to oxidation of the alkaloids The p_H value obtained for this portion was so low (p_H 1 15) that it appeared as though the amount of hypophosphorous acid added (2 per cent) was more than sufficient to give the value (approximately p_H 2 5–3 0), reported by other investigators as being the most desirable To determine if this was actually the case, 25 cc of non-acidified tincture were accurately measured off and adjusted for p_H value by adding successive small amounts of acid measured from a burette The following results were obtained

TABLE II —ADJUSTMENT OF p_H VALUE WITH HYPOPHOSPHOROUS ACID

Cc. of Hypophosphorous Acid Added	p_H Value
0 1	3 0
0 2	2 7
0 3	2 6
0 4	2 0

Tincture No 2 —One liter of tincture was prepared using a 70 per cent alcoholic menstruum acidulated with 2 per cent acetic acid The tincture was not divided into portions as in the case of Tincture No 1, but was preserved in one bulk for observation The p_H value of this tincture was found to be 4 80

The addition of the same percentage of an acid will give variable p_H values in preparations made from different lots of drugs, due to the variable amounts of alkaloids and inert extractive matter present Therefore, it is inadvisable to specify what percentage of acid should be added to the preparation for stabilizing purposes The p_H value that will give the greatest protection to the preparation should be stated instead

The results of this study show that the use of acetic acid, or even glacial acetic acid, as stabilizers, is impractical because of the comparatively large quantity which must be added to bring the p_H value down to the desired level The results presented in the following table demonstrate this clearly

TABLE III

Hydrochloric Acid: Amount of Acid Added to 30 Cc of Tincture	p_H Value	Acetic Acid (36%): Amount of Acid Added to 25 Cc of Tincture	p_H Value	Acetic Acid (Glacial): Amount of Acid Added to 30 Cc of Tincture	p_H Value.
None	5 48	None	4 8	None	4 77
0 1 cc	2 97	3 8 cc	3 7	0 5 cc	4 33
0 2 cc	1 74	6 2 cc	3 4	2 5 cc	3 85
		7 7 cc	3 3	4 5 cc	3 47
		10 0 cc	3 1	7 0 cc	3 17
		11 7 cc	3 0	9 0 cc	2 98
		13 6 cc	2 8	11 0 cc	2 82
		17 5 cc	2 7	14 0 cc	2 61
		23 4 cc	2 5	16 0 cc	2 53
				17 0 cc	2 43
Percentage of acid added to obtain p_H value of 1 74 = 0 66		Percentage of acid added to obtain p_H value of 2 50 = 93 60		Percentage of acid added to obtain p_H value of 2 43 = 56 66	

Assay of Samples —The method used for the assay of Tinctures Nos 1 and 2 is the one described in the U S P X (7) under Tincture of Aconite The samples prepared were assayed at intervals of approximately three months

The portions to be assayed were diluted so that the dose to be administered to the animal would come within a convenient injection range (0 4–1 cc) Warm tap water, chlorine free, was used for making the dilutions

TABLE IV —RATE OF DETERIORATION OF TINCTURE NO 1

			Date of Assay							
Portion	Acid Used	p_H	10–29–31 Per Cent Strength	1–29–32 Per Cent Strength	5–2–32 Per Cent Strength	8–2–32 Per Cent Strength	11–28–32 Per Cent Strength	3–12–33 Per Cent Strength	3–8–34 Per Cent Strength	p_H
1	None	5 7	114	66	Below 50					5 56
2	HCl	3 8		89	80			Below 50		4 40
3	HCl	2 4		100		89	72			2 89
4	HCl	2 3		114		114		114	114	2 85
5	HCl	1 9		114		114	114	100		2 36
6	CH_3COOH	4 6		100	66	Below 50				4 72
7	CH_3COOH	4 5		100			Below 50			4 63
8	CH_3COOH	4 45		89	80					4 56
9	CH_3COOH	4 4		100		100	Below 50			4 57
10	CH_3COOH	4 3		114	114	114	Destroyed			
11	H_3PO_2	1 15		114	114	114	80	72		1 46

The U S P X (7) gives the minimum lethal dose for Tincture of Aconite as 0 00035 cc to 0 00045 cc per Gm weight of guinea pig Therefore, a tincture, the minimum lethal dose of which is found to be 0 00040 cc per Gm weight of animal, would be considered to be 100 per cent with respect to the U S P standard

Immediately after preparation, Tinctures Nos 1 and 2 were assayed and found to have a potency of 114 per cent

The acid used to acidify the portions of Tincture No 1 apparently had no effect on the animals, as the minimum lethal dose was found to be the same in all cases, as shown in the table which follows This table also shows the rate of deterioration as revealed by assays made at intervals, in all but one instance, of approximately three months

The stabilizing effect of the addition of acid is clearly shown by the foregoing results Tinctures prepared *without the addition of acid deteriorate rapidly* Hydrochloric acid is shown to be the best stabilizer of the acids employed This is demonstrated particularly well by the assay results for "portion 4" of Tincture No 1, which had an initial p_H value of 2 30 In this case, hydrochloric acid appears to have afforded complete protection over a period of twenty-nine months In other portions acidified with hydrochloric acid the protection was not so striking, deterioration increasing with an increase in p_H value

TABLE V —RATE OF DETERIORATION OF TINCTURE NO 2

	Date of Assay				
	10–29–31 Per Cent Strength	1–29–32 Per Cent Strength	8–2–32 Per Cent Strength	3–12–33 Per Cent Strength	
p_H					p_H
4 8	114	100	89	72	4 94

Acetic acid proved less efficient than hydrochloric acid It retarded deterioration to a moderate extent when added in sufficient amount When acetic acid was added to the menstruum instead of the percolate, as shown by Tincture No 2, deterioration also took place, although not to the same extent as when the same percentage of acid had been added to the percolate as is the case in "portion 6" of Tincture No 1

Hypophosphorous acid, likewise, afforded only moderate protection

Based on the foregoing results it may, therefore, be said that hydrochloric acid is preferable to acetic acid as a stabilizer for tincture of aconite for the following reasons

I It possesses greater ionizing power than acetic acid

II Having better ionizing properties, much less hydrochloric acid is necessary for adjusting the preparation to the desired p_H value than when acetic acid is used

Hydrochloric acid is preferable to hypophosphorous acid as a stabilizer for tincture of aconite because it possesses greater ionizing power and is more economical

Approximately four months after Tinctures Nos 1 and 2 had been prepared, two other tinctures were prepared from the same lot of drug These two tinctures were numbered 3 and 4, respectively

Tincture No 3 —This tincture was prepared from the same lot of powdered aconite tubers used in preparing Tinctures Nos 1 and 2, the only difference being that in this case the drug had been in the powdered condition for four months, whereas in the preceding cases the drug was ground just before the preparation of the tinctures was begun

Tincture No 4 —This tincture was prepared from the drug which had been *kept whole*, and powdered at the end of the four-month period

The two tinctures, prepared as described, were assayed for potency with the following results

TABLE VI —RATE OF DETERIORATION OF DRUG

Tincture	Strength in Per Cent.	Assay Date
No 3	57	2–15–32
No 4	73	2–15–32

In the case of Tincture No 3 where the aconite had been kept over a period of four months in the powdered condition before being made into tincture, the drug shows a loss of 57 per cent, or about half of its strength compared with the results obtained in the initial assays of Tinctures Nos 1 and 2

In the case of Tincture No 4 where the aconite had been kept over this period of time in the *whole* condition before being made into tincture, the drug shows a loss of 41 per cent compared to the initial strengths of Tinctures Nos 1 and 2

It appears, therefore, that aconite should not be kept in the powdered condition for any lengthy period of time, but that it should be stored in the whole condition and powdered just previous to making up into tincture or other preparation

Aconitine —Swanson and Walters (8) assert that the deterioration of aconite preparations cannot be definitely determined until a more satisfactory method of assay has been developed Swanson (1) feels that the lethal dose method would be satisfactory for testing the therapeutic efficacy of aconite, providing the total alkaloids were determined in terms of a standard aconitine, and a standard method of technique was employed

With the intention, therefore, of studying the seasonal variation of guinea pigs (their susceptibility to a stable standard substance at different intervals during the year), and of the use of aconitine as the standard, the following work was undertaken

Crystalline aconitine (Aconitine Potent, Merck) was recrystallized repeatedly from hot alcohol until its toxicity to guinea pigs became constant This aconitine, used as a standard throughout the work, was recrystallized six times The crystals were then dried thoroughly, and sealed *in vacuo* in portions of 20–30 mg to the ampul

"Aconitine values," using this pure crystalline aconitine, were determined at each interval of assay of the Tinctures Nos 1 and 2 (approximately three-month intervals) A 1 50,000 dilution of hydro-alcoholic solvent (about 25 per cent alcohol) constituted the working solution for injection

Healthy, normal guinea pigs were used for the determination of the aconitine values These animals had been obtained from one source only, and had been acclimated to laboratory surroundings before being used for assay purposes

The U S P X method of assay as directed under Tincture of Aconite (7) was followed in the determination of the minimum lethal dose as in the case of the tinctures assayed

TABLE VII —ACONITINE VALUES GM ACONITINE PER GM WEIGHT OF GUINEA PIG

10-29-31	1-29-32	5-2-32	8-2-32	11-28-32	3-15-33
0 000000050	0 000000055	0 000000050	0 000000055*	0 000000055	0 000000050

* In obtaining the 'aconitine value" on date of 8-2-32 ' the weight of one of the guinea pigs used was 465 Gm , which is considerably beyond the U S P range This procedure was made necessary, however, due to a shortage of guinea pigs at that time Apparently, however this did not affect the results to any noticeable extent

The foregoing aconitine values show that no appreciable change in susceptibility of the guinea pigs to the aconitine took place in 15 months This is explained by the fact that the guinea pigs used were in an absolutely healthy, normal condition and had been obtained from one source only This, probably, would not be the

case if the condition of the guinea pigs was poor, if the animals had not been acclimated to laboratory surroundings and if they had been obtained from various sources This matter is receiving further consideration

CONCLUSIONS

1 The use of hydrochloric acid as a stabilizer for tincture of aconite is superior to acetic acid, provided the preparation is adjusted to the correct hydrogen-ion concentration

2 The use of acetic acid as a stabilizer is impractical because of the large amount required to adjust the preparation to the desirable hydrogen-ion concentration

3 Aconite in the form of the whole crude drug deteriorates rapidly and the powdered drug deteriorates even more rapidly

4 Tincture of Aconite U S P X, because of its poor keeping qualities, should be adjusted with hydrochloric acid to a hydrogen-ion concentration sufficient to preserve it (approximately, p_H 2 3–3 0)

5 The resistance of guinea pigs to aconite, or aconitine, is consistent provided the weight range specified by the U S P X is strictly adhered to, and further provided that these guinea pigs are in an absolutely healthy, normal condition

6 The advisability of the use of aconitine as a bioassay standard will receive more extensive consideration in a later report

DRUG EXTRACTION I A STUDY OF VARIOUS MENSTRUA FROM THE STANDPOINT OF SWELLING EFFECTS, PENETRATION AND EXTRACTION

BY WILLIAM J HUSA AND LOUIS MAGID

(*Continued from page 901, September Journal*)

Swelling of Powdered Belladonna Root—Studies of the swelling of powdered drugs are obviously of importance, since this is the form in which drugs are extracted Scoville (2) measured the swelling of a ground drug, 5 Gm of gentian in about a No 30 powder being placed in a specially graduated 25-cc cylinder and the volume measured before and after treatment with a liquid, allowing time for settling The error caused by the buoyant effect of the liquid on the drug particles was recognized by Scoville

In the present study this method was improved by centrifuging the mixture of drug and solvent, thus overcoming the buoyant effect of the solvent and obtaining a rather complete and sharp separation of liquid and solid Graduated centrifuge tubes of 15 cc capacity were used in a large size centrifuge (Size 1, Type SB, operating at 5 amperes, 110 volts, 60 cycles, made by the International Equipment Co) The centrifuge was run close to maximum speed, which was kept constant throughout the experiments Except where otherwise specified, 0 50 Gm of powdered drug and 8 0 cc of liquid were used in the experiments, these amounts being found to be most practical The mixtures of powdered drug and liquid were centrifuged for ten minutes which was the time ascertained by trial as necessary for complete packing In stating the results, the ten minutes of centrifuging is included in the maceration time The tests were conducted in duplicate, the volume of the powdered drug being read off on the graduated centrifuge tubes

TABLE XVI —SWELLING OF BELLADONNA ROOT (IN NO 40 POWDER) IN VARIOUS MENSTRUA

Swelling of Belladonna Root in Various Menstrua—Through a reputable dealer and miller of crude drugs a 125-pound shipment of belladonna root U S P

was obtained as follows 10 lbs whole root, 40 lbs of 40 mesh and 25 lbs each of 20, 60 and 80 mesh, prepared according to the following specifications "The above to be prepared by taking 125 pounds of belladonna root, selecting a representative sample of 10 pounds for the whole root and a representative 40-lb sample to be milled to 40 mesh and three 25-lb samples to be milled to 20, 60 and 80 mesh, respectively Each 25-lb (or 40-lb) portion is to be milled separately so that each portion will be as nearly alike as possible except for the difference in the milling" It was thought that by use of this 125-pound supply of the drug, all experiments would be strictly comparable A thorough study of the shipment was made by C L Huyck, and it was found that the drug conformed to the U S P requirements

For concise presentation, the results in the tables which follow represent the average of two determinations, expressed on a percentage basis, the volume of the dry drug being taken as 100

With alcohol-water mixtures the results indicate that the swelling decreases with increasing alcoholic content The No 40 powder reached a maximum swelling in the first ten minutes in the alcohol-water mixtures, the later noticeable fall in percentage swelling may be due to a softening of the drug after prolonged contact with the liquid and subsequent firmer packing by the centrifugal force

In glycerin-water mixtures, the final swelling was the same regardless of whether the liquids were present in equal amounts, or whether the glycerin or water was in excess, however, the mixture of glycerin 4 vol —water 1 vol required a longer time for reaching maximum swelling In glycerin-alcohol mixtures there was less swelling than in glycerin-water mixtures In glycerin-alcohol-water mixtures the swelling after 24 hours was greater with the mixtures having the greater proportion of water

Effect of Fineness of Powder on Swelling —Using the official menstruum specified by the U S P X for Fluidextract of Belladonna Root, *i e*, a mixture of alcohol 5 vol —water 1 vol, tests were conducted by the centrifuge method on belladonna root in No 20, 40, 60 and 80 powder

TABLE XVII —SWELLING OF BELLADONNA ROOT OF DIFFERENT DEGREES OF FINENESS IN A MIXTURE OF ALCOHOL 5 VOL —WATER 1 VOL

Powder No	Dry	Time of Maceration in Minutes							
	0	10	20	40	60	120	360	720	1440
20	100	113	117	113	113	113	130	130	117
40	100	100	104	109	109	104	104	114	104
60	100	100	100	100	100	105	105	105	105
80	100	105	110	115	115	115	115	115	115

The volume occupied by a given weight of powdered drug would naturally be greater for the coarser powders, since large particles pack less efficiently than small particles in a given space The results in Table XVII indicate that for the No 20, 40 and 60 powders, the larger the powder, the greater the apparent swelling, this may be due to the fact that as the larger particles swell, the packing becomes still less efficient An opposing tendency, however, arises in the fact that swelling takes place largely near the surface, so that small particles should show a greater percentage swelling on the basis of this factor taken by itself In the No 80 powder, the greater swelling as compared with the No 40 and 60 powders may be due

to an overbalancing of the factor of efficiency of packing by the factor of the increased coefficient of swelling in smaller particles

Effect of Proportion of Liquid in Maceration on Swelling—This point was considered from the standpoint of the effect on percentage swelling in maceration preliminary to packing in a percolator Tests have been carried out by the centrifuge method, by the use of an oedometer (3), and by a packing method using a graduate

For tests of swelling of drug powders with small amounts of moistening liquid, a further study of methods is required, since the results obtained by the different techniques are contradictory to a certain extent, however, the results seem to indicate that maximum swelling is not attained with amounts of liquid ordinarily used in moistening drug powders preparatory to packing in a percolator

Discussion of Results on the Swelling Effect of Solvents—The drying of a drug represents primarily a removal of water, although other secondary changes occur Tissues are originally more or less saturated with water and a marked decrease in size results from drying, due perhaps in greatest measure to loss of turgidity and collapse from loss of water From these considerations it would be natural to consider swelling as primarily a reversal of the drying process, with some differences due to the irreparable damage to the plant protoplasm during the drying The hydration of such dried material (4) would take place as in other dead material by means of imbibition and adsorption with osmosis by the action of vacuolar materials almost eliminated This illustrates the botanical maxim that when a living cell dies, it loses its osmotic powers

While water seems to be the natural swelling agent, some other liquids such as alcohol resemble water sufficiently to be taken up by the tissues It would seem that, in order to cause swelling a liquid must permeate the tissues and wet the inner surfaces The swelling by absolute alcohol would be an example of this, it is possible that the momentary shrinkage caused by absolute alcohol is due to the abstraction of water from the tissues and that the swelling which follows is due to the gradual permeation of the cells by absolute alcohol In the tests on swelling of strips of chestnut wood in absolute alcohol it was recognized that there was a possibility that the absolute alcohol on the slide might take up sufficient moisture from the air to affect the results However, the tests on blocks of chestnut wood were carried out in stoppered and sealed flasks thus eliminating any possible effect of moisture from the air and it was thus established that the swelling effects are due to absolute alcohol itself

The slower approach to equilibrium in the glycerin-water and alcohol-water mixtures might be thought of as due to a slower permeability of the cells to the alcohol water and glycerin water mixtures

The fact that concentrated glycerin solutions cause only one per cent of swelling may be due to the stability of glycerin hydrates, or to a lack of permeability of the cells to concentrated glycerin solutions The well known affinity of glycerin for water is probably due in part to the formation of hydrates Such water of hydration would not be available for hydration of the dried plant tissues unless these had a greater attraction for the water than the glycerin had, in other words the distribution of water between the tissues and the glycerin would depend upon the composition and relative stability of the respective hydrates Glycerin caused a shrinkage of the blocks of chestnut wood, followed by recovery and gradual swelling The results are reminiscent of the observation by Klebs (5) in 1888, that plant cells placed in a solution of glycerin first underwent plasmolysis and then gradually recovered, thus indicating gradual permeation by the glycerin

Ethylene glycol, diethylene glycol and carbitol cause about the same percentage swelling as does water, except that water comes to equilibrium much more rapidly Propylene glycol and dioxan caused less swelling than alcohol

In general the results with the glycerin water, glycerin alcohol and alcohol-water mixtures indicate that the swelling in mixtures of two liquids is practically an average of the effect of the liquids themselves when allowance is made for the relative proportions of the two liquids in the mixture An examination of the graphs (see Graphs 1 and 2) indicates that the general form

of the swelling curves is very similar for alcohol-water and glycerin-water mixtures However, there are some noteworthy differences, in that a smaller proportion of glycerin than of alcohol is required to bring about a decrease in the primary swelling and a lengthening of the period necessary for the attainment of equilibrium, and in that the addition of one part of water to 9 parts of glycerin has no effect on the swelling curve, but in the corresponding alcohol-water mixture there is a difference

The results of the work on strips of chestnut wood indicated that a variation in p_H in aqueous solutions had no effect on the swelling, but in the work on blocks of chestnut wood it was found that 0 01*N* aqueous HCl and NaOH both slightly increased the swelling In alcohol, swelling of woody tissues is decreased by acids, noticeably in 0 1*N* concentration Alcoholic NaOH decreased the swelling of blocks of chestnut wood, while in the work with strips of chestnut wood alcoholic NaOH increased the swelling The swelling with strips may be due to a weakening action of the NaOH on the thin sections used MacDougal (4) also found that tissues swelled more in alkaline solutions, he states further that ' acids decrease the hydration capacity of agar and of the pentosans which enter into the composition of certain types of plant cells " The effects of acid and alkali in alcoholic solution are noticeable particularly in cases where the alkali or acid are present in the alcohol when it is first added to the dry wood If the wood has already been acted upon by the alcohol before the addition of alcoholic acid or alkali, the effect is less noticeable After a tissue has been treated with alcoholic acid or alkali, treatment with alcohol is able to reverse the effect of the acid or alkali only partially This result is in accord with the statement of MacDougal (4) that "no swelling agent yet tested has been found to reverse the action of another solution so fully as to bring the dimensions of the sections down to the dimensions which might have been attained in the second agent alone " However, the results obtained on successive additions of solvents show that water, alcohol and absolute alcohol each have a characteristic effect on the tissues and that this individual effect tends to assert itself regardless of whether the solvent is applied to a dried tissue or to one that has already been treated with another solvent

Comparative Swelling with Grain and across Grain —Current theories regarding the structure of the cell wall offer an explanation for the fact that swelling of wood is greater across the grain than with the grain In 1858, Nageli (6) proposed a theory that the cell wall consists of ultramicroscopic, crystalline, molecular complexes, which he called micellæ, and which were supposed to be arranged spirally Likewise, in 1924 Koehler (7) stated that theoretically the cell walls are made up of ultramicroscopic fibrils running spirally in the cell walls, the water being held almost entirely between the fibrils According to Schorger (8) each micella is normally surrounded by a film of water, but in the dry condition the micellæ are drawn together On exposure to water, 'swelling takes place up to the point where the pressure of the aqueous layers equals the cohesion between the micellæ "

On the basis of X-ray investigations Sponsler (9) concluded that the structural units of the cell walls of fibres are $C_6H_{10}O_5$ molecules attached in chains running parallel to one another and very uniformly spaced According to Sponsler and Dore (10) the $C_6H_{10}O_5$ molecules themselves are held together to form chains by bonds of primary valence while the chains are associated and held together by bonds of secondary valence They state that since the $C_6H_{10}O_5$ molecules are held together by primary valence, water molecules cannot penetrate between them and consequently longitudinal swelling of cellulose fibres cannot occur to any great extent The swelling across grain is explained on the basis that water is able to penetrate between the chains, which are held together by secondary valence only The water molecules become adsorbed upon the oxygen atoms, thus increasing the distance between the parallel chains and causing swelling

Swelling of Fresh and Dried Woody Tissues —There is practically no swelling of the fresh blocks of oak sapwood and of Elberta peach wood in liquids However, the fresh oak sapwood absorbed 12 per cent of its weight of water and the fresh Elberta peach wood absorbed 42 per cent of its weight of water during the time of the experiment This situation is explained on the basis that the liquids which enter open spaces in the wood do not cause swelling but merely occupy space which was previously filled with air Thus Hawley and Wise (11) have stated that the water held in the microscopic cell cavities does not cause swelling of wood According to Detmer (12) the mere filling of the lumina of the wood elements with water cannot bring about

any increase in volume of the material, but only the liquid imbibed by the solid substance causes swelling Detmer states that *imbibition* is by no means capillarity, a fluid entering by capillarity occupies previously existing spaces, while when imbibition takes place, the molecules of the liquid push in between the micelles actually making space for themselves and thus bringing about an increase in volume These considerations make clear how a liquid may be absorbed in quantity in the open spaces in the plant tissues and yet may not cause appreciable swelling either because the micelles are already distended as in fresh wood or because the liquid does not have the proper ties facilitating imbibition as distinguished from capillarity Steel (13) takes the view that when a substance absorbs a liquid without swelling, the cohesion of the molecules of the substance is too great to permit them to be forced apart by the liquid

In studying the data concerning the effect of water and other liquids on blocks of woody tissues dried to constant weight, we find that recovery of original size occurs to a greater extent and at a more rapid rate with the blocks dried at room temperature than with the ones dried in an oven at 90° C These results are in accord with the general rule of colloid chemistry that gels which have been partially dehydrated have a lowered capacity for reimbibing water This has sometimes been explained on the basis that during drying the salts and other dissolved substances are finally left in a concentrated form on the tissue surfaces, and thus affect imbibition in a different manner than when diffused in dilute form

Effect of Thickness of Woody Tissue on Swelling—MacDougal (4) showed that in thin sections, the coefficient of expansion is relatively high and solvation is attained quickly Our results are in agreement, thus the chestnut wood blocks increased only 7 per cent in thickness while the thin sections (0 05 mm) increased 20 per cent in width Cells at or near the surface of a section or block may swell until the forces causing swelling are counter-balanced by the elastic force of the stretched cell wall Cells on the interior of a block in order to swell, must overcome not only the elastic forces of their own cell walls but also the restrictions of the surrounding cells in blocks possessing considerable rigidity it can be readily understood that the inner cells must swell less than the outer cells and thus the coefficient of expansion is relatively low in thick pieces or blocks In a block the outer layers would cause the greater amount of swelling This is in accord with our results, which show that the greater part of the swelling of blocks took place in considerably shorter time than was necessary for the liquids to penetrate to the center of the blocks *(To be continued)*

STUDIES ON STRYCHNINE III THE EFFECTIVENESS OF SUCROSE, SACCHARIN AND DULCIN IN MASKING THE BITTERNESS OF STRYCHNINE *[1]

BY JUSTUS C WARD, JAMES C MUNCH,[2] H J SPENCER AND F E GARLOUGH

Earlier papers in this series (1, 2) on the masking of the bitter taste of strychnine gave the results of experiments with a number of chemically unrelated substances The results obtained with 1 5 and 10 per cent sucrose solutions suggested the desirability of continuing and extending studies with sucrose as well as with other sweetening agents

In the series of tests reported in this communication, strychnine alkaloid, sulphate and hydrochloride were obtained from several manufacturers Chemical tests showed the purity of the products used The sucrose was a sample of factory run beet sugar Soluble saccharin and *p*-phenetylurea (dulcin) were obtained from commercial sources The technic used in our previous studies was followed here Five cc of a solution of strychnine and 5 cc of a solution of the sweetening agent

* Scientific Section Miami meeting 1931

[2] Sharp and Dohme, Glen Olden, Penna

were mixed The mixture was retained in the mouth for exactly one minute and then ejected Two principal observations were made (1) the instant at which the bitter taste was first perceptible, and (2) the effect of the bitterness on the strength of the sweet taste Two individuals (W and S) were consistently available, so most of the figures presented are averages of the results obtained by them The other investigators made similar studies, but not in such detail Their results are in substantial agreement A considerable period of time was allowed to elapse between taste tests to avoid the possible potentiation of strychnine taste In a series of studies on this point we have found that an interval of fifteen to thirty minutes between tastes is desirable

The threshold taste limens of the sweetening agents and of the strychnine compounds were first determined The concentration of the sweetening agent was then increased to 10, 20, 30, 40, 50, 60, 80 and 100 times its threshold, and the limen for the strychnine compound determined at each sweetness concentration The experiments to determine the efficiency of each of the three sweetening agents in masking bitter taste were conducted as separate tests The thresholds for the unmixed solutions are given in Table I The values for the strychnine products are in substantial agreement with the average values obtained upon five individuals in the previous tests, and on forty students tested at Temple University during the last two years

TABLE I —THRESHOLD TASTE LIMENS OF HUMAN BEINGS

Product	Threshold Concentration Millimols/Liter	Gamma/5 Cc

2220	0 05000	0 05720	0 04440

The relative sweetness of saccharin and of dulcin in terms of sucrose has been studied by previous investigators, and divergent conclusions reached because of the variations in concentrations used as "isodulceous" standards Saccharin has been reported to be 200 to 700 times as sweet as sucrose (3) and the threshold concentra-

tions reported to be 10 mg per liter This would correspond to 50 gamma of saccharin in the 5-cc portion tasted in our technic We find the absolute quantity of saccharin detectable under our conditions to be 80 gamma The threshold taste concentrations for sucrose reported in the literature vary from 5 mg to 60 mg in 5 cc , although the absolute quantities claimed to have been detected are 3 gamma and 58 gamma In our experiments 38 mg (38,000 gamma) proved to be the limiting quantity This would mean that saccharin is 38,000/80 or 475 times as sweet as sucrose under our testing conditions

Similarly, dulcin has been reported to be 70 to 350 times as sweet as sucrose, according to the sucrose concentration with which it was compared In our tests the threshold was 90 gamma, or it was 38,000/90 or 420 times as sweet as sucrose It is probable that the sample of dulcin used in these tests was purer than the samples used by other investigators

The detailed findings of the taste limens for strychnine in the form of the alkaloid, the sulphate and the hydrochloride in sucrose solutions are given in Table II The first line shows the concentration in millimols per liter in aqueous solution which just produced the characteristic strychnine bitterness taste The succeeding figures show the thresholds with increasing concentrations of sucrose A sucrose solution, ten times its threshold concentration, had only a slight masking action A concentration twenty times the threshold shows a beginning protection, which increases rather irregularly with further increase in sucrose concentration The highest concentrations of sucrose studied appeared to give somewhat greater masking effects on the strychnine sulphate solution than on the alkaloid and somewhat less on the hydrochloride It is not felt, however, that these differences are necessarily significant The solution of sucrose 100 times its threshold masked 14 to 18 times the threshold of strychnine and its salts

TABLE III —TASTE LIMENS FOR SACCHARIN-STRYCHNINE TESTS

5 33	0 00667	0 01600	0 01000
6 67	0 00800	0 02220	0 01600

The detailed findings of the taste limens for strychnine and its salts in saccharin solutions are given in Table III Increasing concentrations of saccharin again proved effective in masking the bitterness of strychnine A marked difference was found, however, in tests upon the alkaloid and upon the salts The 100 fold saccharin solution masked somewhat more than two times the threshold of the alkaloid, but five times the concentration of strychnine as the hydrochloride and seven times the threshold as the sulphate Our previous studies have shown the

"common ion effect" produced by sodium salts (2), although we did not obtain as great an effect as this It is also conceivable that these strong solutions through influences on the osmotic pressure may influence the rates of absorption

Because of the limited solubility of dulcin, it was not possible to obtain so extensive a series of solutions The detailed data are given in Table IV In general, dulcin tends to resemble saccharin, that is, there is an increased masking effect with an increase in dulcin concentration, and the masking action is about twice as great against the salts as against the alkaloid The strongest solution tested, which was twenty times the threshold for dulcin, protected against somewhat less than two times the threshold for the alkaloid and against somewhat more than three times the threshold for strychnine as the sulphate or hydrochloride

TABLE IV—TASTE LIMENS FOR DULCIN STRYCHNINE TESTS

Concentrations as millimols/liter

Dulcin	Strychnine in the Form of Alkaloid	Sulphate	Hydrochloride
0	0 00347	0 00323	0 00323
0 10	0 00333	0 00348	0 00348

TABLE V—MASKING POWER OF SWEETENING AGENTS AGAINST STRYCHNINE

Gm required to mask 1 Gm of strychnine

Threshold Concentration of Strychnine	Saccharin Strychnine as Alkaloid	Sulphate	Dulcin Strychnine as Alkaloid	Sulphate	Sucrose Strychnine as Alkaloid	Sulphate.
1	14 3	13 2	16 1	15 5	6 790	6,790
10	131	120	147 5	128 5	62,350	63,400
20	240	204	188	188	79,100	90,500
30	326	234			74 000	110,050
40	382	290			79 600	79,500
50	452	260			57,000	57,000
60	502	288			40 700	54,400
80	578	240			54,350	50,000
100	522	216			45,500	39,800

For the practical application of these results, Table V has been prepared to show the number of grams of each sweetening agent required to mask the bitter taste of one Gm of strychnine as alkaloid or as sulphate in various multiples of the threshold bitter taste For example, the threshold concentration of strychnine having a bitter taste is 5 8 gamma per 5 cc , or 1 16 mg per liter If 1 Gm of strychnine is dissolved in 862 liters of water to give a concentration of 1 16 mg per liter (the threshold concentration recorded in Table V) it would be necessary to dissolve in this solution 14 3 Gm of saccharin, 16 1 Gm of dulcin or 6790 Gm of sucrose to mask its bitter taste As the concentration of strychnine is increased, the sweetening agents become relatively more effective Saccharin appears to be the most efficient of these sweetening agents, but tremendous amounts are required for masking purposes

As the concentration of strychnine in a sweetening agent was increased, loss in sweetness developed before any bitter taste could be detected This was particularly noticed with strong concentrations When solutions of sucrose fifty times the

threshold, or stronger, were mixed with strychnine in any form, marked nausea was noted by one of us This was observed even though the solution was almost tasteless from neutralization of the sweet and bitter tastes When strychnine in any form was mixed with solutions of saccharin or of dulcin at concentrations fifty times their sweetness threshold or above, a peculiar metallic flavor resembling dental amalgam was observed

Variation of individuals in speed of bitterness perception was again confirmed. One of us was able to identify the bitter taste of strychnine at a given concentration in two to ten seconds, another required fifteen to twenty seconds The opposite condition prevailed for detecting sweet tastes, the "bitter-slow" being "sweet fast" These differences in rate of apperception were not associated with any marked variation in absolute threshold taste limen, which is in accord with our previous findings (2)

CONCLUSIONS

1 Sucrose, saccharin and dulcin mask the bitter taste of strychnine as the alkaloid, sulphate or hydrochloride

2 Sucrose masks the bitterness of the alkaloid and the salts to about the same extent, a concentration one hundred times its sweetness threshold masking fourteen to eighteen times the strychnine threshold

3 A solution of saccharin one hundred times its threshold masks somewhat more than two times the threshold of the alkaloid, and five to seven times the thresholds of the salts

4 A solution of dulcin twenty times its threshold masks somewhat less than two times the threshold of strychnine alkaloid, and somewhat more than three times the thresholds of the salts

5 Increasing concentrations of sweetening agents increased their masking effects

PHARMACOLOGICAL AND CHEMICAL STUDIES OF THE DIGITALIS GROUP I ADONIS, APOCYNUM AND CONVALLARIA *

BY JAMES C MUNCH[1] AND JOHN C KRANTZ, JR [2]

Although a very large number of papers have been published dealing with various phases of studies conducted upon digitalis, no systematized and concerted investigation of the pharmacology and chemistry of other members of the digitalis

* Preliminary reports at Miami meeting, 1931, and Washington meeting, 1934

(Foot-note We wish to express our appreciation of the assistance rendered by Arnold Quici, Sharp and Dohme, in making many of the bioassays in this study, and to Mrs Margarethe Oakley, Maryland Department of Health, for assistance in the chemical assays)

group has been found in the literature In this investigation, studies were collaboratively conducted upon adonis, apocynum and convallaria The control products used for these studies were prepared from crude drugs identified by competent pharmacognosists The bioassay records of two drug manufacturers over a period of some twenty years have been consulted to ascertain the variations in potency of these crude drugs, as offered in commerce It should be appreciated that these examinations were made voluntarily, before the bioassay requirements of the U S P or N F were made effective In some instances tests were made upon the crude drug only other samples were reassayed from time to time, to obtain some information on rates of deterioration Samples of the finished products marketed as tinctures or fluidextracts by various manufacturers were collected and tested Since no official standards have been prescribed for these products, it was thought of interest to determine the variation in potency of marketed products It appears that at least some of the drug manufacturers have been voluntarily assaying and standardizing these preparations, even in the absence of official potency requirements In addition, a detailed search of the literature has been made to learn the potency of such products as reported, even though the authenticity of the test product is not known In this communication, our results are presented upon adonis, apocynum and convallaria, and certain active principles obtained from these drugs

Clinical reports state that adonis, apocynum and convallaria resemble digitalis in many particulars in their effects upon the heart Prescription surveys show that prescriptions are still being written for these products, although their use in the United States is much smaller than is the use of digitalis Adonis has obtained a definite vogue in Russia, not only as a drug for exerting certain effects upon the heart, but also as a diuretic (4, 5, 9, 10, 15, 16, 17, 18, 22, 25, 29, 30, 32) A glucoside, adonidin, was extracted from adonis and clinical reports have suggested its value Mercier and Mercier (25), in a detailed study of adonis, separated two glucosides, (1) adonidoside, which is water soluble, and (2) adonivernoside, which is insoluble in water, but soluble in chloroform Adonidoside was found to be more cardiotropic and myotropic, having only a feeble action on the central nervous system, adonivernoside was a marked diuretic

Over a hundred years ago it was reported that apocynum was an emetic, cathartic, diaphoretic and diuretic Pharmacological and clinical studies showed that it had a specific effect upon the heart, resembling that of digitalis and that a glucoside, cymarin, extracted from apocynum had a similar activity Because of its action as a diuretic, it has been called the "vegetable trocar" (30, 32) Some information in the literature suggested that there were differences in the activity of different species of apocynum We have made tests on a number of samples of *Apocynum cannabinum* and of *Apocynum androsæmifolium* which were identified, root by root, by Professor William J Stoneback for us We found that fluidextracts prepared from each species showed precisely the same physiological activity If cymarin is the active principle, as has been suggested, this would be expected in view of Cushny's report (5) that cymarin is identical whether extracted from *A cannabinum*, *A androsæmifolium* and *A venetum*

Studies on convallaria have shown that the flowers are richer in active principles than are the roots Karrer (21) in a series of chemical studies supplementing

the earlier investigations of convallaria, (11, 16, 18, 20, 23, 24, 35) has obtained a crystalline glucoside, convallatoxin, which is somewhat less than twice as toxic for frogs as is ouabain

Review of the literature on adonis showed that tests have been made upon frogs, guinea pigs, rabbits and cats, in Table I results reported in the original articles have been recalculated in terms of milligrams of crude drug or of active principle per kilo of body weight of animal This permits immediate comparison of the potency of any extractive in terms of the crude drug The bioassays which we have made are recorded in Table II Studies of deterioration have been rather limited results obtained in our one-hour frog study and in the study by the cat method reported in the literature are given in Table III The chemical assay of the sample of fluidextract of adonis tested by the one-hour frog method in Table III was made by a modification of the Knudson-Dresbach method (1, 26) It was found chemically to be 104 per cent of the (chemical) potency of a standard digitalis product simultaneously assayed by the one-hour frog method and found to be in harmony with the U S P X potency requirement This result is in good agree ment with that obtained by the one-hour frog method which showed the product to be 600/550, or 109 per cent of the requirement of the U S P X for digitalis It is suggested that, if adonis and its preparations are recognized in the forthcoming revision of the National Formulary, the one-hour frog method should be recom mended for bioassay, and that the same potency requirement be established for adonis and its preparations as for digitalis and the corresponding digitalis prepara tions In other words, adonis, by bioassay, has the same activity as digitalis

Physiological potencies of apocynum preparations found in the literature are recalculated in terms of milligrams per kilo and given in Table IV Holste (18) found by perfusion of the isolated frog heart that 0 24 mg of cymarin was equivalent to 1 mg of ouabain other reports in the literature, using the same technique (26) give values of 0 85, 3 54 and 5 38 mg of cymarin as equivalent to 1 mg of ouabain The purity of the cymarin used is unknown In testing tincture of apocynum by the pigeon emesis method, Hanzlik (13) found that a dose equivalent to 9 mg of crude drug per kilo produced emesis and 20 mg per kilo produced death Baljet's studies (1) by the Gottlieb thirty-minute frog method (26) showed that the M S D of cymarin was 0 12 mg per kilo, and of ouabain 0 03 mg per kilo Two fluid extracts of apocynum were assayed simultaneously by the one-hour frog and the M L D cat method For Sample A, the M S D was 320 mg per kilo, the M L D cat value 55 mg per kilo For Sample B, the M S D frog value was 280 mg per kilo, the M L D cat value, 23 mg per kilo Our results in assaying fluid-extract of apocynum by the frog and guinea pig methods are given in Table V The fluidextracts to which letters were arbitrarily signed are products purchased on the open market, and these fluidextracts A and B are not those just referred to Three fluidextracts were reassayed by the frog and guinea pig methods from time to time over 172 weeks to follow any deterioration One sample by both methods of assay showed an apparent increase in potency, but reassays were not made on these samples subsequently to learn whether these changes were apparent or real The loss by the guinea pig method appeared to be greater than by the one hour frog method which showed comparatively little change The chemical assay showed this fluidextract to be 111 per cent of the potency of a similar digitalis

product, although the bioassays showed this product to be approximately twice the potency of the digitalis product It is suggested that, if apocynum and its preparations are recognized in the forthcoming revision in the National Formulary no difference be made between various species, and that the one-hour frog method should be recommended for bioassay, and that the potency requirement established for apocynum and its preparations require them to have twice the strength of digitalis and the corresponding digitalis preparations In other words, apocynum, by bioassay, should have twice the activity of digitalis

Reports in the literature regarding the physiological potency of convallaria preparations are given in Table VII Our studies on fluidextracts, are given in Table VIII and on deterioration in Table IX The four samples studied by the one-hour frog method showed comparatively little deterioration over a period up to 153 weeks Chemical assays of a fluidextract which was somewhat more than 300 per cent of the U S P requirement for digitalis by the one-hour frog method showed only 70 per cent of the estimated potency It is suggested that, if convallaria and its preparations are recognized in the forthcoming edition of the National Formulary, the one-hour frog method should be recommended for bioassay and the convallaria products should be three times as potent as the corresponding digitalis preparations In other words, convallaria, by bioassay, should be three times as powerful as digitalis

For ready reference, results of the bioassay and chemical assay, as well as the p_H of samples tested by the Wilson hydrogen electrode method are given in Table X

CONCLUSIONS

1 Adonis and its preparations bioassayed by the one-hour frog method should have the same potency as digitalis and the corresponding digitalis preparations

2 Apocynum should have twice the potency of digitalis by the one-hour frog method of assay

3 Convallaria should be three times as potent as digitalis by the one-hour frog method of assay

SOME CONSIDERATIONS OF SILVER PICRATE *

BY JOHN C BIRD AND ALFRED BAROL

This presentation is intended to cover some of the outstanding points evolved during recent work with silver picrate, certain particular merits of which would seem to have hitherto been overlooked It is hoped that some of the promising results reported here will act as a stimulus to further clinical investigation of this product

A survey of the literature covering the last 100 years is disappointing in the scarcity of data concerning silver picrate The compound was first produced as a by-product by Chevreul, in 1809, during his work on indigo and later by Liebig in 1828, who named it "silver carbazotate," and noted its explosive property To Dumas (1) however, might be ascribed the credit of first preparing silver picrate, as such, from silver nitrate and ammonium picrate, in 1841 Dumas published an analysis of the compound and evidently stimulated further work, for both Lau

* Scientific Section, A PH A , Washington meeting, 1934

rent (2) and Marchand (3) entered the field within the next three years, making silver picrate from silver carbonate and picric acid Nothing further was done until Carey Lea (4), working in Philadelphia in 1858, prepared the chemical by interaction of silver nitrate and magnesium picrate and briefly described it and such of its properties as were then known, before the Society for the Advancement of Science

There appears to be no further reference to silver picrate until 1905, when it is referred to in the literature of the time as being a new medicament of use in certain conditions of urethritis, vaginitis, etc , while Yale (5) claimed good results in the treatment of diphtheria It was supplied for some time to the medical profession and exhibited in a gelatin or petrolatum base in the form of suppositories and ointments It is due to numerous reports of its peculiar efficacy in these and allied conditions that our recent work has been stimulated

The preparation of silver picrate according to the old and standard methods, such as the action of picric acid upon silver oxide or carbonate in aqueous suspension, has several disadvantages, mainly because of the low solubility of silver picrate in water, about one per cent at ordinary temperature This necessitates the use of large volumes of liquid with consequent lengthy filtrations, evaporations, etc , in capacious tanks of special construction, if a satisfactory product is to be obtained The solubility is somewhat higher (about 5%) in hot water, but application of heat is not desirable

In a search for a solvent for silver picrate which would facilitate its preparation, most of the usual, and many unusual solvents were tried with but little encouragement, the maximum solubility being in most cases below one per cent It is remarkable, therefore, to find that certain of the glycol ethers (particularly diethylene glycol monoethyl ether) possess remarkable solvent powers for this otherwise comparatively insoluble silver salt We have by its means been able to prepare non-viscous solutions of silver picrate containing up to 40% of the solid which, while serving as a means of manipulation, may also be used directly as medicaments In our new method of preparation use is made of this property of abnormal solubility, by carrying out the reaction in the glycol ether Silver oxide is freshly precipitated in the usual way, washed, drained and pressed free from excessive moisture It is then mixed thoroughly in a glass or enameled vessel with a sufficient quantity of the glycol ether to form a smooth paste Picric acid is added in the stoichiometric proportion, when reaction takes place almost immediately and silver picrate is formed On final warming to about 80° C the liquid becomes practically clear, and is filtered when neutral to litmus The bright golden liquid thus forms a concentrated solution of silver picrate, usually precalculated to give a concentration of about $33^1/_3$% of the solid It may be used directly for the preparation of medicinal and pharmaceutical products or to prepare the solid in crystalline form This operation consists in merely adding water to the concentrate and is the reverse of that usually employed in the preparation of crystalline substances, whereby water is gradually removed by evaporation In this case by pouring the warmed glycol solution into about twice its volume of water, large and beautiful golden-yellow needles of silver picrate separate rapidly These are drained, washed with ice water and air-dried with minimum exposure to light

CHEMICAL AND PHYSICAL PROPERTIES

Silver picrate thus obtained forms fine golden-yellow needles of intense coloring power, odorless, but possessing a penetrating bitter taste, the dust is somewhat irritating to nasal membrane The bitterness and staining power are, however, much modified in solutions of the strength used in medications The crystals usually separate with one molecule of water of crystallization but may, on occasion, be anhydrous The substance contains about 30% of silver and is soluble, 1 part in 113 of water at room temperature, solubility at temperatures around 90° C rises to about 5% Boiling water or prolonged exposure of aqueous solutions to light result in gradual decomposition with separation of silver oxide, as is the case with many silver salts The yellow color of the solutions, however, is some aid toward stability to light, colloidal silver chloride, for example, remains suspended in a solution of silver picrate without discoloration for many days, even in bright light. The solid detonates mildly on rapid heating, but it is not as violent, for example, as the sodium, potassium, ammonium or calcium salts Silver picrate forms a well-defined compound with ammonia, first noted by Carey Lea (6) in 1861 By gradually adding ammonia solution to the glycol ether concentrate, no precipitation of silver oxide is formed, as might be expected The solution turns deep orange and eventually precipitates long, thick, dark yellow needles of a compound which on analysis is shown to contain $2NH_3$ per molecule of silver salt This substance possesses interesting properties which are still under investigation It is not as stable as silver picrate, nor is it as soluble in water and other solvents The solutions rapidly darken with separation of silver oxide or silver and the slightest application of heat causes the deposition of a shining silver mirror on containing vessels If increase in bactericidal efficiency and therapeutic activity can be associated with this tendency to decomposition under ordinary circumstances, silver ammonio picrate should possess some interesting possibilities in therapeutic application

The high solubility of silver picrate in the glycol ethers renders possible, in a simple and rapid manner, the formation of numerous ethers of picric acid The required alkyl or aryl halide, such as ethyl iodide, phenyl chloride, etc , is merely dissolved in the same glycol solvent and added to the silver picrate solution Silver halide is at once precipitated in the cold, practically quantitatively, leaving the required picric ether in solution After filtering, water may be added to the liquid as previously described to produce fine crystals of the picric acid derivative In this way methyl, ethyl, phenyl and benzyl picric ethers have been prepared with rapidity and ease The method is not limited to organic derivatives, for metallic compounds may also be similarly produced Mercuric chloride, for example, being soluble in the glycol ether, may be used to prepare mercuric compounds It is hoped that this method may be extended to cover the preparation of other promising derivatives which are not readily obtained by the usual procedures

PHARMACOLOGY AND BACTERIOLOGY

From the pharmacologic and therapeutic standpoints silver picrate combines the effects of silver and of picric acid It may be said to occupy an intermediate position having silver nitrate, with its caustic and irritating, but strongly germicidal properties on the one hand, and the non-irritating, mild, perhaps doubtfully germici-

dal, so-called colloidal silver preparations on the other Silver picrate retains the medicinal qualities of the silver ion but possesses in addition, the well-known analgesic, healing and antiseptic properties of picric acid Much of the bactericidal power is due to the silver which, although ionized in solution to a less extent than silver nitrate, makes silver picrate more efficient bactericidally than the colloidal silver or protein-masked products The therapeutic properties of picric acid are well known, it having been used with success for many years in various skin lesions, including eczema, intertrigo, body ringworm, etc , Wilson (7) stating that in these particular complaints picric acid treatment gave results far superior to any other materials he had used Kolmer (8) found that the use of picric acid as an application to the skin after vaccination proved four times more efficient than phenol in lessening the degree of local inflammatory action

As an astringent, picric acid has been found superior to zinc sulphate or alum, while its penetrating powers are considerable, as shown by the fact that the hands are stained by the solution even through rubber gloves Its use in burns and ulcers is well known, Muncy (9) stating that he had "failed to find an ulceration which did not respond to picric acid," while its "marked anodyne properties (when applied to wounds) made the use of aspirin or morphine rare "

In ophthalmic work, picric acid has met with approval, having been found "far superior in antiseptic action, in the strengths used, to other antiseptics usually administered in ophthalmology " Ehrenfried's (10) summation of the desirable therapeutic qualities of picric acid states the case particularly well

> "Over any clean denuded surface it forms a protective aseptic scab by coagulation of secreted serum which seals up ruptured lymph spaces, protects exposed nerve endings and splints the wound in such a manner that epithelial proliferation may proceed rapidly beneath stimulating nature's method This artificial scab protects against infection from external sources and promotes rapid and painless epidermatization "

If any corroboration of the above is required, Broon (11) reporting on results of picric acid in war surgery states

> "One per cent picric acid is recommended for dressing superficial wounds, syringing sinuses, fractures and corroded tissues It kills bacteria without corrosive effect and prevents suppuration, stimulates granulation of tissue, has marked anodyne properties and is less irritating and more efficacious than iodine It may be used for sterilization of the skin in surgical cases and shortens the convalescent period "

In February of this year Stewart (12) reported his investigations into the maggot treatment of osteomyelitis, showing that a mixture of calcium carbonate and picric acid, or calcium picrate had practically the same effect as the maggots in stimulating phagocytosis and healing the wound In the light of these and many other gratifying reports on the desirability and efficacy of picric acid, it would seem that silver picrate should be worthy of even greater consideration under similar circumstances The additive effects of silver and picric acid would seem to be particularly desirable, as the action of the two constituents is apparently synergistic The liberation of picric acid or picrates by interaction with tissue fluids should be preferable to the corrosive or caustic results of silver nitrate, particularly as the picrate radical would appear to exert such beneficial side effects The irritating effects of silver picrate solutions in the concentrations normally used are insignifi-

cant, for in the course of this work silver picrate solutions of strength 1 1000 have been instilled into the eyes of dogs, cats and guinea pigs thrice daily for ten days and more without sign of irritation or deleterious effect The solutions are less injurious than silver nitrate and definitely of greater efficacy and more rapid action than colloidal silver products Baum (13) in testing a series of silver preparations including argyrol, protargol and silver picrate in several cases of gonorrhea, found that 1/4 to 1 1/2% solutions of the picrate were as effective as 2 to 10% of some of the colloidal silver preparations in stopping the discharges present By agar plate tests using typhosus, aureus, diphtheriæ and gonococcus organisms silver picrate was found to be the equal of similar strengths of silver nitrate in all cases but one (*C diphtheriæ*) *Trichomonas Vaginalis*—the organism frequently found in cases of leucorrhea—is killed instantly by 1% silver picrate solutions, and pus cells are immediately coagulated In short, silver picrate would appear to possess germicidal properties both physical and chemical in nature, picric acid apparently acting by precipitation of albuminous matter, and in some way denaturing the cell constituents These effects, together with its powerfully penetrative properties, probably render the field more suitable for the subsequent action of the silver ion

CLINICAL APPLICATIONS

Silver picrate should be capable of application over a considerable therapeutic field, although with the exception of the recent work of Vanstane (14) who applied it successfully in *otitis media*, vaginitis, cervicitis, and diseases of the bladder, rectum and colon, its existence and usefulness appear to have been overlooked The reason for this may possibly be accounted for by the number of reported fatalities among factory workers during the war period, resulting in the undeservedly restricted use of picric acid compounds

The thought is therefore presented that, in the light of the above findings in which the combination of silver and picric acid has proved equal or superior to the usual silver medicaments without some of their disadvantages, this chemical should be worthy of recognition in medical and pharmaceutical armamentaria

DETERMINATION OF THE REASONABLE OR PERMISSIBLE MARGIN OF ERROR IN DISPENSING III SUPPOSITORIES *

BY MARVIN J ANDREWS [1]

INTRODUCTION

This, the third of a series of papers reporting the results of investigations made to determine what may be taken as the permissible margin of error in dispensing,[2] deals with suppositories

Suppositories called for on prescriptions are usually prepared by mixing the active ingredients with the base in the solid state, then dividing and shaping

* Joint Session Scientific Section and Section on Practical Pharmacy and Dispensing, Washington meeting 1934

[1] In collaboration with A G DuMez, Professor of Pharmacy, School of Pharmacy, University of Maryland [2] Jour A Ph A, 22 (1933), 755, 838, 23 (1934) 350 421

the resulting mass by hand, or by mixing the active ingredients with the melted base and pouring the mixture into molds to solidify It is only in rare instances that suppositories are made by machine in the drug store The vehicles commonly employed are cacao butter, glycerinated gelatin or sodium stearate

For the purpose of this study, a typical suppository prescription was selected for compounding, and the suppositories were made by hand Preparation of the suppositories by the other methods mentioned was not attempted as it appeared that these methods offered no additional possibilities for error, except the one due to a variation in the capacity of the individual molds To discover if there was any appreciable variation in the capacities of the molds and to determine the effect of various methods of filling upon capacity, several series of experiments were carried out in which cacao butter alone was used

EXPERIMENTAL PART

The Pharmacopœia of the United States, Tenth Decennial Revision, page 366, gives the following information under suppositories

' For suppositories made with Oil of Theobroma the following general processes may be employed

Take of

The Medicinal Substance, the prescribed quantity
Oil of Theobroma, grated, a sufficient quantity

"Reduce the medicinal substance if dry to a very fine powder, or if an extract soften it with an appropriate liquid, then mix it thoroughly in a mortar with about an equal weight of grated oil of theobroma and incorporate the remainder of the oil of theobroma until a homogeneous, plastic mass is obtained adding if necessary, a small quantity of expressed oil of almond or wool fat Roll the mass on a graduated tile until a cylinder of the proper length is formed divide this into the required number of equal parts, and with a spatula or other mechanical aid, form them into the desired shape

"If the process of fusion is preferred, mix the medicinal substance with about an equal weight of grated oil of theobroma as directed above, then thoroughly incorporate it with the remainder of the oil of theobroma, previously melted by a gentle heat on a water bath in a suitable vessel provided with a lip Allow it to cool to about 38° C , and when the mixture begins to congeal, pour it immediately into suitable well cooled molds Keep the molds at a freezing temperature until the suppositories have hardened and are ready to be removed

"Rectal suppositories should be cone shaped and when made from oil of theobroma should weigh about 2 Gm "

Based on this information three series of tests were made The first series of tests was carried out to determine the variation in weight and length of hand-made suppositories The objective of the second series of tests was to determine the variation in capacities of the suppository molds used in the City of Baltimore in terms of cacao butter The purpose of the third series of tests was to determine the effect, if any, of different methods of filling on the capacity of suppository molds

With the first objective in view, the following prescription was filled, the suppositories being formed by hand

℞ No 1

Ext Bellad	Gm 0 163
Pulv Gall	Gm 1 300
Ol Theobrom *qs*	Gm 20 000

M et ft Supp No 10

In the actual performance of these tests, the suppository prescription was filled by 100 members of the senior class in dispensing pharmacy at the School of Pharmacy of the University of Maryland under working conditions described in the first paper The completed suppositories were checked for accuracy with respect to weight by using a prescription balance, and for accuracy with respect to length by using a millimeter ruler The standard deviation was computed from the results obtained

In tests made to determine the variation in weight of suppositories prepared by hand, the students were instructed to follow the method outlined in the Pharmacopœia In some instances a few drops of expressed oil of sweet almond, castor oil or a few grains of wool fat were added to the grated cacao butter The suppository pipe was rolled and cut on a graduated tile Some were prepared without the use of a dusting powder, while in others lycopodium or filter paper was used in the process of manufacture The students were directed to make the suppositories cone shaped and to make them as near 25 mm in length as possible

The results of this series of tests are presented in Tables I and II

TABLE I —STANDARD DEVIATION IN WEIGHT OF SUPPOSITORIES MADE BY HAND

Batch Number	Av Wt in Gm	S D in Gm	Batch Number	Av Wt in Gm	S D in Gm

48	1 913	0 065	98	1 926	0 061
49	1 830	0 188	99	1 873	0 093
50	2 176	0 121	100	2 121	0 119
			Average	1 959	0 172

In Table I it will be observed that in the case of the weight of the individual suppositories, the average standard deviation is 0 172 Gm , or 8 81 per cent based on the average weight Fifty-eight of the batches compounded fall within the average standard deviation of 0 172 Gm , thirty-four fall within twice the average standard deviation, or 0 344 Gm , while eight fall within three times the average standard deviation or 0 516 Gm

TABLE II —AVERAGE LENGTH AND AVERAGE STANDARD DEVIATION IN LENGTH OF SUPPOSITORIES MADE BY HAND

Number of Batches of Suppositories Prepared	Average Length of Suppositories Prepared	Average S D in Millimeters.
100	25 76 mm	0 831

In Table II, it will be observed that in the case of the length of the individual suppositories the average standard deviation is 0 831 millimeters, or 3 30 per cent when based on the average length On studying the original results it was noted that fifty-one of the batches compounded fell within the average standard deviation of 0 831 mm , forty-two fell within twice the average standard deviation, or 1 662 mm , while the remaining seven fell within three times the average standard deviation, or 2 493 mm

For the purpose of making it possible to compare the results presented in Tables I and II with similar data that may have been published, but which have not been expressed in terms of the standard deviation, the per cent of deviation from the theoretical has been calculated and is given in Tables III and IV

TABLE III —PERCENTAGE DEVIATION OF HAND MADE SUPPOSITORIES FROM THE THEORETICAL WEIGHT OF 2 GRAMS

100	2 121	3	3	2	2	
	Totals	395	271	155	102	77

The data presented in Table III show that for a total of 1000 hand-made suppositories prepared by 100 different operators, 66 6 per cent fall within a deviation of 10 per cent of the theoretical weight, 82 1 per cent fall within 15 per cent, while 92 3 per cent fall within 20 per cent

VARIATION IN CAPACITY OF SUPPOSITORY MOLDS IN TERMS OF CACAO BUTTER

A second series of tests was carried out to determine to what extent suppository molds used in retail pharmacies in the City of Baltimore varied in capacity

TABLE IV —PERCENTAGE DEVIATION OF HAND-MADE SUPPOSITORIES FROM THE THEORETICAL LENGTH OF 25 MILLIMETERS

Number of Suppositories Prepared	Number of Suppositories That Deviated from the Theoretical Length by— 5% or Less	From 5% Plus to 10%	From 10% Plus to 15%	From 15% Plus to 20%	20% or Over
1000	624	214	124	37	1

The percentage deviation from the theoretical length of 25 millimeters show that 62 4 per cent fall within 5 per cent, 83 8 per cent fall within 10 per cent, 96 2 per cent fall within 15 per cent, while 99 9 per cent fall within 20 per cent

For these tests, ten different sets of suppository molds were borrowed at random from retail drug stores and the capacities of the individual molds determined in terms of cacao butter

To obtain the desired data, suppositories of cacao butter were prepared by fusion in each of the ten sets of molds borrowed The melted cacao butter was cooled to the congealing point and then poured into the well-cooled molds The excess was removed by running the edge of a spatula over the top of the molds immediately after the cacao butter had solidified The individual suppositories were then weighed and the weights recorded

A summary of the results of the second series of tests is given in Table V

TABLE V —CAPACITY OF SUPPOSITORY MOLDS IN TERMS OF CACAO BUTTER

No of Sets of Molds	Av Capacity in Gm	S D in Gm	No of Sets of Molds	Av Capacity in Gm.	S D in Gm
1	1 493	0 008	6	2 032	0 022
2	2 095	0 009	7	1 390	0 027
3	1 915	0 026	8	1 975	0 023
4	1 887	0 014	9	1 481	0 051
5	2 400	0 023	10	1 318	0 037
			Average	1 798	0 024

The data obtained in this series of tests show that the weight of individual suppositories made with the ten sets of borrowed molds range from a low of 1 255 Gm (in mold No 10) to a high of 2 440 Gm (in mold No 5), or a difference of 1 185 Gm

The average capacity in grams in terms of cacao butter of all of the ten sets of suppository molds as shown in the table is 1 798 Gm , while the average standard deviation is 0 024 Gm On further study of the table it will be observed that the deviations for six of the sets of molds fall within the average standard deviation of 0 024 Gm , three fall within twice the average standard deviation or 0 048 Gm , while only one falls within three times the average standard deviation or 0 072 Gm

To make it possible to compare the results presented in Table V with similar data that may have been published but which have not been expressed in terms of the standard deviation, the per cent of deviation has been calculated

The weights of the individual suppositories showed the variation from the average to be less than 5 per cent in every instance, except for the suppositories prepared with mold No 9 In the latter case the weight of 90 per cent of the suppositories fell within 5 per cent of the average weight, while in the remaining 10 per cent there was a variation of 9 8 per cent from the average weight On ex-

amination, it was discovered that some of the individual molds of this set were bored deeper than others

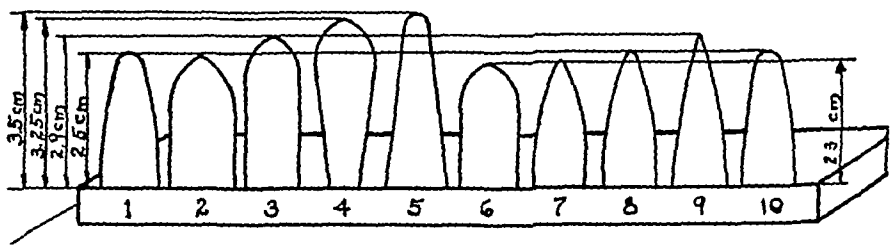
The per cent deviation from the theoretical weight of 2 Gm of cacao butter has also been calculated, the results are given in Table VI

TABLE VI —PERCENTAGE DEVIATION BASED ON THE THEORETICAL WEIGHT OF 2 GM OF CACAO BUTTER

No of Sets of Molds	Percentage of Individual Suppositories Deviating from 2 Gm by— 5% or Less	From 5% Plus to 10%	From 10% Plus to 15%	From 15% Plus to 20%	From 20% Plus to 25%	25% or More
1					60%	40%
2	87 5%	12 5%				
3	75 0%	25 0%				
4	50 0%	50 0%				
5				62 5%	37 5%	
6	100%					
7					40 0%	60%
8	100%					
9					40 0%	60%
10						100%

The variation in length and the difference in shape of the suppositories prepared with the ten sets of suppository molds used are shown in Table VII

TABLE VII —VARIATION IN LENGTH AND SHAPE OF SUPPOSITORIES PREPARED IN THE 10 SETS OF MOLDS



EFFECT OF DIFFERENT METHODS OF FILLING ON THE CAPACITIES OF SUPPOSITORY MOLDS

A third series of tests was carried out to determine to what extent, if any, the capacity of suppository molds is affected by the method of filling With this objective in view suppositories of cacao butter were prepared in the same mold by each of the following methods

1 Melting and pouring cacao butter into well chilled molds

2 Preparing rough suppositories by hand then forcing them into the mold to obtain a uniform shape

3 Preparing suppositories by compression in a suppository machine

The results of this series of tests are presented in Table VIII

TABLE VIII —EFFECT OF THE METHOD OF FILLING ON THE CAPACITIES OF SUPPOSITORY MOLDS

Method of Preparation.	Capacity in Gm of Cacao Butter 1	2	3	4	Average Capacity in Gm	S D in Gm	Per Cent Deviation
Melting and pouring into mold	2 300	2 305	2 305	2 285	2 298	0 008	0 34%
Massed and forced into mold	2 200	2 220	2 300	2 225	2 236	0 037	1 70%
Made by compression in machine	2 395	2 390	2 380	2 345	2 377	0 019	0 79%

An examination of the results in Table VIII shows that the method of filling has a definite influence upon the capacities of suppository molds Based on the results obtained it may be stated that the capacity in grams of cacao butter, beginning with the smallest and ending with the largest, varies in accordance with the following order of arrangement (1) Suppositories prepared by hand and then forced into the molds to shape, (2) suppositories prepared by melting the ingredients, then pouring into well-chilled molds and allowing to solidify and (3) those made by compression in a suppository machine Likewise, it will be found that the greatest variation in weight occurs in the suppositories prepared by hand and forced into the molds to shape, while the most uniform are those prepared by fusion

The variation in capacity due to a difference in the method of filling the molds as observed in the above tests was surprisingly small being less than 2 per cent for all suppositories except in the case of those prepared by hand and then forced into the molds when it was less than 3 5 per cent All of the suppositories in this series fall within twice the standard deviation

CONCLUSIONS

1 The weight of suppositories prepared by hand varies with the working temperature, the technique of the individual operator and the size and shape of the suppository to be prepared

2 The results of the first series of experiments show that 92 per cent of a total of 1000 different suppositories prepared by 100 different operators fall within twice the average standard deviation for weight of 0 344 Gm This corresponds to a variation of 17 2 per cent when based upon the theoretical weight of 2 Gm

3 The results of our experiments showed that there is no greater variation in length than in weight of suppositories made by hand if a definite length is decided upon In ordinary practice, however, this is not true as there are no official standards for length, and each pharmacist makes his own standards

4 Individual suppositories in a set of molds do not vary in capacity beyond reasonable limits There was observed, however, a great variation in the capacity of the sets of suppository molds as used in different retail drug stores The latter variation is believed to be due to the fact that the manufacturers of suppository molds do not have any definite specifications to follow

5 A difference in the method of filling was observed to have an appreciable effect upon the capacities of suppository molds

(*To be continued*)

THE OPENING SESSION

Time has once more brought us round to the renewal of those medical studies of which pharmacy is a branch Year by year it assumes a more definite character, and the period is not far distant when both in teaching and in practice it will occupy an independent place At Bloomsbury Square, where official pharmacy is enshrined, history was seen to repeat itself, there was the same crowd of visitors and friends to welcome successful candidates, the same band of young aspirants who had gained distinction, the same professional congratulations, and a lecturer to give the accustomed introduction address Retrospect of Fifty Years Ago —*The Chemist and Druggist* October 15, 1884

A PHYTOCHEMICAL STUDY OF CANCHALAGUA PANAMENA *

BY ROBERTO A BENEDETTI [1]

Canchalagua Panamena, very much like the *Erythræa chilensis*, Pers is a Gentianaceæ of the species *Schultesia lisianthoides* (Paul Standley) It grows in the Savannas just outside of Panama City

The plant, *Canchalagua Panamena*, varies from 7 cm to 30 cm in height, the stem is quadrangular throughout with branches opposite The leaves are linear and opposite consisting of five nerves The dirty pink solitary flower is about 15 mm long and it comes out of an elongated capsule which later contains the numerous tiny seeds All parts of the plant have a very bitter taste

For many years the farmers in the Interior of the Republic of Panama have used Canchalagua as a febrifuge The therapeutic use of the drug is that of a febrifuge in malarial fevers, as a tonic, and for regulating the liver against jaundice The therapeutic dosage is, as a tonic, 120 cc of a 1% infusion, as an anti-icteric and febrifuge 240 cc of a 3% infusion The soft extract may be used in doses from 0 20 cg to 1 Gm and the powdered drug from 1 Gm to 5 Gm

A representative sample of the entire plant was analyzed according to the U S P methods with the following results

Total ash	5 67%
Moisture (for non-volatile constituents)	9 27%
Alcohol-soluble extractive	9 58%
Diluted alcohol soluble extractive	12 50%
Water soluble extractive	9 97%

A 25-Gm sample of the air-dried drug was reduced almost to a powdered form and extracted in a Soxhlet extraction apparatus with several solvents Ether, ethyl alcohol and water were the solvents used and in the order mentioned

The ethereal extraction was acid to litmus paper, taste, bitterless, color, emerald green The ether was evaporated from the extract and a solid like mass was obtained weighing 1 31 Gm (5 24% of the drug) The extract had a waxy appearance and tasted like wax

The bitter alcoholic extraction gave an acid reaction with litmus paper A few cc of the extract showed a beautiful emerald green coloration, but a larger quantity was reddish brown The alcoholic extract was tested for alkaloids with Mayer's reagent and picric acid giving negative results The extract after evaporation to a glucose consistency, weighed 5 52 Gm (22 08% of the drug) In order to obtain a purer product, the extract was treated 3 times with a mixture of 20 cc of ether, 5 cc of alcohol and 15 cc of water in a separatory funnel The water solution from the separatory funnel was evaporated—the reddish brown jelly like substance obtained was intensely bitter, acid in reaction and insoluble in ether This mixture was then treated with ethyl alcohol in which most of the extract dissolved The filtrate was evaporated to determine if crystals would be formed but unsuccessfully, a reddish brown jelly like substance separated This substance was intensely bitter, acid to litmus paper and when hydrolyzed with dilute hydrochloric acid reduced Fehling's solution

The aqueous extract from the Soxhlet extractor was acid to litmus paper Its solution tastes bitter when fresh, but on standing becomes practically bitterless The reddish brown extract was evaporated to a solid like consistency and weighed 3 45 Gm (13 80% of the drug)

* Joint Session, Scientific Section and Section on Practical Pharmacy and Dispensing A PH A, Washington meeting, 1934

[1] Panama City, Panama

The extract showed the absence of alkaloids After dissolving the extract in a little distilled water and then diluting with ethyl alcohol a bitterless brown gum precipitated

A 10 per cent infusion of the drug was acid to litmus paper and reduced Fehling's solution, showing that it contained a free acid and glucose A few drops of Ferric Chloride solution added to the infusion gave an ink

About 16 Gm of cut Canchalagua was percolated with ethyl alcohol A part of the percolate, after concentration, failed to reduce Fehling's solution Then another portion of the percolate, 30 cc, after being boiled for one-half hour with 2 cc of a 5% hydrochloric acid reduced Fehling's solution This reaction showed the presence of a glucoside

Several methods were employed to obtain a glucoside but without success, probably due to the small quantities of drug used In one of the methods, the drug was boiled with milk of lime to remove the tannin The filtrate, after evaporation to a soft extract, was digested with ethyl alcohol and filtered, to this, ether was added, but no precipitation was obtained

CONCLUSIONS

1 *Canchalagua Panamena* resembles *Erythræa chilensis* physically and therapeutically

2 Uses of the drug febrifuge, anti-icteric and tonic

3 The most important constituents of the drug are a bitter glucoside, free acid, a sugar, wax, gum, tannin and green coloring matter

SOME TIMELY FORMULAS FOR THE CHIROPODIST *

BY ADOLPH F MARQUIER

It has always been a fitting effort on the part of the pharmacist to prepare for the members of the healing art, suitable medicinal preparations to meet the various conditions that present themselves daily In the past and the present we have and are giving considerable time and thought to the human machine and its ailments but our feet only in recent years are receiving scientific consideration and in the writer's opinion there is a great future in this line of endeavor There are at present a number of formulas in use by the practitioners of this art and the writer is taking the liberty of submitting a few of the formulas which in experience have proven some value

Alcohol 70%	500 0 cc

Epidermophytosis—Athlete's Foot

We have had official for a number of years the salicylic acid, Indian Hemp, collodion, Whitfield Ointment, compound talc powder, inunction menthol comp, Stainless Iodine Ointment All of these preparations are extensively used by both the doctors and the laity

AN ENTERIC COATING FOR TABLETS *

HAROLD A JOHNSON[1] AND RALPH W CLARK [2]

The writers have reviewed the more commonly used American textbooks as well as journal literature searching for references on enteric coatings for pills, capsules and tablets Salol or mixtures of salol with other substances seem to be the materials favored by most writers Salol is made use of in certain commercial enteric coated tablets Enteric coated Glycotauro tablets are coated with salol (1), enteric coated tablets, Neutral Acriflavine-Abbott, are coated with shellac and salol while enteric coated tablets, Neutral Acriflavine-National, are coated with salol containing some keratin (2) Several methods of applying salol coatings to pills and capsules have been suggested Apparently, however, little work has been done on developing a method of applying a salol coating to tablets in a manner which

* Section on Practical Pharmacy and Dispensing, A PH A, Washington meeting 1934

[1] Senior Student in Pharmacy, University of Wisconsin

[2] Instructor in Pharmacy, University of Wisconsin

could be used satisfactorily by the retail pharmacist The present paper deals with a simple method of salol coating tablets

Pills, capsules and tablets are the accepted modes of administration of medicines which need only to be taken in small quantities They are used to advantage for bad tasting drugs Pills and tablets may be coated to further disguise bad tastes and all three modes of administration may be coated in such a manner as to make them reach the intestines before they dissolve or disintegrate Capsules may also be treated with formaldehyde to render the gelatin insoluble in the acid juices of the stomach

Pills, one of the oldest forms in which medicines are given, were probably first experimented with in an attempt to secure an enteric coating In 1884 Dr Unna (3) experimented with keratin as an enteric coating Keratin is now generally held as of little value for this purpose Previous to 1884 fatty and resinous substances had been employed (4) Beginning with the third edition, the National Formulary has given a method of salol coating pills by rotating them in successive, small amounts of salol, thus applying several thin coats Salol or a mixture of salol with other substances may be applied in liquid form by spraying a solution on the pills while agitating them in a suitable dish

An enteric coating may be applied to capsules by similar methods However, Cook and LaWall, in the seventh edition of Remington's Practice of Pharmacy (5), point out that greater care is necessary to secure complete coating They also state that the capsules being flexible and the coating very brittle, it is necessary to handle them with care to avoid cracking off the coating Husa and Magid (6) came to the conclusion that a coating applied by spraying a mixture of salol, stearic acid and an alcoholic solution of shellac is satisfactory Bukey and Rhodes (7) studied the treatment of gelatin with formaldehyde and recommend as a method to be used by the pharmacist an immersion for 5 to 15 seconds in a 10% formaldehyde solution They also used gelatin-coated pills in their study

Tablets may be coated by spraying a solution of the material or materials upon them while they are being agitated Wruble (8) developed a coating consisting of shellac, suitable for large scale production He made use of a 25% solution in equal quantities of alcohol and ammonia Because of their shape, tablets, like capsules, do not lend themselves to the National Formulary and similar methods of coating Therefore the following method for salol coating of tablets has been developed Although this method is not all that is to be desired, it may be used to coat a dozen tablets in about one-half hour's time after the operator becomes familiar with the technique involved

A METHOD FOR SALOL COATING TABLETS

Melt a sufficient quantity of salol in a 4-inch casserole on a water-bath to completely cover a tablet upon dipping it into the melted salol When the melted salol reaches the temperature of from 45–50° C (salol melts between 41–43° C), grasp the tablet to be coated on its narrow sides with a pair of tweezers, the points of which have been bent inward, and dip the tablet into the melted salol Remove and keep the tablet moving in a circular motion in the air until the salol congeals Shift the tweezers to a new position on the tablet and repeat the operation until a coating of the desired thickness is obtained Usually three dippings are enough

To make the coating smooth and glossy, grasp the coated tablet with tweezers and pass it quickly through a Bunsen flame

Test tablets containing methylene blue and calcium sulphide for determining the effectiveness of the coatings were prepared by the formula used by Wruble (9) The tablets were compressed on a Stokes hand-operated tablet machine As considerable inconvenience was experienced with Wruble's formula, the following was developed with no changes in the quantities of the two active ingredients

Methylene blue	1/4 gram
Calcium sulphide	1/2 gram
Lactose	3/4 gram
Starch	1 1/2 gram
Purified talc	1 1/4 gram
Sugar	3/4 gram

Granulate with a gelatin solution prepared as follows

Pour upon 180 grains of gelatin sufficient water to cover it and allow it to stand one hour, then pour off the water Transfer the washed gelatin to a dish, add 240 minims of glycerin and sufficient water to make four fluidounces Heat on a water-bath until the gelatin is dissolved Use while warm

There is some question about the effectiveness of these tablets for testing enteric coatings as several students reported no eructations of hydrogen sulphide after taking the uncoated tablet

The test tablets were coated with the salol as described above Sixty students were each asked to take one of these tablets Five reported eructations of hydrogen sulphide gas Three reported no reaction The balance of the group reported blue coloration of the urine This is evidence that the salol coating does not dissolve in the stomach, but dissolves in the intestinal fluids allowing the tablet to disintegrate there

Wholesale Drug Analysis—An analysis of wholesale drug operations, based on an eight months' study of a typical wholesaling establishment, has been published by the Bureau of Foreign and Domestic Commerce of the Department of Commerce as a bulletin—'Domestic Commerce Series—No 86" The work reported was supervised by Wroe Alderson on a plan laid out by John R Bromell The study was made and the report prepared by Edward J Carroll Detailed statistical records and comment are given on selling buying, commodity coverage, storage transportation, finance and risk bearing, a comparative tabulation being included which covers eight types of drug wholesaling The data are broken down for departments and although the author disclaims any purpose of critically analyzing the trade as a whole, his records being factual have a wide relative value The bulletin comprises 110 pages It is for sale by the Superintendent of Documents Government Printing Office, Washington, at 15 cents a copy

MEDICAL AND PHARMACEUTICAL CONTRIBUTIONS TO ELECTRICAL SCIENCE *

BY CHARLES WHITEBREAD [1]

Pharmacy and medicine have played an important rôle in the development of electrical science because pharmacists and physicians were among the first to make practical use of this agency, and because it was the discoveries, studies and writings of these men which furnished the impetus for the early investigations and researches that have made electricity the agency for good which it is to-day

Our science, and science generally, does not need champions to proclaim the part taken in human progress, as the accomplishments of the past and of the present speak for themselves It is a human failing, however, to accept the benefits which come to us as the direct result of the scientific investigations which have made the forces of Nature our servants, and to forget the part taken by mankind to make possible the comforts and conveniences which we now enjoy Let us, therefore, see how we obtained the fundamentals of our knowledge of electricity, noting particularly the contributions of our own and affiliated professions, and how medicine generally has benefited from a branch of science based in no small degree on the discoveries of medical men

The earliest mention of electricity is supposed to have been made by the Ionian philosopher, Thales of Miletus, who died about 548 B C , and who discovered that if a piece of smooth amber is rubbed with a dry cloth it attracts light bodies placed near it Although Thales was regarded as one of the seven wise men of ancient Greece, it is recorded of him that he thought amber possessed a soul, and that it was nourished by substances which it attracted to itself Natural magnets were known in Europe more than two thousand years ago, and the Chinese have used them since 600 B C They were portions of lodestone, native oxide of iron, and the word magnet came into use because this ore was found in Magnesia, Asia Minor

The observations of Thales concerning amber, and of others relative to the magnet, remained without development until the 16th century, when Dr William Gilbert, physician to Queen Elizabeth of England, published a treatise on the magnet in the year 1600, giving the results of the experiments which he had conducted up to that time This physician was the discoverer of frictional electricity in a large number of substances, of static electricity, the repulsion of similar and the attraction of dissimilar poles of the magnet, the diversion of the magnetic needle by electricity, the strengthening of a magnet by an armature, the fact that iron bars become magnetic along the magnetic meridian, that the earth itself is an enormous magnet, etc We are also indebted to Dr Gilbert for the name electricity which was derived from a Greek word meaning amber, and his investigations of a subject which had lain dormant for more than two thousand years, marked the inauguration of the experiments and researches which have since added so greatly to our fund of knowledge

A German scientist, Otto vonGuericke (1602–1688), made the first electric machine, which consisted of a globe of sulphur on an axis mounted in a frame,

* Section on Historical Pharmacy, A PH A , Washington meeting, 1934

[1] Assistant Curator, Division of Medicine, U S National Museum

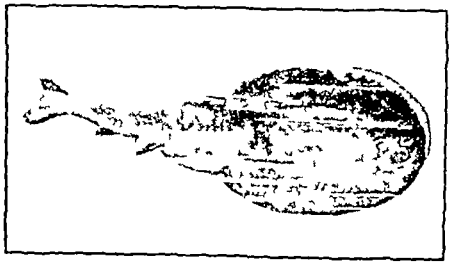

Fig 1 —The Electric Ray (*Torpedo galvani*) This fish, common in the tropical seas, was the source of the static electricity first employed in the treatment of disease It was an animal drug at the beginning of the Christian Era

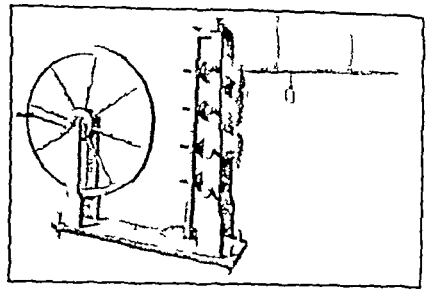

Fig 3 —Dr Watson's Electric Machine The mechanical rubbers are to the left of the globes, and the conductor is suspended by silk cords on the right (From Priestley's 'History of Electricity,' 1775)

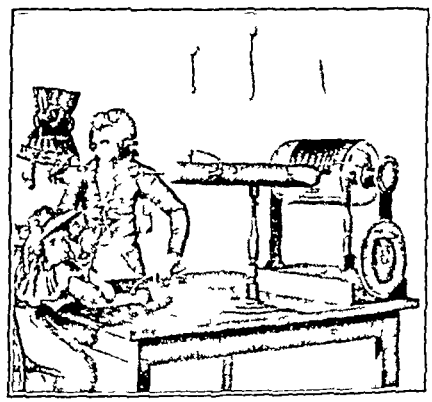

Fig 4 —Administration of static electricity (From a print published in 1799)

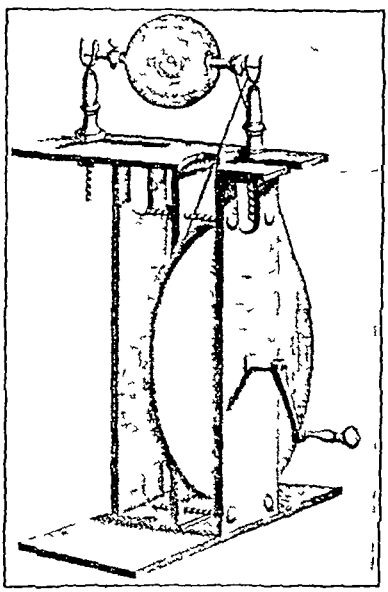

Fig 2 —Hawksbee's Electric Machine An early improvement on the first electric machine made by von-Guericke (From Priestley's "History of Electricity,' 1775)

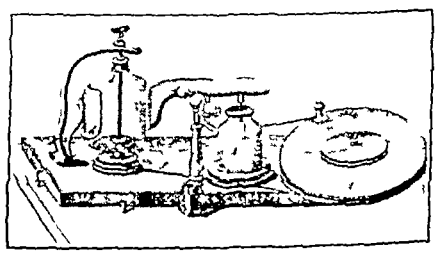

Fig 5 —Read's Cylinder Machine One of the early types of electric machines especially constructed for medical purposes (From Priestley's History of Electricity" 1775)

and discovered the electric spark, observing the crackling sound which accompanies it Francis Hawksbee, in 1709, improved the electric machine, substituting a globe of glass for vonGuericke's sulphur globe In both of these machines the

hand was used to supply the necessary friction, but it was not long before a mechanical rubber and a prime conductor were added to the apparatus The frictional electric machine was improved by others, and soon a special machine for medical purposes was in use

In 1729, Stephen Gray, while experimenting with a medicated tube, found that he could convey an electrical charge to a distance by a hemp string Later he found that when a wire 700 feet long, and hung on loops of silk, was connected at one end with the glass tube, and the tube was rubbed, the other end was electrified and would attract light bodies This discovery was the first to introduce the distinction between conductors and non-conductors, and was the origin of our knowledge of insulators

In 1745, the properties of the leyden jar—so-called because many of the early experiments were conducted at the University of Leyden, Holland—were discovered by vonKleist, Cuneus, Allamand and Muschenbroek, and affirmatively answered the question "Can electricity be stored?" Sir William Watson, M D, in 1747 and 1748 took part in the experiments by which an electrical discharge from a leyden jar was "extended to four miles in order to prove the velocity of its transmission"

In America, Benjamin Franklin distinguished between positive and negative electricity, in 1747, and demonstrated the identity of the electric spark and lightning in 1752 He also devised the lightning rod, and took such an active part in the study of frictional electricity that it is sometimes called franklinic electricity

Up to this time researches had been confined to studies of static or frictional electricity, that is, electricity in a condition or state of rest, but in 1791, an Italian physician and professor of anatomy, Luigi Galvani, by his famous frog experiments, laid the basis for the discovery of dynamic electricity, that is, electricity in motion An Italian physicist, Alessandro Volta, when following up the work of Galvani, in 1799, devised the voltaic pile, the first electric battery Volta's pile, a vertical column of several pairs of zinc and copper disks separated by moist cloths, supplied the knowledge that electricity is generated by chemical action This pile was found to be charged with positive electricity at its lower extremity and with negative electricity at the upper extremity When wires attached to these extremities were brought into communication with each other and then separated, a minute spark was observed which corresponded to the spark obtained from the frictional electric machine Electricity produced by Volta's pile was called voltaic, galvanic, battery or primary electricity

Until the year 1820 electricity and magnetism were regarded as distinctly separate sciences, but in this year Hans Christian Oersted,[1] a professor of physics at Copenhagen, proved the intimate relationship between the two, when he observed that a wire in which a voltaic current was passing deflected a magnetic needle suspended near it Oersted's experiments and those which followed by Ampere, Weber, Arago and Sturgeon marked the discovery of electro-magnetism, and introduced an important era of electrical research which was participated in by many eminent authorities Michael Faraday, in England, and Joseph Henry, in the United States, almost simultaneously made the discoveries that gave us

[1] Son of a pharmacist—see JOUR A PH A, April 1931, page 370

our knowledge of induced currents, and furnished the fundamental information which made possible the modern era in the history of electricity

Among the earliest applications of electricity to human welfare was its use in the treatment of disease The compass was of great service in navigation, and Franklin's rods had provided a safe method of protecting buildings from lightning The real advances in the way of putting electricity to practical use, however, only date from the time of Faraday and Henry, the great men who, by their experiments and researches, made possible many of the conveniences which we enjoy to-day One of the first of these modern applications was telegraphy, the telephone was another, and magneto-electric and dynamo-electric generators and motors are now so common that we are inclined to forget that their introduction has taken just about a century

The practical applications of electricity have come with such rapidity since the days of Faraday and Henry that they cannot be considered in this brief article With the fundamental discoveries in mind, and a recollection that materia medica specimens were the chief source of electricity in the early days, that search for a means of curing disease stimulated investigation, and that medical men were leaders in electric experimentation, we can now turn our attention to a consideration of electrotherapy

The treatment of disease by electricity is called electrotherapy, and if the earliest employment of remedial substances whose real or supposed efficacy depended on electrical phenomena are included under this term, electrotherapy can claim an antiquity as great as some of the oldest branches of medical science The fish known as the "electric ray," common in the tropical seas, was the source of the static electricity first employed in the treatment of disease A Roman compiler of materia medica, Scribonius Largus (14–54 A D), was the first to recommend the use of electric shock as communicated by this fish in the treatment of severe headaches Galen, "The Father of Pharmacy," and the most famous of the Græco-Roman physicians at the beginning of the Christian era, also prescribed shocks from the "electric ray" for the cure of headache, and classical writers of this time spoke of this form of medication in cases of cramp, paralysis, gout, diseases of the joints and disorders of nervous origin In his "Natural History" Pliny refers to the electric ray as if its use as a therapeutic agent was quite general He says "From a considerable distance, even, and if only touched with the end of a spear or staff, this fish has the property of benumbing the most vigorous arm, and of riveting the feet of the runner, however swift he may be in the race If, upon considering this fresh illustration, we find ourselves compelled to admit that there is in existence a certain power, which by the very exhalations, and, as it were, emanations therefrom, is enabled to affect the members of the human body, what are we not to hope for from the remedial influences which Nature has centered in all animated beings?" Later on, the *Gymnotus electricus*, or electric eel of South America, was of interest as the subject of much experimentation because it was able to administer a much more powerful shock than the electric ray

The natural magnet, or lodestone, was a form of primitive electrotherapy, which comes under the heading of magic medicine, as whatever effect was produced by holding it in the hand or wearing it suspended from the neck must have been a psychological one which arose from the superstitious belief that the characteristic

properties of the magnet gave it the power to attract or repel the causes of disease The oldest account of the use of the magnet in medicine is ascribed to Aetius, physician to Justinian I (A D 527–565), who said "We are assured that those who are troubled with the gout in their hands or feet, or with convulsions, find relief when they hold a magnet in their hand" Johannes Arculanus, a professor at Bologna and Padua during the 15th century, is said to have endeavored to remove splinters of iron from the eye by means of the attraction of amber electrified by friction Paracelsus, one of the most famous of the 16th century European physicians, made use of the magnet in the treatment of toothache and other disorders Later it was used in the treatment of headache, and magnetic toothpicks and earpicks were extolled as remedies for disorders of the teeth and ears, and Kircher (1598–1680) speaks of the magnet being worn about the neck to prevent convulsions and nervous diseases While most of these early attempts to utilize a force concerning which little was known were based on "the influence of imagination in the cure of disease," still they served the very good purpose of keeping alive the interest in electrical science and electrotherapeutics

The electrotherapy of the 18th century was confined to the electrification of patients and the administration of shocks by means of electric machines and leyden jars Professor Jallabert, of Geneva, in 1748, noticed the phenomenon of muscular contraction resulting from electric stimulation, and Professor Kratzenstein (1723–1795), was among the first to employ electricity produced by these methods successfully, it being recorded that after fifteen minutes of electrification he cured a woman suffering with a contraction of the little finger Rossler introduced the electric bath as a remedial agent in 1768, Manduyt, in 1777, employed electricity in the treatment of amblyopia, Charles Darwin used it as a remedy for jaundice; and Hufeland recommended electricity for the relief of asphyxia

Exaggerated accounts of great cures effected in Europe reached America and prompted Benjamin Franklin to experiment with electricity as a therapeutic measure, and he related his experiences to a friend in this manner "People were brought to me from Pennsylvania and the neighboring provinces to be electrified, which I did for them at their request My method was to place the patient in a chair and draw a large number of sparks from all parts of the affected limb or limbs Then I fully charged six two-gallon jars, each of which had about three square feet of surface coated, and I sent the united shock through the affected limb or limbs, repeating the shock commonly three times each day" Franklin noted temporary improvements, but the general result of his attempt to utilize electricity for curative purposes seems to have coincided with the experience in Europe of the Abbé Nollet, who said he did not know of a permanent cure by electrification

Galvani's observation that the limbs of a freshly killed frog were thrown into violent convulsions when placed close to the prime conductor of a frictional electric machine led to much physiological experimentation, first upon invertebrates and later on warm-blooded animals These experiments supplied much valuable information with reference to the various forms of response to electric stimulation, and proved that both the voluntary and involuntary muscles were affected

At the beginning of the 19th century galvanic electricity was in use by physicians as a therapeutic measure particularly for the treatment of those diseases

which had been found to receive benefit from frictional electricity Amateur investigators were proclaiming galvanic electricity as a specific for all kinds of nervous disorders and paralytic affections, deafness, blindness, suffocation, etc These unwarranted and unauthorized claims soon brought electrotherapy into such disrepute that the use of electricity as a therapeutic agent was temporarily discontinued

Modern electrotherapy dates only from 1847 when a French physician, Dr G B A Duchenne, discovered that individual muscles could be stimulated by the application of electrodes to the overlying skin Before this the general twitchings produced by an electric shock had been observed, but, as at that time all impairments of movements were included under the term "paralysis" the pathology of which was unknown, very little progress had been made in the way of specific electrotherapy Duchenne now devoted his attention to specific treatment, choosing as his subjects the class of incurable paralytic patients in the large hospitals of Paris He employed induced currents, and his success in restoring health to these sufferers was so great that it gave the special impulse which resulted in the formation of a practical specialty of electrotherapeutics Other men such as Remak, vonZiemssen, Erb, Addison, Crusell, Gull, Bird and Benedikt assisted in the modernization of electrotherapy, and widely extended the usefulness of electricity as a diagnostic and therapeutic agent

The general benefits which are derived from electricity are well known The benefits which have come to medicine are not so familiar, but these, too, are so numerous that we can only skim the surface with the statement that the development of a method of measuring dosage, the discovery of X-rays, and the standardization of electrical apparatus for the purpose of diagnosis and treatment have brought about a true appreciation of electrotherapeutics All forms of electric current are now used in the treatment of disease, the kind of current and the way in which it is applied depending on the result to be effected, and the usefulness of electricity seems all the more wonderful when we consider that most of the cases successfully treated are those for whom there seems no further hope by other methods

If the placing in the hands of physicians of a curative agent for the relief of conditions which could not be helped by other remedial measures were the only benefit which had come to medical science, it would be amply repaid for the part it has taken in the development of electrical science It has received, however, an equal benefit in a diagnostic way, for what could be more wonderful than the X-ray machine which makes it possible to examine the "inside" of a patient, the electrocardiograph which graphically records the action of the heart muscle, the bronchoscope for inspecting the interior of the bronchial tubes, and the electrostethoscope by which the heart sounds can be intensified and heard for a considerable distance, not to mention the numberless other practical uses in medicine

When Franklin was asked what use there was in his electrical experiments he replied by asking "What is the use of a baby?" When Faraday was similarly questioned he responded that he was endeavoring to make electricity useful Franklin realized that electrical science was a very promising infant, and Faraday knew that the child must be put to work to overcome complaints such as the follow-

ing made in the year 1840 "It must be allowed, that the case has not been the same with electricity as with magnetism The latter, by the invention of the magnetic needle, has served to render navigation more secure, and to discover the new world, a source of new riches, new wants and of new evils to the old one But electricity has not yet produced anything of so much importance, to mankind, and to the arts, if we except the analogy now proved between the electric fire and lightning, an analogy which has given rise to a pretty sure preservative from the effects of that dreadful meteor, for in regard to the cures effected by electricity, it must be acknowledged that they are either rare, or not well ascertained"

Only a century has elapsed since the discoveries of Faraday and Henry introduced the modern era of electricity, and since Duchenne laid the foundation for present-day electrotherapy, but this short period of time has been sufficient to overcome all complaints concerning the uselessness of electricity The electrical inventions have come with such clock-like regularity that it would seem that they have been timed to keep interest in the subject alive, for as soon as the novelty of one invention waned another of even greater significance would be made to encourage the workers on to further effort

This review, which has purposely been made brief and consequently incomplete, including only a few of the items of great importance in the early stages of electrical development most likely to be overlooked by the present generation, calls to mind what great good can come from seemingly trivial experiments in the field of pure science

With the thought of the times focused on the matter of devising new methods of utilizing the universal servant, electricity, undoubtedly what we now regard as modern phases will before long be classed among the early ideas and undertakings of electrical science So while lauding, as we should, each new advance, let us occasionally call to mind that pharmacists and physicians, by fundamental contributions, helped to make electrical accomplishments and achievements possible

BARBITURATES ALLEGED DANGERS *

Gillespie (Guy s Hosp) contributes an exhaustive and reasoned article in defense of the barbiturates The article does not lend itself to abstraction but a few points may be mentioned A review of the published records to the end of 1932 fails to show a case in which these drugs, in single or repeated therapeutic doses, have caused death in the absence of complicating factors In complicated cases (with one possible exception) the drug has never been the essential cause of death The margin of safety (the ratio of customary maximum dose to minimum recorded lethal dose) is with barbitone 1 5 and with phenobarbitone 1 3, with the newer barbiturates data are not sufficient to permit such a calculation Idiosyncrasy has to be reckoned with in a proportion of cases—about 3 per cent or less, but this is chiefly a matter of skin conditions or neurological disturbances there is no case on record of a single therapeutic dose even in an idiosyncratic patient, having a lethal effect Contraindications or indications for caution, are (1) old age (smaller dose), (a) kidney disease, absolute except in pernocton or nembutal which are contraindicated in (3) liver diseases, (4) advanced heart or lung disease (smaller doses and not continued), (5) toxemia (sepsis or possibly hypothyroidism), (6) idiosyncrasy to be borne in mind on first administration Addiction may occur, but is unlikely, as the barbiturates do not afford the same euphoria as alcohol or morphine while their withdrawal is not accompanied by the same distressing results

* R D Gillespie *On the Alleged Dangers of the Barbiturates*" *Lancet* (February 17, 1934), 337-345

ANTOINE JEROME BALARD, PHARMACIST AND CHEMIST *

BY JOHN E KRAMER

In perusing the history of science we find in bold letters the names of many great men, workers in this field whose accomplishments have won for them great renown Yet, here and there, we see a name not so familiar, but still deserving more attention than has been accorded Let us take, for example, the case of Antoine Joseph Balard, French pharmacist and chemist, born in Montpellier, France, September 30, 1802 His education was laid along the lines of pharmaceutical training and was acquired under the Faculty of Sciences of his native town His teaching ability, however, was so pronounced that he soon became chemistry assistant, and later professor of Chemistry at the Royal College, the School of Pharmacy and the Faculty of Sciences at Montpellier

Balard qualified as a pharmacist and established himself in business What spare time he had after the demands of his professions had been met was spent in the work he liked best, chemical research The scene of his activities, Montpellier, is situated on the Mediterranean Sea, and a nearby salt marsh provided material for much investigation Certain startling reactions aroused his suspicions and after much intense work he came upon a substance which he ascertained to be a previously unknown element

Because of its odor, when its fumes came in contact with the air, the element was named bromine, after the Greek word "bromos" meaning stench The name, however, was bestowed upon the substance by the famous Gay-Lussac, after Balard had called it muride, from the world "muria," meaning brine Needless to say, Gay-Lussac's appellation remains to this day as the proper one

It is interesting to note that another famous man of that day, Liebig, had his hand, or rather, didn't have his hand in the early days of bromine Some years before the discovery Liebig had been sent, for assay, as an unknown, some nearly pure bromine which had been obtained as a by-product in the manufacture of salt He laid it aside, thinking it some other substance and, when bromine was announced, immediately placed his sample in his "Cupboard of Mistakes" to constantly remind him of his lost opportunity to be the discoverer of a new element

Balard was only 24 years old when he came upon bromine, in 1826, and his reputation and fame from this discovery were instrumental in his election to the chair of Chemistry in the Faculty of Sciences in Paris, succeeding L J Thenard, French pharmacist and chemist, famous for his discovery of hydrogen peroxide In 1844 he became a member of the Academy of Science and in 1851 he was appointed Professor of Chemistry in the College of France In this latter eminent position he had the famous Berthelot as a student, then as assistant and later as a colleague

The sea water which furnished him his clues for the discovery of bromine also induced him to devote much time to the problem of extracting soda and potash from the briny deep Fate was cruel in this instance, for just as he had mastered the problem, rich deposits of the substances he sought were found in the Stassfurt district He also conducted much research on bleaching compounds of chlorine,

* Section on Historical Pharmacy A PH A , Washington meeting, 1934

and was the first to advance the theory that bleaching powder is a double compound of calcium chloride and hypochlorite

Organic chemistry provided another field of investigation for Balard and we find records of his papers on the decomposition of ammonium oxalate, forming oxamic acid, papers on amyl alcohol, cyanides and the difference in composition between nitric and sulphuric ethers He was a frequent contributor to the "Annales de Chimie et de Physique"

In 1868 he was made Inspector General of Superior Instruction in France and on March 30, 1876, his death occurred in the city of Paris

ANTOINE JEROME BALARD

Let us take a look at Balard's character, for his attitude toward life and work was responsible for a great forward step in the advancement of Science It seems that this pharmacist-chemist, who had brought fame to himself in the discovery of bromine, was more or less content to ease along on the strength of what he had done With the praise that was bestowed upon him, he might have reacted in one of two ways He might have become conceited and overbearing or he might have been fired with the great ambition to find new worlds to conquer But, instead, he chose the middle path, continuing in his unperturbed, even manner to perform his experiments in the back room of his pharmacy, or else, as was his wont, wander around to the laboratories of his friends, seeing what they were doing, listening to their plans and making suggestions from his own wealth of information Goodness knows how many of his casual suggestions were put to work to the glory and fame of the user

However, we do know of one such instance Louis Pasteur, whose discoveries and works are so well known and so beneficial to us all, was in the midst of his efforts to solve the very perplexing problem of where microbes came from Some of the scientists of the day were backing the spontaneous generation theory, but Pasteur was of the idea that they came from the air, and were wafted by the air, on dust particles, to all the places where microbes were found Pasteur found his theory hard to prove, for, try as he might, he could not get his yeast mixtures, the medium of microbe cultivation that he used, dust free Every time he heated his flasks, dust-laden air would rush in and in a short time the microbes could be seen increased manifold Pasteur was up against a blank wall when Balard strolled in, heard the story, summed up the situation and rather nonchalantly suggested that Pasteur draw the necks of his flasks into the shape of an "S" lying on its side, patterned after the neck of a swan busily engaged in picking some article from the surface of the water The suggestion made, Balard continued on his visitation rounds, and re-

turned some time later to have Pasteur excitedly tell him of the success of the experiment Air had come back into the flasks through these queer shaped necks but no microbes had developed The germ-laden dust had been unable to go up through the up-turn of the horizontal "S"

But proof was still necessary, so Balard suggested that Pasteur shake his flasks so that some of the culture medium wash through the entire neck and then return to the main body of the flask Once more Balard sauntered out of the great man's laboratory, and once more Pasteur feverishly followed his advice Just as Balard had contended, the necks of the flasks gave up enough microbes to make the yeast soup swarm with newer generations in a very short time The spontaneous generation theory was shattered, and Pasteur was credited with the entire task De Kruif, in his "Microbe Hunters," describes Balard's nature very admirably in just one sentence Telling of a brilliant meeting of great scientists at which time Pasteur did his very efficient theory-exploding, the author said, "If Balard was there, you may be sure he applauded as enthusiastically as the rest A rare soul was Balard"

Although we find the preceding paragraph to be surprisingly true, Pasteur was deeply grateful to Balard for past favors done Balard had been one of Pasteur's teachers and personal advisers, and had been instrumental in obtaining Pasteur's connections with various investigations and with certain institutions That he was appreciative is shown when the position of Inspector General of Higher Education was left vacant Pasteur was immediately proposed for the post but at the same time Balard put in his application, whereupon Pasteur made this gracious gesture in writing, "Your Excellency must know that twenty years ago, when I left the École Normale, I was made a curator, thanks to M Balard, who was then a professor at the École Normale A grateful pupil cannot enter into competition with a revered master, especially for a post where considerations of age and experience should have great weight" Balard, consequently, received the position

Unambitious and indolent, rather given to watching others than doing his own work, Balard was content to let life take its course and human events pass their way unhampered by any more interference from him He is not as well remembered as others he taught in his school, helped in their laboratories and probably served in the capacity of a pharmacist, and who have received the recognition of time and history and remain forever in the minds of men

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

Editor's Note The following paper on 'Effect of NRA Codes on Retail Trade' by an economist as well known as Mr Wroe Alderson is sure to command attention Your Editor can only urge that it be read with thoughtful care —C B JORDAN, *Editor*

EFFECT OF NRA CODES ON RETAIL TRADE

BY WROE ALDERSON

In considering the broad problem of the effect of NRA codes on retail trade there are five major aspects of the problem which may be considered These are

The volume of retail business done
The morale of retailers and their support of the Recovery Program
The competitive position of classes of retailers
The bargaining position of retailers and their suppliers
The efficiency of retail distribution

In so far as the activity of retail trade might be increased by the Recovery Program, it would mean nothing more, of course, than a reflection of the improvement in business as a whole This is aside from such general considerations as the relative improvement in consumer goods industries and capital goods industries Looked upon as a symptom of recovery, the volume of retail trade has not shown a particularly encouraging trend

The Bureau of Foreign and Domestic Commerce has been compiling several series to indicate the trend of retail trade for several lines Reports now available for the first three months of this year show a general increase in volume of retail business over the same three months of last year This is particularly marked in what is called the Rural Store Index This increase may result from the payments that have been made to various classes of farmers under the Agricultural Adjustment Program and to various other disbursements of relief funds in the rural areas The second greatest increase is in the case of automobiles The indications here point to a really fundamental increase in wide-spread purchasing among persons of moderate means Number of units purchased has increased much more than total volume of sales, indicating that a trend toward the more popular priced car At the same time automobile financing has increased more than either units or volume, which will undoubtedly be characteristic of an increase in automobile purchase among classes of moderate income

In other lines covered increases in value have been more than offset by increases in the retail price level In other words, there has apparently been fewer physical units of goods sold at retail rather than a greater number This may not mean that the total consumption of goods has actually been less since the various relief agencies have not used the existing channels of distribution in handling all commodities distributed on a relief basis

One of the most unfortunate consequences of NRA has been its effect on the morale of retail trade The National Recovery Administration began its work last summer in a way that indicated that it was not conscious of the importance or perhaps even of the existence of retail trade The first several months of policy development were based entirely on considerations of the problems of the manufacturer, particularly in the heavy industries The Administration came sharply up against the problem of retail trade when the Blue Eagle campaign was instituted General Johnson had been impatient with the progress attained on manufacturing codes but the Blue Eagle instead of accomplishing the results desired in that direction, involved him inextricably with considerations of retail distribution

One of the biggest aspects of the general problem of the effect of NRA on retail trade is thus the political problem of the effect upon the morale of retailers and through them upon public support of the Recovery Program arising from the peculiar way in which retailers came into the picture Having first been told both in print and in conversations with their representatives who came to Washington that the program was not primarily interested in the retailer and might overlook him entirely, the retailer, because of his direct contact with the consumer, might have been the agent for selling the whole program solidly to the entire country if he had been handled with more consideration

The policy originally announced of leaving considerations of retail trade for treatment at a much later date was probably a sound one It would have been a much easier problem to secure full compliance and strict enforcement against violators if only the larger manufacturing industries had been covered Securing compliance among retailers could naturally be expected to be a slow process because of the great number of small and sometimes irresponsible individuals engaged in the retail business Retail violations are likely to be well known in the community and widely discussed because the retailers' operations are so open to public inspection

From the standpoint of creating employment opportunities, the NRA could not perhaps afford to overlook retail trade with almost as many millions of people employed as manufacturing industries It can be stated with certainty, however, that these facts did not occur to the leading minds in the NRA until much later and as a matter of fact, the retail codes were never handled in such a way as to capitalize to any great extent the employment possibilities offered Ironically enough, the greatest single potential field for real employment was brought into the picture more or less accidentally through a failure to visualize the way in which the so called Blue Eagle campaign would immediately become involved with retailing

Effect of NRA on the competitive position of classes of retailers is one of the most interesting aspects of NRA and its consequences Various groups of competing business men have become highly specialized in the degree to which they make use of various competitive devices In the retail field three of the leading types of stores from the standpoint of competitive position have been limited price stores, cut price stores and service stores There are other lines of cleavage such as small and large stores, specialized and general stores and groups distinguished by particular method of operation such as the chain store and the mail order house

The line of division indicated in the first instance is the one which has been brought most sharply into the foreground by the attempt to set up NRA codes Some of the most vital code provisions carried threats of upsetting completely the

competitive equilibrium in retailing because these code provisions seemed likely to affect the position of one class of retailers more drastically than that of another class of retailers The limited price stores had made a place for themselves on the basis of fixed and well-known prices for a variety of items such as 10¢ for a tack hammer or $5 55 for a pair of shoes These stores had flourished during the past several years of declining wholesale prices Their greatest concern related to the possibility of drastic increases in the cost of labor which would make it impossible for them to maintain their present fixed price lines which were the principal basis of their merchandising appeal to the public One result of their having been so deeply perturbed over these matters was the formation of two brand new trade associations which called into their services two of the shrewdest merchandising men in the country These were Dr Paul Nystrom for the limited price variety stores and William Girdner for the fixed price chain shoe stores Up to the present this group has come off fairly well since the increase in labor cost was much less than they had feared it might be Some variety chains reported national improvement in their position as a result of the enforced wage increase They found that they were getting a better class of help at a higher minimum wage and that these employees were bringing courtesy and intelligent sales effort into the variety store operation for the first time

The service type of store was most concerned about the other step in the program for benefiting labor, namely, the shortening of hours, particularly as it implied or might require the shortening of store hours The downtown stores generally would have had their competitive positions somewhat improved in relation to the small neighborhood stores if there had been a drastic cut in the number of store hours permitted Many of these small merchants obtain a considerable portion of their total business solely because they are able to remain open for a longer number of hours than the larger store Here again the tendency of the NRA to deal gently with retailing so far as prescribing a new labor burden was concerned kept this second group of retail stores from suffering any loss of competitive efficiency in the direction which they particularly feared It would be very interesting to know just what was the basis of the very lenient policy concerning labor requirements in retail codes since some of those who were frankly representing the interests of the retailer at hearings admitted openly to administrative officials that their group was not being asked to carry their fair share of the recovery load but without apparently having any effect on the administrative attitude

The third class of stores were those whose volume depended largely on price appeal This included stores which had to offer prices to attract customers because of downtown locations and stores which were using aggressive price cutting in an effort to make a place for themselves as newcomers to the field during the course of the depression This group included chain stores, department stores, the pine board store in the drug field and the supermarkets in the grocery field All of these types devoted the closest attention to any proposed clauses which were designed to create price appeal by prohibiting sales below purchase cost or some other predetermined level

The result in this direction has been to favor the moderate price cutter as against either the drastic price cutter or the store depending on service appeals While some price protection has been given in the Codes, it is sufficiently moderate

to permit the department store and chain store to sell certain items at prices lower than would normally be offered by the small service retailer The pine boards and supermarkets are barred under the Code from exerting the full force of price cutting which they have used in the past The general effect, therefore, is to restore the general status of competition as far as price appeal is concerned, which existed prior to the depression

The earnings of retailers depend in part on the day to day outcome of the constant struggle between the retailer and his supplier for the larger share of the amount paid by the consumer to cover the functions performed by both The activities of the NRA have thrown the balance slightly in favor of the supplier, particularly in the case of small manufacturers supplying the department stores Here again this could be viewed either as an interference with the present competitive equilibrium or a return to the relative status prior to the depression Over a long period the present policies of NRA would work more and more against the retailers as compared with the supplier There is always, of course, the definite possibility that present policies would be modified before they had led to any drastic upsetting of the present balance of power between retailer and supplier

From the standpoint of the general public interest, the most important question of all is what effect a Recovery Program may have on the total cost of distribution It has long been held by many people that one of the greatest needs of our economic system was to be able to perform at lower cost the function of transferring goods from the hands of the manufacturer to those of the consumer Specifically in connection with the Recovery Program several of the Recovery Agencies and particularly the A A A have placed major stress on reduction of the cost of distribution as one of the fundamental objectives of the program This must be acknowledged as a vital problem and one that must be solved for purposes of long range reconstruction even though its bearing on immediate recovery may be more limited

While such a cost reduction is certainly to be desired, the important question is where to take hold of the problem since it can be shown beyond the question of a doubt that many of the efforts to reduce the cost of distribution have actually tended to increase costs This is sometimes true for example, in the case of individual manufacturers who feel that the cost of the wholesale function as performed by the independent wholesaler is too high to attempt to sell their merchandise directly to the retailer Only too often the manufacturer finds that he is not able to do the job as cheaply as the wholesaler He may still hang on to the wholesale facilities which he has established either because it is difficult to withdraw his investment in them or because he finds some compensating advantage in an increased ability to control his market even though the function is performed at a higher cost

So far as administrative points of view are concerned, the most persistent and fallacious bit of thinking concerning distribution cost has been the assumption that the small retailer was necessarily inefficient because he was small and that he should therefore be eliminated or his numbers greatly reduced To the extent that this point of view is allowed to determine policies, the efforts of reducing the cost of distribution may have an effect opposite to that desired As opposed to this point of view the following things can be definitely shown

1 That the optimum size of unit in retailing is at a very moderate volume point in most lines of trade

2 That the advantages of aggregating individual units into chain systems are advantages which can be duplicated by cooperative effort between small retailers and is not inherent in the corporate form of organization or outstanding excellences of chain management

3 That the function of service retailing cannot be fairly judged except in relation to a definite measure of how much service the consumer wants Retailers create place utility and it is obvious that the cost of creating it will be high if the consumer demands that commodities be brought within a few blocks of his home

4 That the really inefficient small retailers make up a very small fraction of the total volume and that the consumer does not ordinarily carry an additional load because of their presence in the picture since the greater part of the loss which such retailers sustain through excessive operation costs is in the form of wasting their own assets

5 That the small retailer is in several lines engaged in subsidizing the expensive fringe of retail distribution and that a unified system which attempted to cover the market completely might find its average cost considerably increased by the necessity for maintaining distribution at the points where such small retailers now maintain it

---

Gould's 'Pocket Pronouncing Medical Dictionary" 10th edition P Blakiston's Son & Co Inc, Philadelphia Price $2 00, plain, $2 50, with thumb index Flexible cover 4 x 6½ inches Contains over 40,000 words giving the pronunciation and definition of the principal words used in medicine and the collateral sciences, including illustrations of the arteries muscles, nerves bacteria, bacilli micrococci, spirilla, etc , thermometric scales revised dose list of drugs and their incompatibilities, systems of weights and measures based upon U S Pharmacopœia X and revised veterinary dose tables By George M Gould

In selecting the new words care has been taken to include those of sound and permanent value Twelve pages are given to symbols and abbreviations The definitions are brief but definite The Physician's Dose Table' has been prepared by Wilbur L Scoville, included therein the names of Remedies are given in the first column and, in sequence Doses in Apothecaries System, Metric Solubility, Important Incompatibilities The Veterinary Dose Table was prepared by Dr W S Devoe, formerly inspector of Animal Industry U S Department of Agriculture and revised by Dr V G Kimball, assistant professor of Veterinary Medicine, University of Pennsylvania The value of a dictionary is best determined by the users and the revisions and large sale have evidenced the approval of the practitioners of medicine and others who have the volume in their libraries

Pharmaceutical Formulas (P F Vol II) published 1934 supplementary to Vol I, and known as 'The Chemists' Recipe Book' Contains formulas for adhesives beverages, cleaning materials, culinary and household requisites horticultural and agricultural preparations, inks, lozenges, perfumes, photographic preparations, polishes, soaps toilet articles varnishes veterinary preparations etc , including numerous descriptions of practical methods employed in their manufacture and other information of use to pharmacists and manufacturers Over 1000 pages Price by post 15 shillings 6 pence

The formulas are to a large extent representative of the 'correspondence columns" of the *Chemist and Druggist,* the replies to correspondents have been arranged under various headings and the publishers advise that, as far as possible, the formulas have been checked by experiment Formulas from foreign official and non official publications (other than British) are included and, in this connection, it may be pointed out that strengths of preparations and composition of them may vary this should be taken into consideration in compounding also quantities of this book, unless expressed in the Metric System or otherwise stated, are given in British units of weights and measures The *Chemist and Druggist* is well and favorably known to pharmacists and speaks for the value of the Book herein noted

THE CONFERENCE OF PHARMACEUTICAL LAW ENFORCEMENT OFFICIALS

MINUTES OF THE SESSIONS HELD IN SHOREHAM HOTEL, WASHINGTON, D C MAY 10 AND 11, 1934

The sixth annual meeting of the Conference of Pharmaceutical Law Enforcement Officials was convened by Chairman R L Swain at 9 30 A M in the Card Room, with the following present Messrs J W Slocum, W F Mead, Iowa, R C Reese, W Mac Childs, Kansas, Hugo Schaefer, George W Mather F C A Schaefer C P Wimmer, New York, Robert C Wilson, W S Elkins, Georgia, A L I Winne, Virginia, J Lester Hayman, G O Young West Virginia C T Gilbert Connecticut, Joseph Burniak, Michigan, J B Pilchard, L L Walton, R R Gaw, Pennsylvania, N N Brakke, North Dakota, Rowland Jones, South Dakota, C S Pierce, B K Murdock, L H Marr, Maine, W C Muesing J P Jellinek, Minnesota, Henry F Hein Texas, P R Loveland, New Jersey, W Bruce Philip, J W Lee, A C Taylor, R A Veitch Washington, D C , F V McCullough, Indiana, Frank C Purdum, W F Reindollar, R L Swain Miss B Olive Cole, Maryland, M N Ford Ohio

Chairman Swain made a verbal address and then called for the report of the Secretary Treasurer

THE REPORT OF SECRETARY-TREASURER

BY M N FORD

Since the last annual meeting of the Conference, the Secretary has had considerable requests from different states for information which was promptly furnished There being no particular court decisions furnished the Secretary, there have been no bulletins sent out since the last meeting Proceedings of the last annual meeting were published in the JOURNAL and it has been recommended by the Chairman that reprints be secured and made available to the Conference members as soon as possible

There have been no expenditures of money since our last annual meeting therefore, we have on hand a balance from the last meeting of $170 67 We have received from Chairman F C A Schaefer, of the Finance Committee $110 00, therefore we have on hand at this time $280 67

Upon motion of Mr Winne seconded by Mr Jones the report of the Secretary Treasurer was approved

The Conference also approved obtaining reprints of the proceedings of the last annual meeting and that they be made available to the members as soon as possible

REPORT OF FINANCE COMMITTEE

The Finance Committee appointed by Chairman Swain sent out an appeal to the Boards of Pharmacy for contributions of ten dollars for the Conference This Committee not having been appointed until recently did not have ample time to get many replies from their appeal, however the Committee did receive $10 00 contributions from the states of Maryland, Ohio Kentucky Connecticut, North Carolina North Dakota, New Jersey, West Virginia Arkansas and Wisconsin and $5 00 contributions from the Board of Pharmacy of Pennsylvania and from the West Virginia State Pharmaceutical Association making a total of $110 00 The Committee has had favorable replies from other states who will forward their contributions a little later

ROWLAND JONES
W MAC CHILDS
WM HANKINS
HUGO SCHAEFER
F C A SCHAEFER, *Chairman*

Upon motion by Mr Mead, seconded by Mr Gilbert, the report of the Committee was approved

A question was raised as to the legality of the fee being paid by the Board of Pharmacy and a discussion was entered into by Messrs Wilson Childs, Winne, Mead and Hayman

At this time Chairman Swain introduced the Hon Herbert Levy of the Maryland Bar who addressed the Conference on the subject of ' The Place of the Attorney-General in the Legislative and Law Enforcement Program ' Mr Levy spoke in part as follows

Some of you may recall that I spoke to this group at its meeting in Baltimore some two or three years ago Since that time laws have been enacted with such bewildering rapidity and of such sweeping effect that an examination of the role of the Attorney General brings to light new possibilities of useful service on the part of the person holding that office In general it should be said that the place of the Attorney General is traditionally at the head of the law enforcement division of government whereas on the other hand he has no place traditionally in the legislative program

The Attorney General of the United States has the duty of representing the government in law suits in the Supreme Court and in the Court of Claims, and in addition is head of the Department of Justice, having as such as Bryce has remarked in his analysis of the American Commonwealth, powers comparable to those of a minister of justice in a European cabinet Further, the Attorney-General has the important duty of advising the President and the heads of executive departments by opinions on questions of law submitted to him Significant is the inability of the Attorney General to render opinions to either of the houses of Congress and equally so is the limitation whereby the Attorney General cannot give opinions except upon questions actually arising in the department requesting the opinions Finally, the Attorney General may at times act as draughtsman of legislation to be proposed in Congress

The actual duty of prosecuting offenders against the federal laws is not performed unless and until the appellate courts are reached But the connection between the district attorneys and the Attorney General gives the Attorney General contact with and responsibility for the prosecution of offenders even in the lower courts The duties of the various State Attorneys General vary in each state

A contrast between the United States Attorney-General and the Attorney General of Maryland, as an example, may be found in the fact that the local States Attorneys are not subject to the control of the Attorney General of the state who can only participate in a prosecution in a lower court when required by the Governor or the General Assembly to aid the States' Attorneys

In summary, therefore of the place of the Attorney General in the law enforcement pro gram it may be said the United States Attorney-General occupies through the district attorneys a most responsible position in this regard whereas the State Attorney-General holds one of much less importance

In the rendering of opinions there is also some contrast to be noted In Maryland for example the Attorney-General may render opinions when required to do so either by the General Assembly or by one of its houses

The rendering of opinions and the analogous duty of drawing proposed legislation may be described as functions midway between law enforcing and actual legislating " A strict construction of existing statutes may for example directly bring about the passage of supplementary acts by the legislature A liberal construction may bring about restrictive legislation by the law-making body Or the injection of some personal point of view in a law being framed for a governmental department may directly affect legislation

The very possibility of influencing the character of legislation by either of these methods raises the interesting question of the separation of powers Needless to say any attempt on the part of the Attorney-General directly to color legislative changes through the use of his services by those charged with legislative duties presents the same problem in a form in which the separation of the governmental powers can be studied as more strikingly productive of good or evil The actual proposing and advocating of particular legislation by an attorney general is so unusual and so unlikely because of the resentment it would cause to legislators that it need only be regarded as the extreme to which this particular combination of governmental functions may ever proceed

'Separation of Powers ' is a phrase familiar to even the most casual student of civics who has heard from school boy days of the division of the government into executive legislative and judicial parts The origin of the phrase appears to go back to the Spirit of Laws" written by the French nobleman Montesquieu in the middle of the Eighteenth Century It has been said of this

versatile writer (whose 'Persian Letters" are known to many not the least interested in government) that his gift of generalization was so happy that from a mass of incomplete or even totally inaccurate information he could extract a principle of the widest application With his other great gift of forceful and epigrammatic expression he could then express the principle in terms of terse lucidity

At the time when he was writing, the Hanoverian monarchs of England had been on the throne only a few years And the cabinet system of government, made necessary by their inability to speak English and their ignorance of English affairs, to say nothing of their frequent absences on visits to their German kingdom, was only slightly known to Europeans But the division of the government already definitely marked was not lost on Montesquieu when he analyzed the British constitution It is in this analysis that he uses the phrase "Separation of Powers " And he there says

> When the legislative and executive powers are united in the same person or in the same body of magistrates, there can be no liberty "

The idea had already come to America and was embodied in most of the state constitutions at the time of the drawing of the Federal constitution But the words of Montesquieu, quoted by Madison in the *Federalist*, kept the principle clear in the minds of the members of the constitutional convention

It may be appropriate to notice that Madison particularly comments upon the force of the statement of the principle in Article 8 of the Maryland Declaration of Rights

> That the Legislative, Executive and Judicial powers of Government ought to be forever separate and distinct from each other, and no person exercising the functions of one of said Departments shall assume or discharge the duties of any other "

Interesting as may be the study of the origin of the idea it is still more interesting to observe with what force the principle has been adhered to through all the successive changes both in Federal and state forms of government

Applied to the activities of the Attorney-General as a member of the executive department of the government it obviously prevents his voting in any legislative body as does the Attorney General of England who is a member of Parliament It also prevents any close official connection with the law-making power

His problem is not to influence the legislature I learned from practical experience that legislators are very jealous of their prerogatives A wise Attorney-General should never show too much zeal in advocating departmental legislation, for immediately he does so he is suspected of attempting to encroach upon the legislative domain

He should thoroughly familiarize himself with the governmental problems to be dealt with so that if called upon he can draft the laws in clear and succinct language and then present to such as may inquire the explanations and reasons for the law Beyond this he cannot go except at the peril of his official client's cause

That does not mean his legislative activities are of no value in influencing the passage or defeat of legislation in which his official clients are interested On the contrary, a dignified semi judicial presentation of the arguments in favor of the department's position usually carries considerably more weight than an argument to like effect made directly by the official involved

Those of you who must resort to legislatures in connection with your work take heed

Use your Attorney General He can be of great help to you in the presentation of your case, but do not make too much use of him

In other words, enforcement work, like every other kind of work in life must be administered with common sense and the Attorney General can be of great help if you take his nose out of the law books and fully familiarize him with your problem from a practical point of view

The lofty impartiality of the Attorney General, who best fulfils his duties, derived as it is from principles long studied and understood finds no more useful function than in connection with the governmental changes of to day

Acting because of the critical condition of the country in the spring of 1933 Congress passed a series of extraordinary measures producing the most wide spread effects, yet *short and simple* in

their language The most frequently discussed of these are the NRA, and the AAA The power which these acts placed in the hands of individuals is almost incredible The ability of individuals to vary the meaning of the law by executive orders has given practically law making power to executives charged with the administration of these and numerous other acts A committee on administrative law appointed by the American Bar Association says in its report, "To a greater extent than ever before, the lawyer must look to the President's executive orders and to the releases and announcements of the several administrative agencies for accurate and up to-date knowledge of the existing state of the law '

With no disposition whatever to criticize the bold and comprehensive program of President Roosevelt which has breathed life into an industrial civilization previously believed by many to be dying, and has truly replaced the despair of almost an entire world with hope, it seems the effect of concentration of power in administrative officials is bound to tend at least to a desire for increased power on the part of state and Federal officials generally

The proposed Copeland-Tugwell Bill, with which, I believe, you gentlemen have some familiarity, is drawn with the highest purposes in mind to protect the public health But here, too, extraordinary powers are proposed to be given to individuals

The Secretary of State may promulgate regulations governing conditions of manufacture, processing or packing, and he may in effect close a factory and then decide whether his action was justified Meanwhile at all times any officer or employee duly designated by the Secretary shall have access to inspect any factory of the group described

It is apparent that interpretations of this Act, which determine its ultimate scope, will vitally affect the thousands of manufacturers subject to its terms The many questions which will arise in the minds of the army of enforcing officials will call for opinions from the Attorney-General's office, which will react upon every member of the pharmaceutical profession Wise opinions by an Attorney General aware of the problems sought to be solved by the Bill, and not attempting to extend the already far extended confines of the law, will do much to carry out the beneficent purpose of the Act while safeguarding the rights of the individual

The Attorney General who understands the problems of government, well serves those whom he represents by impartially giving opinions to department heads to keep them within their scope and assist them in the execution of the powers that they have been given by the legislature, and by accurately reflecting in bills prepared by him the views of the legislative officials whom he assists

If the new type of legislation such as that recently passed, is to be permanent, the Attorney-General can do much to make the change in governmental theory less unpalatable by bringing about through his counsel and advice, tact and discretion in administration

Following Mr Levy's address, he submitted to questions from the Conference, after which he was given a rising vote of thanks for his splendid address

Chairman Swain next called upon George W Mather, secretary of the New York Board of Pharmacy, who presented a paper on ' The Enforcement of the Poison Laws " Before submitting his paper, Mr Mather gave a verbal report of his activities which were discussed by Messrs Childs Wilson Purdum Winne Reese Jones Elkins, Gilbert Walton and Swain

ENFORCEMENT OF THE NEW YORK STATE POISON LAWS

As early as 1880 the State of New York placed upon the statute books a limited type of control which surrounded the sale of medicines regarded as poisonous This law was amended several times and in 1910 enforcement of the Pharmacy Law was placed under the Department of Education of the State of New York

At that time the word "poison" was defined as follows

"Poisons, where not otherwise limited, means any drugs, chemical, medicine or preparation liable to be destructive to adult human life in quantities of sixty grains or less "

The New York State Board of Pharmacy functioning under the Department was by law given the power to regulate the practice of pharmacology and to make rules approved by the Department for the supervision over the sale of drugs and medicines In conformity with that law certain schedules known as 'A" and 'B ' were adopted

Schedule 'A" consisted of the articles listed below "Schedule A Arsenic, atropine, corrosive sublimate potassium cyanide chloral hydrate, hydrocyanic acid morphine, strychnine

and all other poisonous vegetable alkaloids, and their salts, oil of bitter almond containing hydrocyanic acid, opium and its preparations, except paregoric and such others as contain less than two grains of opium to the ounce "

Schedule ' B" consisted of the following

"Schedule B Aconite belladonna, cantharides, colchicum, conium, cotton root, digitalis, ergot, hellebore, henbane phytolacca, strophantus, oil of savin, oil of tansy, veratrum, viride and their pharmaceutical preparations arsenical solution, carbolic acid chloroform, creosote, croton oil, white precipitate methyl or wood alcohol mineral acids, oxalic acid, Paris green salts of lead salts of zinc or any drug, chemical or preparation which is destructive to adult human life in quantities of sixty grains or less "

Each item of medicine which was defined as poison by reason of the rule is required by law to have the name of the article and the place of the seller noted on the package or container and the label shall be printed in red ink

Violations for infractions of the above laws are punishable as a misdemeanor and may carry a penalty ranging from $25 00 to $200 00 for each offense

"1 1360 Poison schedules, register It is unlawful for any person to sell at retail or to furnish any of the poisons of schedules A and B without affixing or causing to be affixed to the bottle, box, vessel or package a label with the name of the article and word poison distinctly shown and with the name and place of business of the seller all printed in red ink together with the name of such poisons printed or written thereupon in plain legible characters

"2 Wholesale dealers in drugs medicines, pharmaceutical preparations chemicals or poisons shall affix or cause to be affixed to every bottle, box, parcel and outer inclosure of any original package containing any of the articles of schedule A, a suitable label or brand in red ink with the word poison upon it

' 3 Register Every person who disposes of or sells at retail or furnishes any poisons included in schedule A shall before delivering the same enter in a book kept for that purpose the date of sale the name and address of the purchaser and the name and quantity of the poison, the purpose for which it is purchased and the name of the dispenser The poison register must be always open for inspection by the proper authorities and must be preserved for at least five years after the last entry He shall not deliver any of the poisons of schedules A or B until he has satisfied himself that the purchaser is aware of the poisonous character and that the poison is to be used for a legitimate purpose The provisions of the paragraph do not apply to the dispensing of medicines or poisons on physicians' prescriptions '

The labeling of poisons also applies to proprietary remedies if they come within the scope of the rule

Section 1354 provides as follows Every place in which drugs chemicals medicines, prescriptions or poisons are retailed or dispensed or compounded shall be a pharmacy, a drug store or a store shall be under the personal supervision of a pharmacist, a druggist or a store keeper and shall be annually registered in the month of January by the board as conducted in full compliance with law and the rules "

Prior to April 19 1934 the control of the manufacture and sale of proprietary remedies were not within the jurisdiction of the New York Board of Pharmacy However on that date this section was amended placing under the supervision and control of the New York State Board of Pharmacy the manufacture and sale of articles which are poisonous

It is anticipated that in the near future the Board of Pharmacy will formulate rules with the sanction of the Department for the control of proprietary remedies which will conform to the above amendment

Chairman Swain next introduced **Frank C Purdum** a member of the Maryland State Legislature who presented a paper "Is Pharmaceutical Legislation Best Served by a Pharmacist Member of the Legislature? ' as follows

IS PHARMACEUTICAL LEGISLATION BEST SERVED BY A PHARMACIST MEMBER OF THE LEGISLATURE?

The Chairman has assigned to me a rather unusual subject However, I think it is an important one and am very glad to contribute what I can to this Conference of Law Enforcement

Officials At the same time, I am aware of the fact that, unless I can tell you something you do not already know this paper will be of very little value

I shall cover, as briefly as possible, my outstanding experiences and impressions, particularly in connection with pharmacy while serving as a member of the Maryland Legislature during the past eight years I am a graduate in pharmacy, have been registered in Maryland for thirty-two years, and have been and am now, engaged in the operation of my own drug store

The question is Is pharmaceutical legislation best served by a pharmacist member of the legislature? This subject immediately suggests other questions For instance, assuming for the moment that it is to the advantage of the profession to have a pharmacist in the law-making bodies, what type of pharmacist should be encouraged and sponsored by the profession to enter the field of politics? Can a clean, high class professional pharmacist seek an elective office without sacrificing some of his ideals? In what way can a pharmacist as a member of the legislative body, be of most service to the profession of pharmacy?

The question has been raised as to whether he should take the leadership as a trained professional man, and introduce and sponsor all bills that the pharmacists may desire, be ready to boldly take the floor in opposition to all unfavorable legislation or whether he should somewhat submerge himself and work in the background through well selected leaders

Obviously, this question, presenting both views of so large and important a matter, might be discussed at great length The mere statement of the question indicates that there are advantages on both sides Certainly, all efforts must be taken to disarm the criticism that when you, a pharmacist, introduce and sponsor legislation in the interests of pharmacy, you are largely concerned in a selfish venture However, a discussion of what place the pharmacist should play is largely theoretical because his interest and influence are certain to become known whether he acts as a principal or as an accessory, so to speak

As I see the whole matter there can be no fixed rules in this respect It depends upon the circumstances and the character of the legislation being considered If it is of rather a technical nature such as is embraced in the adoption of experience and educational standards, or in bills dealing with specific chemical or pharmaceutical terms, undoubtedly the pharmacist should be thoroughly familiar with the subject and be prepared to explain and answer intelligently any questions that may arise In such a case, there is every reason why he should be the leader in favoring or opposing the measure Here he is on solid ground, and should be regarded as the best qualified to express an expert view of all the facts involved

If on the other hand, the legislation is more economic than technical, the pharmacist legislator may better serve by keeping in the background This thought can be made clear by considering a bill designed to restrict the sale of household remedies to registered pharmacists In spite of our firm belief that such a bill has a direct bearing upon public health, the average legislator is certain to regard it as a mere selfish effort to give pharmacists a monopoly of the business In such a case real statesmanship is demanded, and, even with the best laid plans the thing is mighty apt to get into a snarl and possibly result in defeat, or a compromise measure just about as bad

The pharmacist members of the legislature should seek a place upon the committee to which all health bills are referred In Maryland this committee is known as the Committee on Sanitation and Hygiene I have been chairman of this committee for some years The mere fact that I was selected for this important position carries with it the recognition that my training and experience, as a pharmacist, will have a direct bearing upon the matters which automatically are referred to this committee Here the pharmacist sits in a strategic position He is really on the inside He hears both sides of the question attends all committee hearings may cross examine those for or against a measure, and may present his professional and technical views to the committee He is in position to see to it that a proper report is made by the committee, and he has all the facts should it be necessary to discuss the bill on the floor In every instance, I strongly urge pharmacist legislators to be members of the committee to which pharmaceutical and health legislation is referred

The right type of pharmacist can so impress himself on his colleagues that his judgment will count heavily They begin to regard him as the best posted man in certain respects More or less subconsciously they look to him when certain questions come up With this so I have found, comes a heavy responsibility Members of the legislature have frequently told me that I should

take the responsibility in matters dealing with pharmacy and other health legislation They feel that this is my line, and just as frankly, not theirs Unless the matter is highly controversial, I have found a strong disposition to make me take the lead in legislation affecting the whole health field

Recently, a bill was introduced in the State Senate, which would have granted registration as a pharmacist to one who was entitled to register in 1902, simply by filing the required affidavits, but who was not in the State at the designated period On the surface the bill was harmless and was designed to serve a really deserving case However, such an act would have established a precedent which could have been, and probably would have been, very troublesome There was no disposition to take any action on the bill until my views had been obtained Even though I am a member of the House, the Senate wanted my views on a matter directly concerning pharmacy I mention this incident simply to illustrate the point that a pharmacist in the legislature finds himself in position of speaking for the profession, and in a position also, to further its general standing not only in a legislative sense, but in matters dealing with its professional and technical service

Again, when the Maryland Legislature was considering the provisions of an act to regulate the sale and distribution of alcoholic liquors, I was able to convince the body that alcohol used exclusively for the manufacture of medicinal toilet and antiseptic preparations, flavoring extracts and other preparations unfit for beverage purposes should not carry any state excise tax Also that whisky and other intoxicants when dispensed on physicians' prescriptions were medicines and thus the pharmacist should not be required to take out any State liquor license to fill such prescriptions Let it be understood that this was not a personal victory I was there, a pharmacist who understood the problems and who was on the ground floor, so to speak, throughout the whole discussion

Let me emphasize a point that is of the greatest importance While I am fully convinced that a pharmacist as a member of the legislature can be of very great aid in furthering the legislative program of the profession, I am just as convinced that he must be given real backing by the group as a whole I have constantly sought to have the endorsement and active support of the state associations the board of pharmacy and other organized groups Perhaps it would be more accurate to say that I have tried to have passed, bills which organized pharmacy has sponsored and approved I have more nearly regarded myself simply as their spokesman

If some dangerous, or even debatable, bill is introduced by others than our own group, having a bearing upon pharmacists, I have invariably called it to the attention of the pharmaceutical leaders in the state, and we have sat down and talked it over The course of action that I have then followed has been in accord with the conclusion reached by the group Up to the present, we have had no family quarrels or dissensions and we will have none, so long as the proper men lead and so long as there is the proper team work between them and the pharmacist member of the Legislature However, let me emphasize it is team work that is required If our own ranks develop opposing camps if we once let it be known that the group cannot agree among themselves, the legislative program may as well be shelved until we can express a collective opinion and stand squarely behind it

In conclusion, let me digress briefly into a discussion of practical politics Legislative experience and the ability to fraternize with other members of the legislature are really great helps Every member has a few bills in which he is especially interested Now, I have always felt that it was wise to introduce legislation early in the session, put a real kick back of it and get it through By so doing, you escape the pitfalls of trading and dealing once the battle is really on Most representatives are partly or wholly controlled by district leaders or bosses as they are generally called These bosses are not always bad and their friendship is worth cultivating It may only cost a cigar, highball or lunch The most successful lobbyists work through these channels. This does not show up in pharmaceutical legislation bearing upon the educational or professional sides Invariably, however once it becomes economic or smacking of monopoly you will find the "big boys" want to know what it is all about

Another thing, pharmacists as a whole do not show sufficient interest in politics It is my belief that, in the final analysis, we get as good government as we deserve The best citizens of any state or municipality should be sufficiently interested in politics to assure good government The pharmacist, being both a professional and business man, has a splendid opportunity, in his

daily contact with people, to have a say as to whom his representatives should be But is he interested? To be more explicit, we should take time to become interested in issues, we should vote in primary elections, we should seek to learn the candidate's views while he is still a candidate, in every possible way consistent with decency and civic standards, we should seek to have our voices heard and our views considered

During recent years, any number of bills have come before the Legislature having a bearing upon public health or upon some public health profession Anti vivisection bill is a regular and biennial affair, bills favorable and unfavorable to pharmacists, bills seeking to permit Christian Science or faith healers to make a charge for their services, enlarging the scope of osteopaths and chiropractors, conferring the right of optometrists to use the title 'doctor," uniform state narcotic act, these and many more have found their way to the Legislature during my terms of office

It is my opinion regardless of the unsavory reputation of professional politicians, that a pharmacist can serve as a member of a legislative body without compromising his character or reputation It is my opinion too that a pharmacist, as a member of the Legislature is in position to greatly advance pharmaceutical legislation In most cases he should take a leading courageous and frank position If he is the proper type of pharmacist his views will count heavily on all matters pertaining to the pharmaceutical profession and the drug business

P L Loveland of New Jersey took the place of Harry E Bischoff on the program and spoke on the same subject as Mr Purdum

At this time Chairman Swain appointed the following Committee on Nominations *Chairman* A L I Winne, Virginia, Hugo Schaeffer, New York, L L Walton, Pennsylvania

The following Committee on Resolutions was appointed *Chairman*, J Lester Hayman West Virginia, W S Elkins, Georgia, Roy Reese, Kansas

Chairman Swain next called upon W Mac Childs, secretary of the Kansas Board of Pharmacy who made an oral address on the subject of the "Public Health Council of Kansas and the Values of Its Principles to the Pharmaceutical Program "

At 12 45 P M upon motion duly seconded, the Conference adjourned

Thursday, May 10th

At 8 00 P M the Conference met in joint session with the Section on Education and Legislation and Conference of Pharmaceutical Association Secretaries, in the Club Room of the Hotel Shoreham

SECOND SESSION.

The Second Session of the Conference of Pharmaceutical Law Enforcement Officials convened at 2 30 P M , Friday May 11th, in the Grill Room of the Shoreham Hotel

Chairman Swain called the meeting to order and the first order of business was the discussion to collect court decisions with the idea of raising sufficient revenue to have same printed for distribution to members of the Conference Both Mr Mead of Iowa and Mr Elkins of Georgia volunteered a subscription up to twenty five dollars each in support of such a program either through the board or association

The next question discussed was the time of meeting of the Conference as many of those interested in the Conference meeting would like very much to have a meeting scheduled immediately after the National Association Boards of Pharmacy conclude their sessions The chairman and secretary were directed to use their influence to have such an arrangement made

Chairman Swain next called upon A L I Winne of Virginia, who presented a paper on "Report of Special Committee to Define the Terms 'Patent Medicine' and 'Proprietary Medicine,'" as follows

REPORT OF THE COMMITTEE ON DEFINITION OF "PATENT MEDICINE" AND 'PROPRIETARY MEDICINE "

Your appointed committee to report on a study of adequate definitions for the terms "Patent Medicine" and "Proprietary Medicine" is unfortunately able at this time to render but a superficial report The chairman of the committee acquainted the membership with the purpose of the study and received an informative response from one other member The secretaries of all State Boards of Pharmacy were communicated with and information was returned by some thirty-

eight states Of this number, thirty states reported as having no definition for the terms "Patent Medicine" and "Proprietary Medicine," although the terms were embodied in the pharmacy laws of the respective states Several states have attempted to have the terms defined by their Attorney Generals and some several have court decisions with rather vague interpretations of the terms In no instance is there a clean-cut and satisfactory definition of the terms

The states which report as having no definitions whatever are

Alabama	Kansas	Oregon
Arizona	Kentucky	Pennsylvania
Delaware	Montana	Rhode Island
District of Columbia	Nebraska	South Carolina
Florida	New Jersey	Tennessee
Georgia	New Mexico	Texas
Idaho	North Carolina	Vermont
Illinois	North Dakota	West Virginia
Indiana	Ohio	Wisconsin
Iowa	Oklahoma	Wyoming

Communications directed to the United States Patent Office in Washington brought no response in the shape of a definition of either the term "Patent Medicine" or the term "Proprietary Medicine "

The State of Connecticut, while not expressly defining the terms "Patent and Proprietary Medicines," does throw some precautions around the selling of what is termed in the law "Proprietary and Patent and Medicinal Compound," but stipulates that such preparations must be put up separately in sealed containers and labeled and accompanied with directions for use, together with the name and address of the manufacturer or distributor

Maine defines a "Proprietary Medicine" as one which certain individuals, firms, associations or corporations have the exclusive right to manufacture or sell

New Hampshire defines the term ' Proprietary Article" to mean any chemical drug or similar preparation used in the treatment of diseases, if such article is protected against free competition as to name, product, composition or process of manufacture, by secrecy, patent or copy right, or by any other means

While New Jersey used the terms "Patent and Proprietary Medicines" in its law, it does not define the terms but the suggestion is made in a communication from New Jersey that the report of the Commission on Proprietary Medicine of the AMERICAN PHARMACEUTICAL ASSOCIATION be checked up for definitions Your committee has not consulted this report and is therefore unable to embody in the present report the information that might be derived from that source

New York reports that this problem has been given attention by the New York State Board of Pharmacy and after considerable thought the determination reached by that board was that a Proprietary Medicine is a medicine that any person or persons have the exclusive right to manufacture or sell

South Dakota defines the term as follows "For the purpose of this Act, patent or proprietary medicines shall be considered to include any medicine or drug which is prepared or compounded in proprietary form and sold at retail in the original packages and where the sale thereof is unregulated under the laws of the state "

Virginia attempts to define the terms as follows "The term patent or proprietary medicines, as used in this chapter, shall include only medicines prepared according to a private formula or a secret process or under a trade-mark of the manufacturer or owner and sold under a trade name in an original package on which appear the disease or diseases for which the medicine is intended to be used and specific directions for its administration "

It will be observed that in the few instances where there has been an attempt made to define the terms as embodied in the laws the definitions are deplorably inadequate to control the situation which exists in most states It would appear, therefore, that a further study of this subject should be made In all instances where there has been an effort to define the terms the definitions have failed to differentiate between that large class of products commonly regarded in the drug trade as classifiable under the term "Patent Medicine" from that other large and ever increasing group known to the drug trade as "Proprietary" products The result is that in most states merchants

who know nothing of pharmacy are able to stock and sell many dangerous and potent proprietary products, and we believe that the public interest is not sufficiently safeguarded under such an arrangement

While the definition in the Virginia law is largely inadequate and has been criticized as out of line with the Federal Pure Food and Drugs Act, it does at least have the merit of precluding the sale by general merchants of such proprietary products as do not have designated on their labels the disease or diseases for which the products are intended to be used Such a provision in state law, while entirely out of line with the thoughts of many of those who are interested in an adequate Federal Act to control the sale of products for self medication, may be useful until some better solution of the problem is suggested

It seems to me that the situation would require a clean-cut definition for that group of remedies offered to the public for self administration, and which we have loosely designated as Patent Medicines, and another clean cut definition to embrace that group of proprietary products carried in drug stocks ostensibly for the filling of physicians' prescriptions, and commonly referred to as proprietary products In other words these two groups should be segregated, clearly designated by adequate definitions and the suggestion then made to the several states for a revision of their state pharmacy laws in such a manner as to permit, if desired, the sale of patent medicines by general merchants and to prohibit the sale of proprietary products by that group

It is common knowledge that the term "Patent Medicine" is a misnomer Few of these remedies are protected by patents Some are registered and some are protected by copyright and trade mark, but these forms of protection are indiscriminately used in the patent medicine field and in the proprietary medicine field

It is undoubtedly true that many dangerous proprietary products are stocked and sold by general merchants when as a matter of common protection of the consuming public, these products should be distributed only by pharmacists upon physicians' prescriptions The situation is one which we believe worthy of further study and this inadequate report is presented with the hope that the questions will be placed in the hands of a competent committee for further study and a more definite and constructive recommendation

Respectfully submitted,

GEO W MATHER, New York
JOHN M WOODSIDE, Pennsylvania
M N FORD, Ohio
R P FISCHELIS, New Jersey
R L SWAIN, Maryland
A L I WINNE, *Chairman*, Virginia

Subsequent to the making up of the above report, the following letter was received from Secretary Baker of the Colorado Board of Pharmacy

Mr A L I Winne Secretary
Virginia Board of Pharmacy
105 State Office Building
Richmond, Virginia

Denver, Colo
April 30, 1934

Dear Mr Winne

Replying to your letter of the 18th, I wish to advise that our Board of Pharmacy has defined 'Patent" and 'Proprietary ' medicines, as follows

"A patent medicine is one the formula of which is registered in the United States Patent Office at Washington, D C which registration protects the inventor of the formula from duplication by any other or manufacturing company "

"A proprietary medicine is a medicine compounded according to a formula known only to the manufacturer and marketed under a trade name This trade name does not necessarily have to be registered under the United States Trade Mark Laws, as common law trade-marks exist in the United States and a suit for infringement of a trade mark may be brought by the original user thereof even though the original user may never have registered the same '

The exemption of proprietary medicines in our Pharmacy Law does not apply to official preparations listed in the United States Pharmacopœia and the National Formulary which are sold under a proprietary name

Very truly yours,
(Signed) ARTHUR D BAKER *Secretary*

At the conclusion of Mr Winne's paper a motion was made and adopted, whereby a committee on Patent and Proprietary Medicines was ordered continued, and the report adopted

Chairman Swain next reported that W S Frisbie of the United States Department of Agriculture could not be present and if he submitted a paper on "Cooperation between Federal and State Officials in the Enforcement of the Food and Drugs Acts," such paper will be published

Chairman Swain next referred to a paper submitted by William F Reindollar of the Bureau of Chemistry, Maryland State Department of Health on "Relationship of the Control Laboratory to Enforcement under the Food and Drugs Act," as follows

RELATIONSHIP OF THE CONTROL LABORATORY TO ENFORCEMENT UNDER THE FOOD AND DRUGS ACT

There is perhaps no phase of the enforcement of the Food and Drugs Act more fundamental than that involving the collection, inspection and examination of those products which are offered for sale within the scope of the Act The very purpose of defining the terms "adulteration" and "misbranding," the very act of creating standards of purity, quality and strength, presuppose the existence of an agency, capable and qualified, to make analyses of the products in question and to pass critical judgment upon them with respect to these provisions Hence the necessity of an adequate control laboratory as an integral cog in the machinery of law enforcement is a well established and unquestioned fact The presence of such units in the organizations of the several Municipal and State Health Departments, in addition to those of the Federal Government, is but another confirmation of their value

The details of the operations of the Control Laboratory and the history of the "official sample" in its course of travel from vendor to analyst form an engaging narrative to those whose interests lie in this field It is the purpose of this article to outline briefly the procedures adopted to assure the integrity and safeguard the identity of the official sample, and to do this in such a manner that neither jury nor defending attorney may harbor doubts regarding its genuineness or its relation to the vendor

Purchases of foods and drug products offered for sale on the open market are made in most cases direct from the wholesaler or retailer by an inspector who is an agent of the Control Commissioner No effort is made upon the part of this individual either to conceal or reveal his identity, or upon questioning to hide the purpose for which his purchase is being made However, unless previous circumstances indicate a probable prosecution or unless the vendor so requests, the sample are not sealed on the premises The inspector makes notes concerning the places which he visits and when necessary puts an identifying mark on containers, this together with the labels on the package serves to identify the samples for him when he seals them at the end of the day There is much to be said pro and con regarding this procedure While in the past it was the custom to seal the sample in the presence of the vendor and although from the legal point of view, this is perhaps the more sound method, because of many disadvantages arising therefrom, it has been discontinued To begin with it is time consuming, it involves the transportation of extra equipment and what is more important, it frequently creates an unfavorable impression upon the customers of the vendor, who enter and see a government agent engaged in collecting and sealing samples Harmless though it may be, an unpleasant interpretation is usually placed upon it Furthermore this procedure does not materially safeguard the identity of the sample, it is rather a challenge to the integrity of the inspector, and a device which is useless in any event if that integrity be lacking

Inspectors are furnished with locked compartments, accessible only to themselves, wherein they may store their samples until they are ready to be delivered to the laboratory After an inspection of their labels by the Commissioner the samples are sealed by pasting a strip label over the stopper or lid of the container This label bears on it, in ink the date, name of inspector and

an identification or seal number To further identify the specimen another sticker bearing this same I R No (Inspector's Record Number) is attached This I R No corresponds to a numbered sheet in the inspector's record book on which is a complete description of information pertinent to the sample, such as name and address of vendor, time and price of purchase, proprietor of establishment, etc The inspector then delivers his samples to the analyst who checks them against the records and signs for the number that he has received

Once in the laboratory the samples are kept under lock and key until an examination can be made at which time the seal is broken by the analyst As the nature of the specimens usually varies, analytical precedence is given to those that are most unstable Hence, a group of volatile spirits would be examined before a group of stable alkaloidal tinctures of the Nux Vomica or Belladonna type In the case of extremely perishable products, such as spirit of ethyl nitrite, facilities of refrigeration are available and employed

The great majority of the drug samples collected represent chemicals or galenicals official in the U S P and N F , simple prescriptions and those many common preparations that are prepared extemporaneously in the pharmacy In addition to these groups and when circumstances warrant, a few proprietary preparations and cosmetics are samples Those preparations which are official are examined by the official assay when one is given if there be none, other standard methods such as those recommended by the Association of Official Agricultural Chemists, or those worked out in the Control Laboratories are employed Simple chemicals are subjected to the tests for purity and identity recommended for them in the official books

Extemporaneous preparations and prescriptions form an interesting group because they constitute an index of the accuracy and skill of the compounder and are more reliable in this respect than galenicals which in many cases are purchased from the manufacturer Capsules of acetphenetidin, quinine or salol percentage solutions of potassium iodide permanganate or argyrol, mixtures of sodium bicarbonate with the bromides and solutions of phenol in oil, are examples of this type which may be purchased with or without a prescription Investigational work of this nature resulted in some rather depressing discoveries at first, but more lately has been compensated for by marked improvement in the majority of cases In an early group of ten samples of Saturated Solution of Potassium Iodide, which should contain between 97 Gm and 103 Gm potassium iodide per 100 cc the values were found to range from 45 Gm –88 Gm , now it is rarely that an illegal sample of this type is met with Mixtures as a rule, have been found to be more carefully compounded when ordered on a prescription than when the same combination is requested orally There are occasional exceptions, however Recently, a prescription calling for one dram of phenol in four ounces of olive oil was purchased and upon examination was found to contain liquefied phenol and cottonseed oil In this case both of the ingredients had been substituted

The Food and Drug Law of Maryland does not include the Shirley Amendment, neither does it provide for the control of cosmetics, hence not many patent medicines nor beautifiers are collected However, the few that have been examined emphasize the need of such legislation Bay Rum containing a substantial percentage of methanol has been encountered on the market Two types of medical crystals sold at exorbitant prices have been shown to consist essentially of sodium sulphate or Glauber's Salt A large quantity of mercury was present in a bleach cream which was purchased because a woman had been severely burned by using it A compound purporting to be of value in the treatment of obesity was found to be essentially dextrose Turpentine made up eighty per cent of the volume of a pneumonia cure This sample was purchased by a housewife from an unknown peddler who appeared at her door one day, informed her he was a physician and assured her that his medicine has cured the most severe cases of pneumonia " Although the lady did not have pneumonia she applied the medicine and acquired second degree burns over a considerable portion of her thorax The physician did not return

Medicines for colds coughs lung fever tuberculosis and all pulmonary complaints canker, scurvy, all diseases arising from uric acid, gastritis, constipation, cramps of the motor nerves liver kidney and bladder troubles pains in the breast and over the heart, all blood diseases, neuralgia neuritis of the spleen, and swollen joints have from time to time been received While in most cases they cure, in some the label modestly limits itself to the words "will relieve " And yet unless the labels contain misstatements regarding the composition of the contents, little progress can be made in the prosecution of their vendors Therapeutic claims are beyond the pale of food and drug legislation in Maryland

Upon completion of the analysis duplicate records are prepared, one of which remains in the permanent files of the Bureau of Chemistry, the other is forwarded to the Commissioner If the sample is legal it is "passed," that is, the records are filed and the sample destroyed The office of the Commissioner contains in addition to a 'daily purchase file," a complete record of products obtained from any one vendor By this means the ' sample history" of any establish ment may be obtained immediately If, however, the sample fails to meet the standards of purity, quality and strength, laid down for it the seller is notified of the fact and summoned to appear and is thus 'afforded an opportunity to present evidence either oral or written, in person or by attor ney, showing any fault or error in the findings of the analyst or examiner, or establishing a guaranty from a party residing in this state" from whom he purchased the goods The analyst is frequently requested to attend these hearings in order to answer technical questions pertaining to the analysis

Should the case under consideration represent a wilful or flagrant violation of the law, the Commissioner may present the evidence to the Board of Health and request a prosecution of the offending party Upon the sanction of that body a complete transcript of the case is forwarded to the State's Attorney and a criminal prosecution is initiated Here begins one of the most im portant phases of the chemist's work It is his duty to appear in court, to testify for the control agency and if necessary, to defend his analyst against opposing experts The necessity of the appearance of the chemist in person was emphasized recently in a case held in Western Maryland This case involved the selling of a poison, mercuric chloride, without observing the regulations pertaining to the registration of such products The chemist did not appear at this case, he sent the analytical sheet instead The defendant's lawyer admitted the sale but demurred at the introduction of the analytical sheet The judge sustained the objections, holding that in spite of the official nature of the document the analyst should have been present in person to present his testimony The barring of this evidence left the state unable to identify the substance as mer curic chloride and the case was lost

Thus it may be seen that the role of the Control Laboratory and its staff in the enforcement of the Food and Drugs Act is both fundamental and necessary However, this work is not limited to the important functions described above The staff of the Chemical Bureau engages in numer ous researches which have for their purposes the development of new and better assay methods Studies on preservation have been made to ascertain the optimum condition under which certain galenicals may be kept An extensive investigation of this nature is being carried out at the pres ent time with hydrogen peroxide Samples are kept under varying conditions of temperature and sunlight and in different types of containers and their rate of deterioration is recorded Another activity has been a statistical study of the weights of content of capsules and of powders with the hopes of establishing tolerances for preparations of this type

In short, the efforts of the Control Laboratory are directed along two channels (*a*) It aids by chemical analysis and court testimony in the enforcement of the law, (*b*) it endeavors by re search to produce information, the utilization of which may make it easier for the manufacturer to produce legitimate products

At this time A L I Winne, chairman of the Committee on Nominations, made the following report For *Chairman*, R L Swain of Maryland, for *Secretary-Treasurer*, M N Ford of Ohio, *Delegate to the House of Delegates* Joseph P Murray of Colorado

Upon motion of Mr Elkins, seconded by Mr King, the report of the Committee on Nomi nations was accepted

Chairman Schaefer of the Finance Committee made a further report at this time and reported that his Committee had decided to continue their request to individual board members in case the board had not contributed before and ask for any amount that they could contribute Upon motion of Mr King seconded by Mr Jones the Committee was ordered continued

Chairman Swain next reported the different opinions rendered by Attorney Generals in regard to pharmaceutical law enforcement and it was the request of the Conference that copies of these opinions be mimeographed and furnished to the members

Chairman Swain advised the Conference that it was his idea to secure from all state boards, blanks and enforcement records in order that they may be used in helping other states that may inquire for such assistance

Upon motion duly seconded, the Conference then adjourned

R L SWAIN, *Chairman* M N FORD, *Secretary Treasurer*

JOINT SESSION OF THE SECTION ON EDUCATION AND LEGISLATION, A PH A., CONFERENCE OF PHARMACEUTICAL LAW ENFORCEMENT OFFICIALS AND CONFERENCE OF PHARMACEUTICAL ASSOCIATION SECRETARIES

ABSTRACT OF THE MINUTES HELD IN WASHINGTON D C, MAY 10, 1934

The meeting of the Section on Education and Legislation, A PH A, Conference of Pharmaceutical Law Enforcement Officials, and Conference of Pharmaceutical Association Secretaries, convened May 10th, at 8 00 P M The meeting was called to order by Chairman George C Schicks

The chairman stated that no regular program had been prepared, so it will be in order to bring up matters relating to work being done and contemplated in the different states

A L I Winne was of the opinion that this was an opportune time to bring up matters along the line suggested for discussion

J Lester Hayman said the West Virginia Legislature had been in session for nearly a year He referred to the sale of medicinal liquors in West Virginia that now these could only be obtained on a physician's prescription

As far as he was informed West Virginia is the only state having a law which demands that the sales tax be passed on to the consumer Sales under five cents are exempted, up to fifty cents a one cent tax obtains, and to one dollar, 2 cents The law went into effect April 1st and indications are that the tax amounts to from 2½ to 4 per cent on the gross sales

Questions were asked relative to the collection of the tax Mr Hayman replied, that the tax is considered a 2 per cent tax, that in making sales the money for the tax is dropped in a box for the purpose, a monthly report must be made

Mr Winne inquired whether there was evasion and whether many merchants did not base their reports on a 2 per cent tax

Such possibilities were admitted by Mr Hayman

Various other means of evasion were brought out by Messrs Adams, Winne and Costello and the question was asked whether a person could make a small purchase and later, make another and have the lower sales tax apply to the combined sales Mr Hayman replied that this would not be legal He said that customers at first objected to the tax, but now seemingly, they do not

J M Plaxco said that South Carolina had a General Sales Tax which was amended to tax certain items by affixing a stamp tax—this applies among other things to soda cigars etc

W H Rivard reported on legislation in Rhode Island especially relating to the registration of assistant pharmacists The law now requires four years of collegiate work and graduation Provisions were made for assistants to take the Board examination until July 1936 An effort was then made to register all assistants This was defeated and Rhode Island's law requires four year prerequisite This law was fought during the next session and the opposition appealed to the Governor As chairman, Mr Rivard and his committee secured petitions to the Governor and also the backing of the medical profession was obtained the Board of Health was contacted and within three days it was possible to get the Governor's approval The efforts to defeat the law are being continued and require alertness of pharmacists

The speaker referred to the Rhode Island law permitting druggists on payment of $100 00 to sell liquors The ASSOCIATION is strongly opposing the measure

P R Loveland referred to experiences in counteracting sales tax legislation and especially, the coöperative efforts The number of retailers representing every branch of business was so large that instead of the meeting being held in the Assembly Chamber it was necessary to adjourn to an auditorium As a result, the passage of a sales tax has been held up

C Leonard O'Connell stated that an effort was made to tax prescriptions under a Pennsylvania mercantile act, this has been amended excluding pharmaceuticals and prescriptions from the tax

He stated that Pennsylvania pharmacists did not desire to engage in liquor business Pennsylvania is in the liquor business, has its own stores and leases

George C Schicks said that in New Jersey pharmacists must pay a high license to fill liquor prescriptions

J B Pilchard said that in Pennsylvania pharmacists can fill liquor prescriptions without paying a license tax

R C Reese stated that in Kansas they had difficulties with drug stores having no registered pharmacist in charge, especially with stores that have changed hands Since January this has been corrected to a certain extent

The Kansas registration act was discussed by Messrs Reese and Swain

Secretary Swain inquired relative to State registration acts which give the power of granting or refusing store registration

B V McCullough stated that Indiana required endorsements as to character

A L I Winne said Virginia granted permits for one year He regarded the Virginia registration provision as one of the most useful, because there are no inspectors in the State The permits do not carry the Board Members' signatures, they are signed by the secretary The application is passed on by the Attorney General's office, if deemed necessary, the information desired is, the name of the applicant, that of the pharmacist in charge, his hours of duty and the name of the one who is left in charge during the absence of the pharmacist and the hours during which the place of business is open All the information is sworn to and the owner signifies that he will observe the pharmacy law

In West Virginia, practically, the same form is in use

R L Swain asked whether the permit registers the pharmacist Mr Winne replied that if the owner is not a registered pharmacist, the permit is given in the name of the pharmacist and when he ceases to be employed, the permit is canceled

Mr Reese inquired relative to refusal of permit, Mr Winne replied that if the pharmacy is not notarized, the applicant is notified, in his opinion the safest way is, if the application is in due form, that the permit be issued and take it away if there is non compliance with the law

J J Gill inquired of C T Gilbert regarding the certificate of fitness in Connecticut He replied that this certificate applied to those making application for State Liquor Control License

In reply to a question as to the kind of whisky that must be dispensed, R L Swain stated that it depends on where the liquor is dispensed In the District of Columbia, it must be official whisky The interpretations recently issued by the Food and Drug Administration—when a physician writes a prescription for whisky, the official article must be dispensed, but if the physician states *not* U S P then other whisky can be dispensed The Government has issued interpretations which will guide the pharmacist in labeling and dispensing Answering Mr Brown (Kansas) he referred to an occurrence where a prescription was brought to a pharmacist, being asked the price the customer advised that he could buy the whisky at another store for much less The pharmacist explained that the whisky he would give the customer was official, but the purchase was made at the other store He did not argue relative to the quality of the whisky, but it was the duty of the pharmacist, under the law, to dispense official whisky on a prescription

Mr Brown inquired if an inspector demanded a pint of whisky and that of the U S P is not in stock, can other liquor be dispensed?

R L Swain stated that this opened up a question which was the subject of the celebrated controversy between Dr Harvey W Wiley and Mr Howard Taft The Pharmacopœia defines Medicinal Whisky When whisky is called for, he considered it was always a safe procedure to ask whether a straight or blended whisky is desired

Mr Swain referred to a session of the Maryland Legislature limited to emergency matters and the most important was enactment of a satisfactory liquor control act for the State of Maryland Under it alcohol—used for medicinal, antiseptic and toilet preparations, flavoring extracts, and other preparations unfit for beverage purposes—was exempted from the State Excise Tax. Also pharmacists are permitted to fill prescriptions for intoxicating liquors as defined in the Act without the payment of a State license

The speaker continued by referring to legislation in Western and Pacific Northwest states relative to house peddling

A O Mickelsen said he had a paper prepared by F C Felter Parts of the paper follow

CAN HOUSE-TO-HOUSE SELLING BE STOPPED?

BY F C FELTER

The writer welcomes the opportunity to present such information as has developed and is available at this time, concerning the control through local ordinances, of the evil of house to-house selling

It is a fact beyond dispute and well known to your members, that retail druggists and merchants lose thousands upon thousands of dollars in business annually to the house-to house canvasser Among the items vended are many which should be sold by the retail druggist, they are deprived of business which should go to them as rent and tax payers and employers of labor in the community The same is true, of course, of other lines of trade

Many attempts have been made by municipalities to control this evil practice, most of them being through the license system In other words, house-to house canvassing is permitted upon the payment of certain license fees While this has been partially effective the fact remains that in most localities house to-house selling and soliciting continues more or less unabated Some of the larger firms who practice this system of selling pay the licenses and then proceed to take business from the retail merchants The city treasury is benefited while the retail merchants are deprived of business which they should have In many other cases the itinerant house to-house canvasser slips into town does his canvassing quickly and is gone again He evades the payment of a license and he takes away revenue which should have remained in the city and been spent with its local merchants

It has remained for the towns of Rock Springs and Green River, Wyoming, to solve the problem, at least this appears to be the case at the present time An attorney in Rock Springs is the author of the legislation which has been adopted in both these and other Wyoming cities and which seems to have every promise of withstanding all court attacks as to its constitutionality

The Green River ordinance was first brought to the attention of the *Pacific Drug Review* late in 1933 The writer, recognizing the new point of approach to the problem, as represented by this ordinance, addressed a letter to the mayor of that city The letter was turned over to the attorney who had originated the ordinance, Mr Thomas Seddon Taliaferro Jr , who promptly wrote giving not only a copy of the ordinance but details of the court tests by which the ordinance has been thus far upheld as constitutional

For the purposes of this article it is referred to hereafter as the Green River ordinance It follows

' *Be It Ordained* by the Town Council of the Town of Green River, Wyoming

"Section 1 The practice of going in and upon private residences in the town of Green River, Wyoming, by solicitors, peddlers, hawkers, itinerant merchants and transient vendors of merchandise not having been requested or invited so to do by the owner or owners, occupant or occupants of said private residence, for the purpose of soliciting orders for the sale of goods, wares and merchandise and/or for the purpose of disposing of and/or peddling or hawking the same is hereby declared to be a nuisance, and punishable as such nuisance as a misdemeanor

'Section 2 The town marshall and police force of the town of Green River are hereby required and directed to suppress the same, and to abate any such nuisance as is described in the first section of this ordinance

"Section 3 Any person convicted of perpetrating a nuisance as described and prohibited in the first section of this ordinance, upon conviction thereof shall be fined a sum of not less than twenty-five (25) dollars, or not more than one hundred (100) dollars, together with costs of proceedings, which said fine may be satisfied, if not paid in cash, by execution against the person of any one convicted of committing the misdemeanor herein prohibited

"Section 4 All ordinances and parts of ordinances in conflict with this ordinance are hereby repealed

"Section 5 It being deemed by the town council of the town of Green River that an emergency exists this ordinance shall be in force and effect from and after its passage and approval

'(Note In Rock Springs, Wyo , the ordinance also specifically prohibits solicitors for building and loan insurance, newspapers, books, pictures and periodicals)"

The writer determined to try to interest retail druggists throughout the Pacific slope field in the passage of similar ordinances in their cities It was, and still is, held by the writer that *retail druggists in almost every city could, if they would interest themselves in this legislation,* secure its passage by interesting retailers in other lines and, through the local Chamber of Commerce or women's organizations or both, secure its adoption

Your attention is directed to the fact that the Green River ordinance declares 'the practice of going in and upon private residences in the town of Green River, Wyoming by solicitors peddlers hawkers, itinerant merchants and transient vendors of merchandise, *not having been requested or invited* so to do by the owner or owners, occupant or occupants of said private residence, for the purpose of soliciting orders for the sale of goods, wares and merchandise, and/or for the purpose of disposing of and/or peddling or hawking the same, is hereby declared to be a nuisance "

And a nuisance it is Housewives will tell you so

Not only is the practice of ringing doorbells at all hours of the day a nuisance to the house wife but the entrance of itinerant vendors, hawkers, peddlers, etc , upon private property often leads to some sort of crime The solicitor, vendor or peddler may, through artifice or otherwise gain entrance to the residence for the purpose of *securing certain information which would later* lead to robbery He may, through his persuasiveness or force of salesmanship, dupe the house wife into trading off valuable securities for worthless stocks or merchandise He frequently sells the housewife something that she does not need or want or secures a contract for some long pay ment scheme which becomes a burden upon the head of the house He always takes revenue from that particular town or city which should be spent with its local merchants

Declaration of the "uninvited" entrance upon private property by these vendors as ' a nuisance" is wholly within the police powers of any municipality This has been affirmed by the United States Circuit Court of Appeals, Tenth Circuit, where the Green River ordinance was upheld as constitutional The Fuller Brush Company attacked the Green River ordinance and won its case in the District Court The town of Green River appealed the case to the United States Circuit Court of Appeals The case was decided May 11, 1933, and is reported in the 65th Federal, 2nd Edition, page 112 The Appeals Court reversed the District Court and sustained the ordinance as being constitutional and within the police power of said town

Among other things the court also said ' The frequent ringing of doorbells or private residences by itinerant vendors and solicitors is, in fact a nuisance to the occupants " and quoted from a decision of the United States Supreme Court as follows

> "This court has frequently affirmed that the local authorities intrusted with the regulation of such matters, and not the courts are primarily the judges of the necessities of local situations calling for such legislation, and the courts may only interfere with laws or ordinances passed in pursuance of the police power where they are so arbitrary as to be palpably and unmistakably in excess of any reasonable exercise of the authority conferred "

The writer is informed by Mr Taliaferro that the time limit for appealing this case to the United States Supreme Court has long passed

It would appear, therefore, that the Green River ordinance, declaring certain practices as a nuisance, is constitutional and will stand in the courts of most states The Corporation Counsel of Seattle, Washington declares this as his belief A prominent firm of attorneys in Portland, to whom the writer submitted the ordinance, said ' It is our opinion that to abate a nuisance is strictly within the police powers of any legislative body, whether state or city "

A law student, writing in the *Rocky Mountain Law Review* of the University of Colorado, who had made a particular study of this ordinance said "This Green River case may well be in later years looked upon as a landmark in this type of legislation "

So much for the facts as to the law itself and the courts' decisions and legal opinions

Now, just a word in conclusion *As a result of the writer's efforts a number* of cities in the Pacific slope field have started movements to have this legislation enacted Santa Rosa, Cali

fornia Prineville, Oregon, Yoncalla, Oregon and Lovell Wyo have already adopted the ordinance through the efforts of the retail druggists of those cities Probably fifty other cities of varying sizes in the Pacific slope field have initiated movements to have it placed on the statute books

It is the writer's belief that if the retail druggists in any town or city will band themselves together and work with the other retailers, this legislation can be passed It should be a simple matter to get women's organizations behind it as well as the local Chamber of Commerce and the pressure of these bodies upon the city fathers would secure the desired results

J J Gill stated that an effort had been made in Providence to pass such an ordinance, but unsuccessfully

On motion duly seconded it was voted to accept the paper for publication

R L Swain spoke of methods employed by the vendors He stated that the prices charged by these vendors were considerably higher than those of the average drug store Some of the vendors make the statement that they represent an organization and in that way secure a hearing

A O Mickelsen referred to the City Ordinance of Savannah, Ga , which had not been tested in courts but, in part has been considered unconstitutional Mr Elkins of Georgia, stated that the city attorney of Savannah held that the ordinance was in conflict with the state law The Georgia law permits the sale of patent and home remedies by General Merchants The Attorney-General ruled that the names of the home remedies would have to be enumerated *The Georgia law defines patent and proprietary as meaning the same General Merchants cannot* sell pharmaceuticals

R L Swain inquired of Mr Elkins whether the Attorney-General had ruled that the law enforcement officer shall construe the general terms

Mr Elkins replied that the Attorney-General held there was no one else to enumerate them Mr Swain discussed various opinions relative to the terms ' patent medicines, home remedies, ' etc He suggested that when questions came up regarding court decisions, that members address Secretary M N Ford He referred to the opinion of the Attorney-General (Hon Carey D Landis) of Florida which states that the Pharmacy Act (13757 1929) restricts in every sense of the word the sale of all medicinals to registered pharmacists

James H Beal said he had been asked for his opinion of that of the Attorney-General His reply was that if it can be sustained Florida has the best pharmacy law in the United States and as long as the Attorney General is willing to defend it let it stand

He also approved of the enforcement by the State Board of Health The defendant's Attorney cannot say the druggists are trying to monopolize—the State Board of Health enforces that part of the act Some have been desirous to strike out the provision which assesses registered pharmacists ten dollars annually for the support of the State Board of Health He advised that it was the cheapest law enforcement they could have Dr Beal referred to several stores which were compelled to take down the signs advertising family medicines' and domestic medicines " He was inclined to believe the supreme court would uphold the Attorney General

F W Meissner inquired relative to the meaning of a store being in immediate charge of a registered pharmacist " Dr Beal replied that if an inspector took up a specimen and no registered pharmacist was in charge it would be construed as no registered pharmacist in charge

Mr Elkins referred to the Savannah ordinance having been introduced by the Board of Health as helpful

Dr Beal said restriction of the sales of medicine was for public safety, public welfare His recollection is that physicians under the Florida law, are given reasonable liberty in handling chemicals biologicals, etc

R L Swain stated that about 1918 Dr E F Kelly conceived the idea expressed by Dr Beal that perhaps pharmacists were wrong, they were rendering a Public Health service and should not pay for the enforcement of the Act any more than a grocer should pay for police protection The first step was to place a pharmacist on the State Board of Health of Maryland In 1922 the Food and Drugs Act was so amended

Dr Swain said they asked the Governor if he would finance the enforcement of the Pharmacy laws and he replied that he could not, as he had made a pledge to simplify state government but if a place could be found in the existing state government where the activities would fit in he would finance them and so the Food and Drugs Act was amended Instead of the pharma-

the state of Maryland paying $10 00 per year the Governor sees to it that $15,000 00 is made available for enforcing the pharmacy acts

The speaker stated that if the enforcement program of the state and the legislative program can be tied up with the general health program a great deal of criticism is disarmed Instead of being purely a Board of Pharmacy program it is a part of the health program of the state, the same as vaccination laws and the like

Dr Swain presented two Attorney-General's opinions, one of them deals with Mr Meissner's question, namely, when is a registered pharmacist in charge? The Maryland Act demands that a registered pharmacist must be in charge of a store

He said further that in Maryland they had some difficulty with the supervision of the registration of poison sales He once heard Dr Beal make the statement that an enlightened pharmacist would be diligent in his observations of the poison laws, this he referred to, chiefly, because no other dealer is going to do that He is not going to the trouble that a pharmacist will in handling poisons He presented a number of experiences Several applied to various phases of the subject presented by Dr Swain

C T Gilbert spoke on the limitations of opening new stores in Connecticut, especially the conversion of perfume shops into drug stores A recent law requires registration of a new store and for this $200 00 is charged Only about five stores have been registered since its passage before that the number was from twenty to seventy five each year

R C Wilson stated that in Georgia they were considering compulsory registration laws and he asked Walter D Adams to explain the Texas law Mr Adams stated that this had been presented last year and published in the JOURNAL The question, however, relative to the constitutionality of Section 14 of the Pharmacy Law, this had been declared unconstitutional by the Attorney General The ASSOCIATION has brought a friendly suit against the Board of Pharmacy for the money which the Board has collected It is assumed that the money does not belong to the state and if it does not go to the ASSOCIATION then it will remain with the Board of Pharmacy It is proposed to take the case to the Supreme Court, if necessary Mr Adams also advised that the bill providing for a sales tax was defeated in Texas

R P Fischelis referred to three bills that had been introduced in the New Jersey Legislature, one of them provides for the revocation of licenses of registered pharmacists for crimes involving the violation of the narcotic and liquor law and for non-compliance with the Pharmacy Act The case came up a year or more ago when a pharmacist who had served time for violation because of the sale of wood alcohol for beverage purposes had served that term and applied to the Board for reinstatement that is, renewal of his registration The Board felt that he was not a proper person to be registered and the question was brought to the attention of the Attorney General who found that the Pharmacy Law did not provide for revocation of licenses for crimes involving moral turpitude Three years after the first occurrence this same pharmacist was convicted of forging narcotic prescriptions and again committed to jail and the Judge rather severely criticized the Board of Pharmacy for permitting that type of individual to continue the practice of pharmacy Then it was pointed out to the Judge that the Attorney-General had ruled that the law did not provide for revocation in such cases A strong letter was sent to the Legislature, but up to this time has not been passed

A second bill was introduced which passed both houses and was signed by the Governor providing for the annual registration of the pharmacies Whenever this bill came up it included a definition for the terms "drug store" and "pharmacy" and found objectors and so it was decided not to define the terms "pharmacy" and "drug store " That was made possible by the fact that an Act was passed in 1932 limiting the use of terms "pharmacy" and "drug store" and "apothecary shop" to establishments operated under the supervision of a pharmacist

The third piece legislation provided for a grant of power to the Board of Pharmacy to appeal to the Court of Chancery for injunctions to prevent the continuous violation of the law The Board is more interested in law enforcement and the proper conduct of pharmacists than in collecting penalties This legislation has not been passed There was also introduced without any intervention from pharmacists, a general resolution asking for investigation of cut rate cosmetics shops and chain drug stores The joint resolution provided for the establishment of a commission consisting of two members of the Senate, two members of the Assembly and two members of the State Board of Pharmacy, this has passed the house and is now pending in the Senate

L L Walton inquired whether Dr Swain had discussed with the Attorney General the character of the evidence that would be required in order to convict for conducting a pharmacy without having a registered pharmacist in charge He replied, that in Baltimore there is a working agreement with the State's Attorney for the City and he has requested that cases be brought to the magistrate courts This prevents cluttering up the State docket but if there are difficulties then the case comes back to the Attorney-General The magistrates have invariably said, that if cases are brought before them that there should be real evidence The decision has only come a few days ago and no effort has been made, so far, to put it into effect, but the Act states, that at no time should a pharmacist be left in charge, who is not registered

Mr Walton said that in Pennsylvania the State Board has been operating under the decision, for the last five to seven years, which holds that the pharmacist does not lose charge of the pharmacy by going out to meals or by being absent for one half day It has also been held that in order to prosecute there must be a sale

Dr Swain quoted from the Act which states no pharmacy shall at any time be left in charge of a person who is not a registered pharmacist It is based upon the selling of drugs or medicines or compounding and is simply a blanket statement

Mr Walton stated that the Pennsylvania law was effective along that line

Dr Swain was of the opinion that a short absence from the store would not be sufficient to convict He referred to a case in Baltimore when a pharmacist left the store and gave explicit instructions that he was going out He had also left a man in charge with the instruction not to fill any prescriptions or sell poisons during his absence The case came before Judge Owens and he said that the advice given was all right for the individuals concerned but did not take into consideration the many people of the city of Baltimore

Dr Swain explained that in Maryland and Missouri a jury is the judge of both the law and the facts In most states a court instructs a jury in the interpretation of the law in a criminal case, but in Maryland this is not so The court may refuse to give instructions or, when requested, to give them The instructions must be given in this way, "Gentlemen of the Jury, in response to your counsel s request your counsel requested that I interpret this act to you, but bear in mind under the constitution of the state of Maryland you are the judge of the law and the facts and you are in no sense obliged to follow it and you may disregard it " So that applies to the case referred to It depends on the decision reached by the jury

Mr Walton stated that in Pennsylvania a great many pharmacies are conducted by one registered pharmacist only and the Board has hesitated to penalize the pharmacist who leaves his store for a brief period

M N Ford referred to a case in Ohio It was an appeal case The case came to trial and the defendant stated that he was in full and actual charge as the law provided, that he was in daily charge of the store either by telephone, telegraph or by letter The case went against him and the Board was sustained by the Court of Appeals

W B Philip stated that the decision from the Attorney General of Maryland is legally correct but he would be surprised if a lower court would convict and he spoke from experience, but considered the decision from the Attorney General a very interesting one He felt that the decision was a useful one even if it could not be carried into effect in every instance

R P Fischelis referred to a case in New Jersey where the pharmacist was frequently absent and his wife was left in charge She would not sell anything that conflicted with the law, but a sign was displayed and this was called to the attention of the Attorney General, he suggested that photographs be taken at various intervals during which the store was not in charge of the pharmacist The Board went to court with that evidence and a conviction was given There were four days in which no pharmacist was in charge of the store In the case of persistent violations the proceedings should be taken down and the judge of the lower court will give careful consideration before rendering his decision

A L I Winne stated that he had an experience when the Virginia Assembly met and there were several measures under consideration that affected pharmacists and merchants They were interested in issuing retail licenses and wholesale licenses and quite a number of different activities were concerned, so he found himself drawn into a formed organization representing about 26 groups These worked together in the interest of a tax by which the Governor was endeavoring to raise a million dollars for schools To a certain extent they were successful but the interesting thing was the possibility of such a line up for working together for legislation

J Lester Hayman stated that they had a bill before the Legislature which was sponsored by hotel and restaurant people In it was a section which evidently was overlooked, it provided that where medicines were prepared and sold this department must be separated from the rest of the establishment by sound proof partitions from the ceiling to the floor and this concerned many pharmacists

M N Ford referred to the filling of prescriptions for whisky involving a question before the Supreme Court at this time A liquor control act was passed a few months ago and in order to take care of the business until an organization was made effective the control was wished upon the Board of Pharmacy These permits were issued to about one half of the druggists of the state and the question was raised as to what was whisky The druggists had to stop selling whisky and take out permits to fill prescriptions only

Recently an individual tax payer of the state filed suit against the State Liquor Control Board for selling or contemplating to sell blended whisky This is now before the Supreme Court

W Bruce Philip referred to House Bill 3758 changing the designation ' Retail Liquor Dealer Tax" to "Medicinal Tax " It is now before the Senate Finance Committee of which Senator King is the chairman The meeting was then adjourned

---

The British Pharmaceutical Codex Published by direction of the Council of the Pharmaceutical Society of Great Britain The Pharmaceutical Press, 23 Bloomsbury Square, W C 1 London, England Price 35 shillings, foreign postage extra the price does not include duty

Various supplements antedating the Codex have appeared in England since early in the last century, the purpose being to provide recognized formulas for medicines which were not official in the British Empire Gray's Supplement was first published in 1818 and was subsequently edited by Professor Redwood, other publications followed which met with more or less favor according to standing of the author or compiler but without recognition beyond that

The need for a work issued under the authority of some statutory body was expressed by resolution in 1904 and responsive thereto a committee was organized by the British Pharmaceutical Society for carrying the purpose declared in the resolution into effect The chairman of the committee was Michael Carteighe, the sub committee in charge of the collection of data and information was made up of members well and favorably known to pharmacy among them Dr W E Dixon Prof H G Greenish (deceased) The research work required for the solution of problems was performed partly in the Laboratory of the British Pharmaceutical Society in the teaching institutions and of individual members of the Society

The scope of the work was defined by describing it as "an Imperial Dispensatory for the use of medical practitioners and pharmacists," and named—"The British Pharmaceutical Codex"

The general plan has been followed with revisions and additions, in the contents and arrangement and keeping step with the progress in pharmacy and changes in materia medica

Two of the more important changes in the revision of the edition of 1907 were the additions of brief descriptive notes on the preparations of each drug and chemical at the end of the respective monographs and the inclusion of a pharmacological and therapeutic index

Other parts of the book in its several editions have been prompted by revisions of pharmacopœias and official formularies and developments in materia medica and therapeutics and improvements and suggestions which have given greater value to the Codex

About one thousand substances have been given consideration in monographs, in addition, matters relating to chemical and physical properties or botanical characters action and uses and summary of preparations, new remedies sources of proprietary preparations, information relative to vaccines, vitamins etc In general it may be said that the plan of the Codex does not differ greatly from American dispensatories A comprehensive index is included and the subjects are considered in four general divisions Part I General Monographs on Chemicals, Crude Drugs etc Part II, Surgical Dressings Part III Formulary Part IV, Appendices—tables, general tests reagents, methods of sterilization, pharmacological index trade names, proprietary substances, etc

EDITORIAL NOTES

PHARMACISTS ALWAYS DO THEIR PART

The Christmas Seal this year commemorates the 50th anniversary of the beginning of modern sanatorium treatment in the United States by the late Dr Edward Livingston Trudeau at Saranac Lake New York, in February 1885 The one room cottage the seal depicts became the nucleus of the sanatorium movement in this country To day there are 659 sanatoria containing a total of 86 917 beds The cottage called the "Little Red' because of its color, is preserved at the institution founded by Dr Trudeau

JOHN WESLEY S KNOWLEDGE OF MEDICINE

Repetition of the following article may be of interest to some of the members of the AMERICAN PHARMACEUTICAL ASSOCIATION at this time, because of the anniversary celebration of the founding of the Methodist Church Reference is also made to an article in the May number of the JOURNAL for 1929, page 523 Through the kindness of Lawrence Williams, of Baltimore the ASSOCIATION is in possession of a copy of Wesley's Formulary " 26th edition

A Mortimer, writing in the Special Issue' of the *Chemist and Druggist*, June 25 1921 states that in all references to John Wesley and his life work he has read the knowledge of medicine possessed by Wesley seems to have been ignored Mr Mortimer presents a number of abstracts from ' Primitive Physic or an easy and natural method of curing most diseases," by John Wesley These books were advertised to be sold *at the Rev Mr Wesley's Preaching Houses in Town and Country* The preface to the first edition is dated June 11 1747 a bibliographer has ascertained that the book treats of 243 ailments and contains 725 recipes The history of medicine is briefly traced in the preface and the following is taken from the article referred to "In the early days physic," says Wesley, "as well as religion was chiefly traditional Father handed down to son what he himself had in like manner received, concerning the manner of healing both outward hurts and the diseases incident to each climate and the medicines which were of the greatest efficiency for the cure of each disorder Then when it was seen how the beasts would use certain natural remedies to cure their ills they were tried for human beings with good results, and experience and physic grew up together In addition to this knowledge many accidental discoveries were made which led to the wider use of many hitherto unknown remedies Hence rules for the application of these, and medical books were immensely multiplied, till at length physic became an abstruse science, quite out of the reach of ordinary men Physicians men who knew a little more about medicine than the average person, now were held in esteem as persons who were something more than human Profit attended their employ as well as honour, so they had now two weighty reasons for keeping the bulk of mankind at a distance that they might not pry into the mysteries of the profession Wesley then goes on to show that the medical men of the time of which he is speaking insisted that a knowledge of anatomy, natural philosophy, and even astronomy and astrology were necessary to the understanding of the art of healing They introduced complex medicines consisting of so many ingredients that it was impossible to know which wrought the cure

U S RADIUM IMPORTS

The Belgium Congo has been the world s chief source of radium although some has been produced in Czechoslovakia and, in 1930 radium ore was discovered in northern Canada

According to C C Concannon chief of the Commerce Department's Chemical Division, radium is by far the most valuable commodity ever produced While the United States is the world's largest consumer it has imported less than one third of one pound of the substance during the last decade and for this small amount has paid more than $6,000 000 00 During this period imports have remained fairly steady at around 125 to 170 grams valued at from $400 000 00 to $575,000 00 per

annum, until 1930 when imports advanced to 260 grains valued at $925,000 00, the largest amount ever imported during one year In 1933, 179 grains valued at $576 000 00 were imported, at an average invoice price of $3217 00 per grain, and during the first seven months of the current year $400,000 00 worth was purchased abroad, it was stated

The bulk of radium imports comes from Belgium which controls the Congo output, while smaller consignments are received from Canada and elsewhere

TETANUS TREATED WITH CURARE

Curare has recently had its value assessed in the treatment of tetanus Two cases are reported, in the first, a laborer (39), four doses of "gourd" curare, each 0 032 Gm was given subcutaneously at six hourly intervals on the eleventh day following the injury and four days after the onset of tetanus symptoms Within two hours of beginning the treatment the spasms were less severe, the patient had less pain and was more comfortable The improvement continued for forty eight hours, later, by another injection, 0 032 Gm was given The patient ultimately recovered In the second case, a boy aged 7, an initial dose of 0 0075 Gm was given subcutaneously, followed in ten minutes by the same amount, after a further ten minutes by 0 015 Gm and forty minutes after the first dose with another one of 0 015 Gm By this time the rigidity had disappeared, but respiratory difficulty followed and the patient died Both patients received, in addition, routine treatment with tetanus antitoxin —(*Lancet* (1934), 5792, 475)

NEW YORK BOTANICAL GARDEN CATALOGS ITS PLANT NAMES

An important research project, which has already begun to prove its value, has been completed at the New York Botanical Garden through the assignment of unemployed persons by the Works Division of the Department of Public Welfare This is the compilation of the Index Kewensis, a series of six loose leaf volumes containing the generic and specific names of plants and all the sources of technical knowledge available It represents one of the romances of scientific research, and is said to be the only one of its kind

OVERDOSE OF PARALDEHYDE

Evidence was given by a nurse of the hospital (Fettercairn Hospital, Hamilton, Australia) that she had telephoned to a chemist for eight drachms of paraldehyde This paraldehyde had been injected as a preanesthetic

The apprentice of the chemist in evidence said he had taken the telephone message, which was an order for eight ounces of paraldehyde The coroner found that death was caused by heart failure due to paraldehyde poison, and accelerated by extensive pleural adhesions to both lungs, and a flat and flabby heart He found that the quantity of paraldehyde administered was eight ounces, whereas the quantity prescribed was eight drachms, and that the excessive quantity given was due to a mistake made in the preparation and administration of the drug by a qualified certificated nurse He also found that when unfavorable symptoms manifested themselves every effort was made to restore animation

FOR REAL PHARMACAL SERVICE

'Every branch of the drug trade must recognize the importance, with respect to the general welfare, of the pharmacist in the retail drug store If it were not for the confidence justly placed by the public in the local pharmacist, many of the opportunities and privileges of the drug trade would not exist It cannot be questioned that as public confidence in the pharmacist may lessen, as the drug store may become less and less an institution of public health, the rights of manufacturers of drugs and medicinal preparations will be restricted by legislation enacted in the public interest

"Certain consumer interests, largely miscalled and almost wholly self-appointed, have not been idle in recent months in the matter of stripping the drug industry of important privileges One of the objectives is the supplanting of the existing pharmacally prepared official standards for drugs with government made standards It is, of course, the professional pharmacist who represents the professional work of the drug industry in the eyes of the public It is imperative, therefore, that he should be truly representative of the highest ideals and purposes of his calling It is equally necessary that these ideals and purposes be maintained on the highest possible plane"— From an editorial—*Oil, Paint and Drug Reporter*—September 3, 1934

PERSONAL AND NEWS ITEMS.

Fred B Kilmer has been active in compiling historical data and exhibits of Christ Church,

New Brunswick, organized in 1742 Even brief records are impossible, however the exhibit of a photostatic copy of a deed or lease from Philip French Esq is referred to as a long time lease The document is a lease for 2000 years from December 4, 1742, for the plot of *ground 150 x 150 feet on which the church* now stands, the lease will expire in 3742 and the annual rental named is "two peppercorns per year, if demanded "

Among recent visitors at the American Institute of Pharmacy were Dr Walter Schmid, Dresden, Germany, Dr Julius F Leo, Dresden, the former is food and pharmaceutical chemist and the latter's pharmacy recently celebrated its 450th anniversary Among other visitors—Miss Grace I Harper, registrar of Rutgers University College of Pharmacy, Fred A Lawson, Stoneham, Mass , Mrs C H Huntley, New Haven, Conn , Charles G Ajax (and wife) president of Washington State Pharmaceutical Association, Floyd B Johnson, Calhoun, Ga

The interest of the Press, in the American Institute of Pharmacy is shown by publishing brief sketches and pictures of the building We have before us a clipping with an excellent print of the *Kerkhoven*, Minn , *Banner*, under date of September 7th

Dr Walter and Dr Ida Noddack, Berlin, have been awarded the Scheele Medal of the Swedish Chemical Society

Prof Georg Gamow head of the department of physics and mathematics at the Polytechnic Institute at Leningrad, has been appointed visiting professor at the George Washington University for the coming year During the summer Dr Gamow was a foreign visiting member at the twelfth annual physics symposium of the summer session of the University of Michigan At George Washington University he will give a seminar in theoretical physics and will continue his research on the atomic nucleus

E W Runyon, member of the A PH A , since 1875, has returned from England after a two months' sojourn and is again at his desk

Edgar Warfield, Alexandria, Va , veteran pharmacist (aged 92 years) after 78 years of service is still active in his profession In a picture of the *Evening Star*, Washington, September 6th, he is shown with his son and grandson in the prescription department This is no unusual occurrence, for he comes to the store every day

A. B Stevens, member of the A PH A , since 1885, former dean of the College of Pharmacy, University of Michigan, now of Escondido, Calif , has been spending several weeks in Ann Arbor A dinner party was given for him by Prof and Mrs C C Glover, members of the family and former associates were present

Prof Justin L Powers is pursuing graduate work in the University of Wisconsin

Secretary H C Christensen, chairman of the *Pharmacy Exhibit at the World's Fair*, and Mrs Christensen celebrated their forty-first wedding anniversary at the Swiss Village, A Century of Progress, September 6th Mr and Mrs A Finstead, of Miami, Fla , were honored guests of the occasion

Prof G Barger was presented with the Hanbury Medal at the opening of the 93rd session of the School of Pharmacy [1] of the British Pharmaceutical Society, on October 3rd Professor Barger is not a pharmacist, he is Professor of Chemistry in relation to medicine in the University of Edinburgh, and is well known for his work on ergot and jointly with Dr F H Carr was a discoverer of ergotoxine

Director Claudius T Murchison, of the Bureau of Foreign and Domestic Commerce, delivered a radio address to the National Industrial Advertisers' Association during their meeting in Cincinnati On September 21st, Mr Murchison gave a historical résumé of the development of machinery in the industrial world This has created problems and produced triumphs The achievements of the machine should be preserved and fostered not only in the interest of society, but in the interest of profitable business The problem is, what can be done to improve conditions?

A R. L Dohme has presented to the School of Pharmacy of the University of Maryland a portrait of his father, the late Charles E Dohme, who was president of the Institution in its earlier years The latter was president of the AMERICAN PHARMACEUTICAL ASSOCIATION in 1899

Through the Courtesy of Frank L Black, the ASSOCIATION has received from Dr James C Clarke, Baltimore a hand scale with set of weights Also, a framed receipted bill from the pharmacy of Dr Hynson Jennings & Co , dated June 8 1863

[1] Dr Barger delivered the inaugural address

WILLIAM PROCTER, JR, AWARD

John Uri Lloyd, senior member and past-president of the AMERICAN PHARMACEUTICAL ASSOCIATION pharmacist chemist educator and author, was honored at a special ceremony, October 9th at the Philadelphia College of Pharmacy and Science in recognition of his many and varied contributions to his chosen professions To him was presented the Procter International Award in the form of a suitably inscribed gold watch

This award is named in honor of William Procter Jr (1817–1874), a graduate of the Philadelphia College and long a member of its faculty and editor of its *American Journal of Pharmacy* William Procter, Jr 's contributions to pharmacy and related sciences have won him undying fame

The presentation of the award was made by Dean Charles H LaWall and the award conferred by President Wilmer Krusen The recipient responded with an informal address Preceding the award, Chairman Samuel P Wetherill, Jr, of the Board of Trustees, delivered an address and the exercises were opened with a biographical sketch of William Procter, Jr, by Prof Ivor Griffith

DEDICATION OF LILLY RESEARCH LABORATORIES

Following an inspection by the Indianapolis Druggists' Association on Tuesday and a visit by the Indiana State Medical Association on Wednesday, the formal dedication of Eli Lilly & Company's new research laboratories took place on Thursday, October 11th and was continued on the next day by inspection trips and addresses by guests of honor Nearly one thousand guests were present and these came from all sections of the country, among them R P Fischelis, president of the A Ph A The faculties and laboratories of many pharmacy schools were represented

Featured on the program were the dedication address delivered by Eli Lilly president of the company, and chairman at the dedication, and comments on research in manufacturing pharmacy by Josiah K Lilly, chairman of the board of directors of the company

"The Unpredictable Results of Research" formed the substance of an address by Dr Irving Langmuir famous American scientist and director of research for the General Electric Company His address was followed by a review on 'The Early Story of Insulin," Sir Frederic Banting of the University of Toronto He was followed on the program by Sir Henry Dale chairman of the National Institute for British Research, who delivered an address on the subject 'Chemical Ideas in Medicine and Biology"

At a formal dinner tendered on Friday night by the Lilly organization at the Indianapolis Athletic Club, with J K Lilly functioning as toastmaster, the following speakers were heard Sir Henry Dale, chairman of the National Institute for British Research, Dr Elliott P Joslin of Boston, Dr George R Minot of Boston, Dr Frank R Lillie of Chicago, Dr Charles R Stockard N Y, Dr George H Whipple, Rochester Dr Carl Voegtlin, Washington, Dr G H A Clowes director of the Research Laboratories

WILSON & CO LABORATORY WRECKED

An explosion of undetermined origin in the pharmaceutical laboratory of Wilson & Co Chicago practically wrecked the building and injured three persons slightly The blast which occurred in a basement boiler room near a storehouse of chemicals, blew out all the windows there, demolished a supporting post on the first floor and caused part of the second floor office and laboratory equipment to be precipitated into the basement Immediately after the explosion, the basement was flooded with sulphuric acid from six shattered carboys

---

OBITUARY

Prof John E Groff, aged 80 years, for 40 years chief pharmacist of the Rhode Island Hospital and one of the founders of the Rhode Island College of Pharmacy, died at the hospital after a short illness The deceased joined the staff of the hospital in June 1891, as chief pharmacist, and held that position ever since

J Percy Remington died suddenly in Portland Oregon, September 17th while on a visit to his sister there He was the son of Professor Joseph P Remington

The deceased graduated from the University of Pennsylvania in chemistry in 1898, and later came to the Philadelphia College of Pharmacy, where he received the degree of doctor of pharmacy He was distinguished as an engineer and inventor and developed and patented many widely used mechanical devices for manufacturing processes

SOCIETIES AND COLLEGES

INTERNATIONAL CONGRESS OF PHARMACY

The Twelfth International Congress of Pharmacy will be held in Brussels from July 20 to August 5, 1935 The general secretary is M J Breugelmans 3 rue du Gouvernement Provisoire, Brussels

THE NATIONAL ASSOCIATION OF RETAIL DRUGGISTS

The National Association of Retail Druggists, in New Orleans, September 24th–29th was largely attended, to a certain extent due to the interest developed preceding the convention and the attractions of the interesting city in which it was held

Among the speakers of the N A R D aside from the officials who made illuminating addresses relating to the subjects under their control, were the following James H Beal, E F Kelly F V McCullough H J Anslinger U S Commissioner of Narcotics, James M Doran, Administrator of the Distilled Spirits Institute and W Bruce Philip of Washington

Naturally the code and its provisions was a subject of interest and entered into several addresses and reports The report of the Form of Organization Committee was of great importance, because it was found necessary if the N A R D is to continue representation on the National Retail Drug Code Authority, that the constitution and by laws be altered to some extent

While closer cooperation with the AMERICAN PHARMACEUTICAL ASSOCIATION was endorsed merger of the N A R D and A PH A was not approved Dr James H Beal's address dealt with the subject He gave a history of the organizations and detailed the activities of both

Referring to the AMERICAN PHARMACEUTICAL ASSOCIATION, he said in part

The dominant purpose of the A PH A in 1851 is its dominant purpose to day It considers the professional and scientific interests of pharmacy rather than its trade and commercial interests It studies and reports upon commercial methods and practices, but only as necessary adjuncts to the proper conduct of a pharmacy

It devotes consideration to the scientific and professional interests not only of the retailer but to the professional and scientific interests of pharmacy as a whole In fixing its requirements for membership it does not recognize any distinction between manufacturers, wholesalers or retailers between proprietors or clerks, between professors in colleges of pharmacy and scientific research workers What it does require of its members is an active interest in the advancement of professional and scientific pharmacy

'Another striking feature of the A PH A is that it is controlled by a House of Delegates, the majority of whose members come from state pharmaceutical societies, so that the A PH A in fact is, and might very properly be called the Federation of State Pharmaceutical Associations

RESOLUTIONS

A large number of the resolutions applied to business matters and relations with other organizations, legislation approval of the work of officers and the Association's activities Among many resolutions the following are mentioned

Opposing the filling of prescriptions by hospitals for non patients and asking the American Hospital Association to urge its members to cease this practice

Disapproving the use of the word 'drugs" in newspaper stories when ' narcotic drugs" are intended

Praising the work of the 'Old Apothecary "

Urging continuance of support to National Pharmacy Week and suggesting that retailers hold 'open house' during this week

Urging the issuance of a commemorative postage stamp in honor of the American Institute of Pharmacy

Urging all associations to affirm and support a national fair trade act and recommending that all state associations seek the enactment of legislation similar to the California fair trade act

A recommendation by President Powell that the association move its offices to Washington was approved by the finance committee

The following officers were elected for the ensuing year

Harvey A Henry of Los Angeles, was elected *President* of the Association Other officers are as follows *First Vice President*, H O Chichester, of Macon Georgia, *Second Vice President*, Zack Kerrigan of St Louis, *Third Vice-*

President, M V Hardesty, of Louisville, *Secretary*, John W Dargavel, of Chicago, *Treasurer*, Oscar Rennebohm, of Madison, *Executive Committee*, John Witty, of Portland, and Thomas Smith, of Wilmington, for three years each, Monte Powell, of Denver, for two years, and C Fred Wright, of Boston, for one year

FEDERAL WHOLESALE DRUGGISTS' ASSOCIATION

Mutual and coöperative wholesale druggists were urged to cooperate individually with manufacturers, wholesalers and retailers in efforts to establish plans of price stabilization which benefit the retail druggist, in a resolution approved by the Federal Wholesale Druggists' Association at its nineteenth annual convention, held in Providence, R I, September 16th to 19th The action followed a discussion and members frankly and earnestly expressed their views on discounts, rebates and dividend allowances

Hon Harry J Anslinger reported to the Association that uniform state narcotic laws had been enacted by Florida, Nevada, New Jersey, New York, Rhode Island, Kentucky, Virginia and South Carolina

The following officers were elected *President*, Harry Krupp, Philadelphia, Pa, *Vice-President*, Edward Seiberling St Paul, Minn, *Secretary*, Lee Williamson, Baltimore, Md, *Treasurer*, George Raab, Providence, R I, *Members of the Executive Committee*, O W Osterman, Philadelphia, Pa, T F Williams Buffalo, N Y, Paul Pearson, Washington D C, O J Cloughly, St Louis, Mo, Joseph Dreyer, Newark, N J

The Association formed a new committee on propaganda and invited buying which will study and direct procedure in connection with price stabilization The members of the committee are J J Dreyer, Newark, N J, O J Cloughly, St Louis, R E Lee Williamson, Baltimore, and F T Roosa, Cleveland

NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION

Ogden L Mills Secretary of the Treasury under President Hoover, was one of the speakers at the meeting of the National Wholesale Druggists' Association The convention at White Sulphur Springs, October 1st–5th, which was the 50th annual meeting, broke all precedents for attendance and interest

Another speaker of the convention was Wheeler Sammons, director of the Drug Institute, whose address was based on difficulties encountered in efforts to bring peace to industry

Dr H J Ostlund of the University of Minnesota spoke on "The Distribution of Costs" in an effort to find out what it actually costs to have products reach the hands of the consumer

Discussions on the codes and business affairs entered into program and President Elect A Kiefer Mayer made an analysis of the effect of the codes and how business must be shaped in order to successfully meet the demands

Robert Lund presided as toastmaster at the banquet

The following officers were elected for the ensuing year

Honorary President, Andrew J Geer, Charleston, S C, *President*, A Kiefer Mayer, Indianapolis, *First Vice-President*, Dudwig Schiff, Los Angeles, *Second Vice President*, W W Starkey, Pittsburgh, *Third Vice President*, Edward S Albers, Knoxville, Tenn, *Fourth Vice President*, Sam Dunlap, Jacksonville, Fla, *Fifth Vice-President*, Charles Bergman, New York, *Members of the Board of Control*, William Ochse, San Antonio, Texas, Norman B Livermore, San Francisco, and George Van Gorder, Cleveland, Ohio, *Executive Vice President and Secretary*, E L Newcomb, 51 Maiden Lane, New York City, *Treasurer*, Title Guarantee & Trust Co, New York City, Washington *Representative*, W L Crounse, Washington, D C

AUSTRALASIAN PHARMACEUTICAL CONFERENCE

Melbourne Centenary Meeting, January 16–23, 1935

The biennial meeting of Pharmaceutical Associations of Australia and New Zealand will be held in Melbourne from January 16 to 23, 1935 Concurrently with the convention of the Associations, the meeting of the Australian and New Zealand Association for the Advancement of Science will take place Pharmacists are represented in the latter Association by a section of their own—Section O, Pharmaceutical Science Dr Roy Gardner, of Dunedin, N Z, is president of this section It is in Section O meetings that the scientific and technical papers are read

What is known as the Australasian Pharmaceutical Conference is the Pharmaceutical Associations meeting At this meeting matters affecting the professional and business interests of pharmacists are discussed A committee is now at work preparing the business agenda,

and it is expected that the 1935 meeting will be productive of good results

MEDICINAL CHEMISTRY, AMERICAN CHEMICAL SOCIETY

The division enjoyed well attended sessions which were of unusual interest because of the quite general discussion which followed all papers on the program Perhaps of chief interest was the Symposium on Medicinal Analysis This was essentially an informal gathering It offered ample opportunity for discussion between the various groups as to difficulties encountered in this field, and various methods and laboratory technique were brought out

New officers of the division for the ensuing year were elected as follows *Chairman* John H Waldo, *Vice Chairman*, Walter H Hartung, *Secretary-Treasurer*, D L Tabern

AMERICAN REGISTERED PHARMACISTS' ASSOCIATION

The Thirty First Annual Meeting of the American Registered Pharmacists' Association was held in San Francisco August 1st to 4th The following officers were elected for the ensuing year *President*, Albert C Kasper, San Francisco, *First Vice President*, A A Madsen, San Francisco Hospital, San Francisco, *Second Vice President*, Alice M Riordan, Los Angeles, *Secretary Treasurer*, E S Berwick San Francisco *Directors* Albert Keller, San Francisco, Robert Guild, Sacramento, William Gebhart, San Jose, Roy E Hazlett, Jr Davenport, Iowa

CANADIAN PHARMACEUTICAL ASSOCIATION

The Canadian Pharmaceutical Association held its twenty second annual session in Saint John, August 6th–9th, and commenting thereon the *Canadian Pharmaceutical Journal* states that the meeting will be remembered as outstanding in the history of the organization

Three guests are especially mentioned in the columns, namely, President R P Fischelis of the AMERICAN PHARMACEUTICAL ASSOCIATION, who brought greetings from that organization, Dr R E Wodehouse, Deputy Minister of Pensions and National Health Ottawa who enlightened the members on the work being carried out by that department, Col C H L Sharman Chief of the Narcotic Division, Ottawa who discussed some of the difficulties of the division

The *Canadian Pharmaceutical Journal* of September 15th comments on the address of President Fischelis in which he commended Canadian pharmacists on their unique organization which comprised all the druggists of the Dominion He stated they should keep their forces consolidated and permit no division in their ranks

It was deeply regretted that President H D Campbell of the Association could not be present on account of illness from which he is recovering A letter of appreciation and greetings from him was read

The following officers were elected for the ensuing year *Honorary Presidents*, J J Kinley, Lunenburg, N S E Clinton Brown, Saint John New Brunswick, Henry Groulx Montreal Quebec, W G Smith Welland Ontario H D Campbell, Winnipeg Manitoba, W C Black, Calgary, Alberta, *President*, J H Best, North Battleford, *Vice President*, S R Balcom, Halifax, N S , *Chairman*, A J Wilkinson, Windsor, *Secretary* R B J Stanbury, Toronto

The Pharmacy Week window installed by Reddin Bros , Charlottetown won the F A Jacobs Trophy, which was presented during the meeting The window featured prescription practice and a general and historical exhibit of iodine and several pharmaceutical processes

Dean G A Burbidge spoke on ' Pharmacy in the Drug Store " He outlined the methods adopted by the Province of Nova Scotia for the education of pharmacists, and referred particularly to the arrangements providing for certified clerks

Secretary R B J Stanbury of the Canadian Pharmaceutical Association, and Secretary F A Jacobs of the Ontario Retail Druggists' Association, participated in the functions of the Washington meeting of the A PH A , both are members and regular attendants at the annual meetings

NATIONAL PHARMACY WEEK

The *News Edition* of *Industrial and Engineering Chemistry* of September 20th, page 344, has an interesting article on this year's observance of Pharmacy Week In order to complete the detailed report, the statement should have been included that Pharmacy Week had its inception at the meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION in 1924 as one of the recommendations of Robert J Ruth in his address as chairman of the Section on Practical Pharmacy and Dispensing

PURDUE PHARMACY WEEK OVER THE RADIO

The story of pharmacy was told to the people of Indiana during National Pharmacy Week Short musical programs accompanied the daily talks, the music was furnished by members of the several families of the pharmacy school staff and by the students of pharmacy

The following were the speakers

Dean C B Jordan, "Pharmaceutical Education," President E A Ridgely, of the I Ph A , "What the Indiana Pharmaceutical Asso ciation Is Doing to Protect the Health in Our State," H W Heine, "The Pharmacist and the Law," Prof H G DeKay, "The Druggist " and Prof C O Lee, "The Inquiring Customer," Prof C J Zufall, ' How Man Came to Use Drugs "

INSTALLATION OF THE PRESIDENT OF THE UNIVERSITY OF IOWA

The AMERICAN PHARMACEUTICAL ASSOCIATION was represented by John Milton Lindly at the Installation Ceremonies of Eugene Allen Gilmore as President of the University of Iowa State Senator Lindly functioned in the group of delegates of Learned Associations and Foundations " He writes that when he graduated from the University the attendance numbered about 500, now about 8000, the great development was made largely during the presidency of the retiring president, Walter A Jessup

The attendance at the Inaugural Convocation was nearly 10,000, and the formal ceremonies were carried out in accordance with the University program participated in by State bodies and institutions, the student body and representatives of other educational institutions The name of Dean Wilber J Teeters College of Pharmacy is the fourth in the Board of Deans

PHARMACY TO-DAY

President Robert P Fischelis, of the AMERICAN PHARMACEUTICAL ASSOCIATION opened Pharmacy Week with a radio address on ' Pharmacy To-Day " The opening message stressed the importance of health and the service of pharmacy contributory thereto

The speaker referred to the care necessary in pharmaceutical practice and gave an example of the possibility of error through carelessness and incompetency The activities of the several divisions of the drug industry were depicted and reference made to educational and legal requirements governing pharmacy The address was comprehensive, interesting and well received

AERIAL POLLEN SURVEY

An aerial pollen survey was inaugurated by the Philadelphia College of Pharmacy and Science on September 20th, a ceremony marked the beginning of this survey Endorsement of the plan and commendation was offered at the meeting by Dr Theodore B Appel, Secretary of Public Health of Pennsylvania, Dr J Norman Henry, Philadelphia Health Director Dr Arthur C Morgan, Secretary of the Pennsylvania Board of Medical Licensure, and Dr Randle C Rosenberger of the Jefferson Medical College

The surveys are to be conducted daily and the collection made by air plane from the entire metropolitan area of Philadelphia and a section of southern New Jersey extending seaward twenty miles A model of one of the air planes to be used in the survey was presented to the College by Dr Henry K Seelaus who, with Dr A H Zifferblatt, is in immediate charge of the work Devices for collection of air samples during flights were designed and constructed in the college Engineering Department, under the direction of Frank N Moerk The air planes necessary for the flights have been donated by Richard Mark a patient of Dr Seelaus, and Dr Zifferblatt, who is a sufferer from hay fever

CANADIAN PHARMACY WEEK WINDOW

Friends of the late George E Gibbard, founder of the Canadian Pharmaceutical Association, have created a fund whereby the winning pharmacy window receives a Canadian cup and retains it for one year The winner will be presented with a miniature to keep permanently The window is to be a professional display Photographs of the window are to be sent to the provincial chairmen

Announcement of the winner will be made before the close of the Canadian Pharmaceutical Association 1935 convention and if the winner is present the trophy will be formally presented

---

Samuel L Hilton has added to his contributions to the Library, A PH A , by giving twenty volumes of the JOURNAL, A PH A , U S P Circulars, Treasurer's financial reports, N F Bulletins etc

Charles H LaWall has donated a number of photostat copies of historical records, among them page photostats of Charles Marshall's "Waste-Book "

DEDICATION OF THE CHEMISTRY BUILDING IN PARIS

Ceremonies in connection with the dedication of the Chemistry Building in Paris were held on October 19th and 20th The program provided for an address by President M Albert Lebrun of France, a visit to the building and a banquet in honor of the delegates and visitors

CALIFORNIA COLLEGE OF PHARMACY

The Board of Regents of the University of California has announced that it has assumed direct control of the California College of Pharmacy The College has been affiliated with the University since 1875, but had its own board of trustees and business managers

LEGAL AND LEGISLATIVE

BOARD OF SEVEN DIRECTS NRA

On September 28th, the National Industrial Recovery Board, created by Presidential Executive Order, took over the duty of administering NRA The Board is composed of S Clay Williams Chairman Leon C Marshall Executive Secretary, A D Whiteside Sidney Hillman and Walton Hamilton Blackwell Smith and Leon Henderson were named Legal Adviser and Economic Adviser, respectively to serve ex-officio as members of the Board At its first meeting the Board announced that there would be no drastic changes in either policy or personnel but that such alterations as experience proves to be necessary will be developed gradually It reappointed Col George A Lynch as Administrative Officer empowering him to sign such documents as do not require the personal signature of the President, and to continue supervision of the entire administrative machine of NRA

CODE AUTHORITY BUDGET

Public hearing will be held October 23rd, at the Raleigh Hotel, Washington, on the proposed Code Authority budget and basis of contribution for the retail drug trade

Amendments to the mandatory assessment clause and amendments to permit incorporation of the Code Authority and of local and metropolitan authorities also will be discussed

The proposed budget totals $50 000 00 for January 1 1934, to January 1 1935 It is proposed that each local and metropolitan drug establishment contribute up to $1 00 per employee per year and that of this sum the National Retail Drug Code Authority receive one dollar per retail drug establishment

CODE APPROVED FOR HAWAIIAN RETAIL CODE

The National Industrial Recovery Board, on October 15th, approved a code for the retail trade in the Territory of Hawaii This code will affect some 2800 establishments employing about 15 000 people It will become effective October 29th

This is the first approved code to apply solely to the Territory

Supplementary schedules appended to the code contain special provisions for retailers of drugs and allied products food groceries and their allied products music and radio, electric refrigeration, jewelry and allied products, and photography and photo-finishing

The code for Hawaii follows the mainland retail code closely The hours and provisions are identical establishing a basic maximum work-week of 40 to 48 hours depending on population and hours of store operation Minimum wages follow the same scale but are lower for Hawaii than on the continent, ranging from $9 00 to $12 00 a week

The Board s order approving the code specifically exempts members of the trade from the provisions of any other code to the extent they are engaged in retail trade in Hawaii It also stays the minimum wage provisions as to outside salesmen, and as to employees of retail drug establishments who spend 60 per cent of their time delivering merchandise outside of the shop

The code applies to "all selling of merchandise to the consumer and not for resale" in the Territory of Hawaii but selling milk and dispensing of drugs by doctors in the legitimate practice of their professions are exempted

Administration of the code is entrusted to a Territorial Code Authority made up of the chairmen of the County executive committees of the Retail Association of Hawaii The county executive committees are to act as County Code Authorities The trade practice provisions and the schedules for the various divisions of the trade follow very closely the rules approved for those trades on the mainland

WILLARD L THORP APPOINTED ASSOCIATE ECONOMIC ADVISER

The National Industrial Recovery Board, on October 15th, announced the appointment of Dr Willard L Thorp as associate economic adviser to the National Industrial Recovery Board in the Division of Research and Planning Dr Thorp will be the division's representative and chairman of the Advisory Council

Dr Thorp has been professor of economics at Amherst College and a member of the research staff of the National Bureau of Economic Research, Inc Since coming to Washington as a member of the Committee on Government Statistics he has served as director of the Bureau of Foreign and Domestic Commerce and is now director of the Consumers' Division of the National Emergency Council and a member of the Federal Alcohol Control Administration, the Committee on Mineral Policy and the Industrial Resources Committee

PHILIPPINES TO EXCLUDE FOREIGN PHARMACISTS

Following the advice of the Filipine Pharmacists' Union, the Filipino Pharmacists' Examination Commission, on July 20th, adopted the following two resolutions

1 Practice of pharmacist should be limited to Americans and Filipinos

2 Owners of dispensaries should be limited to Americans or Filipinos who are graduates of a school for pharmacy

It was further resolved that handling of drugs should be made only by Americans or Filipinos who have resided in the country for at least one year and that no license should be given to those who have no qualifications stated above after next January—*Japanese Retail Druggists*

TRADE-MARKS IN MANCHOUKUO

During the nine months that elapsed since the government of Manchoukuo enacted the trade mark law up to the end of July a total of 14,988 applications for trade-marks were applied for The principal applications have been from Japan, 12,010, Germany, 944, Great Britain, 879, United States, 459, France 219

ITALIAN NARCOTIC RULES

The new regulations concerning narcotics, as published in the *Gazzetta Ufficiale*, provide that penalties in the form of imprisonment for from one to three years and a fine of not less than *1000 lire* ($84 00) shall be imposed on any person who grows *Papaver somniferum* secretly, who produces crude opium or who collects or carries on traffic in opium capsules, leaves of coca and/or Indian hemp, writes the Italian correspondent of *The Journal of the American Medical Association*

No public or private place may be used for the gathering of persons who indulge in the use of narcotic substances, not only the keeper of the place but also the addicts are subject to a fine and/or imprisonment

Persons authorized to sell narcotics may not dispense them without a medical prescription nor to persons whose identity is unknown Morphine, diacetylmorphine, cocaine and their derivatives may not be sold other than in the form of an ointment or a solution The medical prescription must be written with ink or indelible pencil and according to a special form, it must contain a general description and the address of the patient, the amount of the dosage written out in full, and directions as to the manner and time of administration

ALABAMA LEGISLATION

Attorney General Thomas E Knight, of Alabama, has ruled that "The terms 'patent' or proprietary' medicines as in this act shall be interpreted to mean those package medicinal products advertised to the general public for certain medication, and not those products or preparations advertised to physicians under copyright or trade names to be prescribed, those products recommended by the U S P and the N F , except those items which should have been or may be classified as household remedies or those products or preparations which from their natural and known effects should have been dispensed, sold or prescribed for use by the public except upon the prescription or advice of a licensed physician or licensed pharmacist "

TEXAS

Bill Introduced Texas H 55 XXX proposes to forbid the sale of barbituric acid ' derivatives and compounds thereof under any copyrighted or chemical name," except on the prescription of a licensed physician The proposed act, however is not to affect the sale of such drugs by wholesale drug houses to retail pharmacists or to physicians A licensed physician is free to dispense these drugs, but, apparently, will be able to buy them from retail pharmacies only on prescription

SALE OF ACETYLSALICYLIC ACID TABLETS

The Federal Trade Commission has issued an order to the Bayer Company, Inc , New York, to cease and desist from using unfair competitive practices in the sale of its acetylsalicylic acid tablets The company is directed to cease using language in its printed advertising or radio broadcasting stating or giving the impression that "aspirin" is a trade mark of the Bayer Company, however, this order does not apply to advertising on packages to be sold in foreign countries in which the word 'aspirin" has been held to be the Bayer Company's valid trade mark A list of seventeen representations are given in the commission's order, which the company is not to use unless properly qualified, limited or explained Among them are such expressions as "It cannot harm the heart," ' Bayer aspirin is always safe," "Take Bayer aspirin for any ache or pain, and take enough to end it There is no harm in its free use," "Genuine Bayer Aspirin tablets promptly relieve headaches, neuritis, colds, toothache, neuralgia, sore throat, lumbago, rheumatism " The order is not to be construed as preventing the company from making proper therapeutic claims or recommendations based on reputable medical opinion or pharmaceutical literature, it was stated The third prohibition in the order is one providing that the company shall not in any way represent that acetylsalicylic acid tablets manufactured by other firms are counterfeit or spurious The company waived a hearing and did not contest the proceeding of the commission — From *Jour A M A* , 10/13/34

BOOK NOTICES AND REVIEWS

Organic Chemistry or Chemistry of the Carbon Compounds By VICTOR VON RICHTER Volume 1 Third English Edition, 1934 790 pages Published by P Blakiston's Sons & Company, Philadelphia, Pa

This is the sixth edition in the English language, being the third American edition The system of presentation followed in the previous German, English and American editions has been retained The first volume of this series deals with the aliphatic series only The order of presentation moves progressively from the hydrocarbons (1) to the halogen derivatives (2), the monohydric alcohols, aldehydes, ketones and carboxylic acids (3), the dihydric alcohols and their oxidation products, (4), to the trihydric, tetrahydric pentahydric, hexa- and polyhydric alcohols, each group being considered with its oxidation product Short chapters then follow, dealing with the carbohydrates, protein chlorophyl, bile pigments, sterols and enzymes

It has been interesting to compare this 1934 publication with the third American translation of the eighth German edition published in 1913 The same encyclopedic arrangement of products is observed The same presentation of material believed to be more important in large print and material believed to be of lesser importance in finer print has been followed Many paragraphs of the 1913 publication have been reprinted without change in 1934 The information presented has been brought up to 1932 on some subjects, but on others most recent references are to publications in the nineteenth Century Many references are to German or French articles which are not readily available Some specific developments have been stressed, such as the electronic theory of valency, and the parachor

The book will still prove useful in the orderly presentation of organic chemistry However, it needs to be supplemented in many points in order to harmonize with teachings on polar molecules, etc This book fills an intermediate role between the elementary texts and the encyclopedias, such as Beilstein —JAMES C MUNCH

Bacteriology and Sanitary Science By LOUIS GERSHENFELD, Ph M , B Sc , P D , Professor of Bacteriology and Hygiene and Director of the Bacteriological and Clinical Chemistry Laboratories in the Philadelphia College of Pharmacy and Science, Philadelphia Price, Limp Leather Binding, $4 50 Publishers, Lea & Febiger

Gershenfeld's second edition of Bacteriology and Sanitary Science is an interesting and authoritative treatise which covers both the technical and practical aspects of many of the important subjects on which the pharmacist has opportunity of offering sound advice In addition it contains a concise statement of many techniques which are useful to the up to date pharmacist in his own work

Obviously, a book devoted to such a large field of knowledge and practice cannot deal with each of the basic sanitary sciences—bacteriology, immunology, parasitology, sanitary engineering and the production of biological products—in complete detail Therein lies its virtue The author has accomplished the very difficult task of separating the specialist's chaff from the pharmacist's wheat The book is recommended to students and to registered pharmacists —JOHN M HANKS

New and Nonofficial Remedies —The American Medical Association has issued a supplement to New and Nonofficial Remedies for 1934 This supplement contains descriptions of the articles which have been accepted by the Council on Pharmacy and Chemistry of the American Medical Association since January and do not appear in the volume prepared for 1934 The Council states that the acceptance of an article does not necessarily mean a recommendation, but as far as it is known, the preparation complies with the rules adopted by the Council Criticisms and corrections to aid in the revision of the next volume, before publication, are asked for

Burroughs Wellcome Research Institution and Affiliated Research Laboratories and Museums have issued a beautiful bound illustrated booklet of the exhibits at the Chicago Exposition Excellent half-tones of the ceremonies at the Corner Stone Laying of the Wellcome Research Institution grace the introductory pages Lists of guests and press reports follow

Whitla's Pharmacy, Materia Medica and Therapeutics William Wood & Company, Baltimore (Bailliere Tindell & Cox, London, England) 645 pages Price $4 25 Sir William Whitla, in the preface to the first edition (1881), stated that the aim of the work was to give to the student of medicine such information in a concise form as he generally has to sift out of two or more of the larger manuals The author was actuated by the feeling that pharmacy is one of the most important sections of Materia Medica, he believed that a knowledge of it should be an essential accomplishment of every educated physician It is evident that the author prepared the treatise, primarily, for physicians

Dr J A Gunn reviser of this edition 12th states that an effort has been to retain observations made by the original author which were based upon his own clinical experience and the actual text has been preserved wherever possible, extensive alterations have been necessary by the appearance of the new British Pharmacopœia Dr Gunn is professor of Pharmacology in the University of Oxford and his assistants in the revision, H Berry, is head of the Department of Pharmacy, Birmingham Central Technical College and member of the Board of Examiners of the Pharmaceutical Society of Great Britain, and J Clifford Hoyle M D , of the London Hospital is Examiner in Pharmacology of the University of Cambridge

The authors apply the term "Materia Medica" to the description of the physical characters of remedies, their origin source, distribution, chemical composition and the methods by which they are obtained, collected, preserved etc , ' Pharmacy" to the methods by which they are prepared and made ready for administration, "Pharmacology" to the science of their action on a healthy organism and 'Therapeutics" to their application in the treatment of disease

Eight pages are given to Treatment in Cases of Poisoning, the other divisions of the Book are Part 1, Pharmacy, 2, Prescription Writing, 3 Materia Medica of the British Pharmacopœia 4, Therapeutics, 5, Non Official Remedies Conciseness features the work and serves its purpose, without adverse criticism it may be said that other works on pharmacy are better adapted to the needs of pharmacists, but the text is well arranged and the matter well presented for the needs of physicians, and it may be said that if the volume was part of more libraries prescription writing would be improved

The British Pharmacopœia under 'authorized contractions" uses gram and then states that in order to avoid confusion the symbol ' G" should be used as the contraction for 'gramme " In Whitla, no attention is given to either contraction, "gm " is used, these variations are apt to confuse physicians in writing prescriptions

Considering the work as a whole, it serves a useful purpose for British physicians and pharmacists, for the American profession it has value as a reference book, more extended references could have been made to both professions and to legal phases applying to the practice of the professions

PHARMACY AND THE PROFESSIONAL SPIRIT *[1]

(ABSTRACT)

BY C ROBERT KEENE [2]

I remember climbing up a hill, behind the city of Marseille First of all I climbed a certain distance, and could then see just over the tops of the houses, a little further on I could see the city streets, and going higher up still, the docks and the great steamers The whole city and the wide horizon beyond could then be seen It would indeed be useful if we could stand aside and view the anxieties of impending examinations, and the difficulties of business in some such way, if we could view the profession you represent, and the part which you yourselves wish to play in it, in the light of a wider horizon, and with a truer sense of perspective

"I have been endeavoring to get to know from the trade journals more about pharmacists One thing is very evident to me—that you are expected by those who speak for pharmacy to cherish your profession as something which is honored by the community, and is also efficient and well organized in its corporate life Professions, however, carry with them certain implications Those who enter into a profession should be well qualified in mind and character in the work they are about to undertake Membership of a profession usually involves membership of a Society, and that Society requires from its members loyalty to its principles and loyalty to the body which acts in its interests as a whole Every member must regard the profession as holding a trust on the part of the public

'It is quite evident I think, that those of you who are going to take part in the work of the Pharmaceutical Society will have to decide among yourselves such matters of principle as *first* the limits of individual liberty, *secondly*, the degree of responsibility of the corporate body, *thirdly*, the place of local initiative and finally, the extent and degree of central control Members of your Society are having to face the difficulties and problems which confront thoughtful men in this modern world in many phases of life and it is to be hoped that they can be solved in such a way as to continue to claim the loyal and whole hearted support of the members

"Professions further imply the principle of public service If we think of the men who have devoted themselves in disinterested service to the Church, law civil service and other professions, we can realize what modern civilization owes to them The educated man is not supposed to work directly or indirectly for his own enrichment or for his own honor and glory He belongs to, and has made himself over to our order consecrated to ends transcending any such personal considerations This is the high standard to which pharmacists must seek to attain in the difficult work they do To be perfectly frank however, I think you have a more than usually difficult task, for after all pharmacists are often traders as well as professional men The ethics of advertising is also open to criticism, appealing, as it so often does, on the one hand to the vanity of people and on the other to the fears they have of, as for example, illness or personal embarrassment I mention this as a challenge implicit in your own ideals, for I firmly believe that the honor of your profession is high, and that your knowledge and integrity are rightly trusted by the public

Finally I would speak to the students It is to be expected that you should have before you, here and in the future the aim of success What you have to decide when you set about the aim, is the way you are going to achieve it Perhaps the surest way is to keep before you what can be truly called professional pride The test of success in any walk of life is not measured alone in the material rewards which life brings us but is the self respect that comes to us in doing our work efficiently and well and in the consciousness that we are keeping alive the best traditions of our race And not the least of the traditions to which you are committed by your entry into this profession of pharmacy is that of true and faithful service and work for the public good "

---

[2] Councillor

ANDREW SCHERER.

JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

VOL XXIII NOVEMBER 1934 No 11

ANDREW SCHERER

Andrew Scherer, member of the AMERICAN PHARMACEUTICAL ASSOCIATION for a half century, was born in Brooklyn, N Y , November 18, 1855, the son of George C and Mary Alsman Scherer The following year his parents moved to Chicago Andrew's apprenticeship began with Ludwig Fermow, a fine type of old-fashioned German apothecary, with whom he remained until the latter's demise, in 1874 Shortly afterward he entered the employ of C M Weinberger, another well-known Chicago druggist, where he was employed for six years

In those days the drug clerk was expected to grind drugs, sift them, make fluid-extracts and tinctures and other pharmaceutical preparations One of the daily duties of the apprentice was to go to the wholesale drug house, carrying a basket and wait for orders to be filled No salary was paid to the apprentice during the first two years

In 1873, Mr Scherer entered the Chicago College of Pharmacy and was graduated in 1875, one of a class of seven Included in the class were Robert Cowdrey, who was for some years editor of *The Pharmacist* and later was nominated for President of the United States on the Labor ticket, Hugo Martin, who took a prominent part in pharmaceutical organizations in Illinois and who was, at the time of his death, a member of the faculty of the College of Pharmacy, W F Woodson, who for many years conducted a drug store at Michigan City and served as its mayor for several terms, Charles Krusemark and Fletcher Smith, who later graduated in medicine and became prominent practitioners, and Charles Jacob, who was a pioneer pharmacist of Forest Park

In 1881, Mr Scherer engaged in the drug business on his own account at Division and Franklin Streets, Chicago, where he remained for five years He then bought a lot at State and Division Streets which he improved with a three story building He has conducted a pharmacy at this location ever since

In 1931, he celebrated the fiftieth anniversary of his entrance into the drug business as a proprietor and gave a dinner to a group of his friends, chiefly members

of the Chicago Veteran Druggists' Association, of which he is the honorary president.

Mr Scherer was married in June 1885 to Miss Agnes Dieden She died four years later leaving him with a son, Andrew, born in 1887, who is still living [1] In 1903 he married Miss Cordelia Maher who died in 1914 There were no children by this marriage

Mr Scherer was a member of the Chicago College of Pharmacy until it was taken over by the University of Illinois and served for many years as trustee and treasurer of the College, and has shown his interest in the College of Pharmacy by giving a prize each year to the member of the graduating class who attains the highest grade in pharmacy He has been a member of the Illinois Pharmaceutical Association almost since its organization and of the Chicago Veteran Druggists' Association since 1901 He joined the AMERICAN PHARMACEUTICAL ASSOCIATION in 1884 and has attended many of its conventions

THE CENTURY OF PROGRESS PHARMACY EXHIBIT

ACCORDING to the *Chicago Daily News* by Malcolm McDowell and quoted by the *C R D A News* of November 10th "The pharmacy exhibit will go to the Museum of Science and Industry, the Rosenwald museum in Jackson Park The reproduction of Philo Carpenter's log cabin drug store, the earliest in Chicago, which stood at the corner of Lake and Market Streets and was opened in 1832, will continue to illustrate the city's pioneer history in its permanent location in the museum With it will go the facsimile of the famous *Ebers Papyrus*, the original of which dates back to about 1500 B C and which was one of the most popular of the exhibits

"The story of digitalis, portrayed by dioramas in the exhibit, goes to Jackson Park along with the materia medica display which might well be called the story of the evolution of medicinal drugs The whole exhibit, as it now stands, visualizing the historical, educational and professional aspects of the science of pharmacy, will make a large showing in the Rosenwald museum It covers 1700 square feet as it now stands, with a frontage of 60 feet on the circular corridor of the Hall of Science Its purpose has been to set forth the history of pharmacy and to show its progress during the last century and also to stress the advances in educational and legal requirements It has carried out its purpose at the World's Fair—it will continue to demonstrate the interesting aspects of the retail drug stores at its new location in the Museum of Science and Industry"

Evidently the interesting proposal quoted above will be submitted to the exhibitors but it should be stated that at this time no official action has been taken by the American Pharmaceutical Association —Editor

FORMULARIES

"Side by side with the national Pharmacopœias numerous books of recipes have been produced in the various countries Three of these, the American National Formulary, the German Erganzungsbuch and the British Pharmaceutical Codex, merit special attention by reason of their publication by the national pharmaceutical organization of their respective countries The need for such formularies, produced by responsible public bodies, becomes more and more pronounced with the changes in the character of pharmacopœias and the decreasing attention given in them to formulæ"—C H HAMPSHIRE, Chairman's Address British Pharmaceutical Conference

[1] He is a graduate pharmacist and a graduate engineer

PHARMACY WEEK AND THE WHITE HOUSE

President Robert P Fischelis of the AMERICAN PHARMACEUTICAL ASSOCIATION addressed the President of the United States on the occasion of the Tenth Annual Observance of Pharmacy Copies of the correspondence follow

October 1, 1934

The President of the United States,
The White House,
Washington, D C

Dear Mr President

When the AMERICAN PHARMACEUTICAL ASSOCIATION dedicated its Washington Headquarters Building last May, you were kind enough to send us a message voicing your appreciation of the contributions which have been made by pharmacists to the successful alleviation and prevention of disease

May I now, in turn, in behalf of the pharmacists of America, on the eve of the observance of National Pharmacy Week (October 7–13) extend to you our great appreciation of your interest in the professions engaged in public health work?

We have followed with admiration the progress of your administration and desire to express to you our confidence in the progressive and forward-looking leadership which you have given to the Nation in these strenuous times

We desire, in particular, to offer our cooperation in bringing about necessary reforms in the public control of the manufacture and distribution of drugs and cosmetics, so that the consuming public may be protected against fraudulent practices which cannot be controlled under the present Food and Drug Law

Respectfully yours,

ROBERT P FISCHELIS, *President*

RPF J

THE WHITE HOUSE

Washington
October 8, 1934

My dear Mr Fischelis

Your letter of October first on behalf of the AMERICAN PHARMACEUTICAL ASSOCIATION has been received The President has asked me to thank you and everyone concerned most warmly for your expression of confidence and for your pledge of cooperation

Very sincerely yours,

LOUIS McH HOWE
Secretary to the President

Robert P Fischelis, Esq ,
AMERICAN PHARMACEUTICAL ASSOCIATION,
28 West State Street,
Trenton, N J

EDITORIAL

E G EBERLE, EDITOR 2215 Constitution Ave , WASHINGTON, D C

THE PHARMACY

THERE has been greater demand during the past several months for information that may be helpful in the establishment of professional pharmacies and reference is therefore made to two contributions published in the August issue of the JOURNAL There has also been discussion on the same subject in British Pharmaceutical publications

Liberty is taken in quoting from an article in a recent issue of the *Chemist and Druggist*

"Any suggestion to limit the sale of therapeutic agents to pharmacists is usually dismissed as Utopian, but no explanation is ever vouchsafed as to the desirability of perpetuating the unrestricted sale of medicines For this reason the pharmacist in this country (Great Britain) has been compelled to take up the sale of many articles more or less remotely connected with pharmacy, simply in order to make a living, and in taking up these side-lines he necessarily enters into competition with other traders"—An evidence that things may not be so very different from conditions in this country

It is therefore pleasing to refer to a professional pharmacy which succeeded a strictly commercial drug store, one wherein many items that had no relation to pharmacy were sold The change to the present status, which is exclusive, was the result of years of development, but after due consideration elimination of side lines was made quickly

The contributor of the other article conceived the idea that his establishment could render better pharmaceutical service by separating it into two divisions, one professional and the other devoted to the soda fountain, candies, cigars, etc Two entrances to the store from the street were provided, one leading directly to the professional pharmacy and the other to the commercial section This move, at first an experiment, has turned out to be very satisfactory

R L Swain concludes his column in *Drug Topics* of November 12th "No doubt real pharmacy will always be in conflict with the commercial side of the store No doubt pharmacists will always be torn between contending forces However, just so long as pharmacists maintain a proper balance between their various duties, and bring their best talents to professional work, drug stores will be truly public health institutions, and pharmacists, indeed, more than merchants"

"HOW MUCH IS A TEASPOONFUL?"

THE *Journal of the American Medical Association* comments editorially on the article on above subject in the August JOURNAL by F W Nitardy The editorial concludes "Since the average teaspoon obviously holds more than 4 cc, an effort should again be made to have a more nearly correct metric equivalent for the average teaspoon recognized in the United States Pharmacopœia"

The subject is somewhat in line with the reports of the Committee on Tolerances by S L Hilton, Robert L Swain and Hugo H Schaefer, published in the

August JOURNAL, 1934, and October issue of 1933, also with the extensive reports made by Marvin J Andrews on "Determination of the Reasonable or Permissible Margin of Error in Dispensing," and the "Accuracy of Medicine Droppers with Flared Tips," by William J Husa and Lydia M Husa

In the concluding paragraph of the latter article it is stated that "from the results given it is apparent that the medicine droppers with flared tips delivered drops 35% to 60% larger than recommended by the Brussels Conference "

Other interesting and important measurements are reported in the paper first quoted and all the references cited point out that variations in effect may be due to the quantity administered and not due to variations from the standards of the products dispensed How best to standardize the teaspoon for dosage has been a subject of study for many years and the importance is always brought forward by the revisions of the U S Pharmacopœia and National Formulary It remains a question as to whether the laity can more readily be impressed with the need of accuracy than the manufacturers Should the latter be required to stamp the measure of capacity on the spoon to be used for dosage? If so, 5 cc as a dose basis (teaspoonful), is suggested, following the standards and suggestions of others

DISGUISING VALUE OF COLLOIDALITY

A STUDY of vehicles for medicine has been the subject of a number of contributions by Bernard Fantus and co-workers In the one dealing with Acacia on the value of colloidality and that on Glycyrrhiza vehicles as disguising agents were brought out and seem worthy of further consideration As a vehicle for the administration of urea no vehicle was found to be as good as Syrup of Acacia, and methyl salicylate was found to be an ideal flavor for the syrup The results of the study suggest further investigations and applications

Glycyrrhiza has proven to be a valuable disguising agent by the medical profession, evidenced by the increase of its use in some prescriptions as shown in Professor Gathercoal's report The authors state that the disguising power of glycyrrhiza for saltiness appears to be more than a mere matter of sweetness, apparently, there is a loss of saline ions as far as taste sensation is concerned The latter results are discussed in the paper published in the September JOURNAL on page 916 A further result, however, is not as favorable, *i e*, Aromatic Syrup of Eriodictyon is superior for disguising the bitter taste of alkaloids The research has also brought out that there is variance in glycyrrhiza which affects the palatability of the preparations therefrom and this is not due to taste idiosyncrasies of individuals

The favorable and unfavorable reports have made the subject worthy of comment as it presents opportunities for pharmacists to cooperate in this research, which may be helpful in prescription service

---

GLYCYRRHIZIN CONTENT OF LICORICE JUICE

As the result of a comparative investigation, Z Csipke (*Ber u Pharm Ges*) concludes that either a standard should be set for the glycyrrhizin content of the juice or it should be prepared directly from the root The method of Eder and Sack in which the furfurol obtained from the hydrolysis of the glycyrrhizin is determined by precipitation with barbituric acid was found to be very satisfactory for the present purpose —G MIDDLETON, *Quart J Pharmacy & Pharmacology*

THE CONSOLIDATION OF PHARMACAL FORCES

BY ROBERT P FISCHELIS *

RECENT developments in American pharmacy have again emphasized the necessity for unifying the forces which contribute to the welfare of the profession and the drug industry A specific proposal upon which attention has been centered for a number of years is the proposed consolidation of the AMERICAN PHARMACEUTICAL ASSOCIATION with the National Association of Retail Druggists Emphasis was given to this proposal by the experiences of those engaged in the retail drug industry when they endeavored to obtain from the National Industrial Recovery Administration a Code of Fair Competition which would eliminate some of the undesirable features now hampering recovery The government demanded that those who claim to represent retail pharmacy should really represent it as far as numbers of units are concerned As long as no one questioned the authority of the representatives of retail pharmacy to speak for the industry as a whole, the question of membership statistics did not come to the foreground With the attempt to curb some of the practices resorted to by minority groups in the industry there came the challenge as to adequacy of representation by the spokesmen of the retail drug industry

It has been assumed that the National Association of Retail Druggists speaks for retail pharmacy from a business standpoint It appears proper, therefore, to urge every owner of a retail pharmacy to join the National Association of Retail Druggists in order to obtain proper representation along economic lines

The AMERICAN PHARMACEUTICAL ASSOCIATION, although representative of all phases of pharmacy including manufacturing, wholesaling, retailing, teaching, law enforcement, research and economics, took part in the formulation of the National Retail Drug Code and is listed among the sponsors of this Code It did not take such a part in the sponsorship of any other code within the drug industry It was natural, therefore, to assume the AMERICAN PHARMACEUTICAL ASSOCIATION to be predominantly interested in retail pharmacy, although such is not necessarily the case It was argued further, that there is no need for two national associations to look after the business interests of the retailer

More recently a proposal has been made to merge the interests of the various State Pharmaceutical Associations into a National Federation which would at once exceed in its total membership both the National Association of Retail Druggists and the AMERICAN PHARMACEUTICAL ASSOCIATION, because the sum total of members of State Pharmaceutical Associations is greater than the total membership of both national associations District conferences of State Associations recently formed appear to be the first step toward federating State Pharmaceutical Associations

With the foregoing facts as a background it is easy to understand why many retail pharmacists are advocating a physical merger of the AMERICAN PHARMACEUTICAL ASSOCIATION and the National Association of Retail Druggists Dr James H Beal, a former President of the AMERICAN PHARMACEUTICAL ASSOCIATION and a member of its Council, has argued eloquently against a physical merger of

* President of AMERICAN PHARMACEUTICAL ASSOCIATION

the two associations on the basis that their scheme of organization is different, that their objectives are dissimilar and that both are needed in their respective fields of service and influence for the development of pharmacy as a whole Many another past-president of the ASSOCIATION has been convinced after careful study that consolidation would be both desirable and possible if human factors could be controlled

The National Association of Retail Druggists, at its New Orleans convention, passed a resolution disapproving consolidation of the two national associations However, it agreed to appoint a committee to meet with a similar committee from the AMERICAN PHARMACEUTICAL ASSOCIATION to discuss methods of coordinating the activities of the two associations and bringing about closer cooperation between the National and State Associations

It seems necessary under the circumstances to clarify the position of the AMERICAN PHARMACEUTICAL ASSOCIATION on the subject of consolidation The writer of this editorial in his contacts with State Pharmaceutical Associations and in a communication to the National Association of Retail Druggists, expressed the view that physical consolidation and merger of the tangible assets of the two Associations is not necessary for a consolidation of pharmacal forces at this time It is the latter consolidation which pharmacists in the United States desire They are relatively uninterested in the method but they are very much interested in results It is conceivable, of course, that if methods are devised for unifying pharmacal forces and obtaining the results which pharmacists in all lines of activity so greatly desire, some form of merger of all associations now in the field may result in the future It is clear, however, from a careful examination of the political, financial and general situation within State and National associations that physical consolidation is not the first step in the process of consolidating existing pharmacal forces

It must likewise be clear to the keen observer that the AMERICAN PHARMACEUTICAL ASSOCIATION, with its all-inclusive membership, constitutes the starting point for united effort in all directions Its interests are general It is the oldest national Pharmaceutical Association and is commonly referred to as the Mother of Pharmaceutical Associations in the United States Its offspring may be found in every specialized field of pharmacy and the difficulty seems to be that the family has not had a real reunion for many years It seems as though the time for such a reunion is at hand and it is the hope of the present administration of the AMERICAN PHARMACEUTICAL ASSOCIATION that when its representatives meet with representatives of the National Association of Retail Druggists at the special committee meeting early in December and with the representatives of the National Drug Trade Conference at another meeting in December, the Mother Association will be looked upon as the leader in constructive effort for the good of the profession and that the specialized units within the industry, while pursuing their individual tasks and carrying out their specific functions, will nevertheless support a renewed consolidation of pharmacal forces for the benefit of all concerned

SCIENTIFIC SECTION

STUDIES ON BARBITURATES II CONTRIBUTIONS TO METHODS OF BARBITAL RESEARCH *

BY THEODORE KOPPANYI, JAMES M DILLE, WILLIAM S MURPHY AND STEPHEN KROP

In a previous paper (1) we described methods of extraction of barbiturates from urine, blood and tissues, and also colorimetric procedures to estimate the quantity of barbiturates so recovered The purpose of this paper is to describe certain improvements and modifications of our technique and some more recently developed methods, with a review of our original experimental procedures

I METHODS OF EXTRACTION

Urine

For ordinary routine procedures the urine is acidulated with dilute hydrochloric acid and shaken with ten volumes of chloroform This usually furnishes sufficiently clear extracts for testing Colored and concentrated urines, however, should be cleared Twenty cc of urine are shaken with an equal volume of a 10 per cent copper sulphate solution in a small separatory funnel after sufficient amounts of 5 per cent sodium hydroxide or potassium hydroxide solutions have been added to produce precipitation The mixture is filtered, the filtrate acidulated with dilute sulphuric acid (not hydrochloric) and shaken with ten volumes of chloroform The chloroform fraction is then filtered through a chloroform moistened double hard filter to eliminate suspended water particles and their solutes This chloroform extract may then be tested directly, or if it contains only small amounts of barbiturates it may be concentrated over a water-bath

When dealing with urines in which the barbiturates are present in high dilutions it is advisable to add enough powdered copper sulphate crystals to make a 5 per cent solution and thus avoid an increase in the volume of urine to be extracted

Blood

1 Sodium Tungstate Method—The Folin-Wu standard blood precipitation method, using sodium tungstate and $^2/_3$ normal sulphuric acid, can be successfully adapted for the extraction of barbiturates It was found, however, that dilution hemolysis was not necessary The procedure is as follows

Ten cc of blood, 10 cc of 10 per cent sodium tungstate solution and from 10 to 20 cc of $^2/_3$ normal sulphuric acid are shaken in a separatory funnel until a chocolate brown color is obtained The mixture is filtered with suction and an aliquot of the clear filtrate is shaken with ten volumes of chloroform

Ten mg of sodium barbital were added to 20 cc of dog's blood From 90 8 to 93 7 per cent of the barbital was recovered by this method

2 Myers and Wardell's Method (Adopted)—The method used by Myers

* Scientific Section, A PH A, Washington meeting 1934

and Wardell (2) for the extraction of blood cholesterol can be used for the recovery of barbiturates from blood

A convenient amount of blood (1 to 2 cc) is pipetted into a small mortar containing a sufficient amount of plaster of Paris to form a dry mixture The mixture is pulverized and transferred to a paper extraction shell This shell is inserted into a perforated glass tube enclosed in a flask and connected to a reflux condenser Ten volumes of chloroform (10 to 20 cc) are poured into the flask, and boiled over a water bath for half an hour The chloroform extract is then filtered and tested If the test is negative the extract may be concentrated over a water-bath and again tested

Ten mg of sodium barbital added to 20 cc of blood gave recoveries of from 88 0 to 92 7 per cent

This method is particularly valuable when only 1 or 2 cc of blood can be secured It may also be used for small quantities of urine or for liquefied tissues

Tissues

1 *Copper Sulphate Precipitation Method* —The weighed organs are ground and thoroughly mixed with a 5 per cent sodium hydroxide or potassium hydroxide solution of a volume sufficient to liquefy the organs within twenty-four hours Then the alkalinized liquefied organs or known portions thereof are shaken with an equal volume of 10 per cent copper sulphate solution and filtered until clear The filtrate is acidulated with dilute sulphuric acid and shaken with ten volumes of chloroform

Another equally simple procedure consists of mixing the ground organs with pepsin and a 3 per cent solution of hydrochloric acid, and allowing the mixture to stand for twenty-four hours This mixture is shaken with an equal amount of copper sulphate solution (10 per cent) after its reaction has been made alkaline by adding sufficient amounts of potassium hydroxide or sodium hydroxide It is then filtered and extracted with ten volumes of chloroform

2 *Liquid Air Method* —It has been found possible to extract barbiturates from tissues which have been pulverized after being frozen with liquid air

The organ or tissue is weighed, placed in a pyrex beaker, liquid air is poured over the tissue until it is frozen It is then pulverized, and a convenient amount of this pulverized material is weighed and placed in a separatory funnel and shaken with 10 cc of chloroform per Gm of tissue The chloroform extract must be filtered before it is tested If necessary, the chloroform extract may be concentrated over a water-bath

Frogs were injected with 1 mg of barbital per Gm of body weight After ten minutes they were frozen in liquid air and the barbital extracted as described Recoveries were from 83 0 to 91 0 per cent

This liquid air method is of special value where rapidity is desired It can be satisfactorily applied to every organ and tissue except the brain and spinal cord The brain and spinal cord must be liquefied with alkali and precipitated with copper sulphate before they can be successfully extracted with chloroform With brain tissue as with other tissues, excess alkali causes pigments to be carried over into the chloroform extract These pigments may interfere with the colors formed in the test

II METHODS OF COLORIMETRY

The Macro Test —In all experiments we extracted the appropriately treated unknown solution by shaking with ten volumes of chloroform in a suitable separatory funnel All chloroform extracts are filtered through a chloroform-moistened filter until clear The colorimetric estimation of barbiturates is always carried out with portions of the chloroform extract

To perform the test 6 cc of an extract are divided into three equal volumes and placed in test tubes called A, B and C To A is added 0 05 cc of 1 per cent cobaltous acetate solution in absolute methyl alcohol and 0 1 cc of 1 per cent barium hydroxide solution in absolute methyl alcohol To B are added 0 1 cc of the cobalt reagent and 0 2 cc of the barium hydroxide reagent To C are added 0 2 cc of the cobalt reagent and 0 4 cc of the barium reagent A blue color indicates a positive test

If malonyl-urea derivatives are present in the extracts a blue color appears in A, may appear in B or even in C If only A gives a blue color the solution contains more than 0 09 mg but less then 0 2 mg of barbiturate per cc If B also yields a blue color, the extract contains 0 3 mg per cc or less, if A, B and C turn blue, the extract contains 0 3 mg per cc or more However, if one allows these colors to stand for five minutes the color of C will fade if the extract contains less than 0 30 mg per cc Chloroform extracts containing less than 0 2 mg per cc become positive, but turn quickly negative when treated as B, but remain positive (blue) when treated as A Also chloroform extracts containing 0 25 to 0 30 mg of barbital per cc when treated like C turn positive but fade from blue to greenish yellow However, they remain positive if treated like A and B Chloroform extracts containing 0 35 mg of barbital per cc or more if treated as C, remain positive

Positive tubes are then compared with standards, within the range of the positive tubes, treated similarly

Not only alcoholic solutions of barium hydroxide, but also any anhydrous alkaline solution, as sodium, magnesium or potassium hydroxide will provide a medium for the test We have investigated these, as well as sodium, magnesium and calcium methoxide, and also ammonia in methyl alcohol The colors produced in these solutions are unstable and unsuited for finer colorimetric comparisons Solutions of calcium and magnesium methoxide cannot be prepared in suitable concentrations for the test The best alkalies are barium and lithium hydroxide [1]

The test using barium hydroxide is directly sensitive to one part of barbital in ten thousand parts of solutions We shall call this the *macro test* The test using lithium hydroxide we shall call the *micro test* This test is sensitive to one part of the barbital in one hundred thousand parts of solution Since chloroform extracts can be concentrated at least twenty times, the micro method can detect one part in two million

Amines were found to provide a suitable alkaline medium for the test The colors produced were unusually stable, fading only after several days Thus they are well adapted for use in standard colorimeters We investigated isobutyl amine, isoamylamine, normal butylamine, propanol amine, isopropylamine, hexamethylenetetramine and naphthylamine Only the primary saturated amines were found to be of value, of these isopropylamine produced the most readable color

[1] The sodium salt of evipal (*N* methyl-cyclohexenyl methyl malonyl urea) is fairly soluble in chloroform, and will yield a positive test with cobaltous acetate in anhydrous media without the otherwise necessary addition of the alkaline reagent However, *N*-methyl-cyclohexenyl methyl malonyl urea itself can be tested in the usual way, but about ten times as much must be used as of the other barbiturates, both in the macro and micro tests Thus it seems that the substitution of alkyl radicals on the nitrogen considerably desensitizes the test

THE MICRO TEST

Reagents

Cobaltous Acetate 0 20%—Two hundred mg of the salt is weighed accurately and placed in a volumetric flask and enough absolute methyl alcohol is added to make 100 cc of solution

Lithium Hydroxide 0 20%—Two hundred mg of the chemically pure, dry material is placed in a 100 cc -volumetric flask and about 50 cc of absolute methyl alcohol added to it The flask is gently warmed on a water-bath to facilitate solution It is allowed to cool and the volume made up to 100 cc A small amount of insoluble material is present This amounts to about 0 5% It does not interfere with the test and may either be left in the reagent or filtered out Due to the insoluble material, this reagent is not quantitatively 0 20% but is about 0 199% This difference is not serious

The Standards

Barbital is dissolved in chloroform to give solutions of the following concentrations

0 002% 0 003% 0 004% 0 005% 0 006% 0 007%

These are prepared by first making a 0 1% solution of barbital in chloroform and then, by proper dilutions, preparing solutions of the above concentrations

The standards are kept in glass-stoppered bottles and evaporation avoided

Procedure

Six cc of the chloroform extract are divided in three equal parts A, B and C

The cobaltous acetate reagent is added to each of the three test-tubes, 0 05 cc to A, 0 1 cc to B and 0 15 cc to C

The tubes are shaken and the lithium hydroxide reagent is added to the tubes 0 05 cc to A, 0 1 cc to B and 0 15 cc to C The tubes are shaken and the colors noted against a plain white background The tubes should be observed for one minute before a final reading is made

TABLE I—COLORS APPEARING IN THE DIFFERENT TUBES WITH DIFFERENT CONCENTRATIONS OF BARBITAL

Concentration of Barbital Mg per Cc.	A 0 05 Cc. of Each Reagent.	B 0 1 Cc. of Each Reagent.	C. 0 15 Cc. of Each Reagent.
0 02	Positive	Negative	Negative
0 03	Positive	Positive, fading in 30 seconds	Fades immediately
0 04	Positive	Positive	Fades in 30 seconds
0 05	Positive	Positive	Fades in about 2 minutes
0 06	Positive	Positive	Permanent for more than 2 minutes

If a permanent blue (color persisting more than 2 minutes) is secured in Tube C, and the other tubes have also shown blue, the concentration is above the range of the test The chloroform extract should then be diluted and the test repeated

If no color is secured with the original extract, a convenient amount should be evaporated to dryness in an evaporating dish on a water-bath and the residue dissolved with chloroform The test is repeated with this concentrated solution

The blue colors are faint, but quite distinct We recommend a series of experiments with the standards before actual extracts are used

The principal error is in reading the different intensities of color For example, if a blue is obtained in Tubes A and B but not in Tube C the actual concentration may be within a range between 0 035 and 0 045 It is possible, however, by standard solutions, to estimate concentration between the extremes of the range

ISOPROPYLAMINE TEST

Reagents

Cobaltous Acetate 1 00% —One Gm of cobaltous acetate is weighed accurately and placed in a volumetric flask Enough absolute methyl alcohol is added to make 100 cc of solution

Isopropylamine 5 00% —Five cc of isopropylamine (Research Laboratories, Eastman Kodak Company) are dissolved in sufficient absolute methyl alcohol to make 100 cc of solution

Standards

The barbiturate is dissolved in chloroform to give solutions of the following concentrations

0 02% 0 04% 0 06% and 0 08%

These standards are kept in glass-stoppered bottles and evaporation is avoided

Procedure

One cc of the chloroform extract is placed in a test tube and 0 05 cc of the cobaltous acetate reagent and 0 3 cc of the isopropylamine reagent is added If barbiturates are present in the extract a reddish violet color develops This is then compared in the micro cups of a colorimeter with the color produced under the same conditions by one of the standards

A simple formula giving the concentration in mg of the barbiturate per cubic centimeter of chloroform extract is

$$\frac{\text{Reading of standard} \times \text{Concentration of standard (mg per cc)}}{\text{Reading of unknown}} = \text{Milligrams of barbiturate per cubic centimeter of extract}$$

III DISCUSSION

The three tests described above are identical as far as their specificity is concerned Of chloroform-soluble substances only theobromine, theophylline and thymine show positive tests Other compounds of similar configurations, such as uracil, alloxan and tricarbonimid, are automatically eliminated due to their insolubility in chloroform No substance has been found which in the urine, blood or tissue either positively or negatively interferes with these tests, with the exception of lecithin or lecithin-like substances (3)

It is noteworthy that the lithium test can be performed only in chloroform solution If the barbiturates are dissolved in absolute methyl alcohol and treated with the cobaltous acetate and lithium hydroxide reagents the color does not develop The barium hydroxide and isopropylamine are effective in absolute alcohol, chloroform and ether

STUDIES ON BARBITURATES III CHEMICAL ASSAY OF BARBITURATES *

BY JAMES M DILLE AND THEODORE KOPPANYI [1]

In a previous paper Koppanyi, Murphy and Krop (1) presented a modification of their original quantitative barbiturate test (2) using cobaltous acetate and isopropylamine dissolved in absolute methyl alcohol as reagents This test was utilized in the following work as a method of chemical assay of various preparations containing barbiturates

EXPERIMENTAL

The test depends upon the formation of a bluish or reddish purple color produced by cobaltous acetate in an alkaline medium when barbiturates are present The barbiturate to be assayed is either directly dissolved in chloroform or extracted with chloroform from an aqueous solution To 2 cc of this chloroform solution are added 0 1 cc of 1 00 per cent cobaltous acetate ($CO(CH_3COO)_2 4H_2O$) in absolute methyl alcohol and 0 6 cc of a 5 00 per cent (by volume) solution of isopropylamine in absolute methyl alcohol A reddish violet color develops which is compared in a standard colorimeter with the color produced by a standard made up of the barbiturate under consideration

As is generally the case with colorimetric tests, the concentration of the standard must be near that of the unknown In order to select such a standard a rough approximation of the strength of the unknown is first made Two cc of each of the following solutions of the barbiturate in chloroform are placed in test-tubes 0 040%, 0 060%, 0 080%, 0 100% and 0 120% To each tube 0 1 cc of cobaltous acetate reagent and 0 6 cc of isopropylamine reagent are added The tubes are then stoppered and set aside The unknown solution treated similarly is then compared with the color of the standards, and a standard close to the unknown is chosen The series of color standards can be kept for several hours in stoppered test-tubes

If the concentration is above the range of the standards, the unknown solution may be diluted to bring it within the range covered by the series of standards If it is weaker, it may be concentrated by evaporation on a water-bath

After a standard has been chosen, 2 cc each of the standard solution and the unknown are placed in two test-tubes The reagents are added and the standard and unknown are compared in the microcups of a standard colorimeter

---

* Scientific Section, A PH A Washington meeting, 1934

[1] From the Department of Pharmacology and Materia Medica, Georgetown University School of Medicine Washington D C

The amount of the barbiturate in the original sample can be calculated by the following formula

$$\frac{\text{Reading of standard} \times \text{Concentration of standard (mg per cc)} \times \text{Salt correction factor} \times \text{Cubic centimeters of chloroform extract}}{\text{Reading of unknown}} = \text{Milligrams of barbiturate in sample.}$$

The salt correction factor is applied in cases where the salt of a malonyl urea derivative is being assayed It is found by dividing the molecular weight of the salt by the molecular weight of the acid form of the barbiturate

If the barbiturate is soluble in chloroform the assay is made by simply dissolving an accurately weighed amount in chloroform This solution is then compared with standards as described

Preparations of barbiturates such as tablets or capsules which contain inert substances to provide bulk, can be best assayed by first dissolving the tablet or the contents of the capsule in a small amount of water in a separatory funnel, and then extracting this aqueous solution or suspension with chloroform If the barbiturate is in the form of its salt the aqueous portion must always be acidulated with 5 per cent sulphuric acid This converts the salt into a form which is soluble in chloroform Three extractions should be made The first with a volume of chloroform approximately five times that of the aqueous volume, the second and third with a volume of chloroform equal to twice the aqueous volume The chloroform extracts are drawn off from the separatory funnel and filtered through a small filter into a volumetric flask of a size to hold ten times the volume of water used Chloroform is washed through the filter to make up to the final volume

Elixirs or solutions of barbiturates are pipetted into a separatory funnel and extracted with chloroform as above For barbital there is a theoretical extraction of 99 48 per cent by this procedure

Accuracy of Procedure—With a view of determining the error of reading the colors and the amount of loss by the various extractive or other manipulations, a series of experiments with barbiturates of known concentrations was undertaken The various barbiturates used were in most cases furnished in a pure form through the kindness of the manufacturers Nitrogen determinations by the Kjeldahl method indicated that all of the samples of barbiturates used were close to 100 per cent purity They were kept in a desiccator, and solutions were made up immediately before use The error of making up the solutions and preparing them for colorimetric determinations was within the allowable error for analytical work

Experiments were first carried out using chloroform solutions of the barbiturates A number of solutions of different concentrations were tested against standards, the concentrations of which lay close to that of the solution being tested Results are summarized in Table I These show the sources of error which may be expected from the assay of barbiturates by this procedure It can be seen that there are two sources of error in this procedure *First*, the error that results from matching the colors in the colorimeter, and, *second*, the error that occurs when the concentration of the standard is not close to that of the unknown

TABLE I —RECOVERY OF BARBITURATES FROM CHLOROFORM SOLUTIONS

Barbiturates	Concentration of Sample Gm. per 100 Cc.	Concentration or Standard Gm. per 100 Cc.	Recovery Average of 3 Determinations	Per Cent Recovery
Barbital	0 040	0 060	0 0429	107 1
Barbital	0 060	0 060	0 0594	99 0
Barbital	0 080	0 060	0 0763	95 5
Phenobarbital	0 060	0 080	0 0655	108 3
Phenobarbital	0 080	0 080	0 0816	102 0
Phenobarbital	0 100	0 080	0 0935	93 5
Amytal	0 100	0 120	0 1042	104 2
Amytal	0 120	0 120	0 1216	100 5
Amytal	0 140	0 120	0 1309	93 5

Other experiments in which aqueous solutions of water-soluble barbiturates were extracted with chloroform are embodied in Table II Sodium barbital for example was dissolved in water, acidulated and extracted with chloroform In addition to the two sources of error given above, there is now an additional possibility of loss in the extraction process

TABLE II —RECOVERIES OF BARBITURATES FROM AQUEOUS SOLUTIONS

Barbiturate	Concentration of Aqueous Solution Per Cent	Amount of Solution Extracted Cc.	Amount of Barbiturate in Sample Gm.	Final Volume of Chloroform Extract Cc.	Recovery Average of 3 Determinations Gm	Per Cent Recovery
Sodium barbital	1 000	10	0 100	100	0 0982	98 2
Sodium phenobarbital	1 000	10	0 100	100	0 1010	101 0
Sodium phenobarbital	0 800	10	0 080	100	0 0785	98 1
Sodium ortal	0 800	10	0 080	100	0 0753	94 1

We prepared powders in which barbiturates were mixed with lactose These powders were then placed in a separatory funnel, dissolved in water and extracted with chloroform The results of this type of assay are embodied in Table III

TABLE III —RECOVERIES OF BARBITURATES FROM POWDERS MADE WITH LACTOSE

Barbiturate	Amount of Drug in a 1 Gm Sample Gm.	Amount of Water Cc	Volume of Chloroform Extract Cc	Recovery Average of 3 Determinations Gm.	Per Cent Recovery
Sodium phenobarbital	0 100	10	100	0 0974	97 4
Sodium phenobarbital (gr IV saccharine added)	0 100	10	100	0 0973	97 3
Phenobarbital	0 100	10	100	1 0041	100 4
Phenobarbital	0 080	10	100	0 0815	101 9
Amytal	0 060	10	100	0 0582	97 0
Amytal	0 080	10	100	0 0744	93 0
Neonal	0 080	10	100	0 0764	95 5
Sodium barbital	0 120	10	100	0 1130	94 2
Phanodorn	0 100	10	100	0 0990	99 0

We believe that with careful manipulation, and with the choice of a proper standard this assay can be performed with an error of not more than 6 per cent

Specificity of the Test—Of chloroform-soluble substances, theobromine theophylline and thymine show a positive test Certain urea derivatives such as biuret and oxamide give positive tests but do not enter into the chloroform frac-

tions in detectable mounts Guanidine and creatinine give a positive test in alcoholic solutions only

None of the common drugs which are combined with the barbiturates in the proprietary preparations investigated interfere with this test

Pharmaceutical Applications—Using this test we assayed a number of barbiturate preparations purchased on the open market Tablets, capsules and elixirs were assayed by this method These preparations are usually mixed with some inert substance to provide bulk for the preparation, or are fixed mixtures

The results of these determinations are embodied in Table IV It can be seen that some of these proprietary preparations tested do not come up to the strength stated on the label

TABLE IV—AN INVESTIGATION OF SOME PROPRIETARY BARBITURATE PREPARATIONS

Barbiturate	Type of Preparation	Amount of Barbiturate in Sample from Label Grams	Grams	Amount Found Average of 5 Determinations	Per Cent of Labeled Amount	Variation
Sodium veronal	Tablet	5	0 3240	0 3101	95 6	93 5 to 98 9
Veronal	Tablet	5	0 3240	0 2759	84 8	82 1 to 90 8
Amytal	Tablet	1½	0 0972	0 0922	94 7	93 5 to 95 7
Amytal	Capsule (with amidopyrine)	1½	0 0972	0 0915	94 5	87 1 to 98 9
Sodium luminal	Tablet	1½	0 0972	0 0812	83 6	82 3 to 84 6
Luminal	Elixir	¼ gr in 4 cc	0 0405	0 0388	95 8	94 1 to 99 0
Veronal	Elixir	2 gr in 4 cc	0 1665	0 1020	61 4	58 5 to 63 3
Novasurol	10% solution in ampul		0 300	0 1878	62 5	57 6 to 69 0

This method of assay is not limited to malonyl-urea hypnotics Novasurol, for example, a commonly used mecurial diuretic composed of diethyl barbituric acid and mercurichlorphenyl oxyacetate may also be assayed by this method In the presence of an acid this compound is broken down, and diethyl barbituric acid is liberated This may then be extracted and estimated From the amount of barbital present the amount of novasurol can be calculated by multiplying the amount of barbital in Gm by the factor 3 211

Correlation of Color with Molecular Weight—In a previous paper (2) it was postulated that the color-giving portion of barbiturate molecule is the malonyl urea residue in which case we would expect the intensity of color to vary with the amount of malonyl urea present The increase in molecular weight among the commonly used barbiturates is not due to a change in the malonyl-urea residue but to the alkyl radicals attached to the central carbon atom Thus solutions of barbiturates of equal percentage should show intensities varying inversely as the molecular weight, whereas equimolar solutions of different barbiturates should show close agreement in color depth

A 0 5 per cent solution of barbital was used as a standard against which other barbiturates of the same concentration were compared The barbiturates used were the pure dried substances and were dissolved in chloroform immediately before use Pernoston and nostal being difficulty soluble in chloroform were dissolved in absolute methyl alcohol in which case the barbital standard was also made up in absolute methyl alcohol

The comparison of barbiturate solutions of different molecular weight but equal concentrations verified the assumption that the depth of color of these solutions would vary inversely as the molecular weight Thus a 0 1 per cent solution of pernoston when compared with 0 1 per cent solution of barbital appeared much lighter in color Due to the great difference in the molecular weights of these two compounds (barbital equals 184 112, pernoston equals 303 052) it was necessary to use barbital in 0 05 per cent solution in order to get an accurate reading of the two colors

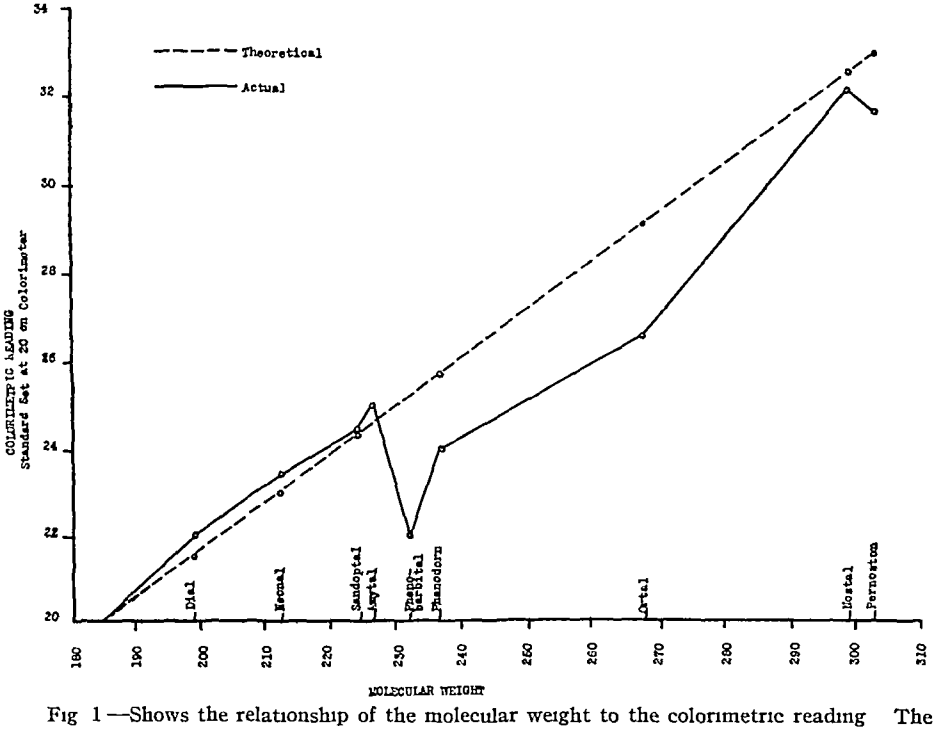

Fig 1—Shows the relationship of the molecular weight to the colorimetric reading The actual colorimetric readings of the different barbituric acid derivatives, with a few exceptions almost coincide with the line representing the theoretical reading

The experiments as summarized in Table V, indicate that the theoretical prediction, namely, that the depth of color will vary inversely with the molecular weight is fulfilled by the different barbiturate derivatives, with the exception of phenobarbital, phanodorn and ortal

It is possible to determine in a general way the molecular weight of an unknown barbiturate if it is in the pure dry state Using the barbital as a standard the difference in depth of color indicates whether the molecular weight is near or far from the molecular weight of barbital

SUMMARY

1 The isopropylamine quantitative barbiturate test was utilized in assaying pharmaceutical preparations containing malonyl-urea derivatives

2 This colorimetric chemical assay is accurate within 6 per cent

tions in detectable mounts Guanidine and creatinine give a positive test in alcoholic solutions only

None of the common drugs which are combined with the barbiturates in the proprietary preparations investigated interfere with this test

Pharmaceutical Applications—Using this test we assayed a number of barbiturate preparations purchased on the open market Tablets, capsules and elixirs were assayed by this method These preparations are usually mixed with some inert substance to provide bulk for the preparation, or are fixed mixtures

The results of these determinations are embodied in Table IV It can be seen that some of these proprietary preparations tested do not come up to the strength stated on the label

TABLE IV—AN INVESTIGATION OF SOME PROPRIETARY BARBITURATE PREPARATIONS

Barbiturate	Type of Preparation	Amount of Barbiturate in Sample from Label Grams	Amount Found Average of 5 Determinations Grams	Per Cent of Labeled Amount	Variation
Sodium veronal	Tablet	5	0 3240	0 3101	95 6	93 5 to 98 9
Veronal	Tablet	5	0 3240	0 2759	84 8	82 1 to 90 8
Amytal	Tablet	1½	0 0972	0 0922	94 7	93 5 to 95 7
Amytal	Capsule (with amidopyrine)	1½	0 0972	0 0915	94 5	87 1 to 98 9
Sodium luminal	Tablet	1½	0 0972	0 0812	83 6	82 3 to 84 6
Luminal	Elixir	¼ gr in 4 cc	0 0405	0 0388	95 8	94 1 to 99 0
Veronal	Elixir	2 gr in 4 cc	0 1665	0 1020	61 4	58 5 to 63 3
Novasurol	10% solution in ampul		0 300	0 1878	62 5	57 6 to 69 0

This method of assay is not limited to malonyl-urea hypnotics Novasurol, for example, a commonly used mecurial diuretic composed of diethyl barbituric acid and mercurichlorphenyl oxyacetate may also be assayed by this method In the presence of an acid this compound is broken down, and diethyl barbituric acid is liberated This may then be extracted and estimated From the amount of barbital present the amount of novasurol can be calculated by multiplying the amount of barbital in Gm by the factor 3 211

Correlation of Color with Molecular Weight—In a previous paper (2) it was postulated that the color-giving portion of barbiturate molecule is the malonyl-urea residue in which case we would expect the intensity of color to vary with the amount of malonyl urea present The increase in molecular weight among the commonly used barbiturates is not due to a change in the malonyl-urea residue but to the alkyl radicals attached to the central carbon atom Thus solutions of barbiturates of equal percentage should show intensities varying inversely as the molecular weight, whereas equimolar solutions of different barbiturates should show close agreement in color depth

A 0 5 per cent solution of barbital was used as a standard against which other barbiturates of the same concentration were compared The barbiturates used were the pure dried substances and were dissolved in chloroform immediately before use Pernoston and nostal being difficulty soluble in chloroform were dissolved in absolute methyl alcohol in which case the barbital standard was also made up in absolute methyl alcohol

The comparison of barbiturate solutions of different molecular weight but equal concentrations verified the assumption that the depth of color of these solutions would vary inversely as the molecular weight Thus a 0 1 per cent solution of pernoston when compared with 0 1 per cent solution of barbital appeared much lighter in color Due to the great difference in the molecular weights of these two compounds (barbital equals 184 112, pernoston equals 303 052) it was necessary to use barbital in 0 05 per cent solution in order to get an accurate reading of the two colors

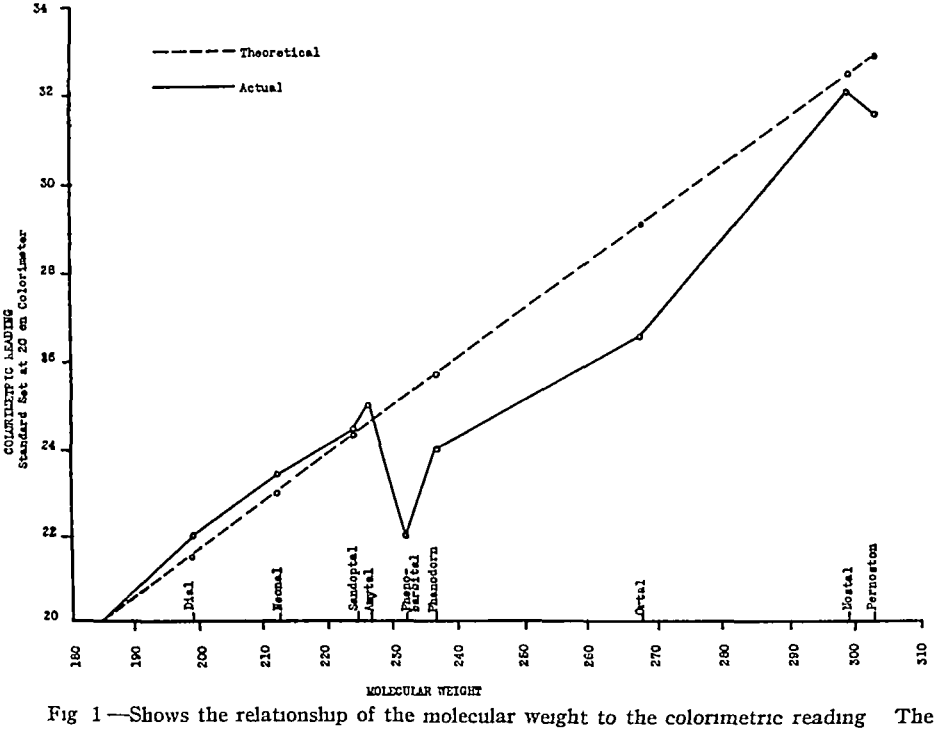

Fig 1—Shows the relationship of the molecular weight to the colorimetric reading The actual colorimetric readings of the different barbituric acid derivatives with a few exceptions almost coincide with the line representing the theoretical reading

The experiments as summarized in Table V, indicate that the theoretical prediction, namely, that the depth of color will vary inversely with the molecular weight is fulfilled by the different barbiturate derivatives, with the exception of phenobarbital, phanodorn and ortal

It is possible to determine in a general way the molecular weight of an unknown barbiturate if it is in the pure dry state Using the barbital as a standard the difference in depth of color indicates whether the molecular weight is near or far from the molecular weight of barbital

SUMMARY

1 The isopropylamine quantitative barbiturate test was utilized in assaying pharmaceutical preparations containing malonyl-urea derivatives

2 This colorimetric chemical assay is accurate within 6 per cent

TABLE V —RELATION OF DEPTH OF COLOR TO MOLECULAR WEIGHT

Barbiturate	Chemical Structure.	Molecular Weight.	Theoretical Reading Standard at 20	Actual Reading Standard at 20
Barbital	Diethyl barbituric acid	184 112	20 0	20 0
Dial	Diallyl barbituric acid	198 112	21 5	22 2
Neonal	*n*-Butyl-ethyl barbituric acid	212 144	23 0	23 4
Sandoptal	Iso butyl allyl barbituric acid	224 144	24 3	24 5
Amytal	Isoamyl ethyl barbituric acid	226 160	24 6	25 0
Phenobarbital	Phenyl ethyl barbituric acid	232 112	25 2	22 0
Phanodorn	Cyclohexenyl ethyl barbituric acid	236 141	25 7	24 0
Ortal	*n*-Hexyl ethyl barbituric acid	268 202	29 1	26 5
Nostal	Isopropyl bromallyl barbituric acid	289 036	31 4	32 0
Pernoston	Sec butyl bromallyl barbituric acid	303 052	33 0	31 5

3 Some of the proprietary barbiturate preparations investigated did not come up to the strength stated on the label

4 The isopropylamine test for barbiturates is sensitive enough for an approximation of the molecular weight of different barbiturates

A NEW METHOD OF DETERMINING ACETYLSALICYLIC ACID IN THE PRESENCE OF MEDICINAL PRODUCTS *

BY RICHARD M HITCHENS

Acetylsalicylic acid is employed so extensively in pharmaceutical preparations that its estimation in such mixtures is of considerable importance

Many methods have been proposed for its determination The association of Official Agricultural Chemists has carried out several systematic investigations and has proposed several methods of analysis (1) One method, applicable in the absence of acidic or basic substances, consists of titrating a cold alcoholic solution of the acetylsalicylic acid with standard alkali to a phenolphthalein end point, thus neutralizing the free carboxyl group present in the molecule, then adding excess of standard alkali to hydrolyze the sodium acetylsalicylate to sodium salicylate and sodium acetate, and back titrating to a phenolphthalein end-point The original titration to phenolphthalein should be exactly one-half of the total titration Another method consists of a chloroform extraction of the acetylsalicylic acid from a water suspension, or a dry chloroform extraction of alkaline excipients is present After removal of the chloroform the acetylsalicylic acid is determined as such if no other chloroform-soluble substances are present Otherwise it is hydrolyzed to salicylic and acetic acids The salicylic acid thus obtained is determined either by volumetric bromination to tribromphenol or gravimetrically by alkaline iodination to the complex $(C_6H_2I_2O)x$, structure uncertain

In none of the methods found in the literature is acetylsalicylic acid itself separated from other organic substances and determined as such Such a method,

* Scientific Section, A PH A, Washington meeting, 1934

if feasible, would allow direct determination and positive identification of the acetylsalicylic acid Present methods allow only its indirect identification

It should be possible to separate acetylsalicylic acid from many organic compounds by extracting its chloroform solution with a dilute solution of sodium bicarbonate, thus forming the water-soluble sodium salt of acetylsalicylic acid, acidifying, reextracting with a suitable solvent and weighing the acetylsalicylic acid after evaporating the solvent at a low temperature

The most apparent objection to this procedure is the ease with which acetylsalicylic acid hydrolyzes to form acetic and salicylic acids, especially in neutral or alkaline solutions

Several investigators have studied the rate of hydrolysis of acetylsalicylic acid in aqueous solution Tsakalatoos and Horsch (2) found that complete hydrolysis occurs in aqueous solution at room temperature in about one hundred days Germuth (3) found about 10% hydrolysis to occur at room temperature in 24 hours, using as a solvent 90% ethyl alcohol, 10% water or 90% glycerol, 10% water Morton (4) found that hydrolysis occurs to the extent of 10% in 24 hours at room temperature in aqueous solutions containing alkali citrates or acetates

Dott (5) found that acetylsalicylic acid could be dissolved in dilute sodium bicarbonate solution, the solution acidified, the acetylsalicylic acid extracted with a mixture of ether and chloroform, the solvent evaporated and a fairly quantitative recovery of essentially pure acetylsalicylic acid obtained However, if the sodium bicarbonate solution were allowed to stand four hours before acidification and extraction, 4 3% hydrolysis occurred

Experiments were accordingly started in this laboratory to determine the extent to which hydrolysis occurs when acetylsalicylic acid is extracted from chloroform solutions with a dilute sodium bicarbonate solution, the solution acidified, the acetylsalicylic acid reextracted and the solvent removed under reduced pressure The free salicylic acid content of the recovered acetylsalicylic acid was determined colorimetrically by dissolving it in a little alcohol, diluting with water and matching the color produced with ferric ammonium sulphate with that produced by a known amount of salicylic acid If the sodium bicarbonate solution was kept at 20° C for one hour before acidification and extraction, about 0 25% hydrolysis was indicated, if at 30° C , about 0 35% Since the salicylic acid is weighed with the acetylsalicylic acid, this would at the most cause the analysis to be 0 08% low In practice the acetylsalicylic acid need never be in the bicarbonate solution more than 20 minutes, so the error caused by hydrolysis is negligible

After some preliminary experiments, the following procedure was found to give quantitative recovery of acetylsalicylic acid from the chloroform solution

About 0 3 Gm of acetylsalicylic acid, sufficient to minimize the effect of errors in weighing is dissolved in 80 cc of chloroform, approximately the volume resulting from the extraction of acetylsalicylic acid from a sample of tablets The chloroform is extracted with 25 cc of a 2% sodium bicarbonate solution, removed to a second separator, extracted with 20 cc of the bicarbonate solution, and discarded The first bicarbonate extract is washed with four 10 cc portions of chloroform each being used to wash the second bicarbonate extract before discarding This removes traces of chloroform soluble substances from the bicarbonate The bicarbonate extracts are combined and acidified with 1 5 cc of 36% hydrochloric acid (The bicarbonate solution should be kept at 25° C or below and the acetylsalicylic acid should not be allowed to remain in the bicarbonate solution more than one hour) The acidified aqueous layer is extracted

with 40 20, 15, 10 cc of redistilled A R ethyl acetate, in which acetylsalicylic acid is appreciably more soluble than in chloroform each ethyl acetate extract being washed with 2–3 cc of water The ethyl acetate extracts are filtered through a plug of cotton into a small Erlenmeyer flask carefully counterpoised against a similar flask The ethyl acetate is evaporated under reduced pressure This is accomplished quickly and conveniently by connecting the flask directly to a water pump and adjusting the pressure with a screw clamp so that the ethyl acetate barely boils The process is hastened by placing the flask in a large vessel containing water at 40–45° C In this way all ethyl acetate may be removed in 30 minutes The flask is kept under reduced pressure for 15 minutes after the ethyl acetate has evaporated The flask and contents are then dried to constant weight over calcium chloride To insure rapid attainment of constant weight the counterpoise is placed in the water bath during the evaporation

Using this method three analyses of a U S P quality acetylsalicylic acid gave 100 1%, 99 9%, 99 6% recovery In each case the salicylic acid content of the recovered material was less than 0 15% By double titration or by melting point, the recovered acetylsalicylic acid could not be distinguished from the starting product The method is, therefore, quantitative, the errors being of the magnitude expected in such an analysis The time required for an analysis is generally not over $1^1/_2$ hours

The behavior of other compounds when subjected to this procedure was now studied to determine if acetylsalicylic acid can be separated from them by this method The above extraction process was performed with 0 3 Gm of acetphenetidin, caffeine, acetanilid, antipyrine, amidopyrine, phenylsalicylate, respectively, no acetylsalicylic acid being present In no case was a weighable residue of any of the above compounds obtained, indicating that they should not interfere with the analysis for acetylsalicylic acid

A distinct residue was obtained with phenolphthalein present This is to be expected since chloroform is a poor solvent for this compound If after two chloroform extractions of the bicarbonate solutions the latter are combined and extracted once with 25 cc of ethyl acetate, the phenolphthalein is removed quantitatively

TABLE I

Mixture Analyzed. Acetylsalicylic Acid		% Recovery of Acetylsalicylic Acid
0 3 Gm	0 2 Gm acetphenetidin	100 1%
	0 05 Gm caffeine	99 8
0 3 Gm	0 2 Gm acetanilid	99 8
0 3 Gm	0 3 Gm antipyrine	99 8
0 3 Gm	0 3 Gm amidopyrine	100 1
0 3 Gm	0 3 Gm phenylsalicylate	99 7
0 3 Gm	0 1 Gm phenolphthalein	99 6

(Sodium bicarbonate solution extracted with ethyl acetate)

With this modification, phenolphthalein does not interfere with the analysis for acetylsalicylic acid

Mixtures of these compounds and acetylsalicylic acid were analyzed by the above procedure The results are given in Table I The first column gives the composition of the mixture analyzed and the second the percentage recovery of the acetylsalicylic acid The materials used were all of U S P quality A R ethyl acetate was redistilled before use

Each of these separations and determinations of acetylsalicylic acid is quantitative, the errors being within the manipulative errors of the analysis In no case did the acetylsalicylic acid recovered contain over 0 2% free salicylic acid, indicating that the error introduced by hydrolysis of the acetylsalicylic acid is not over 0 05%

The method can be adapted to the determination of acetylsalicylic acid in Tablets by following the A O A C procedure of preliminary extraction of the tablets with chloroform in the presence of a small amount of water or by extraction with dry chloroform if alkaline excipients are present Using 0 3 Gm of acetylsalicylic acid and 0 1 Gm starch it was convenient to extract with 20, 15, 15, 10, 10, 10, 10 cc of chloroform in the presence of 5 cc of water Larger volumes of water or fewer extractions with chloroform gave incomplete extraction This method was tried on two samples of commercial tablets The results are given in Table II

TABLE II

Mixture Analyzed	Recovery of Acetylsalicylic Acid
0 3 Gm acetylsalicylic acid 0 1 Gm corn starch	100 0%
0 3 Gm acetylsalicylic acid 0 1 Gm tapioca starch	99 8%
Commercial Tablets	
3½ grains acetylsalicylic acid	3 41 grains per tablet
2½ grains acetphenetidin	3 40 grains per tablet
½ grain caffeine 0 7-Gm sample	
3½ grains acetylsalicylic acid	
2½ grains acetphenetidin	3 35 grains per tablet
½ grain caffeine	3 35 grains per tablet
¼ grain phenolphthalein	

Again the known mixtures gave quantitative results The acetylsalicylic acid content of the two samples of tablets is slightly lower than stated by the formula However, the analyses check well, and no more acetylsalicylic acid could be detected in any of the extraction layers discarded The materials recovered did not contain over 0 2% of free salicylic acid and were identical with acetylsalicylic acid in melting point and in double titration with alkali

SUMMARY

A method is described whereby acetylsalicylic acid may be separated from many organic compounds and determined directly

The method is rapid and accurate and allows easy identification of the acetylsalicylic acid It is applicable in the presence of all compounds except organic acids which are relatively water insoluble, as for example, barbital, benzoic acid or salicylic acid

ANTHELMINTICS I THE EFFECT OF HYDROGEN PEROXIDE AND SOME OXYGENATED TERPENE HYDROCARBONS UPON *ASCARIS LUMBRICOIDES* *

BY LEWIS W BUTZ AND W A LA LANDE, JR

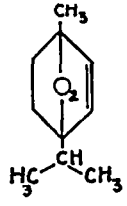
The anthelmintic efficiency of oil of chenopodium in *Ascaris* infections of human beings is well established The oil is also useful in other helminthiases (1) Its high toxicity for the host (2), (3), however, would seem to render unsafe its administration in doses sufficiently large and frequent to insure the desired anthelmintic effect Henry and Paget (4) fractionated chenopodium oil into its constituents These were later (5) examined separately for anthelmintic activity by Smillie and Pessoa who reported that this resided almost entirely in the ascaridole It seems not unlikely that part of the toxicity of chenopodium oil for the human host may be due to the components other than ascaridole, *e g*, cymene and methyl salicylate, but apparently (2) ascaridole itself is quite toxic It would be desirable therefore to study other substances chemically related to ascaridole with the hope of finding one with a higher therapeutic index The work reported here represents the beginning of a proposed extended investigation having this aim in view

The chemical structure of ascaridole (A) seems to be well established by analytic studies (6), (7), (8), although another formula has been suggested (9) It is interesting to consider whether the anthelmintic activity of this substance can be attributed to any one grouping in the molecule or whether this is due to the summation of its chemical and physical characteristics As an approach to a solution of this question the action of hydrogen peroxide and of disuccinyl peroxide (alphozone) upon *Ascaris lumbricoides* has been studied and these substances have been found to be very toxic to the parasites This indicates that the peroxide group, or the hydrogen peroxide or nascent oxygen arising therefrom under various conditions, has in itself pronounced anthelmintic properties These findings logically lead to an examination of other peroxides some of which might have the desired property of low toxicity for the human host, and in addition be sufficiently stable to serve as therapeutic agents administrable *per os*

Peroxides with these characteristics have first been sought among the terpene derivatives It has long been known that terpenes upon exposure to air become altered and that peroxide formation is one of the processes that takes place We have oxygenated a series of commercial and highly purified terpene hydrocarbons In many cases products were obtained which were of the same order of toxicity to *Ascaris* as ascaridole although this toxicity probably cannot be attributed to

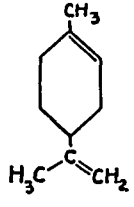
* Scientific Section, A PH A

peroxides The preliminary experiments indicated the wisdom of a more thorough study of α-pinene (B), turpentine (90–95% α-pinene), and *d*-limonene (C) The results of this study are reported in this paper In order to determine whether any of the known oxidation products of these hydrocarbons were responsible for the activity we have tested so far the following compounds Terpineol (D), carvone (E), verbenone (F) and formic acid In addition we have included for comparison bioassay data obtained with chenopodium oil, ascaridole and formaldehyde

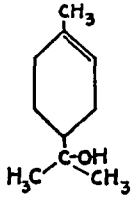


A-*Ascaridole*

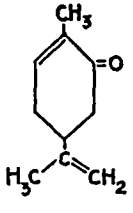
B-α-*Pinene*



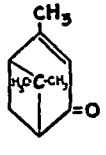
C-*Limonene*



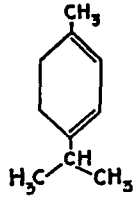
D-*Terpineol*



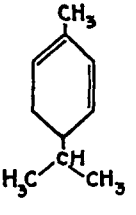
E-*Carvone*



F-*Verbenone*



G-α-*Terpinene*



H-α-*Phellandrene*

EXPERIMENTAL

Materials—Seven specimens of commercial chenopodium oil were tested These were all found to have the same anthelmintic potency and accordingly only one set of data is included in Table I The two samples of ascaridole used in the tests were obtained from Eastman Kodak Co at different times (A and B, Table I) Eighty per cent of B boiled between 92 5–4 5° at 8 mm The hydrogen peroxide solutions were prepared from Merck's superoxol The disuccinyl peroxide was Stearns' alphozone All of the pinene products used in the experiments were prepared from Eastman Kodak practical ' pinene b p 158–161°, the *d* limonene was the best product obtainable from the same source, b p 67–68° at 20 mm , and was redistilled and used without further purification One specimen of turpentine was obtained from a paint dealer (A, Table II), the other (B) was Merck's oil of turpentine U S P X rectified The two samples of terpineol (C and D, Table III) were obtained from Givaudan Delawanna Co and Eastman Kodak Co , respectively, and were used without further purification The carvone b p 113–114° at 16 mm was obtained from Eastman Kodak Co The verbenone, b p 98–101° at 16 mm was prepared from *d* α pinene by oxidation with selenium dioxide according to the method of DuPont *et al* (10) The formic acid solutions were prepared by diluting Eastman Kodak formic acid (98–100%) m p 6–8° The formaldehyde solutions were similarly prepared from Baker s C P 36% The cobalt naphthenate catalyst[1] used in the oxidations was a commercial product Tank oxygen was used for the oxygenations purification was unnecessary since the gas contained only nitrogen and carbon dioxide as impurities

Oxidation of the Terpenes—Thirty-Gm portions of the hydrocarbons were each treated with 0 4 cc of the catalyst (equivalent to 0 05% cobalt) and placed in 250 cc Erlenmeyer flasks which had previously been flushed with oxygen or air The necessary atmosphere was maintained in

[1] Nuodex Cobalt kindly furnished by Oliver Haun D H Litter Co Philadelphia

each flask by passing into it a very slow stream of the oxygen or air The loss by evaporation was inappreciable All the oxidations were carried out at room temperature in diffused light No attempt was made to exclude moisture Although most of the cobalt was precipitated during the oxidation it was nevertheless ascertained by blank experiments that the catalyst had no effect on the worms other than a slight stimulation The oxidation products which were usually yellow and more viscous than the original hydrocarbons, were kept in glass stoppered bottles until needed Active products can also be obtained without the catalyst (No 17 Table II)

Technique of Bioassay—In this work anthelmintic activity toward *Ascaris lumbricoides* was determined by immersion of vigorous specimens in a solution or emulsion of the substance to be tested The apparatus consisted of a rectangular aquarium with glass windows which was filled with water and served as a constant temperature bath An electrical heating unit a thermostat and a mechanical stirrer maintained a uniform temperature of 37 5° ± 0 5° The aquarium was provided with a sheet copper cover containing holes which supported 400-cc beakers of the tall variety Five worms were placed in each beaker which contained 300 cc of the solution or emulsion These were usually females and were always selected for uniformity of size and vigor The worms used were 22–24 cm long and weighed 2 0–2 35 Gm They were all *Ascaris lumbricoides* obtained from the intestines of swine at the abattoir The phenomena observed were the number of minutes after immersion required to produce cessation of normal vermiculatory movements, paralysis and death, respectively For the last two observations it is necessary to remove the worms from the anthelmintic bath for 1–2 minutes This was done about every 50–60 minutes with precaution to avoid changing the environmental temperature Death was determined by means of an inductorium and electrode [2] The worms were observed over a period of 5 hours

When the worms are immersed in some substances rupture of the body wall occurs with extrusion of the viscera Rupture is sometimes accompanied by a detonation Death does not always follow soon after such ruptures Rupture occurred principally with the unoxygenated terpenes and the more concentrated hydrogen peroxide solutions Rigidity and increased pallor often accompany paralysis In one experiment oxygen free nitrogen gas was passed through the beakers containing the worms in water They were apparently unaffected after 5 hours by this oxygen deprivation When nitrogen was passed and the worms were immersed in emulsions of purified pinene the animals were somewhat affected in fact to the same extent as they were when the nitrogen was omitted Thereafter the hydrocarbons were tested without the precaution of using a nitrogen atmosphere

As a method for determining *in vitro* the probable anthelmintic value of a given substance we believe the foregoing procedure has considerable utility It must be emphasized that the parasite for which an anthelmintic is sought and no other should be used in the test This desideratum is almost attained in our method since the swine *Ascaris* is morphologically but not quite physiologically identical with the human *Ascaris* It is not possible, however to use a wholly unrelated species, *e g*, the earth worm, which we have found to be much more susceptible to some substances than *Ascaris* This difference in susceptibility has also been observed by Munch (11) in the case of ethyl alcohol and some samples of chenopodium oil Since, with proper care in handling, the results obtained with *Ascaris* are just as consistent as those obtained in other similar bioassays, there is no need to substitute a less satisfactory animal It is perhaps desirable to add to the anthelmintic bath physiological amounts of substances constantly found in the intestine In the present work these have been omitted for the sake of chemical simplicity Also in most cases no emulsifying agent or other third constituent was ever added the mixtures tested consisting only of the substance or product designated in the table and water The terpineol (Sample D), carvone and verbenone were more difficult to emulsify and some experiments are reported in which 0 1% or 0 2% of acacia gum was added The emulsions were all made in a uniform way by mixing with distilled water in a mechanical shaking machine It might be thought that the anthelmintic potency of a water insoluble material at a given concentration would be related to the degree of dispersion of the material in the water However, it was found that finer emulsions produced by a colloid mill were no more potent than those made with the shaking machine The immersion tests here reported are being supplemented by a study of the

[2] Suggestion of Dr James C Munch

effect of the same substances upon the movements of segments of *Ascaris* as recorded by a kymograph

RESULTS

The bioassay data in Table I show the relative anthelmintic potencies of chenopodium oil, ascaridole, hydrogen peroxide and disuccinyl peroxide as determined by the method just described Although these results demonstrate the high toxicity of hydrogen peroxide to *Ascaris lumbricoides*, it cannot be stated with certainty just how much this finding contributes to an explanation of the anthelmintic action of ascaridole Aqueous emulsions of ascaridole give with a vanadium pentoxide reagent,[1] after 15–20 minutes contact, the same intensity of color as hydrogen peroxide solutions of one-tenth the concentration This color may or may not be due to hydrogen peroxide Ascaridole, in the absence of complicating side reactions, might be expected to yield with water one-fifth its weight of hydrogen peroxide But ascaridole and hydrogen peroxide seem to be of about equal toxicity to *Ascaris*, *i e*, ascaridole is more toxic than would be predicted if its activity were attributed solely to the hydrogen peroxide which it could generate An explanation for this apparent anomaly must be sought by studying the decomposition of ascaridole under very mild conditions such as with water in contact with animal tissues We have found that the hydrogen peroxide equivalent of a 1% ascaridole emulsion (as indicated by the V_2O_5 reaction) decreases very rapidly when successive groups of live *Ascaris* are immersed in the emulsion at 37° C The hydrogen peroxide equivalent of a control emulsion kept at 37° C decreases only slightly in comparison Perhaps the anthelmintic activity of ascaridole is

TABLE I —THE EFFECT OF HYDROGEN PEROXIDE, DISUCCINYL PEROXIDE CHENOPODIUM OIL AND ASCARIDOLE ON *Ascaris lumbricoides* [1]

[1] All the worm tests reported in this paper were carried out by Miss Anna D Ogden of the Jayne laboratory

due in part to decomposition products other than hydrogen peroxide, or perhaps to the simple menthene structure itself Also it may be supposed that the hydrogen peroxide arising from ascaridole is taken up more economically by the worm due to the fact that it is evolved slowly or is stabilized by the presence of the excess ascaridole On the other hand when worms are immersed in pure hydrogen peroxide solutions, a part of the available hydrogen peroxide may be dissipated

[1] Prepared by dissolving 4 Gm of vanadium pentoxide in 40 cc of concentrated sulphuric acid with subsequent addition of enough water to make one liter Two cc of reagent were added to 1 cc of solution or emulsion Under these conditions ascaridole emulsions gave maximum color in about 20 minutes

so far as opportunity to exert toxic action is concerned, *e g*, by combination with unimportant parts of the worm substance or by conversion to molecular oxygen

The results of the worm tests with α-pinene, turpentine, limonene and their oxygenation products are given in Table II It is seen from the table that oxygenated hydrocarbons can be prepared which are just as toxic as chenopodium oil or ascaridole It is also apparent that the optimal conditions for producing these anthelmintic products are not yet worked out In order to find these we are making a systematic study of factors which may affect the autoxidations concerned It would appear likely from a consideration of the experimental procedure that the fraction of non-toxic terpene hydrocarbon converted is very small, and that therefore the toxicity of the substances formed during oxygenation must be very great indeed

[1] 64% were killed in two hours

[2] No catalyst

The chemical nature of these substances is not yet known Examination reveals that the activity probably cannot be attributed to peroxides These are demonstrable in the oxygenated hydrocarbons but are very quickly decomposed on shaking with water The dilute emulsions which were so toxic to *Ascaris* gave no coloration with the V_2O_5 reagent They therefore contained less than 0 0005% of hydrogen peroxide equivalent Of course it is possible that peroxides are present which do not react with the V_2O_5 reagent under the conditions employed It should be recalled here that Bodendorf (8) obtained peroxides toxic to earth worms by oxygenating α-terpinene (G) and α-phellandrene (H)

TABLE III —THE EFFECT OF TERPINEOL, VERBENONE, CARVONE FORMIC ACID AND FORMALDEHYDE ON *Ascaris lumbricoides*

[1] Contained 2% of ethyl alcohol which in itself is not toxic to *Ascaris*

[2] Contained 0 1% of acacia gum [3] Contained 0 2% of acacia gum [4] 30% paralyzed in 4 hrs

We have observed that the oxygenated hydrocarbons give a strong Schiff reaction [1] This is significant since it has been shown (12) that verbenone (F) is formed during the autoxidation of oil of turpentine, and that carvone (E) is similarly produced (13) from limonene Both of these ketones give a positive Schiff reaction We have investigated the effect of verbenone and carvone upon *Ascaris* The results (Table III) show that, while both these substances are quite toxic, their toxicity is not sufficiently great to account for more than a part of the antiascaridic action of our oxygenated hydrocarbons A number of other substances have been identified as products of oxidative transformations of α-pinene and limonene Two of these terpineol (D) and formic acid (14) have been bioassayed

[1] Reagent Aqueous solution of basic fuchsin (0 25 Gm per L) treated with an excess of sulphur dioxide gas One cc of sample was added to 5 cc of reagent and the mixture vigorously shaken

with the results shown in Table III Still others now being prepared will be studied later Since the amount of free acid in the emulsions studied is small (p_H 5 8) it is doubtful how much any free formic acid present contributes to the anthelmintic effect Perhaps renewed analytical investigation of oxygenated α-pinene and oxygenated limonene will give a clue to the identity of these very powerfully antiascaridic substances

SUMMARY

1 Hydrogen peroxide is very toxic to *Ascaris lumbricoides* The relation of this observation to the anthelmintic activity of ascaridole has been discussed

2 By passing oxygen or air over α-pinene, turpentine or *d*-limonene products are formed of pronounced toxicity to *Ascaris lumbricoides* The toxic substances in these products are probably not peroxides

PHYSICAL PROPERTIES OF NEOARSPHENAMINE POWDER *

BY A E JURIST, J R VAN WINKLE AND W G CHRISTIANSEN

Very little has been written concerning the physical characteristics of neo arsphenamine powder The United States Public Health Service specifications (1) for neoarsphenamine state that "Stability shall be determined by exposing the ampuled product to a temperature of 56° C for a period of at least 24 hours, during which time it should show no marked change in color, consistency, or solubility" This statement does not, however, describe the various changes which can occur during the "heat-testing" of neoarsphenamines The following discussion is based on a large number of observations made during the testing of a variety of neo arsphenamines all of which were sealed in evacuated ampuls

* Scientific Section A PH A, Madison meeting, 1934

Although neoarsphenamine is usually described as a yellow, free-flowing powder, there are several different types of powder

(*a*) A powder consisting of coarse sandy particles which show no tendency to cling together when an ampul of the product is rotated slowly

(*b*) A very finely divided, fluffy type of powder whose particles cling together

(*c*) A powder containing a mixture of both fluffy and coarse particles with noticeable differences in color existing between the particles of different size

(*d*) A powder which is finely divided and which consists of small sandy or hard particles, not of soft, fluffy ones

All of these different types of powders have been found in commercial samples of neoarsphenamine

It is apparent that the differences between the several types of powder are due to variations in the physical characteristics of the individual particles such as size, shape, and hardness or porosity, and need not have any relation to the chemical or biological properties of the product Since neoarsphenamine is a complex product which is produced by precipitation, it is not unexpected that the physical properties may be varied rather extensively without altering the chemical or biological properties The Public Health Service specification quoted above relates to changes in the color, consistency, and solubility of the powder It is agreed that if chemical decomposition does occur during the heat test one might expect to find changes in the color, consistency, and solubility of the powder However, if two powders which are chemically identical and chemically stable on heat test are different in physical properties, it would be possible for changes to occur in the particles which would be observed as color or consistency change and these two changes would not then be indicative of chemical sensitivity or instability Any such purely physical changes should not, however, be accompanied by differences between solutions of the original and of the same material after heat test We have been interested in the magnitude and character of the powder changes which are associated only with the physical characteristics of the powder and in the mechanism whereby these changes occur

We will first mention the nature of the changes which have been noted and which are believed to be only physical, the consistency changes will be considered first A free flowing powder may change to one whose particles show a distinct tendency to cling together Also a dry looking powder may, after heating, show a greatly increased tendency to adhere to the wall of the ampul in which it is packaged One further change sometimes noted is that a dry powder may develop a wet appearance after heating Usually the heat-tested ampul is removed from the oven, allowed to cool for a short time, and compared with an unheated ampul Very often, when some such comparison shows a difference, this difference will decrease greatly if the heat-tested ampul is allowed to stand at room temperature for 24 hrs before comparison with an unheated ampul, *i e*, the powder gradually reverts to its original physical condition If the consistency change taking place during heat test is only temporary, reversion will occur slowly in the sealed ampul, but by opening the ampul the powder can be returned to its original consistency almost instantly These phenomena are very pronounced if the ampul, immediately after removal from the oven, is rotated so that the powder rolls around in the warm ampuls The powder may stick to the walls and appear to be

wet, but if the ampul is now opened the wet, sticky powder changes rapidly to its original dry, free-flowing condition Reversions of this type are in themselves indicative of the fact that the consistency change was only physical, and this belief is supported by the clarity and color of a solution of the heat-tested powder

A suggested explanation of the above findings is based on the fact that neo arsphenamines contain a small amount of volatile matter which may be water or some solvent used in the precipitation When the highly evacuated ampul containing the powder is kept in the oven, these traces of liquid are volatilized and exist in the space above the powder [1] The behavior of this volatile matter when the ampul is removed from the oven affects the consistency of the powder Immediately after removal from the oven the glass ampul starts to cool and does so faster than the powder inside, therefore instead of passing back into the powder the vapor starts to condense on the ampul as well as on the powder particles If the condensation on the glass is extensive a thin film of liquid will coat the ampul wall and if the ampul is rotated the particles become wetted by the liquid film and become wet and sticky in appearance If on the other hand the ampul is removed from the oven very carefully so as not to agitate the powder and if the ampul is allowed to stand at room temperature, the liquid film which initially deposits on the glass starts to pass back into the powder, neoarsphenamine is very hygroscopic and therefore as the film of liquid gradually evaporates from the glass it is reabsorbed by the powder We suggest therefore that in the absence of chemical decomposition, the consistency change in neoarsphenamine powder as a result of heat test is a function of the traces of volatile matter in neoarsphenamine and the manner in which it is reabsorbed by the powder

Color change of powder is sometimes difficult to evaluate correctly because changes in the character of the particles which are observed as consistency changes can produce apparent color changes Thus, it is known that two surfaces may have exactly the same shade of color but they will appear to be different if one is smooth and the other rough Therefore if the powder changes in consistency, an apparent color change of powder is not unexpected Also, if the vapor which is being reabsorbed by the heat-tested powder is all or partly water, a surface darkening of the particles would be expected because when these traces of water come in contact with the particles there would be an infinitesimal but still detectable "gumming" of particles on the surface In so far as these color changes are associated with consistency changes, they should lessen when the ampul is handled, after heat test, in such a way that the consistency change disappears Such is the case, however, there are also color changes of powder which do not disappear during the consistency reversion, but which nevertheless are not related to chemical change A powder may have darkened permanently after heat test, but when its solution is compared with that made by dissolving an ampul which has not been heated, the two solutions may be identical in color We conclude, therefore, that both the temporary color change which may be observed in conjunction with the consistency change and the more permanent one are related to the physical properties of the powder

[1] If one is interested in observing the liquid which volatilized during the heat testing the ampuls may be placed in a verticle position with the tip upward in the heat test oven using a temperature slightly above 56° C At the conclusion of the test liquid will be observed in the tip of the ampul

The variable extent to which these consistency and color changes occur and the extent and rate of reversion are due or at least intimately related to the original character of the individual particles of which the powder is composed

We wish to re-emphasize the fact that all discussion in this paper relates only to changes in powders which do not undergo chemical changes during heat test and the object has been to direct attention to and explain certain minor changes observable in tests used to control neoarsphenamine

DRUG EXTRACTION I A STUDY OF VARIOUS MENSTRUA FROM THE STANDPOINT OF SWELLING EFFECTS, PENETRATION AND EXTRACTION

BY WILLIAM J HUSA AND LOUIS MAGID

(*Continued from page 984, October Journal*)

PENETRATION OF VARIOUS SOLVENTS

The penetration of liquids through cells is one of the fundamental factors to be considered in drug extraction Since botanists have been more interested in living tissues, very little has previously been done on the permeability of dried tissues, such as drugs

Penetration of Various Solvents into Chestnut Wood—In connection with the tests of swelling on blocks of chestnut wood (see Table X) the rates of penetration of the solvents were determined by weighing the blocks at various intervals, the increase in weight indicating the amount of solvent which entered the block There is a loss of soluble constituents from the blocks, but this does not introduce a serious error in the case of chestnut wood For weighing, the blocks were removed from the liquid and the excess liquid on the surface removed by blotting with filter paper The results are stated on a percentage basis, taking the original weight of the blocks as 100 Each result represents the average of three blocks

The results in Table XVIII show the rate of penetration and the weight of liquid imbibed in 384 hours by blocks of chestnut wood The rate of penetration is indicated by the slope of the curves (see graphs) and the time of attainment of equilibrium and from Table XIX Water shows the most rapid rate of penetration, and a greater weight of water is absorbed Alcohol also penetrates rapidly, but the weight imbibed is less than the weight of carbitol, ethylene glycol, dioxan and diethylene glycol Propylene glycol and glycerin show the lowest rate of penetration and are imbibed to a much smaller extent than the other liquids (see Graph S)

Of the binary mixtures of water, alcohol and glycerin, it is seen that a mixture of equal volumes of alcohol and water shows as fast a rate of penetration as does

water but is imbibed to a lesser extent, mixtures of equal volumes of glycerin and water and glycerin and alcohol show about the same rate of penetration as does alcohol (see Graph 9)

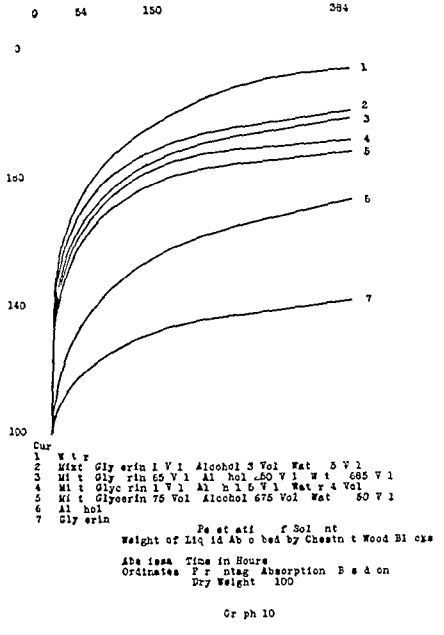
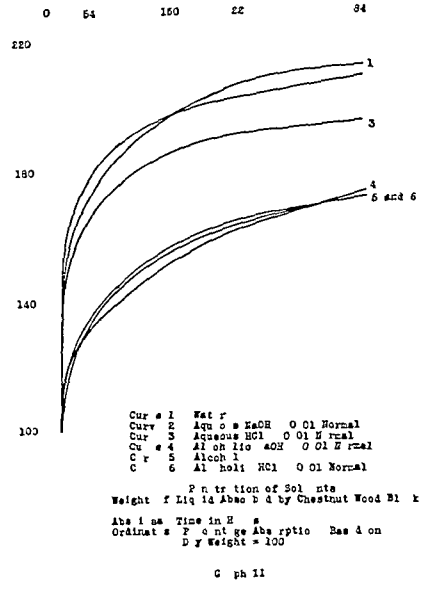
The ternary mixtures of water, alcohol and glycerin penetrate as rapidly as water, while the amount of liquid imbibed is less than that of water and more than that of alcohol (see Graph 10)

The results show that the weight of 0 01*N* aqueous HCl is slightly less than for water while a corresponding quantity of NaOH has practically no effect, with the exception of showing a slightly increased rate of penetration during the first period of imbibition In alcohol, the absorption is practically unchanged on addition of acid and alkali (see Graph 11)





At the end of the experiments, the blocks were cut open and observations made visually as to the indications of completeness of penetration It was found that glycerin, a mixture of equal volumes of glycerin and alcohol, and propylene glycol were the only liquids which had not completely penetrated the blocks in 384 hours, which was the duration of the experiment It was found that with glycerin penetration across the grain was only barely perceptible and penetration with the grain was about 1 mm With propylene glycol penetration across the grain was only barely perceptible and penetration with the grain was about 2 mm It is interesting to note that in spite of the small distance apparently penetrated by the glycerin and propylene glycol, the imbibition was found to amount to 41 Gm of glycerin and 44 Gm of propylene glycol per 100 Gm of wood

In order to check more closely the rate of penetration of the various liquids into chestnut wood, blocks were placed in the various liquids and cut open at frequent intervals In some cases the line of demarcation between the dry and wet portions of the block was rather indefinite, hence penetration experiments were tried coloring the solvents with safranin and methylene blue, respectively However, it was observed that the dyes penetrated considerably slower than the liquid itself, due most likely to adsorption of the dyes by the wood It was therefore

concluded that the dyes were inapplicable for this purpose and experiments were made using pure solvents

Blocks of chestnut wood, averaging 1 75 mm in thickness and 24 mm square, were placed in various liquids, and one block from each liquid cut open at various time intervals In one experiment, blocks with the grain running the long way were used, and in another, blocks with the grain running the short way were used The liquids, with the time required for complete penetration, are given in Table XIX

TABLE XIX —RATE OF PENETRATION OF VARIOUS LIQUIDS INTO CHESTNUT WOOD BLOCKS

Liquid	Time for Complete Penetration in Blocks with Grain Running the Long Way	Blocks with Grain Running the Short Way
Water	1 day	2 0 hours
Alcohol	2 days (?)	2 5 hours
Dioxan	6 days	6 0 hours
Carbitol	11 days	11 0 hours
Ethylene glycol	14 days	40 0 hours
Diethylene glycol	29 days	70 0 hours
Propylene glycol	Incomplete after 35 days Penetration about 3 mm with grain and about 0 5 mm across grain	125 0 hours
Glycerin	Incomplete after 35 days Penetration about 1 5 mm with grain and not perceptible across grain	Incomplete after 314 hours

The results in Table XIX show the comparative rates of penetration of the solvents studied The results prove definitely that liquids penetrate faster with the grain than across the grain, since the penetration was so much more rapid in the blocks which had the grain running the short way

Penetration of Various Solvents into Other Woods —In connection with the tests of swelling on blocks of oak sapwood (see Tables XII–XV) additional measurements were made to compare the absorption of liquids by oak wood, in three conditions, namely, (*a*) fresh, (*b*) dried to constant weight at room temperature, and (*c*) dried to constant weight at 90° C in an oven The rates of penetration were determined by weighing in the same manner as in the case of chestnut wood blocks (see "Penetration of Various Solvents into Chestnut Wood")

TABLE XX —LOSS IN WEIGHT OF BLOCKS OF FRESH OAK SAPWOOD ON DRYING

	Fresh	After Time Intervals (Hours)							
	0	3	10	24	46	240	528	720	1536
At room temperature	100	97	92	82	70	62	61	61	61
At 90° C in oven	100	75	68	56	55	55	55	55	55

It is seen that at room temperature the blocks lost 39 per cent of their weight, the constant value being obtained after 528 hours At 90° C in an oven, 45 per cent of weight was lost, the constant value being obtained after 46 hours

The blocks of fresh sapwood of oak absorb 12 per cent additional water With alcohol, it seems that at first some moisture is removed from the wood by the alcohol as the blocks decrease 4 per cent in weight, later the penetration of alcohol overcomes this effect and after 1536 hours the weight of the blocks is the same as the weight of the original fresh blocks The large amount of moisture in the oak sap

TABLE XXI —ABSORPTION OF LIQUIDS BY OAK SAPWOOD BLOCKS
(Weight of blocks stated on basis weight before drying = 100)

		After Time Intervals (Hours)								
		0	3	10	24	72	240	528	720	1536
Fresh blocks (undried)	Water	100	104	105	107	110	111	111	111	112
	Alcohol	100	98	97	96	98	98	99	99	100
	Glycerin	100	105	107	111	113	113	115	116	117
Blocks dried at room temperature	Water	61	91	96	99	103	106	107	108	
	Alcohol	61	85	90	92	95	96	97	97	
	Glycerin	61	66	70	73	79	85	90	94	
Blocks dried in oven at 90° C	Water	55	75	87	94	100	103	104	105	
	Alcohol	55	75	82	86	89	91	92	92	
	Glycerin	55	58	59	60	62	65	68	71	

wood apparently allows the entrance of glycerin, as it is seen that the blocks absorb 17 per cent of their weight of glycerin in 1536 hours

The results show that the imbibition of water and alcohol is somewhat less and of glycerin very markedly less with the blocks dried at room temperature than in the case of the undried and fresh blocks of oak sapwood Imbibition of water and alcohol is somewhat less and of glycerin very markedly less with the blocks dried in an oven at 90° C than in the case of the blocks dried at room temperature

Results similar to those obtained with oak sapwood have been obtained on the wood of an Elberta peach tree and the sapwood of Sassafras variifolium (Salisbury) O Kuntz (Lauraceæ)

Penetration of Various Solvents into Powdered Belladonna Root —Studies of the imbibition of solvents by powdered drugs is obviously of importance, since this is the form in which drugs are extracted There are no data available on the rate or amount of liquid imbibed by powdered drugs

When obtaining the data on the swelling of powdered belladonna root by the centrifuge method (see Tables XVI and XVII) determinations were also made of the number of cc of each liquid imbibed by the powdered drug These data were obtained by reading off the volume of unabsorbed, supernatant liquid in the graduated centrifuge tubes after centrifuging, and subtracting this volume from the known amount of added liquid, which was 8 cc In the following tables the results are expressed in terms of the volume of solvent in cc imbibed by 1 Gm of powdered drug and are based on the average of two determinations

With the binary mixtures of alcohol and water, it is seen that imbibition decreases as the alcoholic content of the mixture increases Since only a small proportion of liquid is imbibed after the first 20 minutes it would appear that the powdered drug is rather thoroughly penetrated within that time The difference in imbibition between 10 and 20 minutes is greater for the liquids consisting largely of alcohol, thus suggesting that for this particular drug penetration by aqueous liquids is more rapid than by alcoholic liquids Imbibition of glycerin-water mixtures is greater, in the time of the experiment, than of glycerin-alcohol and glycerin-alcohol-water mixtures

The results in Table XXIII indicate that with increasing fineness of powder, imbibition decreases until No 80 powder is reached where there is an increase in imbibition It is possible that the larger particles have a greater proportion of un-

damaged cells, and are thus able to hold more solvent in the cell cavities An opposing tendency, however, arises in the fact that swelling takes place largely near the surface in this type of material, so that small particles show a greater percentage swelling on the basis of this factor taken by itself It would seem from the results that when the No 80 powder is reached the increased total surface of the particles allows an increase in imbibition which overbalances the decreased amount of solvent held in cell cavities

Discussion of Results on the Penetration of Various Solvents into Woody Tissues —The following table lists the solvents used in the penetration study in the order of decreasing rate of penetration into chestnut wood Along with this are the molecular weights and the amounts of the solvents absorbed by chestnut wood in 384 hours, expressed in moles, grams and cubic centimeters of solvent

It would seem that smaller molecules should, other things being equal, penetrate in greater amount than larger molecules The results in Table XXIV show that for those liquids showing complete penetration in 384 hours the amount of liquid which penetrates is inversely proportional in a general way to the molecular weight when the amount absorbed is expressed in moles, when expressed in Gm or cc the rule does not hold *However, the rate of penetration is not* controlled entirely by the size of the molecule The slower penetration of larger molecules

would be in accord with a mechanical or sieve theory of penetration, although other factors would enter, such as association of liquids, surface tension, viscosity, vapor pressure, etc

TABLE XXIV

Solvent	Mol Wt	Absorbed by 100 Gm Wood Moles	Grams	Cc
Water	18	6 22	112	112
Alcohol	46	1 57	72	89
Dioxan	88	0 93	82	79
Carbitol	134	0 75	100	94
Ethylene glycol	62	1 44	89	80
Diethylene glycol	106	0 75	79	70
Propylene glycol*	76	0 58	44	42
Glycerin*	92	0 45	41	33

* Did not penetrate the blocks of chestnut wood completely in 384 hours

Water and alcohol-water mixture show a rapid rate of penetration with water penetrating in greater amount Glycerin-water mixture shows a slower rate of penetration than alcohol-water mixture, but a more rapid rate than glycerin-alcohol mixture

The four glycerin-alcohol-water mixtures used in the U S P and N F extractions all show similar rates of penetration and the amount penetrating lies between the amounts penetrated by alcohol and water alone The results indicate that the variation in the four official menstrua has practically no effect on penetration and imbibition

The weight of 0 01*N* aqueous HCl is slightly less than for water alone while a corresponding quantity of NaOH has practically no effect In alcohol the absorption is practically unchanged on addition of acid and alkali

Penetration of Various Solvents into Fresh and Dried Woods—The results obtained with fresh and dried wood offer interesting facts It has been shown that fresh wood takes up considerable water, and that dried wood not only regains the water lost on drying but takes up a further amount of water This fact may not have received consideration in connection with drug extraction but it has been known to plant physiologists that plant tissues show a water deficit, or unsaturated hydration capacity (4) This condition in the plant is due to the fact that water in the living plant is being used up in metabolic plant processes and is constantly being lost from the surfaces by transpiration, the water available must be divided up among all tissues and accordingly the unsatisfied hydration capacity of a tissue may vary widely according to conditions, for example, fresh oak sapwood absorbed 12 per cent of water, while fresh sassafras wood absorbed 35 per cent of water

(*To be continued*)

The melting point of quinine ethyl carbonate given in the British Pharmacopœia appears to be too high The melting point of the dried salt of pharmacopœial purity seems to lie between 90° and 92° C When the salt is purified by recrystallization the melting point may be raised to 91 5° to 92 5° C The melting point of the substance without previous drying is higher than that of the dried salt and the final point of melting may be above 95° C The presence of free quinine as an impurity lowers the melting point'—G R PAGE Laboratory British Pharmacopœia Commission

LABORATORY NOTES ON THE STABILIZATION OF FLUIDEXTRACT OF ERGOT *

BY ELMER H STUART AND FRANCIS E BIBBINS

In spite of the large number of published articles relating to the deterioration of Fluidextract of Ergot, the problem of a satisfactory method of stabilizing this preparation has not yet been solved Because of this fact the laboratory notes herein reviewed are submitted with the hope that they may be of value to other workers interested in this problem The authors wish to point out that many of the ideas are not original but have been gathered from the literature as sugges tions worthy of investigation

The various assay results reported in this paper were carried out according to one of three well-known methods of determining potency of ergot and its prepara tions These methods were, *first*, a modification of the Broom and Clark method (1), *second*, the Cock's Comb method of the U S P X and *third*, a modification of Smith's Colorimetric method (2)

Swanson in 1929 (3) pointed out that the control of the p_H of Fluidextract of Ergot is important Our data, however, would indicate that the problem is more complicated than that of adjusting the p_H, by the addition of acid to the Fluid extract

The various methods for determining p_H were investigated for a reliable method applicable to Fluidextract of Ergot and one which could be readily checked by laboratory chemists The hydrogen electrode was discarded because the results are questionable in the presence of alcohol The removal of the alcohol before de termining the p_H so altered the Fluidextract that the figures obtained were of little value The quinhydrone electrode [Coons (6)] gives p_H values which are readily duplicated when the following method is observed

Add 0 1 Gm quinhydrone (Eastman) to 5-cc Fluidextract of Ergot Adjust the tempera ture to 25° C and read after allowing two or more minutes for the electrode to reach equilibrium Before using the electrode it should be cleaned as Coons suggests by boiling for five minutes in 50% nitric acid solution, rinsing with distilled water followed by boiling for five minutes in 10% sodium bisulphite solution and again rinsing with distilled water

It has been the observation of the authors that some Fluidextracts of Ergot appear to be relatively stable while others made by the same method from another lot of ergot deteriorate rapidly It is our opinion that some lots of crude ergot contain something that stabilizes the Fluidextract while other lots do not contain sufficient of this material to exercise the stabilizing influence for any appreciable time In an attempt to answer this question the ash was determined from a num ber of Fluidextracts of Ergot in order to see if this factor had any relation to sta bility The ash varied from 1 33 Gm to 2 09 Gm per 100 cc , but showed no rela tion to stability The iron in the ash was next determined and was found to range from a trace up to 0 25 Gm per 100 cc calculated to ferric oxide Again there was no relation to stability Fluidextract of Ergot also contains traces of copper, alu minum and nickel As a further check on the influence of metals, the percolation was carried out in glass, iron and monel percolators (see Table I) The results were negative

* Scientific Section A PH A Washington meeting, 1934

Since some Fluidextracts of Ergot are more stable than others, it occurred to the authors that perhaps this condition might be due to variation in the proportion of rye grains contained in different lots of ergot This was checked by adding to the Fluidextract an extract of rye prepared in the same manner as the Fluidextract of Ergot The result obtained was negative (see Table II)

The addition of cane sugar, milk sugar and dextrose to Fluidextract of Ergot resulted in increased deterioration (see Tables II and III) As an additional check on this point, two relatively stable and two unstable Fluidextracts of Ergot were tested for their reducing action of Fehling's solution (U S P X, page 497) as follows

Five-cc Fluidextract of Ergot were evaporated so as to remove the alcohol then 15 cc each of Fehling s solution A and B added The mixture was diluted to 100 cc then boiled for two minutes and filtered through a tared Gooch crucible The precipitate was washed with distilled water followed by alcohol and by ether and then dried thirty minutes at 100° C The blank was run in the same way omitting Fehling's solution A (copper sulphate solution)

The method of the British Pharmacopœia, 1932, requires extraction of the ergot with fifty per cent alcohol containing one per cent of tartaric acid The Fluidextract of Ergot made by this method (see Table VI) deteriorated within six months This is about the same rate of deterioration as is observed when the U S P X method of preparation is used The addition of tartaric or of hydrochloric acids to the Fluidextract did not give a stable product as is shown by Tables VI, VII and VIII

In Tables III, VI and IX the method of percolation was changed from the fractional percolation procedure of the U S P X to the single percolation process which is described on page 159 of the Pharmacopœia as process Type A This method of percolation yielded a Fluidextract of Ergot which is as active as the regular U S P X method when made from the same lot of drug (compare Table VI)

Wokes and Elphick (4) found that defatting ergot increased the efficiency of the extraction with either neutral or acidified alcohol Our results as shown in Table IX do not support this statement As a matter of fact we have prepared a standard Fluidextract of Ergot by percolating the whole drug without having applied any preliminary treatment Our attempt to answer the question as to whether the stability of the Fluidextract is influenced by the incomplete removal of the petroleum benzin from the drug before percolation is shown in Table IV The addition of petroleum benzin to the Fluidextract apparently had no effect on the stability

In Table IV the effect of air upon Fluidextract of Ergot was observed by bubbling through the sample, for 48 hours, a current of air previously saturated with the menstruum by passing the air through diluted alcohol No immediate loss of activity was observed, although, on aging the samples, the deterioration progressed more rapidly

In 1930 Thompson (7) recommended that Fluidextract of Ergot be distributed in completely filled bottles in order to prevent undue exposure to air Our findings (see Table IV) agree with his conclusions, since deterioration progressed more rapidly when stored in bottles that were one-fourth full

Our results shown in Table III agree with Linnell and Randle (5) in that an acid alcohol menstruum is more efficient than alcohol alone The table also indicates that the higher percentage alcohol extracts the activity more completely than does alcohol of lower concentration All samples, however, deteriorated upon aging

CONCLUSIONS

1 Fluidextract of Ergot is not stabilized by adjusting the p_H by means of acids

2 A reliable method for determining the p_H of Fluidextract of Ergot is outlined

3 Some lots of crude ergot contain something which tends to stabilize the Fluidextract more than others

4 The addition of rye extract to the Fluidextract of Ergot apparently does not influence the stabilization

5 The addition of sugars increases the deterioration of Fluidextract of Ergot

6 The power of Fluidextract of Ergot to reduce Fehling's solution bears no relation to stability

7 Hypophosphorous acid linseed oil, vitamin A concentrate and hydroquinone favorably influence the stability of Fluidextract of Ergot

8 Fluidextract of Ergot made by the method of the British Pharmacopœia deteriorates the same as that made by the U S P X method

9 The type of percolation is not important

10 Defatting the drug before percolation is not important

11 The activity of ergot is extracted more completely by acid alcohol than by neutral alcohol

12 Higher percentage alcohol is more efficient for percolation of ergot than low percentage alcohol

The authors wish to acknowledge the assistance received from Edward E Swanson, C C Hargreaves, Asa N Stevens, W J Rice and Edward J Hughes for the biological and chemical assay reports in this paper

THE TESTING OF ERGOT

BY HOWARD H CROSBIE

In the course of investigating the breakdown rate of liquid preparations of ergot, we have in this laboratory been using all three usual methods of testing, *i e*, the Broome-Clarke rabbit uterus method, the Allport-Cocking color reaction, and the Cock's Comb method, with a distressing want of correlation, driving one to the verge of despair We have experimented with a photographic modification of the Cock's Comb reaction that we think it worth drawing to the attention of other workers

The method is to photograph the bird, before injection, by means of an appropriate light filter and red sensitive plates so that blue registers as black and red registers as white The bird is then injected and after $1^1/_4$ hours is again photographed on the same plate, consequently the two photographs get the same development The resultant prints although not necessarily good pictures of birds do pick up differences that are not visible to the unaided eye

Before making an assay, one prepares two pairs of reference prints, one pair with a dose of some standard (in this case Ergotoxine ethanesulphonate solution $^1/_2$ mg per cc) of such size as to produce a minimum effect as in Fig 1 Another reference photograph is made of the same bird with a larger dose and more pronounced effect as in Fig 3 In assaying a sample marked "A" a first trial was made on the assumption that it was probably over-strength and a lesser dose of "A" was given than had been given to the same bird in Fig 1 with the result shown

in Fig 2 The dose in Fig 2 being seven-eights that of No 1 one can say that had the effect been the same, Sample A would be 114% of the standard, but the effect is more, therefore the strength of "A" is more than 114% of the standard

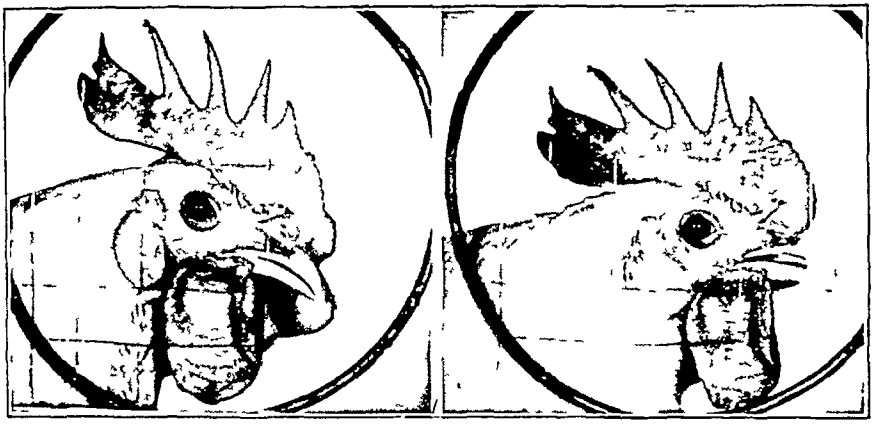

Fig 1 —*Reference print Minimum effect* (not visible to the eye) *Left*, Before injection Animal No 57 Sample No E E S Ampul *Right*, After injection of 1 75 cc —Sept 26, 1934

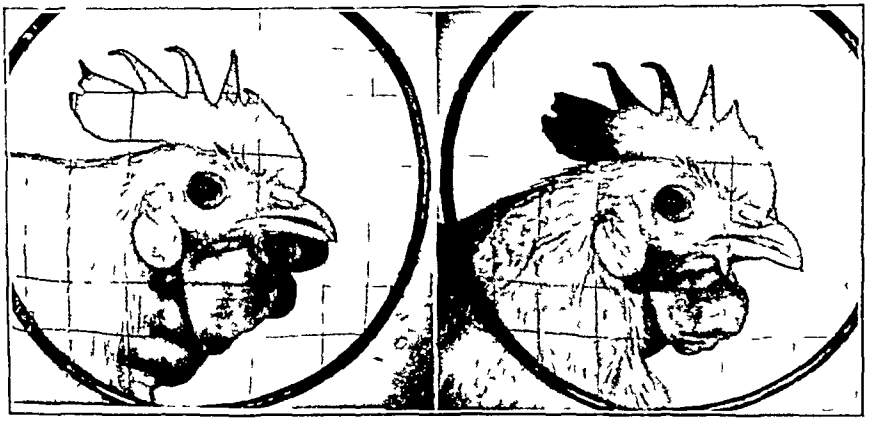

Fig 2 —*The unknown I eft*, Before injection Animal No 57 Sample No A—*Right*, After injection of 1 75 cc —Sept 26 1934

When we compare Figs 2 and 3 we find the ratio of dose 175/250 Had the effect been the same, "A" would be 143% of the standard, but the effect is less, therefore the strength of "A ' is less than 143% of the standard

By taking another bird and administering a dose representing 128% (mean of above limiting values), then comparing the print with the print of this bird's reaction to the standard, one can say whether strength is above or below 128% There seems to be no difficulty in getting results that can be relied on to an accuracy of within 10%

A bird whose temper has been ruffled also ruffles its feathers and may give the impression that the exposures are not the same Prints are best judged by holding at arm's length with partly closed eyes It is also necessary to concentrate

one's attention on the combs alone and to neglect the human hand which shows black, not being in the spotlight

Another question may arise, would another bird give the same result? We cannot trespass on the hospitality of the editor to reproduce the prints but we have photographic evidence that four other birds with this sample gave concordant results

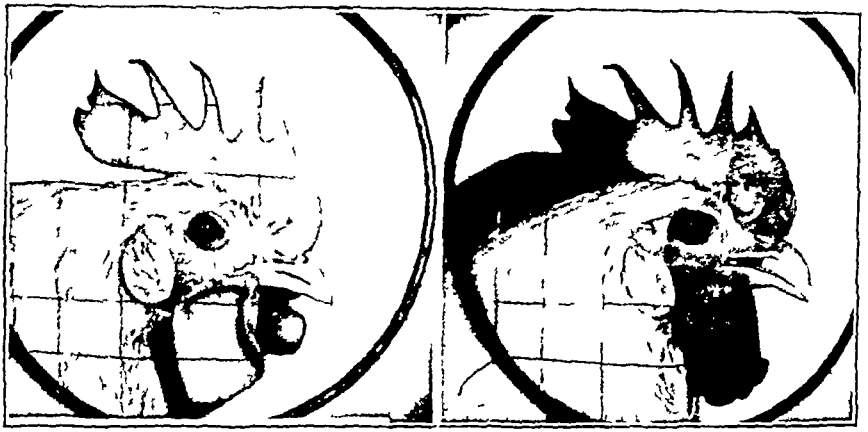

Fig 3 —*Reference print* *Full effect* (visible to the eye) *Left* Animal No 57, Sample No E E S ampul *Right* After injection of 2 5 cc —Sept 19 1934

The difficulties of the official method appear to be chiefly in the lack of power of the human eye to detect a small proportion of blue in the presence of strong red We have been using this photographic method in routine testing of manufactured batches for a considerable time and we are convinced that much more accurate results are obtained thereby, with the additional advantage of having an easily translatable permanent record

After taking more than 100 photographs we have come to the conclusion that reliable results can only be obtained by comparing the photograph of the effect of the unknown against the effect of a standard solution *on the same bird* We have yet to find one pair that contradicts another when compared in this way

The photographic technique is fairly simple, using an "A" filter and Wratten Panchromatic plates, an exposure of $^1/_{15}$ sec at f/4 5 is sufficient when using two photoflood lamps

The function of the ring screen showing in the prints is to avoid the necessity of arranging and refocusing each time, the ring and camera being fixed on a base board which also holds the two flood lights which have reflectors to concentrate the beams on the ring screen This arrangement ensures similar lighting conditions for both exposures

A repeating back is needed to obtain both images on the same plate and is of the usual type

A white background is desirable but pointing to the sky is not practical as blue sky registers as black We find a ground glass screen illuminated from behind gets over this difficulty

THE LABORATORIES OF THE WM S MERRELL COMPANY CINCINNATI, OHIO

BIBLIOGRAPHY OF PHARMACEUTICAL RESEARCH

Compiled by A G DuMez, Reporter on the Progress of Pharmacy

All articles in these lists will be presented in abstract form in the bound volumes of the YEAR BOOK, which is issued annually Those desiring abstracts immediately can obtain them for a fee of one dollar each by communicating with A G DuMez, University of Maryland, School of Pharmacy, N W cor Lombard and Greene Sts , Baltimore, Maryland

DETERMINATION OF THE REASONABLE OR PERMISSIBLE MARGIN OF ERROR IN DISPENSING IV PILLS *

BY MARVIN J ANDREWS [1]

INTRODUCTION

This, the fourth paper of this series,[2] deals with pills

Pills which the pharmacist compounds in the filling of prescriptions are usually made by intimately mixing the ingredients called for in the dry state in a mortar, adding the required amount of liquid excipient and kneading to develope a plastic mass The mass, when of the proper plasticity, is removed from the mortar and rolled into a pill pipe The latter is cut into the desired number of parts which are then rolled into pill form by hand The selection of the excipient and the amount to be used is in most cases left to the judgment of the pharmacist

The possibilities for error, where operations of the foregoing nature are involved in the filling of prescriptions, are numerous, and to determine to what extent each is a contributing factor would be almost an endless task Since, however, some investigations to determine the variations in the weight of pills made by pharmacists have been reported, further studies along this line seemed to be warranted, if for no other reason than to demonstrate the difficulties encountered in attempting to determine what constitutes a reasonable margin or error in preparations of this type

The factors largely responsible for variations in the weight of pills made by the pharmacist are undoubtedly (1) the nature of the excipient used, (2) personal equation and (3) the loss in weight on standing To determine to what extent each of these factors contribute to the total error, the studies reported in this paper were undertaken

* Joint Session, Scientific Section and Section on Practical Pharmacy and Dispensing, Washington meeting, 1934

[1] In collaboration with A G DuMez, Professor of Pharmacy School of Pharmacy University of Maryland

[2] Jour A Ph A, 22 (1933) 755, 838, 23 (1934), 350, 421

EXPERIMENTAL PART

A variety of liquid excipients are used in the compounding of pill masses Soap and water honey or glucose are probably as extensively used as any of them They were, therefore, selected for use in these studies

Three series of experiments were carried out In the first series, tests were made to determine the variation in weight of individual pills in the same batch In the second series, tests were made to determine the effect of the use of different excipients upon weight The principal objective of the third series of tests was to determine the average loss or gain in weight of the batches of pills prepared in the first series after standing for a period of one and two weeks

With these objectives in view the following prescriptions were filled

No 1		No 2		No 3	
℞		℞		℞	
Aloe	2 600 Gm	Aloe	3 250 Gm	Aloe	3 250 Gm
Soap	0 650 Gm	Honey, *q s*		Glucose, *q s*	
Water, *q s*		*To make 10 pills*		*To make 10 pills*	
To make 10 pills		Sig		Sig	
Sig					

In the actual performance of these tests, the pill prescriptions were filled by 100 members of the senior class in dispensing pharmacy at the School of Pharmacy of the University of Maryland under working conditions described in the first paper The completed pills were checked for accuracy with respect to weight by using a prescription balance The standard deviation was computed from the results obtained

In tests made to determine the variation in weight of pills, the students were instructed to mix the powders intimately, then incorporate sufficient excipient to form a plastic mass and divide it into 10 pills In some instances the students used a dusting powder such as lycopodium to facilitate rolling and shaping the pills, while in other instances they were prepared without the aid of a dusting powder

The results of the first series of tests are presented in Tables I, II and III

TABLE I —WEIGHT AND STANDARD DEVIATION IN GRAMS OF BATCHES OF PILLS MADE IN COMPOUNDING PRESCRIPTION NO 1

Batch Number	Weight in Gm.	S D in Gm	Batch Number	Weight in Gm.	S D in Gm.
1	3 969	0 014	51	3 650	0 012

				5 689 Gm	
Average weight of batch (10 pills) =					
Average standard deviation of batches =					0 032 Gm

In Table I, which gives the average weight and the standard deviation of each of the individual batches of pills called for in prescription No 1, it will be observed that in this series of tests the average weight of a total of the 100 batches is 3 659 Gm or an increase of 0 409 Gm over the theoretical weight before adding the excipient On further examination it will be observed that the average standard deviation is 0 024 Gm Sixty of the batches of pills filled fall within the average standard deviation, or 0 024 Gm , thirty-nine batches fall within twice the average standard deviation, or 0 048 Gm , while one batch (No 33) falls within three times the average standard deviation, or 0 072 Gm

In Table II, the results show that the average weight has increased 1 545 Gm over the theoretical weight of 3 250 Gm on adding honey as the excipient The average standard deviation for this series is 0 029 Gm Fifty of the batches of pills filled fall within the average standard deviation of 0 029 Gm , forty-six fall within twice the average standard deviation, or 0 058 Gm , while the remaining four batches fall within three times the average standard deviation, or 0 087 Gm

In Table III, it will be observed there is an average increase of 2 439 Gm over the theoretical weight of 3 250 Gm when glucose is added as the excipient The average standard deviation for this series of tests is 0 032 Gm Fifty one of the batches of pills filled fall within the average standard deviation of 0 032 Gm, forty-eight batches fall within twice the average standard deviation, or 0 064 Gm, while the one remaining batch falls within three times the average standard deviation, or 0 096 Gm

The data obtained in this series of tests show that the use of different excipients in massing the same ingredients has a marked effect upon the weight of the completed pills The increase in the average weight and in the average standard deviation on adding different excipients is in the following order (1) soap and water, (2) honey and (3) glucose

(To be continued)

NOTES ON EARLY DRUG LEGISLATION *

BY F W NITARDY

Recent discussions of drug control by the Federal Government have been chiefly restricted to the problems of the present century Readers might conclude from these discussions that the passage of the present federal law in 1906 was the first considerable achievement in favor of the consumer, and that in the absence of public interest this was instigated and largely supported by a Government bureau, the Department of Chemistry Even a casual investigation of the periodical literature of the past century will change such view The Food and Drugs Act of 1906 was not the first legislation of its kind nor was its passage accomplished by an individual or a group of individuals as a result of a few years of agitation This legislation was the outgrowth of over half a century of effort in which laymen, physicians, pharmacists and drug manufacturers alike participated The following isolated instances, while not in any sense representing a complete résumé of the subject, illustrate the extent and ramifications of the campaign to obtain pure drugs for the consumer and professions of medicine and pharmacy

As early as 1848 Congress passed an "Act to prevent the importation of adulterated and spurious drugs and medicines" In its original form it had been introduced into Congress early in the year and was supported by memorials from various organizations including the American Medical Association, Surgeons in the Army and Navy, the physicians and apothecaries of the District of Columbia and by circulars published by the College of Pharmacy of New York in which attention had been publicly drawn to the large quantities of sophisticated chemical and pharmaceutical preparations imported The gross adulteration of drugs such as opium, blue pill mass and quinine sulphate had been described by Dr M J Baily, examiner of drugs at the New York Customhouse, who further reported in hearing before the House Committee that more than one-half of many of the most important chemical and medical preparations together with large quantities of crude drugs, arrived in this country so much adulterated or otherwise deteriorated as to

* Section on Historical Pharmacy, A PH A, Washington meeting, 1934

render them not only worthless as medicine, but often dangerous This Act, as approved on June 26, 1848, required examination of products used wholly or in part as medicine, at the port or entry, for quality, purity and fitness for medical purposes Such products found adulterated or deteriorated so as to render them inferior in strength and purity to the standard established by the United States, Edinburgh, London, French and German pharmacopœias and dispensatories, and thereby improper, unsafe or dangerous to be used for medicinal purposes were refused passage The owner had option of requesting reexamination of strictly analytical character at his own expense, and if the examiners' rejection was sustained, the privilege of reexporting the material within 6 months after payment of costs and depositing surety bond In lieu of such reexportation within the specified period the material was to be destroyed by the Collector Special examiners were appointed for this work, salaries of $1600 00 for the Port of New York and of $1000 00 for other ports were specified [1] Early in 1849 the Act was amended to improve the salaries of special examiners of drugs, medicines, etc

The American Medical Association had appointed a committee to study this question, the members having been instructed "to note all the facts that come to their knowledge, with regard to adulterations and sophistications of drugs, medicines, chemicals, etc" The report made in 1850 discussed both foreign and domestic adulteration In the port of New York, certainly, the quality of imported material had markedly improved since the passage of the federal law On the other hand the law caused certain inconveniences to the manufacturers, largely due to uncertainty with regard to standards In connection with domestic adulteration the Committee mentioned the frequent adulteration of powdered drugs, mercurial preparations, etc It recommended that the state legislatures be requested to pass laws authorizing the appointment of inspectors, and making it a penal offence to deal in adulterated drugs and medicines No such action was taken by the Association but the Committee was continued [2] At the annual meeting of the American Medical Association in 1853, the president's report, referring to good results obtained from the federal law, recommended that individual states be encouraged to study the situation

For some time members of the New York College of Pharmacy had been studying the problem of adulterated drug imports Since the passage of the law of 1848 difficulties were considered to be due chiefly to lack of standards for the guidance of Drug Examiners and to some extent to the appointment of unqualified examiners In 1851 the Board of Trustees of that institution appointed a committee to investigate the subject The Committee considered that other Colleges of Pharmacy should take part and invited the Colleges of Boston, Philadelphia, Baltimore and Cincinnati to send delegates to a Convention to be held in New York on April 24, 1851, for the purpose of recommending a tariff of standards for the use of Drug Inspectors—which it proposed to bring before the National Medical Association, to meet on the 6th of May, at Charleston, S C, that its influence might be brought to bear with Congress Delegates from these institutions did

[1] *Trans Am Med Assoc*, 1 (1848), 336

[3] *Ibid*, 6 (1853) 77

not arrive but several of them sent communications expressing aproval of the project The duration of the Convention—four days—was such that little was accomplished but the delegates of the New York College adopted the report of their Board of Trustees and sent it to the meeting of the National Medical Asso ciation [1] The recommendation of the Convention with regard to standards was submitted to the National Medical Association with the Report of the Committee on Adulterated Drugs, which unfortunately, was for other reasons refused publica tion by the Association [2] The proposed establishment of standards was fully approved but it was the opinion of the Medical Association that the subject was properly the province of the pharmaceutical profession

A subsequent convention of delegates from the colleges at Philadelphia, Boston and New York was held in October 1851 [3] This convention recommended the adoption of standards for but a few drugs Opium, scammony, elaterium, iodine, gum resins, cinchona bark and rhubarb More important was its action in calling a further convention to be held in Philadelphia a year later to consider the formation of a National Association to meet every year This was the beginning of the AMERICAN PHARMACEUTICAL ASSOCIATION

In 1857 the Treasury Department published the regulations, explanations and standards which had been adopted up to that time

The AMERICAN PHARMACEUTICAL ASSOCIATION, in its *Proceedings* of this period, repeatedly mentioned adulteration of imported drugs and apparently decided that its continuance was due to unqualified examiners, for in 1858 it presented a petition to Congress describing evasion of the law of 1848 by reship ment from port of rejection to other ports where less vigilance was employed in examination It requested amendments to the law which would change the mode of appointment of examiners, increase in salaries of examiners and the furnishing of chemicals so that examiners might apply chemical tests when necessary to de termine quality of drugs [4]

By 1861 the incorporated medical and pharmaceutical bodies of the collection district of New York had proposed, through a joint committee, to take some de-cided action to secure the proper execution by the Federal Administration of this law to prevent the importation of adulterated and spurious drugs and medicines The Committee appointed by the Medical Society of the State of New York con sisted of Drs Frank H Hamilton, John H Griscom and Edward R Squibb The joint committee comprised also committees appointed from the Kings County Medical Society, the New York County Medical Society, the New York Academy of Medicine and the New York College of Pharmacy This joint committee sent memorials to President Lincoln and to the Secretary of the Treasury, Salmon P Chase, protesting the necessity of appointing as examiners under the law of 1848 candidates who were graduates of medical or pharmaceutical colleges and whose competency had been established by the medical boards of examination of the Army and Navy Copies of similar memorials were sent to the Secretary of the

Treasury by several of the New York hospitals, by two prominent New York pharmacists, three druggists and importers, and two importers The Colleges of Pharmacy of Boston, Philadelphia, Baltimore and Chicago took similar action In spite of such representations the next Examiner for the Port of New York, although in early life a druggist, was said to have had slight suitability for the work and to have been appointed for "strong political reasons"[1]

At the annual meeting of the American Medical Association in 1860 a committee consisting of Drs Joseph Carson, Henry J Bowditch and E R Squibb, was appointed to report on the "Practical Working of the U S Law to Prevent the Importation of Adulterated and Spurious Drugs and Medicines" No report was made but the committee was reappointed in 1863 In 1864, it was found impossible on account of lack of accordance to prepare a report, and the committee was discharged At the time of the discharge, Dr Edward R Squibb presented in the form of a paper such data as had been collected by him His conclusions make it evident that the law was not administered in a manner satisfactory to the ethical manufacturer He stated, "This law to prevent the importations of adulterated and spurious drugs and medicines has not prevented, and does not now prevent, such importations" He considered the principal reasons why it did not to a much greater extent fulfil its important objects to be the failure of the Secretary of the Treasury to appoint "suitably qualified persons" and because the incumbents of the more important of these offices failed to perform diligently and faithfully the duties of the office, as prescribed by the act He further claimed that the standards used by these examiners were uniformly below those specified by the U S Pharmacopœia

> "For some time after the passage of the law, numerous instances of rejection of most of the common drugs were heard of, and these continued some time after the operation of the law had made it known at the sources from whence these foreign drugs come Inferior foreign drugs, however, were never absent from the market at any time, and the effect of the law seemed rather that of increasing the proportion and the demand for good drugs than of excluding bad ones
> A little later in the history of its application, however, glaring instances of maladministration appeared to become more numerous, and political party influences took possession of the offices under the law, so that by the year 1860, when the Association's first committee was appointed abundant evidence could be adduced to show that the law was rarely administered at all, and that its value to the medical profession consisted mainly in its existence upon the statute book"[2]

In 1868 the AMERICAN PHARMACEUTICAL ASSOCIATION appointed a committee to draft a law regulating the entire practice of pharmacy This committee, reporting in 1869, proposed a law intended also to prevent adulteration of drugs and medicines Section 16 of this law would have made it illegal to mix knowingly any inert or foreign substance with drugs or medicinal preparations with the effect of weakening or destroying medicinal power, or to sell the same otherwise than in the unbroken original package put up by the manufacturer or to sell such unbroken package knowing the article contained therein to be so adulterated Discussion of the proposed law as reported in the PROCEEDINGS did not cover this section but was restricted largely to that portion covering the qualification of pharmacists The ASSOCIATION could not agree upon the Committee report and did not approve

[2] *Trans Am Med Assoc* 15 (1865), 141–150

it It did, however, send copies of the proposed law to the legislatures of the various states suggesting the desirability of enacting legislation on the subject [1]

The singular lack of agreement over the necessity for stringent Government control of drugs has been evident for a great many years In 1879 a committee appointed by the Philadelphia Drug Exchange to consider the need for such legislation reported that adulteration was of limited extent The Board of Directors adopted this report which expressed opposition to legislation owing to the difficulty of wise and just administration, the possibility of financial losses resulting from price changes occurring during the examination of drugs and the difficulties of fixing of responsibility for adulteration [2]

Legislation to prevent the adulteration of drugs and medicines was considered in 1878–1879 by a committee composed of representatives from the New York Academy of Sciences, the New York Academy of Medicine, the New York County Medical Society, the Therapeutical Society, the New York College of Pharmacy, the New York Medico-Legal Society, the Public Health Association and the American Chemical Society [3]

In 1879, Dr Edward R Squibb proposed an "Act to Prevent the Adulteration of Food and Medicine"[4] which is interesting because of its severity and because it included also cosmetics He proposed that for the purpose of this law, the term "Food" should include every article used for food or drink or in food and drink, of man and animals, and that the term "Medicine" should embrace every article, other than food and drink, used for the preservation of health, or for the relief or cure of disease in man or animals, including antiseptics and disinfectants and cosmetics As standards he specified the U S Pharmacopœia for articles embraced by that authority, and for other articles the national pharmacopœias of other countries or other commonly accepted standard authority He defines adulteration as (1) the adding of one or more substances to another or others whereby the strength, purity, quality or true value of the resulting substance or mixture is reduced or lowered from its original or true value, (2) the substitution of one substance for another, (3) the abstraction of any part of any substance with the effect that the separation shall reduce that value of the substance, (4) the application of a name commonly known or understood to indicate any substance, to any part or parts thereof, or to any other substance, (5) the presence in any substance of any impurity, or any foreign matter that is either natural or accidental to it, if in unusual proportion, (6) the admixture of different qualities of the same substance with the effect of tending to deception and fraud, (7) any debasement or dilution of any substance whereby it is reduced in intrinsic value, and is yet liable to be given, bought, sold or used as though it were not debased or diluted, (8) any coloring, coating, polishing or powdering, or any other alteration in the physical condition or sensible properties of any substance, with or without addition to, or subtraction from it, whereby damage is concealed, or it is made to appear better and greater than it really is, either in quality, weight or measure, or whereby im

purities or defective quality are partially or wholly masked or hidden, (9) the giving or selling or offering for sale, or the possession of any adulterated article by any person whose business it is to make or to deal in articles of food or medicine It is declared that "the sole and entire object and intention of this law [is] to protect the public against deception and fraud in the cost and quality of food and medicine through adulteration "[1]

In 1881, legislatures of New Jersey and New York passed practically identical laws controlling Food and Drug adulteration They required that "drugs must conform to the U S P standards or if not sold under or by a name recognized in the U S P must not differ materially from standards laid down in other pharmacopœias or standard works of Materia Medica " They also specified that prosecution under the law be based on analysis requested by an agent or board of health appointed under the act State legislation was passed in Michigan during the same year and in 1882 by Massachusetts, Minnesota, Tennessee, Texas and Louisiana Several of these laws prescribed no standards for determining adulteration [2] Undoubtedly many of the other states passed similar laws prior to the Federal law of 1906

The above legislation was sponsored by the National Board of Trade and National Board of Health A bill prepared by a committee of experts under direction of the former organization was also introduced before the Senate of the 47th Congress by Mr Miller of New York on Dec 20, 1881 In its definition of adulterated drugs this bill resembled the present Food and Drugs Act but was much broader since it covered also drugs sold under or by names not recognized in the United States Pharmacopœia [3] This bill was criticized by Dr Edward R Squibb because it made no legal provision for obtaining or identifying samples nor for examining them, but delegated this to the National Board of Health [4] This bill restricted the term "drug" to include medicines for internal or external use It did not therefore attempt to control the composition of cosmetics

In 1883 Dr Harvey W Wiley became Chief of the Division of Chemistry in the Department of Agriculture and soon thereafter began his efforts to force the passage of federal legislation on adulteration of food and drugs The subsequent history of the movement and the passage of the Food and Drugs Act of 1906 is described in Dr Wiley's Autobiography published in 1930 It is evident, however, from the material discussed above that the passage of such legislation was to a considerable extent due to the continued attempts of various individuals and scientific and professional organizations to obtain similar regulation

PHARMACY WEEK WINDOW DISPLAY COMMITTEE

The following committee members will serve as judges of the 1934 Window Display Contest *Chairman*, Dean John F McCloskey, Loyola University, New Orleans College of Pharmacy, E V Kimzey and J Culver, wholesale druggists, P Grossman and A Worner, retail pharmacists, all of New Orleans

AMENDMENTS TO THE FEDERAL FOOD AND DRUGS ACT PROPOSED BY DRS WILEY AND KEBLER NEARLY A GENERATION AGO *

BY LYMAN F KEBLER [1]

The present agitation for amending or repealing the Food and Drugs Act of 1906 brings to mind many past activities and accomplishments One frequently hears it said that cosmetics were not of sufficient importance, or prominence, previous to or at the time this law was enacted, to include them in the legislation In this connection it may be interesting to note that cosmetics, for ages, played a prominent part in the make-up of the fairer sex, to enhance their attractiveness and to please mankind Like all good things, their use has increased with prosperity, the fashions and demands of the time

Cosmetics were used in such abundance, even in the sixties, that they were included[2] among the products for raising revenue, to pay the indebtedness caused by the rebellion in our country Congressman Marriott Brosius included cosmetics in his first food and drug bill (*H R 5441*), introduced December 18, 1897 He included them in several subsequent bills but they were omitted from his last two bills Cosmetics were made a part of the District of Columbia Food and Drug Law, approved February 17, 1898 On March 4, 1898 the National Pure Food and Drug Congress, comprising over 250 delegates, amended and adopted the then pending Brosius bill, which amended bill included cosmetics Companion bills in the Senate at the time, also covered cosmetics Due to the opposition that developed to the inclusion of drugs generally, in a law to be administered by the Department of Agriculture certain bills covered foods and pharmacopœial drugs only Cosmetics went out of the picture for many years but were again brought forward in time

In view of the fact that there have been such determined efforts made to supplant the present Food and Drugs Act in some quarters, rather than to amend it, let us see what Dr Wiley and others thought about amending it in 1911 and 1912 The purpose of the amendments was to heal the breach caused by the United States Supreme Court decision in a case involving an alleged cancer cure, to cover cosmetics and therapeutic devices, to reach false and misleading advertising separate and apart from the package, to increase the number of drugs to be declared on the label, to control unscrupulous parties sending medicines directly to the consumer and to reach other features These amendments cover the essential features of the bills introduced in Congress in 1933 and 1934, excepting food standards

The request for making food standards was embodied in a goodly number of the early bills and always met defeat Dr Wiley was reluctant to take up this feature in the proposed legislation Food standards was one of Dr Wiley's hobbies but he knew from experience the temper and power of the interests involved I think all will agree that with his vast experience in food and drug legislation, Dr Wiley was eminently qualified to propose and prepare effective amendments

* Section on Education and Legislation, A PH A Washington meeting 1934.

[1] Former Chief of Drug Division, Bureau of Chemistry, United States Department of Agriculture

[2] U S Stat at L 12, 484 (1862)

to the Federal Pure Food law It is likewise evident that with the multiplicity of Federal, State and Municipal legislation, affecting foods, drugs and public health, that the various enforcing officers, chemists, druggists, physicians, attorneys, consumers, advertising agencies, the business interests involved and others, were keenly alive and sensed the justice or otherwise, of amendments that may be proposed to existing laws or the enactment of new laws on these subjects

A FEW SALIENT FEATURES IN FOOD AND DRUG LEGISLATION

In order that our memories may be refreshed, permit me to briefly call attention to a few of the salient mile-posts on the way to the enactment of the Pure Food Law The quality of the medicines and chemicals imported into the United States during the first half century of her existence were exceedingly poor in character Apothecaries, physicians and chemists became greatly aroused As a result of the agitation that developed a law was passed in 1848,[1] prohibiting the importation of spurious and adulterated drugs and medicine The standards recognized were "the United States, Edinburgh, London, French and German pharmacopœias and dispensatories" This safeguarded the sick so far as imports were concerned, but nothing was done to control the purity of domestic medicines for many years thereafter Strange as it may seem, a fairly efficient food and drug law was passed in the state of California in 1872 [2] The United States Congress in 1878[3] enacted a law for the District of Columbia, penalizing pharmacists who adulterated their drugs, chemicals and medicines

Congressman H B Wright of Pennsylvania introduced the first Federal Food Bill in the United States Congress, January 20, 1879 It covered foods only and was a good bill for a beginning, but died in Congress The same bill was reintroduced in the next Congress by Representative R L T Beale of Virginia, May 23, 1879, and made some progress, but also came to naught The subject, however, created a great stir at the time, particularly by George T Angell, a prominent, wealthy and experienced Boston attorney, who had the health and welfare of humanity at heart This publicity resulted in the National Board of Trade, at its annual meeting in December 1879, offering $1000 00 in prizes for a draft of a "Food Adulteration Act" The same year Congress authorized the formation of a "National Board of Health" In 1880 the report on the above prizes appeared[4] together with a draft of a proposed Food and Drug Law, by the National Board of Health, based on the first prize essay, by Dr G W Wigner of England, where a similar law had been in operation for a number of years It may be of interest to note that Dr Wigner's prize essay contains the essentials and is the basis of most of the general food and drug laws enacted in the United States, so far as adulteration is concerned

In 1881 one food and drug bill was introduced in the Senate and three in the House All were based on the Wigner prize essay Over one hundred food and drug bills were introduced in the United States Congress from 1879 to 1906, inclusive

UNITED STATES SUPREME COURT DECISION MAKES BREACH ON LAW

Dr H W Wiley was appointed Chief of the Bureau of Chemistry, United States Department of Agriculture in 1883 and soon thereafter began to take part in the proposed food and drug legislation There was probably no one better qualified than Dr Wiley to see through some of the machinations resorted to, to frustrate the passage of such a law or make it innocuous after its enactment He recommended and made numerous suggestions and amendments to the various bills that were proposed over a period of nearly a quarter of a century His interests were primarily centered in foods Drugs were largely incidental He relied generally on the advice of others in case of medicines

I became identified with the work as Chief of the Drug Laboratory in 1903 Dr Wiley delegated the drug work to me, including the legislative activities I was to keep him advised There was, as stated above, a vast amount of opposition in some drug quarters to a national law controlling the quality of drugs, but after the law was passed in 1906, the drug trade generally supported it We were making good progress with its enforcement, when like a thunderbolt came a Federal Circuit Court decision holding that the Act did not cover therapeutic claims The case was appealed to the United States Supreme Court This Court sustained the lower court, one reason being that it was enforced in the Bureau of Chemistry The language generally believed controlling, in the case of drugs, Section 8, reads, "That the term 'misbranded' as used herein shall apply to all drugs the package or label of which shall bear any statement, design or device regarding such article, or the ingredients or substances contained therein which shall be false or misleading in any particular " The Supreme Court, in a divided opinion, 6 to 3, held that this language covered adulteration but did not reach curative claims The fact that nine of the most eminent jurists disagreed on the meaning of this section of the law, shows that it was not clear and definite in spite of its constructive criticisms by many attorneys of the land

Amendments to this law were proposed before it actually went into effect About a dozen bills to amend the Act had been introduced in Congress up to the time the United States Supreme Court handed down its decision in the Johnson cancer cure case, May 29, 1911 This decision necessitated the abatement of a large number of cases under consideration, some of which were in court Alleged cancer cures were considered among the most flagrant violations under the law We felt rather jubilant that the defendant was courageous enough to contest the case in court There was little doubt in our minds as to the final outcome, but we were greatly disappointed The flood-gates of former days of flamboyant curative claims were thrown wide open There was rejoicing in some camps and certainly depression among those enforcing the food laws

PRESIDENT TAFT'S SPECIAL MESSAGE TO CONGRESS

President William H Taft fully appreciated the seriousness of the situation, as is tersely shown by the following, now historic, special message he sent to Congress

PURE FOOD AND DRUGS ACT

The Vice-President laid before the Senate the following message from the President of the United States (House Doc No 75), which was read

To the Senate and House of Representatives

Your attention is respectfully called to the necessity of passing at this session an amendment to the food and drugs act of June 30, 1906 (*34 Stat., 768*) which will supplement existing law and prevent the shipment in interstate and foreign commerce and the manufacture and sale within the Territories and the District of Columbia of worthless nostrums labeled with misstatements of fact as to their physiological action—misstatements false and misleading even in the knowledge of those who make them

On June 30, 1906, after an agitation of 20 years the food and drugs act, passed by the Fifty ninth Congress, received the approval of the President and became law The purpose of the measure was twofold—*first* to prevent the adulteration of foods and drugs within the jurisdiction of the Federal Government, and *second* to prevent any false labeling of foods and drugs that will deceive the people into the belief that they are securing other than that for which they ask and which they have the right to get The law was received with general satisfaction and has been vigorously enforced More than 2000 cases have been prepared for criminal prosecution against the shippers of adulterated or misbranded foods and drugs and seizures have been made of more than 700 shipments of such articles More than two thirds of these cases have been begun since March 4, 1909 Of the criminal cases more than 800 have terminated favorably to the Government, and of the shipments seized more than 450 have been condemned and either relabeled or destroyed In every case in which the food seized was deleterious to health it was destroyed A large number of cases are now pending

The Supreme Court has held in a recent decision (*United States vs O A Johnson opinion May 29, 1911*) that the food and drugs act does not cover the knowingly false labeling of nostrums as to curative effect or physiological action, and that inquiry under this salutary statute does not by its terms extend in any case to the inefficacy of medicines to work the cures claimed for them on the labels It follows that, without fear of punishment under the law, unscrupulous persons knowing the medicines to have no curative or remedial value for the diseases for which they indicate them, may ship in interstate commerce medicines composed of substances possessing any slight physiological action and labeled as cures for diseases which, in the present state of science, are recognized as incurable

An evil which menaces the general health of the people strikes at the life of the Nation In my opinion, the sale of dangerously adulterated drugs or the sale of drugs under knowingly false claims as to their effect in disease, constitutes such an evil and warrants me in calling the matter to the attention of the Congress

Fraudulent misrepresentations of the curative value of nostrums not only operate to defraud purchasers but are a distinct menace to the public health There are none so credulous as sufferers from disease The need is urgent for legislation which will prevent the raising of false hopes of speedy cures of serious ailments by misstatements of fact as to worthless mixtures on which the sick will rely while their diseases progress unchecked

At the time the food and drugs act was passed there were current in commerce literally thousands of dangerous frauds labeled as cures for every case of epilepsy, sure cures for consumption and all lung diseases, cures for all kidney liver and malarial troubles cures for diabetes cures for tumor and cancer, cures for all forms of heart disease, in fact, cures for all the ills known at the present day The labels of many of these so called cures indicated their use for diseases of children They were not only utterly useless in the treatment of the disease, but in many cases positively injurious If a tithe of these statements had been true, no one with access to the remedies which bore them need have died from any cause other than accident or old age Unfortunately the statements were not true The shameful fact is that those who deal in such preparations know they are deceiving credulous and ignorant unfortunates who suffer from some of the gravest ills to which the flesh of this day is subject No physician of standing in his profession no matter to what school of medicine he may belong, entertains the slightest idea that any of these preparations will work the wonders promised on the labels

Prior to the recent decision of the Supreme Court the officers charged with the enforcement of the law regarded false and misleading statements concerning the curative value of nostrums as misbranding and there was a general acquiescence in this view by the proprietors of the nostrums Many pretended cures, in consequence, were withdrawn from the market and the proprietors of many other alleged cures eliminated false and extravagant claims from their labels

either voluntarily or under the compulsion of criminal prosecution Nearly 100 criminal prosecutions on this charge were concluded in the Federal courts by pleas of guilty and the imposition of fines More than 150 cases of the same nature, involving some of the rankest frauds by which the American people were ever deceived, are pending now, and must be dismissed

I fear, if no remedial legislation be granted at this session, that the good which has already been accomplished in regard to these nostrums will be undone, and the people of the country will be deprived of a powerful safeguard against dangerous fraud Of course, as pointed out by the Supreme Court, any attempt to legislate against mere expressions of opinion would be abortive, nevertheless if knowingly false misstatements of fact as to the effect of the preparations be provided against, the greater part of the evil will be subject to control

The statute can be easily amended to include the evil I have described I recommend that this be done at once as a matter of emergency

The White House, June 20, 1911 Wm H Taft

President Taft stressed the necessity of controlling "knowingly false misstatements of fact" but cautioned against legislation covering "mere expressions of opinion "

BILLS INTRODUCED TO REMEDY THE BREACH

On the same day that the President sent his message to Congress, Representative Swager Sherley introduced a bill to amend Section Eight, dealing with misbranding, to remedy the breach caused by the United States Supreme Court decisions Senator McCumber introduced a companion bill (*S 2849*) in the Senate, June 22, 1911 Hon William Richardson introduced several bills for the same purpose, one June 24th, another July 5th and a third December 4th, all during 1911 Dr Wiley and I were called on to draft suggestions regarding certain amendments proposed in the Richardson bill Hearings were had on the December 4th bill, H R 14060, which embodied all of the amendments in the Richardson bills Other proposed amendments then pending also came up for consideration, particularly the Sherley bill, H R No 11877 The hearings were held before the Committee on Interstate and Foreign Commerce, House of Representatives, 62nd Congress, 2nd Session, April 23rd to 29th, inclusive

Mention should be made that Dr Wiley retired to private life, April 1, 1912, and I was directed by Secretary Wilson to give the Committee every possible assistance This all followed shortly on the heels of the unfortunate attacks made on us in the Department Even though we were exonerated I was not feeling at my best to handle the various problems raised I called on my former Chief for advice and assistance

AMENDMENTS PROPOSED FOR SECTION SIX

The following amendments were embodied in Section Six of this bill

"Or device," ' also soda and potash lye, also cosmetics, hair preparations and dyes and toilet preparations, also tobacco, snuffs, tobacco substitutes and all tobacco products "

Based on my experience and knowledge I suggested the inclusion of devices and cosmetics The lye and tobacco features were included by request, as will be noted later During the hearings, about a dozen of assorted devices or therapeutic devices, as we called them later, were shown, a partial list of which will be found on page 45 of the hearings, 1912

Therapeutic devices were never to my knowledge included in this type of legislation before

The question was raised as to the propriety of including devices under the heading of drugs, as is shown by the following

Mr Esch Doctor, do you see any inconsistency in declaring by statute that these mechanical devices are drugs? That is what that section does

Dr Kebler Congress can declare anything a drug if it wants to

Mr Esch. If that meaning is not in the dictionary could we give any interpretation we see fit as to words?

Dr Kebler Oh, yes, there is no question about that

Mr Stevens But we can t declare that to be a fact which is not a fact?

Dr Kebler These commodities are used for the treatment of diseases

Mr Esch One of the amendments is that the term ' drug" shall include 'device," and your interpretation of "device" is made clear by these mechanical devices

Dr Kebler Yes, and also they carry with them an element of medication, as a rule

Mr Esch That might be so of that

Dr Kebler Here is one (indicating) which you will find contains a little battery inclosed in it somewhere, or it is to be attached to a battery, for the purpose of conducting electricity

Mr Esch I know that would not be a drug

Dr Kebler Electro therapeutics is considered under that line

Mr Esch. It is used as a medication not as a drug

Dr Kebler It is a therapeutic agent, we have it as a part of the medical course in every up to-date medical school

Mr Esch The point I am trying to get at is whether we ought to make such a declaration in this section or to provide a separate section covering devices

Dr Kebler Well, of course, that is for Congress, or this committee, to determine, not for me But I think it could easily be covered there, because they are so analogous to the ordi nary agents that are used for the treatment of diseases, and are supposed to have the same effect

After this questioning by Congressman Esch, and questions raised by others, Dr Wiley and I felt that it would be unwise to push the matter We were not interested in distorting the dictionary meaning of terms used in the law, because we had to resort to dictionaries in our work and believed it injudicious to set an example that might cause embarrassment later, but we were not prepared to amend the law by proposing a new section covering therapeutic devices at the time I was rather surprised that no one raised a question about stretching the term "drug" during the two hearings of Senator Copeland's bills, S 1944 and S 2800, in 1933 and 1934, respectively And these bills covered every sort of device, even those that might aid in the function of man or other animals The question of distorting the dictionary meaning of terms seemed to be lost sight of by all parties concerned They were to be called drugs as a matter of course

In the enforcement of the law we came across a goodly number of cosmetics which we believed should be controlled in the same manner as foods and drugs were controlled Attention was called by name to an assortment of these products on the market at the time, containing deleterious agents, among which may be named corrosive sublimate, white precipitate, silver nitrate, soluble lead salts and paraphenylendiamin, an aniline derivative Some of these cosmetics were reported at times to produce harmful results to the user In most cases there probably was a supersensitiveness or idiosyncrasy on the part of the user, or the product may not have been applied according to directions

No objections were made at the time of the 1912 hearings to the inclusion of cosmetics under the definition of drugs, in the law A partial list will be found on pages 42 and 91 of the hearings

Soda and potash lye were introduced at the request of the manufacturing industry The substitution of soda lye, the cheaper product, for potash lye, was a common practice In many instances soda lye is as useful as potash lye, but for some purposes it is entirely unsuited and may result in damage

Tobacco and tobacco products were included at the request of Senator Taylor of Tennessee He called attention to serious cases of adulteration and misbrand ing Among the harmful adulterants reported may be mentioned arsenic and lead The arsenic came from the sprays used to control the ravages of insect pests Lead in former days came largely from the lead foil in which the tobacco was commonly wrapped Some may also have come from the lead arsenic spray used

As a matter of fact attention was called to the eminent danger to health be cause of the promiscuous and indiscriminate use of arsenic and lead sprays on our foods, in checking the depredation of insect pests Reference was made to the fact that the British Government put a tolerance of 1 4 parts in beverages and about 20 parts of lead per million on foods We felt that the 1906 pure food law covered the addition of these poisons to our foods and should be vigorously en forced At the hearings the old-time question as to the recognition of the Home opathic Pharmacopœia was raised In fact Senator Gallinger introduced a bill (S 4856) January 29, 1912, providing for the recognition of the Homeopathic Pharmacopœia by the food law After some discussion Dr Kebler said, "I see no objection whatever to introducing into this law a homeopathic pharmacopœia, providing the homeopathic profession gets together and decides on the pharma copœia, and provided further that the standards now in the law are not interfered with" Others expressed similar views It should be said that it was asserted over and over again that the inclusion of the pharmacopœia was delegating power and therefore illegal The U S Pharmacopœia and even the pharmacopœias of certain foreign countries were recognized as standards in the 1848 drug import law and no one had upset that law, after sixty-four years of enforcement, because of this alleged delegation of power

CHANGES SUGGESTED FOR SECTION SEVEN

Section Seven was amended to include the changes embodied in Section Six of the bill and to cover methyl alcohol, which was considered an undesirable constituent of medicines

At the importunities of physicians and the retail drug trade, it was suggested at the hearings that the proviso commonly referred to as the variation clause, be deleted The issue was raised by Chairman Richardson This precipitated an acrimonious discussion on the part of some interests Dr Kebler said, "I did not intend to say anthing on that matter—"* * * * * But after the question was raised he reviewed conditions rather extensively and recommended its elimi nation It was vehemently contended that its elimination would make the law unconstitutional

AMENDMENTS TO SECTION EIGHT DISCUSSED

Section Eight dealing with misbranding was amended to reach all forms of false or misleading advertising, wherever and in whatever manner used, to control, by means of licensing, irresponsible persons sending medicines directly to the consumer, and to increase the number of drugs to be declared on the label

The part dealing with false or misleading advertising of foods or drugs reads "or if the label or labels or any advertisement, poster, circular, or otherwise, contain any false or misleading claims or representations relative to disease or symptoms of disease, to be read or intended to be read by the laity, which are intended or calculated to produce in the minds of persons reading them or to whom the same may be read, a false impression of the existence of disease in their own bodies, or if any statement or expression of opinion concerning its physiological, therapeutic, nutritive or remedial property be made or promulgated in any manner so as to deceive or mislead, or which shall deceive or tend to deceive the purchaser "

Dr Wiley and I were surprised that no material objections were made to this proposed, rather inclusive as we thought, amendment, an amendment that covers advertising in all forms, including curative claims for drugs and nutritional representations for foods

The bill also contained the following additional clause in the matter of publicity, "or when represented to the public in any way as having any remedial property" We suggested that this clause be expunged, believing that the above proposed amendment was all sufficient

HABIT-FORMING AND DELETERIOUS DRUGS TO BE DECLARED IN LABEL

Another misbranding amendment reads

Or if it be a drug offered for sale to the laity, directly or indirectly, which contains any habit-forming or deleterious ingredients to wit acetanilid antipyrin acetphenetidin, anesthesin alcohol, aspirin, alpha and beta eucain, arsenic barium salts carbolic acid, caustic hydroxids, chloroform chloral cocaine creosote, cantharides croton oil, caffein cannabis, heroin, holocain, hydrocyanic acid, lead salts, morphin, methyl alcohol mercury salts, novocain nux vomica orthoform phenacetin the phosphides, theobromin, theophyllin trional, stovain, strychnine vernol yellow phosphorus cotton root ergot pennyroyal, rue savin, tansy the poisonous alkaloids all heart depressants or excitants, or any compound or preparation or derivative of any of the foregoing, and to any food or drug product which is falsely branded as to the State Territory or country in which it is manufactured or produced All these articles or preparations or derivatives shall bear a label containing not only the name by which they are known, but also the names of the parent substances from which they are derived "

No specific opposition to this amplified amendment developed Congressman Covington maintained that the best way to solve this problem would be to require the entire formula on the label Dr Kebler felt that might accomplish a great deal, but that a goodly number of persons would not know what they were taking or what the effects would be The Congressman believed that this course would drive frauds off the market and that legitimate proprietary medicines would find a better market

CONTROLLING IRRESPONSIBLE PARTIES BY A LICENSING SYSTEM

The proposed amendment in the bill to bring this about reads

or if the compounder, manufacturer or vendor thereof is not authorized both under the law of the State or community where the article is produced, manufactured or offered for sale, directly to the consumer, to practice medicine or pharmacy, or both, as the case may be, "

This amendment reaches out into a new field There is, however, something analagous to it in the virus, serum, toxin and antitoxin law [1] We believed it best to pattern after the precedent set in this law and recommended the following

Unless such drug is marked to show that it has been manufactured or compounded by a legally registered or qualified practitioner of medicine or pharmacy who holds an unsuspended or unrevoked license issued by the Secretary of Agriculture, providing the Secretary of Agriculture shall not issue any license to any manufacturer or compounder of any preparation containing any of the substances named above concerning which any false or misleading claims or representations relative to disease or symptoms of disease or statement or fact concerning its remedial or curative property be made or promulgated in any manner "

We knew that this language was defective but hoped that the legal minds at the hearings would whip it into proper form Our experience had been that wholly ignorant, unscrupulous, naive rascals, concoct or had concocted drug mixtures and sent the medicines so concocted to unsophisticated persons in all parts of our fair land The object of this amendment was to put an end to this pernicious business The committee considered the aims of the amendment most worthy and took kindly to it, but some attorneys attacked it fiercely, yet one of them submitted a draft of a bill embodying this feature to be enforced by the Commissioner of Internal Revenue The bill covers certain named habit-forming drugs, provides for a specific tax and requires all dealers handling same to take out a license

At the request of the committee a new bill was drawn up embodying all of the suggested changes Such a bill was prepared by us and printed for the use of the committee But after careful search I was unable to locate a copy In reference to the amended bill and Dr Wiley's views of it, let me quote from the hearing, page 230

Congressman Sabath Would you permit me to ask Dr Wiley a question?

Mr Richardson Certainly

Mr Sabath Have you, or did some one submit to you, this amended bill of Mr Richardson's, as it is now amended by Dr Kebler?

Dr Wiley I wanted to say that I was with Dr Kebler when these amendments were suggested, and I am quite familiar with them and saw the bill when it came up

Mr Sabath What is your opinion, now, upon the bill as amended? Do you think it is a bill which should be recommended and passed?

Dr Wiley I do

Mr Sabath Do you think it will cure a great many defects in the present law?

Dr Wiley It will cure a great many defects in the present law, it will strengthen the bill and will protect the public and will be beneficial all along the line and yet it is far from being what I consider a perfect bill I do not think anybody can draw that bill, except in the light of experience, but in the light of six years' experience in the enforcement of the drug act, I would say that would give immense strength to the law

[1] U S Stat at L 32, pt 1, 728 (1902)

THE FALSE AND FRAUDULENT ENIGMA

One of the alleged weaknesses in the present law is the phrase, "false and fraudulent" This phrase constituted a part of the amendment enacted to cure the defect pointed out by the U S Supreme Court decision Neither Dr Wiley nor I looked with favor on this amendment, we questioned its enforceableness, but the committee in its report H R 1138, 62nd Congress, 2nd Session, 1912, held that the phrase has a well-defined meaning in criminal law, that fraudulent means a deliberately planned purpose and intent to deceive and that it is easily susceptible of proof, which proof the Government is required to establish, by the facts and circumstances in each case It was stressed at the hearings that intent must be proved, that the phrase "false and fraudulent" was essential to meet the decision of the Supreme Court and to make this part of the law constitutional Even though specific proof of intent is not always easy, the committee felt that the Shirley amendment best met the Supreme Court decision, and the views expressed by President Taft in his special message to Congress and recommended its enactment Senator McCumber used the phrase "false or fraudulent" Apparently lawyers differ The Shirley amendment was made part of the law [1] It must be said that this amendment served a useful purpose in curbing many unworthy curative claims and representations Some culprit may escape punishment under this amendment by technicalities, but we must have an abiding faith in the old-time principle that "a person is presumed to be innocent until he is proved guilty"

There seems to be an idea abroad that the present advertising is the worst ever This is erroneous The enforcement of the food and drug law, the postal law and the Federal Trade Commission act have made wonderful changes If anyone doubts it let him go back thirty years and satisfy himself or just read the flamboyant advertisements included in the Richardson Hearings

May I further call attention to the fact that the pharmaceutical profession has for many generations contested adulteration and untruthful advertising

---

THE STABLER-LEADBEATER APOTHECARY SHOP, ALEXANDRIA, VA, 1792–1933 *

BY ELEANOR LEADBEATER

(IN COLLABORATION WITH THE LATE EDWARD STABLER LEADBEATER)

When, in 1792, young Edward Stabler borrowed from an uncle a hundred pounds in order to buy stock for the apothecary shop he planned to operate, he did not realize he was establishing a business in which his descendants would continue for the next one hundred forty-one years Records do not tell us what feelings of uncertainty he may have harbored in relation to his venture, but they do show that his business prospered to such an extent that he was able to return the loan and double his stock of goods during the first year

The original bill, dated June 1792, came from Townsend Speakman of Philadelphia and contained about one hundred fifty items, amounting to 120 pounds,

[1] U S Stat at L 37, 416 (1912)

* Owned by the AMERICAN PHARMACEUTICAL ASSOCIATION

10 shillings and 6 pence, or, as was written underneath, 96 pounds, 2 shillings and 3 pence in Virginia currency Three of the items listed are still extant They are, two very heavy marble mortars and a quart flint glass bottle bearing the inscription "Spt Nitre" This bottle had been in constant use ever since the founding of the business, until 1933 when the doors were closed behind the last customer and the store ceased to function as a pharmacy

It is not surprising that during those earliest years of the store's history, General Washington, whose business and friendships often called him to Alexandria, frequently dropped in to talk with Edward Stabler and to purchase supplies to restock the medicine chest at Mount Vernon, where he had the welfare of his slaves as well as that of his immediate household to consider

That his widow continued the estate's dependence upon the Alexandria apothecary is attested by a note in her handwriting, dated "Mount Vernon, April 22nd, 1802" It reads

"Mrs Washington desires Mr Stabler will send by the bear'r, A quart bottle of his best Castor Oil and the bill for it"

An interesting entry in one of the old ledgers, under date of December 7, 1799, records the purchase by Dr Elisha Dick of one pound of Glauber Salts As this date was just eight days before General Washington's death and as Dr Dick was one of the physicians who attended him in his last illness, it seems very probable these salts were given the illustrious patient

Many letters and orders sent Edward Stabler from George Washington himself have unfortunately been lost, as these were given to various persons instead of being kept in the files of the business

There are, however, other documents that show the Washington family's connection with the store, one of which, from the General's nephew, Judge Bushrod Washington, who inherited the Mount Vernon estate, is as typical of a period when every second was not utilized at a break-neck pace, as are the candles, the lumbering coaches, and the powdered wigs that represent for us that adolescent period of America's growth Judge Washington wrote

"Respected Friend

"Above is a check for 77 9 amount of your account, which ought much sooner to have been attended to In future I will thank you to send it to me more frequently, at least once a year

' Respectfully,

"Bush Washington"

Also representative of a leisurely era is the correspondence between the good apothecary and the London firm of Allen & Howard In a letter written in 1801, Mr Stabler ordered

"One medicine chest, complete with weights, scales bolus knives, etc I want this to be of mahogany of good quality, as it is for the granddaughter of the widow of General Washington, the cost to be about twelve guineas"

It was not until the following year that Allen & Howard billed the apothecary for a "mahogany, folding door, medicine chest complete" at 11 pounds, 11 shillings, and shipped it on the sailing vessel Union, Thomas Woodhouse, master

A much less formal evidence of a long-continued friendship is found in the name, scrawled on the white plaster of one of the interior walls of the vault, of one

of the great-great nephews of the Father of His Country Several of this generation of the family owed their early business training to a boyhood connection with the store in which he traded Two of these nephews are now druggists in West Virginia

Over half a century passed between the days when the first president chatted with his Quaker friend, Edward Stabler, and those later days when, in his place, another great general frequented the little store to discuss national and local events with Edward Stabler Leadbeater, the grandson of the founder Here was another military man closely leagued with a peace-loving Friend However, the relationship seems not so paradoxical when one considers the gentleness, simplicity and sweetness of character of Robert Edward Lee

One of these tranquil talks, however, was fated to experience a momentous interruption A messenger, of whose identity as J E B Stuart, afterward Lee's chief of cavalry, contemporary records bear witness, entered the store with news of John Brown's raid Lee, still an officer in the United States army, was ordered to go at once to Harper's Ferry to quell the rebellion

"I am afraid," he said, "this is only the beginning of more serious trouble "

The correctness of his conjecture was evidenced all too soon and, before many months, Alexandria, a town whose sympathies were almost entirely with the South, was occupied by Union troops Husbands and sons marched away to fight for that which, after four bitter years was to become forever, "The Lost Cause "

A conquered town has, perhaps, more to tell in after years than has a besieged city, so that stories of those days in Alexandria are numerous, but the particular one that affects the Leadbeater drug store has to do with the unwillingness of the owner to take the oath of allegiance to the United States

Because his religious scruples forbade his joining the Southern army, Edward Stabler Leadbeater remained at his business when many of his neighbors marched off to the war Yet his sympathies were entirely with the South and he could not force himself to submit to the edict that, unless their clerks took the oath, all business houses should be closed However, Mr Lewis Mackenzie, a Union sympathizer and Justice of the Peace, declared he would trust no one but Ned Leadbeater to put up his prescriptions so, oath or no oath, the store must not be closed

Besides the Lees and Washingtons, another family of national importance, particularly through its marriages into the former two, the Custis family, also, dealt with the Stabler-Leadbeater firm

An interesting letter from George Washington Parke Custis has been preserved This letter, written, on April 8, 1818, reads

"My Dear Sir

"Not being able to command cash at this time from the heavy expense of my building, I enclose my note agreeable to promise I am duly sensible of the politeness and liberality I have always received from you and I have to express my acknowledgment also for the very excellent articles always received from your house and with perfect esteem for your personal character, I am, Your humble servant,

'George W P Custis "

It is interesting to note that the building in question was that of his dignified mansion, "Arlington," located on a hillside between Alexandria and the city of Washington and commanding an excellent view of the broad Potomac This

estate is now the well-known site of the national cemetery and has now, at some little distance from the Custis-Lee home, another structure of lasting beauty, the Arlington Amphitheatre, which furnishes a distinguished background for the tomb of the Unknown Soldier

In the period just before the Civil War, other noted persons were frequently seen in the old drug store

Mr Phineas Janney of Alexandria, a brother-in-law of Edward Stabler, was famous for his excellent table And not only were the viands spread upon it extraordinarily fine, but the company that sat about it was unusually brilliant It numbered often John Calhoun, Henry Clay and that illustrious son of New Hampshire and of Dartmouth College, Daniel Webster, as well as other notables of the day

After one of these dinners, these gentlemen had often to wait several hours till such time as they might take the ferry boat back to Washington It was their custom to repair to Friend Stabler's, where they sat about and discussed burning issues of national importance or, possibly, those trivialities to which even the great occasionally condescend

Among the interesting documents preserved since the early days of the business is one which, although it relates to no persons of particular eminence, may well be referred to as an eloquent testimonial to two "great" rascals, as well as providing an interesting glimpse of an unusual method of closing an account

This entry, under date of 1797, follows

"Clingman and McGaw To repairing medicine chest for ship Saratoga, 2 pounds, 5 shilling, 6 pence

"Credit by dishonesty in full which in the ultimatum met with its full reward (as vice always does), McGaw being executed in Scotland for being as a spy on board of a French ship—Clingman being arrested in Holland—what became of him I know not"

A brief description of other items of interest in relation to the store should add to the visitor's pleasure in viewing this little-changed business place of bygone years

At the rear of the 107 S Fairfax St section of the store is a large desk, the front of which has been fitted with two compartments in which are mirrors, one of them bearing in gold leaf the figures "1792" and the other "1892," thus symbolizing a century of service

Above these mirrors, in letters of gold leaf on a dark background are the various names under which the business was operated up till 1865 They are

1792
Edward Stabler
1820
E Stabler & Son
1831
William Stabler
1840
William Stabler & Co
1844
W Stabler & Bro
1852
John Leadbeater
1857
J Leadbeater & Son
1860
Leadbeater & Co

To bring the record up-to-date, the following firm names should be added

1865
E S Leadbeater & Co
1869
E S Leadbeater & Bro
1892
E S Leadbeater & Sons
1903
E S Leadbeater & Sons, Inc
1916
Leadbeater Drug Corporation

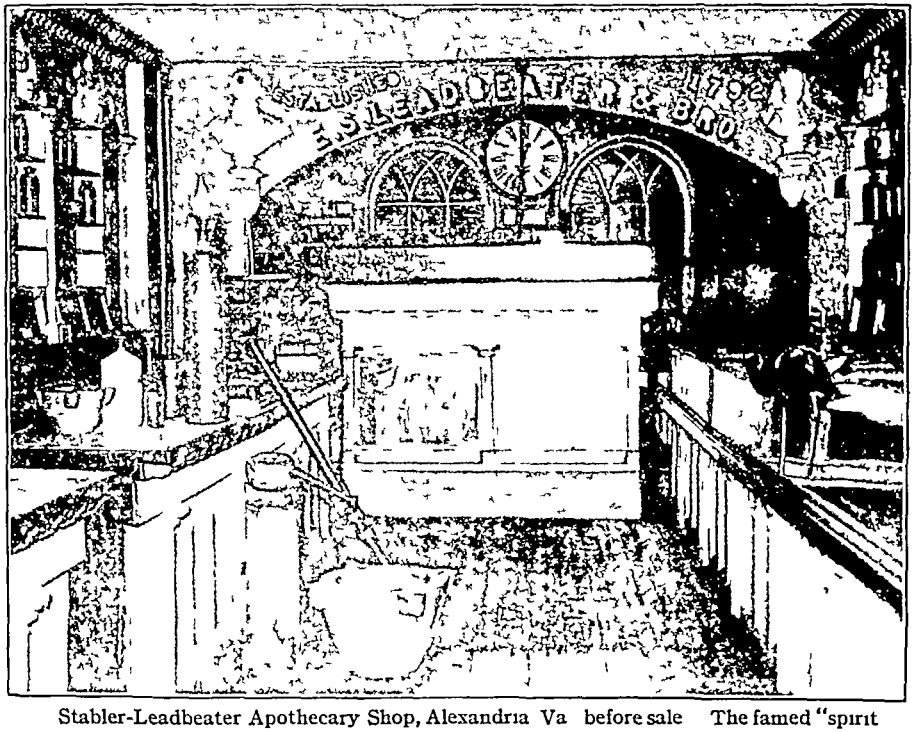
Over the desk are plaster casts of General Washington's head on the one side and on the other, Benjamin Franklin's A little boy, asked whom they represented, replied

"Why, George and Martha Washington, of course!"

Accuracy was, perhaps, to his mind less essential than appropriateness

In honor of the other general associated with the store, there hangs over one of the doorways in this same room a large picture of Robert Edward Lee and the generals on his staff

In this room, too, is a large clock, well over a hundred years old



Stabler-Leadbeater Apothecary Shop, Alexandria Va before sale The famed "spirit of nitre bottle" is on the counter, back of a mortar, also a tall show bottle On the front counter, at the left, is the General Robert E Lee plate

Old hand-blown bottles, the ancient show cases, the shelves covered with gleaming bottles of ingredients for prescriptions as well as the various staples sold by apothecaries for many, many years, all serve to heighten the contrast between this historic business house and a modern drug store where one has almost to constitute oneself a hunting party in order to find medicinal supplies In these and in the old ledgers the casual visitor, as well as the carefully trained pharmacist, will find much of interest and will feel amply repaid for the time spent in a visit to the store, for such a visit constitutes a fascinating and delightful excursion into the nation's past

EDITOR'S NOTE The exterior and interior of the building are now being restored and will be kept open as a museum when restoration is completed, a memorial to its founder and a reminder of early American pharmacy and illustrious patrons of this pharmacy See pages 705–707, JOURNAL A PH A for August 1933

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

Perhaps no subject taught in colleges of pharmacy has changed as much in the past decade as has the subject of chemistry, especially organic chemistry This explains the amount of time, attention and thought that has been given to this subject in the meeting of our teachers' conferences The importance of it cannot be overemphasized The papers by Dr Jenkins and Professor Harrod are worthy of careful study by all teachers of organic pharmaceutical chemistry—C B JORDAN, *Editor*

TEACHING ORGANIC PHARMACEUTICAL CHEMISTRY

BY GLENN L JENKINS *

NEED FOR MORE EMPHASIS

The changing trend in Materia Medica has resulted, in many instances, in the partial or complete replacement of many natural drugs by pure chemicals This tendency toward the more extensive use of pure chemicals, whether they are isolated from natural sources or made synthetically, has placed an ever increasing responsibility and amount of subject matter upon those who teach chemistry in colleges of pharmacy The burden falls especially to the lot of those who teach organic chemistry Sufficient cognizance of the change that has occurred and is occurring has not been made in formulating new curricula A casual perusal of the latest edition of The Pharmaceutical Syllabus and of The Prescription Ingredient Survey by Gathercoal furnishes evidence of this fact In the Pharmaceutical Syllabus under the outline of the required course in pharmacognosy is written, "The course should include every crude vegetable or animal drug that the pharmacist is likely to be called upon to sell or dispense The order of emphasis should be determined by the order of importance and the order of importance should be determined by usefulness and extent of use by pharmacists, physicians and laity" A primary list of drugs to be studied in detail as well as a secondary list of drugs to be studied less thoroughly is appended The primary list includes such drugs as *Apocynum, Chirata, Matricaria, Pepo* and *Xanthoxylum* The secondary list includes such drugs as *Absinthium, Adonis, Aletris, Aralia, Berberis, Geranium, Juglans, Mezereum, Rumex, Sassafras Pith, Trifolium, Triticum* and a host of others The Prescription Ingredient Survey shows that these drugs and their preparations are seldom if ever used in prescriptions

The only required course of instruction treating of organic chemicals in The Syllabus is the basic course in Organic Chemistry, a course that should be restricted in scope to the teaching of the fundamentals of organic chemistry, theory and practice It should be obvious that this elementary course is not given sufficient time in the average curriculum to cover both the fundamentals of organic chemistry and the chemistry of the many complex and diverse types of organic chemicals used as medicaments The irrationality of the situation is augmented when the importance and extent of use of such chemicals as the alkaloids, volatile

* School of Pharmacy, University of Maryland, Baltimore, Md

oil derivatives, hypnotics, anesthetics, antiseptics, etc, are considered The condition that pertains in many schools can be corrected in large measure by the introduction of a required course in organic pharmaceutical chemistry

SCOPE OF THE COURSE

The scope of a course in pharmaceutical organic chemistry should include natural as well as synthetic products Those chemicals described in the United States Pharmacopœia, National Formulary and New and Nonofficial Remedies should be made the chief subject content of the course It should not be restricted to them since many new remedies not included in these volumes, due to patent rights or other cause, are of equal and sometimes of greater importance The emphasis given to any phase of instruction must necessarily be determined by the individual teacher The formulation of any definite course content should be based on and correlated with that of the pre-requisite and other courses Frequent revision of the subject matter should be made by adding new remedies as they are introduced into therapeutic practice To do this, the teacher must continually survey the journal literature

DIDACTIC INSTRUCTION

The classroom teaching of organic pharmaceutical chemistry need not differ from or require a different method of presentation than that employed in teaching elementary organic chemistry The difference should be chiefly one of emphasis Thus, where fundamental theory and the reactions of functional groups in simple compounds are studied in the pre-requisite course, the applied course is limited primarily to a study of the reactions involved in the production, purification and identification of medicinal compounds The compounds may be classified into characteristic groups according to therapeutic usage or according to chemical structure for the purpose of systematic study The classification according to therapeutic use, *i e*, as anesthetics, hypnotics, antipyretics, antiseptics, etc, is of value if one primarily wishes to bring out chemo-therapeutic relationships It may be of special value if a thorough course in pharmacology and therapeutics is not included in the curriculum This method of approach to the subject has the disadvantage that widely varying structures are grouped together Thus different classes of chemical compounds, such as alcohols, aldehydes, ketones, disulphones, esters, amides and urea derivatives would be considered in a single group under sedatives and hypnotics Generalizations pertaining to methods of synthesis and isolation, reactions and properties are often impossible when this method is utilized When a systematic chemical classification is followed in presenting the subject matter, compounds of related structure and, in many cases, of widely variant therapeutic use are grouped together This system serves to emphasize the many instances of absence of relationship between structure and physiological activity which are much more common and striking than the cases of chemotherapeutic relationships The chemical classification has the further advantage that compounds of related structure, isolated or synthesized by a general method, and having properties in common are considered at the same time

It has been my experience that the presentation of the subject matter from the chemical viewpoint is best Synthetic products can then be discussed along

with natural products to which they are related and derivatives of natural products are placed beside the parent substances Since students are partially familiar with the chemical system of classification, they are enabled to draw upon and utilize knowledge gained in the elementary course It makes unnecessary a detailed study of each compound, *e g*, the methods of synthesis and the properties of most of the barbiturates can be obtained from a detailed study of barbital

Since no suitable text is available, the subject must be taken up in lectures or discussional groups or both An abundance of reference works in English on such subjects as alkaloids, fats and waxes, volatile oils, enzymes, natural and synthetic medicaments, etc, are available, however These and review articles in the journals can be used for collateral reading Regular weekly assignments including specific questions that are to be studied and answered by the students have proved of value Topic assignments which demand collateral reading also can be made advantageously

LABORATORY INSTRUCTION

Laboratory instruction is difficult to carry out when dealing with complex compounds Experiments that require chain synthesis are better suited to the graduate than to the undergraduate laboratory Simple experiments which are adaptable to performance often do not illustrate new reactions or require different technique from that used in the basic course A valuable laboratory course of instruction can be built up without elaborate or expensive facilities, however Thus experiments having for their object the isolation of enzymes, alkaloids, volatile oils, glycosides, etc, and a study of the purity and identity of the products obtained are practicable The laboratory work on complex synthetic remedies can be limited to qualitative tests for identity and purity If small amounts of the chemicals and reagents are used, a twofold objective may be attained, namely economy of materials and perfection of technique From this type of work the student gains a feeling of intimacy with the materials handled and experiences in some measure the spirit of the thought expressed in an editorial in the *Journal of Chemical Education* "By all means let us encourage a student to experience his own romance of science—an acquaintance with Dante and Beatrice will do him good but it will be neither so illuminating nor so satisfying as an affair of his own"

CONCLUSION

Rapid strides forward have been made in pharmaceutical education through the extension of the course of instruction to a minimum of four years The next forward stride should consist of a further realignment of the content of the courses of instruction In that realignment, more complete recognition of the changing trend in therapeutics should be made The increasing importance of natural and synthetic organic chemicals should be acknowledged through the inclusion of required courses in organic pharmaceutical chemistry in the curricula If the necessary time for the inclusion of this instruction cannot be found, it may be necessary to delete much teaching concerning therapeutically dead substances, the epitaphs of many of which are written in our official standards and dispensatories to make way for the new generation of used products

TEACHING ORGANIC CHEMISTRY TO PHARMACY STUDENTS

BY J R HARROD *

INTRODUCTION

Since the dawn of history, man has been interested in his own physical welfare—health, comfort and appearance He has consequently discovered and invented remedies, sedatives and cosmetics, first empirically and then scientifically Pharmacy and chemistry were one, finally, chemistry, because of many other applications, developed into a distinct and separate branch of science, but the close relationship still exists Serving to reveal physiological functionings, both regular and irregular, and to develop means by which useful medicinal compounds may be prepared from natural sources or synthesized from the elements—organic chemistry is a fundamental factor in the pharmacist's professional education

THE AIM IN TEACHING THE COURSE

The primary purpose in offering any course of study to a student is to assist him in gaining a working knowledge of its facts and fundamental principles It is desirable to organize the material of the course so that the student's time may be reasonably conserved and that he may be enabled to acquire the knowledge without confusion and bewilderment Organic Chemistry being a highly specialized branch of science, is usually taught, not as a part of general information or cultural education—although this may be done—but as an important component of the technical preparation for life's vocation

In the university, where students of many different motives are working, the question often arises as to whether they should be segregated according to their respective interests and each group offered a course in organic chemistry peculiarly adapted to its particular viewpoint, or whether all should be offered the same course It is the opinion of the writer that there are many advantages to be realized from requiring all students, regardless of their ultimate interests to carry on the same basic course, and that these advantages outweigh the disadvantages that may arise from such procedure In the first place it is thought that any student of science should see it in perspective as a great relationship of various types of compounds, should see it in relation to other branches of science as inorganic chemistry, physics and biology, should see it in its relation to the solution of human problems such as those found in the practice of pharmacy, the practice of medicine and the operations of industry and agriculture It is believed, moreover, that the student being made acquainted with the application of organic chemistry in these various fields will have created in his mind a keen desire to make use of it in the solutions of the specific problem found in such technical courses as pharmacology, pharmacognosy, urinalysis and physiological chemistry By this means the student will be directed to observe and offer his own solution to a given problem rather than have these items pointed out and suggested by his instructor

Furthermore it is believed that the student should be led to see that in whatever vocation or profession he finally orients himself, his part of the world's work will always be definitely related to all other parts, and that unless he takes this fact

*Ohio Northern University, Ada O

into consideration he cannot expect maximum success He cannot afford to assume a snobbish attitude toward any other profession or to become clannish in his habits It is not presumed here that the course in organic chemistry shall be transformed into a course in sociology or social relations, but the atmosphere of the general course may be made to impart these ideas without in any way impairing its efficiency to teach chemistry

THE CONTENT OF THE COURSE

The choice of material for any course of study is an important problem At least two considerations must be made, (1) material that will give the desired factual information must be chosen, (2) material that will illustrate the right method of attack will be required

It is conventional to classify organic compounds as hydrocarbons, halogen derivatives, alcohols, aldehydes, ketones, acids, etc, and this classification is usually followed in the teaching process Because of the great wealth of information presented in the average textbook, a definite study program including a systematic arrangement of facts pertaining to the respective groups, together with methods of synthesis by which compounds of one group may be prepared from appropriate compounds of other groups, is indispensable to the student This study program will logically include

1 *Occurrence* The compounds of the given group may be only laboratory products or may be found in nature, or both

2 *Preparation* A study is made of the reactions whereby the compounds may be prepared from the natural sources or by synthetic means

3 *Properties* Both physical and chemical properties are classified and then, later, expressed for the most part by means of equations

4 *Structure* The relationships of the various types of compounds are established by studying the structures of the molecules and the groupings found therein, and by studying the reaction whereby these structures may be proved

5 *Isomerism* The student on his first acquaintance with organic chemistry is puzzled to know how such an enormous number of compounds can arise from so few elements He soon learns that a given empirical formula may represent a dozen, twenty, a hundred or almost any number of compounds, and that this is true because the atoms may be arranged in great variety within the molecule

6 *Nomenclature* When one first reads the literature of organic chemistry, he is surprised by the endless confusion of names The variety of systems and the lack of system is sometimes bewildering even to the experienced chemist, while for the beginning student it may become a matter of utter discouragement A careful consideration of this topic is imperative

7 *Representative Compounds* It is shown that because of homologous relationship a detailed study of one or two compounds of a group will be sufficient to establish the general properties of that group

8 *Medicinal Compounds* In the respective groups at appropriate points a few medicinal compounds are studied, and whenever possible one of these may be used as a type compound, thus lending interest and utility to the course

9 *Commercial Compounds* In the same manner commercial compounds that have general application are introduced

This definite program is applied to each major subdivision of the science in skeleton form until the student has the perspective and then in considerable detail For the latter he is required to read his textbook Thus it is found possible to interest and accommodate the various types of students—pharmacy, pre medical,

engineering, arts majors—and at the same time be so specific that each student will find sufficient reference to his particular field that he may readily make application in his respective technical courses

METHOD OF PRESENTATION

College students are generally interested in personal achievement The facts and principles of chemistry become particularly attractive when associated with the individuals who are responsible for their discovery and development Dalton, Lavoisier, Berzelius, Dumas, Liebig, Wohler, Kekule and Faraday were real human men, possessing the emotions, passions, virtues and vices that are found in mankind generally To know of them, as well as many others, and their work lends incentive to the study of chemistry

This science took on a new perspective when Liebig and Wohler discovered that cyanates and fulminates might contain the same elements in the same proportion When Wohler found that he could prepare a compound, that he had always supposed was made only by life processes, from a common inorganic compound that in turn could easily be prepared from the elements, a revolution was achieved

The reasonings and controversies of these great pioneers of chemistry lend interest to isomerism, and the sympathy, humanity, kindness and industry of Pasteur give attraction to optical rotation Kekule's dream of wriggling molecules fixes indelibly the structure of benzene, and the perseverance of Erlich lends enchantment to organic synthesis, while Fischer's superb work adds dignity and fascination to research

Too often organic syntheses are just so many chemical reactions that must be committed to memory so as to be able to pass the examination Malonic ester may mean starting with chloroacetic acid and winding up with the sour, foul-smelling constituent of rancid butter, or, it may mean the preparation of the beneficent compounds of barbital, luminal and amytal If so, there is no trouble to remember it The synthesis of acids is not in itself a particularly attractive topic, but when Kolbe's synthesis is applied to salicylic acid, attention is obtained immediately Sulpho ethers sound like far-fetched and foreign compounds, but when a substituted one in the form of mustard gas is discovered they take on new significance, and the topic of sulphones becomes a surprise of interest when one comes across sulphonal The diazo reaction also becomes interesting when it is found to be used in the preparation of such common compounds as methyl orange and methyl red The significance of phthaleins becomes apparent when phenolphthalein, fluoroescein, eosin and mercurochrome are mentioned

CONCLUSION

This, in briefest outline, is the plan of the course in organic chemistry offered to a mixed group of students at Ohio Northern University It is the writer's experience that interest is aroused and maintained, and that the student, who satisfactorily completes the course succeeds well in his chosen field, be it pharmacy, medicine, teaching, industrial work or graduate study At the same time those who have followed the course for general information are enabled to see how the science contributes to the development of human welfare

ASSOCIATION BUSINESS

AD INTERIM BUSINESS OF THE COUNCIL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION, 1934–1935

Office of the Secretary, 2215 Constitution Ave Washington, D C

LETTER NO 6

October 16, 1934

To the Members of the Council

31 Joint Meeting Executive Committee, N A R D, and Council, A Ph A The annual joint meeting was held in New Orleans on September 24th The following is the report as issued by Secretary Dargavel and Secretary Kelly

"The annual meeting of the executive bodies of the A PH A and the N A R D was held on Monday, September 24th, in the conference room H of the Roosevelt Hotel, at 9 30 A M, at which the following members were present National Association of Retail Druggists—Harvey A Henry, Chairman of the Executive Committee Monte L Powell, President George L Secord, Thomas S Smith, C Fred Wright Charles Ehlers, John Witty, John W Dargavel

"Members of the Council of the AMERICAN PHARMACEUTICAL ASSOCIATION—E F Kelly, W Bruce Philip, Walter D Adams, James H Beal

These meetings are held for the purpose of discussing many problems of mutual interest to the two groups

"The program included consideration of the various suggestions recently advanced for a consolidation or a closer coordination between the two associations, and for a closer affiliation between them and the state associations, food and drug legislation, U S P and N F Publicity and National Pharmacy Week

Secretary Kelly was called upon to open the discussion of the first subject and spoke at length of the conditions which led to the organization of the N A R D and the relations which had existed between the two organizations He assured the officers and members of the N A R D that it is the purpose and desire of the A PH A to at all times work with them on all problems of mutual concern

"Attention was called to suggestions from time to time for consolidating the associations and for a more effective alliance between them The A PH A has always been willing to consider such suggestions in good faith as shown by the resolution adopted by it last year So far no acceptable plan has been submitted for consolidation because of the sharply different field in which the associations operate and any move in this direction should have very careful examination

Recent developments and proposals however warrant further consideration of the whole subject of the relations between the associations and between them and the state associations to the end that the need of all three groups may be fully met A close affiliation or coordination of the two associations with the supporting state and local associations was urged Dr Secord spoke in support of Dr Kelly's remarks

"Dr Beal also addressed the group He also was in accord with the statements previously made and stated that he was to address the convention on this subject at which time he would detail the reasons why in his opinion actual consolidation of the associations was impossible

"Practically all of those present were called upon and expressed the opinions that the two associations having so much in common would work in harmony

'Food and drug legislation was next discussed It was the concensus of opinion that the two associations should take an active part in initiating and supporting such legislation

W Bruce Philip, Counsel of the N A R D brought out the fact that he had written a Food and Drug Bill in the form of an amendment to the present act

'It was agreed that at the coming annual meeting of the National Drug Trade Conference, the A PH A and the N A R D should actively coöperate to secure the approval of a satisfactory bill for submission to Congress

"A general discussion of National Pharmacy Week and the U S P and N F Publicity and of plans for promoting these movements followed

'Inasmuch as the A PH A in its meeting at Madison had passed a resolution to the effect that a committee be appointed to meet with a committee of the N A R D if the latter approved for the purpose of affecting a better relation between the two organizations, the Executive Committee present offered a motion which was seconded and passed that the President of the N A R D appoint a like committee to confer with the Committee from the A PH A

'The motion was as follows

"That a committee of three be appointed to work with the A PH A committee to consider the relations existing between the two associations and to present at the earliest opportunity a plan or suggestions for improving them

"The committee is also to consider matters relating to the Drug Trade Conference to Pharmacy Week and the U S P and N F Propaganda and will meet at an early date It was agreed that all matters pertaining to present publicity concerning this meeting or any meetings between the N A R D and the A PH A should emanate from the Secretary of the N A R D or from the Secretary of the A PH A

'There being no further business before the committee it was adjourned"

The subjects considered were limited as noted to those mentioned on the program recently submitted to the members of the Council

Messrs Rowland Jones and Oscar Rennebohm were present at New Orleans, but arrived too late to attend the joint meeting

Among the resolutions adopted by the N A R D was one disapproving the proposed consolidation of the two associations

In accordance with the resolution as adopted at the Madison meeting in 1933 Chairman Hilton of the Council has appointed E F Kelly, R P Fischelis and R L Swain

At the joint meeting in New Orleans, it was agreed that if the State Associations requested representation on the joint committee, this would be provided

(*Motion No 5*) *It is moved by Eberle that the appointment of Messrs Kelly Fischelis and Swain to represent the A Ph A on the joint committee by Chairman Hilton, be approved*

32 Committee on Maintenance The following letter has been received from Chairman Dunning of the Committee on Maintenance

The recent campaign for funds to free the American Institute of Pharmacy Building from debt has resulted in aggregate subscriptions amounting to $119,314 00, $50 000 00 of which represents a bequest, leaving a difference of $69 314 00, $58 228 00 has been paid in cash, the balance credited to the AMERICAN PHARMACEUTICAL ASSOCIATION Headquarters Building Fund, in the Maryland Trust Company, is $51 184 18 The current bills amount to less than $3000 00 and a few hundred dollars in addition, will take care of all unforseen expenses within the immediate future When all these bills and expenses are paid there will remain a balance of approximately $48 184 18

"There is, therefore, at the present time in hand sufficient funds to meet current bills pay off the $40,000 00 note held by the Maryland Trust Company and leave a balance of approximately $8000 00 in cash The instalment payments will, of course increase this cash as time goes on as also will new subscriptions, which are being received regularly in small numbers

'The only other obligation against the American Institute of Pharmacy project is a mortgage of $36 000 00 held by the George Washington University on account of the lot in the rear which we were obliged to purchase to be able to obtain the necessary frontage for our building This mortgage could be reduced from time to time, could be paid off out of the new subscriptions which will come in over a period of years or, if such funds would be insufficient then the payment of $50,000 00 bequest already mentioned, would eventually take care of this debt and leave a balance

It is evident that the American Institute of Pharmacy project, including the building, the equipment furnishings, land and every other cost is free from financial obligations and is at present secure and safe

"The operating expenses of the AMERICAN PHARMACEUTICAL ASSOCIATION in this building are, as you have been informed, through my open letter to pharmacists, not greatly more than the moderate amount expended upon the quarters which were occupied in Baltimore

"I think it is quite correct to say that the project is, at present, on a sound financial basis and does not represent, in any sense, a threat to the security and safety of the future of the AMERICAN PHARMACEUTICAL ASSOCIATION, but, on the contrary, does provide obvious advantages

"It seems to me advisable to remind the Council that an Act of Congress provides that the American Institute of Pharmacy Building and its occupant, or occupants, must operate on a non profit basis, also that freedom from revenue taxes and, more particularly, from property taxes in the District of Columbia, is dependent upon meeting the requirement before mentioned Just recently, the Daughters of the American Revolution have been subjected to an investigation on account of renting some portion of their Continental Hall Building for profit and have been threatened with taxation

"I am suggesting to the Council that Secretary E F Kelly, Treasurer C W Holton and myself be authorized to reduce the note held by the Maryland Trust Company, or pay it off in full at any time within the next ninety days from the present date, in accordance with our best judgment"

H A B DUNNING, *Chairman*

(*Motion No 6*) *It is moved by Philip that E F Kelly Secretary, C W Holton Treasurer, and H A B Dunning, Chairman, be authorized to reduce the note held by the Maryland Trust Company, or pay it off in full at any time within the next ninety days from the present date, in accordance with their best judgment*

33 Local Secretary for 1934–1935 No nominations have been submitted other than that of Dean Mickelsen (see Council Letter No 4, page 945)

(*Motion No 7*) *It is moved by Kelly that A O Mickelsen, Portland, Oregon, be elected Local Secretary for 1934–1935*

34 Headquarters and Time for 1935 Meeting Certain recent developments in connection with the joint meeting of the Oregon, Washington and Idaho Pharmaceutical Associations, to be held in Portland during the week of the A PH A meeting, make it necessary to further delay the vote on the headquarters hotel and the time (see Council Letter No 4, pages 945–946) It is important, however, to elect the Local Secretary in order that the necessary committees may be appointed and the plans for the meeting be prepared

35 Use of Text of the N F V The following communication has been received from Chairman DuMez of the Committee on Publications

"I have gone over the manuscript submitted by G S Eadie of the School of Medicine of Duke University, which we propose to use in the Hospital Formulary of Duke Hospital, and find that he has used the text of the National Formulary no differently than others to whom we have granted permission to use portions of the text of the N F in the publication of books I am, therefore recommending to the Council that permission be granted to G S Eadie to use portions of the text of the National Formulary in the preparation of the Hospital Formulary of Duke Hospital, and that no charge be made therefor in view of the small amount of material taken from the N F and the restricted use to which the publication will be put"

(*Motion No 8*) *It is moved by DuMez that permission be granted to the School of Medicine of Duke University to use the text of the N F VI for partial reproduction in the Hospital Formulary of Duke University under the usual conditions and that no charge be made therefor in this instance*

36 Applicants for Membership The following applications properly endorsed and accompanied by the first year's dues have been received

No 42, David A Lofgren, 30 E 111th St, Chicago Ill, No 43, John David Smith 101 Manly, Univ of N C, Chapel Hill N C, No 44 Bernard J O Connell 17515 Parkside, Detroit, Mich, No 45 W L Hickok, Martinsville Va, No 46 Ray M Bush, 770 Angella St, Dubuque, Iowa, No 47, Paul Leopold Weinbrenn, 24 Rosebank Rd, Johannesburg South

(*Motion No 9*) *Vote on applications for membership in the American Pharmaceutical Association*

E F KELLY *Secretary*

EASTERN GROUP PLANS STABILIZATION CONTROL

To seek a reasonable margin of profit between costs and suggested minimum selling price, and to creat a more closely ' supervised" price stabilization program than has ever before been possible, will be the first steps taken by the newly formed federation of Eastern States pharmaceutical associations to test its power in dealing with drug problems according to John F O'Brien executive secretary of the new group and president of the New York State Pharmaceutical Association

The new federation which consists of delegates from nine eastern state associations and may include three others was formed for the professed purpose "of promoting professional and economic interests of pharmacy and to cooperate with the AMERICAN PHARMACEUTICAL ASSOCIATION and National Association of Retail Druggists in matters of national importance "

In addition to its price stabilization activities Mr O'Brien said that the new group will also work for the reconsideration by manufacturers of their present policy on ten-cent sizes, for the restoration of discounts formerly allowed by wholesalers and for legislation which will confine the sale of medical products to pharmacies

Although the policies of the new federation have not been definitely worked out as yet, the executive committee of the group has been appointed and will meet shortly to develop its processes of operation The executive group according to the by-laws of the association, is authorized to deal with any and all problems of professional and economic importance

The federation plans to hold semi annual meetings in May and November, at which time the members of the council of the federation will meet Each state has already appointed its representative, which consists of two members, one appointed for a two-year term and the other for a one year term The councilors are selected by state pharmaceutical associations of the states represented Those states are Massachusetts Rhode Island Connecticut, New York New Jersey, Pennsylvania Maryland, Virginia, West Virginia It is also believed that New Hampshire, Vermont and Maine will become affiliated with the federation —*From Drug Topics*

TEXAS PHARMACEUTICAL ASSOCIATION

Dallas was selected as the convention city in 1935 by the executive committee of the Texas Pharmaceutical Association at its semi-annual session at the Adolphus Hotel The Convention will be either in May or June

PROCEEDINGS OF THE LOCAL BRANCHES

"All papers presented to the Association and Branches shall become the property of t Association with the understanding that they are not to be published in any other publicati prior to their publication in those of the Association, except with the consent of the Council —Part of Chapter VI, Article VI of the By-Laws

ARTICLE III of Chapter VII reads "The objects and aims of local branches of this Associ tion shall be the same as set forth in ARTICLE I of the Constitution of this body, *and the acts local branches shall in no way commit or bind this Association, and can only serve as recommendation to it* And no local branch shall enact any article of Constitution or By-Law to conflict with th Constitution or By-Laws of this Association "

ARTICLE IV of Chapter VII reads "Each local branch having not less than 50 dues pai members of the Association, holding not less than six meetings annually with an attendance o not less than 9 members at each meeting, and the proceedings of which shall have been submitte to the JOURNAL for publication, may elect one representative to the House of Delegates "

Reports of the meeting of the Local Branches shall be mailed to the Editor on the da following the meeting, if possible Minutes should be typewritten with wide spaces between th lines Care should be taken to give proper names correctly and manuscript should be signed b the reporter

BALTIMORE

The regular monthly meeting of the Baltimore Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held on November 8th, at the Emerson Hotel The meeting was prefaced by a delightful dinner given in honor of Dr and Mrs R P Fischelis by the Faculty of the School of Pharmacy of the University of Maryland The dinner was attended by members of the Faculty of the School, by Maryland State Department of Health officials, by officers of the Maryland Pharmaceutical Association, Baltimore Retail Druggists' Association, Baltimore Veteran Druggists' Association and by members of the Baltimore Branch

The meeting was called to order by President B Olive Cole at 8 15 who presented the speaker of the evening Dr Fischelis spoke on, "Federal Regulation of the Drug Industry " During the course of his address Dr Fischelis discussed the following

The direct responsibility of the AMERICAN PHARMACEUTICAL ASSOCIATION in improving drug legislation and the relation of the ASSOCIATION to the fostering of better drug standards, the view of the non medical members of the Committee on the Costs of Medical Care regarding the distribution of information on public health matters through pharmacies, several new trends in advertising control in the drug industry, formula disclosure, the variation limits of the U S P and the N F and their relation to modified formulas, a proposed board of review to be appointed by the President to pass on rulings of the Department of Agriculture, what constitutes medical opinion, finally, how the A PH A should sponsor good food and drug legislation

Dr Fischelis said he believed that enforcement officials should have enough power to put into effect the spirit of the public health law and that they should not be hampered in their work by drastic provisions that might open ways in which unscrupulous individuals could circumvent the good spirit of the law

The speaker further pointed out that anyone who is desirous of medicating himself should have the right of knowing what he is taking He said he was convinced that qualitative formula disclosure for proprietary remedies was in the best interest of the public welfare

At the conclusion of the address the meeting was opened for discussion Dr A G DuMez A L Sullivan of the Maryland State Department of Health, Dr John C Krantz, Jr , Simon Solomon, Dr R L Swain, Dr E F Kelly and others present discussed various points brought out by the speaker

A rising vote of thanks was tendered to Dr Fischelis for coming to Baltimore and presenting his address The meeting was well attended, including several guests from Washington and students of the School of Pharmacy

C JELLEFF CARR, *Secretary Treasurer*

CHICAGO

The 223rd meeting of the Chicago Branch of the A PH A was held Tuesday evening October 16, 1934, at the University of Illinois College of Pharmacy

President Webster called the first meeting of the school year to order and introduced the

first speaker of the evening, Prof R E Terry, who gave a report of the AMERICAN PHARMACEUTICAL ASSOCIATION meeting held at Washington D C, last May This meeting of the ASSOCIATION was in conjunction with the dedication of the new building erected in Washington by the ASSOCIATION

The second speaker of the evening was Prof E N Gathercoal chairman of the Revision Committee of the National Formulary He outlined the progress of the revision as of January 31, 1934 There will be very few changes in items after that stage of revision

A summary of the report shows the following statistics The N F VI will contain 714 items, N F V items carried over will number 482, deleted U S P X items will number 79, 153 new items not found in either the U S P X or N F V, will be added Most of these additions and deletions were suggested by the prescription survey conducted for the purpose of ascertaining their extent of use

The arrangement of the book will differ in that it will consist of only one part and not divided into separate parts as in the previous revision The style of arrangement will be as follows Title Page Preface, General Principles, Individual Monographs alphabetically arranged, Diagnostic Reagents and Clinical Tests Standards for Materials and Processes Used in N F Tests and Assays, History, Index Supplements

Twenty new ampuls will be added twenty two new chemicals six glandular products and fifty four new tablets, not to mention small numbers of the many other classes of preparations

Some innovations in standardization of biological products will be found in the new book

After many questions had been answered by Professor Gathercoal the thoroughly enjoyable and educational meeting was brought to a close by President Webster

L TEMPLETON *Secretary*

DETROIT

Members of the Detroit Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION recently adopted a plan for permitting customers to pay for medical service and medicines in 15 monthly instalments The chairman of the committee is Leonard A Seltzer, Don Squier and Ben Bialk are members of the committee and K B Reed is the manager of the Medical Service Bureau

NEW YORK

The October meeting of the New York Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held in the College of Pharmacy Columbia University on Monday October 8th About forty-five members and guests attended

President Ballard was in charge of the meeting which was opened by the reading of the minutes of the May meeting The minutes were accepted as read

Treasurer Currens reported This report was accepted

The applications for membership in the A PH A together with remittances of Messrs Breuer and Schwartz were received for forwarding by the secretary

Chairman Lehman, of the Committee on Legislation and Education, reported that the police were arresting pharmacists for the sale of emmenagogues and contraceptives He also mentioned that it was now illegal to sell valerian or its preparations except on a written prescription The labor difficulties in the Bronx between store owners and the Drug Clerks Union were briefly discussed

Dr Arny moved that a committee be appointed to draw up suitable resolutions concerning the work and contributions to pharmacy of our dear departed friend Dr Kassner, the resolutions to be sent to Mrs Kassner This motion was approved and President Ballard made the appointments after the meeting

The chairman then announced the programs already arranged for several meetings in advance and urged every one to attend He called attention to the fact that the December meeting would be held in the Brooklyn College of Pharmacy through the invitation of the Kings County Pharmaceutical Society

The guest speakers for the evening were then introduced The first was Fred L Wertz who discussed, "Advertising in Pharmacy"

Mr Wertz began by pointing out that he as a layman, had only learned of Pharmacy Week in the last two years He emphasized that pharmacists were not impressing the public with dignity and respectability of their profession and that National Pharmacy Week required the whole hearted cooperation of every pharmacist in order to make the public fully conscious of it In this connection his argument was that pharmacists should take greater interest in the advertising value of

their show windows, and the cases and general fixtures within the store

Mr Wertz was particularly desirous to impress his listeners with the thought that the windows were a source of attraction in bringing people into the store Good salesmen cannot function unless people come in to buy and look around The speaker called attention to the error made by many pharmacists of failing to tie up their window displays with national advertisers

Many interesting examples were cited by the speaker and some enlightening figures on the sums spent by department stores for window displays were given

In summing up, Mr Wertz declared that window advertising was the least understood form of advertising, the most neglected, and was the one form which provided the small retailers with the most favorable opportunities

At the close of the address, Mr Currens said that the retailer should back up what he puts in his window

Fred Frankfurter, retail pharmacist, then spoke on, "The Return to Pharmacy"

Pointing out that many factors were involved in assigning causes for the present unsettled conditions in retail pharmacy, he briefly reviewed some of the work being done in Westchester County to improve matters In connection with National Pharmacy Week, he called attention to the educational campaign conducted during the last three months by proper cooperative advertising in the local papers The object was to make the public pharmacy conscious Mr Frankfurter believed that a return to dignified rational pharmacy was inevitable and that the development was well advanced Through cooperative movements pharmacists were encouraging the writing of prescriptions by physicians Only recently a new and fertile field had been investigated through professional advertising and educational work among veterinarians This group had taken a considerable interest in prescription writing

In closing the speaker pointed out that although the sales of side line items in his store had markedly decreased in the last several years, the volume of pharmaceutical business had decreased but little

After some brief discussion on the subjects presented by the speakers, a rising vote of thanks was voted

RUDOLF O HAUCK, *Secretary*

TESTIMONIAL DINNER TO PRESIDENT FISCHELIS

A testimonial dinner will be tendered to Dr Robert P Fischelis in honor of his election to the presidency of the AMERICAN PHARMACEUTICAL ASSOCIATION Sponsored by the New York Branch of the A PH A this happy event will be celebrated in the Hotel Pennsylvania, New York City, Thursday evening, January 10, 1935

Dr Fischelis has served American pharmacy with conspicuous ability and his devotion to the cause, his high ideals and the effort he has put forth in raising the standard of pharmaceutical practice throughout the Nation richly entitles him to the respect and esteem in which he is held by every true follower of our high and honorable calling

Tickets may be obtained from Hugo H Schaefer, *Chairman*, 115 West 68th St, New York City at $4 00 per plate

NORTHERN NEW JERSEY

The ninth meeting of the Northern New Jersey Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held at Rutgers University College of Pharmacy on Monday, October 15th

David L Cowen presented an interesting paper on 'Early American Legislation Pertaining to Pharmacy," which will appear in a later issue of the JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION Photostatic copies of the Virginia Act of 1736 entitled "An Act for Regulating the Fees and Accounts of Practicers in Physic" and the South Carolina Law of 1751 entitled "An Additional and Explanatory Act to Act for the Better Ordering and Governing of Negroes and Other Slaves' discussed by Mr Cowan were presented to the college and will be framed and added to the library

Professor C L Cox was elected secretary of the branch to fill the vacancy caused by the resignation of Doctor L W Rising who returned to the University of Washington this year

The program committee outlined its plans embracing many interesting and instructive features for coming meetings The next regular meeting will be held on Monday, November 19th

C L COX, *Secretary*

PITTSBURGH

The opening meeting of Pittsburgh Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held Thursday evening, October 25th, in the main lecture room of the Falk Clinic The meeting was opened by President Raymond J Hornfeck of McKeesport

After reading of the minutes by Secretary McGinnis, the president introduced Dr E C Reif who presented an interesting report of the Washington meeting of the A PH A He gave a vivid word picture of the dedication services of the American Institute of Pharmacy A discussion followed in which references were made to the time when the Headquarters Building was a hope and now is a reality Several activities of the Pittsburgh Branch incidental to making the building a success were brought to mind

President Hornfeck introduced Dean C Leonard O'Connell who spoke on Problems of Modern Medicine" In his opening remarks the speaker referred to the codes in their operation and said that what we need in pharmacy in place of ineffective codes is plain old-fashioned honesty

He pointed out that the orderly economic flow of merchandise from its source to the ultimate consumer required the three agencies, manufacturer, wholesaler and retailer, that the increased number of more aggressive merchandisers with their chief appeal based upon deep cut rates on standard commodities as "loss leaders" tended to eliminate the wholesaler, that this gave rise to two distinct groups of retailers, from the standpoint of buying, whose basic costs radically differ, and that in the light of these facts the code provision prohibiting the sale of merchandise at prices less than cost is indeed an empty victory for the small distributer

Dr O'Connell stated "It is certainly uneconomic to expect the ultimate distributer to defray the cost of retail distribution"

In continuing Dr O'Connell said that if the large unit distributers were able to demonstrate their ability to get all the commodities they offer to the consumer at a great saving, there would be some merit to their argument that they can afford to distribute for less Contrary to this, however, this underselling plan is only successful to the extent that such distributers can sell 'own brand" items at unusual profits to offset losses from standard underpriced articles He further stated that the pricing of well known merchandise at a price of cost or less with the overt intention of leading the public to believe that all merchandise is sold on a similar basis, is clearly unethical He said, 'if manufacturers have permitted their goods to be tossed about steadily losing original value in the public mind, the burden for restoration is upon them rather than upon the small retailer"

The speaker stated that a fair minimum price for any commodity should be the basic cost of the item plus the honest efficient cost of selling and that the selling expenses would be at least 20% of the sales On such a basis an item costing $4 00 per dozen would sell for $5 00, or 42¢ a unit, and an $8 00 item would sell for $10 00 per dozen or 83¢ a unit Dr O'Connell concluded by stating that such a plan could only be brought about by the retailers, convincing the manufacturers that they were earnest and sincere in their opposition to unethical and uneconomic practices—this could easily be done if the retailers would simply refuse to distribute items whose resale price did not include their costs of distribution

STUDENT BRANCH PITTSBURGH COLLEGE OF PHARMACY

John Gibson Campbell was elected *President* of the senior class of the Pittsburgh College of Pharmacy, other officers chosen by the Seniors for the year 1934–1935 school term are *Vice President*, Jack Leroy Rosenberry, Kittanning Pa , *Treasurer*, Fred H Stadtlander, Pittsburgh, *Secretary*, Miss Lillian Jane Cohen Washington, Pa President Campbell represented the Students' Branch as delegate at the 82nd annual convention of the AMERICAN PHARMACEUTICAL ASSOCIATION held in Washington in May 1934

Officers of the Junior Class are *President*, Walter O McGinnis, McKees Rocks, Pa , *Vice-President*, Charles M Kaetzel of Rimersburg, Pa , *Treasurer*, Isadore Browarsky Oakdale, Pa , *Secretary*, Glenn Kellogg, New Castle, Pa

Officers of the Sophomore Class are *President*, John J Todora, Aliquippa, Pa , *Vice President* Ralph G LeMoon, Erie Pa , *Treasurer*, William A Kane, Braddock Pa , *Secretary*, Miss Jane Beyer, Punxsutawney, Pa

Officers of the Freshman Class are *President* Robert C Kealey, Jeannette, Pa *Vice-President*, Robert L Peel, Jr , Sharon Pa , *Treasurer*, Vera Karel, Ambridge, *Secretary*, Betty Haeckler, Pittsburgh

STEPHEN WILSON *Acting Secretary*

EDITORIAL NOTES

OFFICERS-ELECT OF AMERICAN PHARMACEUTICAL ASSOCIATION

The Board of Canvassers upon tallying the votes find that the election of officers elect for 1935–1936 has resulted as follows

For *President* Patrick H Costello, Cooperstown, N D

For *First Vice President* Frank A Delgado, Washington, D C

For *Second Vice President*, J Lester Hayman, Morgantown, W Va

For *Members Elect of the Council*, James H Beal, Fort Walton, Fla , C H LaWall, Philadelphia, Pa ,R L Swain, Baltimore, Md

TURNER F CURRENS
C W BALLARD
HUGO H SCHAEFER, *Chairman*

THE WASHINGTON-BALTIMORE SECTION OF THE HISTORY OF SCIENCE SOCIETY

The Washington-Baltimore section of the History of Science Society held its November meeting in the American Institute of Pharmacy on Wednesday, the 7th

The *president* of the section is Dr James E Couch, and the *secretary* is M C Leikind, both of Washington

Charles H LaWall was the first speaker and the subject "Alchemical Symbols as Used in Pharmacy" This was an illustrated lecture

Dr W J Wilson, Consultant Manuscripts Division of the Library of Congress, spoke on 'The Fifteenth Century Latin Alchemy and Its Antecedents" and the discussion was led by Dr C A Brown, Bureau of Chemistry, *U S Department of Agriculture* Dr Brown enlarged on his remarks, using lantern slides

About seventy-five members and visitors were present, many of whom are members of the History of Science Society

Mrs Charles H LaWall, President and Mrs R P Fischelis were also present

'The organization of the History of Science Society was the result of a constantly growing interest in the study of the history of science In 1919 a group of scholars interested in the cultural phase of science, under the direction of Dr Lynn Thorndike, formed a section of the American Historical Association In 1920 a similar section was organized in the American Association for the Advancement of Science, with the late Dr William A Locy as chairman The formation of the History of Science Society by Dr David Eugene Smith was the result of the merging of these two groups The need of an organization of this kind was evidenced by the rapid recognition accorded the History of Science Society It was organized in Boston, January 12, 1924 and was incorporated under the laws of the District of Columbia, January 30 1925 It was affiliated with the American Association for the Advancement of Science, April 26, 1926 and admitted as a constituent member of the American Council of Learned Societies, February 2, 1927 The Society meets annually usually with the American Association for the Advancement of Science or the American Historical Association, and participated actively in the Second International Congress of the History of Science and Technology in London in 1931"

Officers of the Society are *President*, Harvey Cushing, Yale University, New Haven Conn., *Vice-Presidents*, Charles A Browne, Washington, D C , Chauncey D Leake, San Francisco, Calif , *Treasurer and Corresponding Secretary*, Frederick E Brasch, Library of Congress, Washington, D C , *Recording Secretary*, Lao G Simons, Hunter College, New York, N Y

PHARMACEUTICAL CONDITIONS IN DENMARK

A party of Danish pharmacists recently visited England, and, from information obtained from them, *The Pharmaceutical Journal* gives the following particulars regarding pharmacy in Denmark

"Pharmaceutical education and examination is in the hands of the Ministry of Education, and the pharmacy law is administered by the Health Department of the Ministry of Home Affairs, which also fixes the prices at which drugs and pharmaceutical preparations may be sold The number of pharmacies is limited to about one to 10,000 of the population, there being altogether about 300 pharmacists The privilege of owning a pharmacy is granted by the State, and reverts to the State at the death of the owner The establishments are strictly pharmaceutical in character, and are inspected by pharmacist-inspectors, of whom there are three, these also inspect the works of manufacturing pharmaceutical firms An inspector spends a day in each pharmacy Among his

duties is the taking of samples for analysis, the analyses being carried out by the inspector himself in the laboratory of the Inspectorate A fee for the inspection is charged, which is graded according to the size of the pharmacy and amounts to about £10 for the larger pharmacies Inspections may be made as often as the authorities think fit"

THE PRACTICE OF PHARMACY IN EGYPT

Chemical and bacteriological analysis in Egypt is conducted by many of the pharmacists, who work in close cooperation with their medical confrères and are treated by the latter with the respect and esteem extended by one professional body to another There are in Egypt about a thousand proprietor pharmacists and 200–300 assistant-pharmacists the majority of these are concentrated in a few large towns

The "drogueries" or drug stores, of which there are quite a number in Egypt sell most of the lines usually associated with the chemist in England and the druggist in the United States, but which are not supplied by the pharmacist in Egypt, France or Germany Cameras, cigarettes, silverware stationery and many other things which the professional pharmacist of Cairo or Alexandria would disdain to handle are offered by the drogueries" of these cities in great variety These are the shops which make effective window displays of their goods and which have handsome decorations, fittings and general appearance They do not, however, indulge in dispensing work in the sale of poisons, these functions being restricted to the pharmacist proper —From the *Indian and Eastern Druggist* for October

SCHOLARSHIPS AND AWARDS

The 1934 Leverhulme Pharmaceutical Scholarships, Great Britain, have been awarded to Frank Charles Cumberland, Arnold Rogers and Maurice William Partridge, students of Nottingham University College The scholarships were founded by the first Lord Leverhulme, and are open to student associates of the Pharmaceutical Society of Great Britain They have each a value of £60 the first carrying also the award of a gold medal and a prize of books, and the second a similar prize of books

Schools of Pharmacy in the United States award scholarships for various researches and the number is growing showing the increased interest in pharmaceutical activities

The AMERICAN PHARMACEUTICAL ASSOCIATION Research Award of $1000 00 has been granted to the Florida School of Pharmacy The studies on Drug Extraction are being continued under the direction of Dr W J Husa

The council of the American Association for the Advancement of Science has appropriated $3000 00 for grants in aid of research It is the policy of the association to make the grants of small amount and its preference to give them to research workers in smaller and less well-known institutions Applications should be addressed to the permanent secretary of the American Association for the Advancement of Science, Smithsonian Institution Building, Washington, D C ,

For the third time since its foundation the Nobel award for chemistry has been granted to an American The winner of the prize for 1934 is Dr Harold C Urey, Leonia, N J He discovered the basis of what is popularly known as ' heavy water " The work in part was done by Dr F G Brickwedde, celebrated for his process for liquefying helium

---

The editorial offices have been presented by Margaret and Walter Cousins, Sr , Dallas, Texas with a unique paperweight representing a Texas longhorn The head was carved out of the heart of a mesquite tree by Bill Hickman of the famous Texas ranger family, and the horns are from a genuine Texas longhorn Mr Hickman carved it with a pocket-knife and one who knows the mesquite will realize that it was a task to produce this striking design

PERSONAL AND NEWS ITEMS

President Robert P Fischelis, of the AMERICAN PHARMACEUTICAL ASSOCIATION, secretary of the New Jersey State Board of Pharmacy, addressed the student body of the College of Pharmacy of the University of Maryland in Baltimore on Thursday, November 8th, on the subject ' Contemporary Pharmacy "

The same evening he also addressed the Baltimore Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION on the subject ' Federal Regulation of the Drug Industry '

Lyall J Klotz has accepted a position as Professor of Pharmacy in the College of Pharmacy, Ferris Institute, Big Rapids, Michigan Dr Klotz was one of the two to receive the first Ph D 's awarded by the University of Florida

Louis Magid has accepted a position in the Research Department of the Wm S Merrell Co , Cincinnati Dr Magid held the AMERICAN PHARMACEUTICAL ASSOCIATION Research Fellowship during two years for his work on Drug Extraction He received the Fairchild Scholarship award for 1931

Prof P A Foote of the University of Florida, spent the summer visiting points of pharmaceutical interest in several countries of Europe He studied methods of instruction in the Colleges of Pharmacy in London, Amsterdam, Heidelberg Leipzig, Berlin and Paris

Dr Oliver Kamm was the principal speaker at the November meeting of the Science Club of the University of Georgia

Graduate student, University of Minnesota, Karl Goldner, passed his preliminary Ph D examination minor—organic chemistry, major—pharmaceutical chemistry, on Monday, October 15, 1934 The examiners were Drs E D Brown, W Lauer, C A Mann, L I Smith, C H Rogers and F J Wulling Dr Rogers, in charge of the major, acted as chairman of the Examining Committee

W Bruce Philip, former Counselor of the National Association of Retail Druggists, is maintaining an office in the Munsey Building, Washington, D C He is establishing a bulletin service for retail druggists

Rowland Jones, Jr , of Gettysburg, So Dak , has been named representative of the National Association of Retail Druggists He has established his office in Washington, D C.

It has been announced that J A O Preus former governor of the State of Minnesota, has assumed duties as Legal Advisor of the N A R D

Dr Frederick J Cullen, former Chief of Drug Control in the United States Food and Drug Administration, has been appointed general representative for the Proprietary Association at Washington He succeeds the late Ervin F Kemp

Dr Cullen is a graduate registered pharmacist, as well as a doctor of medicine, and has practiced in both fields During the World War he was regimental surgeon of the Tenth United States Field Artillery and served overseas with the Third Army Division He was wounded at Chateau Thierry and holds two citations for bravery under fire He is a member of the Order of the Purple Heart

Robert Rice, of Missoula Mont , has been awarded the H A B Dunning Scholarship in the School of Pharmacy, University of Maryland He will spend part of his time teaching in addition to work on his Doctor's degree

Among recent visitors at the American Institute of Pharmacy were Bertil Ronnmark, Control Laboratories, Stockholm Sweden, fellow of the Swedish Pharmaceutical Association, studying under Dr Reid Hunt Harvard University, Dr C A Rojahn, University of Halle, Germany, Editor of the YEAR BOOK

OBITUARY

ERVIN F KEMP

Ervin F Kemp, general representative of the Proprietary Association and in charge of its headquarters in Washington, died October 23rd, at his home in Sandy Springs, Md He was sixty two years old and has been connected with the association for thirty years, in Chicago and Washington, having charge of its bulletin service and general publicity and editing the monthly periodical, *Standard Remedies* Mr Kemp was born in Grand Rapids, Mich , where he spent his boyhood Before going with the Proprietary Association, he was a newspaper man in several Ohio cities He was a member of the AMERICAN PHARMACEUTICAL ASSOCIATION His wife, Nellie B Kemp, survives him

ROBERT H LAND

Robert H Land, member of the AMERICAN PHARMACEUTICAL ASSOCIATION and prominent Augusta pharmacist, member of city council and former president of the Georgia Pharmaceutical Association, died at his home October 10th, after a long illness, aged 68 years

He was born November 6, 1866, in South Carolina, a son of Robert H and Elizabeth Griffin Land With his parents, he moved to Augusta in his youth, and his father for many years was a prominent pharmacist of Augusta

Mr Land entered the drug business about 50 years ago, organizing the Perrin and Land Drug Company, in 1896 the partnership was dissolved and he organized the Land Drug Company This he operated for more

than thirty years, until his retirement, when he was succeeded by Fred J Bodeker, who had been associated with him forty-one years Following his retirement from active business he became associated with the McKesson-Murray Drug Company as consulting pharmacist

As stated, the deceased had served as president of the Georgia Pharmaceutical Association, also for a period as chairman of the Georgia Board of Pharmacy and was a member of the board of trustees of the University Hospital

DR PHILIPP FISCHELIS

Dr Philipp Fischelis, professor of Histology, Embryology and Pathology at the Temple University School of Dentistry, died of heart disease, October 30th, at his home in Philadelphia, aged 76 years

Dr Fischelis had devoted much of his time to dentistry and dental education since his retirement as a physician Educated at the universities of Leipzig Koenigsberg and Berlin, he came to this country in 1889 He served at various times as instructor of rhinology and laryngology at the Philadelphia Polyclinic as special laryngologist at Mount Sinai Hospital and associate professor of Histology and Embryology at Medico-Chirurgical College

He was a member of the American Association for the Advancement of Science and many medical societies the author of "Developments of the Thyroid and Thymus Glands" and "Development of the Lung" and co author of several other works

Surviving are three sons, Robert P Fischelis, president of the AMERICAN PHARMACEUTICAL ASSOCIATION and secretary of the New Jersey State Board of Pharmacy, Bert F and William Fischelis, and three daughters, Marie, Alice and Anna

SOCIETIES AND COLLEGES

DISTRICT MEETING OF BOARDS AND COLLEGES

The 1934 District Meeting of Boards and Colleges of Pharmacy was held at Mammoth Cave Kentucky The five states representing this district include Indiana, Kentucky, Illinois, Michigan and Ohio

Representatives of the Indiana Board of Pharmacy were E A O'Harrow, *President*, Bloomington, R B Rothrock, Evansville, and John A J Funk Galveston The Indiana Colleges were represented by Dean Jordan Professors Zufall and DeKay and Mr Heine of Purdue, Dean Niles and Professor Ambrose of Indianapolis College of Pharmacy, and Dean Lofgren of Valparaiso College of Pharmacy

DISTRICT MEETING AT LURAY VA

Seventh and Eighth District of Virginia pharmacists met at Luray, November 22nd Vice President Edward P Berlin issued the call for the meeting of which Walter S Nicklin is the chairman Subjects of the meeting are listed

Price Control as I Would Like to See It," by C P Rector of Fredericksburg, Small Town Drug Store Problems and Some Changes That Would Help," by W E Hisey of Shenandoah, "What the City Pharmacy Is Up Against, and What Should Be Done about It," by J E W Timberman, Alexandria, Constructive Suggestions for the Improvement of Our Association, by C S Brooks, Winchester

Secretary E F Kelly is named as speaker on 'The Future of the Drug Code "

SIXTH DISTRICT ASSOCIATION OF SOUTH CAROLINA

Resolutions calling upon the NRA for relief in the form of a minimum mark up from manufacturers' wholesale list cost of at least 15 per cent were adopted by the Sixth District Judicial Circuit Pharmaceutical Association, which met in Rock Hill October 25th

President King introduced Vice-President J D Ashmore of Greenville, who reported on the high spots of the N A R D convention in New Orleans Unfair Trade Practices" was the topic of an address by Secretary-Treasurer J M Plaxco of Due West Hilton Ratterree, Jr , of Rock Hill, outlined the legislation that probably will be recommended this year H R Wood of Chester, led an interesting round table discussion on prescription pricing

OFFICERS-ELECT OF AMERICAN PHARMACEUTICAL ASSOCIATION, 1935–1936

President, Patrick H Costello, Cooperstown, N Dak , Retail Pharmacist and Secretary North Dakota Board of Pharmacy *First Vice-President*, Frank A Delgado, Washington, D C , Pharmacist, Chemical Division, Department of Commerce *Second Vice-President*, J Lester Hayman, Morgantown, W Va , Secretary, West Virginia Pharmaceutical Association and Professor of Pharmacy, School of Pharmacy, University of West Virginia *Members of the Council* James H Beal, Fort Walton, Fla , Teacher of Pharmacy, retired, Charles H LaWall, Philadelphia, Pa , Dean, Philadelphia College of Pharmacy and Science, Robert L Swain, Baltimore Md., Deputy Food and Drug Commissioner of Maryland and Secretary, Maryland Board of Pharmacy

The officers elect, named above, will be installed at the next annual meeting of the ASSOCIATION to be held in Portland, Ore , in 1935

ASSOCIATION OF OFFICIAL AGRICULTURAL CHEMISTS

The Association of Official Agricultural Chemists held its annual meeting in Washington, October 29th–31st This was the fiftieth anniversary of the Association and its attendance was large Among those present were two charter members, C W Dabney and W G Gascoyne W D Bigelow delivered the fourth Wiley memorial address

For the first time in its history the Association had as its president a Canadian chemist R Harcourt of the Ontario Agricultural College

The following were elected officers of the Association for the ensuing year *President* F C Blanck *Vice President* H H Hanson *Secretary Treasurer,* W W Skinner *Additional members of the Executive Committee* C C McDonnell, H R Kraybill R Harcourt and F S Frisby

MEETING OF WHOLESALE DRUGGISTS AND FEDERAL TRADE COMMISSION TO MEET

Under the sponsorship of the Federal Trade Commission, a trade practice conference for the wholesale drug industry in the United States will be held in the Congress Hotel Chicago December 6th Charles H March member of the Commission will preside

The conference is being called at the request of the National Wholesale Druggists Association, which at its annual convention in White Sulphur Springs, W Va October 13th approved a recommendation by President Henry D Faxon as follows

'Your board concurs in the recommendation of the president that this association should apply for a fair trade practice conference for the whole drug trade industry under the auspices of the Federal Trade Commission within the very near future

'The purpose of the conference is to eliminate certain unfair methods of competition and trade abuses of which the commission has been told, there has been complaint in the industry including such practices as secret rebates misbranding price discrimination false invoicing substitution of products without authority and other unfair practices"

Members of the National Wholesale Druggists' Association do the commission says approximately 75 per cent of the total wholesale drug business in the United States with an annual volume of business of approximately $500 000 000 00 The commission expects that a large representation of wholesale druggists will attend the conference, from probably every state in the Union

In addition to Commissioner March, who will preside the Federal Trade Commission will be represented at the conference by George McCorkle director of the trade practice conference division of the Commission

ALLIED PROFESSIONS MEET IN NEW JERSEY

Representatives of the Medical Society of the State of New Jersey the New Jersey State Dental Society the New Jersey Pharmaceutical Association and the New Jersey State Nurses' Association perfected an organization to be known as the Conference of Allied Medical Professions of the State of New Jersey The purpose of this society is to provide a medium for discussing matters of common interest to the various groups It is planned to foster the organization of county and district groups Meetings are to be held at least once a year and other meetings may be called by the chairman or by action of the conference

NORTH PACIFIC COLLEGE

All faculty members of North Pacific College of Pharmacy and a large group of students were in attendance at the Junior Oregon State Pharmacy meeting held at Multnomah Hotel October 10th Professor Grill gave a talk on Professional Pharmacy" and Dean Mickelsen spoke on 'Outstanding Accomplishments of Oregon Pharmacists" and the coming American pharmaceutical convention Dean Mickelsen was also principal speaker at the Eastside Lions Club, October 9th His subject was Biologicals in Medicine' He also spoke at the Eastside Commercial Club on "The Role of the Pharmacist in the Community" the latter being broadcast

---

We are in receipt of two illustrated reprints from Prof C H LaWall of articles that appeared in the *Journal of Chemical Education* in August and October the former dealing with the Virgin Mary as the Patroness and Protectress of Pharmacy and the other with St Cosmas and St Damian, Patron Saints of Pharmacy and Medicine

LEGAL AND LEGISLATIVE

CINCHOPHEN AND AMIDOPYRINE DANGEROUS TO HEALTH AND LIFE SAYS FOOD AND DRUG CHIEF

Wide-spread use of two drugs—Cinchophen and Amidopyrine—are subjects of a bulletin of the Federal Food and Drug Administration

'Current medical literature contains many reports which clearly indicate that these drugs are dangerous to health and life," says W G Campbell Chief of the Food and Drug Administration "The gradual development of serious poisoning from the use of these drugs is often so insidious that the danger is not recognized by the user Cinchophen causes a degeneration of the liver cells Amidopyrine may cause a reduction in the number of white blood cells, a condition called agranulocytosis'

NEW RULES AND REGULATIONS PROMULGATED BY THE NEW YORK STATE BOARD OF PHARMACY

At the last meeting of the New York Board of Pharmacy and in accord with the powers vested in them by law, three new pharmacy rules were proposed and have received the approval of the New York State Regents The rules follow

Rule 24 —Misbranding —A drug or medicine shall be considered misbranded if labeled, sold or offered for sale under a name or title which deceptively imitates the official title of any drug or medicine that is listed in the National Formulary, United States Pharmacopœia or the United States Dispensatory

Rule 25 —Imitation —A drug or medicine shall be considered an imitation if in any way it deceptively imitates any official drug or medicine in the National Formulary, U S P, or United States Dispensatory

Rule 26 —Habit Forming Drugs —Any medicine which contains morphine, opium, heroin, chloroform, cannabis indica, chloral hydrate, acetanilide, barbituric acid or any of the poisons listed in Schedules A and B of Section 1363 of the Education Law or any derivative or preparation of any of these substances or any other drug or medicine, if the content of its container, or any part thereof, taken at one time, are likely to prove poisonous, deleterious, or habit forming, shall be sold only by a licensed pharmacist, who shall take reasonable precautions to acquaint the purchaser of the nature and effects of such drug or medicine

NEW JERSEY LEGISLATION

The following legislation was passed during 1932 1933 and 1934 and signed by Governor A Harry Moore, of New Jersey —Discontinuing licensing assistant pharmacists and preserving the right of assistants registered as such, with provisions made for their advancement The law stated that only high school graduates and graduates of recognized colleges of pharmacy could take examinations to become registered pharmacists Prohibiting the use of the terms "pharmacy," "drug store" etc, by places other than those supervised by registered pharmacists Requiring licenses for handling narcotic drugs by wholesalers and instituting requirements for pharmacists identical with those in the Federal Narcotic Act Supplementing the act regulating the practice of pharmacy to prevent violations by making it possible for the Board of Pharmacy to serve summons or warrant Regulating the sale of barbital and other narcotic drugs, and stopping the sale of certain proprietary drugs by patent medicine stores An act governing the compounding of medical prescriptions to prevent adulteration The act stops the altering of prescriptions in any manner whatsoever unless approved by the prescriber An act which repeals sundry acts relative to narcotic drugs and strengthens the requirements of the act passed in June 1933 Annual registration of pharmacies, and under this act the board will not issue permits unless they are satisfied that a drug store is in personal and continuous charge of a registered pharmacist Allowing the Board of Pharmacy to revoke licenses of pharmacists convicted of crimes but giving such pharmacists right of appeal to the Supreme Court

SALES BELOW COST PROVISION UPHELD

Judge Robert Pollard of the State Circuit Court of Virginia, recently sustained the constitutionality and validity of the State NRA Act and the Retail Drug Trade Code of Fair Competition He overruled a demurrer to the bill of complaint charging violation of the provision in the Retail Drug Code prohibiting selling below cost This was the first case

brought before either the Federal court or the State in Virginia

OFFICIAL PREPARATIONS TAXED

A ruling from Deputy Internal Revenue Commissioner Mellott is to the effect that U S P Tincture of Ginger under whatever name sold is classified as an intoxicating liquor and the manufacturer thereof must qualify as a rectifier and pay rectifiers' special tax The product is subject to tax on rectified spirits and the sale thereof would require wholesale or retail liquor dealers' special tax stamp even though such sale is for medicinal purposes Stamps obtainable from local Internal Revenue Collectors must be placed upon the bottle in which the preparation is distributed and sold The tax is at the rate of approximately 30 cents per gallon of manufactured product

CODE FOR PHARMACEUTICAL BIOLOGICAL MAKERS

Approval of a code of fair competition for the manufacturing pharmaceutical and biological industry has been announced by the NRA The code which establishes the maximum work week of forty hours and a minimum wage of 35¢ per hour, is expected to reduce working hours in the industry by 10 per cent and slightly increase the minimum weekly earnings over the 1929 averages

Pharmacists, research and scientific workers chemists and executives who receive $35 00 or more weekly, are exempted from the maximum hour provision, as are outside salesmen The code became effective November 5th

MAINE PHARMACEUTICAL ASSOCIATION

For the purpose of securing closer affiliations with the parent body and for the setting up of local druggists' organizations in all Maine communities now lacking them, President Burton K Murdock of the Maine Pharmaceutical Association has appointed two members from each county of the state to serve as a Maine Council of Pharmacy Organization of the council was effected at a meeting in Portland of the executive committee of the State association

The new council is to elect one of its members to serve on the Association s executive committee Caldwell Sweet of Bangor, and C C Libby and H D Gerrish, of Portland, were named to represent wholesale drug houses of the state on the council

The mid-winter meeting of Maine Pharmaceutical Association will be held in the State House in Augusta February 15, 1935 The annual meeting will be held at the Rangeley Lakes House Rangeley June 26–28 1935

SWITZERLAND PHARMACY

The Swiss Society of Pharmacy directs that window shows should demonstrate the difference between a pharmacy and a drug store In making displays it is necessary to take into account the character of pharmacy and to respect its professional dignity Wholesale houses who do not support the interests of pharmacy should not be allowed space in windows All samples must be plainly marked as such and not be given away to the public except in packages smaller than the regular size The distribution of free gifts is strongly deprecated, as is coupon trading and all sales stunts It is permissible to distribute a calendar diary, note book or other small similar object, which can be considered as a favor Pharmacists are forbidden to advertise in any way competition on a price basis

THE FIFTEENTH INTERNATIONAL RED CROSS CONFERENCE

The Fifteenth International Red Cross Conference was held in Tokyo, beginning October 20th This was the first International Red Cross Conference ever held in the Orient, fifty seven countries were represented, the number of delegates being two hundred and fifty two

The Conference was opened by Prince Lyesato Tokugawa who presented an address in which he expressed the gratitude of the Imperial family and praised the achievements of the Red Cross Responses were made by Col G Huber vice president of the International Committee, and Professor Nolf, president of the Red Cross Society of Belgium Prince Kan in read a message for the Empress Prince Lyesato Tokugawa was selected as the chairman of the Conference

Grace I Harper registrar of the New Jersey College of Pharmacy has donated to the AMERICAN PHARMACEUTICAL ASSOCIATION a Homeopathic Cholera Case Presumably, this dates back to about 1834

BOOK NOTICES AND REVIEWS

ABSTRACT OF PROPOSED PHARMACOPŒIAL CHANGES

The first Abstract of Proposed Pharmacopœial Changes has been issued This deals with Inorganic Chemicals The publication of abstracts of changes proposed for the Pharmacopœia is in compliance with the recommendations of the Pharmacopœial Convention that all who are interested may follow the revision Reprints will be mailed without charge to anyone who is interested The Abstract is printed in the September JOURNAL, beginning on page 927

Annual Survey of American Chemistry, Volume 8, 1933 National Research Council The Chemical Catalog Co, Inc, New York City Editor Clarence J West, Director, Research Information Service, National Research Council 403 pages Price $4 50

Twenty five topics are covered in the volume, as follows Theories of Solutions, Kinetics of Homogeneous Gas Reactions, Subatomic Phenomena, Thermodynamics and Thermochemistry, Colloids, Contact Catalysis, Structure Determination by X-Ray and Electron Diffraction, Electrochemistry, Analytical Chemistry, Compressed Gases, Aliphatic Compounds, Carbocyclic Compounds, Heterocyclic Compounds, Pharmaceuticals, Biochemistry, Ferrous Metals in 1932 and 1933, Insecticides and Fungicides, Chemistry of the Silicates, Ceramics, Petroleum Chemistry and Technology, Cellulose and Paper, Leather, Paints, Rubber, Gaseous Fuels during 1932 and 1933

The chapter on Pharmaceuticals has been prepared by Clifford S Leonard, Director of Research, of the Burroughs Wellcome & Co Experimental Research Laboratories One hundred and seventy-five references conclude the chapter and quite a number of the articles referred to are from the JOURNAL OF THE A PH A

Edgar Grim Miller, Jr, of the Department of Biological Chemistry, Columbia University has contributed the chapter on Biochemistry

The chapter on Insecticides and Fungicides has been prepared by R C Roark of the Insecticide Division, Bureau of Chemistry and Soils, U S Department of Agriculture Two hundred and forty-six references conclude the chapter

F W Willard at the conclusion of the Foreword states that "to Dr C J West must be rendered the entire credit for this useful work. His continued interest and discriminating judgment render this survey more useful with each issue"

'Obituary of Frederick Belding Power" by Dr C A Browne

"Observations upon the Essential Oil Industries of Foreign Lands," reprinted from *Journal of the Chemical Education*, March 1934

LIST OF TRADE NAMES

A new list of trade names in use by member firms of the American Drug Manufacturers' Association and the American Pharmaceutical Manufacturers Association has been prepared under the auspices of the Patent and Trade-Mark Committees of the respective groups

The purpose of the compilation is to furnish information in the preliminary consideration of new trade names It has been revised to August 1, 1934

It is the desire of the associations that the booklet receive the widest possible distribution not only among members, but among all others interested in this important field including firms and individuals identified with allied organizations, trade mark attorneys and association trade mark bureaus

Copies may be obtained from Carson P Frailey, Executive Vice President and Secretary, American Drug Manufacturers' Association, Albee Building, Washington, D C, or from Clarence W Warner, Secretary, American Pharmaceutical Manufacturers Association, 246–250 High Street, Newark New Jersey

---

OFFICERS OF THE DAIRY, DRUG AND FOOD OFFICIALS

Henry Hoffman, Jr, chief of the food and drug department of Minnesota, was elected *President* of the Association of Dairy, Food and Drug Officials of the United States at the close of its four-day convention held in Atlanta, October 15th–18th Other officers named are Phil Taylor, chief food inspector of the Florida department of agriculture, *Vice President*, and W C Geagley, state chemist of Michigan (reëlected) *Secretary Treasurer* Mrs Sarah Vance Dugan, chief of the food and drug control of Kentucky, and Walter S Frisbie, chief of the office of cooperation of the federal food and drug administration, Washington, were named members of the executive committee.

COMMENTS ON SOME EVENTS OF 1934

American pharmacists will refer to the completion and dedication of the American Institute of Pharmacy as no less than an outstanding and most important event in the history of the AMERICAN PHARMACEUTICAL ASSOCIATION The following is quoted from an editorial in a Washington paper

The beautiful new home of the AMERICAN PHARMACEUTICAL ASSOCIATION, Constitution Avenue at Twenty Second Street, has a significance exceeding even the important scientific purposes to which it will be dedicated It represents a tide which is working in the affairs of men It is a symbol of a trend '

Those who have encouraged the effort have looked upon their contributions as expressions of loyalty, public service and desire to promote pharmacy They realize that in proper shaping of affairs the thought must lead that success depends on unison in action as far as this is reasonably possible, and confidence within the groups is essential strengthened by a right understanding with related activities

The Chicago World's Fair, recently brought to a close was eminently successful in every respect The Pharmacy Exhibit has brought pharmacy s message to the general public and has had a distinct educational value Pharmacy responded to an opportunity and profited thereby

This year's celebration was the decennial of Pharmacy Week Those who have had an active part in the annual event have shown their loyalty to pharmacy in an effort which extends beyond the activities of the seven days designated as Pharmacy Week

While there has not been entire approval of the codes it may truly be said that those who have directed the affairs under the drug codes have worked faithfully and accomplished much, they have sought the greatest good for the greatest number ' and they have received commendation not only from their own constituents but code authorities of other organizations

The National Council on Pharmaceutical Practice has presented as a first objective a study of the needs of each field of activity and has in preparation an announcement of these needs to the country, it is proposed to make a restatement of codes of ethics and practice as the basis of a high professional standard for each group The study is being shaped into action

Study of food and drug legislation, preparatory for the next session of Congress is being carried on The aim to provide better standards brought the AMERICAN PHARMACEUTICAL ASSOCIATION into life and to serve the public has always been a purpose of the organization and there is evidence of closer coöperation of the divisions of the drug-trade activities to formulate legislation along these lines of thought

Researches in professional accuracy are being promoted by the AMERICAN PHARMACEUTICAL ASSOCIATION A number of reports have appeared in the JOURNAL based on work which develops a better understanding of this important subject in prescription practice The Committee on Weights and Measures is collecting factual information relative to weighing and measuring apparatus These investigations contribute a valuable service to pharmacists, to the officials who supervise and direct the service of pharmacy, to physicians, dentists and the public

In order to obtain a complete picture of the prescription filling activities of pharmacy a study was included as an integral part of the National Drug Store Survey This report has been published by the AMERICAN PHARMACEUTICAL ASSOCIATION in cooperation with the U S Department of Commerce Bureau of Foreign and Domestic Commerce, the study was made in the Merchandising Research Division of the Bureau Further studies are being made and it is hoped that soon another edition will be ready for the press

Work on the U S Pharmacopœia XI and of the National Formulary VI is nearing completion, "Abstract of Proposed Changes" in the former is being published and reports on the latter have been made which indicate the improvements and changes in the forthcoming edition

The pharmaceutical exhibits prepared by various committees and organizations, and those sponsored jointly by the Revision Committees of the U S P and N F at meetings of National and State associations have been interesting and educational Those who gave of their thought and time have rendered most valuable services to pharmacy

E FLOYD ALLEN

JOURNAL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION

VOL XXIII DECEMBER 1934 No 12

E FLOYD ALLEN

E Floyd Allen, member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1884, was born January 2, 1858, in Cranford County, Pennsylvania He received his early education in the Public Schools and State Normal School at Edinboro, Pa After teaching for a year, he found employment in the drug department in a general store operated by W R Allen, in Jefferson, Ohio In 1881, he matriculated as student in the Philadelphia College of Pharmacy and was graduated in 1883 A year later he entered into partnership with a brother in the retail drug business at Minneapolis and continued therein until 1930

Mr Allen at once took an active interest in the Minneapolis Retail Druggists' Association and in 1884 he became affiliated with the State Association and served as its secretary for a time and, in 1889, was elected president of the organization He recalls some of the work of the Association and the difficulties encountered in inducing the legislature to enact a pharmacy law, when it was found impossible to secure the passage of a bill furthered by the pharmacists a less desirable measure was accepted, hopeful that a later legislature would strengthen it Continued efforts in that direction were more or less successful and provision was made to establish the Department of Pharmacy which, in 1892, was organized under direction of Dean Frederick J Wulling

The results of the work in which our honored member had an active part have been gratifying Thereby better pharmaceutical service has been rendered and it is a source of pride to pharmacists and other citizens of Minnesota that the achievements of the pioneers have been faithfully carried on by their successors

Mr Allen is active in civic affairs and is interested in several successful enterprises

EDITORIAL

E G EBERLE, EDITOR 2215 Constitution Ave , WASHINGTON, D C

THE SEASON'S OPPORTUNITIES

A MOST eventful year of history is coming to a close, bringing us to a new year fraught with equally important and varied problems We join in worthy purposes in evidencing our fellowship and conveying assurance to the Government and to the public that we are optimistic or hopeful of greater stability in affairs and growing prosperity

References have been made on a preceding page relative to some important events It is only by good team-work, genuine cooperation, sympathy and a measure of unselfish devotion that real success can be achieved in pharmacy as well as other activities

As has been said in substance in these columns on other occasions—work within the ASSOCIATION gives pharmacists the opportunity of expressing their thoughts concerning pharmacy and the drug business, of exerting their influence, thereby a broader viewpoint is developed and a higher appreciation of their co workers is inspired

The substance of the foregoing message finds expression in the following That pharmacy may progress during 1935 because of strengthened enthusiasm and cooperation, and through greater opportunities for service That there may come the realization that, however much pharmacists may have done for pharmacy and its organizations, they, themselves, have profited more because of their active and concerted interest

In greeting the members and others, wishing them health and prosperity, the hope is expressed that their strength may be equal to the greater duties which have come upon them as citizens, and as members of this and other associations organized for professional advancement

NEW PHARMACOPŒIAL STANDARDS FOR COD LIVER OIL OFFICIAL JANUARY 1, 1935

ANNOUNCEMENT of New Pharmacopœial Standards for Cod Liver Oil, to become official January 1, 1935, was made by Chairman E Fullerton Cook in his report on The United States Pharmacopœia at the Washington meeting of the AMERICAN PHARMACEUTICAL ASSOCIATION "These standards have been developed through a series of conferences with the vitamin experts of the United States and an extensive study of the general standard by the Sub Committee on Organic Chemicals The vitamin standards and vitamin assays represent the studies and conclusions of the U S Pharmacopœial Vitamin Advisory Board The release of this announcement, as an interim revision, has been authorized by the U S P Committee of Revision and U S P Board of Trustees, the standards to become official on January, 1935

The U S P Vitamin Advisory Board also announced the release of "Reference Cod Liver Oils" of known Vitamin A or Vitamin D potency, expressed in U S P X (1934) Units These "Reference Oils" are to be used as standards in Vitamin A or

D assays for determining the potency of Cod Liver Oil, Cod Liver Oil Concentrates, irradiated ergosterol or other irradiated or Vitamin A- or Vitamin D-containing products

Copies of U S P X (1934) interim revision Cod Liver Oil Text and the Reference Cod Liver Oil may be obtained by addressing Chairman E Fullerton Cook, of the Committee of Revision, 43rd and Woodland Ave , Philadelphia, Pa

THE NATION-WIDE NARCOTIC DRIVE

UNDER direction of the Chief of the Federal Bureau of Narcotics, Harry Anslinger, and Deputy Commissioner Louis Ruppel and other officials of the division made a nation-wide successful effort toward a clean-up of the narcotic traffic The Bureau is to be congratulated on their success, which will be followed by continued efforts The raid of December 7th–8th is said to be the most extensive drive ever made by Federal narcotic agents and has disclosed a most serious situation, not only because of the traffic in narcotics and the results, the relation to crimes, but because students in schools have been led to the use of narcotics

Recently, Commissioner H J Anslinger in a comprehensive press article stressed the importance of depriving narcotic peddlers of customers as a means of checking the narcotic evil "The legal dispensing of narcotics is carefully guarded and the laws are observed, violations are remarkably infrequent, the distribution of narcotics is through peddling and if the peddlers are deprived of customers they will cease to exist Illegal production of narcotics and export to countries seeking to eradicate narcotic addiction constitutes the other means of distribution for which correction has not been effected "

Liberty is taken in quoting from several editorials to recall early efforts of pharmacists and of the AMERICAN PHARMACEUTICAL ASSOCIATION in controlling narcotic addiction and references are given to action taken by the ASSOCIATION prior to the enactment of the Federal law It seems almost unbelievable, but nevertheless a fact, that when pharmacists first made concerted efforts to have restrictive legislation enacted, they found objection by legislators who thought there must be an ulterior motive back of their efforts, "because it reduced sales volume "

On page 567 of Volume 50 of the PROCEEDINGS is the report of Chairman H P Hynson which gave impetus to continue the study of addiction by the ASSOCIATION In Volume 51 is another report of the Committee (page 466) and a paper by James H Beal—' An Antinarcotic Law," which may be designated as a step toward national legislation relative to the handling of narcotics, for at the same meeting a draft for an antinarcotic law was submitted and a revision of it at the 1904 meeting (page 104), at which time also a paper on "Pharmaceutical Legislation with Special Reference to Antinarcotic Laws" (page 180) was presented The report made at the 1905 meeting indicates how seriously the conditions were viewed by pharmacists throughout the country That Congress did not realize the importance of antinarcotic legislation is evidenced by the fact that the federal law was not enacted until December 1914 The law added burdens to the many willingly assumed by pharmacists, quoting the closing paragraph of an editorial (1913) in advocating the passage of a federal antinarcotic law "It must not be imagined that any form of law can be devised that will be entirely free from objec-

tions, or that will not impose some burdens upon pharmacists and physicians, no matter how conscientious they may be in the handling of these drugs "

The references made are not intended to take credit for performing a duty to mankind, but to call attention to the important services rendered by pharmacists, because they recognized their duty long before general recognition was given to the control of narcotic sales, and all divisions of pharmacy entered into this service It is contended in the interest of the public, that the sale and dispensing of all medicines be restricted to those who, because of training and education, know the effect of medicines and realize their individual responsibility, as professional men and women, in safeguarding the public The situation developed adds emphasis to the importance of the latter statement

---

MEETING OF MEDICAL ADVISORY BOARD OF COMMITTEE ON ECONOMIC SECURITY

The following report is taken from the *Journal of the American Medical Association* of November 24, page 1627

The Medical Advisory Board, appointed by Secretary Perkins, chairman of President Roosevelt's Committee on Economic Security, to advise the committee's technical staff in its study of programs of public health, medical care and health insurance, met in Washington on November 14th and 15th The board met in executive session with all its members present as follows Drs Walter L Bierring of Iowa, Rexwald Brown of California, James Deacon Bruce of Michigan, George W Crile of Ohio Harvey Cushing of Connecticut Robert B Greenough of Massachusetts J Shelton Horsley of Virginia, James Alexander Miller of New York, Thomas Parran, Jr , of New York, George M Piersol of Pennsylvania and Stewart R Roberts of Georgia Other persons attending the meeting included Edgar Sydenstricker, in charge of the medical and health phases of the studies of the Committee on Economic Security, I S Falk of the technical staff, and by invitation Dr R G Leland and A M Simons of the Bureau of Medical Economics of the American Medical Association

"Nathan Sinai, Michael M Davis and W Frank Walker also met with the board as consultant staff members associated with the dental, hospital and public health advisory committees which have also been appointed by Secretary Perkins and which are to meet in the immediate future The meeting was opened by short addresses from Secretary Perkins and Edwin E Witte, executive director of the Committee on Economic Security Secretary Perkins and Mr Witte requested the close cooperation and advice of the medical profession in developing the health aspects of the President's program for economic security Owing to the fact that the Medical Advisory Board will make its recommendations to the Committee on Economic Security no public statement of its deliberations was given out, but we are informed by Mr Witte that the technical staff of the committee presented to the board tentative proposals on the three subjects above mentioned in extending and improving public services, tax supported medical care for dependents and other population groups affected with certain diseases and health insurance against illness

'Health insurance was discussed from the point of view of considering the details of a plan suitable to the various needs of the American people and the interests of the medical professions in the event that legislation on this subject is proposed by the administration The board requested an extension of time for this study Arrangements were effected whereby Dr Leland and Mr Simons will participate in this study with the technical staff It is anticipated that the board will meet again within the next six weeks or two months "

Other advisory committees are to be created, including dentistry hospital management and public health and it may be stated that the interests of pharmacy will receive consideration in due course

'Edgar Sydenstricker, chief statistician of the United States Public Health Service and director of public health activities for the Milbank Memorial Fund, has been placed in charge of the studies on Economic Security which it is hoped will yield the best possible means for providing adequate medical care for those who are without means ' "

SCIENTIFIC SECTION

FLUCTUATIONS IN THE RESISTANCE OF RATS TO NEOARSPHENAMINE AS OBSERVED IN ROUTINE TOXICITY TESTS OVER A PERIOD OF FOUR YEARS *

BY A E JURIST AND W G CHRISTIANSEN

Toxicity determinations on different samples of neoarsphenamine have been recorded in the literature many times and some papers have appeared describing toxicity studies on this substance For example, Durham, Gaddum and Marchal (1) have applied the "characteristic" curve or integrated frequency method of biological assay to neoarsphenamine, and Morrell and Chapman (2) found considerable variations in the resistance of individual rats in one rat colony It is proposed to discuss this question here from a somewhat different standpoint

In the course of the routine manufacture of neoarsphenamine each lot is tested for toxicity In these tests the Maximum Tolerated Dose of each lot is not determined but the test is of such a character as to determine whether or not the lot is satisfactory at a definite dosage The requirements of the National Institute of Health are that 60% or more of the test rats must survive at a dosage of 240 mg per Kg of body weight, using rats weighing approximately 100 Gm each With rare exceptions neoarsphenamine will pass such a test easily The routine tests carried out in this laboratory are run at two dosage levels, which for the purpose of this paper will be referred to as A mg /Kg and B mg /Kg [1] A large number of tests run during a period of years have shown certain variations in the number of rats surviving at these doses and the extent of this variation will become evident from the discussion which follows

EXPERIMENTAL

The rats used in these tests have been obtained from different sources so that the variations noted are little affected by this factor Five rats, each of approximately 100-Gm body weight, have been used in each of 963 tests, making a total of 4815 rats Of this number 3220 rats were injected at dosage level A and 1595 at level B The results have been grouped on the basis of monthly averages and cover a period of four years at dosage level A and three years at level B Also, since the toxic manifestations of neoarsphenamine are noted chiefly in the kidneys of the rats surviving on the sixth day after injection, the results of the gross examination of the kidneys of the surviving rats[2] has been included The extent of the kidney damage has been rated on a percentage basis using the following scale

Undamaged	100%
Slight damage	75%
Definite damage	50%
Marked damage	30%
Marked damage with congestion	20%

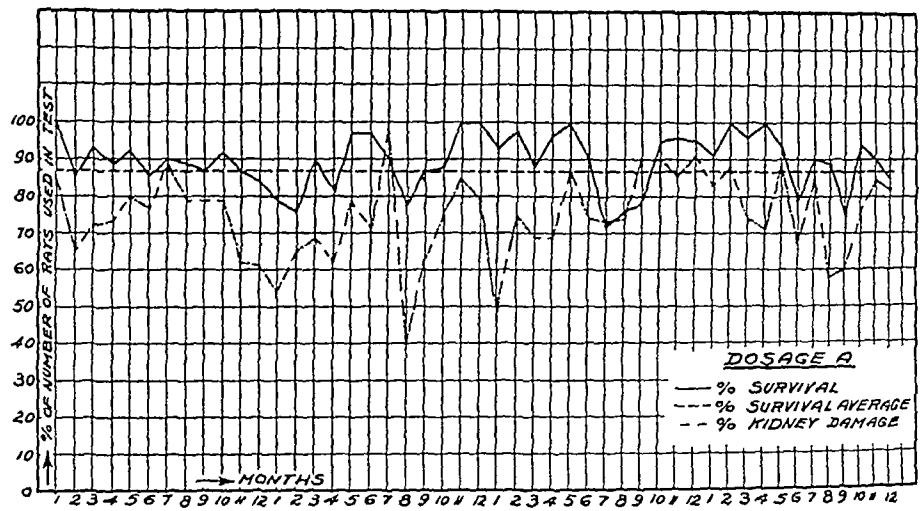
* Scientific Section, A PH A Washington meeting 1934

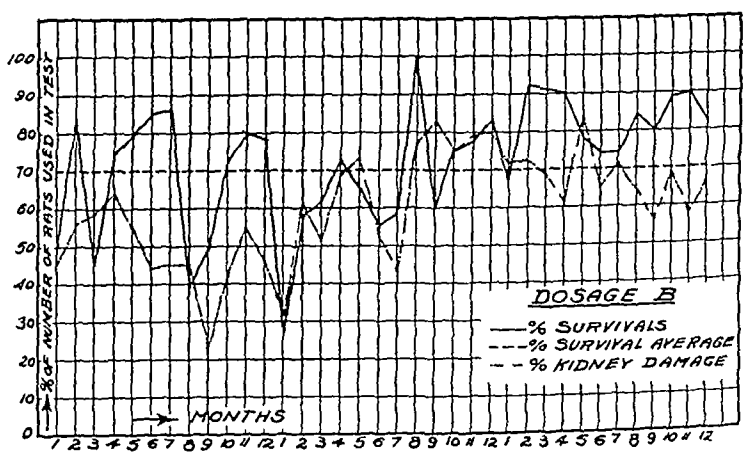
[1] The exact figures would contribute nothing to the discussion presented herein they are of course considerably higher than 240 mg /Kg

[2] The rats are killed and examined at the end of the test period

The results of these tests have been summarized in the attached curves The same scale is used in each case for the percentage of rats surviving and for the extent of the kidney damage noted in these rats The years are divided into twelve months each, numbered in order from one to twelve The dotted line drawn through the survival curve represents the average number of survivors in all

Fluctuations in Resistance of Rats to Neoarsphenamine as Observed in Routine Toxicity Tests of Dosages A and B over a Period of Four Years





the tests included in each curve, this average in each case is drawn from the gross totals, not by averaging the monthly percentages Separate sets of curves are given for the tests run at A mg per Kg and for those run at B mg per Kg

DISCUSSION

The results obtained with the dosage of A mg per Kg will be taken up first Out of a total of 3220 rats 2806 or 87% survived the test period Out of a total of

48 months the percentage of survivors fell below 87% only 13 times These drops below the average occurred in

January of the 2nd year	July of the 3rd year
February of the 1st and 2nd years	August of the 2nd and 3rd years
April of the 2nd year	September of the 3rd and 4th years
June of the 1st and 4th years	December of the 1st and 4th years

Therefore the fall below the normal average took place seven times during the months from June to September, these being the hottest of the year, and five times during the months from December to March, these being the coldest of the year These results, on the whole, appear to indicate that the resistance of rats to neoarsphenamine is independent of the season of the year during which the test is made, although the hotter weather may, to some slight extent, lower the resistance of the rats at times This agrees with the conclusion of Morrell and Chapman (2) that while the susceptibility of a rat colony seems to vary from time to time this variation is not related to the season of the year

At the same time an examination of the curves for kidney damage in the surviving rats shows that the percentage varies quite closely with the percentage of rats surviving However, as would be expected, the per cent of kidney damage is greater than the percentage of deaths This is to be anticipated because of the high dosage level In only three instances is the per cent of kidney damage less than the percentage of deaths

The results obtained at the other and higher dosage of B mg per Kg are not as uniform as those obtained at A mg per Kg Out of 1595 rats injected 1124 or 70% survived, but in 12 of the 36 months the percentage of survivors was below the average for the entire period These drops below the normal occurred in

January of all 3 years	June of the 2nd year
February of the 2nd year	July of the 2nd year
March of the 1st and 2nd years	August of the 1st year
May of the 2nd year	September of the 1st and 2nd years

In these the average falls below normal five times during the months from June to September, and six times during the months from December to March This confirms the conclusion that variations in rat resistance are apparently independent of the season of the year It may, however, be significant that at both dosage levels the percentage of survivors is below normal only twice during the months of mild weather, namely, October, November, April and May The variations in the percentage of survivals, especially at the lower dosage, are not large enough, however, to justify the conclusion that this is really a seasonal variation

The fluctuations in the survival curve are much greater at B mg per Kg than at A mg per Kg due, of course, to the fact that the dosage is much nearer the Maximum Tolerated Dose Here again the curve for kidney damage parallels the survival curve closely, the extent of damage is greater than the percentage of deaths except in 9 of the 36 months There are greater variations in the relation between the percentage of survivals and the extent of kidney damage at B mg per Kg than at A mg per Kg due to the fact that the dosage B is materially larger than A

It is interesting to compare the yearly survival percentages at the two dosage levels

	Per Cent Survivals			
	A Mg /Kg		B Mg /Kg	
	Average.	Limits	Average	Limits
First year	89 2	84–100		
Second year	85 8	76–100	65 4	39–86
Third year	86 5	72–100	64 1	27–100
Fourth year	86 7	79–100	80 9	67–92

These figures show that even when neoarsphenamine gives a high percentage of survivals at a dosage level at which deaths occur, the use of still higher doses enables one to demonstrate differences in toxicity in batches which give practically identical results at the lower dose Thus, the testing at A mg /Kg during the second, third and fourth years shows that at this dose about 13% of the rats died and the fluctuations were all of about the same order whereas the testing at the higher dose showed a much lower per cent of deaths for the fourth year than for the second and third

The toxicity tests were carried out in the Biological Laboratories of E R Squibb and Sons, at New Brunswick, N J

FREE ALKALI IN GLASS *

BY L F GABEL

It is obvious that glass bottles and ampuls of high soluble alkali content are unfit for use in finely adjusted pharmaceutical and chemical solutions

The following experiment demonstrates the possible reactions resulting from glass of high soluble alkali content A benzoic acid solution in an ordinary glass bottle is heated sufficiently to volatilize traces of benzoic acid in the neck of the bottle The sealed bottle is permitted to stand several months and upon testing, the traces of volatilized benzoic acid will be converted to the sodium salt

In the days before the advent of facilities to measure alkali and acids in minute amounts by the potential hydrogen apparatus, the soluble alkali in glass was determined by heating accurately measured amounts of $N/20$ HCl in the glass on test Titrating the excess of $N/20$ HCl with $N/20$ NaOH (Phenolphthalein T S) and calculating the free alkali in the glass from the amount of $N/20$ HCl reacting with the free sodium in the glass

For the past seven years we have used the following method for determining the amount of free alkali in glass

---

* Scientific Section A PH A Washington meeting, 1934

Boil fresh distilled water to one third the original volume Allow to cool sufficiently to permit the colorimetric determination of p_H, using Methyl Red p_H indicator The water, with the carbon dioxide excluded, has a p_H of about 5 6

Immediately fill the ampuls with the water, seal, immerse in water and place on steam-bath (approximately 80° to 90° C) for 16 consecutive hours The contents of the ampuls are then tested with Brom Thymol Blue p_H indicator, or Cresol Red, and the increase of p_H noted The increase in p_H is used as the basis for comparing different stocks of glass for soluble alkali

Bottles are tested in like manner with the exception that the bottles remain uncorked during the heat test and are submerged up to the neck in hot water A layer of liquid petrolatum on the surface of the water-bath prevents evaporation of the bath

The following data is an example of a test run of ampuls and bottles by the above procedure

TABLE I

Glass Sample.	Original p_H of Boiled Distilled Water	p_H of Water after 16 Hrs at 80° C.	Average Increase in p_H	Glass Sample.	Original p_H of Boiled Distilled Water	p_H of Water after 16 Hrs at 80° C	Average Increase in p_H
27	5 5	6 3–6 3–6 4	0 82	Bottles	5 4	6 5	1 28
Ampuls	5 5	6 5–6 4–6 2		Lot No 1	5 4	6 7	
Lot ' A"	5 5	7 2–7 6–6 6			5 4	6 6	
	5 5	6 5–6 2–6 3			5 4	7 0	
	5 5	6 2–6 1–6 2			5 4	6 7	
	5 5	6 6–6 8–6 5			5 4	6 8	
	5 5	6 1–6 6–6 1			5 4	6 5	
	5 5	6 2–6 0–6 0			5 4	6 5	
	5 5	6 1–6 1–6 2					
27	5 5	6 6–6 6–6 6	1 26	Bottles	5 4	7 5	2 1
Ampuls	5 5	6 9–6 4–6 4		Lot No 2	5 4	7 4	
Lot ' B"	5 5	6 8–6 9–7 0			5 4	7 6	
	5 5	7 0–7 2–7 0			5 4	7 6	
	5 5	7 0–7 2–6 9			5 4	7 6	
	5 5	6 6–7 0–6 5			5 4	7 5	
	5 5	6 8–6 6–6 0			5 4	7 4	
	5 5	6 7–6 9–6 6			5 4	7 4	
	5 5	7 2–6 7–6 9					

In the above table, ampuls labeled lot "A" are superior to lot "B" in regard to free alkali content, as the average ampul in lot "A" contained less soluble alkali than in lot "B "

The results obtained by this method are purely comparative but are sufficient to base a judgment on the glass in question, as standard stock samples can be tested at the same time and under the exact conditions as the submitted samples

Methyl Red and Brom Thymol Blue p_H indicators are acid in reaction, and as there is no buffer action in distilled water, the p_H obtained would be influenced by the slight acidity of the indicator

In the following experiments, neutralized indicators were used to arrive at a more accurate determination of increase in p_H due to the soluble alkali in glass

You will note that in the case of the neutral indicator, the p_H of the original water was 6 9 and the gain in p_H was 0 5 In the acid indicator the water was 5 6 p_H and the gain in p_H was 0 6

In order to use the neutralized indicators it would require more work, involving

TABLE II

Ampuls Same Stock	Acid Indicator p_H of Original Water	p_H after Heat Treatment	Gain in p_H
No 1	5 6	6 2	0 6
2	5 6	6 3	0 7
3	5 6	6 2	0 6
	Neutral Indicator		
No 4	6 9	7 4	0 5
5	6 9	7 4	0 5
6	6 9	7 5	0 6

the use of buffer solutions, whereas the acid indicators simplify the p_H determinations with the use of the Hellige Comparator

A series of experiments was made to note the results in regulating the original p_H of water used in the bottles and ampuls on test

Fresh distilled water of 5 5 p_H was used in one set of 2-oz flint glass bottles, to another set, water of 6 0 p_H was added, and another, 6 9 p_H, also, 7 2 p_H We prepared water of p_H 4 5 in one experiment These varying p_H's were obtained by adding alkali to the water to increase, and acid to decrease the p_H

Bottles Same Stock	Original p_H of Water	p_H After Heat Test	Gain in p_H
No 1	4 5	7 6	
	4 5	7 2	2 9
	4 5	7 4	
No 2	5 5	8 5	
	5 5	8 5	3 0
	5 5	8 5	
No 3	6 0	8 9	
	6 0	8 8	2 9
	6 0	9 0	
No 4	6 9	8 8	
	6 9	8 8	1 9
	6 9	8 8	
No 5	7 2	9 0	
	7 2	8 9	1 7
	7 2	8 9	

We also ran a series of ampuls in similar manner (with varying p_H)

Ampuls Same Stock	Original p_H	p_H After Heat Test	Gain in p_H
No 1	5 4	5 9	
		5 9	0 5
		5 9	
No 2	6 4	6 7	
		6 9	
		6 7	0 4
		6 8	
No 3	7 6	8 2	
		8 1	
		8 1	0 6
		8 3	

In the preceding series of tests on ampuls, very slight differences in free alkali were observed The results would indicate that regardless of the initial p_H, the final results are practically identical We are dealing, in the case of ampuls, with very slight amounts of alkali

An analysis of the series of tests on bottles reveals that regardless of the initial p_H, up to 6 0, the gain in p_H is similar When the original p_H of water is adjusted to 7 0, the increase in p_H upon applying the heat test is but 60% of that obtained with original water at 5 5 p_H

The length of time of the heat test used in our procedure is too severe, as will be shown by the following observation

Bottles of the same stock were completely filled with water of known p_H The sealed bottles were permitted to stand at room temperature for one year The gain in p_H in one year at room temperature was but 0 5 Ordinary glass bottles increase the p_H of water 3 0 after 16 hours at 80–90° C

SUMMARY

This paper was written with the object in mind of drawing attention to the necessity of the establishment of a standard method of determining the free alkali in glass

In our work we attempted to obtain purely relative results in order to make fair comparisons of glass

A standardized method should be established only for glass bottles and ampuls that are used for finely adjusted pharmaceutical and chemical solutions

PARKE, DAVIS & CO

A NOTE ON THE U S P MONOGRAPH ON CHRYSAROBIN * [1]

BY JOHN H GARDNER

For several years past, there has been an investigation in progress in this laboratory on the constituents of the anthracene drugs In the early part of this work, it was shown that the acetate of chrysophanic acid-9-anthranol can be isolated from demethylated and acetylated chrysarobin (1), indicating that chrysophanic acid-9 anthrone is a constituent of the drug On repeating this work with several samples of chrysarobin, it was found that the yields were extremely variable, ranging from nearly zero to about fifty per cent of the weight of the drug taken In attempting to trace the cause of this variation, all of the samples were subjected to the tests for identity given in the U S P monograph on chrysarobin For comparison, similar tests were made on pure chrysophanic acid and on pure, synthetic chrysophanic acid-9 anthrone The results of these tests are given in Table I

---

* From the Chemical Laboratory of Washington University, St Louis This investigation was made possible by a grant from the fund given by the Rockefeller Foundation to Washington University for research in science

[1] Scientific Section A PH A, Washington meeting, 1934

TABLE I

Reagent	U S P	Chrysarobin	Chrysophanic Acid	9 Anthrone
5% NaOH	Deep red	Red	Red	Pink
Concd H_2SO_4	Deep red	Brownish red	Cherry red	Yellow
Fuming HNO_3	Red brown	Red brown	Yellow	Light brown
$+NH_4OH$	Violet red	Brownish red + precipitate	Violet	Brown

It will be noted that in two of the four cases the results with chrysarobin differ decidedly with the tests given by the U S P, that is, with concentrated sulphuric acid and on treating the fuming nitric acid solution with ammonia In the latter case, the monograph also states that chrysophanic acid gives a yellow color with those reagents The production of a violet color was checked using chrysophanic acid from three sources, one sample from chrysarobin and two synthetic The colors obtained with five samples of chrysarobin from as many different dealers gave the same colors, with the exception that a few samples showed some bluish green fluorescence in sodium hydroxide solution

These results can only lead to one conclusion, that the tests for identity for chrysarobin given in the U S P are incorrect and in need of revision No data are as yet at hand to justify any positive suggestions

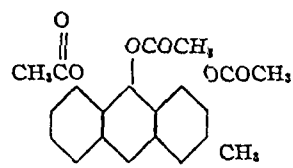
THE PREPARATION OF CHRYSOPHANIC ACID FROM CHRYSAROBIN *[1]

BY JOHN H GARDNER

In the course of our studies on the chemistry of the natural purgatives it has become necessary to find a source from which chrysophanic acid can be readily obtained Since chrysarobin is made up almost entirely of derivatives of chrysophanic acid and of emodin monomethyl ether, it seemed a logical material to investigate

Several years ago, the author and Naylor (1) found that by demethylating chrysarobin with hydrobromic acid and acetylating the product, a mixture was formed from which chrysophanic acid-9-anthranol triacetate (Formula I) could be readily separated by fractional crystallization Chrysophanic acid can be readily



I

* From the Chemical Laboratory of Washington University, St Louis This investigation was made possible by a grant from the fund given by the Rockefeller Foundation to Washington University for research in science

[1] Scientific Section, A PH A, Washington meeting, 1934

prepared from this material, as will be shown in the Experimental Part Unfortunately, on repeating the preparation of the anthranol triacetate using a number of samples of chrysarobin from various sources, the yields were found to be irregular and usually poor Consequently, this method does not meet our requirements

Hauser (2) found that chrysarobin contains a substance, ararobinol, probably a dianthrone derived from chrysophanic acid, which upon reduction yields chrysophanic acid-9-anthrone Consequently, a new procedure was tried Chrysarobin was first reduced with tin and hydrochloric acid with or without stannous chloride and then subjected the product to the same procedure as before Using five different samples of chrysarobin, the anthranol triacetate was obtained in yields of 15 to 35% of the weight of chrysarobin taken It was easily purified by crystallization from glacial acetic acid

For the preparation of chrysophanic acid, the anthranol triacetate was oxidized with chromic acid to diacetyl chrysophanic acid and that hydrolyzed to chrysophanic acid It was found that unless the anthranol triacetate was quite pure, it was virtually impossible to obtain the subsequent products in good states of purity

EXPERIMENTAL

Preparation of Chrysophanic Acid-9 Anthranol Triacetate —A —To a solution of 5 Gm of chrysarobin in 200 cc of boiling glacial acetic acid there were added 15 Gm of 200 mesh tin and then, during three and one half hours 65 cc of concd hydrochloric acid Boiling was continued another three and one half hours The mixture was then cooled and diluted with water until no more precipitate was formed The mixture was filtered the reduced chrysarobin being floated away from the residual tin The crude product was sucked as dry as possible on the filter and was used without further purification

The reduced chrysarobin was boiled under reflux with 75 cc of glacial acetic acid and 75 cc of 48% hydrobromic acid for fifteen hours After cooling, the mixture was filtered and the residue dried at room temperature

The dried residue was mixed with 5 Gm of anhydrous sodium acetate and 55 cc of acetic anhydride The mixture was boiled one hour and poured onto ice After standing 24 hours with occasional stirring, the residue was filtered out and dried at room temperature It was then boiled with about 200 cc of glacial acetic acid, cooled stirred and filtered The residue was washed with glacial acetic acid until the washings were almost colorless Yield, 0 75 to 1 25 Gm , m p 228–235°

B —A mixture of 25 Gm of chrysarobin 100 Gm of stannous chloride 75 Gm of 20-mesh granulated tin and 1000 cc of glacial acetic acid was boiled under a reflux condenser with mechanical stirring for four hours During the first two and one half hours, 400 cc of concentrated hydrochloric acid was added in small portions The mixture was cooled and filtered, the reduced chrysarobin being floated away from the remaining tin

The reduced chrysarobin was demethylated and acetylated as before using proportionate amounts of the various reagents Yield of chrysophanic acid 9 anthranol triacetate, 8 5 Gm after two acetic acid treatments m p 238–241° (corr) with decomposition McDonnell and Gardner (3) give m p 239 6–240°

Diacetyl Chrysophanic Acid —To a solution of 8 5 Gm of chrysophanic acid 9 anthranol triacetate in 350 cc of hot glacial acetic acid there were added 3 Gm of chromic acid in a little water and acetic acid, in portions The mixture was heated nearly to boiling for fifteen minutes A small amount of insoluble tar was removed by hand The mixture was diluted to 1 liter with water and allowed to stand over night The product was filtered out and washed with water Yield 7 Gm (89.2%), m p 205–206° (corr) from alcohol Siegrist (4) gives m p 208–209° Beal and Gunton (5) give m p 204°

Chrysophanic Acid —Five grams of diacetyl chrysophanic acid were partly dissolved and partly suspended in 600 cc of boiling ethyl alcohol A solution of 3 Gm of potassium hydroxide in a little water was added and the mixture boiled three hours, after which 10 cc of concentrated

hydrochloric acid was added and the mixture allowed to stand over night The precipitate which formed was filtered out It was found to be a mixture of chrysophanic acid and potassium chloride It was therefore boiled with water and the chrysophanic acid filtered out Yield 3 5 Gm (95 8%), m p 193–194° (corr) Naylor and Gardner (1) give m p 195 6–196 2° Other investigators report slightly lower values

SUMMARY

A satisfactory method for the preparation of chrysophanic acid from chrysaro bin has been developed

THE BIOASSAY OF SQUILL *[1]

BY HARRY ROSEN

Squill, a member of the heart stimulant or digitalis group of drugs is biologically assayed by the same methods as the other members of this so-called "Digitalis series"

Many test animals and methods of procedure have been proposed and employed for bioassay and standardization purposes Consequently a wide divergence of opinion concerning the relative merits of the respective procedures is found

Hale (1) (2), after working with the various methods of assay, concluded that they did not give proportional results and suggested that the one hour frog procedure was probably the most suitable

The American Drug Manufacturers' Association (3) undertook collaborative investigations of the various assay methods and concluded that the M L D frog and M L D guinea pig methods were more accurate than the one hour frog or cat methods and that the technique involved was much simpler

Richaud (4), studying the various methods for the assay of cardiac tonics, concluded that the guinea pig method was unsuitable for the assay of these drugs

Eckler (5) assayed a series of preparations by the cat, guinea pig and one hour frog methods He concluded that the cat method was complicated, time consuming, costly and gave results varying from 33 to 123 per cent

Rowntree and Macht (6) concluded that the cat method was more reliable than the frog method Van Leeuwen, den Besten and van Wijngaarden (7), (8), (9) reported that the cat method was more accurate and was independent of seasonal variations as compared with the frog methods

Wible (10) concluded that the cat and the one hour frog methods agree within the limits of biological error

---

* Scientific Section, A PH A Washington meeting, 1934

[1] From the laboratory of Marvin R Thompson Professor of Pharmacology School of Pharmacy, University of Maryland Compiled in part from a thesis submitted to the Faculty of the Graduate School of the University of Maryland in partial fulfilment of the requirements for the degree of Master of Science June 1933

Burn (11) stated that the results obtained by assaying Tr of Squill, in terms of ouabain by the cat method differed significantly from the results obtained by the frog method The assay in terms of scillaren gave the same results whether performed on the cat, frog or rabbit auricle

Rowe (12) in an early report stated he preferred the M L D frog to the cat method but believed he did not work with enough cats In a later paper (13) he reported that the hour frog, M. L D frog and cat methods were inapplicable while the guinea pig could be used but is too expensive

Conflicting reports concerning the M L D of squill for the various animals are also found in the literature Eggleston (14) stated that he found for the cat M L D, 525 545 595 and 642 mg per Kg, while Rowe (12) gave the value as 112 mg per Kg for one highly active sample of fluidextract Pittenger, in his 'Biologic Assays" (15), gives 575 mg per Kg as the M L D

Vanderkleed (16) reported that season was of no direct significance in the guinea pig method of assay, while Haskell (17) disagreed with this statement since he had figures to show that during eight months, the original M L D was at times doubled due to seasonal variation Pittenger (15) stated the M L D for guinea pigs is 0 0025 cc Tr or 0 00025 cc Fluidextract of Squill

Presentation of many other citations of the literature would only serve to illustrate further disagreements

The U S P X "one-hour frog," the "over night or mortality curve frog," "intravenous cat" and "subcutaneous guinea pig" methods have received the most impressive support

It may thus be seen that many workers have subjected these and other methods to comparative study, and the evidence so obtained has resulted in conflicting opinions of such a magnitude as to cause some workers to roundly condemn certain of the methods and to praise others It is worthy of note, however, that no one method has proved to be sufficiently superior to clearly establish universal preference for that method Advantages and disadvantages are to be found in each, but the main reason for the preference of a given worker for a given method is usually to be found in his belief that the different methods yield significantly different results for a given squill preparation, and that the "preferred" method yields the results of greatest reliability and accuracy

Because the four methods mentioned have been found to be possessive of merit in this laboratory, a comparative study involving these four methods was undertaken with a view toward establishing if possible, whether or not the respective methods actually do yield conflicting results, and if so, to ascertain the character of the discrepancies

METHODS

One-Hour Frog Method—The procedure for this method was carried out as directed in the official U S P X assay (18) The suitability of ouabain as a standard for substances, other than those of the strophanthus family is one of the doubtful points of the one-hour frog assay for squill Burn (11) believes that it is not satisfactory and recommends a squill preparation as a standard The standards used in this study were ouabain and scillaren A It had been planned to also use scillaren B but this idea, as will be explained later, was abandoned

Over Night Frog Method—The Chapman and Morrell (19) modification of the Trevan (20) mortality curve method was used in the over night frog assays Although the curve of Chapman and Morrell was prepared for digitalis and strophanthus assays, it was used here and the results compared to those of the other methods Both ouabain and scillaren A were used here also as standards

The Intravenous Cat Method —The conventional intravenous method was used for this work with the exception that 30–45 minutes was strictly adhered to as a time limit in which the death of the animal was to occur A further exception was that a dose of 6–10 cc per Kg was the range allowed for injection into the cat Five cats, if giving consistent results, were used for each assay If the results showed great variations, more cats were used, until consistent results were obtained

All cat results were calculated in terms of ouabain and scillaren A This necessitated the determination of the cat M L D for ouabain and scillaren A, and the seasonal effect on the susceptibility of the cat to these standards These studies afforded an opportune time to observe the stability of scillaren A solutions as preserved in this laboratory This was not necessary for ouabain, since it had been determined before this work was begun, that ouabain solutions as preserved in this laboratory are very stable

Subcutaneous Guinea Pig Method —This method was used as developed by Reed and Vanderkleed (21) Six hours was the time limit originally planned for this method, but could not be adhered to, as will be explained later Results were calculated in terms of ouabain and scillaren A

DISCUSSION

Table I shows the M L D of ouabain per Kg of cat to be 0 1111 mg and that of scillaren A to be 0 2185 per Kg The values for scillaren B with 12 cats varied from 0 05987 to 0 1511 mg per Kg Repeated with six cats, the figures ranged from 0 08277 to 0 1865 mg per Kg Due to this great variation in results of the individual cats, no conclusions as to the M L D could be made For this reason, all further work planned with scillaren B as a standard was abandoned

Cats show no seasonal variation in susceptibility to either ouabain or scillaren A

Scillaren A solutions as preserved in this laboratory are stable for about three months It is proved that the change in M L D after this time is due to decomposition and not seasonal variation, by the fact that a while previous to this test, a new solution gave results, which were the same as the original M L D

As stated before, other workers in this laboratory proved that ouabain solutions as preserved are very stable

Table II shows that the one-hour frog, over night frog and cat methods give results in good agreement within the limits of experimental error Much of the disagreement shown by other workers is most likely due to the fact that they obtained results in cat units and not in terms of a standard Cat units vary in different laboratories due to differences in type and depth of anesthesia, modifications in technique, environment and diet of the cats For this reason, cat units established by any one laboratory cannot be used universally, while a standard of comparison can Results should be expressed in terms of a standard substance, regardless of what assay method is used

The guinea pig method shows agreement with the other methods within the limits of experimental error in about 60 to 70% of the assays Variation in guinea pig susceptibility is found in this laboratory to occur only when the source of supply or diet of the animals is changed So long as they are obtained from one source and kept on one diet, they show no variations The reason for the disagreement of some of the guinea pig results is thought to be due to the great variation in susceptibility of the individual animals and not due to so-called seasonal variation

The six-hour limit for the occurrence of death in the guinea pigs was altered to an over night time limit Absorption was very variable in the individual animals, and it was thought that the longer period of observation would overcome this difficulty

From the standpoint of accuracy and routine dependability in assaying squill preparations, and also taking the matter of time and expense into consideration, the results of this investigation have convinced the author as well as the other workers in this laboratory that the over night frog method is definitely superior to any of the other methods employed

For those workers having an adequate supply of suitable cats the cat method is thoroughly reliable, though somewhat less accurate than the over night frog method, provided that the "cat unit" idea is abandoned and samples are assayed in terms of ouabain or scillaren A as in the frog methods

The one-hour frog method requires much experience in order to eliminate the sources of error The assayist lacking thorough experience cannot hope to obtain consistently accurate results For this reason, either the over night frog or cat methods are distinctly preferable

The time and expense necessary before results can be obtained by the guinea pig method is not justified by the results The other methods require no more time, in fact two of them require much less time before results are known and all of them are more accurate

CONCLUSIONS

(1) The one-hour frog, over night frog and intravenous cat methods of assay for squill give results in agreement within the limits of experimental error provided the results are expressed in terms of an appropriate standard The guinea pig method gives the same results in 60–70% of the assays

(2) Ouabain is a satisfactory standard for squill since scillaren A, a squill body, showed no advantages

(3) The over night frog, intravenous cat and one-hour frog methods are most suitable in the order indicated The guinea pig method is not as reliable

(4) Official squill preparations retain over half of their activity for a period of one year

(5) The simple determination of the M L D of a squill preparation by the well-known cat method does not yield a reliable indication of potency The M L D of a standard substance, such as ouabain or scillaren A, must be determined by the identical technique used for the sample, and the results expressed in terms of the standard instead of "cat units"

SALIVA TESTS II HEROIN

BY JAMES C MUNCH *

Success in using the mouse test for the detection of morphine (1) suggested the possibility of employing it for the detection of heroin in the saliva of horses and in pharmaceutical products (2) A standardized technique was developed for this saliva test (1)

A series of normal mice, weighing approximately 20 Gm, were injected subcutaneously with heroin, and various symptoms observed over a period of half an hour In general, the *S*-tail curve resembles that produced by morphine Literature reports (2) indicate that morphine and heroin are equally potent, threshold doses being stated to be 10 gamma per 20-Gm mouse, or 0 5 mg per Kg We found the threshold dose of heroin to be much smaller (Table I) In addition to the tail curve, mice injected with heroin showed a series of symptoms differing from those following the administration of morphine The mice tended to become much more restless, and hyper irritable A common heroin symptom was the

* Sharp and Dohme, Glen Olden, Penna

development of a definite running reflex Very shortly after the injection of an effective dose, mice tended to go to the periphery of their cages, and start an endless parade round and round from right to left, or vice versa If two injected mice were placed in the same cage, but facing in opposite directions, they developed a traffic code, on meeting, one mouse consistently swerved to the right, the other to the left

Heroin was injected subcutaneously into horses Definite evidence of stimulation was observed by a veterinarian after 32 5 mg per horse The injection of 16 mg per horse, or one-half the previous dose, failed to affect the horse so far as the verterinarian could determine The mouse test on samples of saliva was positive with each dose (Table II) The horse receiving 16 mg was also bled thirty minutes after injection The blood was allowed to clot and tests conducted upon the serum No effect was observed on mice, following the injection of 1 cc of serum, 2 cc uniformly produced a positive tail-curve

TABLE I —MOUSE-TAIL RESPONSES AFTER INJECTION OF HEROIN

Dose Mg /Kg	Per Cent Mice Showing Positive Reaction
0 025	0
0 04	25
0 05	100
0 0625	100
0 07	100

TABLE II —DETECTION OF INJECTED HEROIN IN HORSE'S SALIVA

Horse No	Weight	Heroin Injected Mg /Horse	Heroin Injected Gamma/Kg	Veterinary Deductions	Mouse Test. Tail Curve	Mouse Test. Excitement
135	570	325	570	Stimulation	Positive	+ + +
9366	500	162 5	325	Stimulation	Positive	+ + +
135	570	65	115	Stimulation	Positive	+ +
135	570	32 5	57	Stimulation	Positive	+
135	570	16	28	Normal	Positive	0

The running reflex and the increased irritability appeared to differentiate heroin from morphine Heroin solutions in the saliva of untreated horses, in normal horse serum, and in distilled water, were identical in action Saliva collected from horses receiving 16 to 65 mg per horse gave a morphine, rather than a heroin type of response, suggesting that heroin is broken down to morphine in the body of the horse Following larger doses of heroin, positive mouse-tail tests were not observed until an hour after administration, and the effect persisted in salivas collected twenty-four hours afterward However, salivas collected after 15 and 30 minutes produced marked excitement, followed by depression This excitement and depression decreased in intensity with decreasing doses, and was not observed after the administration of 16 mg of heroin After the subcutaneous administration of heroin to horses, some substance is excreted in the saliva which produces effects upon mice similar to those produced by morphine

Mouse tests were made by direct intraperitoneal injection of a series of very old solutions of pharmaceuticals containing heroin, such as Linctus Compound, Syrup of Heroin Compound and Elixir of Glycerin and Heroin Compound The undiluted products produced typical tail-curves, restlessness and the running reflex of heroin, but convulsions developed, and the animals died within ten to thirty minutes Marked opacity of the pupils developed shortly before death

Dilute solutions produced typical tail-curves, marked depression rather than stimulation, and blindness

CONCLUSIONS

1 Physiological actions upon mice serve to detect heroin in saliva, as well as in pharmaceutical preparations

2 Heroin is more effective than morphine on mice

3 After administering heroin, the saliva of horses contains a substance giving a morphine reaction on mice

DRUG EXTRACTION I A STUDY OF VARIOUS MENSTRUA FROM THE STANDPOINT OF SWELLING EFFECTS, PENETRATION AND EXTRACTION

BY WILLIAM J HUSA AND LOUIS MAGID

(*Concluded from page 1103 November Journal*)

EXTRACTION OF BELLADONNA ROOT OF DIFFERENT DEGREES OF FINENESS

Filtration Method—A technique was used by Husa and Fehder (14), whereby imbibition and extraction of powdered drugs could be determined in a process of maceration An outline of the method as applied to powdered belladonna root is as follows

Ten grams of powdered belladonna root were macerated for 15 minutes with 90 Gm of menstruum in a 250-cc Erlenmeyer flask in a thermostat at 30° C, during which time it was agitated every five minutes The mixture was then filtered and after allowing 15 minutes for completion of draining, the filtrate was weighed and the weight of the filter paper with the wet marc was also determined Similar macerations were made for periods of 1 hour, 5 hours and 24 hours, with less frequent agitation during the longer intervals

In the filtrate, the percentage of dissolved solids was determined by weighing exactly ten Gm of filtrate in a tared 50-cc beaker, evaporating to dryness on a water-bath and drying to constant weight in an oven at 105° C The filtrate was assayed for alkaloidal content according to the U S P X assay for Tincture of Belladonna except that 25 Gm of the filtrate were used The wet marc was also assayed for alkaloidal content according to Type Process B, designated for belladonna root by the U S P X

The amount of moisture in the powdered drug was determined by the U S P X method for drugs containing no constituents volatile at 100° C The amount of dry marc was calculated as follows (weight of drug taken for extraction) minus (weight of moisture in drug) minus (weight of dissolved solids in filtrate) = (weight of dry marc) The weight of the liquid imbibed by the marc was calculated as

follows (weight of wet filter paper + wet marc) minus (weight of filter paper and liquid imbibed by the filter paper) minus (weight of dry marc) = (weight of liquid imbibed by the marc) The loss of menstruum during the process was determined by comparing the total weight of the materials used with the combined weight of the filtrate and wet marc

Work has been carried out using exactly 10 00 Gm of powdered belladonna root of different degrees of fineness and exactly 90 00 Gm of an alcoholic menstruum consisting of a mixture of alcohol 5 vol —water 1 vol , this being the menstruum official in the U S P X for Fluidextract of Belladonna Root

24 hrs	18 2	7 29	72 0	1 0	1 68	0 036	0 009	0 045

Using the official U S P X menstruum for the Fluidextract of Belladonna Root (mixture of alcohol 5 vol —water 1 vol) and belladonna root in No 20, 40, 60 and 80 powder, it is seen that imbibition is complete in each case in 15 minutes The relative amounts of liquid imbibed and the yield of total non-volatile extractive (listed as "total extractive" in the tables) by the different powders offer interesting comparisons

TABLE XXVI —EFFECT OF FINENESS OF POWDER OF BELLADONNA ROOT ON YIELD OF TOTAL EXTRACTIVE AND ON IMBIBITION USING MIXTURE OF ALCOHOL 5 VOL —WATER 1 VOL

Fineness of Powder	Grams of Solvent Imbibed by 10 Gm Drug		No Gm of Total Extractive from 10 Gm. Drug after 24 Hrs
	Maceration Method	Centrifuge Method	
No 20	21	21	1 26
No 40	20	17	1 40
No 60	16	15	1 86
No 80	18	16	1 68

In Table XXVI the figures under the centrifuge method represent the average of results after 60, 120, 360, 720 and 1440 minutes The data on imbibition by the centrifuge method were originally stated in terms of the number of cc of solvent imbibed by 1 Gm of drug, for the preceding table the results given in Table XXIII were recalculated on the basis of the number of Gm of solvent imbibed by 10 Gm of drug The results in Table XXVI indicate that with increasing fineness of powder, imbibition decreases until No 80 powder is reached where *there is an increase in imbibition* A hypothesis to explain this phenomena has already been given earlier in the paper

The amount of total extractive obtained from the filtrate in the maceration process offers the same anomaly as observed in imbibition The yield of total extractive increases with increasing fineness of powder down to and including the No 60 powder, but when the fineness is increased to a No 80 powder, the yield of extractive decreases By powdering the drug more finely more surface is exposed, giving the solvent more ready access to the constituents, and the slowly diffusible substances have greater opportunity to enter the solvent phase, these factors would account for the increased yield of extractive in passing from a No 20 to a No 40 and No 60 powder As the total surface of the particles increases, an opposing tendency would assume greater importance, *i e*, the tendency for the drug constituents to be adsorbed on the surfaces of the particles In the No 80 powder, it appears that the greater adsorptive power due to increased surface overcomes the advantage gained by greater accessibility of solvent so that the net result is a decrease in yield of total extractive as shown in Table XXVI

An examination of Table XXV indicates that the official menstruum extracts as much alkaloid in 15 minutes as in 24 hours in a maceration process with the No 40, 60 and 80 powders, but not with the No 20 powder, which gives a maximum yield of alkaloids after 1 hour Similar results have been obtained with a totally different drug, *i e*, jalap (14) These results throw considerable doubt on the wisdom of the long periods of maceration specified in many of the pharmacopœias of the world

Typical results such as those shown in Table XXV*c* indicate that 0 035 Gm of alkaloids is found in the filtrate while 0 013 Gm of alkaloids remains in the marc It is of interest to consider the state of the alkaloids in the marc Since 0 035 Gm of alkaloids is dissolved in 74 Gm of filtrate, a calculation shows that if the 16 Gm of menstruum remaining in the marc contained the same proportion of dissolved alkaloids, there would be 0 008 Gm of alkaloids thus existing in the dissolved state in the liquid imbibed in the marc This would leave 0 005 Gm of alkaloids remaining in the marc in some other form, this might be present in the undissolved form in the inner recesses of the drug particles or it might be present in a state of adsorption on the surfaces of the drug particles If the 0 005 Gm of alkaloids were so situated as to be only slowly accessible to the solvent, it would follow that the amount of alkaloids should gradually increase in the filtrate during the 24 hours, but as a matter of fact the same amount of alkaloids appears in the filtrate in 15 minutes as in 24 hours From these considerations it appears more likely that this proportion of alkaloids is adsorbed on the drug surfaces The only other explanation visualized at present is that this proportion of alkaloids is so inaccessible to the solvent that the latter has no effect on it, this explanation seems less likely

Centrifuge Method—A technique was devised for determining the rate of extraction of alkaloids and of total extractive on maceration with successive portions of menstruum, as well as the degree of imbibition at different stages of the extraction process In this method the centrifuge is used for separating the liquid from the drug In order to facilitate comparisons with the previous maceration experiments, the same quantities of drug and menstruum were employed, *i e*, 10 00 Gm of powdered drug and 90 00 Gm of menstruum Into each of four centrifuge tubes of 50 cc capacity were placed 2 50 Gm of powdered drug and 22 50 Gm of menstruum The contents of each tube were well mixed by means of a glass rod inserted through a cork stopper in the mouth of the tube The tubes were then placed in a thermostat at 30° C and allowed to remain there for 15 minutes, being well stirred every five minutes The tubes were then centrifuged for ten minutes, after which time the clear supernatant liquid was decanted, the liquids from the four tubes being mixed together in a closed container and weighed in order to determine the weight of macerate obtained from 10 00 Gm of powdered drug and 90 00 Gm of menstruum The tubes containing the wet marc were then weighed, and from this weight the amount of liquid imbibed in the marc was calculated For the next maceration, 22 50 Gm of menstruum were added to the wet marc in each tube, the mixture stirred well and placed in the thermostat and the same procedure followed as previously described Thus the amount of liquid imbibed in the marc after each maceration was determined, as well as the amount of macerate in each case Five macerates were obtained and each was assayed in duplicate for alkaloidal content and total extractive The total time elapsing from one maceration to the next was 55 minutes, this being kept constant throughout the procedure.

The results shown in the following tables were calculated as in the case of the filtration method, with the exception that the calculations were somewhat simpler due to the fact that corrections for the use of filter paper were eliminated, since filter paper was not used

TABLE XXVII—EFFECT OF A MIXTURE OF ALCOHOL 5 VOL—WATER 1 VOL ON POWDERED BELLADONNA ROOT OF DIFFERENT DEGREES OF FINENESS ON MACERATION WITH SUCCESSIVE PORTIONS OF SOLVENT

The technique of maceration with successive portions of solvent throws light on just what is happening during percolation, as the drug repeatedly comes into contact with fresh solvent The process is, however, broken up into several steps, and it is thus possible to secure data which cannot be conveniently secured in the usual percolation process The loss of menstruum throughout the procedure is small, being at the greatest only 1 9 Gm in the handling of 450 0 Gm of menstruum

A study of Table XXVII shows that imbibition decreases until No 80 powder is reached where there is an increase in imbibition The yield of total extractive increases until No 80 powder is reached where there is a decrease These results are in accord with the data shown in Table XXVI

As the extractive matter is gradually removed there is a corresponding increase in imbibition, this increase from the first to the fifth macerate totals 1 8 Gm for the No 20 powder, 1 1 Gm for the No 40 powder, 0 6 Gm for the No 60 powder and 0 2 Gm for the No 80 powder The increased imbibition may be due largely to the fact that the cell cavities are able to hold more liquid after some of the cell contents have been removed The larger particles, having a greater proportion of undamaged cells, would be able to hold more solvent in cell cavities As the fineness of the powder increases, and fewer undamaged cells remain, it would follow that the increase in imbibition on removal of some of the cell contents would become smaller, on the basis that the removal of cell contents from damaged cells would decrease the size of the particles without leaving an enclosed cavity capable of mechanically holding a liquid The observed results are in accord with this hypothesis

Calculations indicate that in the No 20 powder, some of the alkaloids remain undissolved during all five successive macerations, this may be due in part to the fact that for this size of powder the amount of extractive matter removed is the lowest observed in this series of experiments and the extractive remaining in the marc may shield the alkaloid from contact with the solvent, the alternative explanation would be that the constituents having a part in the adsorption of alkaloids by the marc have not been sufficiently removed With the No 40 powder,

the rate of extraction is more rapid, but at the end of the fifth maceration a small amount of alkaloids still remains undissolved With the No 60 and 80 powders, all of the alkaloids seem to be removed in the first three macerations, in both cases, calculations show that there is some undissolved or adsorbed alkaloids after the first maceration but all the alkaloids are dissolved during the second maceration and finally removed in the third maceration (that is to say, the amount remaining after the third maceration is less than 0 0005 Gm and hence is neglected)

Certain aspects of the results in Table XXVII are brought out by the calculations presented in the following table

TABLE XXVIII —RESULTS ON EXTRACTION OF POWDERED BELLADONNA ROOT WITH SUCCESSIVE PORTIONS OF MIXTURE OF ALCOHOL 5 VOL —WATER 1 VOL

Fineness of Powder	Percentage of Total Alkaloids in First Macerate	First Two Macerates	First Three Macerates
No 20	68	85	91
No 40	73	93	98
No 60	83	98	100
No 80	81	98	100

Table XXVIII indicates that extraction of alkaloids from powdered belladonna root by maceration was most efficient in the No 60 and No 80 powders

EFFECT OF VARIATION IN SOLVENTS ON EXTRACTION OF BELLADONNA ROOT

Alcohol-Water Mixtures —Using belladonna root in No 40 powder (the fineness of powder specified by the U S P X for the Fluidextract of Belladonna Root), tests were made of the effect of variations in the alcoholic strength of menstrua, this question was studied by the technique of successive macerations with the use of the centrifuge In each experiment exactly 10 00 Gm of belladonna root in No 40 powder (moisture content = 9 60 per cent) were used, while in each maceration 90 00 Gm of the specified menstruum were employed

The results indicate that imbibition increases as the proportion of alcohol in the menstruum decreases The amount of total extractive obtained likewise increases with a decrease in alcoholic strength of the menstruum Considering the results of the maceration experiments, it is seen that the four highest alcoholic strengths used do not make good menstrua for belladonna root, however, as the proportion of water increases there is a progressive increase in efficiency of extraction of the alkaloids The four next proportions, *i e*, alcohol 5 vol —water 1 vol, alcohol 4 vol —water 1 vol, alcohol 7 vol —water 3 vol and alcohol 1 vol —water 1 vol have approximately the same efficiency, resulting in extraction of substantially all of the alkaloid As far as the results go the official menstruum for the U S P X Fluidextract of Belladonna Root appears to be well chosen

With the higher strengths of alcohol the values for the total alkaloid obtained from the macerates plus the marc were lower than with the more dilute solutions of alcohol Further tests showed that the U S P X method for determination of alkaloids of belladonna root applied to the marc did not take out all of the alkaloids in cases where the drug had been treated with alcohol of 82 5 per cent by volume or higher This was shown by exhaustively extracting 10 00 Gm of powdered belladonna root with alcohol, which yielded 0 039 Gm of alkaloids, followed by exhaustive extraction with the U S P X menstruum (alcohol 5 vol — water 1 vol), which yielded 0 011 Gm of alkaloids It thus appears that when the drug has been treated with a strong alcoholic menstruum, neither the menstruum nor the ether-chloroform mixture is capable of extracting all of the alkaloids But as shown, the official menstruum is capable of removing the remainder of the alkaloids Possibly the stronger alcoholic menstrua precipitate certain water-soluble constituents which envelop a portion of the alkaloids in such a manner that it cannot be extracted either by the strong alcoholic menstrua or by ether chloroform mixture When treated with more aqueous menstrua the precipitated matter might then be dissolved and the alkaloids extracted 10 00 Gm of belladonna root in No 40 powder assayed by the U S P X method yielded 0 045 Gm of alkaloids, while with alcohol and the official menstruum, 0 050 Gm of alkaloids was obtained There is a possibility that the U S P X assay does not extract all of the alkaloids

Thus it is shown that the discrepancy in total alkaloids is caused by the fact that ether-chloroform mixture does not extract all of the alkaloids when used on a marc which has been treated with strong alcoholic menstrua In Table XXIX it is thus clear that full reliance may be placed on the analyses of the macerates themselves, but that the analyses of the marcs may best be disregarded The data on the marcs are not necessary for interpreting the extraction data, the marcs having been analyzed merely as a check on the analyses of the macerates

Acidic Menstrua.—Since the use of acid in the menstrua for some alkaloidal drugs has been considered advantageous, it was of interest to determine the value of acidic menstrua in the extraction of belladonna root. Using the technique of macerations with successive portions of solvent with the use of the centrifuge as described earlier in the article, tests were made in which hydrochloric acid replaced part of the water used in the official menstruum for the U. S. P. X. Fluidextract of Belladonna Root.

TABLE XXX.—EXTRACTION AND IMBIBITION OF BELLADONNA ROOT IN NO. 40 POWDER ON MACERATION WITH SUCCESSIVE PORTIONS OF SOLVENT

10.00 Gm. of drug of moisture content = 9.60 per cent.
90.00 Gm. in each maceration of a mixture of alcohol 5 vol.—water 0.4 vol.—U. S. P. HCl 0.6 vol.

Maceration	Weight in Grams of: Liquid in Marc.	Dry Marc.	Macerate	Loss of Menstruum	Total Extractive	Alkaloids
1st	17.2	7.63	75.0	0.2	1.41	0.033
2nd	17.5	7.09	90.0	0.2	0.54	0.008
3rd	17.8	6.84	89.8	0.2	0.25	0.001
4th	18.0	6.70	89.6	0.3	0.14	0.001
5th	17.9	6.59	90.0	0.2	0.11	0.001
Marc						0.001
						Total = 0.045

The results in Table XXX may best be compared with Table XXIX*e*. The rate of extraction of alkaloids and extractive matter by the official menstruum corresponds closely with the rate of extraction using the acidified menstruum. Imbibition of menstruum by the marc is the same in both cases. It is thus seen that the addition of acid was of no benefit in the maceration process used.

SUMMARY

Methods were developed for determining the swelling effect of solvents on drugs and other vegetable tissues in the form of thin strips, blocks and powders. The rate of penetration of solvents through cells was determined. The solvents studied included various binary and ternary mixtures of water, alcohol and glycerin and some of the newer solvents of the glycol type. Using powdered belladonna root, studies were made of the effect of fineness of powder and variation in solvents on imbibition and extraction in a maceration process.

AN INVESTIGATION OF GLEDITSCHIA TRIACANTHOS (LINNÉ) *

BY Y THOMAS OESTER

These studies on *Gleditschia triacanthos* (Linne), the common honey locust, had their origin at the University of Notre Dame As early as 1926, King (1) at Notre Dame discovered that *Gleditschia triacanthos* possessed pharmacodynamic activity Rudduck (2) extended these pharmacodynamic studies, Simons (3) succeeded in isolating an active principle which possessed marked oxytocic properties He called this principle *hypoxysin* Two Japanese workers, Matshshima and Kubota (4) isolated a potent glucoside or saponin from a related species, *Gleditschia horrida* Their only published pharmacological study was upon the toxicity of the glucoside Simons showed that his constituent did not respond to the common glucoside tests The latest work (5) was that of the writer

EXTRACTION OF ACTIVE PRINCIPLES

During the past three years investigations have been undertaken with these objectives in mind

1 Detailed study of the blood pressure reaction of the drug, which Simons (*loc cit*) indicated was present in the leaves, also allied pharmacological studies
2 Determination of the nature of this principle
3 Determination of its mode of action
4 Comparison study of this principle contrasted with the common pressor and depressor substances

In the preliminary work, the statements of the previous investigators were substantiated, that aqueous percolates of the leaves are the most potent Various menstrua and methods of extraction were tried but aqueous percolation appears to be the most suitable There is, however, a large amount of tannin and coloring matter in all aqueous extracts Their presence offers difficulties in isolating the active constituent The *hypoxysin* was removed by the method of Simons, and all work was done with the hypoxysin-free extracts

No successful procedure has been developed for the isolation of the active blood pressure constituent This, despite the use of the following procedures

1 Original percolations were made using alcohol, acetone, acidified acetone, chloroform, ether and petroleum ether Injections of aqueous extracts from dried residues of these percolates gave no marked blood pressure reactions
2 Normal aqueous percolations, acid and basic, were subjected to a shaking out process with the following solvents, ether, chloroform, petroleum ether carbon tetrachloride, ethyl acetate, amyl alcohol and benzene
3 Dried aqueous extracts were treated with the following reagents, alcohol, ether, chloroform benzene, carbon tetrachloride, acetone xylene, acidified alcohol and acidified acetone
4 The following agents, animal charcoal kaolin, picric acid, hexamethylenetetramine, lead oxide, magnesium oxide and purified talc, failed to separate the potent constituent from the extraneous matter
5 The procedure as detailed by Fuller (6) was also followed
6 Steam distillation failed to bring about a separation of the active constituent

* Scientific Section, A PH A , Washington meeting, 1934

PHARMACODYNAMIC ACTIVITY

The following studies were made dealing with the pharmacodynamics of the aqueous extracts after the removal of the *hypoxysin*

1 The oxytocic nature of *hypoxysin* itself was substantiated by experiments upon the isolated uterus of the guinea pig Pittenger's procedure (7) was used

2 Intravenous injections of aqueous extracts produced no marked influence upon the respiration of the etherized dog A tambour encircling the chest was used to record the respiration

3 The aqueous extracts exert some influence upon voluntary muscle In the frog's gastrocnemii, there was a noticeable increase in the amount of work, and fatigue was delayed

4 There is very little effect upon ventricular contraction when the extract is injected intravenously Only during the period of lowest blood pressure was there a noticeable decrease in ventricular systole The Guthrie myocardiograph was used to record the ventricular response

5 In direct perfusion and irrigation of frog's and turtle's hearts recorded by the suspension cardiograph, outlined by McGuigan (8), there was at first a slight decrease in frequency although an improvement in force Upon extended perfusion or irrigation, however both frequency and force are decreased

6 The blood pressure activity of the Gleditschia extracts consists chiefly in a marked lowering of blood pressure Following this there is a gradual return to normal The reaction seems to be more effective than that following the use of the common nitrites

7 The depressor effects appear to be due to direct action of the drug on the musculature of the blood vessels because

(*a*) The heart frequency and force are not markedly affected by the injections of the drug

(*b*) Adrenalin, acting as a stimulant to the nerve endings in the arterial wall, normally brings about a constriction This action is unimpaired by the previous use of the Gleditschia extract From this result it is apparent that the extract does not affect the nerve endings Therefore it is assumed that the arterial musculature and Rouget cells produce the change in blood pressure

8 Direct experimentation on arterial rings from the sheep's carotid artery showed that there is a decrease in tone upon the application of Gleditschia extract The experimental procedure used was the same as that outlined for the isolated uterus

DEPRESSOR CONSTITUENT

A large number of experiments upon the blood pressure of the etherized dog lead to the following conclusions

1 The blood pressure constituent may be extracted from the crude drug by the use of an aqueous menstruum

2 The blood pressure constituent is not soluble to any marked extent in the following solvents ether, ethyl acetate, carbon tetrachloride carbon disulphide, petroleum ether, amyl alcohol acetone or benzene

3 Changes in p_H within a small range, either above or below 7 35 do not affect the activity of the principle to any marked degree

4 No toxicity was ever noted on any of the injections, although some represented as much as four Gm of the crude drug

5 Aqueous extracts of the drug gave negative tests for alkaloids and glucosides It appears from the general nature of the extracts that the active constituent is a complex neutral principle of a gummy consistency

SUMMARY

The common methods of separating active constituents are of little value when applied to aqueous extraction of *Gleditschia triacanthos*

There appear to be two active constituents, *hypoxysin*, isolated by Simons, and a second which has marked depressor action

From a preliminary investigation of the extracts it would seem that the active blood pressure constituent is a neutral principle of gum-like consistency

The depressor action is best obtained from aqueous extracts

The depressor activity seems to be caused by a direct action of the drug upon the musculature of the blood vessel

The drug has very little effect upon the heart rate or force The respiration is uninfluenced by the injections of the drug

Administration of the drug causes an increase in the amount of work performed by voluntary muscle, also a delay of fatigue

ASSAY OF BARBITURIC ACID DERIVATIVES

Barbituric acid derivatives, when mixed with silver nitrate form soluble silver compounds which are only very slightly dissociated and therefore do not form silver oxide with alkali This reaction may be used for their assay as follows 0 2 to 0 3 Gm is dissolved in 30 mils of water with the addition of 1 Gm of anhydrous sodium carbonate, and *N*/10 silver nitrate is run in until there is obtained a distinct turbidity which remains for some time One equivalent of silver then corresponds to one molecule of the barbituric acid derivative The method may be used for diethyl barbituric, phenylethylbarbituric cyclohexenylethylbarbituric, diallylbarbituric, isopropylbrom propenylbarbituric and butylbrompropenyl barbituric acids but not for *N* methylated derivatives such as evipan and prominal —H Budde in *Apothekerzeitung*, 49 (1934), 295, through *Quarterly Journal of Pharmacy and Pharmacology*

CINCHOPHEN POISONING

A J Quick (New York) regards the acute yellow atrophy of cinchophen poisoning as a form of allergic reaction—Arthus's phenomenon This is a severe localized inflammatory process which may be produced in animals by injection of a protein The reaction is due to a metabolic derivative, not to the cinchophen itself Quick advises certain precautions in its administration the drug should be given under medical supervision and large doses should be avoided, it should not be given to persons sensitive to foreign proteins and such proteins should not be given at the same time, cinchophen should never be given intravenously, and it should be given with caution to patients with damaged livers In acute yellow atrophy glucose and insulin (5 to 10 units three times a day) should be given, calcium gluconate and liver extract are also of value —*Am J Med Sci* Jan 1934 115–121 Through *The Prescriber*

BIBLIOGRAPHY OF PHARMACEUTICAL RESEARCH

Compiled by A G DuMez, Reporter on the Progress of Pharmacy

All articles in these lists will be presented in abstract form in the bound volumes of the Year Book, which is issued annually Those desiring abstracts immediately can obtain them for a fee of one dollar each by communicating with A G *DuMez, University of Maryland, School* of Pharmacy, N W cor Lombard and Greene Sts , Baltimore, Maryland

HOSPITAL FORMULARIES

Dean E T Motley, of the University of South Carolina School of Pharmacy, as a member of a special committee appointed by the American Pharmaceutical Association, has begun the task of assembling copies of hospital formularies used in the states of Georgia Florida, Tennessee and the Carolinas

The A Ph A group, known as the "Committee for the Collection of Information Pertaining to Professional Pharmacy" is gathering medicinal formulas from all parts of the United States, to be assembled and placed in the American Institute of Pharmacy in Washington as a source of reference for those interested in this type of work.—*Southeastern Drug Journal*

THE EFFECT OF AGE ON THE RATE OF DISINTEGRATION OF MANUFACTURED MEDICINAL TABLETS

BY GEORGE E ÉWE

The effect of age on the rate of disintegration of manufactured medicinal tablets is an important subject for investigation since excessively retarded disintegration may reduce the efficacy of the tablets

Other than the extensive investigation made by a Committee of the American Pharmaceutical Manufacturers' Association under the Chairmanship of Dr C S Leonard (1), (2) there is practically a total dearth of published data on this subject Using the methods of testing the rate of disintegration previously devised by the Committee on Project No 1 of the American Pharmaceutical Manufacturers' Association (3) Dr Leonard's Committee studied the effect of aging for 1 year on 30 different kinds of tablets most of which were suspected of "hardening" (that is, showing retarded disintegration) in time In summarizing the work of his Committee Dr Leonard found that all of the tablets, with the possible but doubtful exception of one, still retained their disintegration rate of classification as defined by the aforesaid "Committee on Project No 1" after aging for one year

As a contribution to the literature on this subject the effect of aging for 1 year on the rate of disintegration of 228 different kinds of medicinal tablets of various types was determined by the writer Of this number 8 were hypodermic tablets, 137 were uncoated compressed tablets and 83 were coated compressed tablets and included tablets of all of the classes defined by the Committee on Project No 1 (3) with the exception of Class No 9 The methods of testing the rate of disintegration were those of the Committee on Project No 1 (3) and the tablets were stored in cork-stoppered bottles in a dark closet during the aging period

For convenience of expression the terms "hardened" and "softened" will be used in this article if the time required for disintegration at the end of the aging period was respectively longer or shorter than the initial disintegration time, although the degree of hardness of a tablet is not a criterion of its disintegration rate In analyzing the results of the tests a tablet was arbitrarily considered to have "hardened" or "softened" if its final disintegration rate varied 25% or more from its initial disintegration rate, this figure of 25% variation being considered to be necessary to reconcile the variables represented by differences in duplicate determinations and variations in physical construction of individual tablets of the same batch Furthermore, since the changes in disintegration time upon aging were usually only a matter of several minutes at most, a 25% variation figure was not considered excessive as a basis for deciding whether the tablets had "hardened" or "softened "

Summarizing the voluminous results it was found that 9 5% of the uncoated compressed tablets "hardened" and 10 2% "softened," each kind of tablet, however, remaining well within the disintegration limits of its class as defined by the "Committee on Project No 1" (3) so that no practical loss of efficacy was suffered by the tablets chargeable to retarded disintegration upon aging Of the coated compressed tablets it was found that 25 3% had "hardened" and 7 2% had "softened," and also as in the case of the uncoated compressed tablets, all remained well within the disintegration limits of their classes None of the hypodermic tablets

showed a measurable change in disintegration rate upon aging These results are in line with those of Leonard (2) who found that 37% of all of the tablets examined by his committee required a longer time for disintegration after aging for 1 year and 23% required a shorter time, all, however, with the possible but doubtful exception of one, still remaining within their respective disintegration rate classification as defined by the aforesaid "Committee on Project No 1"

These results and those of Leonard (2) indicate that many tablets may show more rapid disintegration after aging rather than slower disintegration, which is contrary to the popular notion that newly made tablets are always more desirable in regard to rapidity of disintegration Effort is constantly made by producers to guard against so-called "hardening" of tablets with age and market tablets have been observed which disintegrated spontaneously due to over-zealousness of the producer in guarding his product against "hardening" or in insuring initially rapid disintegration The 228 kinds of tablets reported upon in this article were the products of a single manufacturer, did not constitute the total list of tablets put out by the manufacturer and were not selected for the tests but were taken for test successively as they happened to come up for manufacture The balance of the list of tablets will be also tested and if the conclusions warranted to date require modification a second communication will be made Since the tablets used in this work were the product of a single manufacturer this data does not establish the status of the general tablet market in respect to the effect of age on the rate of disintegration of tablets However, these results are likely indicative, since they are in line with Leonard's results which represented the products of several producers, and are published with the view of encouraging similar investigations and reports which cannot but react to the benefit of the consumer of these products The duty of the producer in this matter is pointed out by Leonard (2) as follows

> the only way a manufacturer can find out if his product hardens, if he is concerned about it, is to conduct just such a test as we have here reported Our Committee could not examine all varieties of tablets, that would be a Herculean task All we could hope to do was to show the trend and point out the method That our results were negative in that they did not show serious hardening speaks well for the products of the modern pharmaceutical manufacturer"

The corresponding duties of the jobber and retailer are also so ably stated by Dr Leonard in his report (2) that they deserve re-stating herewith in the interest of wider distribution

> "As one year is usually the maximum time of storage of tablets on the stock and jobbers' shelves this means that the manufacturer gets a satisfactory product into the retailer's hands What the latter may do with it cannot be predicted If he keeps it on his shelves for 5 years more, some products may seriously harden But we do not feel warranted in continuing the work of the Committee for 5 years to tell him so This is a problem for the Pharmaceutical Association
>
> "Deteriorations other than those of hardening, deteriorations of chemical nature which interfere with the pharmacodynamic action of some products may be expected to occur in 5 years, and are more serious than any hardening The problem of failure to move out retail stock in half a decade is a problem of economics and of medical psychology, and can best be dealt with by a policy of detail attention and return credits in cases of overstocking"

WHY HAND-MOLDED HYPODERMIC TABLETS VARY *

BY S WALLEY BOWER

In a previous paper, dealing with variations in Hand-Molded Hypodermic Tablets,[1] it was shown that the variations in the molding of Morphine Sulphate Tablets ranged from 3 63% over strength to 7 67% under strength

It was thought desirable to consider the subject more in detail to determine what variations occurred in hypodermic tablets other than those of morphine sulphate Inasmuch as the morphine sulphate mass to make these tablets consisted of from 50 to 90 per cent of sieved morphine sulphate, it was considered advisable to take for comparison, tablets, the mass of which consisted principally of milk sugar, with very small quantities of medicinal ingredients This would make it possible to determine whether the densities of the powders entering into the various tablet masses made an appreciable difference with the errors in the final results

The tablets selected for this study were Atropine Sulphate, $^1/_{100}$ grain, Strychnine Sulphate, $^1/_{60}$ grain, and Scopolamine Hydrobromide, $^1/_{100}$ grain Thus, for comparison, different conditions were obtained as to the densities of the ingredients, the morphine sulphate being of a much lighter density than the sugar of milk in the tablets now to be considered

These tablets were hand made, a steel plate with 200 perforations being used, thus turning out 200 tablets with each molding The yields obtained in the pressing of these tablets, also the variations from the theoretical are shown in Table I

The figures in the first column represent the number of finished tablets calculated to be made from the tablet mass, and called the theoretical The second column shows the number of tablets obtained upon completion of the molding, while the third shows the count over or under theoretical The last column represents the error in per cent of each lot, taken as a single unit Considering the theoretical as one hundred per cent, those producing an over yield of tablets will be shown naturally as being under the theoretical, while those having an under yield will be shown as having a percentage over the theoretical

TABLE I —ERROR IN YIELD BASED ON THEORETICAL

	Theoretical	Yield	Over or under Theoretical	Per Cent
Atropine Sulphate.				
Lot 1	56,000	53,602	2,398 under	104 47
2	56,000	56,315	315 over	99 44
3	28,000	27,583	417 under	101 51
Strychnine Sulphate.				
Lot 1	70,000	73,132	3,132 over	95 74
2	70 000	70,090	90 over	99 87
3	70,000	69,070	930 under	101 35
Scopolamine Hydrobromide.				
Lot 1	21,000	21,215	215 over	98 99
2	21,000	20,800	200 under	100 96
3	21 000	20 330	670 under	103 30

* Section on Practical Pharmacy and Dispensing, Washington meeting 1934

[1] JOUR A PH A, 23 (1934), 36–40

The tablets of each lot were counted into as many complete divisions of 500 tablets as possible Each 500 was now weighed to obtain the highest and lowest 500 tablets in weight of the several lots This high and low were then compared with the theoretical weight of 500 tablets of the corresponding lot, and the percentage error computed This error is shown in Table II Also the percentage variation of each entire lot is repeated in the last column to afford an easy comparison with reference to this high and low per cent

TABLE II —COMPARISON OF HIGH AND LOW OF 500 TABLETS

Atropine Sulphate	High Per Cent	Low Per Cent.	Difference	Per Cent Variation in Entire Lot
Lot 1	105 23	101 22	4 01	104 47
2	102 95	100 07	2 88	99 44
3	100 22	97 69	2 53	101 51
Strychnine Sulphate				
Lot 1	96 89	92 99	3 90	95 74
2	99 14	95 78	3 36	99 87
3	101 67	100 06	1 61	101 35
Scopolamine Hydrobromide				
Lot 1	98 85	97 22	1 63	98 99
2	101 87	97 02	4 85	100 96
3	103 90	100 05	3 85	103 30

The 500 high tablets and the 500 low tablets of each lot were now subdivided into five parts of 100 tablets each and weighed From the 500 high tablets, the weight of the 100 tablets highest was noted The error in per cent of these was determined as based on the theoretical Also from the low 500 tablets, the weight of the 100 lowest was obtained, and its percentage error determined in the same manner

This percentage of the high 100 tablets may be used to represent the greatest deviation from the theoretical on the plus side, and the percentage of the low 100 tablets, the greatest deviation from the theoretical on the minus side As these two figures are the extreme limits of variation from the theoretical, the difference between these two percentages represents the variation in per cent of each lot of tablets

TABLE III —EXTREMES OF VARIATION

Atropine Sulphate	High Per Cent.	Low Per Cent.	Difference Per Cent	Variation in 500 Per Cent.
Lot 1	105 57	100 92	4 65	4 01
2	103 47	99 92	3 55	2 88
3	100 40	97 39	3 01	2 53
Strychnine Sulphate.				
Lot 1	97 66	92 77	4 89	3 90
2	99 67	95 39	4 28	3 36

Scopolamine Hydrobromide.				
Lot 1	98 98	97 10	1 88	1 63
2	102 17	96 48	5 69	4 85
3	104 40	99 80	4 60	3 85

These results are shown in Table III The first column shows the greatest variation from the theoretical on the plus side, of 100 tablets, column two, the

greatest variation from the theoretical on the minus side The third column shows the difference of these extremes The last column contains the difference in variation of the extremes of 500 tablets from the preceding table

Commenting on this table, it will be seen that the difference in variation of each lot of tablets seems to remain quite constant, the percentage error depending upon the number of tablets produced from the several lots, as varying from the actual number of tablets to be made, and upon which each formula is based While the extremes of variations of these tablets, which consist principally of milk sugar, seem to be less than those found in morphine sulphate tablets,[1] the difference is not so great, that a statement of fact can be made, as so many factors enter into human workmanship A slight change in pressure of the operator in molding may change the entire calculation However, these figures may be taken as a general average, covering a considerable period of time, and for control work are very satisfactory

WHY TABLETS VARY

Referring to Table I, this relationship can be noted more clearly Those lots of tablets having an over yield in the number of tablets, show a percentage weight under the theoretical, which runs consistently throughout the entire lot The same is true of those lots producing an under yield, as shown by the percentages over the theoretical

As an example, let us consider the three lots of scopolamine hydrobromide The mass of each was made from the same formula, namely, Scopolamine Hydrobromide, U S P, 210 grains, milk sugar, 10,500 grains This mixture weighed 10,710 grains, to yield theoretically 21,000 tablets, each 100 to weigh 51 grains The material entering into each mass was obtained from the same source of supply, and in the preparation passed through the same process The tablets were molded by the same person, but at varying times These facts being considered, similar yields of tablets should be expected But instead of this, one mass produced 21,215 tablets, another 20,800 tablets and the third 20,330 tablets The data covering scopolamine hydrobromide are collected in Table IV

TABLE IV —SCOPOLAMINE HYDROBROMIDE TABLETS

Lot	Yield.	Per Cent	Extremes of 500 Tablets in Per Cent.	Extremes of 100 Tablets in Per Cent.
1	21,215	98 99	98 85 — 97 22	98 98 — 97 10
			Difference 1 63	Difference 1 88
2	20 800	100 96	101 87 — 97 02	102 17 — 96 48
			Difference 4 85	Difference 5 69
3	20,330	103 30	103 90 — 100 05	104 40 — 99 80
			Difference 3 85	Difference 4 60

A study of this table shows the difference in pressure exerted in molding, not only in the result of the entire lot, but in the component subdivisions as well While the three lots, taken as single units, have variations in per cent of 1 01 under, 0 96 over and 3 30 over, respectively, the subdivisions show extremes in percentages of 1 88, 5 69 and 4 60, respectively

This variation, both in yield and of the tablets in various lots, shows why a tolerance from the declared strength is necessary in the manufacture of tablets of

[1] JOUR A PH A, 23 (1934), 40

this nature This tolerance should be sufficiently large to cover uncontrollable factors that enter into the molding, but not too large as to impair the accuracy of dosage

This paper is not intended to offer any suggestions in the manufacture of hand molded hypodermic tablets It merely shows what variations take place in the molding of tablets by the comparison of various yields, and what problems confront the manufacturer, endeavoring to turn out a uniform product

DETERMINATION OF THE REASONABLE OR PERMISSIBLE MARGIN OF ERROR IN DISPENSING IV PILLS

BY MARVIN J ANDREWS

(*Continued from page 1122, November Journal*)

For the purpose of making it possible to compare the results presented in Tables Nos I to III with similar data that may have been published, but which have not been expressed in terms of the standard deviation, the per cent of deviation from the average has been calculated and is given in Tables IV, V and VI

TABLE IV —PERCENTAGE DEVIATION FROM THE AVERAGE WEIGHT OF PILLS PREPARED IN FILLING PRESCRIPTION No 1

It will be observed on examining Tables IV, V and VI that a variation of 15 per cent from the average weight will include the majority of all the pills compounded in this series of tests A summary of the results based on the per cent deviation from the average weight is given in Table VII

TABLE VII —SUMMARY OF RESULTS SHOWING THE NUMBER OF PILLS DEVIATING FROM THE AVERAGE WEIGHT AND THE PERCENTAGE OF DEVIATION

Prescription Number	Number of Pills Deviating from the Average Weight by— 5% or Less	From 5% Plus to 10%	From 10% Plus to 15%	From 15% Plus to 20%	20% or Over
1	610	247	105	30	8
2	626	243	102	21	8
3	632	262	78	19	9

The foregoing results compare favorably with those reported by Dr Robert L Swain in a paper entitled "Prescription Accuracy by State Board of Pharmacy Examinations—A Preliminary Study" (JOUR A PH A, 22 (1933), 1259) On calculating the percentage deviation based on the average weight of each batch of pills reported by Dr Swain to be satisfactory, we find that 82 8 per cent fell within 10 per cent, 13 6 per cent fell between 10 and 15 per cent, 2 5 per cent fell between 15 and 20 per cent, while the remaining 1 07 per cent were over 20 per cent

THE EFFECT OF TIME ON THE WEIGHT OF FRESHLY PREPARED PILLS

In the first series of tests the pills were weighed the same day they were prepared In this series of tests each batch of pills made for the first series of tests was weighed to determine the loss in weight on standing These pills had been stored in ordinary pasteboard pill boxes for periods of one and two weeks

The results of these weighings are given in Table VIII

TABLE VIII —AVERAGE WEIGHT OF 100 BATCHES OF PILLS AFTER STANDING FOR PERIODS OF 1 AND 2 WEEKS

Prescription Number	Average Weight of 100 Batches of 10 Pills Each on Day Prepared	1 Week Later	2 Weeks Later	Average Loss in Weight Over a Two-Week Period
1	3 659 Gm	3 292 Gm	3 204 Gm	0 455 Gm
2	4 795 Gm	4 771 Gm	4 731 Gm	0 064 Gm
3	5 689 Gm	5 601 Gm	5 501 Gm	0 189 Gm

CONCLUSIONS

1 The factors largely responsible for the variation in the weight of pills made by pharmacists are (1) the nature of the excipient used, (2) the amount of care exercised in compounding, and (3) the length of time which is permitted to elapse before the pills are weighed

The nature of the excipient used is not responsible for the variation in the weight of individual pills of the same batch, but is probably the principal cause for difference in the weight of batches of pills made by different individuals

2 From the data obtained in the tests made it would seem that twice the average standard deviation is a reasonable margin of error for weight This margin will cover 99 per cent of the batches of pills made in filling prescriptions Nos 1 and 3, and 96 per cent of the batches made in filling prescription No 2 Expressed in terms of percentage, a margin of error of 13 1 per cent variation from the average weight would cover all the above cases From this it is concluded that a margin of 15 per cent deviation from the average weight would be reasonable and should be permitted

(*To be continued*)

A STUDY OF THE EMPTYING TIME OF THE STOMACH WITH REFERENCE TO PILLS AND TABLETS *

BY F S BUKEY AND MARJORIE BREW

The results reported in this paper have been obtained from a rather extensive study of enteric coatings By use of the X-ray, many interesting facts were found concerning the length of time pills, tablets and capsules remain in the stomach

Early investigators have stated that pills would remain in the stomach from one to six hours However, the consensus of opinion was that from one to three hours was the normal emptying time The X-ray studies indicate that six hours is about the average emptying time

Apparently, size and shape of pills or tablets has little to do with the length of time they remain in the stomach Pills of 7 2 mm , 5 9 mm and 3 9 mm in diameter, and compressed tablets of 10 5 mm in diameter and 4 8 mm in thickness were used Also square tablets 10 mm by 10 mm and 5 mm in thickness and rectangular tablets 12 5 mm by 8 5 mm by 3 5 mm were given The tablet and pill masses contained $BaSO_4$ in order that they might be observed by X-ray In cases where the individuals were given nine pills, three of 7 2 mm in diameter, three of 5 9 mm in diameter and three of 3 9 mm in diameter, it was not uncommon to find that the larger pills left the stomach first

The subjects used in the study were normal and apparently in good health The same individual was used repeatedly in order to determine individual variation These individual variations made it almost impossible to state a general rule on

* Section on Practical Pharmacy and Dispensing A PH A , Washington meeting, 1934

emptying time It was found that the same subject given the same kind of pills on two different days, would react differently For example, subject L H was given three tablets and the X-ray pictures showed them to be out of the stomach in one hour On another day, the same subject was given five tablets of the same size and the X-ray pictures showed three tablets to be out of the stomach in four hours and the other two remained there for a longer period of time This variation was undoubtedly due to the condition of the individual, the type of food eaten and the concentration of gastric juices, for this reason, an emptying time constant for the individual is rather difficult to determine

A few experiments have been conducted using specific diets and the results indicated that the diet may have an influence upon the length of time pills, tablets and capsules will remain in the stomach Further study is being conducted on this phase of the problem

Several types of enteric coatings were studied Such coatings as salol-shellac, salol-balsam, keratin, stearic acid, stearic acid-carnauba wax and tolu were used in addition to the usual type of commercial enteric coatings Tolu coatings were not studied with the idea of determining their enteric value but to find whether they would disintegrate in the alimentary tract Very few pills or tablets with the tolu coatings disintegrated in the stomach, thus it made an excellent means of studying emptying time On abstracting the results of these experiments, it was evident that the type of coating has little to do with the time that pills, tablets or capsules will remain in the stomach

In this study 367 pills, tablets and capsules were given and 96 subjects were used The following table gives the number of subjects and the number of times they were used

TABLE I —NUMBER OF SUBJECTS, TIMES USED

Number Subjects	Times Used	Number Subjects	Times Used
16	1	5	4
12	2	2	5
6	3	1	8

The following table gives the emptying time in hours for tablets, pills and capsules of the indicated dimensions with no regard to the type of coating

TABLE II —EMPTYING TIME IN HOURS

Type.	Size in Mm	No of Pills Out of the Stomach at the End of the Listed Hours. 2	3	4	5	6	7	8	9	10	11	12	15	17	19	21
Tablets	10 5 x 4 8	15	39	37	14	12	3	3	0	4	0	0	0	0	0	0
Capsules	18 3 x 5 9	0	3	2	3	0	1	0	0	0	0	0	0	0	0	0
Pills	7 2	13	10	2	1	1	2	0	1	0	0	0	0	0	0	0
Pills	5 9	5	4	5	3	0	1	0	0	0	0	0	0	0	0	0
Pills	3 9	2	0	0	4	0	3	3	0	0	0	0	0	0	0	0
Pills	6	0	10	20	28	6	9	0	3	8	18	5	1	12	10	1
Tablets (sq)	10 x 10 x 5	8	4	0	5	3	0	0	0	0	0	0	0	0	0	0
Tablets (rect)	12 5x8 5x3 5	15	0	5	0	0	0	0	0	0	0	0	0	0	0	0

The following table gives the total number of pills, tablets and capsules which were out of the stomach at the end of the stated time with no respect to the shape or enteric coating

TABLE III —TIME OUT OF STOMACH

Number	Hours	Number	Hours
58	2	4	9
70	3	12	10
71	4	18	11
58	5	5	15
22	6	12	17
19	7	10	19
6	8	1	21

The largest number of pills passed out of the stomach in four hours, but the average emptying time calculated from this table was found to be five and nine-tenths hours

The following table gives the emptying time in hours for pills and tablets based upon the type of enteric coating used with no regard to size

TABLE IV

Type of Coating	No of Pills Out of the Stomach at the End of the Listed Hours																			
	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21
Tolu (S B Penick)	0	0	1	5	0	2	0	3	0	0	5	0	0	0	0	0	0	4	0	1
Tolu (Huisking)	0	10	0	10	0	5	0	1	3	7	0	0	0	1	0	2	0	4	0	0
Tolu (Eimer & Amend)	0	0	7	17	0	3	0	0	4	0	0	0	0	0	0	9	0	0	0	0
Tolu (Hopkins)	0	0	12	0	0	0	0	0	0	12	0	0	0	0	0	0	0	0	0	0
Keratin	0	1	0	3	4	0	0	0	4	0	0	0	0	0	0	0	0	0	0	0
Stearic acid	0	6	9	0	1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Salol Balsam	5	12	4	1	1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Salol Shellac	2	0	0	3	2	1	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Carnauba wax and stearic acid	11	4	9	3	1	0	0	4	0	0	0	0	0	0	0	0	0	0	0	0

Several conclusions have been drawn from this study *First*, that the size and shape of a pill, tablet or capsule have no effect on the length of time it will remain in the stomach *Second*, that the same individual does not react uniformly toward this type of medication with reference to emptying time *Third*, that indications point to the fact that the emptying time may be influenced by the type of diet *Fourth*, that the type of enteric coating does not have any effect on the length of time that pills, tablets and capsules will remain in the stomach

COLLEGE OF PHARMACY,
UNIVERSITY OF NEBRASKA, LINCOLN, NEBRASKA

PRESCRIPTION PROBLEMS *

BY S W MORRISON

A large number of interesting prescriptions has been collected from the files of the Illinois Research Hospital, a few of which are presented in this article Each one presents some difficulty which can be remedied, instead of compounding as written and dispensing a disagreeable-looking prescription

℞ 1

Lugol's Solution	20 0
Compound Elixir of Pepsin *q s*	120 0

* Section on Practical Pharmacy and Dispensing, A PH A, Washington meeting 1934

An opaque colloidal precipitate of brown color is produced, giving an unsightly appearance The remedy is to add 15 cc of alcohol to the Lugol's Solution before adding the compound elixir of pepsin A clear solution is obtained

℞ 2	Sodium Bromide	35 0
	Compound Elixir of Pepsin *q s*	120 0

The sodium bromide dissolves easily in the elixir but after standing a few hours a flocculent precipitate forms This is due to the salting-out action of the bromide and will not obtain in dilute solutions The precipitation can be prevented by dissolving the sodium bromide in 35 cc of water before adding the elixir

℞ 3	Salicylic Acid	0 6
	Coal Tar Solution	4 0
	White Lotion	60 0
	Water *q s*	120 0

This prescription was filled by dissolving the salicylic acid in the coal tar solution, then adding the other ingredients A coarse brown precipitate of the tarry matter formed, possibly due to the acidity of the salicylic acid The only way the prescription can be satisfactorily filled is to mix the coal tar solution with the water and the white lotion and then triturate this with the salicylic acid in a mortar No precipitate occurs and a uniform smooth lotion can be dispensed Perhaps it is because the salicylic acid is not in solution and does not increase the acidity of the solution

℞ 4	Corrosive Mercuric Chloride	gr VI
	Dilute Acetic Acid	ʒ ss
	Sodium Borate	ʒ ss
	Glycerin	ʒ IV
	Alcohol	ʒ III
	Water *q s*	fl oz IV

This prescription will usually produce a yellow to red precipitate of HgO, depending on the manner of mixing A clear colorless solution is obtainable if the corrosive mercuric chloride and 6 grains of sodium chloride are dissolved in some of the water and the acid added The sodium borate is then dissolved in the glycerin and a portion of the water, this is mixed with the solution of the mercuric chloride, the alcohol is added and sufficient water to make the required volume The sodium chloride decreases the ionization of the mercuric chloride, thereby preventing reaction and precipitation of the mercury Addition of hydrochloric acid instead of sodium chloride will likewise give a clear solution

℞ 5	Amidopyrine	7 0
	Chloral Hydrate	5 0
	Syrup of Citric Acid	30 0
	Water *q s*	90 0

No matter how these ingredients are combined an oily-like mixture separates and settles to the bottom Chloral hydrate is soluble in oil, and amidopyrine is insoluble in oil An emulsion was made, hoping that the combining of the chloral

hydrate with the amidopyrine might thereby be prevented The chloral hydrate was dissolved in 10 cc of olive oil and mixed with 4 Gm of acacia The amidopyrine was dissolved in the water and syrup with the aid of heat The aqueous solution was added to the oil solution and an emulsion made by means of the syringe method, which proved to be the best procedure The mixture of the liquids was drawn up into a 50-cc Leur syringe, then forced out again This operation was repeated 6 or 7 times and a perfect emulsion formed It gave a white milky preparation which did not separate after standing 3 days

The advantage of the syringe method is that less acacia is required, no definite proportion of oil, water and emulsifying agent is necessary and the method never fails The only precaution necessary is in the trituration of the acacia with the oil, so that there will be no lumps to obstruct the opening of the syringe This improved method can be recommended for a place in the N F VI, instead of the present procedure

℞ 6	Sodium Salicylate	15 0
	Citric Acid	0 6
	Tincture of Ferric Chloride	15 0
	Glycerin	60 0
	Methyl Salicylate	1 2
	Solution of Ammonium Acetate *q s*	120 0

This prescription resulted in a dark colored mixture with a dark gelatinous precipitate of ferric salicylate A more pleasing preparation can be obtained by substituting Tincture of Ferric Citrochloride A clear solution is obtained without the precipitate and dark color

℞ 7	Sodium Bromide	15 0
	Tincture of Belladonna	15 0
	Kaolin	4 0
	Liquid Petrolatum *q s*	120 0

At first glance this appears to be an impossible combination as none of the ingredients are soluble or miscible with each other However, a very satisfactory preparation can be made by adding acacia and water and making an emulsion which will be homogeneous and will not readily separate The kaolin and 4 Gm of acacia were triturated with some of the liquid petrolatum The tincture was diluted with 10 cc of water and the bromide dissolved in it This solution was then added to the liquid petrolatum mixture and an emulsion prepared by the syringe method described under prescription No 5

℞ 8	Morphine Sulphate	0 3
	Sodium Iodide	5 0
	Bismuth Subnitrate	6 0
	Divide in chart No 12	

When these salts were triturated together in a mortar, the mixture immediately turned to a brick-red color This is due to the presence of moisture and reaction of the sodium iodide with the bismuth subnitrate, forming bismuth oxyiodide Even when mixed lightly with a spatula without trituration the mixture gradually

turned to a yellowish orange color It is desirable to dispense these powders without decomposition and the addition of 5 Gm of dried starch to the mixture will prevent the reaction and change in color However, the mixture should not be triturated in a mortar

UNIVERSITY OF ILLINOIS,
COLLEGE OF PHARMACY

U S P AND N F PUBLICITY IN MARYLAND *

BY FRANK L BLACK

There has been a great amount of enthusiasm shown in the revival of the use of U S P and N F preparations Back in 1930, Lawrence S Williams, president of the Maryland Pharmaceutical Association, advocated in his retiring speech the forming of a committee to study the U S P and N F Propaganda The incoming president appointed Mr Williams chairman of this committee They worked for two years under Presidents Spire and Kantner and made some progress

L S Williams had to resign due to ill health and, in 1933, President L V Johnson appointed a new committee of eight, who selected Marvin J Andrews as its chairman [1]

The first meeting of the new committee was held on August 16, 1933, when plans were formulated for the type of work to be done It was decided at this meeting that mimeographed letters be sent to every physician in the City of Baltimore and the counties of Maryland These letters were to consist *first*, of general information on the U S P and N F , *second*, arguments to induce the physicians to prescribe U S P and N F drugs and preparations, and *third*, such other material that the committee may decide upon

It was also decided that with each letter at least eight or ten seasonable prescriptions be included, titled as to their use This letter and the list of prescriptions were to be published in the *Maryland Pharmacist*, one month before mailing them to the physicians, so that every pharmacist would be enlightened as to what was being done, with the exception that the use for which these prescriptions were intended would not be mentioned in the *Journal* in order that physicians could not come back with the suggestion that pharmacists were employing these formulas for counter-prescribing

It was proposed to send out a series of six such letters and lists of prescriptions at intervals of one month Then came the task of financing this proposition After very careful study the cost for completing the work was ascertained to be about $575 00 to $600 00, which included stationery, mimeographed letters, printing of prescription formulas and postage, there are about 200 physicians in Baltimore and in the state of Maryland

The state and city associations had appropriated a sum of money at the first announcement of this project, but due to the financial loss and depression they were not able to make the full payment Maryland Pharmaceutical Association

* Section on Practical Pharmacy and Dispensing, A PH A Washington meeting, 1934

[1] Assistant Professor of Pharmacy at the School of Pharmacy of the University of Maryland

holds a spring and a fall regional meeting independent of the yearly convention, on October 17, 1933, at the Hagerstown regional meeting, it was proposed and passed that a letter should be mailed to every pharmacy in Maryland, asking for a donation of one dollar There were about 75 members present at this meeting and about sixty-five dollars were collected before adjournment

On November 1st, the appeal requesting this donation was mailed to every pharmacy, and to date about $400 00 has been collected The outcome of this appeal for one dollar was somewhat of a surprise, as it was expected to receive at least 90 or 95% of replies from the independents and little or no support from the chain organizations, however, the chains responded 100% and the responses from the independents was below the expectancy This loss being observed, the Baltimore Retail Druggists' Association formed a committee to canvass every drug store in Baltimore that had not subscribed, and to date the result has been very satisfactory

There have been a number of joint meetings of the pharmaceutical bodies with the doctors and on each occasion some comment was made of the value of the U S P and N F

It is gratifying that the *Maryland Pharmacist* has been good enough to give the space of two pages or more for this work The second mailing has just been completed and responsive thereto a number of very complimentary letters from medical friends have been received and the results of the undertaking are very encouraging

NOTE Reprints and formulas accompanied the paper, also copies of an address on U S P and N F—Their Relationship to the Cost of Medical Care," by R L Swain delivered before the Maryland Academy of Medicine and Surgery, January 16, 1934 reprinted from the *Maryland Pharmacist*, February 1934

Accompanying a series of prescriptions (exhibited with the paper) mailed to physicians it was stated

The purpose of sending you these prescriptions is to direct your attention to some of the useful combinations which can be made from items official in the Pharmacopœia of the United States and the National Formulary with the hope that you may be induced to make more frequent use of these standard works in writing your prescriptions If you have any criticisms to make of the above prescriptions or any suggestions to offer as to other means by which we may accomplish our purpose, it will be appreciated if you will communicate them to the Committee

Prepared under the auspices of the U S P and N F Publicity Committee of the Maryland Pharmaceutical Association and the Baltimore Retail Druggists' Association "

(*Signed*) MARVIN J ANDREWS, *Chairman*

THE PHARMACEUTICAL POSSIBILITIES OF DENTAL SUPPLIES *

BY LEON RICHARDS [1]

The potential possibilities in the field of dental supplies are worthy of considerable attention by the present-day pharmacist This opportunity of mutual benefit by the cooperation of the professions of dentistry and pharmacy demands more than casual interest It is not a new idea, but the advantages to be gained from this cooperative effort seemingly need more emphasis The knowledge and services of both groups are not being utilized to the extent they should be

* Section on Practical Pharmacy and Dispensing, A PH A , Washington meeting 1934

[1] Assistant Professor of Pharmacy, University of Montana

It can hardly be disputed that the dentists are required to pay exorbitant prices for a number of relatively simple mixtures masquerading under meaningless, high-sounding titles This exploitation, by some manufacturers, has created an antagonistic reaction within the profession and the dentists are a ready market for the pharmacist seeking new fields for his professional services

There are a large number of secret formula preparations being sold to the dentists by supply houses that can be successfully replaced by official preparations, or materials prepared from recognized formulas The scientific background of the pharmacist especially equips him for this specialized work and he should avail himself of this opportunity to increase the scope of his professional services

Frequently, the practitioner unknowingly has been imposed upon by some of the manufacturers Certain dental supply houses and nostrum dealers have persistently foisted harmful preparations on the public and the dental profession in the guise of beneficial remedies The hydrochloric acid tooth stain removers are outstanding examples of this type of preparations, some of them have been found by chemical examination, to be strong hydrochloric acid solutions—a rather important matter which some supply house salesmen have neglected to mention

The remedy for this situation has been suggested by the Council on Dental Therapeutics of the A D A , it is for the purpose of correcting this condition that they publish from time to time critical reports on various products submitted to them for approval and recommend that U S P and N F materials be used whenever possible Many outstanding men in their profession have courageously pointed the way Dr Harold S Smith (1), chairman of the Council, in his article entitled, "Dental Proprietary Remedies and Nostrums," states

'Many of these remedies are secret formulas carrying some fancy copyrighted name, and carrying, in some cases, in the literature accompanying them, therapeutic claims which may not be supported by scientific evidence This situation would not exist if the therapeutic training of the dentist were adequate If it were adequate he would consult the U S P and N F regarding the therapeutic agents required, and secure them on the basis of rational costs, rather than on the tremendously inflated prices of the proprietary formulas "

This work of the Council has been supplemented by various papers that have pointed out official materials especially applicable for dental use For example, Aaron Isaacs (2), associate chemist of the Bureau of Standards, comments on mercury as follows

'Many different terms such as pure, chemically pure, distilled, redistilled, double distilled and U S P are used to designate the quality of mercury—none of these terms has a definite meaning except the term U S P and the requirements given in the U S Pharmacopœia are entirely adequate for mercury to be used in dentistry "

The fact that a busy dentist does not have time, nor possess the specialized training necessary to evaluate new drugs tends to emphasize the dependability of the official products However, the average practitioner needs to be more fully informed concerning the individual materials that he can utilize in his office Therefore, the pharmacist should detail his dentists on the specific materials that he is able to supply them at reasonable prices

To this end there are listed below as suggestions, a few of the more common materials found in dental offices

1 Arsphenamine U S P, in the treatment of Vincent's disease
2 Howe's Ammoniacal Silver Nitrate Solution (3), to retard the progress of dental decay
3 Compound Choroformic Solution of Mastic, N F V, pulp capping
4 Chloroformic Solution of Rosin, N F V, pulp capping
5 Dental Polishing Paste (Mickelsen) (4), professional use only
6 Compound Dental Liniment of Aconite, counter-irritant for relieving pain involving the gums
7 Compound Dental Liniment of Aconite and Iodine N F V, used on the gums as a refrigerant counter irritant
8 Eugenol U S P, reducing agent
9 Formaldehyde U S P, reducing agent
10 Toothache Remedy N F V, Black's well known 1-2 3 mixture
11 Liquefied phenol U S P devitalizing agent
12 Mercury U S P, amalgams
13 Compound Solution of Iodine U S P, disclosing agent
14 Tincture of Iodine U S P, counter-irritant and antiseptic
15 Sodium Perborate, treatment of Vincent's disease

HOSPITAL PHARMACY *

BY RICHARD D FRANKLIN [1]

MANUFACTURING

The amount of manufacturing to be regarded as advisable depends largely upon the number of prescriptions dispensed and the number of pharmacists employed For a small hospital with only one pharmacist it is often advantageous to buy most of the finished preparations Our hospital has a capacity of about 300 beds, and treated 35,000 out-patients during the past year We have found it profitable to manufacture many of the official and non-official elixirs, ointments, mixtures and solutions, but deem it advisable to buy many other preparations, such as assayed tinctures and fluidextracts, ampuls of various medicinal substances, and all tablets and pills In other words, the simpler preparations can be made in the pharmacy, while those requiring more elaborate equipment, or better suited to mass production, should be purchased

PURCHASING

Purchasing merits the personal attention of the pharmacist, and should not be left entirely to the purchasing agent Quality and service are most important,

* Charles V Chapin Hospital located in Providence, R I, was formerly known as the Providence City Hospital, the name was changed in December 1931, in honor of Charles V Chapin M D, who was for forty eight years Superintendent of Health of Providence The hospital was primarily, for infectious diseases, but tubercular and neuropsychiatric patients are treated also

[1] Assistant Professor of Operative Pharmacy at the Rhode Island College of Pharmacy, Providence, R I

and it is, therefore, poor economy to deal with houses that have been found to be unreliable as to quality of goods, or promptness of delivery

DISTRIBUTION TO WARDS

Most of the requisitions from the wards come in early, and can usually be filled before the prescriptions from the out-patient department begin to arrive All preparations are dispensed in bottles or jars, wide-mouth bottles for tablets, pills and powders, and narrow-mouth for liquids The glass may be white or amber, depending on the preparation and the necessity for protecting it from light Such bottles are inexpensive and much more satisfactory than paper or card-board containers

The label carries the name of the medication, the date and the initials of the pharmacist who is responsible Materials known to deteriorate are issued in small quantities, with an additional label calling attention to the expiration date, or the date on which any remaining material is to be returned to the drug room Tincture of digitalis, for example, when issued to the wards is given a month's dating, if any is returned, it may, if approved, be dispensed to the out-patients Silver colloids and alkaloids without preservative are returned in two weeks Wards are inspected periodically to prevent overstocking and the accumulation of out-dated preparations

A complete record of each prescription is filed, as in any modern retail pharmacy This record contains the name, address and age of the patient, together with the prescription number Prior to 1930 about eighty per cent of our out-patients paid for their prescriptions, but during the last three years the number of patients paying for their medicine has dropped to about ten per cent The resident physician in charge of the out-patient department, with the assistance of the social service department, investigates all cases before deciding that they are unable to pay, and signs all prescriptions that are to be dispensed free We do not feel that we are competing unfairly with retail pharmacists, for, although we may cut in on a small amount of their paying business, we save them far more by taking care of those who cannot pay cash, and from whom collection would be difficult and in many cases impossible During the last calendar year we have dispensed 30,000 prescriptions to out-patients and the needy and unemployed of the city of Providence, at an average cost of about twenty-five cents

While we have our own hospital formulary and find it useful in many ways, the greater part of our prescription work is entirely individual Considerable time could be saved by the use of stock mixtures but, in general, individual prescriptions are to be regarded as more desirable

The hospital employs three registered pharmacists, all graduates of the R I College of Pharmacy, one assistant, one student pharmacist and one porter The pharmacist who fills a prescription is responsible for that prescription, as we employ no checking system We feel that the advantage to be gained by having a second man check the prescription is fully offset by the tendency of the system to divide responsibility, and that the extra work and expense are therefore not justified The drug department is open from 8 30 A M to 9 00 P M daily, including Sundays and holidays Each pharmacist works about 50 hours per week Clinics are also conducted by the hospital in two different sections of the city These

clinics are pediatric in nature, and one of our pharmacists is always in attendance during clinic hours All packages are wrapped before being sent out

DISPENSING MEDICINES TO THE NEEDY, AND METHODS OF HANDLING RELIEF WORK

One full-time and several part-time physicians are employed by the city to care for those unable to pay Prior to 1932 many retail stores furnished free medicine to such patients, but in 1932 the increasing number of free prescriptions forced them to abandon this practice, and the city had to take up the work The city physicians carry small supplies of drugs, furnished by the city, for emergency use When they find it necessary to write prescriptions they adhere as closely as possible to standard and official drugs At first the cost was borne by the Health Department, but in January of 1933 the Department of Public Aid assumed the expense for prescriptions issued to patients coming under the heading of "Unemployed Relief" and "C W A " workers These are accompanied by a letter of identification from a social service worker connected with the Department of Public Aid Since the establishment of the F E R A the system has been changed in that patients are allowed to call their own physicians, at the expense of the Department of Public Aid As a result, costs have greatly increased, for about 75 per cent of the prescriptions are for proprietary medicines, many of which cost from $1 00 to $2 50 As the matter of dispensing now stands, the Health Department pays the needy sick who are too enfeebled to work and those who would have no means of support even if times were better The Department of Public Aid, through City and Government appropriations, pays the cost of medicines issued to the unemployed and F E R A workers

LABELING

The label carries the serial number of the prescription, the date, directions and signature or initials of the pharmacist who is responsible In order to discourage self-medication, as well as to save the patient possible embarrassment, names of medicines and formula numbers are not, as a rule, put on the label

VALUE AND USE OF A HOSPITAL FORMULARY

A hospital formulary can be of distinct value if it is kept up-to-date by regular revision, and if the physicians are familiar with its contents The point to be borne in mind is that the formulary should not be followed too slavishly The physician should be encouraged to write individual prescriptions when, in his opinion, such prescriptions are indicated Individual attention to prescriptions is especially important in the departments of Internal Medicine, Dermatology and Gastro-Enterology This practice of course increases the amount of work, and can be overdone, but the physicians who are giving their time to the free clinics deserve all the cooperation we can reasonably give them The Council of Chemistry and Pharmacy of the American Medical Association has repeatedly gone on record against the abuse of the practice of prescribing of medicine in fixed doses to group patients The difference between the individual prescription and that of the formulary is often quantitative rather than qualitative The common "Sippy" powder, for example, may contain too much magnesium oxide for some patients

REFILLS

Out-patients are not allowed refills without an order from a physician connected with the department from which the original prescription was obtained The same rule applies to patients from the Department of Public Aid, if the preparation contains a potent drug, if no such drug is present two refills are allowed

EXPERIMENTAL USE OF NEW DRUGS AND REMEDIES

The policy of the hospital administration toward new drugs and remedies is thus expressed by Dr Richardson

There are on the market many useful drugs and chemicals, not listed in the United States Pharmacopœia or National Formulary, which are being tried out, and new ones are constantly appearing They are either preparations recognized by the Pharmacopœia or Formulary, and sold under trade names, or they are slight variations from such recognized preparations, and are given new trade names Offered under trade names, these preparations are sold at much higher cost than is warranted by cost of manufacture In many instances, if the prescription bears the name of a chemical the price is much less than when it bears a trade name Many of these new drugs are of no more value than are other less expensive drugs Physicians are constantly being solicited by detail men to try these expensive preparations, and too often they are persuaded to do so

"Certainly, progress is being made in drugs and chemicals for the treatment of illness, but physicians should be careful not to saddle unnecessary cost on their patients for new and unproven preparations Expensive drugs, unless they are absolutely needed, should not be prescribed for poor people and persons who are on the public relief, and which must be paid for by public funds Intelligent prescription writing is fast becoming a lost art "

NARCOTIC RECORDS

A separate numbering system is used for prescriptions containing narcotics No refills are allowed without a new prescription The nurse in charge of a ward can requisition narcotics from the drug department She must, however, report on a narcotic blank all drugs and the number of doses given the patient during the preceding 24 hours, this report is sent to the drug department daily In conjunction with this, a physician must sign, in a special book, for all narcotics given on the ward If the nurse desires more narcotics she must order the quantity desired and report the balance left from the previous order, and this must correspond with the total quantity first issued Furthermore, the physician's order book is checked with the nurse's report We limit denominations of narcotics to those most frequently used on the wards We dispense H T morphine sulphate in $^1/_4$-grain or $^1/_8$-grain tablets, the same for H T codeine sulphate If any doses are needed above or below these quantities they can easily be derived from them There may be a little waste at times, but this is more than compensated for by not having to stock an unnecessarily large number of denominations

---

NEW YORK DENTAL SOCIETIES

New York Dental Societies on December 3rd observed the centennial of the world's first dental society—the Society of Surgeon Dentists of the City and State of New York They also commemorated the 200th anniversary of the first known practice of dentistry in this country as a profession The first two practitioners were, according to the centennial announcement, Drs James Reading and James Mills, both of whom began their dental practice in New York in 1734

THE DEPARTMENT OF THE AMERICAN ASSOCIATION OF COLLEGES OF PHARMACY

C B JORDAN—CHAIRMAN OF EXECUTIVE COMMITTEE, A A C P, EDITOR OF THIS DEPARTMENT

A definite statement by an authority of what a college course should embrace is welcomed by all teachers of that subject The study of applied botany, applied chemistry, applied physiology, as well as applied physics, is quite important in building such a professional curriculum as that of pharmacy The leaf is the most important biochemical laboratory contributing to the welfare of man, and not only deserves considerable attention but should be a means of interesting students in botany Several important drugs consist either of leaves themselves, or the active principles of leaves and therefore deserve particular attention in botany applied to pharmacy as well as in pharmacognosy The following paper by Dr Youngken will interest all teachers of botany —C B JORDAN, *Editor*

THE STUDY OF THE LEAF

BY HEBER W YOUNGKEN *

Botany, like chemistry, has long been recognized as fundamental to the proper understanding of Pharmacognosy and Pharmacy One of its most alluring phases is that dealing with the study of the leaf The leaf and the flower are the two most necessary parts to have in hand in making certain and ready identification of an unknown plant Of the many vegetable drugs, leaves rank second in number only to roots so that the importance of their fundamental study is obvious

In the education of students of Pharmacy are we to look upon Botany merely as an academic course or are we to continue to recognize that, in addition to its cultural value, it has its professional pharmaceutical side which, if developed with the student by properly coordinating it with Pharmacognosy, will be of inestimable value when he comes to pursue the professional course in the latter subject?

Let us examine the content of each of two courses on the leaf phase of Botany, the first a typical academic course, the second a typical pharmaceutical one

OUTLINE OF THE STUDY OF THE LEAF (ACADEMIC COURSE, 1ST YEAR BOTANY)

1 DEFINITION Origin and Development of Leaves

2 OUTER MORPHOLOGY OF THE LEAF—Leaf blade, petiole stipules, venation simple leaf, compound leaf (pinnately and palmately compound), leaflets, leaves of different forms on the same plant (heterophylly)

3 MICROSCOPIC ANATOMY OF THE LEAF (*a*) Anatomy of blade of dorsiventral leaf (*b*) Anatomy of petiole of dorsiventral leaf

4 PHYSIOLOGY OF THE LEAF

A Photosynthesis (*a*) Raw materials (*b*) Sunlight the energy factor Relative effectiveness of different parts of the spectrum (*c*) Function of chlorophyll (*d*) Efficiency of the leaf in utilizing the sun's energy Measurements of the quantity of light energy which is absorbed by the leaf and of the quantity which is utilized in photosynthesis Demonstration, using a variegated leaf (*e*) By product (*f*) End products (*g*) Rate of carbohydrate production (*h*) Conditions influencing the rate of photosynthesis (*i*) Utilization of the product of photosynthesis

B Transpiration (Experiment with potted plant using bell jar Experiment with Potometer in measuring rate of transpiration)

* Professor of Botany and Materia Medica Massachusetts College of Pharmacy, Boston

(*a*) Definition (*b*) Utility to the plant (*c*) The transpiration stream (*d*) Cooling effect of transpiration (*e*) Conditions affecting transpiration rate (External and internal conditions) (*f*) Other conditions of reducing transpiration

C Respiration in leaves.

D Autumnal coloration of leaves including conditions favoring the production of anthocyanins

E Special functions sometimes performed by leaves (Protections by bud scales, spines, water storage, food storage, attachment by tendrils, capture of insects)

5 LABORATORY STUDIES mainly devoted to experiments in plant physiology with little microscopic work of elementary character

OUTLINE OF THE STUDY OF THE LEAF (PHARMACEUTICAL COURSE)

1 DEFINITION OF LEAF Outstanding Leaf Drugs

2 THE COMPLETE LEAF (*a*) Leaf blade—general structure of lamina (*b*) Petiole—petiolate and sessile leaves (*c*) Stipules—stipulate and exstipulate leaves

3 LEAF FUNCTIONS (*a*) Photosynthesis (Materials, energy factor, end products) Demonstration of photosynthesis using variegated leaf (*b*) Assimilation (Utilization of the product of photosynthesis) (*c*) Respiration (*d*) Transpiration Demonstration, using potometer

4 TYPES OF LEAVES DEVELOPED IN ANGIOSPERMS

5 ORIGIN AND DEVELOPMENT OF LEAVES

6 PHYLLOTOXY—Terms referring to forms of leaf arrangement, including alternate, opposite verticillate, decussate and fascicled

7 VERNATION—Forms of leaf folding in bud

8 LEAF VENATION—Mid rib or primary vein, middle primary lateral primaries kinds of venation furcate, parallel reticulate, pinnately veined, palmately veined, pinnate reticulate palmate reticulate, anastomosing tessellated and impressed

9 LEAF INSERTION—Terms referable to leaf insertion including radical, cauline, ramal perfoliate, amplexicaul, connate perfoliate, equitant

10 FORMS OF LEAVES (*a*) Simple leaf defined (*b*) Compound leaf defined, pinnately and palmately compound leaves (leaflets, petiolule rachis)

11 FORMS OF LAMINA with terms referable to each subhead as follows General Outline Apex Base, Margin Lobing of Lamina and Transition to Compound Leaf

12 FORMS OF PINNATELY COMPOUND LEAVES

13 FORMS OF PALMATELY COMPOUND LEAVES

14 LEAF MODIFICATIONS

15 LEAF TEXTURE—Terms referable to, as membranous, succulent and coriaceous

16 LEAF COLOR

17 LEAF SURFACE—Terms referable to, as pellucid punctate, glabrous, pubescent, tomentose, scabrous, etc

18 DURATION OF LEAVES—Terms referable to

19 GROSS STRUCTURE AND HISTOLOGY OF THE PETIOLE (*a*) The pulvinus and stalk portions and shapes of petioles (*b*) Sheathing petioles—Pericladium (*c*) The Phyllode (*d*) Histology of monocotyl and dicotyl petioles

20 STIPULES Definition Forms of lateral and axillary stipules The ligule and ochrea Modified stipules

21 GROSS STRUCTURE AND HISTOLOGY OF THE LAMINA (*a*) Dorsiventral types including hydrophytic mesophytic and xerophytic (*b*) Bifacial type (*c*) Centric types including xerophytic and succulent (*d*) Study of a powdered leaf drug

22 STRUCTURE AND DEVELOPMENT OF STOMATA Neighboring cells

23 LABORATORY STUDIES—the gross morphology and histology of leaves of medicinal and horticultural plants Demonstration of the leaf drugs of the U S P and N F as well as some unofficial ones Leaf fibres as Sansevieria, etc

A careful examination of the outlines presented here, the first of a general university academic course in botany, the second of a course in botany given in a pharmaceutical college or in a college of pharmacy of some universities where morphology is emphasized, will reveal the fact that in the former, plant physiology is emphasized with hardly sufficient plant morphology for the proper understanding of physiology, whereas in the latter, plant morphology receives the greater emphasis with sufficient plant physiology and ecology for their broadening value, for holding the interest of students during the presentation of the subject and for the needs of the average pharmaceutical career

PHARMACY AND THE COMMITTEE ON ECONOMIC SECURITY

BY ROBERT P FISCHELIS *

IN THE near future President Roosevelt's Committee on Economic Security will present plans upon which the Congress will base legislation pertaining to unemployment insurance, old-age pensions and possibly sickness insurance and other social welfare projects

Announcement has been made of the selection of a Medical Advisory Committee to cooperate with the Committee on Economic Security on problems involving the practice of medicine Some concern has been expressed by pharmacists that no one representing pharmacy has a place on this Advisory Committee and that no Pharmaceutical Advisory Committee has been appointed

So that the members of the AMERICAN PHARMACEUTICAL ASSOCIATION and others interested may know that we have not been unmindful of the opportunity for cooperating with the Government in matters of public concern which may or may not affect the practice of pharmacy, we present the following information

Early in October the writer was called into conference with members of the staff of the Committee on Economic Security to discuss pharmaceutical phases of health insurance At that time the Committee on Economic Security was exploring the entire field of social insurance and information was sought from the various health professions with regard to problems that would affect them We supplied the Committee with the information it asked for It was pointed out to us that the Committee would seek further information if and when it became apparent that health insurance was to be a part of the administration's legislative program A definite promise was made to the writer at that time that a representative group of pharmacists would be sought to advise the Committee on Economic Security with reference to the pharmaceutical phases of any program that may be developed Further contact with the Committee indicates that the program has not reached a stage requiring our cooperation Physicians are of course concerned with old-age pensions and other social legislation as well as health insurance The Medical Advisory Committee was therefore appointed earlier

With assurances that we shall be called upon to give advice when health in-

* President AMERICAN PHARMACEUTICAL ASSOCIATION

surance is definitely considered, it becomes necessary to collect and classify all available information on the subject so that we may be able to comment intelligently on the Government's proposals and offer constructive suggestions for improvement over the various systems in vogue in foreign countries

Unfortunately we have not gone as far as the medical and dental professions in obtaining such information The National Associations representing these professions have financed surveys of health insurance made right on the ground in various foreign countries where such systems are in vogue Various County and State medical and dental societies have had committees at work studying such projects and the general field of social welfare legislation In some States, pharmaceutical associations have done likewise

The experiences of pharmaceutical associations in the various States with emergency relief and the information obtainable from pharmacists who have worked under health insurance systems in foreign countries should be collected at once and forwarded to the Washington Headquarters of the AMERICAN PHARMACEUTICAL ASSOCIATION for coordination The cooperation of all State and Local Associations in this endeavor is earnestly solicited

---

DRUG ADDICTION COMMITTEE, NATIONAL RESEARCH COUNCIL

The members of the Drug Addiction Committee, National Research Council are Dr William Charles White, National Institute of Health, U S Public Health Service chairman, H J Anslinger, U S Commissioner of Narcotics Prof Charles W Edmunds University of Michigan, Dr Ludvig Hektoen, Director, McCormick Institute for Infectious Diseases, Prof C S Hudson, U S Public Health Service, Prof Reid Hunt Harvard University, Dr Frederick B LaForge Bureau of Chemistry and Soils, U S Department of Agriculture Prof Torald Sollmann, Western Reserve University Dr Walter L Treadway U S Public Health Service Prof Carl Voegtlin National Institute of Health U S Public Health Service, and Prof Francis G Blake, Yale University, chairman of division of medical sciences, National Research Council

At the University of Virginia a research laboratory was established under Dr Small's direction for chemical analysis and synthesis of alkaloid substances related to or similar to morphine Because few American chemists had worked on alkaloid chemistry in the past 25 years, it was necessary at the start of the work to import chemists from Europe for Dr Small's laboratory Dr Small himself spent two years in narcotic research in Europe The "imported" chemists who have worked with him are Dr Erich Mosetting and Dr Alfred Burger

At the University of Michigan another research laboratory was established under the direction of Prof C W Edmunds and Dr Nathan B Eddy, for biological testing of the narcotics and their substitutes

All clinical work is being done under the direction of Dr Walter Treadway chief of the division of mental hygiene U S Public Health Service

Funds for the work are being provided by the Rockefeller Foundation —*Science News Letter*, December 15 1934

Dihydrodesoxymorphine D was made by Dr Lyndon F Small University of Virginia research chemist It is ten times as effective as morphine in relieving pain Given as a substitute for morphine to persons addicted to the latter drug, the new product satisfied the cravings of the addicts and relieved the painful abstinence symptoms that follow withdrawal of morphine This indicated that it also might be habit forming

---

Wishing You Health and a Successful 1935

PROCEEDINGS OF THE LOCAL BRANCHES

"All papers presented to the Association and Branches shall become the property of the Association with the understanding that they are not to be published in any other publication prior to their publication in those of the Association, except with the consent of the Council" —Part of Chapter VI, Article VI of the By-Laws

ARTICLE III of Chapter VII reads 'The objects and aims of local branches of this Association shall be the same as set forth in ARTICLE I of the Constitution of this body, *and the acts of local branches shall in no way commit or bind this Association, and can only serve as recommendations to it* And no local branch shall enact any article of Constitution or By-Law to conflict with the Constitution or By-Laws of this Association"

ARTICLE IV of Chapter VII reads "Each local branch having not less than 50 dues-paid members of the Association holding not less than six meetings annually with an attendance of not less than 9 members at each meeting, and the proceedings of which shall have been submitted to the JOURNAL for publication, may elect one representative to the House of Delegates"

Reports of the meeting of the Local Branches shall be mailed to the Editor on the day following the meeting, if possible Minutes should be typewritten with wide spaces between the lines Care should be taken to give proper names correctly and manuscript should be signed by the reporter

CHICAGO

The 224th meeting of the Chicago Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held November 20th, at the University of Illinois College of Pharmacy President G L Webster called the meeting to order and appointed the following nominating committee for officers of the Branch for the ensuing year W B Day, *Chairman*, I A Becker and William Gray

The speaker of the evening was Frank J Zuck, a pharmacist of Rockford, Illinois, whose subject was 'Pioneering in a New Field" Mr Zuck at one time taught in the Pharmacy Department of the local college and after leaving engaged in the retail drug business in Rockford, specializing in prescription work and specialties pertaining to the medical profession

Mr Zuck stated that he believed the average strictly prescription shop could not hope to prosper greatly from prescription work alone and that there were possibly three main side lines that could be used by the druggist in this specialized field to enhance the trade and profits namely (1) Surgical supplies, (2) Manufacturing for your store and others (3) A laboratory fulfilling the needs of the doctors Mr Zuck elected to choose the first mentioned and gave figures to show the huge business he carries on in this line, mentioning instruments etc, that would probably be foreign to the average druggist, he pointed out the necessity of being well versed in this particular field if success is to be expected

The speaker stressed that work must be made a passion if returns are to be expected from the investment Mr Zuck's philosophy of success in the retail drug business may be summarized as follows Be in love with the work get a good basic knowledge while in college in preparation for future work work toward a model and a goal, not to be restless and expect results to come too fast by visualizing the project fewer mistakes will be made, not to be averse to criticism, start out with a small capital He explained the last statement, which might be criticized by some in that it was an advantage against initial overspending and that more careful and exacting surveys are made of every detail large or small, if the capital is limited

Mr Zuck recommended that a prescription store be in the downtown area or near a group of physicians He also suggested that at least fifteen or twenty physicians would be needed to foster a store of this type, not all of their patronage should be expected but whatever comes should be merited and received with a smile

The remainder of the discussion dealt mainly with the manner in which the store is being conducted, the high lights of which are Direct buying from the manufacturer runs about 90% in the store The clerks must know the doctors and their needs, must read the current journals and be informed on late trends in the pharmacy and medical world New literature is kept on file for the use of the doctors

Mr Zuck's shop has all steel shelving, adjustable for any particular need The prescription department is systematized for accuracy, efficiency and cleanliness Separate desks are maintained for will call packages " deliveries, bicycle hops and post office mailing The prescription counters are white enameled to give a clean appearance and to show dirt so that they will be kept clean The prescription counter is of the glass enclosed "partial sight" type This is expected to stimulate the interest of the customer and to advertise the profession of pharmacy

A dental line has been added as an adjunct to the surgical line in the belief that there is a growing interest between the dentist and the pharmacist Wheel chairs and crutches are rented A full line of baby specialties is carried Oxygen tents and infra-red lamps are rented From a small beginning the rubber tubing business has grown to large proportions and a full line is carried

There are complete facilities for the storing of biological and perishable materials One compartment of the refrigerator is made up of individual lockers for the use of the doctors who have keys and sole access to their individual lockers

A complete line of diabetic supplies is featured as this has grown in importance

Salesmen are treated as friends as they are sources of much new and advance information

Doctors are furnished with prescription blanks but the name of the drug store is purposely omitted so as not to tie the doctor down to the store The idea is maintained that the faith and friendship of the doctor to the store is sufficient A card index of the doctors is made with much information thereon including their usual formulas and ingredients

A free scale is placed in the store for those who care to weigh themselves, or packages This has been found to bring in many customers

A close alliance is kept with the hospitals and much business is obtained from this source

At this point Mr Zuck concluded his very interesting discussion with the suggestion that for a later meeting a speaker be obtained, for the benefit of the many senior pharmacy students present, who would deal with the financing and managing of a drug store with respect to buying, business records, inventories and the many other money problems, a good knowledge of which is essential to success

LAWRENCE TEMPLETON *Secretary*

NEW YORK

The November meeting of the New York Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION was held on the evening of November 12, 1934, in the College of Pharmacy, Columbia University About fifty members and guests attended The meeting was opened by President Ballard The minutes of the previous meeting were read and approved Treasurer Currens reported a balance of $217 10 on hand The application of Samuel C Henry for membership in the New York Branch was presented and accepted

Chairman Kidder, of Professional Relations Committee reported that cooperation between physicians and pharmacists was progressing He called attention to a Physicians and Pharmacists' meeting held in Westchester about a month ago, and also mentioned that Dr Ballard would address physicians in the Hackensack Hospital on November 13th, on "Physician, Pharmacists and Patient "

Chairman Lehman, of the Committee on Legislation and Education, reported the following

Proposed Budget of The Code Authority for the Retail Drug Trade provides for the collection of the following sum to cover the period from November 1 1934 to April 30, 1935 Total $204,309 00, of which $25,000 00 is to be allocated for the National Code Authority and $179,309 00 to local and state authorities Means of collection is $1 00 per employee from each retail drug establishment in towns of more than 2500 inhabitants those below that number being exempt 50¢ for each establishment to go to the National Authority, the balance to state and local

Establishments liable to the assessment are such in which over 50% of the business is done in drug items This seems unjust as some of the Department stores have drug departments that do more business than some of the Chain Stores, also some retail establishments in cities of 2500 inhabitants do a larger business than many of the stores in large cities

A hearing on the question of putting soaps under the drug instead of the grocery code was held in Washington on October 23rd No decision has been made so far

Commissioner Anslinger warns retail druggists that all exempt narcotics must be recorded by the seller, whether official proprietary, prescription or otherwise

There are prospects of a bill to be introduced in Congress requiring the Federal Registra

tion of all persons who import, manufacture, produce, compound, sell, dispense or deal, in drugs or medicines The annual fee is to be $5 00 plus $1 00 for every registered person employed in the establishment This may tend to restrict the sale of medicines and drugs to registered pharmacies and drug stores

The Capper-Kelly bill may be reintroduced, in somewhat changed form, also the Tugwell bill

In reference to the prohibition of sale of Valerian, its compounds, derivatives and preparations, several pharmacists and others were arrested during the past week for having bought valerianates and valerianic acid, one was fined $25 00 for having bought 4 ounces of valerianic acid, and making use of it without being able to show a prescription or having any record as to its disposition

The strike of the Drug Clerks is still confined to the Bronx, where stores which have refused to sign up with the Union are being picketed Wage demands are not exhorbitant, from $30 00 to $35 00 a week, and the hours from 48 to 56 However, the employer who signs up is obliged to employ his clerks through the Union, cannot discharge anyone unless permitted by the Union, and must permit the Union officials to examine his books from time to time to determine whether he is in a position to increase the compensation of his employees

A "Pharmaceutical Employer-Employee Coordinating Committee" has been organized to combat this movement and isolate it as much as possible

An organization meeting of the Federation of Eastern State Pharmaceutical Associations was recently held The purpose of this organization is to advance the cause of price stabilization, provide a code of ethics for the industry, promote Retail Code enforcement, and restrict sales of drug items to drug stores It has many problems before it

Due to the absence of the Committee members, Dr Ballard read the report from the committee appointed to draw up suitable resolutions concerning Dr Kassner The report was as follows

RESOLUTIONS, DEATH OF HERBERT C KASSNER

WHEREAS, in the death of Dr Herbert C Kassner American pharmacy has sustained an irreparable loss, the New York Branch of the AMERICAN PHARMACEUTICAL ASSOCIATION takes this occasion to express its sorrow and grief in the following resolutions

Resolved, that we are deeply cognizant of his capabilities as an officer of this association, that by his loyal diligent and efficient performance of duty he helped materially in building up the activities of this branch, that by his kind consideration of others and his eagerness to cooperate, he was an ideal associate to work with

Resolved, that we join, with many others, in expressing our deepest regret that a career, so rich in possibilities of future contributions to our profession should have been curtailed while he was barely in the prime of life

Resolved that these expressions of our esteem and sympathy be inscribed upon the minutes of our organization, and that a copy suitably engrossed, be transmitted to the family of the late Dr Herbert C Kassner

(Signed) ABRAHAM TAUB, Resolutions Committee
SAMUEL S LIBERMAN

Following the reading, Dr Arny moved acceptance of the report, this was seconded and the report was approved

Dr Schaefer, Fischelis Dinner Chairman now reported that the dinner had been postponed to January 10th, and would be held in the Pennsylvania Hotel at four dollars ($4 00) per plate Postponement was necessary because of the recent death of Dr Fischelis' father

President Ballard then introduced the speaker of the evening, Dr William Crocker, managing director of the Boyce-Thompson Institute, who spoke on "Some Biochemical Researches at Boyce-Thompson Institute"

The speaker outlined the plan of work at the Institute pointing out that work was conducted on a project basis rather than individual research He emphasized that in his opinion there was no distinction between applied science and pure science when it came to research

In explaining some of the work conducted at the Institute, Dr Crocker discussed four subjects, namely, the effect of light upon plants, superstimulants which have been discovered that throw dormant plants into active growth, how sulphur acts as a fungicide, and the stimulative and anesthetic action of the simple unsaturated carbon gases as ethylene, acetylene and carbon monoxide upon plants

The studies on the effect of light on plants were conducted with artificial light, and with ultraviolet, and with infra red light Special glass was used in some green houses

Of exceedingly great interest were the lantern slides and the motion pictures used to illustrate the lecture The stimulating action of certain substances and the anesthetic action of others was vividly illustrated by motion pictures The films showing the growth of plants were unique

Dr Crocker was assisted by Mr Floyd

At the close of the speakers' address there was some discussion, after which a rising vote of thanks was accorded Dr Crocker and the meeting adjourned

RUDOLF O HAUCK, *Secretary*

COLONIAL LAWS PERTAINING TO PHARMACY *

BY DAVID L COWEN [1]

The medical historian seeking material descriptive of conditions in that profession in early America can find much of interest in the statute books of the thirteen colonies True enough, the uncomplimentary may exceed the complimentary but nevertheless there is an abundance of material with which to work

The situation is not so happy with regard to pharmacy a search through the records has yielded but two colonial laws specifically mentioning the apothecary Moreover but one of the two a Virginia Act of 1736, was specifically intended to regulate the apothecary, the other, a South Carolina Act of 1751, placed restrictions on the apothecary as an adjunct to the regulation of slaves [2] It would be flattering if this paucity of legislation were traceable to the fact that the apothecary did not abuse his profession as did the 'Phisitian and Chirurgeon," and therefore was not subject to uncomplimentary legislative regulation Less flattering would be the possibility that the apothecary had not attained the professional level of indispensable service to the community that was conducive of exploitation or that the profession was not sufficiently significant numerically to exert any social pressure one way or the other The most logical explanation is, of course, that the pharmaceutical and medical professions had not yet differentiated The laws regulating the "practice of physic," probably regulated also what was then the practice of pharmacy If this is not exactly so the result is obtained if we consider the apothecaries as the ' others ' in the colonial laws that regulated "Physicians, Surgeons, Midwives and others "

There is ample evidence in colonial statutes supporting the fact that the physician was his own apothecary To cite but one set of examples, Virginia in 1639, 1646, 1658, 1662 and 1692 enacted laws substantially to the effect that any "phisitian or chirurgeon," whose fee seemed exorbitant, could be brought before a court where he had to 'declare upon oath the true value worth and quantity of his drugs and medicines administred "[3]

---

* Read before Northern New Jersey Branch, A PH A

[1] Instructor in History, Rutgers University, New Jersey College of Pharmacy

[2] Authorities have previously suggested two other laws a Virginia Act of 1636 and a New Jersey Act of 1664 Neither is authentic In regards to the former, see fn 4, *infra* The reference to the New Jersey Act is found in the chronological table in C H LaWall, 'Four Thousand Years of Pharmacy" (Philadelphia, 1927), page 572 "1664 New Jersey passes earliest law regulating apothecaries in the new world " That there was no such law is evident from the fact that 1664 was the year in which New Jersey first became a political entity by virtue of the English conquest of New Netherlands, and that the "first Assembly ever convened in New Jersey met May 26–30 1668 ' [F B Lee, "New Jersey as a Colony and a State" (New York, 1903), Vol I, page 135] If the reference (Cf LaWall, page 331) is to one of the "Duke's Laws" of 1665 (which are more applicable to New York than to New Jersey), there was a law, not unique admonishing no person as 'Chirurgions, Midwives Physicians," to "presume to Exercise or put forth any Acts contrary to the known approved Rules of Art in each mistery ' ["Colonial Laws of New York" (Albany, 1894), Vol I, page 27] Absolutely no mention of apothecaries is made

[3] The years are given in new style The titles of these Acts are similar to An Act about Physicians and Chyrurgeons Accounts " The 1646, 1658, 1662 and 1692 Acts are in, W W Hening, "The Statutes at Large of Virginia" (New York, etc , 1819 etc) Vol I, pages 316, 450 Vol II, page 110, Vol III, page 103 The 1639 Act is referred to in a footnote, *Ibid*, Vol I, page 450 The quotations are from the 1646 Act

This item also serves to illustrate the reference above to "uncomplimentary" legislation Actual arrest of the physician was, until the Act of 1692, involved in the procedure, and it devolved upon the court to determine the fee he was to receive Similarly the reasons given for this legislation exemplify what was meant by professional "abuses" The preamble to the 1646 act stated that medical attention, despite its uncertain and often detrimental effects, was so much more expensive than the replacement costs of slaves and servants, that the planters found it more humane and economical to let their slaves die!

It is not the intention here to discuss the laws regulating the practice of medicine, they bear a relation to pharmacy by inference alone Only the two laws concretely mentioning the apothecary to which reference already has been made and such few other laws as have a direct bearing on pharmacy will receive consideration

Most important, both in point of time and in content, is the Virginia Act of 1736 [1] It is fitting that with the dearth of material this law should prove a veritable mine of information as to pharmacy in colonial America This wealth of information warrants its complete reproduction here

AN ACT FOR REGULATING THE FEES AND ACCOUNTS OF THE PRACTICERS IN PHYSIC

I WHEREAS the Practice of Physic, in this Colony is most commonly taken up and followed, by Surgeons, Apothecaries, or such as have only served Apprenticeships to those Trades, who often prove very unskilful in the Art of a Physician, and yet do demand excessive Fees and exact unreasonable Prices for the Medicines which they administer and do too often for the Sake of making up long and expensive Bills, load their Patients with greater Quantities thereof, than are necessary or useful, concealing all their Compositions, as well to prevent the Discovery of their Practice, as of the true Value of what they administer, which is become a Grievance dangerous and intolerable, as well to the poorer Sort of People, as others, and doth require the most effectual Remedy that the Nature of the Thing will admit

II *Be It therefore Enacted by the Lieutenant Governor Council and Burgesses, of this present General Assembly, and it is hereby Enacted by the Authority of the same,* That from and after the Passing of this Act, no Practicer in Physic in any Action or Suit whatsoever, hereafter to be commenced in any Court of Record in this Colony shall recover for Visiting any sick Person more than the Rates hereafter mentioned That is to say,

	l	*s*	*d*
Surgeons and Apothecaries, who have served an Apprenticeship to those Trades shall be allowed			
For every Visit and Prescription, in Town or within Five Miles,	00	5	00
For every Mile above Five, and under Ten	00	1	00
For a Visit of Ten Miles	00	10	00
And, for every Mile above Ten,	00	00	06
With an Allowance for all Ferriages in their Journeys			
To Surgeons For a Simple Fracture and the Cure thereof,	02	00	00
For a Compound Fracture and the Cure thereof	04	00	00

[1] Various authorities have erroneously dated this Act as 1636 See S Wickes, 'History of Medicine in New Jersey" (Newark, 1879), page 54, F H Garrison 'An Introduction to the History of Medicine" (Philadelphia, 1914), pages 233, 682, *Ibid* 1929 Ed pages 304, 824, and LaWall, pages 331 571 It is evident from the following that there was no such act in 1636

1 There is no record of it Only two acts of the 1635/6–1636/7 sessions of the Virginia Assembly have been preserved and the titles to ten others are known [see the preface to the Journals of the House of Burgesses of Virginia 1619–1658/59" (Richmond 1915) page xxxv and none of them refers to physicians surgeons or apothecaries

2 Wickes cites as his authority the "Half Yearly Compendium of Medical Science" Jan 1878 (which see, page 66) This however gives the date correctly as 1736

	l	*s*	*d*
But those Persons who have studied Physic in any University, and taken any Degree therein, shall be allowed,			
For every Visit, and Prescription, in any Town, or within Five Miles,	00	10	00
If above Five Miles for every Mile more, under Ten	00	1	00
For a Visit, if not above Ten Miles,	01	00	00
And, for every Mile above Ten,	00	01	00

With an Allowance of Ferriages, as before

III AND to the End the true Value of the Medicines administred by any Practicer in Physic, may be better known, and judged of, *Be it further Enacted by the Authority aforesaid*, That whenever any Pills, Bolus, Portion, Draught Electuary, Decoction or any Medicines, in any Form whatsoever, shall be administrred to any sick Person, the Person administring the same shall, at the same Time, deliver in his Bill, expressing every particular Thing made up therein, or if the Medicine administred be a Simple or Compound, directed in the *Dispensatories*, the true Name thereof shall be expressed in the same Bill, together with the Quantities and Prices in both Cases And in Failure thereof, such Practicer or any Apothecary making up the Prescription of another shall be nonsuited in any Action or Suit hereafter commenced, which shall be grounded upon such Bill or Bills Nor shall any Book, or Account, of any Practicer in Physic, or any Apothecary, be permitted to be given in Evidence, before a Court, unless the Articles therein contained, be charged according to the Directions of this Act

IV AND *be it further Enacted, by the Authority aforesaid*, That this Act shall continue and be in Force for and during Two Years, next after the Passing thereof, and from thence to the End of the next Session of Assembly [1]

An analysis of this Act serves to corroborate many other evidences from a multitude of sources and to alter some conceptions of certain facts in American pharmaceutical history

Of primary importance is the close interrelation between colonial pharmacy and medicine that is so clearly demonstrated The apothecary is definitely and legally stated to be a Practicer in Physic," by his inclusion in the Act Added to this is the description of services (Sec I) and the list of fees (Sec II) for services, obviously more medical than pharmaceutical in modern practice Conversely, the Act illustrates that the surgeon and even the physician who had taken any Degree," compounded their own medicines

The indictments against the surgeons and apothecaries (Sec I) are indeed as interesting a commentary on colonial pharmacy as could be desired That they practiced "Physic" although "unskilful in the Art of a Physician" is reminiscent of the famous case of William Rose in England in the previous century, and is a precursor of disaffection to come So also did the Act presage the victory of the physicians as the difference in fees enumerated in Section III will bear witness

That the surgeon and apothecary padded their bills administered huge doses and concealed the contents of their concoctions recalls not only conditions in England in the seventeenth century, but also the aspersions cast upon the physicians themselves in the Virginia laws of 1639 and after Nor can the ethical implications of these indictments be passed over Their inclusion in the Act along with the accusation of professional secrecy in order to prevent the Discovery of their Practice " formed a challenge to the profession to clean house

The final indictment of the surgeons and apothecaries was that they had learned their "Trade" only by serving apprenticeships This seems almost unduly derisive in an age when apprenticeship was the accepted mode of learning in a country offering no other means One can almost visualize the sneer of the graduate physician behind that indictment Yet we have here one of the earliest, if not the first concrete documentary evidences of pharmaceutical apprenticeship in America Nor can the inference be passed over that only such apothecaries who had served apprenticeships were eligible to practice in Virginia At least it seems that a self-constituted apothecary who had not served an apprenticeship, could not legally demand or

[1] The Act was first published as Chapter X of the Acts of 1736 in, *Anno Regni Georgii II Regis Decimo At a General Assembly continued to the fifth day of August 1736* (Williamsburg 1736) pages 26–27

recover fees equal to those apportioned by the Act to regularly apprenticed apothecaries Only the fees of graduate physicians, and surgeons and apothecaries who had "served an Apprenticeship" are enumerated

The differences between the fees granted the surgeons and apothecaries and those granted the physician with a degree (Sec II), show that the worthy Burgesses had been convinced that the ministrations of a physician were worth just twice that of the others One wonders at the efficacy of this mode of regulation The Virginia planter might be tempted greatly by the saving in calling the cheaper practitioner, especially, in the light of the Virginia legislation in the seventeenth century, if a servant or slave were the afflicted There is also the possibility that the cheaper rate for his medical advice tended to force the apothecary into a more truly specialized pharmaceutical practice, at least it is logical to attribute some such intention or hope to the instigators of the law In this respect the Act can be considered the first legal attempt to separate the pharmaceutical and medical professions, for it antedated by twenty-four years the first colonial law anent the licensing of physicians which was passed by New York in 1760 [1]

Section III of the Act was merely an improved substitute for the laws cited above, passed in Virginia during the preceding century The bill of particulars took the place of the practitioners' oaths of the earlier laws, and such particularization often became an integral part of later medical legislation throughout the country

Two other important items remain to be emphasized The mention of 'Dispensatories" constitutes one of the few references to them in colonial records of any sort, and the first legal recognition of such compilations The records reveal no other similar utilization of a dispensatory or pharmacopœia until over a century later when a federal statute of 1848 set standards of purity and strength by reference to American and European works [2] It is significant to remember that in 1736 no dispensatory or pharmacopœia had yet been published in America

The final item of importance is the reference in Section III to "any Apothecary, making up the Prescription of another " Here we have concrete proof that the apothecary was already assuming his specialized function in pharmaceutical practice as early as 1736 It demonstrates that the appointment of Jonathan Roberts as apothecary at the Pennsylvania Hospital in 1752 ' to fill prescriptions other than his own "[3] was not an entirely unprecedented procedure More important, however, is that the "introduction" of prescription writing in America can no longer be attributed to John Morgan in 1765 [4] Unquestionably Morgan deserves much credit for championing and popularizing professional differentiation in the face of potent opposition, but the credit for the actual introduction of prescription writing must, until further evidence is found devolve upon some unknown Virginia practitioner who preceded Morgan by at least thirty years

Unlike the Virginia Act the South Carolina Act of 1751, as has been intimated, was not an attempt to regulate the apothecary but to control slaves A good portion of this Act however, is of interest

> An Additional and Explanatory Act to 'An Act for the better Ordering and Governing Negroes and other Slaves in this Province [May 17 1751]
>
> VII *And Whereas* the detestable Crime of Poisoning hath of late been frequently committed by many Slaves in this Province and notwithstanding the Execution of several Criminals for that Offense yet it has not been sufficient to deter others from being guilty the same *Be it therefore Enacted* by the Authority afore-

---

[1] Although the General Court of Connecticut (*i e* the legislature) licensed physicians in the seventeenth century there seems to have been no legislation covering the matter Reputation apparently was the major criterion in granting the license

[2] ' An Act to prevent the Importation of adulterated and spurious Drugs and Medicines," *Statutes at Large and Treaties of the U S A , 1845–1851* (Boston, 1851), pages 237–239 known as Vol IX of the *Statutes at Large*

[3] M I Wilbert, ' The Beginnings of Pharmacy in America" in *American Journal of Pharmacy*, Sept , 1907, page 400

[4] J W England, Ed The First Century of the Philadelphia College of Pharmacy" (n p 1922) pages 21, 24 and LaWall, page 576

said, That not only such Negroes, Mulattoes or Mestizoes (whether free or bond) as shall administer Poison to any Person or Persons (whether free or bond), but also all and every Negro, Mulatto and Mestizo (whether free or bond) who shall furnish, procure or convey any Poison to be administered to any Slave or Slaves, to any Person or Persons as aforesaid, and also all such Negroes, Mulattoes and Mestizoes (whether free or bond) as shall be privy (and not reveal the same) to the administering of any Poison to any Person or Persons as aforesaid or be privy (and not reveal the same) to the furnishing, procuring or conveying any Poison to be administered to any Person or Persons as aforesaid, shall be deemed and adjudged, and all and everyone of them are hereby declared to be Felons, and shall suffer Death, in such Manner as the Persons appointed and impowered by the Act *for the better ordering and governing Negroes and other Slaves in this Province*, for Trial of Slaves, shall adjudge and determine

X *And be it further Enacted*, by the Authority aforesaid, That in Case any Slave shall teach or instruct another Slave, in the Knowledge of any poisonous Root, Plant, Herb or other sort of Poison whatever, he or she so offending, shall, upon Conviction thereof, suffer Death as a Felon And the Slave or Slaves so taught or instructed, shall suffer such Punishment (not extending to Life or Limb) as shall be adjudged and determined by the Justices and Freeholders, or a Majority of them, before whom such Slave or Slaves shall be tried

XI *And*, to prevent as much as may be, all Slaves from attaining the Knowledge of any mineral or vegetable Poison, *Be it further Enacted*, by the Authority aforesaid, That it shall not be lawful for any Physician, Apothecary or Druggist, at any Time hereafter, to employ any Slave or Slaves in the Shops or Places where they keep their Medicines or Drugs, under Pain of forfeiting the Sum of *Twenty Pounds* Proclamation Money for every such Offense, to be recovered and applied as is herein after directed

XII *And be it further Enacted*, by the Authority aforesaid, That no Negroes or other Slaves (commonly called Doctors) shall hereafter be suffered or permitted to administer any Medicine or pretended Medicine, to any other Slave, but at the Instance or by the Direction of some white Person And in Case any Negro or other Slave shall offend herein, he shall, upon Complaint and Proof thereof made to any Justice of the Peace for the County suffer corporal Punishment not exceeding *Fifty* Stripes [1]

The provisions of Sections VII, X and XII were not entirely new In 1748 a Virginia Slave Act contained the severe provision that if "any negro, or other slave, *shall prepare*, exhibit or administer any medicines whatsoever, [except upon order of the master] he or she shall be adjudged guilty of a felony and suffer death without benefit of clergy "[2] There was but one meager allowance if it were proved that there was neither ill intent nor bad consequences, such slave shall have benefit of clergy "[3] Later, in 1770, Georgia added provisions to its slave laws[4] closely resembling those of the South Carolina Act The Virginia Act of 1748 by prohibiting "exhibition," only inferred a restriction on the transmission of a knowledge of drugs, the Georgia Act specifically banned it in almost the exact words of Section X of the South Carolina statute

The relation of these three laws to pharmacy is evident They can be classed readily as America's first definite anti quack legislation, and formed the basis for similar enactments

---

[1] The Act was first published in *Acts Passed by the General Assembly of South Carolina continued to the 24th Day of April 1751* (Charleston 1751), pages 31–38

[2] The term "benefit of clergy" is the Anglicization of the legal term *Privilegium Clericale* and should not be given its modern literal interpretation

[3] "An Act directing the Trial of Slaves committing capital Crimes ," Hening, "Statutes at Large," Vol VI, page 105

[4] "An Act for ordering and governing slaves within this province " R Watkins and G Watkins, "Digest of the Laws of the State of Georgia" (Philadelphia, 1800), pages 163–179

in the South before the Civil War The Virginia Act of 1748 definitely emphasized the preparation and exhibition of any medicine whatsoever," and not merely the administration of poison as did the other two The latter however, were specific in prohibiting the transmission of a knowledge of drugs by slaves All three, although such was not their purpose, present the earliest legal ban on unscientific and mystic accumulation of drug information The lore of the African medicine man, in law at least, was no longer to be practiced or transmitted in those three colonies Moreover, the actual presence of this lore in colonial America forms itself a most intriguing branch of early American pharmaceutical history The history of American pharmacy begins, not with the migration of some European physician or apothecary to the New World, but with the magical manipulation of herbs by the Amerind later to be augmented, and largely supplanted (in the South) by the lore of the African medicine man There may be some objection to terming such legerdermain as pharmacy, but as the eminent anthropologist, Sir James G Frazer, has said, The fallacy of differentiation a science or an art according to its application and the moral intention of the agent is obvious enough with regard to pharmacy "[1]

The provisions of Section XI of the South Carolina Act are not found in either the Virginia Act of 1748 or the Georgia Act of 1770 Part of the interest in this section lies in the mere mention of 'Apothecary or Druggist" As already stated this is the second and last mention of the apothecary in colonial law Not until 1786 does 'apothecary" appear again in the laws, and then only incidentally when Virginia imposed a tax on 'every practising physician apothecary-or surgeon "[2] As a matter of fact, none of the terms apothecary" pharmacist," or 'druggist" appears with any regularity in the state rolls until well into the nineteenth century, and the law digests do not give the profession the dignity of an individual title consistently, until the wave of regulation that commenced in the 1870's

The use of the term Druggist" in Section XI of the South Carolina Act is of course unique, for it did not appear in the Virginia Act of 1736 At first glance it would appear that 'Apothecary" and 'Druggist" were being used interchangeably, for there is no comma after the former in the phrase Physician Apothecary or Druggist" However, an examination of parallel phrases, *e g*, Negroes Mulatoes or Mestizoes" in Section VII, reveals a similar dropping of the comma The most logical conclusion is therefore that a differentiation between the two terms was being made, especially since such a differentiation is definitely known to have been the practice in colonial America

The final distinctive feature of Section XI is the prohibition of the employment of a slave by apothecaries in their "Shops" The Virginia Act of 1736 did not specifically mention the shop, and the only restriction on his running of a shop was that the apothecary particularize his bill These two isolated restrictions were the only requirements placed upon the colonial apothecary but they form the beginnings of what in the parlance of today might be termed loosely, the 'regimentation" of the pharmacist

There remains one other type of law bearing a direct relation to pharmacy In 1773 Connecticut met the evil of itinerant medicine shows with a law prohibiting the sale of "any Physick, Drugs, or Medicines" by any Mountebank" and all shows or exhibitions by them The Act was passed not only because "the Practice of Mountebanks, in dealing out and administering Physick and Medicine of unknown composition has a practice to destroy the Health Constitution, and Lives of those who receive such Medicines," but also because amusingly enough 'Plays, Tricks, Jugling or unprofitable Feats of uncommon Dexterity and Agility of Body," which was part of the Mountebanks' stock in trade, had a tendency toward "Corruption of Manners promoting of Idleness, and the detriment of good Order and Religion "[3] New Jersey had included a similar although less virulent, provision in its act regulating the practice of medi-

[2] An Act imposing new Taxes," Hening, "Statutes at Large," Vol XII pages 283–287 This was repealed in 1790 'An Act to Repeal Part of an Act imposing new Taxes" *Ibid*, Vol XIII, pages 114–115

[3] An Act for suppressing of Mountebanks," 'Acts and Laws of the State of Connecticut" (New London, 1784), pages 161–162

cine a year before,[1] and again enacted it in 1783.[2] Similar laws occasionally make their appearance in the nineteenth century

It must be pointed out in closing that the foregoing pertains only to the thirteen English colonies in America that later became the original United States No general statements have been made that were intended to include Spanish, French or other English colonies in America The writer feels that a search through the legal records of these three groups of colonies will uncover material of interest to pharmaceutical history It is not amiss to mention that the start of such a search has already revealed one item of interest On February 12 1770, the Spanish Governor of Louisiana, Don Alexandre O Reilly issued an edict intended to regulate the practice of surgery, which, printed in French as a broadside, included the following comment on medicine, surgery and pharmacy

> Medicine embraces three parts, namely medicine proper, which is the science of recognizing diseases, and the relation which they have with remedies and of prescribing the latter together with the diet The other two parts, which are surgery and pharmacy, are its attendants and have their special field Surgery includes the use in general of the hands and of external remedies Pharmacy is concerned, generally speaking, with the preparation of remedies [3]

Thus, by gubernatorial edict, the distinct and separate existence of pharmacy as a branch of medicine received legal recognition in clear and concise form The pharmaceutical profession had indeed made great progress when Don O Reilly was able to proclaim, "la Chirurgie, & la Pharmacie ont leur district particuleur"

STUDENT BRANCH OF ST JOHN'S UNIVERSITY, COLLEGE OF PHARMACY

December 7th, Dr Victor G Fourman, Chief Chemist of Compagnie Parento Importers of Essential Oils and Synthetics Croton on the-Hudson, New York, delivered a lecture on Flower Oils and Perfumes to the Members of the Group at the regular meeting of the Student Branch, A Ph A, St John's University College of Pharmacy

"The story of perfumes starts with the dawn of history" the lecturer pointed out It was noted that natural products of plant and animal origin were used exclusively until the chemist Tiemann prepared vanillin by a synthetic process in 1874 This was the first perfume chemical to be prepared by a synthetic process and marks the beginning of modern perfume chemistry It is to be noted in this connection that, while synthetic perfume materials are now largely employed, many of the natural products used by the ancients are still in use

While essential oils can be obtained from practically any flower it is interesting to note the fact that the number of flower oils on the market can be counted on the fingers of both hands Dr Fourman pointed out as the reason for this the high cost necessary to produce the flower oil Natural oil of gardenia, a product most often prepared synthetically, would cost about $1000 00 per pound to produce from the flower

After describing the various methods used to extract oils from flowers, the lecturer pointed out some interesting facts in connection with the oils so prepared Very often the oil extracted from the flower possesses an odor different from the flower itself In the case of otto of rose it was pointed out that some of the phenyl ethyl alcohol contained in the oil is removed by the water during the distillation with steam This small amount of phenyl ethyl alcohol is responsible for the difference in odor and when it is replaced the odor again resembles that of the flower

The lecturer in dealing with synthetic perfumes pointed out that the artificial product prepared from the approximate constituents of the true flower oil is at first harsh and disagreeable

[2] "An Act to regulate the practice of physic and surgery " W Paterson, "Laws of the State of New Jersey" (Newark 1800), pages 51–52

[3] A translation of the complete broadside is available See D C McMurtie, "A Louisiana Decree of 1770" in *New Orleans Medical and Surgical Journal*, Vol LXXXVI, No 1, July 1933 pages 7–11

miles away from the natural odor It is here that the expert perfumer adds the subtle something that tones down, sweetens and brings the synthetic to the standard of the natural oil In this connection, Dr Fourman stated that perfume chemistry is largely empirical

During the lecture Dr Fourman exhibited the samples of perfume materials recently presented to the College by his firm Among the samples shown were a natural musk pod and phials of civet and civetine

In the discussion that followed, it was pointed out in regard to the kind and quality of alcohol used in perfumery that there was essentially little difference between wine or grain spirits and that an expert might produce an attractive perfume using ordinary "rubbing alcohol" In connection with the perfuming of cosmetics it was pointed out that it is quite important to realize that a perfume that is suitable for a soap might not be useful at all for a face powder

At the conclusion of the lecture and discussion a vote of thanks was extended Dr Fourman

---

SCIENCE WRITERS FORM ASSOCIATION

"Announcement was made September 14th of the formation of the National Association of Science Writers, made up of staff members of newspapers and press associations who devote their major efforts to the field of science Mr David Dietz, Cleveland, science editor for the Scripps Howard newspapers is president of the association, the purpose of which is to 'foster the dissemination of accurate scientific knowledge by the press of the nation in coöperation with scientific organizations and individual scientists'

The history of medicine is punctuated with accusations which have been brought against physicians and dealers in drugs from time to time A little reflection soon satisfies one that it would be very strange if this were not the case Disease and health are such intimate concerns of every human being, the treatment of sickness is and always has been, so largely the outcome of trial and error, and the beliefs of the patient and doctor are so diverse that it is inevitable that great and virulent disagreements should arise"

INSTITUTE OF PHARMACY UNIVERSITY OF LIEGE

The fiftieth anniversary of the foundation of the Institute of Pharmacy of the University of Liege was held at Liege from November 16th to November 19th under the chairmanship of Professor F Schoofs of the University France was represented by Professors Herissey, Perrot and Goris, and M Collard, Switzerland by Col Thomann Denmark by Dr Faurholt, Norway by Prof Jamstadt, Sweden by Prof Ohlson, Great Britain by Secretary H N Linstead, and the four universities of Holland by their four professors of pharmacy—van Itallie of Leiden, van der Wielen of Amsterdam, van Os of Groningen and de Graff of Utrecht Among others present were Dr J J Hofman of The Hague, president of the International Pharmaceutical Federation, Prof Polonovski of Lille and Prof Castille of Louvain

In his opening address Prof Schoofs traced the history of the growth of the Institute At the conclusion of his address he was presented by the Danish Pharmaceutical Society with a gift of books and by the Swedish School of Pharmacy with a congratulatory address

Part of the sessions were devoted to the reading of scientific papers, those attracting particular attention were papers by Prof Herissey on 'The use of diastase in the chemical in the laboratory," by Prof van Itallie on 'Norman Arsenic," and by Prof Fourneau of Paris on 'The Antagonists of Adrenalin" Mr Linstead read a paper on the method of pharmaceutical education in Great Britain The paper dealt in particular with the emphasis now placed upon the need for the pharmacist to familiarize himself with biological methods and standards In the discussion which followed Prof Perrot Mr Breugelmann, Prof Castille and Col Thomann took part M Breugelmann outlined the scheme which had been considered by some members of the Nationale Pharmaceutique for establishing an institute for biological testing in Belgium

An exhibit included old pharmacopœias and pharmaceutical documents from the collection of Dr O van Schoor of Antwerp, and an exhibition of pharmaceutical apparatus and materials by manufacturers

ASSOCIATION BUSINESS

AD INTERIM BUSINESS OF THE COUNCIL OF THE AMERICAN PHARMACEUTICAL ASSOCIATION, 1934–1935

Office of the Secretary, 2215 Constitution Ave , Washington, D C

LETTER NO 7

November 9, 1934

To the Members of the Council

37 Joint Meeting Executive Committee N A R D and Council, A Ph A Motion No 5 (Council Letter No 6, page 1150) has been carried and the appointment of Messrs Kelly, Fischelis and Swain is approved

38 Committee on Maintenance Motion No 6 (Council Letter No 6, page 1150) has been carried and Messrs Kelly, Holton and Dunning are authorized to reduce or pay in full the note held by the Maryland Trust Company

39 Local Secretary for 1934–1935 Motion No 7 (Council Letter No 6, page 1150) has been carried and A O Mickelsen is declared elected

40 Use of Text of the N F V Motion No 8 (Council Letter No 6, page 1150) has been carried and the School of Medicine of Duke University is being advised

41 Election of Members Motion No 9 (Council Letter No 6 page 1151) has been carried and applicants for membership numbered 42 to 76, inclusive, are declared elected

42 Appropriation from the Centennial Fund The terms under which this fund was established, provided that the interest accruing from the investment of the fund is to be devoted to the defraying of expenses actually incurred by members in conducting investigations in some branch of science connected with pharmacy No appropriation has been made from this fund for several years

The U S P-N F Prescription Ingredient Survey completed sometime ago and issued in book form has proved to be useful not only in U S P and N F revision but also in many other ways, and while the demand for the report has been encouraging it has not covered the cost of the survey above the appropriations made by the U S P Board of Trustees and the A Ph A Council

At the recent meeting of the Executive Committee, the matter was informally discussed and the Secretary was requested to submit a recommendation After discussion with Chairman Philip of the Committee on Appropriations, the following motion is submitted

(Motion No 10) It is moved by Philip that $3500 00 of the accrued interest of the Centennial Fund be transferred to the Current Fund as an appropriation toward the expenses of the U S P N F Prescription Ingredient Survey

43 Appropriation toward the Expenses of the Pharmacy Exhibit at the Century of Progress At the recent meeting of the Executive Committee of the Council, the question of an appropriation for this purpose was informally considered and the Secretary was requested to submit a recommendation at the proper time

Recently, Chairman Christensen of the Committee on Pharmacy Exhibit has advised that about $500 00 will be required above the appropriations so far secured to balance the moderate budget for the expenses for 1934 including the dismantling of the exhibit etc Chairman Christensen and his associates believe that no additional subscriptions are possible at this time and that the results of the exhibit from every viewpoint fully justify the moderate expenses incurred

After discussing the situation with Chairman Philip of the Committee on Appropriations the following motion is submitted

(Motion No 11) It is moved by Philip that an appropriation of $500 00 be added to the Budget for 1934 for the expenses of the Committee on Pharmacy Exhibit at the Century of Progress

LETTER NO 8

November 9, 1934

To the Members of the Council

44 Retail Price of the National Formulary, Sixth Edition and of the Recipe Book Second Edition The following communication has been received from Chairman DuMez of the Committee on Publications

"The time has arrived when it becomes necessary to secure estimates on the distribution and sale of the N F VI and of the Recipe Book II It is, therefore, necessary for the Council to set the retail price for both publications

"The Board of Trustees of the U S P Convention, so we are advised, have decided to increase the retail price of the U S P XI, in buckram, to $5 00 per copy, retaining the present retail price of $7 00 for the inter leaved leather-bound copy The principal reason for the advance in price of the buckram-bound copy was the increase in cost of the work of revision, including research It was the opinion of the Board that the retail selling price of the N F VI should also be increased to $5 00, in buckram, and that the present price of $7 00 in inter leaved leather-bound copy be retained, in order that the increased cost of revision of the N F , including research, should be covered

"The present retail price of the R B I, in buckram is $5 00 and there is no demand for an inter-leaved leather-bound copy

"The question of the retail selling prices for these publications has been considered by the Committee on Publications and we recommend to the Council that they be fixed as follows

National Formulary VI, $5 00 per copy in buckram
National Formulary VI, $7 00 per copy in leather
Recipe Book, II, $5 00 per copy in buckram

with the request that action be taken as promptly as possible "

(*Motion No 12*) *It is moved by DuMez that the retail selling price of the National Formulary, Sixth Edition, be set at $5 00 per copy in buckram and at $7 00 per copy in leather, and that the retail selling price of the Pharmaceutical Recipe Book, Second Edition, be set at $5 00 per copy in buckram* With the consent of the Chairman of the Council, a vote on the motion is called for at this time If there is objection or if any member wishes to submit comments or requests further information, the vote will be considered as tentative

45 *Invitations for Bids for the Distribution and Sale, Specifications for the Distribution and Sale, and Proposals for the Distribution and Sale of the National Formulary, Sixth Edition, and of the Recipe Book, Second Edition* The following communication has been received from Chairman DuMez of the Committee on Publications

The Board of Trustees of the U S P Convention have decided so we are advised to issue at an early date invitations for bids for the distribution and sale of the U S P XI, to use the same forms with certain modifications, as were employed for the U S P X, and to send the invitations to the same firms to which they were sent for the U S P X with the addition of one or two firms that have requested the privilege of submitting a bid With the invitations will be included specifications for bids and the form on which the proposal is to be submitted The forms used for N F V and for R B I are practically identical with those used for U S P X

It was also decided by the Board of Trustees, after a careful study of these forms (1) in order to avoid added responsibility, to use the word 'distributor' for 'agent,' 'sub distributor' for 'sub agent' and 'distribution' for 'agency' wherever these words occurred in either the invitation, specifications or proposal, and to add in the note in the specifications in which the term 'distributor' is defined the following words 'and is not intended to be synonymous with the term 'agent,'' following the word 'cooperation' in the second line, (2) that the word 'exclusively' be inserted in the proposal, following the words 'postal cards' and following the word 'advertise,' (3) that the minimum return in the case of buckram shall be $3 34 and of the leather-bound $4 67 It was also agreed that it would be to the advantage of the U S P as well as of the N F , to issue invitations at the same time and to the same firms It will be recalled that invitations for the manufacture of the U S P XI and N F VI were issued at the same time and that the contracts were awarded to the same firm

'The Committee on Publications have approved the issuance of bids for the distribution and sale of the N F VI and of the R B II, and have approved the changes as suggested by the Board of Trustees in the forms for the invitation

the specifications, and the proposal, and recommend to the Council that the bids be issued at the same time and to the same firms as the invitations for the distribution and sale of the U S P XI, and that the changes as authorized above be made in the invitation, the specifications and the proposal "

Copies of the invitation, the specifications and the proposal are attached to letters to members of the Council

(*Motion No 13*) *It is moved by DuMez that invitations for the distribution and sale of the National Formulary, Sixth Edition, and of the Pharmaceutical Recipe Book, Second Edition, be issued as recommended by the Committee on Publications and that the invitation, specifications and proposal be approved as submitted herewith*

46 Contract for the Printing, Binding and Distribution of the Year Book Volume 22 The following communication has been received from Chairman DuMez of the Committee on Publications

' The Committee on Publications has secured bids on the printing, binding and distribution of the YEAR BOOK, Volume 22, and recommends to the Council that the contract be awarded to the Lord Baltimore Press Baltimore, Maryland, which firm submitted the lowest bid Their bid is approximately 8 per cent higher than their bid for Volumes 20 and 21 which they have recently completed

"It is requested that action be taken on this recommendation as promptly as possible "

(*Motion No 14*) *It is moved by DuMez, that the contract for printing, binding and distributing the Year Book, Volume 22, be awarded to the Lord Baltimore Press, Baltimore, Maryland, on the basis of their bid*

47 Use of Text of the N F V The following communication has been received from Chairman DuMez of the Committee on Publications

In response to your communication of November 2nd regarding the granting of permission to the J B Lippincott Company to use the text of the N F in a book entitled 'Prescription Writing and Formulary," by Dr Charles Solomon, it is stated that I can see no reason why permission should not be granted

' In the communication which you received from the J B Lippincott, it is stated that only the name of the drug or preparation will be used I, therefore, recommend to the Council that, since the only use which will be made of the N F in the preparation of Dr Charles Solomon s book on 'Prescription Writing and Formulary' is the titles of the drugs and preparations permission be granted to the J B Lippincott Company to use the text of the N F as requested, and that no fee be charged for this privilege if it can be considered a privilege "

(*Motion No 15*) *It is moved by DuMez that permission be granted to the J B Lippincott Company to use the text of the N F V for partial reproduction in "Prescription Writing and Formulary," by Dr Charles Solomon under the usual conditions and that no charge be made therefor in this instance*

E F KELLY, *Secretary*

CHANDLER MUSEUM EXHIBITS

Chemical apparatus used by Louis Pasteur and Joseph Priestley constitute one of the most valuable historical exhibits of the Chandler Museum Movie films made by Thomas Edison in 1889 are also on view

Synthetic dyestuffs prepared from deadly war gases are shown in a special section of the museum

The museum was started in 1865 by Prof Charles F Chandler [1] pioneer in industrial chemistry and one of the founders of the American Chemical Society

[1] Deceased August 25 1925, member of the AMERICAN PHARMACEUTICAL ASSOCIATION, 1867–1925

REGULATIONS FOR CODE AUTHORITIES RELATIVE TO FUNDS AND ACCOUNTING

'Pursuant to the authority vested in it by Executive Order Number 6859, and otherwise, the National Industrial Recovery Board does hereby prescribe the following regulations applicable to all Code Authorities with respect to funds and accounting

"A Each Code Authority shall promptly provide for

The designation of a person or persons who shall receive and account for all funds The furnishing of adequate security by such person or persons for the protection of funds in his or their custody The maintenance of Code Authority funds in its name and separate from all other funds The keeping of accurate and adequate accounting records, available at any reasonable time for inspection by accredited representatives of the National Recovery Administration The submission of periodic reports to the National Recovery Administration at such times as it may require An audit at the expiration of each budget period by a competent independent auditor as defined in Paragraph C hereof, such audit to be acceptable to the National Recovery Administration The publication or distribution, not later than sixty days after the budget closing date, to those members of the trade or industry who have paid assessments or otherwise contributed funds to the Code Authority of a report of its financial operations for the budget period, its financial position at the closing date thereof and of its activities in the said period, and the filing of a copy thereof with the National Recovery Administration

"B Each Code Authority shall furnish such information regarding its observance of the provisions of this Order as the National Recovery Administration may deem necessary to insure compliance therewith, and any action by a Code Authority hereunder if found by the National Recovery Administration not to be in accord with this Order, is subject to its disapproval

'C As used in Paragraph A, 6, hereof the term 'competent, independent auditor' means a public accountant in good standing who is either a certified public accountant or who has the equivalent in ability of a certified public accountant provided however that as to any service to be performed in any particular state or governmental division of the United States, such accountant in any event shall have the qualifications required by law in such state or governmental division of the United States for the performance of such service, this term further means an accountant who is in fact independent of the Code Authority whose accounts he audits Unless the National Recovery Administration permits otherwise, it will not recognize a public accountant as independent with respect to any Code Authority if (*a*) such public accountant his firm or anyone in his employ has any interest as an officer, agent or employee of such Code Authority, or (*b*) such public accountant, his firm or anyone in his employ is an officer or employee of any member of the trade or industry under such Code Authority or of any trade association of such trade or industry

---

The Robert J Ruth Memorial Trophy Chairman Anton Hogstad Jr, Pharmacy Week Committee, at right

EDITORIAL NOTES

TOLERANCES FOR AMPULS AND TABLETS

At a meeting of the Combined Contact Committee of the American Pharmaceutical Manufacturers' Association, new monographs were prepared for submission to the Food and Drug Administration on the following products Ampuls of Mercury Succinimide Tablets Methenamine and Sodium Biphosphate, and Tablets Calcium Carbonate Standards and methods were adopted for Ampuls of Bidistilled Water for recommendation to the National Formulary Committee of Revision A committee was appointed to make a study of methods for assay for Tablets of Nitroglycerin other than hypodermic tablets as it has been found that the Contact Committee methods for the assay of hypodermic tablets of Nitroglycerin do not give concordant results when applied to compressed tablets

HISTORY AND DEVELOPMENT OF PHARMACEUTICAL EDUCATION

Prof Ernst T Stuhr, of Corvallis Oregon, has addressed a letter to schools and colleges of pharmacy, as follows

'The writer is desirous of securing authentic information pertaining to the history and development of pharmaceutical education in your state The material obtained will eventually be formulated into a history of the American Colleges and Schools of Pharmacy At your earliest convenience, will you kindly supply the following data "

MATERIAL DESIRED

"1 Origin and organization of your Pharmacy Schools or College and its affiliations

"2 Organizers (Also original faculty if possible)

"3 Other institutions in your state offering a course in pharmacy and their respective locations "

GIFT BY LLOYD LIBRARY AND MUSEUM TO CORNELL UNIVERSITY

Large woodlands near Ithaca covering approximately 620 acres have been given to Cornell University by Lloyd Library and Museum of Cincinnati Ohio, for the exclusive use of biologists as a natural out of door laboratory The Lloyd Library was founded by John Uri Lloyd, senior past president of the AMERICAN PHARMACEUTICAL ASSOCIATION, and the late Curtis Gates Lloyd noted mycologist The latter died November 11, 1926, and the wood lands are a memorial to him He stipulated that when the deeds of the property were turned over to Cornell no trees or undergrowth were to be cut The woods are to be allowed to follow their natural course of growth, death and decay They have for years been protected property and now form primeval wild wood

GIFT OF CARL WEEKS TO DRAKE UNIVERSITY

Carl Weeks, Des Moines Ia , recently presented his million dollar mansion, Salisbury House, to Drake University, to be used as a college of fine arts The home of Mr and Mrs Weeks is modeled after Kings House, a Tudor mansion of Salisbury, England The building of the estate was completed only six years ago and consists of 24 rooms, 10 acres of land and valuable stone and art work Mr and Mrs Weeks will continue to live in their home until plans for endowment of the gift have been worked out Mr Weeks is serving as a member on a committee which has been formed to direct a campaign for endowment of the property

PERSONAL AND NEWS ITEMS

Dr Oliver Kamm delivered two impressive and instructive addresses November 23rd before the Science Club of the University of Georgia During the afternoon, prior to his appearance before the Science Club Dr Kamm spoke informally to the members of the faculty and to students on the campus on ' The Status of Endocrine Research " In the first of his addresses Dr Kamm spoke on 'The Place of the Chemist in Public Health, and the Part the Chemist Has Played in Public Health in the Past " The second phase of his discussion was devoted to Water Metabolism ' Dr Alfred Scott, head of the chemistry divisions at the University of Georgia presided

The Chandler Medal of Chemistry, presented annually by Columbia University for conspicous work in the field of chemistry, was awarded December 12th to Dr Jacob Goodale Lipman, dean of agriculture in Rutgers Uni-

versity and director of the New Jersey Agricultural Experiment Station

Professors Charles W Bauer and Victor E Levine completed their summer's research in Alaska, visiting many points Their expedition is one of the first in the field to gather medical statistics relating to the Alaskan Eskimo, it was a preliminary undertaking for the purpose of preparing for future medical investigations among the Eskimos

According to the *Oil, Paint and Drug Reporter*, the Department of Agriculture will continue to work for passage of legislation to strengthen the food and drugs act, Secretary Henry A Wallace declared in his annual report, released December 12th

Without saying so explicitly, the Secretary of Agriculture implied that the department will be satisfied with the form of the bill as modified by Senator Royal S Copeland rather than the original draft submitted by Undersecretary Rexford G Tugwell

At a special meeting, December 5th, of the students, faculty, trustees and friends of the Philadelphia College of Pharmacy and Science in the College auditorium an oil portrait of Dr Charles H LaWall was presented by Leon A Spielman, the artist who is a pharmacy graduate of the Philadelphia College and associated with his brother, Maurice Spielman, in the operation of two drug stores in central Philadelphia

At the presentation, Mr Spielman delivered an address entitled ' Mixing Drugs and Paints," in which he recited many interesting and humorous incidents in the development of both his professional and artistic careers

Ambrose Hunsberger, of Philadelphia, has resigned as assistant supervisor in charge of the Permissive Division, U S Bureau of Industrial Alcohol

Frederick Rohnert, Detroit, Michigan, recently celebrated a dual occasion, his 73rd birthday anniversary and his 53rd year in the drug business, in the same location He opened his pharmacy in 1881 The neighborhood has changed very much but the pharmacy has not The globes in his window are the ones he had when his business was established

Prof R W Morrison, who during the 1932–1933 term was associate professor of pharmacy at the University of South Carolina School of Pharmacy here has returned to the university as adjunct professor Upon his graduation from the university in 1929 he obtained an instructorship in the School of Pharmacy of the University of Tennessee, and there received his degree of master of science in pharmacy in 1931 He returned to that institution the following year and spent the 1931–1932 term doing work leading to the degree of Ph D During 1933–1934, he was associated with the William A Webster Company, pharmaceutical manufacturers, in its research laboratories in Memphis

Herbert M Bingham has been named Washington representative of the National Wholesale Druggists' Association He will represent the association and its members in a legal capacity before committees of Congress and before the various departments of the Federal government, and will give counsel on governmental matters which affect the industry

The Reserve Pharmacon of November displayed a view of The American Institute of Pharmacy on the cover page Among the articles of the issue is "Advertising Professional Pharmacy in Cleveland," by Gene W Johnston

Dr F J Bacon spoke on "Chemistry of Plants ' before Cleveland Section of the American Chemical Society In the illustrated lecture by Dr Bacon, he traced the history of the isolation and identification of some of the major types of plant constituents Some fifty individual plants were discussed all of which are being cultivated in the medicinal plant garden of Western Reserve University

President Harvey A Henry was a guest of honor at a banquet of the Southern California Retail Druggists' Association held in Los Angeles on December 13th

New Jersey Journal of Pharmacy for November carries the proceedings of the 64th annual convention of New Jersey Pharmaceutical Association, the constitution and by laws of the organization and the state pharmacy laws

Dr Erich von Gebauer-Fuelnegg, associate professor at Northwestern University and consulting research chemist, died November 18th at Passavant Hospital, Chicago He was thirty two years old Death resulted from inhaling hydrogen chloride in connection with the perfection of a discovery he had made in organic chemistry He was associated with the Marbro Products Company, Gary Ind , and had developed a rubber fabric said to be as transparent as window glass impervious to water and to decomposition Dr Gebauer Fuelnegg was born in Prague, Czechoslovakia Surviving are his wife and an infant daughter

OBITUARY

EDWARD S DAWSON

Edward S Dawson, long recognized as one of the leading pharmacists of New York State, member of the AMERICAN PHARMACEUTICAL ASSOCIATION since 1876, died November 30th, at his home in Syracuse He was 82 years old and a native of Syracuse

For many years Mr Dawson was a member of the firm of Brown & Dawson, pharmacists, before joining the Mutual Pharmacal Company, Inc of Syracuse about eight years ago He served three terms as a member of the New York State Board of Pharmacy first appointed in 1884 by Governor Grover Cleveland He was secretary of the board for a time In *1902 Mr Dawson was elected secretary of the* New York State Pharmaceutical Association, an office he held for more than thirty years He was named honorary secretary last year

Tokens of appreciation of his work as a pharmacist were given him June 27 1933 when he and Mrs Dawson, who survives, celebrated their 50th wedding anniversary Mr Dawson was born in Syracuse September 29, 1852 He entered the drug business in 1868, in 1871 he matriculated at the Philadelphia College of Pharmacy, graduating in 1874 On his graduation he joined the firm of Brown and Elder in Syracuse purchasing in 1877 an interest in the business

Surviving are his widow, two daughters, Mrs Louis W Winchell of Cortland and Mrs Warren L Ives of White Plains a son, Edward S Dawson Jr of Schenectady

ROY C REESE

Roy C Reese member of the AMERICAN PHARMACEUTICAL ASSOCIATION, secretary of the Kansas Pharmaceutical Association and a drug inspector for the State Board of Pharmacy, died November 27th aged 52 years while on official business in Wichita

Mr Reese had been secretary of the Kansas Association for about seven years, and one of his first actions upon becoming secretary was to institute a vigorous membership drive which brought the ASSOCIATION'S strength to 85 per cent of the state's druggists

He operated drug stores in Lawrence, Kansas and Kansas City, Missouri He was secretary of the Associated Retailers of Kansas and a member of the N A R D Mr Reese made his home in Topeka, where services were held

CHARLES I CLOUGH

Charles I Clough, 67, of Tillamook one of Oregon's best loved pharmacists, passed away in Portland on November 17th following an operation for cancer from which he had been suffering for several months He was a member of the board of directors of the Oregon State Pharmaceutical Association and had been in business in Tillamook for more than a quarter of a century Prior to going there he had worked in several Portland stores, notably the old Skidmore and Pfunder pharmacies He practiced in Oregon before the State pharmacy law was passed and was Secretary of the Oregon State Pharmaceutical Association His *wife and a son and daughter survive him*

P J GARVIN

The druggists of Connecticut mourned on November 29th the sudden death of P J Garvin, well known authority on pharmacy law, inspector of pharmacies in the state, and lecturer on Pharmaceutical Jurisprudence at the Connecticut College of Pharmacy whose death was caused by cerebral hemorrhage Thanksgiving evening Apparently in good health, his death was an unexpected blow to his daughter and his many friends and associates

Mr Garvin was born in Mitchelstown, County Cork, Ireland, November 29, 1868 and was educated in the Christian Brothers Monastery there Upon his arrival in America he became interested in pharmacy, and was the proprietor of the Garvin Pharmacy in Bethel Connecticut until he became Inspector in 1918 For twenty three years he had served the pharmacists in the capacity of secretary treasurer, preceding this office by being president of the organization soon after he joined it When the need of a college of pharmacy became apparent, Mr Garvin wrote the charter for the institution, and arranged for the passage of the legislative measures for it Since its inception he had been a member of the Board of Trustees, and was given an honorary Doctor of Pharmacy degree at its first commencement He was a member of the AMERICAN PHARMACEUTICAL ASSOCIATION and constantly active in all phases of pharmacy

At his funeral services conducted at St Mary's Roman Catholic Church and according to the Dominican Rite, his casket, borne by six close friends members of the New Haven

Retail Druggists' Association, William Coughlan, president of the C P A Thomas Nugent, president of the N H D A, Arthur Rivard, Tracey Cadwell H C Sauerbrunn and Prescott Williams, passed through a long aisle formed by the guard of honor representing pharmacists from every city in Connecticut Representatives of the Danbury Lodge B P O E, Middletown Knights of Columbus, Bethel Foresters, besides members of the faculty, alumni association and student body of the Connecticut College of Pharmacy were present Hundreds of floral tributes proved the love he had inspired in the hearts of his friends and associates, and telegrams and messages of condolence were received by his only daughter Alice-Esther Garvin, from all parts of the country

The deceased is survived by his daughter Alice Esther Garvin, Lecturer in English at the Connecticut College of Pharmacy teacher of English at the New Haven High School, and editor of the Intercollegiate Catholic Club Bulletin, and three sisters, Mrs Hugh F Roper, Mrs John Lally and Miss Ella A Garvin, all of Hartford

Dr Garvin's body was placed in the Garvin plot in St Lawrence's Cemetery beside that of his wife, Alice Foley Garvin, who died on the same date five years ago

Dr Theobald Smith, president of the Rockefeller Institute of Medical Research, who turned into new channels an entire stream of medical thought died December 10th, aged 75 years An eminent pathologist, honored in almost every nation, he proved for the first time that insects hosts spread certain diseases to man and thereby pointed to ways of conquering the infectious diseases His studies blazed the way for the explanation of what then were the mysteries of malaria yellow fever and African sleeping sickness

Next to the discovery of the means of transmission of Texas cattle fever, his best known research was the differentiation of bovine from human tubercle bacilli, in 1896 Previously the differing types of disease caused by these organisms had not been recognized

The significance of Dr Smith's discovery promptly was realized by Koch, original discoverer of the tubercle bacillus, and it has played a far-reaching part in present day control of tuberculosis

In 1894 he discovered what was probably the first example of experimental disease due to vitamin deficiency His early discoveries were of use in the control of diphtheria

He was a director of the Carnegie Institution, a scientific director of the Rockefeller Institute for Medical Research from its beginning, later becoming vice president and last year on the death of Dr William H Welch, succeeded to the presidency

SOCIETIES AND COLLEGES

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

The American Association for the Advancement of Science will hold its meeting December 27th to December 31st in Pittsburgh The AMERICAN PHARMACEUTICAL ASSOCIATION is represented in this organization

NATIONAL DRUG TRADE CONFERENCE *

Active, constructive participation in the movement for revision of the Federal Food and Drugs Act in the coming session of Congress was voted by the National Drug Trade Conference in its annual meeting December 5th The conference did not adopt or approve any new food and drugs bill, nor did it express its views with respect to the scope of the revision, or to the nature of additions or other changes which, in its belief should be made

The method by which the food and drugs act should be revised was not definitely stated by the conference The incoming special committee on food and drug legislation was instructed to give careful consideration to the three methods recommended to the conference by this year's committee These are (1) revision of the present act, (2) revision of S 2800 of the preceding congress to meet the views of the drug industry, (3) preparation and introduction of a wholly new bill The new committee will be composed of one representative of each of the nine constituted associations to be named promptly by these organizations

The conference referred to special committees for study a number of resolutions proposing endorsement of (1) legislation restricting

* From *Oil Paint and Drug Reporter*

the sale of drugs and medicines to establishments under the supervision of registered pharmacists, (2) requiring all manufacturers of products to be licensed annually, (3) the establishment of an agency to prepare public information on the proper use of appropriate simple remedies in self medication, (4) publication on the label of all drug products of a statement of the name and quantity of their ingredients (5) development and application of more accurate information directed to the development of the service rendered to the public by pharmacy

Cooperation with the medical, dental, nursing and other public health professions for the development of better service was voted by the conference

The officers elected are *President* Carson P Fraley, Washington, executive vice president of the American Drug Manufacturers Association, Washington, *Vice-President* A C Taylor, National Association of Boards of Pharmacy, *Secretary Treasurer*, W Paul Briggs dean of the School of Pharmacy, George Washington University Washington, *National Councillor* in the Chamber of Commerce of the United States, Samuel L Hilton, Washington

The executive committee of the conference is composed of one representative of each of the constituent associations, selected by the respective organizations

WHOLESALE DRUGGISTS CONFER WITH FEDERAL TRADE COMMISSION

More than three hundred representatives of the wholesale drug trade agreed in a trade practice conference held by the Federal Trade Commission in Chicago December 6th, that certain practices are the major causes of unfair and unethical competition in the industry and asked the Federal Trade Commission to adopt and enforce resolutions so defining these practices The trade urged the Commission to investigate the costs of wholesale distribution of drug merchandise, recommended the general adoption of accurate and standard methods of cost finding to foster intelligent and fair competition, and sought the distribution among members of the trade of information covering delinquent and slow credit accounts—all with the sanction of the commission

The meeting was attended by Charles H March and George McCorkle, of the Federal Trade Commission

The proposed resolutions provoked very little discussion, all but two or three being adopted unanimously Under the usual procedure the Commission will consider the approved resolutions adopt those which it considers advisable and ask members of the industry to signify their intention of following them Subsequently the Commission will apply and administer the rules The Chicago conference was called by the Federal Trade Commission on the application of the National Wholesale Druggists' Association which went on record at its last annual convention in favor of such a meeting

Trade practices were considered in two groups—Group I, Illegal, Group II, Not Illegal but should be observed In the first false advertising, defamation of competitors selling below cost to injure competitor, secret remuneration, secret payment or allowance, refunds, altering trade marked merchandise to deceive acceptance of orders and making smaller deliveries at quantity price, misrepresenting as wholesaler imitation of trade marks, fictitious prices, threats of suit for intimidation, substitution misleading price lists, create monopoly, free transportation, special price misrepresentation, unreasonable discounts, coercing purchases, interference with competitors' rights These statements are to be considered in connection with deception, and also the practices of Group II

The following committee was selected to cooperate with the Federal Trade Commission and to perform such acts as are proper to put into effect the rules adopted A Kiefer Mayer, Indianapolis, George V Doerr, Minneapolis, Warner James, Inc, Brooklyn N Y, O J Cloughly, St Louis, and Ira J Shapero, New York

Dr E L Newcomb was unanimously elected secretary of the conference Col Charles H March, member of the Federal Trade Commission addressed the conference on "Origin and Powers of the Commission"

F W D A PLANS CAMPAIGN OF EXTENSION

Executives of the cooperative wholesale houses composing the Federal Wholesale Druggists' Association met in Chicago for special deliberations December 5th and 6th The chief topic of discussion, according to R E Lee Williamson, secretary of the Association, was extension of the coöperative plan, and steps were taken toward explaining the plan to retail

druggists in sections where there are now no cooperative organizations "Flexibility of the operating plans of the cooperative houses," Mr Williamson said, 'made it possible for them to report at the meeting that none had had a loss over the past four years, in spite of their sharing in the general lessening of business" The Association will hold its Winter meeting in New York some time before March 10th

DRUG INSTITUTE OF AMERICA

Endorsement of its past activities and the proposal of a budget that will assure continuance of a very definite predetermined program were the outstanding actions taken at the Annual Meeting of the Drug Institute, Inc, at its headquarters in New York City on December the 12th

---

Retail druggists will come face to face with their responsibilities under price stabilization plans during the coming year according to plans outlined at the annual meeting of Drug Institute of America, in New York City, December 12th The Institute intends to send two men out in the field to set up committees in every urban community to disseminate information relative to developments in the industry along lines of stabilization The meeting was attended by thirty four members

Ten members of the board of directors whose terms expired this year were reelected and seven members were elected to fill vacancies or newly created openings The directors who were reëlected were as follows Charles J Lynn, Dr W E Weiss, J L Johnston, Ralph Aronson George V Doerr, Harry Z Krupp, John W Dargavel, C Fred Michaels, H H Miller and Wheeler Sammons Henry W Bristol, John H Johnson, Charles A Peacock and B E Levy, were elected to fill vacancies C W Kress, Fred Griffiths, Dr E L Newcomb Dean C E Caspari and Dean H V Arny were elected to fill new positions on the board Officers of the Institute will be elected at a meeting of the board December 19th

NATIONAL ASSOCIATION OF RETAIL DRUGGISTS

Cincinnati was selected as the 1935 N A R D convention city by the members of the Executive Committee *Chairman*, Charles Ehlers Cincinnati, C Fred Wright, Boston, George L Secord, Chicago, John Witty, Portland, Ore, Thomas S Smith, Wilmington, Delaware, Monte L Powell, Denver, and President Harvey A Henry, Los Angeles

A PH A AND N A R D COMMITTEE DISCUSSES COOPERATION

The joint committee representing the AMERICAN PHARMACEUTICAL ASSOCIATION and the National Association of Retail Druggists, in a meeting held in Washington, December 5th considered at length various suggestions that have been presented looking to a consolidation or affiliation of the two national associations and also to the closer federation of State pharmaceutical associations with the two national associations The proposal for consolidation was disposed of for the present by a formal resolution adopted by the National Association of Retail Druggists at its recent annual meeting in New Orleans The proposal for some form of affiliation between the associations did not appear to the committee to be practical under existing conditions, and in view of the apparent need for separate organizations to deal with the professional and the economic problems of pharmacy

The members of the joint committee are Robert P Fischelis, E F Kelly and R L Swain, representing the AMERICAN PHARMACEUTICAL ASSOCIATION, and John W Dargavel, Charles Ehlers and Thomas S Smith, representing the National Association of Retail Druggists

FEDERATION OF EASTERN STATES PHARMACEUTICAL ASSOCIATIONS

The by-laws provide that the purpose of this federation shall be to promote and advance the economic and professional interests of Pharmacy and to cooperate with the A PH A and the N A R D in problems of national interest

At present the membership is composed of the associations of the following states Massachusetts, Connecticut Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Virginia, West Virginia A council is created of representatives from constituent members Other articles deal with officers and duties Two meetings are provided for, May and November, and special meetings may be called by the executive committee

STATE ASSOCIATION MEETINGS

[illegible] Pharmaceutical Association meets [illegible] June 18th–20th

[illegible] Pharmaceutical Association meets in [illegible] May 14th–16th

[illegible] Pharmaceutical Association meets [illegible] June 18th–20th

Vermont Pharmaceutical Association meets [illegible] Mount Mansfield Inn Fairlee, June 16th–18th

Florida Board of Pharmacy will meet in Jacksonville January 7th, applications should be filed with Secretary J H Haughton, Palatka Fla

Tennessee Board of Pharmacy will meet in Nashville January 15, applications should be in the hands of Secretary J B Sand South Nashville, by January 1

ARIZONA PHARMACEUTICAL ASSOCIATION

The annual meeting of Arizona Pharmaceutical Association was held in Phoenix, November 22nd–24th A large representation of its members was in attendance L N Brunswig, Frank E Mortenson, secretary of Southern California Pharmaceutical Association, were among the visitors Secretary H C Christensen, of the N A B P, was present to assist in the final draft of a proposed new Pharmacy Law and as a representative of the AMERICAN PHARMACEUTICAL ASSOCIATION President Harvey A Henry, of the N A R D, was one of the speakers of the convention, First Vice President, Ludwig A Schiff, N W D A, was a representative of that organization

ASSOCIATION OF OFFICIAL AGRICULTURAL CHEMISTS

To commemorate its fiftieth anniversary the Association of Official Agricultural Chemists has issued as No 4 of its current volume of the *Journal of the Association of Official Agricultural Chemists* a fifty year index of its publications This index includes all entries from the Proceedings published in the Department of Agriculture *bulletins*, the journal of the Association, and in the 1920 1925 and 1930 editions of the 'Book of Methods' The Association plans to issue a supplementary index each ten years covering subsequent work

LEGAL AND LEGISLATIVE

NARCOTIC EVIL

No class of citizens is more seriously concerned and desirous of destroying illegal traffic in narcotics than are druggists and pharmacists There are probably no more needful and useful drugs than narcotics but, unfortunately, there is no greater evil than misuse of them Pharmacists have a responsibility and it is gratifying to know that they as a class, discharge their duty in connection therewith A part of an editorial of the *Washington Evening Star* is quoted

"Both as an evil in itself and as a causative of other evils the traffic in narcotics has become one of the gravest menaces to social stability in this country It affects the moral and physical health of those addicted to the drug habit and it leads to all forms of dishonesty in the maintenance of the business of purveying the materials By a pernicious sequence those who are engaged in the traffic seek to enlarge the field by corrupting the young Themselves in most cases addicted to the use of drugs, the vendors ply their trade without conscience or restraint to gain means to secure the materials which in their depraved condition they crave To break this vicious circle of combined cause and effect is a task of great magnitude"

PHARMACEUTICAL AND BIOLOGICAL INDUSTRY

The following members have been appointed members of the code authorities of the Pharmaceutical and Biological Industry Carl N Angst, Pitman Moore Co, Indianapolis, Ind, Horace W Bigelow, Parke Davis & Co, Detroit, Clifford V Haver, Haver Glover Laboratories, Kansas City, Mo, John G Searle, G D Searle & Co, Chicago, A Homer Smith, Sharp & Dohme, Philadelphia

RULES PRESCRIBED FOR HANDI CODE AUTHORITY FUNDS

The National Industrial Rec[illegible] issued regulations, December 7th, be followed by all code authoriti[illegible] money collected for code admini[illegible] prescribed rules call for a bon[illegible] all money collected, separatio[illegible] thority funds from all others, [illegible] and adequate accounting rec[illegible] inspection by the NRA, peric[illegible]

Administration, audits by independent accountants at the end of each budget period, and submission of financial reports to all contributors to code funds within 60 days after the budget closing date These regulations provide that each such code authority must furnish adequate information regarding observance of the rules and any action of a code authority is subject to NRA disapproval if found that it is not in accord with the order The order further defines the term 'competent, independent auditor" who is to conduct the audit at the end of each budgetary period

SCRIP" PROVISIONS OF RETAIL CODES ARE STAYED UNTIL JANUARY 6, 1935

Provisions of various retail codes which prohibit the acceptance of ' scrip" in payment for goods have been stayed until January 6, 1935, under an order announced to day by the National Industrial Recovery Board

The codes affected are those for the retail trade the retail jewelry trade and the retail food and grocery trade, together with any other code or codes" in which similar provisions may exist

The stay was ordered to permit additional time in which the National Industrial Recovery Board may study a report submitted on October 22nd by a special committee which investigated so called 'company" stores and the scrip system of wage payments generally

In its report, the special committee submitted recommendations relating specifically to Article IX Section 4 of the retail code as approved on October 21, 1933, which would eliminate that Article and substitute the following provisions

' No company store or retail store shall collect by offset in the form of scrip, book credit or otherwise against the wages of any person other than its own employees engaged exclusively in the retail trade, an amount for merchandise sold by said store in excess of 25 per cent of such pay earned in any pay period

No store shall purchase or receive or accept for cash or consideration in trade or in payment of indebtedness any scrip at less than its par on face value "

COSMETIC CODE AMENDED

Members of the perfume cosmetic and other toilet preparations industry, whose sales of these products during 1933 amounted to $5000 00 or less and represented 5 per cent or less of the total net sales of such members need not contribute to the support of the code authority for this industry, the NRA has decided The order is in the form of an amendment to an earlier order terminating the exemption from paying fees to this code authority, which had been granted manufacturers the bulk of whose products were produced under some other code

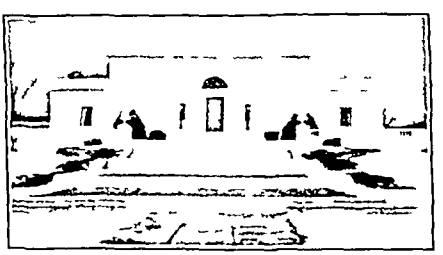
RETAIL DRUG CODE AUTHORITY OF THE DISTRICT OF COLUMBIA

The Retail Drug Code Authority of the District of Columbia has sent out a questionnaire asking for information as follows

Should NIRA be continued after June 1935? Is collective bargaining of any importance to you? Has the Drug Code been of value to the trade? Has reemployment increased? Have wages been increased? Have trade practices improved? Should the Drug Code be continued? Should some other form of business control replace the Code? Should retailers in towns of less than 2500 population be exempted? Are the provisions governing hours of labor satisfactory? Should they be increased? Should they be decreased? Are the minimum wages satisfactory? Should they be increased? Should they be decreased? Should the present Loss Limitation Provision be continued? Are the other trade practice provisions satisfactory? What change should be made in the Code?

OPTIONAL DISCLOSURE OF FORMULAS IN CANADA

The Pharmaceutical Journal states that an amendment to the Canadian Pure Food and Drugs Regulations requires on labels of medicinal preparations a quantitative statement of ingredients and recommended dosage. This is not required if the drugs conform to the recognized standards prescribed under Section 6 of the Canadian Food and Drugs Act, nor if sold under a registration number assigned under the Proprietary or Patent Medicine Act



The American Institute of Pharmacy First snow in Washington, December 1934 —*Courtesy of S L Hilton*

HARRY C CARR TO HEAD NRA DISTRIBUTING TRADE DIVISION

The National Industrial Recovery Board December 7th, announced the appointment of Harry C Carr as Acting Division Administrator of the Distributing Trades Division to succeed Robert L Houston, who resigned recently

Mr Carr was Deputy Administrator in charge of the retail section of the Distributing Trades Division

Before coming to NRA, Mr Carr was managing director of the European Marketing Subsidiary Companies of the Gulf Oil Corporation 1928–1932, assistant to the president and export manager of the Sun Oil Company 1915–1928, and manager of the Railway Supply Department of the Simmons Hardware Company, 1911–1914

He was born in St Louis and is a graduate of Columbia University

BOOK NOTICES AND REVIEWS

Accepted Dental Remedies published by the Council on Dental Therapeutics of the American Dental Association, 212 E Superior Street, Chicago, Illinois Revised annually 204 pages Price $1 00

The purpose of the book is to give information to protect the dental profession in the prescribing and the use of proprietary medicines, to list accepted proprietary articles and analogous official preparations so that the dentist may have a complete list of drugs and preparations from which to choose

It lists and describes non official drugs as well as those selected from the U S P and N F It contains a bibliography and index to proprietary and nonofficial articles not accepted by the council Rules governing the admission of proprietary articles to the list of "Accepted Dental Remedies' are outlined in detail They cover such subject matter as composition of article, identification direct advertising, indirect advertising false claims as to origin, unwarranted therapeutic claims, poisonous substances, objectionable names, products with protected names, unscientific and useless articles Explanation of the Council's interpretation of the rules is clearly set forth so that the manufacturer pharmacist and dentist may have a very workable knowledge of the intent of the Council on Dental Therapeutics and the regulations governing the acceptance of a product

Attention is brought to rules governing the use of the Seal of the Council stating how it is to be used size of Seal and conditions governing the time period for its use

The therapeutic index lists the following classification Corrosives or caustics, astringents, styptics, disinfectants, germicides and antiseptics, local anodynes and analgesics, local anesthetics, dehydrating agents for tooth structure, emollients and protectives, drugs used against oral amœba drugs of dental interest used for infections of the alimentary tract, for effect on circulation, respiratory and central nervous systems and to reduce fever as well as those used for their effect in the blood, that is, to increase the hemoglobin and increase coagulability

Definitions for official pharmaceutical preparations are stated so that the dentist may find it convenient to make a choice of the proper type of medication to administer Tables of poisons and their treatment as well as ones for solubility, weights and measures are enumerated

Accepted Dental Remedies represents a wealth of valuable information for those who have use for such a concise well written publication It should not only be in the office of every practicing dentist in this county but also in every prescription pharmacy It has a very definite place in dentistry comparable to that in medicine of the New and Non official Remedies of the American Medical Association —GEORGE C SCHICKS

We are in receipt of the following reprints, through the courtesy of Dr C A Browne, Chief, Chemical and Technological Research, U S Department of Agriculture

Scientific Notes from the Books and Letters of John Winthrop, Jr ," reprint from *Isis*, December 1928
